HARPER & BROTHERS

THE MASTERS OF THE WILDERNESS

By CHARLES B. REED

Chicago Historical Society, "Fort Dearborn Series"

The opening essay, which gives its title to the volume, is a highly interesting and carefully wrought account of the origin and upgrowth of the Hudson's Bay Company, with a portrayal of its powerful influence on the development of Canada. "The Beaver Club," the second essay in the volume, is closely allied to the first, and concerns a social club of Montreal, the members of which were drawn from the partners and factors of the Northwestern Fur Company, for many years a rival of the Hudson's Bay Company. The concluding essay, "A Dream of Empire," recounts with many fresh details the adventures of Tonty in Old Louisiana.

NOW READY

GREAT JURISTS OF THE WORLD

From PAPINIAN to VON IHERING

BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth*, $5.00 *net.*

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.

☞ *Send for descriptive pamphlet of the Continental Legal History Series.*

Longmans' Recent Publications

Men and Matters

By WILFRID WARD. 8vo. Pp. xii+451. $3.50 *net*. (Weight, 32 oz.)

CONTENTS: Disraeli—Lord Cromer on Disraeli—George Wyndham—Mr. Chesterton among the Prophets—John Stuart Mill—Cardinal Vaughan—Tennyson at Freshwater—Cardinal Newman's Sensitiveness—Union among Christians—The Conservative Genius of the Church—St. Thomas Aquinas and Mediæval Thought—Cardinal Newman on Constructive Religious Thought—Reduced Christianity—Papers read before the Synthetic Society.

Wayside Neighbours

A Companion Volume to "Wayside Lamps"

By the Author of "Especially William, Bishop of Gibraltar, and Mary, His Wife." Fcap. 8vo. $0.90 *net*. (Weight, 10 oz.)

CONTENTS: The Callows—The Junction for the North—Rays from an Oxford Candle—Ellen—A Branch of Blossom—Leocardio—Rue with a Difference—Quite Well Meant—The Cup of Hot Tea—Workhouse Saints—Miracle or Mere Coincidence?

The Wanderer's Necklace

By SIR RIDER HAGGARD, Author of "Allan Quatermain," "King Solomon's Mines," etc. With Colored Frontispiece and 3 other Illustrations. Crown 8vo. Pp. x+341. $1.35 *net*. (Weight, 20 oz.)

Essays on Faith and Immortality

By GEORGE TYRRELL. Arranged by M. D. PETRE. Crown 8vo. $1.40 *net*. (Weight, 18 oz.)

This volume comprises, for the most part, matter hitherto unpublished which existed in the form of notes and essays among the MSS. which Father Tyrrell left behind him. To this have been added a few articles already published, either in England or abroad, in various periodicals, but which are not now easily obtainable, and which possess a certain importance.

The Origin of Attic Comedy

By F. M. CORNFORD, Fellow and Lecturer of Trinity College, Cambridge; Author of "From Religion to Philosophy," "Thucydides Mythistoricus," etc. 8vo. $2.40 *net*. (Weight, 24 oz.)

The book is intended not only for classical scholars, but for all readers interested in the origin and growth of the drama.

Education and the New Utilitarianism, and Other Educational Addresses

By ALEXANDER DARROCH, M.A., Professor of Education in the University of Edinburgh. Crown 8vo. $1.20 *net*. (Weight, 14 oz.)

ROGET'S THESAURUS

OF ENGLISH WORDS AND PHRASES

New Large Type Edition

Revised by C. O. S. MAWSON.

"Our old reliable friend."—*Chicago Record-Herald.*

"The editor deserves great credit for the improvement he has made in matter and form in this classic work of reference."—*N. Y. Sun.*

"For well over half a century, Roget's 'Thesaurus' has been to countless literary workers a very present help, second only in usefulness to the dictionary itself. Of the long series of reissues since its first appearance in 1852, the latest is a 'large type edition,' revised and brought down to date by Mr. C. O. S. Mawson. The large type is an actuality, and the revision is of a very substantial sort—consisting in the judicious addition of numerous slang and cant expressions, Americanisms, and various new phrases and quotations. The use of thin paper reduces the 650 pages of the book to a thickness of less than an inch. Altogether, this seems to us *the very best edition* of the 'Thesaurus' now available."—*The Dial.*

THE AMERICAN YEAR BOOK FOR 1913

D. APPLETON & COMPANY, Publishers

The Nation.

NEW YORK, THURSDAY, APRIL 23, 1914.

Summary of the News

The Mexican situation has assumed a new aspect during the past week, inducing a change in the policy of the Administration. On April 16 it was assumed that the crisis was over on Gen. Huerta's agreeing to salute the American flag provided the salute were returned. On the following day, however, Huerta reconsidered his attitude and demanded that the salute should be gun for gun. An ultimatum was sent on Saturday, April 18, giving him until 6 P. M. on Sunday to accede to the United States demand for an unconditional salute. Huerta's only reply to the ultimatum was to make a fresh demand for a written protocol guaranteeing that the salute should be returned, a request which was immediately refused. A blockade of Mexican ports was thereupon ordered, and on Monday the President went before a joint session of Congress to ask for the authorization to take what measures were required by the needs of the situation. President Wilson's message, in which he was careful to emphasize that the measures he has thought it necessary to adopt are directed not against the Mexican people, but against Gen. Huerta, is the subject of comment elsewhere. On Tuesday, while the Senate was still debating the terms of the resolution that should be adopted, a party in the Senate urging one so phrased as to cover the possibility of armed intervention, orders were issued by the Executive for the seizure of the custom house at Vera Cruz to prevent a large shipment of field guns and ammunition that was to be landed there from being transported to Mexico City.

The operations of the rebels have meanwhile continued to be largely successful. According to dispatches received on Saturday, they had captured Salinas and Puente Morelos and had won another victory at Juarez. A dispatch from El Paso on Monday conveyed the information that the Constitutionalist army had begun its assault on Monterey and gave the text of a message from Gen. Gonzales reporting that on April 15 the town of Cadereyta had been captured after a fierce battle in which the Federal garrison of 2,000 was almost annihilated.

The result of an informal poll of the delegates to the Democratic convention at Baltimore in 1912, undertaken by Senator Gore, is interesting as showing that nearly one-half of the delegates support the position taken by the President on the Panama Canal tolls question. Of those who have written to Senator Gore, 504 are in favor of the repeal, 98 oppose it, and 23 are non-committal.

Evidence that no exemption of tolls for American coastwise traffic using the Panama Canal was contemplated at the time of the framing of the Hay-Pauncefote treaty was presented to the Interoceanic Canals Committee of the Senate on April 16, when a letter from Joseph H. Choate, ex-Ambassador to Great Britain, was read into the record. Mr. Choate declared his conviction that the negotiations at the time excluded "the possibility of any exemption of any kind of vessels of the United States."

The text of the treaty with Colombia has not yet been given to the Senate, but was published in Bogotá and in Paris last week. Considerable opposition has developed in the Senate to the clause in which the Government of the United States "expresses sincere regret for anything that may have interrupted or altered the relations of cordial friendship existing long between the two nations."

A decision in the Kansas insurance-rate case was handed down by the Supreme Court on Monday affirming the right of a State to regulate rates of insurance.

The Militia Reorganization bill, empowering the President, with the assent of Congress, to raise an additional volunteer force in case of war, was passed in the Senate on Monday.

The Colorado mine strike resulted on Monday in a serious clash between the strikers and the State militia, in which several strikers, one soldier, and one non-combatant were killed.

An attempt on the life of Mayor Mitchel, of New York, was made on April 17, when an elderly man, who has since been found to be mentally irresponsible, fired at him as he was entering an automobile in front of City Hall. The bullet missed the Mayor and struck Corporation Counsel Frank Polk, who was beside him. Mr. Polk was wounded in the jaw, but the injury happily proved not to be dangerous.

An important step towards municipal home rule has been taken in New York State. Gov. Glynn last week signed the Murtaugh-Sullivan Optional City Charter bill, giving to all cities of the second and third class the right to adopt a simplified form of charter. Seven optional forms of charter are offered to the cities, and each is privileged to choose the particular one which is approved by a majority of its voters.

The debates in the House of Commons during the past week have been enlivened by the repetition of charges of a Liberal "conspiracy" to coerce Ulster. On Friday a statement was made public by Sir Edward Carson and other members of the Ulster Unionist Council, embodying charges that during the recent crisis Lieut.-Gen. Sir Arthur Paget had been instructed to seize various strategic points and that Ulster was to be blockaded by land and sea, and on Monday the matter was taken up in the House of Commons, the demand being made from the Unionist side for a judicial inquiry. So far as the details of the charges can be gathered from cable dispatches, they seem to have been sufficiently answered in Mr. Winston Churchill's statement in the House of Commons on March 30.

The full returns of the elections in Sweden are not available as we write, but there appears to be no doubt that the Liberals have been defeated by a substantial majority, having lost a number of seats both to the Conservatives and to the Socialists. The result of the elections will, therefore, be to endorse the proposed increase in naval and military armaments and the direct intervention of the King in political controversy, which were the causes that brought about the resignation of the Liberal Ministry.

The threatened strike of the employees of the Italian railways, to which we alluded last week, and in anticipation of which the Government had made extraordinary preparations, was abandoned on Monday.

The Parliamentary crisis in Japan, produced by the resignation of the Yamamoto Ministry on account of the naval scandals and the failure of Viscount Kiyoura to form a Cabinet, was settled by the acceptance of the Premiership by Count Shigenobu Okuma, ex-Foreign Minister, who announced on April 15 that he had been able to complete his Cabinet.

The Chinese brigand, White Wolf, who since last autumn has extended his depredations through three provinces, and has sacked a dozen cities, finally threatening the ancient city of Sian-fu, has apparently met with reverses recently at the hands of the Government troops. It was reported on April 16 that he had been severely defeated with considerable loss at a point northwest of Sian-fu, but, following the self-appointed destiny of bandits in countries troubled by civil strife, on Monday he issued a proclamation denouncing President Yuan Shi-Kai, and proposing himself as a saviour of the republic who, after he had effected the capture of Sian-fu, would inaugurate a reign of social justice.

From dispatches from London published in Monday's papers it would appear that Montenegro is again bellicose. Territory on the Albanian side of the frontier occupied by the Hoti and Gryda tribes was awarded to Montenegro by the Ambassadors' conference, but the frontier line has not yet been definitely established. Montenegrins, however, seem to have anticipated the deliberations of the frontier commission by invading the territory, and fighting has been reported around Tuzi.

The deaths of the week include: George Alfred Townsend, Aaron J. Zabriskie, April 15; Dr. George William Hill, April 16; Arthur McKee Rankin, April 17; Alfred Noble, April 19; Charles S. S. Peirce, S. R. Crockett, Brig.-Gen. William H. Cotton, April 20; Sir Edwin Durning-Lawrence, April 21.

The Week

President Wilson's message did not clear up a confused situation. Rather, it introduced new elements of doubt and uncertainty. If Congress listened to the President expecting to be fired by glowing appeals, it was disappointed. If anybody thought that the country would be set aflame by the message, he must have been surprised by the actual result. People are more puzzled than ever. They hear talk of war, and see preparations for war going on, but can't tell for the life of them what it is all about. The President was to set their patriotic emotions ablaze, but somehow he did little more than give them new problems on which to exercise their minds. He was to make their hearts burn, but in reality only made their heads ache.

The arrangement of Federal districts by the Organization Board, and the allotment of Federal reserve cities, have been made, with resultant criticism in many quarters, which was perhaps inevitable under the general plan pursued. But the fact that there should be dissatisfaction is regrettable, and its existence greatly emphasizes the importance of a wise choice of the five members of the Federal Reserve Board who, along with the Secretary of the Treasury and the Controller of the Currency, are to constitute that important body. The law provides that at least two of these five appointees "shall be persons experienced in banking and finance," and that "one shall be designated by the President as governor and one as vice-governor of the Federal Reserve Board." It is not yet clear precisely how the relative spheres of authority and activity of the Federal Reserve Board and of the regional bank directorates will be defined in routine practice, and there is a multitude of details, in the working machinery of the system, on the introduction of which the national board will be naturally called upon to decide. The successful operation of the system, especially in its early and experimental stages, will depend very largely on the selection of men of sufficient practical experience, mental balance, and capacity for sound judgment, to enable them so to deal with these immediate problems as at once to inspire confidence in the banking and business community. We should regard it as in the highest degree unfortunate if the two "persons experienced in banking and finance" were not to be men widely and favorably known for their training and knowledge of the problem, alike in its practical and theoretical aspects.

With the Government adopting post-office advertising and the sending of bulletins to school heads to further the demand for public documents, it must be encouraging to find popular backing for the proposed measure to permit their distribution through book shops and publishing agencies. The change would seem to affect solely the individual. Yet one of the Western State universities has discovered that it would be more convenient to order through trade channels, and to this public libraries all over the country agree. The present law prohibits the Superintendent of Documents from selling more than one copy of a Government publication to a person or firm dealing in books for profit. The amendment should make possible a new advertisement of various documents; their public exposure where they are of interest to special groups or communities; and facilitate the ordering of them by men who "never find time" to send a letter to Washington, with money-order or stamps enclosed. Those who object to any margin of profit would still have the opportunity of ordering direct; and while this may not cover all the opposition to permitting commercial disposal of documents, especially if there were a chance to speculate in those of which there is a limited supply, it leaves few dangers in the plan.

In cutting down legislative appropriations for the purpose of making a good showing at the end of the year, the principle seems to be to cut, not where there is least need, but where there is least political resistance. There are always patriots in Congress to rush to the defence of our harbors, our internal waterways, and our post offices; but what members would be sufficiently interested to take up the cudgels for an institution like the Children's Bureau, so remotely connected with the maintenance of political fences? Well, be it said to the credit of a majority in the House that it did rally last week to the defence of so eminently deserving a cause as that with which Miss Lathrop's name has been so long connected. By an amendment to the Appropriations Committee's report, the House increased the item for the Children's Bureau from $25,000 to nearly seven times as much.

Such national bodies as the Conservation Congress may disagree about State vs. Federal control, but the Western Conference of Governors has always decidedly espoused the former principle. That it has made slow progress is traceable to a public caution bred by the alliance of advocates of a "hurry-up" exploitation of natural resources with advocates of local regulation. Risks are not precipitately to be incurred. The Western Conference has just adjourned in Denver, with resolutions that have an unwontedly reassuring ring. "It is the duty of every State to adopt such laws as will make for true conservation of our resources, prevent monopoly, and render the greatest good to the greatest number; and as rapidly as the States prepare themselves to carry out such a policy the Federal Government should withdraw its supervision and turn the work over to the States." The generalities seem to glitter here, but those familiar with legislation like Pennsylvania's to conserve forests by taxation, irrigation legislation like that passed in virtually every semi-arid State and in Oregon and Washington in 1913, with such agreements as with Oregon for the joint investigation of development projects, and with the powers recently vested in water and conservation commissions everywhere, will understand the general legislative tendencies the Governors would encourage. For such other recommendations as the one specifying that 10 per cent. of unappropriated lands be given to the States to be sold for a reclamation fund, not so much can be said. But the whole tenor of the Conference looked to co-operation with Washington.

The chairman of the Commission which administers the Wisconsin Workmen's Compensation law draws a striking contrast between its working and that of the system which prevailed before the law was passed. In 1910, he says, it cost "$450,000 to carry $150,000 to the injured workmen; in 1914 [the

estimate being based on the showing for January] the injured workmen will receive $900,000, and the administration will cost less than $12,000." These figures are startling; but, whether strictly accurate or not, they reflect the general nature of the beneficent change wrought by workmen's compensation laws. It is this manifest avoidance of the lamentable waste involved in the litigation system which did as much, perhaps, as any one thing to recommend the idea of the automatic compensation plan to the general approval of public opinion in this country. Even in this aspect, the waste was but one part of the matter; for besides the deplorable waste there was the cruel uncertainty. When we add to this the other two great factors in the case—the hardship of having the workman bear the brunt of accidents which are part of the normal risks of the trade, and the incentive which a proper compensation law supplies to the prevention of accidents—there is no difficulty in understanding the rapid headway made by this kind of legislation in State after State.

When the future historian comes to write of the forces which were operating on April 14, 1914, to shape the destiny and the spirit of the American people, we wonder what relative importance he will assign to President Wilson's order for the concentration of our fleet at Tampico and to the opening of the major league baseball season. He will have to be a very skilful historian to keep his proportions correct. He will record the fact that in a year of business depression the automobile industry was thriving. He will take note of the fact that while bands of the unemployed were creating unrest in the cities, equally numerous bands of citizens were flocking to the tango academies and the dancing teas. He will be telling only part of the story if he overlooks the fact that in a period of general hard times a new eight-club league has forced its way into organized baseball, attracted by the prospect of handsome profits.

For a victim of the suppressive tactics of the Associated Press, the editor of the *Masses* seems to be somewhat of an adept at suppression himself. In the last number of that militant publication, Mr. Eastman is at pains to show how a wrong caption under a characteristic cartoon printed in an earlier issue of the *Masses* wasn't so wrong after all. The picture in question—so we gather—dealt with the public banquet which brought to an end the recent Episcopal Convention on Morningside Heights. The reader was asked by the artist to contemplate the spectacle of the successors of Jesus guzzling and swilling at a Broadway hotel at $20 a plate. To this some one in authority has replied that the cost per plate was not twenty dollars, but four dollars, and that the total expenditure on wines and tobacco was less than fifty cents per person. The obvious thing for Editor Eastman to do was to prove that a public dinner of clergymen and laity at four dollars a head was as bad as, if not really worse than, one at twenty dollars a head. Mr. Eastman accomplishes the task to his satisfaction, but, as the outsider sees it, only after severely suppressing several elementary laws of logic, together with his sense of humor and fair play.

With all of our traditional practical sense, latterly dignified by terms like efficiency and scientific management, we are still subject to the appeal of the imagination. An instance in point is the starting of the "great Lincoln highway" across the State of Illinois. Few are stirred by the mass of argument for good roads, but a Lincoln highway—that is altogether different. And so we have the Governor taking off his coat, rolling up his shirt-sleeves, moistening his hands, seizing a silver spade, and turning the first earth in the new thoroughfare. Yet the memorial element in the event is almost negligible. Lincoln's memory is used on behalf of a project that, without it, would be less promising of success. "Illinois is ashamed of its roads," explained the Governor, speaking from a motor truck after he had finished with the silver spade, "but we have awakened, and reproaches will not be our due much longer." Then the popular imagination was aroused again by the sight of the Governor pulling the lever and starting the huge motor truck forward. What would our Yankee shrewdness amount to without our love for sentiment and spectacle?

How to discover a great wave of public sentiment, or, if you can't find it, to invent it, the following telegram shows:

CINCINNATI, OHIO, *April 10, 1914.*
SOME RELIABLE NEWSPAPER MAN,
Elkhart, Ind.:

Please file early Friday evening 300 words showing unfavorable sentiment your section toward President Wilson's stand on Panama Canal tolls. Interview big business men and get them to say something hot. ENQUIRER.

Unfortunately, this was delivered to a newspaper man in Elkhart not at all "reliable." He sent it on to Senator Kern, who read it in the Senate and had it inserted in the *Congressional Record.* It lights up instructively the tactics which the owner of the Cincinnati *Enquirer* and the Washington *Post* has been using in his campaign against the President.

The Indiana Progressive Convention did not fail to perform the first task of all such conventions, namely, to prove that the organization is not a one-man party by greeting with enthusiasm the naming of Theodore Roosevelt as the Progressive Presidential candidate for 1916. Senator Poindexter was at pains to point out the availability of this gentleman for the nomination by reminding his hearers that the Colonel "has the prestige of his record in the Presidency." He has also the prestige of his record at Chicago, where he demonstrated what it is to be a good loser and the only man who can win. Upon the tolls exemption matter, the Senator took a lofty position. "The Progressive party does not believe," he said, "in distorting the language of a treaty." The ears of those notorious treaty-distorters, Messrs. Choate and White, must have burned as these words were uttered. It has remained for the Democratic party, according to the Senator, to propose to surrender the sovereignty of "this most costly of all the American possessions to the whims, caprice, and sordid interests of foreign countries and domestic railroad lines." In the face of such unassailable logic, it is disheartening to read of four times as many Republicans as Progressives going to primaries in Indiana in places that cast more votes for Roosevelt than for Taft in November, 1912.

It is hard to believe that the lurid rhetoric of a Blease can long prevail against so plain a statement of the educational condition of South Carolina as the Columbia *State* ventures to make.

Pointing out that South Carolina is one of but six States to be without a compulsory education law, while all foreign nations have such laws, the *State* asks whether it is only coincidence that in Massachusetts, with compulsory education extending over a period of two centuries, two out of three men, women, and children have savings-bank deposits. But State pride should be enough to stir South Carolina to lift herself from a position so near the foot of the ladder as is shown by the fact that in percentage of children in school she ranks forty-third; in number of days the schools are open, forty-sixth; in value of public school property and in percentage of literacy, forty-seventh; and in yearly expenditure for each child of school age, forty-eighth. Thirty-five States have been admitted to the Union since South Carolina and her twelve sister commonwealths formed it, and almost every one of them is ahead of her in popular education, one of the primary elements of self-government.

In the early days of our occupation of the Philippines, Mr. Dooley found occasion to animadvert on the cocksureness of certain Americans who, a week or two before, were somewhat in doubt whether the Philippines were islands or canned goods. We are a long distance from that condition of mind now, and yet there is quite enough mistiness in prevalent notions concerning the Filipinos to make such an address as that of Commissioner Quezon, decidedly conducive to enlightenment. He acknowledges very fully the advance that has been made, in education and government, during the American occupation, but insists also on the fact that the people of the archipelago were in the main a civilized and a Christian people long before we went there, and that they had a widespread educational and governmental system. His plea for a speedy advance towards independence is based both on the degree of culture which obtained before our arrival and on the great progress that has been made since. A cutting from a Filipino newspaper, which has just come to hand, is of special interest in connection with Mr. Quezon's statement. From this it appears that the Philippine Assembly has unanimously passed a bill prohibiting the taking of photographs of nude persons; the reason, as the newspaper puts it, being that "the practice of taking, selling, publishing, exhibiting, and circulating the pictures of Igorots, Negritos, and other non-Christian Filipinos has been a powerful engine of misrepresentation, a deadly instrument in the hands of those who wish to make it appear before the American people that we are utterly unfit to manage our own affairs." There is no doubt that the vivid appeal to the eye which these pictures make goes far to put out of mind the fact, told only in the cold language of statistics, that the naked tribes form only a small fraction of the population of the archipelago.

If Rome is as wise as her years ought to have made her, she will not plan the celebration of her two thousand six hundred and sixty-seventh birthday without finding out how St. Louis is going to mark her one hundred and fiftieth. For St. Louis, being much nearer the beginning of celebrations than the Eternal City, has a fresh stock of ideas, and also enthusiasm. "Into the melting pot of this great civic drama," we read, "will go all sections, all factions, all divisions, and all special interests. Out of it will come, well moulded, a great civic spirit that will galvanize us into aggressive boosters for St. Louis." We do not say that there is a hint here for the prisoner of the Vatican or his fellow-ruler in the Quirinal, but if they seized the celebration in Rome in order to have a melting pot of their own, out of which might come a great civic spirit that would galvanize them into aggressive boosters for Rome, would not the Missouri city give them generous applause? It is no small thing to have "all the world sitting up and taking notice of you"—as Rome herself was once the best of witnesses.

At the time the English Unionists were holding their great meeting in Hyde Park, to protest against the "coercion" of Ulster, there was a large gathering of laboring men in Trafalgar Square. They, too, had their addresses and harangues, and it is rather amusing to find the Tory newspapers describing the proceedings as a "defiance of law and order," and the speeches made as "seditious." Yet the labor leaders simply applied to their own purposes the good Unionist doctrine of the Army. The teaching of the Ulster crisis, affirmed Mr. Grayson, was that "the workers could arm themselves, and, better still, that the officer and the private soldier could refuse to shoot." In Ireland, asserted Mr. Lansbury, the officers had mutinied, and all that the labor cause wanted was that "Tommy Atkins should do likewise." This is horrifying to the Conservatives, but what difference does it make whether the language is uttered by Bonar Law and Lord Hugh Cecil, or by labor agitators? On the main question of the duty of the Army to support the civil power, the "general orders" under which the troops acted in Ireland when the Unionists were in power and Mr. Balfour, as Irish Secretary, was sternly putting down Nationalist disturbances, have lately been reprinted. In addition to requiring the military to be at the service of the Government in suppressing riot and disorder, they specifically prescribed that troops might be used to "oppose armed insurrection," and to "disperse treasonable meetings." That was sound policy in Connaught in 1891, but is unconscionable tyranny in Ulster in 1914.

A Cabinet headed by Count Okuma was the logical way out of the *impasse* created by the fall of the Yamamoto Ministry and the inability either of Conservatives or Radicals to rally a majority in the Diet. Count Okuma occupies a middle position, and though his progressive followers are not the strongest faction in Parliament, his personal prestige is such as to promise a fairly long tenure of office for the new Ministry. The new Premier is seventy-six, and his career as administrator dates back to the very beginning of the modern régime in Japan. His advanced ideas brought him repeatedly into conflict with the members of the Elder Statesmen group; but with the disappearance of the latter and the rise of a democratic spirit inimical to so many of the traditions of the older Japan, Count Okuma, as a man seasoned by experience and old age, may well appear welcome to the conservative elements as a defence against the threatening forces of radicalism. Yet the postponement of the issue of representative government cannot be for long. As the veterans of the Meiji pass from the stage, the centre of parliamentary government must shift from a personal to a party basis.

THE CHANGED MEXICAN POLICY.

"Impatience on our part would be childish, and would be fraught with every risk of wrong and folly. We can afford to exercise the self-restraint of a really great nation which realizes its own strength and scorns to misuse it." "We shall triumph as Mexico's friends sooner than we could triumph as her enemies—and how much more handsomely, with how much higher and finer satisfactions of conscience and of honor!"

These words from President Wilson's special message to Congress last August, on the Mexican trouble, are just as true to-day as they were then. If our Government is to depart from their spirit now, it will cause not only disappointment but surprise. What has happened to break down the President's long forbearance? It would seem that he had borne the big grievances of thirteen months, resolute against war, only in the end to lose patience over a very little one. For it is clear that, if the Administration had chosen so to represent it, the Tampico incident would have appeared a negligible trifle. A mistake had been made in arresting American bluejackets, but it had been promptly disavowed and an apology for it offered. And even if the President considered it necessary to back up the demand of Admiral Mayo for a salute, this was virtually granted. There was some characteristic fencing by the Mexican Government over the details, but the final offer of Huerta was to fire the salute as demanded by us, with a return salute to the Mexican flag to be made by us as agreed, on the sole condition that the undertaking on both sides be reduced to writing and signed in the form of a protocol. This last President Wilson refused. It is said that he feared it would mean formal recognition of Huerta. But it is difficult to see how it could be more of a recognition than is involved in sending him diplomatic notes. In any case, the final result is that, in consequence of this seeking to divide a hair 'twixt north and northwest side, Congress has been asked to authorize measures of war against Mexico!

In Mr. Wilson's message to Congress on Monday he disclaimed all intent of anything like a war of revenge or of conquest. He appealed for authority to use the armed forces of the United States, but denied that real war was intended. Nor did he fail to assert the benevolent motives of this Government, which, he declared, was still desirous of leaving the Mexicans free to work out their own destinies. But the crucial thing, the pitiful thing, would be that war should be begun on a mere punctilio, after all these months of resisting the pressure and clamor for war on the score of really serious provocation.

In standing for peace, as he has done through this period, President Wilson has made secure what even he could not now shatter at a stroke, if he were so foolish as to try. He has shown that the people are ready to follow a strong leader who is against war. Aside from a few small interested groups, there is in this country no desire for war with Mexico. This is due in good part to the firm attitude taken by President Taft and, after him, by President Wilson. Their patient but resolved course kept the war-spirit in restraint. What a calamity now to loose it unnecessarily! Yet it is reassuring to note that there is nowhere any enthusiasm for the threatened war. Most of the people one meets, most of the newspapers, seem a bit ashamed that things have come to such a pass that the powerful United States should be setting out to chastise puny Mexico. There certainly can be no glory in that, and there may be much misery. It will be said, of course, that we are merely embarking upon a holiday punitive expedition. But sensible men know that the sword once grasped is not easily dropped; and that when the guns begin firing, it is harder and harder for the voice of reason to make itself heard.

As we write, no irrevocable decision has been made. Every one of right feeling will hope to the last moment that some way may be found of averting a war that could not help seeming unworthy and degrading, and in which few of us could see any warranting principle or inspiring cause. A paltry war is the most horrible of all. It necessarily produces those forced and cheap and disgusting exhibitions of "patriotism" which we are now beginning to see—diners in restaurants, not one of whom could be dragged into the field, rising to sing "The Star-Spangled Banner," with other displays as tawdry. There will doubtless be others, like the Yale students, to think of war as a grand frolic. And the pity of it is that such words of truth and soberness as ex-President Taft addressed to the New Haven collegians on Sunday will have no chance of a hearing, if war comes. Yet what Mr. Taft said is verity itself. War means not only the sacrifice of life and treasure; it means the piling up of taxes, with their burden crushing those least able to bear it; it means peculation and dishonesty and fraud, with the brutalizing and corrupting of the whole conduct of public affairs; above all, it means the subordinating of every other public question, and the indefinite postponement, or entire sweeping away, of all programmes of civic betterment and social reform. That nothing of this lies in President Wilson's purpose is conceded; but he must know, and if he does not he will speedily ascertain, that a real war with Mexico would make his Inaugural, with all of its moving words about the need of broad policies of legislation in behalf of the victims of political and social injustice, so much waste paper.

WORKING OF THE OREGON SYSTEM.

Friends and opponents of direct legislation agree that it is too soon to attempt anything like final conclusions regarding its working, even in the State where it has been tried most extensively. But it is not unprofitable to take a look at the experiment from time to time, and scan its progress. Oregon has had the initiative and referendum since 1902, direct primaries since 1904, and the recall of elective officers, including judges, virtually direct election of Senators, and constitutional authority for proportional representation and the preferential ballot since 1908. Only Portland has availed herself of this last provision. During the dozen years since the initiative and referendum were adopted, 107 measures have been submitted to the voters, of which 47 have been accepted and 60 rejected. These have been of all degrees of importance, from a proposal to transfer the custody of county prisoners from the county court to the sheriff, which was accepted, and one requiring railways to carry State and county officials free, which was rejected, to woman's suffrage, which, after three defeats, was adopted, abolition of the State Senate, and exemption of all improvements, tools, livestock, and furniture from tax-

ation—a single tax measure in disguise—which were defeated.

One of the first things that strike one who examines the table of votes on measures submitted to the people is the percentage of the vote for officials that was cast upon initiative and referendum proposals. Upon every occasion except one, submission of such measures has been made at regular elections. Only twice has the percentage of the vote for officials that was cast for or against the measures submitted fallen below 70, and then it was above 65. In the great majority of cases, it has been between 80 and 90. On three measures more persons voted than voted for officials, these three being proposals submitted in 1910 to regulate or prohibit the sale of liquor. In comparison with New York's recent fiasco of an election to decide whether or not to hold a constitutional convention, these figures are most creditable to the Oregon voter's sense of duty. Even in the one special election of last year, the vote upon the five not tremendously important measures submitted was 75 per cent. of the average vote for President and other officials in 1912. Yet a proposal to require a majority of all electors voting, in order to carry a measure, was rejected by a two-thirds vote in 1912, over 80 per cent. of the voters who marked ballots for officials expressing themselves upon this revolutionary issue. This odd manifestation of political psychology is probably to be explained upon the ground that the proposal was felt to be an attack upon the system of direct legislation.

In general, the results of the vote upon the 107 measures which have been submitted are creditable to the citizenship of Oregon. It is interesting to note that the two proposals to increase the pay of officials were rejected by votes of three and five to one, and that there has been a marked tendency to reject proposals involving taxation, even to the extent of refusing permanent support to two of the three struggling State normal schools. On the other hand, the single tax system has been defeated under every guise in which it has presented itself, except in an act giving counties the power to adopt it, which was carried by a very small majority. But these are just the results which would be expected of a community which, if not rural, is not urban either. Oregon has but one city of over 15,000 inhabitants, and its unincorporated or rural territory contains two-fifths of its people. If a community so composed is not fairly conservative, where should we look for one? It would not be possible to draw any inferences whatever from these results, applicable to a community like our own—not if direct legislation had been prevailing in Oregon for decades.

Yet there have been one or two experiences in connection with the Oregon system that cannot be dismissed so easily. The details that we have presented have been drawn from an article by Richard W. Montague in the *National Municipal Review*. Mr. Montague is in sympathy with the system of direct legislation, but is unable to say much for direct primaries as they have worked in Oregon. Why this piece of the machinery should have failed, is difficult to discover. But its failure emphasizes the impossibility of generalizing at present about the working of direct government. A more serious matter is Mr. Montague's "negative evidence" upon the effect of the recall of judges. Two attempts have been made in Oregon to recall judges of the Circuit Court. Both occurred "under circumstances that writers on the subject of judicial recall have pointed to as constituting the greatest dangers to the independence of the judiciary, and consequently to free institutions; namely, an unpopular decision or the appearance of taking an unpopular position by the judge, on an issue in which the public has a lively interest, and a strong and unscrupulous party or faction ready to urge its cause against the judge." In the two instances mentioned, the promoters of the recall were unable to obtain the necessary number of signatures to set the recall machinery in motion, and Mr. Montague infers that "so far as the evidence is in, it is perfectly safe to trust a normal American electorate" with this weapon. The test of the recall of judges, of course, comes, not when the voters are willing to accept an unpopular decision, but when they are not willing to accept it, and a single instance of the latter sort may easily outweigh in its consequences ninety-nine of the former. It is this sinister possibility that makes one hesitate to give up a system which, with all its faults, has proved its ability to stand heavy strain.

THE MONOTONY OF THE MACHINE.

The issue between the labor unions and the advocates of "scientific management" resolves itself just as frequently into a human problem as into an economic problem. This point has been well brought out by the rival views on scientific management which have been discussed the past few days before the Industrial Relations Commission. The objections brought forward by the representatives of labor were of two kinds: fears lest "efficiency" mean only a speeding-up process of which the pecuniary advantages would fall only in small part to the worker; and resentment at the reduction of the worker to a standardized, smoothly-functioning, unquestioning, and, by implication, unhuman machine. It is this phase of the problem which appeals most closely to the theoretical friends of labor. The grinding monotony of industrialism against which Ruskin lashed out so violently is at present very much to the front. The argument is familiar enough. As contrasted with the purposive and free play of intelligence in the old handicraft worker, as contrasted with the purposiveness which the business man and professional man of to-day still find in a succession of tasks, each complete in itself, the factory worker, under division of labor, is the victim of a weary and endless process, with the wage, and not the work, as the only aim in view.

It would be absurd to deny that a very fair measure of truth obtains in such pictures of the monotony of the machine. But it is just as plain that a vast deal of exaggerated psychologizing and sociologizing has piled up about the subject. There are two conflicting lines of argument which Socialist critics of the present system are in the habit of advancing, often simultaneously. One is the older argument which foresees revolution as produced by the increasing misery and degradation of the working classes. The other is the new argument which foresees revolution as produced by a working class advancing in physical welfare, in knowledge, and in organization, in consciousness of and confidence in their own strength. The humanitarian writer who cries out against the monotony of modern industrial life

belongs to the earlier school of thought. The theory of the steady degradation of the working class was developed by the early Socialist thinkers on *a priori* grounds. Because the facts to-day contradict them a revised philosophy has become necessary. The critic of modern industrialism, on the whole, clings to the old *a priori* methods of reasoning. Here is the grinding, whirring rush of the factory, with its unvarying, monotonous routine, its infinitesimal division of tasks, its total lack of the creative instinct of the artist; can there be any doubt that the life of the factory worker is more depressing than it ever has been?

To which the answer is that it isn't so. The newer Socialist contention is conclusive on the point. If it be true that the worker is growing in self-consciousness, in resourcefulness, in the sentiment of class solidarity, it must be pretty plain that the machine is not exercising a brutalizing effect on the worker. Even the distinction which critics of the present system are beginning to draw between the so-called aristocracy of labor and the great mass of unskilled or semi-skilled labor, fixing our attention entirely on the factory in its most discouraging aspects, as its fruits have shown themselves at Lawrence or at Paterson, only forces us to conclude that this growing capacity of the mill-hand, not merely to feel unrest, but to express his unrest, is a sign of growing intellectual power and freedom which, far from suppressing, the factory has brought into being. The phenomenon, so universally recognized, of the growing tension of urban life offers proof in the same direction. What is it that draws the masses from the country to the cities, if not the greater facilities of human communication, the wider opportunities of pleasure, of spiritual excitement and growth—even if growth sometimes in the wrong direction—which the factory and the tenement offer?

The fallacy is a double one. It consists, on the one hand, in exaggerating the stress of modern industrial life, by leaving out of account the steady shortening of the hours of labor and the steady increase of opportunity for development that a shorter workday affords. It consists, on the other hand, in exaggerating the happy conditions under which the vast mass of humanity carried on its toil in pre-industrial days—the old fallacy of the Golden Age, somewhere back in the past. The classic picture, of course, is of the mediæval handicraftsman taking joy in creating beautiful, entire, wholesome things. But the mediæval world was not made up of cathedral builders singing hymns in stone and mortar. (Recent skeptics have pointed out some very wretched jerry-building in the mediæval cathedrals.) For the great mass, life was one of crushing, brutalizing toil in which it would be difficult to find a higher purposiveness or a higher joyfulness than in the textile-works or rolling-mills of to-day. Monotonous enough life must be in the garment shops of New York. But the New York factory girl, as she revealed herself during the garment strikes of recent years, alert, confident, capable of leadership, is certainly no witness to a debasing, colorless existence.

PRISONERS AND GOOD ROADS.

The twentieth century was well under way before we awoke to the advantages, not to say the necessity, of well-made highways; then, rather suddenly, we were struck with a double condition: the poor management of the roads was paralleled by the poor management of the men who, for their offences against the law, were confined in prison. This two-fold waste was too much for our sense of efficiency. The idea of curing, or at least alleviating, a pair of evils at a stroke captured the practical imagination, and, enforced by the sentimentality that the practical mind is always glad to welcome when it appears as an ally and not as a foe, gave the nation more and better roads than it had ever built before.

We do not say that this is exactly what history will record, but the connection between prisoners and good roads, and roads and good prisoners, is increasingly emphasized by persons interested in the one or the other, or both. Gov. Glynn has recently signed a bill appropriating $75,000 for the addition of a brick-making plant to the resources of the State Reformatory at Elmira, N. Y. First let the prisoners make the bricks for the roads; then why should they not lay them? State convicts have never been put to work on highways in New York, but a few counties have tried the experiment, notably Onondaga, the county in which Syracuse is situated. One such piece of work, carried on for three months, employed about thirty-five men. They were sheltered in a farmhouse which they themselves repaired, to make it habitable, and half a dozen of them did the housework, the cooking, and the laundry work. The guards were for supervision rather than discipline. Over a hundred different prisoners were employed in the work, but no attempt at escape occurred. The prisoners continued in good health, and were willing to work, although they were inexperienced and received no pay. So encouraging were the results that the county supervisors repeated the experiment the next year on a larger scale.

Those who are informed on this subject like to point to Rome, the great road-builder, and remind us that those wonderful highways were built by slaves. But this proves rather too much, and, besides, we are accumulating a fund of knowledge based upon our own conditions. The last number of the Proceedings of the Academy of Political Science is devoted to the employment of convict labor on road construction in the Northern States. The record is almost uniformly favorable to such employment. From New Mexico, newest of States, but oldest in adopting the "honor system" and working prisoners on public highways in accordance with it, to New Jersey, whose first trial of convict labor on roads was made last December, the testimony is well-nigh unvarying that the combination is good for both the roads and the prisoners. Only Utah seems to have had an actual failure with the "honor system," and the solitariness of this exception suggests that the blame for it lies with the administration of the system rather than with the system itself. Everywhere else the reports are that the prisoners who are placed on their honor voluntarily are scrupulous about observing their pledge. In Colorado, during four years, less than 1 per cent. of the convicts concerned broke faith. In Oregon, after the recapture of an escaped prisoner at Gov. West's personal expense the other prisoners asked to be allowed to pay all costs out of their "bonus money," on the ground that their untrustworthy comrade had "double-crossed" them by throwing suspicion on the

system and on all the prisoners. There have been no wholesale attempts at escape whatever.

How efficient are prisoners as road-workers? The exact ratio of their efficiency to that of free laborers is not very important, since other considerations control here, such as the willingness of organized labor to allow convicts to do this sort of work, the desirability of providing occupation for them, and the sad condition of our roads. But it is interesting to note that while in some cases they are reported as less efficient than free labor, being unskilled, in at least one State, Washington, they are credited with being a third more efficient, owing, not to compulsion, but to fear of being taken back to the penitentiary. The possibility of development for the more intelligent is also pointed out in the opportunities for blacksmith, mason, carpenter, and other work connected with road and bridge building. The relation of such opportunities to subsequent employment is evident. One matter is insisted upon: the prisoners should be paid. The folly of keeping a man idle while his family depends upon charity, public or private, is apparent. Both economic and moral reasons urge paying him wages. He does his work better when he is paid, and, like the free laborer, he reaps the reward of self-respect. Road work, as it happens, shows large net earnings by prisoners, who can thus help in the support of their needy families, while the balance to the prisoner's credit on the prison book acts as a check upon the temptation to lapse into evil ways.

THE SURGICAL CONGRESS.

Our country has borne an honorable share in the development of modern surgery, and it is matter of special satisfaction that the two men to whom, by virtue of their offical position, it fell to greet the delegates to the Fourth Congress of the International Surgical Association were so eminently representative of distinguished achievement. Surgeon-General Gorgas, who extended a welcome on behalf of the President of the United States, has won imperishable fame by his work in converting the Panama Canal Zone from one of the most pestiferous into one of the most healthful spots in the world; and Dr. William J. Mayo, who welcomed the visitors as president of the American Surgical Association, has a unique distinction in having elevated an isolated hospital in a small Minnesota town to the rank of one of the world's most famous institutes of surgery. An additional element of national satisfaction was supplied in the address of Professor Depage, of Brussels, president of the Congress, who not only made reference to the excellence of American surgery, and to the prompt helpfulness of the American Red Cross in such an emergency as that of the Balkan War, but paid a tribute to our country as personifying throughout the world the "ideas of peace and civilization" of whose ultimate triumph he declared that the International Surgical Association feels confident.

To the members of the Congress, the matters of chief interest are, of course, the latest developments in surgery, including those whose status is still problematical. But to the outside world, such a gathering as this may well serve rather as a reminder of the wonderful progress that has already been fully realized. To the younger generation, it may be startling to be reminded that antiseptic surgery, in the modern sense, is barely half a century old, Lister having begun his researches only in 1860; and the science of bacteriology, now of such enormous extent and manifold usefulness, was, as recently as thirty or thirty-five years ago, pursued by only a handful of men as a novel specialty. Much more recent still, of course, are the Röntgen rays, with all the aid they supply to the knowledge of individual cases; and even the electric light, which is laid under contribution for the exploration of interior organs, is a mechanical development of the last few decades. But these are only a few salient elements in surgical progress which strike the attention of even the most remote and superficial observer; how vast has been the accumulation of knowledge and skill through the special labors of hundreds of gifted and devoted men, we get but a faint inkling in the record of this or that wonderful operation which in former times would have been utterly impossible.

One effect, of direct practical importance, ought to be produced by the contemplation of this magnificent progress, not only of surgery, but of medical and sanitary science generally. When one tries to realize its immense sweep, the way it has silently entered into the lives of millions, averting or conquering disease and staying the hand of death, one can but stand amazed at the pitiful want of imagination which alone can account for the misguided efforts of men and women, presumably normal and well-meaning, who, in the name of humanitarianism, seek to put obstacles in the way of the laborers in this field. They rush in with their half-knowledge, filled with a senseless readiness to find wicked unscrupulousness or heartlessness in men whose lives are spent in the endeavor to diminish our sufferings and eliminate the perils that beset us.

With the desire of these people to prevent wanton cruelty, or to reduce to a minimum the sufferings of animals used as subjects of medical research, every right-minded person must sympathize. But in the pursuit of these objects they exhibit not only a lamentable want of the sense of proportion, but also a hopeless inability to weigh evidence. As a rule, they refuse to admit that any important benefits have been gained by experiments upon animals; and they are able to pick up here and there an expression of some medical authority on their side, which they put up against the virtually unanimous judgment of the whole world of science. And when they find themselves compelled to abandon this position, they take refuge in silence on this subject, and devote themselves to selecting, magnifying, and coloring with all the sensational epithets at their command whatever in the records of medical research has an appearance of sustaining their general indictment of heartless and wanton cruelty. Neither the high character and lofty aim of the men who carry on these researches, nor their assurances that everything is done to reduce pain to a minimum, nor any contemplation of the physical agony and the spiritual anguish spared to countless thousands of human beings by the discoveries arising from their labors, suffices for a moment to stay the hand or the pen of the one-ideaed anti-vivisectionist.

In contrast with the blind and narrow sentimentalism which inspires this kind of attack, the work that is being done by

the great army of the world's physicians and surgeons, and the researches that are being carried on by medical investigators the world over, strike one with a sense of grandeur and nobility. We take these things nowadays as a matter of course; we accept their fruits, and give little thought to the labors by which they are attained. But no one who has been in contact with the men who are in the van of this great work can fail to be struck with the fact that in them the strenuousness and ardor of the scientist is mated with the devotion and humaneness of the lover of mankind. Along with the elevation of medicine and surgery to that high scientific plane which they now occupy has gone not a brutalization of the profession, but a more general prevalence of a high and broad humanity among its members. The sawboneses of whom we read in "Pickwick" were never, of course, representative of the profession, but there was a greater admixture of that sort of thing among medical students of past generations than it is easy for people of to-day to believe. The higher intellectual qualifications, and the more strenuous intellectual exertion, that the present-day standards of medicine demand, have without question weeded out, in a very great measure, not only the more ignorant, but the more callous and the more coarse-grained candidates for a medical career.

SHAKESPEARE AT THE SPRINGTIME.

For those who are celebrating to-day the Shakespearean anniversary, the place and date of his birth may easily appear to have peculiar significance. Born at Stratford three hundred and fifty years ago, the poet came into the world "in the sweet o' the year." No one who has passed that season in a lovely English hamlet like Stratford can quite forget the experience; and the reawakenings which spring must have brought in boyhood to the sensitive spirit of Shakespeare may well have provided a permanent outlook on nature. Theorizing and the record of his works lead to the same conclusion. The out-of-doors furnishes a large portion of his settings, which he not infrequently enlarges upon in the dialogue, and by preference he turned to its glorified scenes. There was, of course, a particular reason for seeing, through the eyes of Lear, only the rough and the rugged; just as he was bound to surround the idyllic Perdita with Nature's store of beauty. But when not specially prescribed, the natural background of his plays often suggests something of the elation which he himself may have felt in the airy freedom of Stratford. Even when serving the purpose of elaborate banter, the setting is not allowed to lose its poetry:

> The moon shines bright: in such a night as this,
> When the sweet wind did gently kiss the trees
> And they did make no noise, in such a night
> Troilus methinks mounted the Troyan walls
> And sigh'd his soul toward the Grecian tents
> Where Cressid lay that night.

And the poet's sincerity in the line:

> How sweet the moonlight sleeps upon this bank!

is only heightened by the simplicity.

It is not enough to say that Shakespeare fell in with a custom of his day in scattering sunlight in the paths of his characters. There is ample evidence to prove that he looked at the scenes about him with a glowing appreciation of their beauty. His peering daffodils, and "violets dim"

> But sweeter than the lids of Juno's eyes
> Or Cytherea's breath;

> His glorious mornings that
> Flatter the mountain-tops with sovereign eye;

> His little
> dive-dapper peering through a wave
> Who, being look'd on, ducks as quickly in;

attest both the observant eye and the exultant heart. Whether we think of Shakespeare's Nature as being largely at the springtime or shortly thereafter, as one is apt to do, or as divided among the seasons, it offers a freshness and joy such as he himself could observe at Stratford in "proud-pied April."

If the theory of the effect of environment upon a writer had not been overworked, we should be tempted to say that Shakespeare's out-of-doors was responsible for his dramatic atmosphere. The buoyancy of his sparkling comedies is really typical, though in less degree, of his entire work. Even the sombre "Lear" scarcely furnishes an exception to the rule. We have only to compare it in this respect to certain tragedies of Ibsen to observe the different points of view of the two men. While winds rage and thunders crash, in the famous scene on the heath, there is never the shut-in feeling which is imposed by "Ghosts" or "Rosmersholm." The air will some time clear, if not for Lear, at least for the kingdom. There is breadth and sweep which catch up the protagonist and make him a part, but only a part, of Nature's convulsions; the wretched victim in "Ghosts" is suffocated, along with the audience, by the narrowing and concentration of natural forces. For the nonce it is as though Nature existed merely to teach this awful lesson.

Partly, the difference noted is due no doubt to the newer requirements of the stage. The great number of scenes which Shakespeare could use help to give variety and large dimensions to his world. But this is not the whole story. Shakespeare stands out in almost as marked contrast to his contemporaries. Even so impressive a drama as "The Duchess of Malfi" introduces, along with other horrors, a "dance of eight madmen," not for sensational purposes, but to thicken and intensify the tragedy. The atmosphere, as might be expected, here becomes murky. Murky Shakespeare's atmosphere never is. A comparison of Marlowe's "Edward II" and Shakespeare's "Richard II," which have leading characters fundamentally similar, brings out the same point. Both Edward and Richard live in a world of their own imagining, being unfitted by temperament to attack the problems of the actual world. One is surrounded by the atmosphere of his two or three pitiable faults, made monotonous by repetition; Richard, equally beset, builds an imaginative world that is as airy and diverse as it is impractical.

Shakespeare saw life *naturally*, if by that is meant that the spirit of the out-of-doors is allowed to get in-doors. If his characters show a certain enlargement, they partake of the same idealization which his Nature undergoes. The spring of life is never quite absent from them, whatever may be their age. They are caught at the high tide of existence, when the blood is urgent and impulses are generous, for good or evil. Sometimes they are as precisely drawn as his little dive-dapper, and usually they have, like his "violets dim," divine aspirations.

Foreign Correspondence

A PHILOSOPHER ON THE HUSTINGS—MR. BALFOUR AND MR. BONAR LAW—SENATOR LODGE'S REPRIMANDS.

LONDON, April 11.

The dramatic surprises of the last few weeks have schooled people to believe almost anything, but it was hard not to think that Mr. Balfour's appearance on a Hyde Park platform must be an optical illusion. Or was it possible that Mrs. Thurston's fiction of John Chilcote was plagiarized by fact?

Never before has any English statesman of Prime Ministerial rank condescended to enter the arena of Hyde Park. Mr. Balfour is one of the last men who might have been expected to establish the precedent. What would his uncle have thought if he had lived to hear of it? This escapade might have been much more easily credited even to Lord Rosebery, who at the period of his chairmanship of the London County Council showed considerable democratic sympathies. Gladstone might have done such a thing, for one of the most notable incidents in his career was an address at an immense open-air demonstration at Greenwich. But as to Arthur James Balfour, one might even have doubted whether he was aware that Hyde Park was ever used for the purpose of a public meeting. At the time that his 1902 Education Bill was under discussion, some reference was made in the House to an enthusiastic popular rally—held, of course, on the usual ground—in protest against it. Mr. Balfour, turning to his colleagues on the Treasury Bench, remarked, with his well-known air of polite bewilderment, "Let me see, where did this gathering take place?" The rumor that he had to ask a policeman his way to the park is an obvious invention, for Rotten Row during the season cannot have been a strange place to him.

At any rate, the spectacle of Mr. Balfour holding forth to a Hyde Park throng from the elevation of a wagon was more curious than any scene that has lately been presented on the stage. Little wonder that the sight of his deprecatory and academic figure in such surroundings made some observers think of an aristocrat on a tumbril during the French Revolution, or that others compared the sensation to that of a bank holiday crowd invited to listen to a classical concert.

Liberals find it difficult to judge whether it would be more to the interest of the present Government for Bonar Law to continue in the Opposition leadership, or for it to go back into the hands of Arthur Balfour. Bonar Law helps his opponents by his reckless plunges. He has no consistent policy, but is the victim of any rash impulse that promises some immediate advantage at the expense of the other side. The situation was correctly hit off by Augustine Birrell, in explaining why the Government had not suffered more grievously from its own mistakes: "We never dig a pit for ourselves but Bonar Law steps into it." More than once the present Unionist leader has had to withdraw within a few days or even hours from a position confidently but thoughtlessly taken up in the excitement of debate.

The flaw in Mr. Balfour's leadership was of a very different kind. He is immune against spasms. No sensational turn in the course of events can disturb his equanimity. But he is no less seriously handicapped by an astonishing inability to diagnose popular feeling. The débâcle of his party at the general election of January, 1906, was largely due to his refusal to recognize the opposition that had been aroused by the Chinese labor policy in South Africa. Even without this his Government would have been defeated, but it was the storm of indignation at this phase of his administration that turned the defeat into a rout. Evidences of popular antagonism were visible everywhere to the naked eye, but Mr. Balfour was all the time serenely unconscious that he had offended public sentiment in the matter. Mr. Balfour's daimon again failed to warn him how the country was likely to take the rejection of the 1909 budget by the Lords. He was not ostensibly a member of the die-hard group, but he did not interpose his authority to check the passionate counsels of the extremists. No other living statesman has the record of having led his party to defeat in three general elections in succession, and that Mr. Balfour has suffered this humiliation is to be attributed in no small degree to his astonishing blindness to the signs of the times.

But he learns nothing and forgets nothing. He appears to be quite unaware that the normal English attitude to Home Rule is at all different to-day from what it was when he went to the Chief Secretary's office in Dublin in 1887. In his speeches against the present Home Rule bill he has assumed in the English constituencies the same state of mind to which he appealed a quarter of a century ago.

Students of the natural history of fossil remains have found a good deal to interest them lately in Senator Lodge's "One Hundred Years of Peace." It is not often possible to dig up a deposit which retains so perfectly the very atmosphere of a hundred years before. Perhaps the best-informed and most careful of the many English reviews of the book was that contributed by H. S. Perris to the *Daily Chronicle*. He wonders for what audience the book was intended. If for Americans it will hardly please the more balanced and scholarly, who expect something more than robust partisanship in historical work. If for Englishmen, the Senator has mistaken his audience, for they will either smile or will resent being lectured by an American politician for the sins of themselves and their fathers during these hundred years under the guise of an historical retrospect. Mr. Perris points out in detail several of Mr. Lodge's sins of omission and commission, and concludes with the wholesome remark that it is equally unpleasing to witness the British lion roaring and lashing his tail and to hear the American eagle screaming and flapping his wings. "The time has gone by," he suggests, "for statesmen to invoke these noises and grimaces of the Zoo. The world's peace must be made and kept by saner methods and more constructive toil."

H. W. H.

THE "FRENCH LEAGUE"—A MOVEMENT TOWARDS UNITY.

PARIS, April 11.

A movement was begun in Paris in the last days of March which may—and which may not—succeed in uniting the sorely divided French people, at least in those things which are necessary to their existence as a nation. It is really non-political, and its leaders are trying to keep it non-partisan; but it cannot help having an influence on the general elections of Sunday, April 26, which will seat in Parliament for four years the Deputies who rule the French republic.

The interest which such a movement has for Americans consists in the universally recognized high character of the Frenchmen who are organizing it. While it aims at a united France and includes representative men who are not politicians from dozens of varying political groups, it has no coöperation, so far, from the Extreme Radicals, who, with the help of Socialists, now hold the Government of the republic. No sane prophet will risk his reputation by predicting the result of the coming elections; but no matter what Government is in power, the "French League," which embodies the movement, will maintain its essential work. It concludes its appeal for union with weighty words:

> This is a momentous hour. A conflict between European Powers is, to say the least, possible; and its chief danger will be for France. Yet our political and religious discords are being exasperated and the disquiet of many all but reaches despair.
>
> The French League will abstain from all political or religious dispute, and will ignore all that divides. It will bring into light and force the feeling which, notwithstanding dissensions unavoidable in a free state, unites us in the love of our country.
>
> It wishes to persuade the French nation that France, united in patriotic faith, has nothing to fear from whomsoever. It will preach confidence and hope.

Words like these are not unexpected from the new League's presidents of honor—Prof. Ernest Lavisse and Gen. Pau. They are well authorized by their life and career to represent the two great non-political forces of France, the university and the army. Ernest Lavisse in the eighties and nineties was the one leader of the university youth of France. A "new spirit" of concord was timidly proclaimed by Minister Spuller, the friend of Gambetta, in Parliament in 1892; but it expired in the angry explosions of the Dreyfus affair and the religious war which was made to issue from it. For fifteen years, majority rule in the French republic has meant the nagging of the minority—and of a minority which, if it had been united, might have been the majority at perhaps all of the general elections.

The Extreme Radical and Socialist Deputies, who have formed the ruling majority in Parliament, have not once been elected by more than 47 per cent. of

the voting population of the country. The 20 to 25 per cent. of the voters who persist in not going to the polls would, for the most part, not have voted for them. It is these "abstentionists" and the incurable divisions of the minority which have made the victory of cleverer politicians possible. And this may happen again now, unless the sense of impending danger to France as a nation should prove strong enough to prevent politicians from seizing once more on the government of the republic for their own private and party interests.

To an American there is no obvious reason why French Radicals, even, should not uphold the patriot rather than the politician. It is understood that Socialists enter Parliament to help on their cause; and more than once they have bargained with Conservatives. If they have been supporting Radical Governments, it is because it is easier to push them towards Socialist legislation.

Professor Lavisse and many other members of the new League were notorious Radicals once. If they are joining with equally notorious Conservatives now, it must be because they believe the time has come for Frenchmen to stop fighting among themselves and to stand all together against the common danger from without. Paul Déroulède, who was so long berated as a patriot Don Quixote, has died just before this rally to his stirring hymn:

Fight for your Mother if you love her!

No one can suspect Ernest Lavisse of anti-Pacifism; and yet sitting with him as president of the French League is Gen. Pau, who did so much to get the three years' military service and increase of armaments through the French Parliament. Among the vice-presidents are another general, an admiral, and a bishop; a Moderate Republican Senator and a Deputy, Joseph Reinach, who did chief work for the exoneration of Dreyfus. Among significant names in the committee are those of men like the Greek scholar Maurice Croiset, the successor of Renan as administrator of the Collège de France; Louis Havet, who in the Dreyfus affair was a founder of the League of the Rights of Man and, as professor of the Collège de France, led the opposition to bestowing a professorship in that national college on Brunetière, because the latter was a Catholic; Maurice Barrès, who leads the French youth of to-day in the national reaction; Lépine, Prefect of the Paris police through many Radical administrations, and Adolphe Carnot, brother of the President of the Republic, who was assassinated by an Anarchist and one of the first to call a halt in government of the republic for the majority instead of for the whole people.

There are nine members of the French Academy, among whom, besides Lavisse and Barrès, there are such world-wide representatives of French literature as Pierre Loti, Frédéric Masson, Alfred Mézières, Marcel Prévost, Henry de Regnier, Jean Richepin, Edmond Rostand. There are world-famous men of science like Arsonval; Branly, of wireless telegraphy; Daniel Berthelot and Jean Becquerel—and fifty more with a right to say to the world that France shall be one. S. D.

Education in the South.

JOINT SESSION OF CONFERENCE FOR EDUCATION IN THE SOUTH AND SOUTHERN EDUCATION ASSOCIATION — LOUISVILLE KY., APRIL 7-11.

At the Conference in Louisville large chapters of progress were recorded for the Southern States. It was a conference of a variety of interests; a national mind brooded over it, and it was reinforced by great governmental agencies. It showed economic and social changes in the making. With an estimated attendance of 2,500, not more than half were engaged directly in school work, the others included business men, preachers, men and women from the farm and from every walk of life, with a common patriotic interest of building up the rural life of the South.

The Conference opened with a memorial service to its notable founder, Robert C. Ogden. The address was delivered by United States Commissioner of Education P. P. Claxton. He reviewed the history of the Conference from the time when two or three were gathered together, seeking to unite North and South in the great educational task at hand, to the present magnificent gathering, with its splendid achievements. Dr. Claxton showed that in ten years' time illiteracy in the Southern States had been reduced more than one-half. The conception of education had broadened from the ideal of the three R's and a little high-school work to include the agricultural high school, the consolidated rural school ministering to the needs of country life, and a system of supervision and industrial training which reaches directly the homes and farms of the people. He pointed out that a radical change of spirit had taken place in the South with regard to education. The schools were no longer looked on as a necessary evil savoring of reconstruction days and carpet-bag rule, but the people believed in them and were beginning to support them properly. The figures from eight Southern States showed an increase in the past year of funds raised by local taxation of more than one and a half million dollars. He declared that the change of attitude and growth of education in the South during the past decade was the most marvellous educational progress the world has ever seen.

It was universally conceded that the most eloquent address delivered at the Conference was the exhibit at the armory. Here were gathered none of the ordinary odds and ends of school work, but actual scenes and demonstrations of work going on. From the fireside industries of "our contemporary ancestors" of the mountains, displayed by Berea College, to the moving pictures of the boys' and girls' corn and tomato clubs, shown by the Department of Agriculture, a panorama of social and economic changes was displayed that made vivid a wonderful period of Southern history.

A water tank and gasolene engine, with complete equipment for supplying the country home with running water at an absurdly low cost, was the contribution of President Joe Cook, of the Hattiesburg Normal School, Mississippi. This was not theory, but practice. The farm home displayed by Winthrop College, Rock Hill, S. C., Miss Mary E. Frayser in charge, was also a centre of attraction. The dining- and living-rooms were furnished simply and tastefully. In the kitchen and laundry were running water and every convenience for the saving of steps and lessening of labor. The washboard had been banished and was replaced by a washing-machine. And the tables were supplied with rollers to do away with the heavy lifting of dishes between dining-room and kitchen. Outside the kitchen window was a beautiful row of red geraniums, and a schedule showed a workable plan for each day's round of duties, and provided time for rest, reading, and social recreation. The effect of this exhibit might be judged by the significant remarks of all that visited it. One farmer was heard to say: "I am going to spend $150 on my wife's kitchen when I get home."

Next was a practical demonstration of cooking, and a busy crowd gathered to hear the explanation of the teachers in charge. Further on were exhibits showing the eradication of hookworm and the busy field work of the agents of the Sanitary Commission. Adjoining this was splendidly portrayed the day's work of a rural nurse, while near the entrance was a demonstration of the parcel post in operation, revealing how various kinds of produce from the farm might be cheaply and easily marketed by mail in near-by cities. This was in charge of the local post office.

The conference was notable for the splendid group meetings. At every turn one found a small company of earnest men and women tugging away at the special problem in which they were interested. Prominent among these were the conference of rural school supervisors, the conference on the country church, the women's conferences, and the conference on the education of the negro. At noon these groups would come together to listen to addresses by such eminent men as Dr. Warren H. Wilson on the "Country Church," Dr. A. D. Wilson, of the University of Minnesota, on "Coöperation," and Mr. Bradford Knapp on "Farm Demonstration Work."

The meeting of rural school supervisors was called by Dr. Claxton, rep-

resentatives of thirty-seven States being present. The informal discussions revealed an astonishing similarity of conditions in all parts of the country. No State, North, East, South, or West, seems to have a monopoly of bad roads and poor country schools, when one goes far enough from the railway. Encouraging progress is reported from all sections. The consolidated rural school has come to stay, and, moreover, this school is going to be so adjusted to the needs of the people in its community that it will be a clearing house of rural progress for young and old. It was pointed out by several that a city school of the traditional type set down in the country had done more harm than good, for it had weakened the neighborhood by sending off its strongest young people.

Valuable discussions on improving rural schools through standardization, consolidation, supervision, practical industrial training, and community activities were engaged in by all present. This group perfected an organization and elected Mr. J. H. Binford, of Virginia, president; Mr. W. E. Larson, of Wisconsin, vice-president, and Mr. L. S. Ivins, of Ohio, secretary.

Led by Dr. James H. Dillard, agent of the Jeanes and Slater Funds, as president, a very earnest group of county superintendents, State supervisors of rural schools, representative negro leaders, and interested men and women, listened to encouraging reports of the colored schools in all sections of the South. Supt. J. H. Culkin, of Warren County, Miss., told a striking story of the organization of boys' and girls' clubs among the negro schools. Warren County now has more than 2,500 negroes in these clubs. No girl is permitted to attend the county school unless she has at least five products growing in her garden. The boys are graded according to ages, and each must cultivate a stipulated amount of land, and the products grown must be such as will bring a substantial return. No boy or girl may remain in school unless this work is kept up, and every teacher is required to give at least fifteen minutes a day to the club work. As a result, there are in Warren County more than 20,000 acres of land under cultivation by demonstration methods by negroes who are club members.

Any one who has followed these conferences for the past four years, at Jacksonville in 1911, Nashville 1912, Richmond 1913, and Louisville in 1914, cannot fail to be impressed with the enormous change of sentiment and the growing determination on the part of the white people of the South to give their negro neighbors a better training for the life that they must live among them.

JACKSON DAVIS.

Country Life.

ON THE LAND.

The ingenuous reader may have found himself rather confused than enlightened by casual contact with the abundant farm-and-garden literature of the past few years. He has a vague notion that everything to do with the soil is somehow all of a piece, all one problem which ought to have an "answer"; yet the current miscellany of data and opinions, scientific theories and genial sentiments, connected with the land does not make the answer easier to formulate. The latest amiable chronicle of a David Grayson and the latest report of a state experiment station do not hang together notably well. The "back-to-the-land" theme is developed very differently in the sumptuous pages of the *Country Gentleman* and the honest, unromantic columns of the *Rural New Yorker*.

The truth is, all this writing is not about one thing, but about a number of perfectly distinct things. "Country life" is not farming, nor is pottering about in a suburban vegetable garden. As for going back to the land, that is a step which a large number of people now delight to take—in fancy; and it is undoubtedly as well for most of them that the experience should remain vicarious—not because it is not the finest thing in the world for a man to do, but because it is a very difficult thing to do successfully; and the hopeful amateur is not likely to bring to his new acres the whole equipment necessary to wring both bliss and a living out of them. It is an extremely varied equipment, involving health, brains, industry, patience, and capital. And not the least of these is capital. You may buy your fifty abandoned acres for a song, but you cannot sing them into shape. Your investment has only begun. You must have stock, machines, fertilizers (some of them cost $60 a ton)—above all, labor. To put your fifty acres in commission, to get them into a condition of high "efficiency" (sacred word), will mean spending, say, thirty to fifty dollars an acre. Are you prepared to do this, oh, my brother?

For some of these necessaries, it is true, you can get credit, but that is a poor way to begin for the amateur who has the professional game to learn. Crops do fail, or, succeeding, prove a drug in the market. The latter fact is among the bitterest disillusionings of the tyro. Diseases and vermin pests one is ready for; labor and forethought will take care of them. Even against frost and drought something may be done; they are in a way calculable, and a legitimate part of the game. But the market! Reader, did you ever look over an orchard heavy with peaches, or an acre of tomatoes in their prime, or a potato-field holding its dark green pride half through August, and realize that these gifts of a bountiful season are duplicated in your neighbor's fields over the wall, and over a thousand walls beyond; that the market is about to be glutted with perfection; and that your crops, twice as good as usual, it may be, will not fetch a dollar more than usual? This is one quaintness of the local market. Another is that it is never safe from sudden incursions by distant enterprise. Six weeks of drought in June and July: the potato crop is poor hereabouts. You, with a field that knows how to hold its moisure, with liberal use of the most expensive fertilizers, with a clean but costly defeat of the potato-bug to your credit, with incessant cultivating, achieve a remarkable yield. In September potatoes are selling at a dollar a bushel, but you don't care to unload many at that price. They will bring a dollar and a half later. You store your thousand bushels, at some expense—and just as you are ready to part with them, along in March, at a fancy price, some genius sends down a thousand carloads of perfect tubers that have wintered in Maine—and you find your little crop worth half what it was in the autumn.

It is unsafe for the beginner to go back to the land without a fair amount of capital to start him on his way and tide him over the bad moments. One factor in successful farming, perhaps the most indispensable of all, "help," is not to be obtained on credit. The man who gives you his ten or twelve hours of daily labor (in contrast with the fifteen or eighteen of the old-fashioned hired man, who is no more) must have his thirty or forty dollars a month, and must have it on time, or he will yield to his natural preference for "moving on." And he or his equivalent is indispensable. No man, whether he works extensively or intensively, can get a decent living for himself and his family out of the land with his two hands.

"But, my dear sir, I've grown all our garden stuff for years—winter vegetables and all. Right out back. Done every stroke myself. Just fun for me." It is the voice of the suburban gardener, and it tells (perhaps) the truth. Here is one incontestable fact: any man of ordinary health and brains can grow his own vegetables in his own backyard, and save a hundred or two a year, at the expense of his grocer—it is a pity we haven't the word greengrocer in America. He must do his own work, and if he is that kind of man he will find it "just fun." If he is not that kind of man, he had better let it alone. If you don't love making things grow, you may as well yield the grocer his 100 per cent. profit, and keep your hands

clean. You will either turn your garden over to a hireling and make a luxury of it, or neglect it, or make your paltry profit at undue cost. There is no more miserable spectacle to a true lover of the soil than a man who hates it and does not know enough to let it alone.

But a great many people do have the instinct for making things grow. For them there is nothing to lose and much to gain in the vegetable garden. They are sure of their pleasure, and their profit, too. They are on the safe and sunny approach to the back-to-the-land trail. All they invest is their odd half-hours, all they make is "velvet." No wonder more and more people are learning to give the instinct play, as is attested by the increasing number of periodicals and handbooks addressed to home-gardeners as a class. This literature, like that of the flower-garden, is of two sorts, the sentimental and the practical. There are writers who are so intent upon conveying their deep emotion at the marvel of the new-born bean that they neglect to convey anything else about it. I have before me an amusing product of the intoxication which may be induced by contact with back-yard soil.* Each of the writer's somewhat infantile bits of instruction as to the planting and care of common vegetables is enlivened by a dash of verse, or worse. The literary note is struck in the motto of the title-page:

> 'Twas Byron who said
> "The ladies inspired the Muse."
> But to vegetables I'm wed,
> And dame nature choose.

This is the second-best poem in the book; quite the best is the quatrain inscribed to the lima bean. It is what Blake might have written if he had ever noticed a lima bean:

> This bean so shy,
> Under sunny sky,
> Loves the salt air,
> Cool nights and fair.

Unluckily this seems to have been a fluke: the average of quality of these lyrics is more fairly suggested by

> We have Irish tubers and sweet,
> With river and valley Burbank,
> And raise more things to eat
> Than any State of our rank.

Or, in a more philosophical vein,

> Work with the hands is physical, work with the brain divine.
> As we are animals in the likeness of God,
> We should labor with our hands and mind.

Here, on the other hand,† is a book of the practical type. It is a compact but workmanlike and serviceable handbook, without graces of style, but readable, and with some good pictures. An uncommon feature is the listing of the best varieties to be planted in the home garden; this should be of use to a great many amateurs who, for lack of experience, have not known how to find their way to the most desirable seeds among the hundreds so enthusiastically commended in the catalogues.

With the aid of such handbooks, free soil-analysis by the State, the best fertilizers and methods of cultivation, and a liking for work, the home gardener is sure of his reward. But let him beware of drawing a wrong inference from his success. Half his profit as a home-gardener is, as it were, negative. His basket of vegetables is worth a dollar to him because that is what he would have to pay the greengrocer for it. But he must eat his basketful to get his fine returns; and there is a limit to that sort of thing, even in the largest and greediest family of vegetarians. Every basketful beyond what he eats (unless he takes to peddling) must yield the dealer his 100 per cent. or more. A successful truck-farm must be very near its market, and involves a system of wholesale growing and retail marketing. With plenty of capital and exceptional skill and intelligence the thing can be made to pay; but it is neither here nor there in connection with the fifty worn-out and abandoned acres in Nowhere-in-particular which may stand for the lure of our hopeful commuter. Before he throws up his city job and chestily installs himself in his abandoned farmhouse, on his own land, he should look himself coldly in the eye and ask himself these questions: Has this man enough thousands in store to back him in this new career? Can he pay for the initial repairs (repairs is the euphemistic term) on the farmhouse; for the tools, stock, vehicles, machines, fertilizers, labor, which are needed to put these acres in commission? Does he know what he is going to grow, and where he is going to sell it, and whether, when he has sold it, he will be richer or poorer?

Some of these questions the author of "That Farm"* could have answered to his satisfaction, at the outset. Mr. Whittingham has written, or caused to be written, an instructive and often amusing account of his successful experience as a back-to-the-lander. The exhibit has little bearing upon the average case; for, in the first place, Mr. Whittingham has plenty of capital, in the second place he edged cautiously into the game instead of taking a sudden plunge, and in the third place he is evidently a man who could make a comfortable living selling shoelaces in Tahiti. He is the Yankee of fable, touchingly American, with a vein of sentiment which flows freely, out of business hours, and a strong sense of the whimsical, the clock around. He has a mission; listen to the call in the closing paragraph of his delightful book:

> When the music of the metropolis begins to grate on you, city brother, and the glittering lights of the Avenue look like signals in a tunnel, do not think that hope has been scuttled, nor that life is a joke or a tragedy. Come where the sunshine will bleach despondency and cynicism out of your heart — come through the open gateway of That Farm into the promised land.

When Mr. Whittingham approached the gateway of That Farm, he had an income of some $30,000 as head of a "going" dry-goods business, and "a bit laid by." He had been interested in the theory of farming, but his first taking to the land was by way of settling "the annual annoyance of solving the summer problem." He found a 400-acre farm, with a dwelling house which had cost $50,000, and numerous tenant houses, barns, and outbuildings, including a mill. The owner was in difficulties, and after leasing the place for a year Mr. Whittingham pared down the "asking price" of $50,000 to some $20,000 and certain worthless securities. He gives a record of his first four years on the place. The first year, under an overseer system, the profit was small—only a few hundred. Taking over the management himself and applying his business energy and sense to the problem, the owner quickly increased the returns, his net profits for the fourth year being over $22,000. This was done by sparing no necessary outlay and permitting no waste, by doing a retail delivery business in milk and garden truck, by paying good wages and commissions to his head men, and by personal supervision and attention to detail such as would be necessary in any other industry. He supplants the local milk monopoly by establishing a more generous monopoly of his own. It is all a fight, and a fight to be enjoyed by a man who is accustomed to win. Incidentally, he improves the standards of farming in his neighborhood, and shares his good fortune wherever he can within his margin of profit. In short, he has been able not only to pick up a $100,000 farm for a fifth of its value, but to "swing" his purchase. We wonder if he really fancies that many of his brothers who are tired of the music of the metropolis and the lights of the avenue could have done anything like the same thing? He has made a fascinating story of it, at all events: his Harum-like sketches of local types and incidents are worth having for their own sake.

A book such as Mr. Whittingham, with his demand for the best methods, might have consulted in remodelling his farm building, is "Farm Structures,"

*_The Garden Patch._ By Edward DuBois Flint. New York: John Lane Co. 50 cents net.

†_The Home Vegetable Garden._ By Adolph Kruhm. New York. Orange Judd Co. $1 net.

*_That Farm:_ Recounting the Adventure of a Dry-Goods Merchant Who Went Back to the Land. By Harrison Whittingham. New York: Doubleday, Page & Co. $1.20 net.

by a professional "agricultural engineer."* This is a work of severely technical sort, covering the whole ground of building material, methods of construction, heating, ventilating, and water supply, chiefly with reference to farming on a large scale. Such books are of greater importance to the man who is thinking of going back to the land than libraries of sentiment. If he is worthy of the life at all, he is bound to get more out of it than a living: but his first business is to make sure that he does not get less. H. W. Boynton.

*Farm Structures. By E. K. J. T. Ekblaw. New York: The Macmillan Co. $1.75 net.

COUNTRY HOMES AND GARDENS.

A LITTLE book on gardening that combines a good many merits is "The Commuter's Garden" (Crowell; $1 net), edited by W. B. Hayward. It is attractive as to page and binding, entertaining and sound in style, and it contains a large amount of information that will not mislead. Designed altogether for the beginner and the perplexed soul who has not so much as begun, in about a score of brief chapters it touches upon the main questions that are sure to beset the novice, questions relative to Planning the Garden, Your Lawn and its Care, Annuals for the Garden, How to Handle Bulbs, Vines that are Useful, The Gentle Art of Pruning. The concluding chapter, On Keeping a Cow, contains excellent advice. In general, the author confines himself to the simplest facts—which is the easier for him since he has the "dependable" views of the "old-fashioned gardener"—and avoids the danger of making his book a hybrid between a statement of first principles and a thorough gardening encyclopædia. The animated style in which it is written and which is seen at its best perhaps in the chapter on Useful Garden Tools, distinguishes it pleasantly from many other books of its kind. The sixteen full-page half-tone illustrations are excellent.

A LESS attractive and more compendious book is Tarkington Baker's "Yard and Garden" (Bobbs-Merrill; $1.50 net), which has been issued in a revised edition. The paper is of a somewhat dismal gray that mars all the abundant illustrations and renders some of them worthless. The chapters, covering about the same ground as those of the foregoing book, contain explicit and unadorned information in considerable quantity, and there are very useful planting tables in the appendix which give the height, color, cultural suggestions, etc., of a number of bulbs and annuals.

"THE Back Yard Farmer" (Chicago: Forbes & Co.; $1), by J. Willard Bolte, is composed of a mass of miscellaneous information, not so much for the gardener as for the person who keeps a cow and a horse and rabbits and bees and chickens. Owing to this extensive aim, no part receives as much attention as it deserves, and the book often surprises both by its inclusions and its exclusions. It is most detailed in its chapters on vegetables.

A BOOK full of garden wisdom, set down in a strong, simple style, is "Everyman's Garden Every Week," by Charles A. Selden (Dodd, Mead; $1.25). One need not be surprised at the style, for Mr. Selden is an editor during the daytime, and, we presume, a farmer only before breakfast and after dinner. He bought a small farm a few years ago; and he has no reason to be ashamed of the flavor of State and Government agricultural bulletins that is detectable here and there in his book, for study of these bulletins, combined with considerable enthusiasm and the help of a good hired man, made that farm a success and left Mr. Selden bursting with useful information. The most interesting thing about this book, the chapters of which were originally published in the *Country Gentleman*, is the arrangement. Save for a few introductory chapters and a few closing ones, each chapter confines itself to one week of the gardening season, the weeks being taken chronologically. At the end is a brief calendar of suggestions month by month, and at the outset a clear table of contents. Two chapters touch on flowers, and one on making good lawns; but the others have to do with vegetable gardens—that includes the art and science of canning vegetables against the winter. There is an interesting chapter on raising mushrooms. While Mr. Selden's work is packed with interesting and valuable information, and is provided with a good index to make that information accessible, it is obviously not intended to give a cyclopædic answer to every question that may enter the puzzled horticulturist's mind. Rather, it belongs to the realm of good reading. It is the sort of book that George H. Ellwanger used to write, a book so delightfully and withal so earnestly done that it makes the reader share much of the enthusiasm of the writer—and of Michaelangelo Frieri, the hired man.

FOURTEEN years ago Prof. Liberty H. Bailey wrote the preface to the original "Cyclopædia of American Horticulture." It was a monumental work in a field where there had been an almost absolute blank, and it was intended to give a comprehensive view of the status of North American horticulture as it was at the close of the nineteenth century. Several editions have been printed since that time, but the changes have consisted largely of the correction of errors. The work has now been expanded from four volumes to six, of which the first has just appeared (Macmillan; $6), and Professor Bailey declares that it should be regarded as a distinct work, so great has been the extent of the revision. The first casual inspection reveals that many full-page pictures, including a number of colored plates, have been added, and the number of drawings has been doubled; all of which is a decided improvement over the old equipment. A synopsis of the plant kingdom (78 pages), a key to the families and genera (69 pages), a glossary giving the English meanings of Latin names, and the usual glossary of botanical terms are other additions.

IN the body of the work, the articles of specialists have been revised or rewritten to keep up with the advance in horticulture and horticultural knowledge. The already excellent cultural advice has been still further improved; and many practical class-articles—on subjects such as Evergreens, Formal Gardening, Japanese Gardens, and Tree-Moving—have been added. Of course, no one who knows anything at all about the literature of gardening needs to be told that the Cyclopædia is unique so far as this country is concerned. It is the Bible and the Britannica of the garden-folk, amateur and professional alike. And the remarkable thing is that, while it is fundamentally a work of reference, full of paralyzing Latin names and botanical descriptions, it also contains limitless quantities of good reading of the sort dear to the heart of the garden enthusiast.

THE interpretation of the rather cryptic title of Frances Duncan's "My Garden Doctor" (Doubleday, Page; $1 net), is that gardening is a cure for nervous prostration. Two women, one of whom is ill, the other a nurse, retire to an old farmhouse on the side of a New Hampshire mountain, and live near to Nature. They also live next to a poetizing painter person. The cure, the departure for town, and the realization that the painter is necessary to existence all come together. It is rather a mountain idyll than a gardening handbook, pleasant in style and excellent reading. To real garden-lovers, such passages as this will give joy:

"Cutworms," she said—"cutworms; bit the stems right off."

"But what can you do for them?"

"Cuss," responded Mrs. Tarbox, briefly. "That's what folks does mostly."

ONE of an extended series of concise and useful manuals, each of which aims to tell the builder of a country home how to render that home both a thing of beauty and a practical success, is "Making a Garden of Small Fruits," by F. F. Rockwell (McBride, Nast; 50 cents net). The author gives detailed instructions as to the planting, cultivating, pruning, and spraying of the cane fruits, bush fruits, strawberries, and grapes. One chapter treats of the culture of dwarf and trained fruits with remarks on the respective merits of each. There are two valuable tables, one giving a list of fruits that the home garden should furnish, with details as to the distance necessary between the plants, the number it is wise to set out, the varieties, and the price of each. The second table covers the subject of spraying fruits of trees as well as the small varieties, and in its completeness of detail and its concise form may prove a pocket guide to victory over the legion of insects and diseases that make the amateur fruit-grower's life a burden.

THE value of "Educational School Gardening and Handwork," by G. W. S. Brewer (Cambridge: University Press), lies chiefly in the spirit in which its author approaches his subject. Not the immediate making of well-kept gardens, but the ultimate making of well-rounded men and women is the result desired from the training that he advocates. A

line quoted at the opening of chapter iii is the keynote of the author's purpose: "In the 'I made this' or 'I made that' is the making of 'I.'" The reader cannot but appreciate the good fortune of the English youngsters who were the garden pupils of so excellent a teacher. There is much of value in this unpretentious little English handbook for those who have to do with garden craft in American public schools.

FARMING AND RURAL LIFE.

HOW to increase our harvests so as to meet the needs of our rapidly growing population is the problem discussed in "Intensive Farming" (Outing Publishing Co.; 70 cents net), by L. C. Corbett. The book itself is an example of its own theories, inasmuch as in a space of but little over one hundred small pages of large type it tells a great deal about vegetable and fruit growing in general, and also much about forced special crops. In intensive writing the author covers the raising for market of onions, celery, fruits (small and large), citrus fruits, the breeding of plants, the growing of seeds, nursery growing, irrigation, the breeding of thoroughbred animals, the economics of intensive industries, and the cropping system as a unit. The material is presented entirely from the commercial and economic standpoint, and includes some interesting, even remarkable, sets of figures relative to investments and returns; also several "labor charts" whose object is to show "that if it were possible to have labor charts for each of the standard crops grown in any crop zone it would be possible to take into consideration, in making up a crop rotation, not only the returns from the crop in forage and grain, the benefit to be derived from the maintenance of soil fertility, but also the economic features of crop production bearing upon the labor supply. The labor problem on the farm involves the economical distribution of labor, and as such becomes a vital factor in the crop rotation. Crop rotation assumes a new aspect when labor distribution is added to crop returns and the maintenance of production. The ideal farm system is one which permits the economic use of a constant labor supply, and until such a system is worked out the labor problem of the farm will continue to exist."

A THOROUGH study of available agricultural dressings, including animal manures, is found in Prof. Homer J. Wheeler's "Manures and Fertilizers" (Macmillan: Rural Text-Book Series), a new volume designed for agricultural high schools and colleges. Its interest is scientific rather than practical and popular. Facts about fertilizers, always based on chemical analysis, are freely given, but their special action must be inferred. The subjects of dressings for special crops, home mixing, green manuring, and methods of curing barnyard manure, are almost entirely omitted. For these reasons the book will not take the place of Voorhees's "Fertilizers" as a popular handbook; it will, however, prove valuable for the class-room and for reference. Some excellent features are the studies of the agricultural value of seaweeds, and of lime in many forms. The introduction of calcium nitrate and calcium cyanamid, noted in these columns some four years ago, is here shown to be proceeding rapidly, though all the difficulties of manufacture and handling are not yet overcome. Such fertilizers, electrically made from the nitrogen of the air, relieve us of the prophesied danger of a nitrogen famine.

IN the same series, "The Corn Crops," by E. C. Montgomery, is a similarly scientific study of maize in its various forms. This book will prove more generally useful than the preceding in giving directions for the preparation of the land and for the cultivating and harvesting of the crop. Sweet corn, so often ignored in treatises on corn, has here its proper place. Yet the amateur will discover that the live interest of corn culture has somehow slipped away in Prof. Montgomery's handling of the subject, even Jerry Moore, the Southern boy, with his wonderful acre of corn, achieving but a place in a statistical table.

ON the other hand, "Farm Arithmetic," by Profs. C. W. Burkett and K. D. Swartzel (Orange Judd Company), is a book ingeniously planned to introduce to country children many facts of farm life which the ordinary arithmetic ignores in favor of theoretical study. The general intention of this book is to make arithmetic a living instead of a dead subject, not only by bringing it near to every-day experience, but also by making that experience itself more vital. The illustrations, often remotely connected with mathematics, are cleverly chosen to stimulate interest. The more important subjects of study are plant and animal feeding, profits from crops and animal husbandry, the cost of labor and building, and the benefits of good roads, drainage, spraying, and farm improvements. The problems are arranged to bring out the advantage of scientific planning based on knowledge of facts. Only the chapter on Farm Accounting seems slight and inadequate. Modern farm accounting (for a good system see the Massachusetts Crop Report for August, 1913), with its careful classification and close study of every department of expense, is the proper climax to such a book as this, and much more of the pupil's attention should be directed to it. Apart from this evident lack, which we hope to see remedied in a future edition, few recent textbooks seem better planned to make for a country child the dry facts of farming not merely less repellent, but even attractive.

AT the outset of her book, "Pigeon Raising" (Outing Publishing Co.), Miss Alice MacLeod shows that a real fondness for the birds and an interest in the welfare of each one is essential to success in the raising of squab. In the first chapter there is warning against inadequate housing, poor situation, and inferior stock. Then follow simple and clear-cut rules, the observance of which should insure many hatches and healthy birds. A diagram is given of the model pigeon establishment, with directions how to build it and the nests. The book also names the best breeds for mating, if market birds are desired, and tells which are most satisfactory for improving the stock. The method of feeding that is most likely to promote the health of the flock and its breeding is carefully explained. The writer finds preparing and marketing comparatively simple matters, and tells how a good trade may be acquired and kept by proper methods of killing and shipping. For one who is seriously interested in pigeon raising as a business, the concise advice in Miss MacLeod's book will be of practical value.

IN the introduction to his book, "Practical Tree Repair" (McBride, Nast; $2 net), which he describes as "a pioneer in its field," Mr. Elbert Peets states explicitly that the volume deals "with one division of the science of arboriculture. It is devoted entirely to the prevention and repair of physical injuries to the framework of the tree." To the unscientific reader whose knowledge of arboriculture is limited to "Woodman, spare," 250-odd pages devoted entirely to the theme mentioned may not sound attractive, but the fact is that "Practical Tree Repair" has not a dull page in it, even for the layman. It is a "conservation" propaganda worth reading and heeding. The tree's structure and manner of growth, its wounds and their treatment, the value and function of filling trees, and many other matters are clearly discussed. The author has also some straightforward criticisms on so-called "tree-surgery" and "tree surgeons," and with equal frankness does not hesitate to name the manufacturers of products that he has tested and found valuable.

A TIMELY treatise on the problem of rural recreation written by an authority whose expert knowledge and practical training have made him master of the subject is "Play and Recreation for the Open Country," by Henry S. Curtis (Ginn & Co.; $1.16 net). There are suggestions as to ways and means of recreation in the home, the rural school, and the country community. The last five chapters deal especially with the subject of the rural social centre. The book should be helpful to mothers and teachers in farm districts, and also to the public-spirited members of rural communities who are working through the grange or the church, or through extension classes or farmers' institutes, to raise the social standard of their locality. An unfortunate dulness of treatment is the one marring feature.

EDUCATIONAL SCHOOL GARDENING.

ONE of the chief reasons for the economic pressure during the last few years is the fact that between 1899 and 1909 agricultural production in the United States increased only 10 per cent., while the population increased 21 per cent., that the yield of wheat increased 3.8 per cent., of orchard fruits 1.8 per cent., and the production of corn decreased 4.3 per cent. In view of this, it is interesting to find Dr. Eggleston, president of the Virginia Agricultural College, and Mr. Robert Bruère, of the University of Chicago, in their joint book, "Work of the Rural School"

Burlington Public Library

Harper; $1), giving the present high cost of necessities as the reason why the public is turning to rural schools as the most important instrument to-day in the control of the food supply.

THE book deals with the essential subjects of buildings, sanitation, centralization of schools, transportation, plans of instruction, amusements, and agriculture. The great need for development in our rural communities is forcibly pointed out, and it is made plain that "the only effective way in which the rapidly growing science of cultivation, farm management, and marketing can be brought to bear upon agriculture is through the public schools." When the crudeness of inherited agricultural methods and the lack of knowledge among farmers are taken into consideration, the opportunities of the rural school-teacher seem momentous indeed; for too often the task of proper preparation for effective citizenship is shifted from the home to the school, leaving the teacher to inculcate the gospel of better farming and the economic value of efficient production.

SEVERAL cases are cited where the rural school maintains a farm as an object-lesson for the surrounding community, and where new methods of ploughing, planting, and cultivating have been introduced. These experiments in due course have encouraged project work at home, and with instructive results. One boy kept twenty-six chickens, using modern methods, and in six months showed his astonished father a net profit of $27. Another lad insisted upon feeding his father's cows with a balanced ration from November to June; and, by keeping strict account, found that the best cow netted a profit of $54, and the poorest a loss of $2.39, much to the amazement of the incredulous parent. Still another boy, becoming ambitious after his experience in the school garden, raised tomatoes, celery, and cabbage plants in a hot-bed frame, and at the end of the season was able to show his father a net profit of $35. In this comprehensive and constructive book various phases of the building-up, not only of the rural school, but of the rural community at large, are set forth in discriminating fashion.

C. A. STEBBINS'S book on the "Principles of Agriculture through the School and Home Garden" (Macmillan; $1) is adapted for use in the country or in the larger centres of population, and for children from eleven to fifteen years of age. Many older children, however, whether in school or out, will find much of interest and enlightenment in this little volume, which covers a wide range of subjects, including the beautifying of school grounds, agricultural clubs, convenient rural homes, public health, seeds and stock, etc. Each chapter closes with a list of pertinent questions and exercises, bringing out the value of what has gone before.

FOR scholars who have gone through the earlier grades in our rural schools "Soils and Crops," by T. F. Hunt and C. W. Burkett (Orange Judd Co., $1.50), will be found well fitted to prepare them for the agricultural college courses, or for practical work at home on the farm. The authors are well-known writers on agricultural subjects, and this book is interesting and useful. The lessons, forty eight in number, carry the student from the food requirements of plants through various important steps to the kind of crops suited to various climatic conditions. At the end of every three chapters a number of practical examples are given, from which the teacher may select at discretion.

COUNTRY ARCHITECTURE.

"BUILDING by a Builder" (Doubleday, Page; $1.20 net), by Mr. Benjamin A. Howes, a well-known constructing engineer and consultant, is a work that will appeal to a very wide audience; for its author speaks with the authority given by broad experience and without a trace of bias in relation to matters that must interest all who are concerned with building operations, whether as owners of dwellings small or large, or as responsible members of building committees. The book is addressed primarily to the owner and deals largely with problems which he, or she, alone can meet; but the honest builder will be glad to have the public made acquainted with the pitfalls that beset him, and the architect will surely be grateful for the sympathetic picture given of the difficulties he is compelled to overcome. The author also does good service to owners, as well as to architects, by calling attention in detail to the misleading means adopted by manufacturers of special building materials to push their wares into use by the small investor who can ill afford the loss inevitably resulting from inferiority of construction. He makes clear the differences between sound and unsound methods, and deals seriously with the conditions which at times make the "unburnable house" a profitable and at other times an unprofitable investment. Apart from the expression of some rather optimistic views as to methods of "floor heating," the author seems to suggest no modes of construction that are not proved to be of value by long experience.

THE Park Department of a city that makes unlimited appropriations will find "The Practical Book of Garden Architecture" (Lippincott; $5 net), by Mrs. Phebe Westcott Humphreys, much more practical than will the individual owner. The writer explains that her preparation for the authorship of the volume was obtained in college and in investigating the estates of other people. And there is an easy-going optimism about lakes for gardens and outdoor swimming pools for the ordinary, every-day sort of place in the country that suggests that Mrs. Humphreys has not supplemented that early training by maintaining a country place of her own. Everything is on the grand scale. The backstop of the tennis court is a combination tea-room and pergola with Florentine pottery. To give the proper touch to the wild or woods garden a yoke of oxen, attached to an old-fashioned cart, are recommended as almost essential. The oxen are shown in one of the illustrations of the book flanked by an ornate urn, no doubt imported. Bird houses become elaborate, and the dear old contraption of boards that every boy used to build in the apple tree after reading his "Swiss Family Robinson" is now a two-story structure, with almost everything in it except a ballroom, according to this recent "practical guide." Yet it is an attractive book, thanks very largely to the hundred or more good photographs taken by the author's "husband-chum."

Books and Men

LITERARY FISTICUFFS.

"From Samuel Johnson to George Bernard Shaw literary England has had a kindness for the pugilist."

The sentence is from Clement K. Shorter's new life of Borrow, "George Borrow and His Circle." The author goes on to say that Borrow carried his enthusiasm further than any, and that no account of him which concentrates attention upon his accomplishment as a distributer of Bibles and ignores his delight in fisticuffs has any grasp of the real man who wrote "Lavengro." "Indeed, it may be said . . . that Borrow entered upon Bible distribution in the spirit of a pugilist rather than that of an evangelist."

Borrow's father was a fighter, and insisted that in open combat he beat the champion of the day, "Big Ben Brain." One of his son's semi-fictitious books declares that the old man died with Brain's name on his lips. Borrow himself pretends to have put on the gloves with John Thurtell, the notorious murderer of Weare. And finally, of course, there are his accounts of his own fights with the Flaming Tinman and with Petulengro.

The battle with the Tinman is sometimes called the greatest fist-fight in English literature. I have heard it recommended as such, and I have just reread it to see if my first opinion had changed. It still seems a rather tame affair. Borrow admitted that his opponent half put himself out by hitting the tree, and this takes a good deal of spirit out of the fight. The presence of Isopel Berners does much to redeem the chapter, however—just as the presence of a woman at another fight, about which I am going to speak, added piquancy to the scene in the ring.

Bernard Shaw's contribution to the literature of pugilism is "Cashel Byron's Profession." If it were not for the plays it would seldom be read to-day—perhaps it would never have been republished. That would have been a loss, for it is an entertaining story, though we see the pugilist mostly "in citizen's clothes." Some of his friends sent it to Stevenson when he was at

Saranac in 1887 or 1888. "It is all mad, mad and deliriously delightful," he writes. And again: "It is *horrid fun.* All I ask is more of it. Thank you for the pleasure you gave us, and tell me more of the inimitable author. (I say, Archer, my God, what women!)"

Meredith's excursion into the "noble art" occurs in "The Amazing Marriage." Sir Conan Doyle has written one readable book, "Rodney Stone," and a number of short stories, including an excellent one called "The Croxley Master," all dealing with the ring. Fights in the schoolboy books are numerous, but they do not count as stories of pugilism. Jack London has "The Abysmal Brute," and he touches upon the subject in other books. There are also, to be sure, the histories of real battles—Henry Downes Miles's "Pugilistica" and the volumes of "Boxiana" and "Fistiana." These are but chronicles, the dry bones from which living literature might be made. They are comparable with the "Newgate Calendar," a work, by the way, which Borrow said taught him to write genuine English.

If I were bound for that mysterious desert island whose inhabitant is always restricted to one book, and if that one, for some reason, had to contain a prize-fight, I would leave all these, and plump for "The Virgin in Judgment," by Eden Phillpotts. There may be better fights than that fought in the bull-ring of Sheepstor by David Bowden and Bartley Crocker. It would be a pleasure to know about them. This one has all the elements which make such an encounter of absorbing interest.

The requirements are, first, that the reader should have some knowledge about, and regard for, both the principals; and, secondly, that it should be a real Marquis of Queensberry affair—not a mere wayside rough-and-tumble. The latter may be amusing, as a score of novelists have proved, but unless very brief they put too great a strain upon our credulity. The average man, after he has passed his twelfth year, does not engage in casual fights that rise above the level of a passing "scrap." Almost the only realistic description of such an encounter, one that shows how ridiculous two gentlemen may look when they resort to blows, unexpectedly, is in a novel by Anthony Hope—either "Tristram of Blent" or "Quisante."

The fight in Mr. Phillpotts's novel lives up to the requirements. David and Bartley are the chief male characters of the book. One is slow, solemn, dependable; the other quicker and wittier, a better friend to others than to himself. They are excellent foils, without being artificially contrasted. Bartley has seriously offended David Bowden in a number of ways—and at last, under circumstances of considerable temptation, by kissing Rhoda Bowden, his sister. She is the virgin who sits in judgment, not only by acting as David's second during the fight, but at a later period and in more serious events. Her temperament, which is of a polar frigidity, makes common humanity incomprehensible to her, and brings about the final tragedy of the novel.

These are the principals, and the cause of the fight. Both the men are, of course, amateurs, but they are a pair of vigorous young Devonshire men, and they go into training and practice for a number of weeks. The fight is held with a most scrupulous regard for all the rules of the prize ring, for it is under the charge, not only of the local publican, an ex-pugilist, but also of his friend and visitor, "Frosty-face Fogo."

Mr. Fogo, a real personage, flits through other novels than this. He was the "Poet-Laureet of the Prize Ring," and was at every English ring-side half a century ago—for the time of the novel is the 1860's. He assumes command of the battle, and it is due to his satanic cunning that the clergyman of the parish and the police are balked in their attempt to break up the fight. He attends church on the preceding Sunday and hears the vicar announce his determination to save the village from disgrace. During the sermon the vicar gives his hearers a picture of a prize-fight, for it appears that he had witnessed one in his degenerate Oxford days.

"One of the unhappy creatures who marred God's own image on that occasion was called Peter Crawley and known to his friends by the vulgar sobriquet of 'Young Rump Steak,'" said the clergyman, glaring at the congregation as though daring them to smile. Mr. Fogo nodded: he remembered the fight. But he announces to the vicar that he has been won over. Such burning words he has not heard since he "sat under a bishop in St. Paul's." He has seen a light; he will betray the rascals to the forces of law and order. So, early on the morning of the great day, he leads the clergyman and the constable to a distant part of the moor, to watch a veritable ring, staked out and roped off, and to await the coming of the combatants and the spectators at eleven o'clock. Then he slips back to the village, and there, at nine o'clock, "on this winter morning, one of the last authenticated prize-fights ever fought in England was duly conducted with all right ritual, pomp, and circumstance, under direction of that high priest and poet of the P. R., 'Frosty-face' Fogo."

All of which is very wrong and lamentable, making capital reading, as you have found—or may find—by looking at the story.

EDMUND LESTER PEARSON.

Poetry

"LE BYRON DE NOS JOURS."

Thine was the gift, Apollo—or the curse—
Of dream too golden for this greenback age.
So—meant like Milton or the Tuscan sage
To map anew for men God's universe—
He balks—ah, pity!—at the empty purse,
And stoops his talent to the times' sure wage:
Gushes erotic slime; slops o'er the stage:
Rhymes *belles* and *Jezebels*—God knows which worse;
Or on a spavined Pegasus of prose—
As mealy-mouthed as good Sir Hudibras's—
Tilts at sex-bogies; or his trumpet blows,
Astolfo-like, to bleed the monied classes;
Or else, uncased, in gentler, uplift pose,
Indites eugenic sermons for the masses.
Apollo, thine the ass is.
Oh, call unto thyself thy braying tribe,
Or decommercialize again the scribe!

JEFFERSON B. FLETCHER.

News for Bibliophiles.

EARLY AMERICAN PROLOGUES AND EPILOGUES.

An article printed in this column about a year ago (Vol. XCVI, p. 201) discussed several early American theatres, particularly those of Charleston. Since writing that article I have found some interesting data concerning the Charleston theatres in contemporary local newspapers. Limitations of space prevent the publication here of all this material, but it may be worth while to reprint some prologues and epilogues specially written for the Charleston performances. These poems deserve recognition in view of the claim made for the prologues to "The Merchant of Venice," spoken at Williamsburg in 1752, as "the first composition written for and addressed to an American audience that was preserved" (Seilhamer, "History of the American Theatre," I, 41; cf. Tyler, "Williamsburg, the Old Colonial Capital," p. 229). Certain lines from several Charleston prologues and epilogues are quoted, and, as I believe, slightly misinterpreted in Dr. Cook's recent volume, "Literary Influences in Colonial Newspapers, 1704-1750" (pp. 245-249); but in their entirety they have not to my knowledge been reprinted.*

The earliest of these is taken from the *South Carolina Gazette* for February 8, 1734-5, and reads:

Prologue spoken to the ORPHAN, up-

*Since the sentence above was put in type, I have seen Mary C. Crawford's "The Romance of the American Theatre" (Boston: Little, Brown & Co., October, 1913), on pp. 56-57 of which is given a modernized version of the first prologue. But at least one line is wholly wanting, and several others contain errors.

on it's being play'd at Charlestown, on Tuesday the 24th of Jan., 1734-5.

When first Columbus touch'd this distant Shere.
And vainly hop'd his Fears and Dangers o'er,
One houndless Wilderness in View appear'd!
No Champain Plains or rising Cities chear'd
His wearied Eye.—
Monsters unknown travers'd the hideous Waste,
And Men more Savage than the Beasts they chac'd.
But mark! how soon these gloomy Prospects clear,
And the new World's late horrors disappear.
The soil obedient to the industrious Swains
With happy Harvests crowns their honest Pains,
And Peace and Plenty triumph o'er the Plains.
What various Products float on every Tide?
What numerous Navys in our Harbours ride?
Tillage and Trade conjoin their Friendly Aid,
T' enrich the thriving Boy and lovely Maid.
Hispania, it's true, her precious Mines engross'd,
And bore her shining Eutralls to its Coast.
Britannia more humane supplys her wants,
The Brittish sense and Brittish Beauty plants.
The Aged Sire beholds with sweet Surprize
In foreign Climes a numerous Offspring rize,
Sense, Virtue, worth, and Honour stand confest,
In each brave Male, his prosp'rous hands have blest,
While the Admiring Eye improv'd may trace
The Mother's Charms in each chast Virgin's Face.
Hence we presume to usher in those Arts
Which oft have warm'd the best and bravest Hearts.
Faints [*sic*] our endeavours, rude are our Essays;
We strive to please, but can't pretend at praise;
Forgiving Smiles o'erpay the grateful Task;
They're all we hope and all we humbly ask.

The spirit of these lines clearly implies that this performance of "The Orphan" would "usher in" the dramatic art to Charleston, if not to America. In the absence of contrary evidence they justify us, I think, in looking upon Otway's tragedy as the first drama offered to the Charleston public. While the author's name is not disclosed, the words "our Harbours" point to American authorship. However that may be, these verses constitute for America the first "occasional prologue" now extant.

In the same number of the *Gazette* from which these lines are taken appears a second prologue to "The Orphan," "acted at Charleston, Febr. 7, 1734-5," which runs:

Encouraged by your Smiles again we dare
Approach the good, the wise, the great, the fair,
Each gentle Look, each lovely Face betrays
Kindness, beyond our Impotence to please,
Who boast th' Intent alone.—But if to-night,
While tender Pity forms severe Delight,
Of real Spleen and formal Wisdom full
Some count it Virtue to be stiff and dull,
Much may be said in spight of the severe,
For us who dare to speak, and you to hear.
The wisest Mortal e'er beheld the Day
Confess'd a Season to unbend and play.
To our attempts such Wisdom must be kind,
Where the Amusement tends to form the Mind;
For Worth distress'd the pitying Tear to drain,
And challenge Grief from Woes which others feign.
Besides, if Pleasures oft repeated cloy,
And of itself Variety's a Joy,
I really can't discern th' important Ill,
Tho' it relieve Backgammon or Quadrille;
Or when this Muse has wept, the comic Style
Laughs off our Heats and Politicks a while:
For spight of the Objections some produce,
Ev'n merry Plays may have their serious Use:
And if they're treated hard, their Fate is such,
'Tis where they're little known, or—dreaded much.
No carking Miser of his Teeth afraid,
His shilling sinks to see the Miser play'd;
No wither'd Fool to Bloom and Beauty wed,
Admires the picture of his branching Head:
And if important Mortals, cramm'd with Thought,
Condemn what *Addison* and *Shakespear* wrote,
Fond of our Peace, averse to all Disputes,
We straight submitt and ask—the Price of Boots,
The good and wise may say "Abuse has been";
But from th' Abuse ne'er argue to the Thing:
Oft at the Tree do future Culprits spring,
And Thefts increase the more while Felons swing,
Must Convicts therefore out of Goal [*sic*] be kick'd,
And Robbers 'scape lest Pockets should be pick'd?
But howsoe're we fall,—these tender Scenes
Have mov'd the fairest Nymphs and bravest Swains;
The fair and brave shall here the scene persue,
Pathetic, simple, and to many new.
We hope your Favour much, yet scarcely fear,
That one departs for what's recited here.
With greater Risque the bitter Pangs to prove
Of wild Desire or ill-conducted Love.

The *Gazette's* heading to this prologue gives the date of the performance as February 7, 1734-5. There is reason to believe that the correct date is February 4, inasmuch as the play had been advertised for "Tuesday the 4th Inst." in the *Gazette* of January 25. February the fourth of that year fell on Tuesday, and it seems probable that the play was acted earlier in the week than Friday when we note that the prologue came out in Saturday's paper. The advertisement also announces that with "The Orphan" will be given "a new Pantomime Entertainment" of Harlequin and Scaramouch.

In the *South Carolina Gazette* for February 22 of the same year is given an "Epilogue to the Orphan, spoken after the entertainment"—apparently alluding to the "pantomimic entertainment" mentioned in the advertisement for the evening of February 4. The lines follow:

By various Arts we thus attempt to please,
And your Delight persue by different Ways;
Nor from our numerous Imports judge it fit
To banish Pleasure and prohibit Wit.
But while from Britain's wealthy Cities flow
Much for Necessity and much for Show,
From the old World in Miniature we shew
Her choicest Pleasures to regale the new.
Four your Delight and Use has *Otway* wrote,
And pow'rful Music tunes her warbling Throat,
While other Objects entertain the Sight
And we, you know, can die for your Delight.
Warm'd with th' Applause your Favour now bestows,
It may inspire the Merit you suppose;
If haply your continu'd Smiles produce
The *humble Fabrick* suited to the Use.
Then from the doubling Arch the Notes shall bound,
And Vaults responsive eccho to the sound:
Thence from their Graves pale Ghosts arising slow
Shall clear the injur'd and the guilty show.
From nobler Themes shall loftier Scenes appear,
And *Cato* urge what Senators may hear;
Or *Congreve's* Drama shake the laughing Dome,
With Wit unmatch'd by *Athens* or by *Rome*.

The little Term that Heaven to Mortals spares,
Is dally clouded with prolonging Cares;
Nor *real* Virtue blames the pleasing Strife.
To blend Amusement with the Shades of Life;
Wise, innocent, serene, she smiles at Ease,
Nor hanging Witches, nor adjuring Plays.

Dr. Cook is undoubtedly right in seeing a slap at the New England Puritans in the last line, but that other lines imply the frequent presentation in Charleston of "Hamlet," "Cato," and Congreve's plays is an assertion not beyond cavil. Rather do they promise that such dramas will be offered, provided the Charleston patronage justifies the venture. In time the promise was fulfilled.

"The Orphan" seems to have retained a strong hold on the affections of Charleston theatre-goers, for five times, at least, it was acted, and repeated almost every season of which we have record. Dryden's "Spanish Friar" was acted March 25, 1735, "for the Benefit of Monimia," evidently the actress who played the title rôle in "The Orphan."

The same actress in the beginning of 1736, when the first permanent theatre was opened in Charleston, took the part of Silvia in Farquhar's comedy "The Recruiting Officer." This fact is shown by an epilogue, which has been recently found by my colleague, Prof. R. H. Griffith, in the London *Gentleman's Magazine*, Vol. VI (1736), p. 288. The title runs:

"*EPILOGUE to the* Recruiting Officer, *written by THOMAS DALE, M.D., and spoken by* Silvia *in Man's Cloaths, at the Opening of the New Theatre, in* Charles-Town *in* South Carolina, in 1734."*

The author, Thomas Dale, was a Charlestonian, assistant justice of the province, and afterwards a member of the upper house in the South Carolina Assembly. He has hitherto been known to fame chiefly as the father of a more distinguished physician of the same name, whose life is related in the "Dictionary of National Biography."

One may at least guess that Dale is the author of all these prologues and epilogues. Internal evidence points slightly in that direction. But at any rate, he deserves notice as one of the earliest American writers of verse.

Robert Adger Law.

*Evidently a mistake for 1735-6. Advertisements in the *Gazette* show clearly that the New Theatre was opened with "The Recruiting Officer" on February 12, 1735-6. This epilogue was printed in the *Gentleman's Magazine* for May, 1736.

Correspondence

LIBRARY OF THE SURGEON-GENERAL'S OFFICE.

To the Editor of The Nation:

Sir: I desire to direct your attention, and that of your readers, to what threatens to become a national calamity. As is well known to those versed in scientific matters, the Surgeon-General of the United States Army has had under his control a library commonly known as "The Library of the Surgeon-General's Office." This library is in many regards unique; its value is beyond cavil, its importance to scientific medicine is imperative, its loss or abrogation would be an unspeakable calamity. The eminence to which it has attained is largely due to its control and detailed management by properly equipped scientists. It is highly improbable, if not actually impossible, that such eminence could have been attained and maintained under a less rigid control. Through the Index Catalogue it renders a service to scientific medicine that is not paralleled by any other publication. By generous provision of those in authority its accumulated literature is made readily accessible to those in search of detailed knowledge. The existence of this library is a priceless national asset.

The autonomy of the Library of the Surgeon-General's Office is threatened with early obliteration; and with the ancillary loss of scientific management, its high international value and its usefulness to scientific medicine will doubtless

suffer irreparably. This threatened peril is found to lie within the provisions of the recent Army Appropriation bill, which even now awaits final action; by which the library is to be transferred from the control of the Surgeon-General and merged with the Congressional Library.

The gravity of the situation warranted the St. Louis Medical Society in adopting unanimously the following protest at its last meeting, on April 4, and in transmitting by wire a copy of said protest to each of the Missouri Representatives in Congress:

The St. Louis Medical Society has learned with grave concern that the Army Appropriation bill just passed by the Senate of the United States contains a provision whereby the Surgeon-General's Library is to be transferred to, and become a part of, the Library of Congress.

To make the largest, best-equipped, and best-conducted medical library in the world, which through the Index Catalogue furnishes bibliographical data for all the physicians, medical educational institutions, and scientific medical associations, and which is accessible to the medical men of all sections of this country, a subordinate department of a general library is in the opinion of this Society a reactionary and unwise policy which would lower the scientific standing of the United States in the eyes of the civilized world. To rob the magnificent Surgeon-General's Library of its autonomy would prevent it from continuing its splendid work which can be done only if the library is in charge of carefully chosen scientific medical men; it would entail additional and unnecessary expense upon the people, and the usefulness of the library would be seriously impaired.

The Secretary of this Society is hereby instructed to convey this expression of our disapproval of the proposed transfer to the Missouri members of the House of Representatives with the respectful request that they make every endeavor to prevent this unjustifiable and destructive legislation.

I request that you grant sufficient space in the *Nation* for this letter and the protest above noted, in the hope that scientists generally, but especially influential bodies of medical men, will unite in a strong and prompt protest to avert, if may be, an issue which is but little short of a national crime.

NORVILLE WALLACE SHARPE.

St. Louis, April 13.

THE LATE COLONEL HALLOWELL.

TO THE EDITOR OF THE NATION:

SIR: The death of Col. Norwood Penrose Hallowell removes almost the last of the distinguished Massachusetts officers of colored troops during the Civil War, and is a fresh reminder how rapidly the remainder of the "Grand Army" is dwindling away. Of all who took service for the Union, none are entitled to greater credit than the men who volunteered with Robert Gould Shaw, Thomas Wentworth Higginson, and the two Hallowells, for no one knew whether the colored troops would fight or not, and the Confederates early announced that there would be no quarter for the officers of "nigger regiments." As Col. Higginson put it, these men went to war "with halters around their necks," and the experiences of the colored soldiers taken prisoners at Fort Wagner showed that this was not exaggerated.

The South could not believe that the officers of these untried organizations were men of family, breeding, and even of scholarship, as in Col. Higginson's case. Yet this was the fact in many instances; the opportunity to ally themselves with this new venture, which was really the first Government recognition of negro manhood, made an irresistible appeal to many young Harvard men, and even to a son of the non-resistant Garrison. All in all, no finer type of young American manhood ever served our country in peace or war; Col. Shaw typifies it because of his shining personality and his tragic death. But Norwood Hallowell and his brother Edward, who succeeded Shaw in the Fifty-fourth, and succumbed soon after the war to the results of his wounds and exposure, were of as fine clay.

Curiously enough, in much Southern writing of the war the idea still prevails that all the Northern troops were mercenaries from Europe or the slums of the cities. Every Southern officer appears in the Southern novels of the strife as the personification of chivalry and every Yankee officer as a pot-house politician or a mannerless boor. There is still no realization of the fact that the best blood of the North was poured out freely, that the aristocratic families of New York and New England gave as readily of their sons as any in Southern States. Of this the death of Col. Hallowell is a proper reminder, just as it recalls his lifelong devotion to Harvard College and his helpful influence upon its athletics and the athletes in whom he became so deeply interested through the prowess of sons and nephews. New York, April 18.

"RELIGION WITH A PUNCH."

TO THE EDITOR OF THE NATION:

SIR: I write to commend most heartily your trenchant editorial entitled "Religion with a Punch." As you so well said, "Noise and numbers! There it is, the old fallacy made to excuse such a treatment of religion as really tears up its deepest roots." And that ministers and other intelligent Christians can be caught in this fallacy seems well nigh incredible.

It would be refreshing to read something like this in the regular church papers. But the "noise and numbers" captivate us in religion as in other activities.

You will be glad to know that the Cleveland churches recently have twice declined to have a Billy Sunday campaign in their midst. They feel just as you have written, that while a few might possibly be reformed, untold harm would come from the coarse and vulgar handling of holy things which is Sunday's chief asset.

I wish your editorial might have a wide reading. It would stiffen the spine of many ministers who in heart loathe Sunday's methods, but because of pressure are obliged to invent apologies for him. E. C. YOUNG.

Cleveland, April 10.

THE CONSTITUTIONAL POWER OF THE COURTS.

TO THE EDITOR OF THE NATION:

SIR: In a communication to the *Nation* of February 19 I find two quotations from our Federal Constitution offered as proof of the contention that the Constitution confers "upon the Supreme Court the power to declare acts of Congress unconstitutional." The quotations are as follows:

The Constitution and the laws of the United States which shall be made in pursuance thereof; and all treaties made . . . shall be the supreme law of the land.

The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made.

The assertion that these passages "confer upon the Supreme Court the power to declare acts of Congress unconstitutional" seems to me to beg the question. The passages say merely that the Constitution and the laws and treaties made in accordance with it shall be the supreme law of the land and that the judicial power shall extend to all cases in law and equity arising under that law. They do not say that one part of our three-fold government, the judiciary, shall have the exclusive power to declare finally what that law is. What seems to be meant by those passages is that the Constitution is the supreme law of the land and as such is binding upon each and every department of our Government.

When the Federal Supreme Court declares an act of the Federal Executive or an act of the Federal Legislature to be unconstitutional it exercises not a judicial power, but a political power; and it is well known that at common law the judiciary possesses no political power. Nowhere is such a power expressly given to the judiciary in the first Constitutions of the original States; nowhere is such a power expressly given to the Federal judiciary in the Federal Constitution; and immediately upon the first exercise of this power by the Federal judiciary there was well-reasoned and well-supported opposition to it.

It is argued that it would lead to disorder, perhaps to disaster, were each of the three separate departments of our Federal Government permitted to judge for itself whether its acts were in harmony with the Constitution. Such has not been the experience of the European countries, in every one of which the Legislature is free from control by the judiciary. And in our own country the control of the Legislature now exercised by the judiciary is one of the least powerful of all the checks to be found in our plan of government. It is a check that fails to reach many actions of the Legislature. Should the Legislature decline to act, even in a case where the Constitution orders it to act, the Federal judiciary cannot compel it to act; and even when an act of the Legislature is, in the opinion of the judiciary, contrary to the Constitution, the judiciary is powerless to intervene, even though the act continues in force for many years, until the matter is placed before it in

the form of a suit of which it is authorized to take cognizanee.

But this whole question of the beneficial nature of the check now exercised by the Federal judiciary upon the Federal Legislature is, in the opinion of the present writer, beside the point. The sole question is: Did the framers of the Constitution intend the judiciary to have that power? In view of the facts that such power is not expressly conferred upon the judiciary in the Constitution and that nowhere at the time the Constitution was framed was there a judiciary endowed with sueh power, the burden of proof would seem to rest rather heavily upon those who uphold the view that the Supreme Court did not arrogate that power to itself. E. M. H.

Moscow, Idaho, March 20.

BENJAMIN OSGOOD PEIRCE.

To the Editor of The Nation:

Sir: In these days when our universities are so frequently under criticism, when lamentations are so often heard of the waning influence of their professors, it is a pleasure to contemplate the career of one who was not only a noted scholar and scientist, but also a warm-hearted, sympathetic man, endeared to all who came in contact with him, whether students, colleagues, or acquaintances. Such a man was Benjamin Osgood Peirce, late professor of physics in Harvard University, the bare facts in whose career were mentioned in the *Nation* of January 22, but whose many-sidedness deserves far more extended mention.

Peirce was a Yankee of Yankees, born in Beverly, Mass., on February 11, 1854, descended from a long line of Massachusetts ancestors, his great-grandfather, Benjamin Peirce, having been killed at Lexington. Together with the Puritan traits and the New England conscience which were his chief characteristics, he possessed a strong sense of fun and a genial disposition, which were continually in evidence. Beverly was in those days a great seafaring town, and at the age of nine Peirce took a voyage with his parents to the Cape of Good Hope, where his observation was so careful that fifty years afterwards he was able to surprise South Africans by descriptions of what he had seen. He was educated in the public schools of Beverly, and after a couple of years, in which he learned the carpenter's trade, he decided to go to college, and prepared himself for Harvard. The liking he had for the classics, shown by his conversing with his father in Latin on their daily walks, he retained throughout his life, and was able to quote long passages from the Latin and Greek poets. Many of us still believe that such a training makes the best possible foundation for a scientist.

At Harvard he took a well-selected course, but showed so marked a talent for mathematics and physics that on his graduation in 1876 he received a travelling fellowship and proceeded to Germany, where he remained four years. In 1879 he obtained the degree of Ph.D. at Leipzig, where he had worked in Wiedemann's physical laboratory, and the next year he spent under the stimulating influence of the great master Helmholtz in Berlin. It was here that he became charmed with the beauty of mathematical physics, then hardly taught in this country, to which he devoted so much of his after-life. Returning to the United States in 1880, after teaching a year at the Boston Latin School, Peirce was appointed instruetor in mathematics at Harvard, and was promoted in 1884 to an assistant professorship. There is at Harvard no chair of mathematical physics, or Peirce would have held it; but in 1888 he received the appointment to the Hollis professorship of mathematics and natural philosophy, which perhaps gave him a freer hand, and enabled him to distribute his time as he preferred in the laboratory and in mathematical physics. The courses in the latter subject he worked up to a high degree of efficiency, the subject being, as has been stated, entirely new in this country. In the laboratory, in a similarly painstaking manner, he developed an admirable course in electrical measurements. Here he came into close contact with his students, and became a sympathetic father-confessor to many of them. At the same time he threw himself enthusiastically into the prosecution of research, which he kept up with undiminished productivity to the end of his life. This is not the place to analyze his work, which was characterized, whether experimental or theoretical, by prodigious painstaking and rare critical knowledge.

It is of Professor Peirce as a man that I wish here to speak. He was rare among American scientists for the breadth of his interests and the catholicity of his sympathies. He was a voracious reader, particularly of biography and history. He spoke French well, and German so well, including the South German dialect, as to deceive the native. For music he, like many mathematicians, had a passion, and possessed a careful knowledge of musical form and history. For several years he served on the committee on honors in music. Whether or no a musical ear makes a good linguist, Peirce possessed both gifts, and at nine years acquired the difficult Kaffir "clicks," as later he showed a nice sense for Latin metrics and for foreign accents. Painting and architecture he keenly enjoyed, delighting in Gothic, and lamenting the lack of beauty in the Harvard buildings. Everything requiring skill of hand interested Peirce. In any kind of boat he was thoroughly at home, and he had many warm friends among Gloucester captains and ship carpenters. He kept a font of type in the laboratory, and set up many of the complicated mathematical formulæ in one of his books with his own hand, while his figures were always drawn by himself, and the curves carefully made by templets filed out in sheet metal. Thus his sympathy went out to all workers, whether with hand or brain.

In 1900 too strict attention to work brought on nervous prostration, and Peirce was obliged to take two years' leave of absence. Even then health did not return, but with Spartan devotion Peirce never missed a lecture after returning to work. During the rest of his life he suffered greatly from insomnia, but he never complained. His cheerfulness was irresistible. With his intimates he adopted a style of Yankee dialect, slang, and humor that was inimitable, but with the public, whether speaking or writing, his style was beyond criticism, and marked by clearness and elegance. The writer was one of hundreds of students who felt the charm of Peirce's influence and sympathy, and to his colleagues he was an inspiration. The crowded chapel at the funeral, the dozens of letters since his death, from colleagues, pupils, and scientists, at home and abroad, and from those humble functionaries to whom Peirce's daily smiling greeting meant much, all attest the place that he had made in the hearts of men. In person as in heart, Peirce was a big man. Over six feet in height, heavy, and muscular in proportion, he was the picture of a manly man. With it he had the sensitive heart of a woman, and in him modesty was developed to an almost impossible extent. At the time of the conferring of the well-merited degree of doctor of science, President Lowell made certainly one of the most truthful of his happy charaeterizations when he called him "a scientist ignorant only of his own deserts." Arthur Gordon Webster.

Worcester, Mass., April 16.

PICTURESQUE LANGUAGE.

To the Editor of The Nation:

Sir: In connection with an editorial in the *Nation* on picturesque language, I have thought that certain words and phrases culled from the vocabulary of a former cook, a negro woman from the mountains of Tennessee, might be of interest to some of your readers.

"Turtle," by a slight change, becomes "turkle"; "catamount," "catamouse"—surely a most natural association of ideas. The singing of birds was described as a "sweet fuss." "Poke" for "bag" was an everyday word. Many of the expressions noted either concerned, or were addressed directly to, a handsome black cat, with which she conversed constantly, apparently on terms of perfect equality. When this household pet was cross, a not infrequent occurrence, he was called "ill"; when on the contrary he showed signs of wishing to be petted, he was "pettish." Another cat, after an unsuccessful attack on ours, "shabbed [ran] away"; "he jest burned the air." "To burn the air" is certainly quite as vivid as the French "brûler le pavé." After some misdemeanor, the cat was "twiggled [beaten] good." But the pearl of the collection, a word as connotative in its way as some of those quoted in Miss Furman's admirable stories, was a verb used to describe a contemptuous refusal. "I gave Tom some milk," quoth the cook, "but he jest *snurled* up his nose at it."

Geo. N. Henning.

Washington, D. C., April 3.

Literature

A MEXICAN ON HIS COUNTRY.

The Case of Mexico. By Rafael de Zayas Enriquez. Translated from the Spanish by André Tridon. New York: Albert and Charles Boni. $1.35.

The present work is interesting and typical only as an example of ordinary Latin-American political discussion; its value is that of an inspired campaign document. The author shows slight interest in literary style or structure. He opens with a long letter, covering twenty pages of the book, which he addressed from New York to Francisco I. Madero, on December 29, 1911. The inconsistency of his words to President Madero, compared with his expression of opinion in 1914, approaches closely to insincerity. Three years ago he wrote to the successful revolutionist: "You find yourself to-day at the head of the Government, to which position you were elected by a majority of the people to preside over their destinies." In this letter the author writes of Pino Suarez as a man "whom you first had elected Governor of the State of Yucatan." Later, indeed, while treating Madero's San Luis Manifesto, he asserts: "The Mexican nation never supported him personally at the polls nor during the revolution."

Mr. Zayas Enriquez then compares Madero and Porfirio Diaz. Very interesting are the charges which he repeats against the former: that his plans were mainly to stave off the ruin of his family, then heavily involved; and that by the activity of Zapata in the state of Morelos the Madero family were enabled to acquire valuable plantations at ridiculously low prices. In succeeding chapters he records the "bloody ten days," the decision taken by Gen. Huerta and the army, and the fall of Madero. He attempts to prove that the *de facto* government became a government *de jure* according to the Mexican Constitution. In chapter vi the execution of Gustavo Madero, the brother of the deposed President, is passed over without attention, and on the death of Madero and Pino Suarez he quotes Carlos Toro's "Fall of Madero" as saying: "Nobody cared to preserve the lives of those dangerous apostles of violence and anarchy, and their death was considered by their friends and enemies alike as a national necessity. The bitterness, the anger, the feuds so sedulously kept up by these two men ended with them; it was plain common-sense that demanded their extermination." Mr. Zayas Enriquez, however, agrees with the official account, on the ground that anonymous public opinion did not appear in court under a military dictator to support its charges!

In chapter vii the Mexican writer touches on President Wilson and the American point of view. He begins by saying that until recently he thought the President a pure idealist. His conclusions now are, however, that "Machiavelli would have been clay in Wilson's hands, and what is more, that Machiavelli would never have known it." The policy of Gen. Huerta and his *coup d'état* are next justified, and notwithstanding the testimony of history, Mr. Zayas Enriquez gravely affirms that "the Mexican people are not really revolutionary. Madero made them so, and they have remained so."

The characteristic prominence of the army in Latin-American politics, and the fondness of the dictators for invoking Napoleon Bonaparte are set forth in Gen. Huerta's address before his new Legislature, as here quoted, when he stated that "it will always be a high and noble duty, or at least a commendable attitude, to save a nation at the cost of all principles"; and that "the ultimate truth is to be found in that saying of Bonaparte's: 'In saving the country one does not violate any law.'"

Mr. Zayas Enriquez further characterizes President Wilson's attitude towards Huerta as a hostility which seems to be the consequence of a personal dislike rather than a political policy. He examines the various statements and acts of President Wilson in regard to Mexico, and decides that if his desires were carried out by the Mexican Government, "Mexico would have become virtually an American colony." Hasty composition, at least, appears in this work, for in direct contradiction to statements on certain pages, the author writes that the Mexican problem is "nothing more than a conflict between the Wilson Doctrine, successor to the Monroe Doctrine, and the indomitable attitude of Huerta, patterned after the attitude of our immortal patriot, Juarez." He agrees, in conclusion, with Col. George Harvey, who wrote that the sole alternative to a policy which leads only to war is the reversal of President Wilson's policy. The clearest statement of the whole work is that regarding "watchful waiting":

> The Honorable Mr. Wilson has only one alternative; either order an armed intervention, a course which he pretends he does not contemplate and which I contend he has neither the right nor the power to resort to; or rely entirely upon diplomatic action. An attitude of watchful waiting does not constitute a solution. It constitutes a real danger; it is, in the last analysis, inaction due to ignorance of whatever action should be taken.

In spite of the attempted impartial treatment of the situation by Mr. Zayas Enriquez, and his advocacy of a reversal of President Wilson's policy, there is material provided in his own book for a dissenting view. He condemns Madero thus: "Madero was not born to be a leader. Superficial in his judgments, stubborn in his capriciousness, fettered by many superstitions, he was not what is called a personality, he was merely an abnormal type." On the other hand, he acknowledges of Gen. Diaz, who was a "personality" in his sense of the word, that he "sacrificed many victims in order to establish and maintain a political system that would insure peace. A Warsovian peace it was called by many men of unbiassed mind; an educational peace, Diaz called it, for he acknowledged it as the only means of training his fellow-citizens for a life of order and labor." Nevertheless, the Mexicans were not so educated. Madero without result appealed to the ideals of democracy, peace, and harmony as enthusiastically as does Mr. Zayas Enriquez. There is no evidence which would lead one to suppose that, when these two personalities of opposite type have failed to govern the country successfully by either method, another "strong man" will be any more capable of it. Huerta at his best is not likely to approach the strength and efficiency of Porfirio Diaz.

CURRENT FICTION.

Garden Oats. By Alice Herbert. New York: John Lane Co.

This is the second novel of a writer who is, consciously, very modern and clever and sophisticated. "Emancipated" is perhaps the best word available. The whole story is a concrete argument for the equal moral and emotional rights of men and women. Olive Latimer, who tells the story, is not hampered by old-fashioned delicacy in the telling of it. She loves a spade as an epicure loves an onion. "The most complex of us," she says, "may be also the most primitive—only we taste our own primitiveness, roll it, as it were, upon the tongue." And, she might have added, we are eager to share the morsel with others. What she chiefly complains of is the male code which sets women on "an intolerable pedestal of difference," exacts of the adored one a false modesty, a pretended continence.

Adolescence in Olive Latimer involves an awakening of the senses which must be concealed. There are false dawns of passion, and then the real thing comes. But it does not set her free, her lover has a dream of her which she dares not break. She longs to be his mate, and sees that, to be happy, he must worship her as a being above and apart. Marriage does not change their relation. She knows that she has the best part of love, but it does not satisfy her; nor does motherhood. It is "l'amour" she thirsts for, the opportunity to let go, to throw herself away for the sake of one

glorious hour of—the flesh. The opportunity presents itself, and she is saved from yielding fully to it by mere chance. Her eyes are opened, the danger is past; she has an impulse to confess, to expound herself, once for all, to her husband:

"It's no good. He must have his pretty lie!" I said to Mollie.

"Make it a lovely truth!" said Mollie. "Yes, you can."

"I'll try. I swear I'll try; my wild oats are all sown."

Mollie forestalled a twentieth-century wit:

"Be thankful they were only garden oats," she said.

The chief question is whether this kind of crop is worth exposing in the marketplace. The obsolescent male, with his clumsy ideals, turns a shamefaced eye upon it. And we believe that a good many women who are not fools or hypocrites honestly feel, in reading this sort of feminine confession, what Celia felt more lightly when Rosalind's wit carried her beyond bounds: "You have simply misused our sex in your love-prate."

North of Fifty-three. By Bertrand W. Sinclair. Boston: Little, Brown & Co.

This is a tale of the Canadian wilds where strength and endurance are life's requirements, where man battles against nature, and nature generously repays by teaching him and providing for him. Here his success does not entail the crushing of weaker men, and his pleasures grow large, healthy, unspoiled by the pettiness of urban civilization. In Mr. Sinclair the cry of "Back to Nature" is distinctly more convincing than it usually sounds. His romance centres upon two people who have escaped to Canada from the wrongful slander of their neighbors. Hazel Weir is lost in the woods and comes to the camp-fire of "Roaring Bill" Wagstaff, notorious for miles around. He promises to take her home, but in the end determines to carry her away as his wife in modern cave-man style. Hazel must obey. Then begins the awakening of her nature in Bill's cabin in the woods filled with books and culture. She realizes the qualities of her cave-man's character, the true product of nature and the open. She loves him, yet she chafes for liberty. So Bill sets her free. But as she enters cities and civilization the woods and Bill call her back, and she returns to be his wife.

Up to this point, it is familiar romance. Mr. Sinclair removes it from that category by beginning his real story here. He compares the life of the woods and of civilization, by giving his couple one more full taste of the emptiness of conventional life before establishing them permanently in the wilds. Mr. Sinclair has a definite point that he states clearly. His two characters are exceptionally well drawn and sympathetic. His style is robust and vigorous. His pictures of Canadian life are stimulating.

Barnabetta. By Helen Martin. New York: The Century Co.

Back-country misses, daughters of illiterate tinsmiths whose brothers drive the country-stage and who have themselves been only drudges in the house, do not generally, upon being sent to college, win their way at once into the heart of the college president, particularly when he happens to be of Boston's bluest blood. Nor do they become paragons of learning and culture, with advanced ideas on Socialism and industrialism, in the brief space of little more than a year. Nor do such rustic damsels spurn an offer of marriage from their college president merely because his hesitation has indicated snobbery. Nor, in the end, do they receive a similar offer from the only other eligible man in the town, incidentally a millionaire. Yet Barnabetta, daughter of Barnaby and Etta Dreardy, of a family of Reinhartz, Pa., "Dutchmen," disproves the general rule. Once her stepmother has sent her off to college, she develops the afore-mentioned attributes with extraordinary rapidity. It is not entirely the background of quaint characters that lends compensation to the story. These are picturesque enough, particularly the brusque, "close" father, who at fifty-five provides himself with a nosegay to win the fortune of an antiquated spinster. The appeal of the story lies in its straightforwardness. The style possesses a certain natural spontaneity, an innocence that gradually wins over the reader and makes the adventures of Barnabetta seem pleasantly true.

Monksbridge. By John Ayscough. New York: Longmans, Green & Co.

This is a quiet picture of English rural scenes and the life of gentlefolk infused with a rare humor. The time is not long after the Oxford movement, and the central incident is the conversion of a public-school lad, Perkin Auberon, from the Church of England to Roman Catholicism. But it is far from constituting the whole story, which is of the ups and downs of the Auberon family—a widowed mother, Sylvia, Perkin, and the narrator, a second daughter, gifted with rare observation. The restrained characterization is admirable. Sylvia, who is beautiful, brilliant, and snobbish, rules domestic affairs with an iron hand and marries Lord Monksbridge, not for his new title and newer riches, but—as she carefully explains—in order that her own Norman lineage may give the needed lustre to it. The mother is a quiet, sensible person, and Perkin is drawn with the right admixture of youthful fire and hardheaded logic. The unnamed narrator, as we are given to understand, is plain and insignificant beside her sister, but develops wonderful charm. Part of it is certainly exhibited in her ability to detect a subtle basis for irony in all that goes on about her, and to see in satiric light the lovers of Sylvia, the tutors of Perkin, the doddering county families.

Mrs. Brand. By H. A. Mitchell Keays. Boston: Small, Maynard & Co.

"Mrs. Brand" is a clever novel full of the modern spirit. It has a sophisticated, rich, and rather flippant heroine, a glorious opportunity for the reformer. It has a doctor-hero who devotes his life to ministering to the wretchedest section of the city ("if your hero has the bad luck not to have been born in the slums, he must at least have the wit to take up his habitation there as soon as he comes of age," a critic has said). It has a "fallen woman," who is introduced to the heroine by the hero, and is regenerated by both of them. As a foil to the hero, there is another suitor, a worldly and selfish but brilliant minister, whom the heroine seems for a time to prefer. To classify the novel thus is not to condemn it. In spite of its occasional sentimentality, it is well planned and crisply written, and presents two or three characters drawn with unusual skill.

AN INFORMAL PICTURE OF BURROUGHS.

Our Friend John Burroughs. By Clara Barrus. Including Autobiographical Sketches by John Burroughs. Boston: Houghton Mifflin Co. $2 net.

For twelve years the literary assistant of John Burroughs has, as she tells us, enjoyed "exceptional opportunities . . . of observing him." The record of her observations falls into three parts: first, two chapters in which she rambles at ease; secondly, several chapters in which Mr. Burroughs writes of himself in an equally informal style, and, thirdly, five more chapters by the author in her most nonchalant vein. The result of the plan of the book is that nothing has its proper place, and that many things are mentioned twice, with a limping "as has been said" by way of apology.

In substance, most of the book is pretty close to the ordinary magazine article on "My visit to Slabsides"; that is, it shows faithful rather than penetrating "observation," and is always likely to slip from triviality to fatuous profundity and back again. The triviality one is content to smile upon indulgently—any one, at least, who is accustomed to recent biographical writing; but the fatuous profundity is too much. Here is a fair specimen:

We brought the good things from the hearth, hot and delicious, and sat down to a dinner that would have done credit to an Adirondack guide—and when one has said this, what more need one say?

In helping myself to the celery, I took an outside piece. Mine host reached over, and, putting a big white centre of celery on my plate, said: "What's the use taking the outside of things when one can have the heart?" This is typical of John Burroughs's life as well as his art—he has let extraneous things, conventionalities, and non-essentials go; has gone to the heart of things. It is this that has made his work so vital.

As we arose from the table, I began picking up the dishes.

Such is life at Slabsides. It is hard to find, amid the throbbing hero-worship, the real John Burroughs; we are at the oracle whither come Vassar girls and Burroughs clubs, where "artists and sculptors paint and model him, and photographers carry away souvenirs of their pilgrimages"; but the oracle himself is in danger of being buried beneath so much praise and pillows and femininity, as he was on his Alaskan trip: "Up in Alaska there were a dozen or two following him around, tucking him up in steamer rugs, putting pillows to his head, running to him with a flower, or a description of a bird."

A few of the countless incidents mentioned by the writer are significant. But the value of the book resides mainly in the central section—Mr. Burroughs's "Autobiographical Sketches," which cover about one hundred pages. These sketches were written as letters to Miss Barrus at intervals between 1903 and 1912, to supply her with material in case she should some day undertake a life of Mr. Burroughs. Though not intended for publication in the original form, they are so published in order to preserve their "homely, unstudied value." This value they have; and they are, besides, full of apt description and characterization and incident—and, of course, they are heavily freighted with fact. Though put together helter-skelter, they are, therefore, a valuable—we might venture "precious," were it not for that vision of the ladies up in Alaska—addition to the writings by and about John Burroughs. It is impossible to review the contents, where so much is pertinent and quotable and all is interesting. Suffice it to say that to his father, that red-haired, naïve, emotional farmer who, we are told, probably never said "Thank you" in his life, Mr. Burroughs supposes that he owes nothing more admirable than his foot; while to his mother, a busy, devoted mother of ten children, he owes "my temperament, my love of nature, my brooding introspective habit of mind. . . . In her line were dreamers and fishermen and hunters," among them Mr. Burroughs's grandfather, who "went from the Book to the stream, and from the stream to the Book," and who even when eighty years old "would woo the trout-streams with great success, and between times would pore over the Book till his eyes were dim." Mr. Burroughs writes at length of his ancestry and of his mental and moral inheritance; the rest of these autobiographical pages he devotes to his life on the farm, to his love of nature (which, though innate, he tells us was evoked by Emerson), to his early writings and his experiences as a teacher, and to an analysis of his character and his outlook on life. What he tells regarding his early writings is supplemented by a chapter by Miss Barrus which contains a number of interesting quotations from his youthful Johnsonian and Emersonian productions.

THE NEW BANKING ACT.

The Operation of the New Bank Act. By Thomas Conway, jr., and Ernest M. Patterson. Philadelphia: J. B. Lippincott Co. $2 net.

Analysis of the operation of an important new law within less than a month of its enactment is admitted by the authors of the present work to be "unusual." The book bears evidence of careful collection and compilation of the documents and discussions which marked the progress of the new banking law through the House of Representatives and the Senate, and deals topically, but sometimes only superficially, with the different problems arising under each section and paragraph. It forms a convenient manual for those interested in the new law, whether as bankers, officials, or students; and its statements are generally accurate and temperate. From the standpoint of any one familiar with the subject, some of the discussions appear almost needlessly elementary in character, but the work is avowedly intended for the general reader. To the economic student its discussions will be suggestive, even if they are not always exhaustive.

There are some statements which are subject to challenge. It will hardly be agreed in New York or in other impartial circles that the crisis of 1907 "was almost entirely a bankers' panic," and that "there were no conditions which would cause a panic in Minnesota, in the Middle West, in the South, in New England, or in any part of the country except New York city" (page 9). The great absorption of capital into fixed forms, carelessly encouraged perhaps in New York, but going on all over the country, is thus calmly ignored, and it is even declared that when the country banks suspended currency payments, it was because they found that they could not obtain the return of their deposited reserves, and that, "therefore, they were forced to follow the bad example of New York" (page 95). This saddling upon a single city of the entire responsibility for the misdirection of capital and the general collapse of the banking system throughout the nation is going farther than even the most enthusiastic advocate of banking reform is ordinarily disposed to go.

Another statement which may be challenged, or which at least may lead to misconstruction, is the intimation that if the sum of $17,857,052, representing one-sixth of the subscriptions to the capital stock of the Federal reserve banks, "should be called for at any one time, there might be considerable difficulty in making payments without injury to business" (page 49). Apparently, the authors have no great confidence in the strength of the existing banking system if they believe that a transfer of this small amount, spread over 7,500 institutions, would have any serious effect upon the money market. They also reveal remarkable naïveté in the statement on the next page, that "the requirement that the payments must be in gold is a very valuable one, in that a considerable supply of it will thus be furnished to the reserve banks at the very start."

It needs no more than an elementary knowledge of banking to show that whether the payments into the Federal reserve banks were in greenbacks, checks, or drafts, it would require only the simplest operations through the clearing house and the Sub-Treasuries to turn them into gold or gold certificates, and that this must occur inevitably, except possibly in the case of greenbacks and silver certificates, because the entire resources of the banks at the outset must consist of cash, and cannot include in any case redeposited reserves or credits. The demand that individual banks shall sort out gold and gold certificates for making their payments is an infantile device, having absolutely no banking value.

Some surprise perhaps may be felt by Secretary McAdoo when he reads the declaration that through subdivision into districts "the country is, figuratively speaking, divided into compartments that are expected to be almost water-tight" (page 69). It was the intimation of the Secretary, during the hearings in New York, that the Federal Reserve Board would exercise a benevolent watchfulness over the various Federal reserve banks and would make such disposition of their resources and gold reserves that limiting New York to a bank of small capital would have little or no adverse effect. Water-tight compartments are not possible, even between nations—much less be-

tween sections arbitrarily marked off on the map of a single country.

There is a curious misinterpretation of the policy of the Treasury Department in the description given of the system of maintaining the gold reserve (page 195). It is set forth correctly that when legal-tender notes are presented for redemption through the gold reserve fund, it is the practice at the Treasury Department to place them among the assets in the general fund, taking from this fund an amount of gold coin or gold certificates equal in amount to the legal-tender notes so transferred. The comment is made that "thus, the letter of the law is complied with, if not the spirit." The fact is that from the beginning of the creation of the gold-reserve fund, it was felt that so long as there was a considerable amount of free gold in the general assets of the Treasury, it would be foolish to let the reserve fall below the legal limit of $150,000,000, or to issue bonds to replenish it. By promptly handing over notes which are redeemed in gold to the general fund of the Treasury in exchange for gold held there, the gold reserve has never, since the Act of March 14, 1900, appeared at a less figure in the daily balance than $150,000,000. The effect upon the public mind would have been much less favorable if the reserve had been allowed to sag below this amount to some uneven figure from day to day; and it would have been supremely foolish to employ the great resources placed at the command of the Secretary of the Treasury to replenish these small losses by the public sale of bonds. The policy inaugurated in 1900, and since steadily pursued, is quite as much in accord with the spirit of the law as with its letter, and any other course would have excited unfounded alarms and might have imposed needless charges upon the Government.

These shortcomings in the discussion, however, are of only minor importance and do not affect the general accuracy of the analysis of the scope and effect of the new law. The character of the note issue, and the weak points in the composite system which finally became law, are clearly pointed out. The provisions for the issue of notes by the Federal reserve banks, "issued under the same conditions and provisions of law as relate to the issue of circulating notes of national banks secured by bonds of the United States bearing the circulation privilege," are brought out more clearly than has been done in most discussions of the new law. These provisions are more or less of a hodge-podge, and were evidently insisted upon in conference committee, after being reduced from a much worse form, in order to guard against the contraction which might follow the retirement of the old national bank-notes. It would have been much better if the notes to be issued by the Federal reserve banks had been homogeneous in character—of one form and type—bearing the imprint of the Federal system, even if bonds had constituted a part of the general assets held against them.

The bond-secured circulation is, however, restricted in several ways. First, the total amount of 2 per cent. bonds which may be bought by the Federal reserve banks and employed for note issues is limited to $25,000,000 per year. Secondly, the bonds thus bought may be converted into 3 per cent. bonds which do not carry the circulation privilege; they may be converted into one-year Treasury notes, which are likely to prove a valuable liquid asset; or they may be held by Federal reserve banks without being made the basis of a note issue. The interesting question is raised whether the language assimilating the notes based upon bonds to the notes issued by national banks carries with it the tax of one-half per cent. *per annum* upon notes issued by Federal reserve banks. There is a provision of the law (in sec. 7) which provides that "Federal reserve banks, including the capital stock and surplus therein, and the income derived therefrom shall be exempt from Federal, State, and local taxation, except taxes upon real estate"; but this can hardly be held to override the more specific definition of the conditions under which the banks may issue notes.

It is probably in the power of the Federal reserve banks to confine their circulation to the form of Federal reserve notes, if they are able to substitute them from time to time for gold received from the public and the Government, and thus to avoid entirely the issue of notes specifically secured by bonds, without contracting the currency any more than if bond-secured notes were issued. The obviously sound policy of the Federal reserve banks will be to put out a note whenever they can do so in exchange for gold, independently of the question of expansion or contraction, in order to pile up in their vaults a reserve of several hundred millions of the yellow metal, which will give their combined reserves something of the impressiveness of those of the Bank of Russia or the Bank of France.

The authors seem to have only an inadequate appreciation of the principle that interest should not be paid on commercial deposits. Attention is called to the fact that in the law as finally enacted Federal reserve banks are not forbidden to pay interest, but the comforting suggestion is added that "it does not seem at all certain that they will do so" (page 61). It might have been added that if they should pay interest upon reserve deposits, they would fly deliberately in the face of the reasoned experience of the world. That experience dictates the payment of interest upon those deposits only which are in the nature of investments.

On such a point as the allocation of the tax to be paid upon the impairment of the reserve against notes, no light whatever is thrown, even in the way of conjecture, by the authors of the present work. They simply declare, following the language of the act itself, that the tax "is to be paid by the reserve bank, but it is required to add an equivalent amount to the rates of interest and discount fixed for it by the Federal Reserve Board" (page 149). Several questions naturally suggest themselves in regard to the allocation of this tax. Is the rate of interest to be added to all discounts made after the reserve falls below the legal minimum of 40 per cent., or only upon those where the person desiring the rediscount asks directly for notes instead of deposit credit? Is the tax to cease when other paper is paid off and the impairment of the reserve comes to an end, or is the increased tax to be continuous upon the loans upon which it is first imposed?

In referring to the Federal Advisory Council, which the national banks are authorized to appoint to confer with the Federal Reserve Board, it is remarked that "a careful examination of this grant of powers makes it evident that the influence of this Council may mean much or little" (page 83). No one is likely to dispute this safe assertion. But it does not necessarily follow that differences of opinion between the two bodies—the Federal Reserve Board and the Advisory Council—are, as our authors think, "inevitable." They rarely occur between bodies of a similar character at the European banks of issue, and they should not occur in this country if the Federal Reserve Board consists of men with open minds, ready to compare their own views with those of the trained bankers who will probably serve on the Advisory Council. The suggestion that the "only safe solution is for the Advisory Council to devote itself to the collection and presentation of facts and the furnishing of information, but never advice, except when called for," will not bear criticism. The Council is distinctly directed by the law "to *make recommendations* in regard to discount rates, rediscount business, note issues, reserve conditions in the various districts, and the purchase and sale of gold or securities by reserve banks, open-market operations by said banks, and the general affairs of the reserve banking system."

Careful analysis is made of the ef-

fect of the transfer of reserves upon the different classes of banks and of the proportion of country deposits which the New York banks now carry. There is also some discussion of the effect of the new law upon the loans made on the Stock Exchange; but naturally, this discussion is inconclusive, in view of the fact that the banks and the Stock Exchange itself have not yet been quite able to solve the problem. Upon the whole, the book is likely to prove timely for those interested in the working out of the new law, although a more complete and conclusive treatise is likely to be produced at some future time, dealing with the questions of law involved as well as those of an economic and banking character.

A MONUMENTAL WORK.

Histoire de la Langue Française des origines à 1900. By Ferdinand Brunot. Vol. IV: "La Langue Classique" (1660-1715), Part I. Paris: Armand Colin. 18 francs.

At intervals of years, the *Nation* has noticed the progressive publication of this giant work. The Académie des Inscriptions et Belles Lettres has bestowed on it the Premier Grand Prix Gobert (1912), the highest national honor. In erudition, in logical and easy ordering of the myriad examples patiently collected, in its successful taking over of the history of language to the human history of a nation which is one in race and civilization and has, by its language, influenced profoundly the languages and literature and modes of thinking and feeling of other civilized countries, this work is, perhaps, without a rival. In particular, even the greatest works on the "classic languages" of Greece and Rome do not furnish such indications of the habits of mind and morals at the given period of history as constantly appear in these pages. The author, who is himself a brilliant product of the older humanities, has been sharply attacked in his university career for the part he is supposed to take in substituting modern for ancient and classical training. Save for reference, the present voluminous work may not enter the secondary curriculum; but for higher studies—and for the educated thinker who seeks an understanding of the evolution of humanity as well as of language—it is indispensable. Thus the present Part, with the few additions and corrections which it may call forth, supplements vitally all that has hitherto been written of the Golden Age of Louis the Fourteenth.

The author modestly excuses himself as he girds himself anew to the long toil still needed to bring his task to an end:

> Some day, perhaps, I may be able to give the public a short synthesis. . . . To-day I wish to print the documents as I have them. And it is necessary, before all else, that my book should appear. When the age of full maturity begins passing, it is imprudent to prolong too much a labor whose accomplishment still requires so many years.

For the first time, there will be found in this volume two chapters almost entirely due to others than myself. . . . I have no intention of transforming the character of my book and giving henceforward a collective work, of which I should be only the director. But, in spite of the counsel of several of my friends, I have sacrificed the vanity of doing the work alone to the hope of doing the work better. Indeed, that which is important and of general interest is not that the "History of the French Language" should be entirely my work, but that it should approximate as closely as possible to what it ought to be. Now, as may well be thought, my competence is not universal. . . . Soon my readers will profit even more largely by the interest which various men of learning have been willing to show in this history. . . . I ought to add that if the numberless quotations of my text have been verified one by one in the originals whence they are taken, it is thanks to the unwearied patience of her whose devotedness no duty, however burdensome, can surfeit; to her who has been associated with a life wholly of science and labor, and has wished to be something more than the witness of it.

At the beginning of the volume, Professor Brunot explains lucidly its aim and scope, and gives fifteen pages of abbreviations used in citing his texts. The citations themselves are not only apposite to the text as they occur, but are chosen with a skilful eye to general interest; and the same is to be said of the copious footnotes. A first book is devoted to the existing theories of language at the classic period—grammarians and the Academy, dictionaries and reasoning, writers and the public, with the general spirit of the time. The second book treats of orthography from Malherbe and Port Royal, through salons and a phonetic campaign (already!), to the action of the Academy and schools, with entertaining examples of men and of letters and court ladies. In the third book—on pronunciation—Professor Rosset of Grenoble, a pupil of M. Brunot, who has specialized himself in phonetics, has given help; the chapters on good use, Parisian and provincial, and the resistance of popular instinct are illuminating. The fourth book takes up vocabulary, in which the development of prudishness somewhat resembling Puritan English, is treated at length, with its curious transition from morality under Louis the Fourteenth to good taste under Louis the Fifteenth. The words used in each class of society are considered fully, with the "fixation" of the lexicon against neologism and in favor of that precision which is the glory of French literature. The three-column lexicological index of this Part alone comprises twenty-one pages—a single example of the satisfactory apparatus of all this learning.

Notes

Longmans, Green & Co. announce the forthcoming publication of "Modern Industry," by Florence Kelley.

Frederick A. Stokes Company will publish this month "The Cost of Wings," by Richard Dehan.

Small, Maynard & Company announce for publication on Saturday "Sweetapple Cove," by George van Schaick.

The Macmillan Company announced for publication yesterday "The Secret Book," by Edmund Lester Pearson. Other volumes which will be published shortly by the same company are: "The Letters of Richard Henry Lee," edited by James Curtis Ballagh; "A Lad of Kent," by Herbert Harrison; "The Enlarging Conception of God," by Herbert Alden Youtz.

Houghton Mifflin Company's list of publications for April includes: "The Heart's Country," by Mary Heaton Vorse; "The Misadventures of Three Good Boys," by Henry A. Shute; "The Owl and the Bobolink," by Emma C. Dowd; "Stories and Poems and Other Uncollected Writings," by Bret Harte, compiled by Charles Meeker Kozlay; "Before Vassar Opened," by James Monroe Taylor; "Nurses for Our Neighbors," by Dr. Alfred Worcester; "The New Politics," by William Garrott Brown; "Religious Confessions and Confessants," by Anna Robeson Burr; "Social Justice Without Socialism," by John Bates Clark.

John Lane Company announces for publication on May 1: "The Home of the Seven Devils," by Horace W. C. Newte; "The New Optimism," by H. de Vere Stacpole; "French Novelists of To-day," by Winifred Stephens; "The Love Affairs of Napoleon," by Joseph Turquan, translated by J. Lewis May.

The Rev. C. Silvester Horne's Lyman Beecher Lectures for 1914 at the Yale Divinity School will be published in one volume by the Fleming H. Revell Company. The synopsis of the lectures is as follows: Introductory—The Servant of the Spirit; The First of the Prophets; The Apostolic Age; The Royalty of the Pulpit; Athanasius and Chrysostom; The Rulers of Peoples; Savonarola, Calvin, and John Knox; The Founders of Freedom; John Robinson and the Pilgrim Fathers; The Passion of Evangelism; Wesley and Whitefield; The Romance of Modern Preaching.

WE have received from the Harvard University Press, at Cambridge, the Harvard University Directory. It is a handsomely printed catalogue of men now living who have been enrolled as students in the University, and includes officers of instruction and administration. In this second edition (the first was printed in 1910) the number of names

has been brought to more than 35,000, and addresses, corrected to September 15, 1913, have been found in the case of all but about a thousand. There is an alphabetical list, followed by a geographical arrangement of the names. So systematized, the book should fill a large need. The price is $2.50 postpaid.

THE Phi Beta Kappa Society has delegated to a committee consisting of Prof. Clark S. Northup, of Cornell University; Mr. William C. Lane, librarian of the Harvard University Library, and Mr. John C. Schwab, librarian of the Yale University Library, the preparation of a volume of representative Phi Beta Kappa orations. Some scores of notable addresses have been delivered before the various chapters of the society since its organization in 1776. It is now proposed to publish fifteen or twenty of these in a volume of some five hundred pages, with a photogravure frontispiece, in a limited edition, through a house well known for the excellence of its special publications. As the committee must guarantee the publishers a sale of five hundred copies, it invites subscriptions, which may be sent to any of its members. The price of the book will not exceed three dollars.

THE correspondence of Arthur Capel, Earl of Essex, who was Lord Lieutenant of Ireland from 1672 to 1677, is contained in many bulky volumes of manuscript among the Stowe Papers in the British Museum. Two efforts to edit them have been made in the past, but each has exhausted the editor before the task has been much more than begun. Another effort has now been made by the Royal Historical Society, and a selection covering the years 1675-1677 has recently appeared in the Camden Third Series, Volume XXIV (Office of the Society). The work is well done, though the preface is written in an amazingly poor style. The letters are of value for the constitutional history of the period, and contain a number of items that may well find place in any general treatment of the subject. One of the letters recalls the important effect that the imprisonment in 1676 of Francis Jenks, a linen draper, had upon the passage of the Habeas Corpus act in 1679, and revives the memory of a man to whom the Englishman of to-day, and no less the American, owes some gratitude. The spelling "Gynks" throws light on contemporary pronunciation. A remark made by Charles II, and here mentioned, to the effect that "women seldome understand theyre owne buissenesse," adds somewhat to our appreciation of the royal sense of humor, for probably the King knew whereof he spoke.

THE author of "In the Old Paths: Memories of Literary Pilgrimages" (Houghton Mifflin) has fallen into neither of the traps which lie open for the writer of a book of this kind. Mr. Arthur Grant has not made a mere topographical and historical chronicle; nor has he produced a series of sentimental maunderings amid old literary shrines. Instead, his book is one which could have been written only by a man who knew the old paths, the old villages, with their dwellings and churches, and knew them well. At the same time, he skilfully offers his reader a great deal of their charm. Some of his subjects are: Hertfordshire Revisited; Wheathampstead and Charles Lamb; England's Pennsylvania—Penn Village and Stoke Poges; The Homeland of the Disraelis; Memories of Lichfield; Oxford and the Cotswolds; Amid the Haunts of Cowper. The essay on Lichfield is in the right vein, and there are two on Shenstone—From Arden to Arcady, and Shenstone, a Poet of Arcady—which are both delightful.

"LANDMARKS OF LITERATURE" (McClurg), by Arthur E. Bostwick, the librarian of the St. Louis Public Library, is based upon some lectures spoken before the training classes of two or three large libraries. In eighteen brief chapters the author discusses such matters as The Nature of Literature, Special Literary Forms, The Structure of Literature, Some Formalities in Written Speech, and The Preservation of Literature. All is in good sense; if there is a little obviousness the author's lively style saves it from banality. Dr. Bostwick says that the subjects are not treated in any other one place in a style to make them interesting to the general reader. This is doubtless true, and yet one feels that the book will be most used by the library student. One also feels that such a work from a man who knows the needs of aspiring librarians is in the nature of a confession that his colleagues of the future are not very securely grounded in some of the essentials of their profession.

A TIMELY and interesting book of an historical nature is Percy F. Martin's "Maximilian in Mexico" (Scribner). Unlike some recent works, it is more than its title indicates, for of its 480 pages, over 150 are given up to Maximilian's earlier career, and to the conditions in Europe and Mexico that led to French intervention. Mr. Martin has travelled widely throughout Latin-America, and written many books, besides countless articles in the newspapers and journals which he has represented on his travels. His "Mexico of the Twentieth Century" has for some time been the standard work in English on the economic resources of the republic as it was under President Diaz. Some of Mr. Martin's books have been very dull, but this one is readable. The author has a strong sympathy for his hero, and a fairly clear comprehension of his subject. An impressive bibliography, which will probably be of greater value to future historical students than it seems to have been to the author, contains relatively few references to books published in this country. Like most journalists, Mr. Martin writes readily, and rarely fails to publish anything that he has written. He also has the strong prejudices of the British newspaper corespondent, and is, as a rule, unwilling to think well of the United States of America. His animus is constantly cropping out, but it is so perfectly obvious that it makes his books interesting and instructive. It is often "good medicine" to read the criticisms of a prejudiced English traveller.

IN the present disordered state of our diplomatic service, the chapter dealing with the United States representatives in Mexico, during the last part of Maximilian's life, is peculiarly significant, and deserves to be widely read. The Campbell affair is one which may well cause us to blush for shirt-sleeved diplomacy. "It has to be remembered that whereas Mr. Campbell was appointed Minister to Mexico, in May, 1866, he did not take up his duties until December, while he resigned in the following June, of 1867. During the whole thirteen months, he had journeyed but once to the Republic of Mexico, and had never visited the capital at all. He had not met, nor had he troubled to meet, a single member of the Mexican Administration; his letters of credence had remained in his portfolio until delivered by a deputy, and beyond a number of crudely composed and badly translated dispatches addressed to the Foreign Minister, the Mexican Government had no official cognizance of his existence." It is Mr. Martin's opinion that "Mr. Lewis D. Campbell should never have been in the diplomatic service of any country — especially that of the United States. It is doubtful whether any other government would have employed such an officer." Naturally, Mr. Martin does not spare Campbell's reputation, and presents only one side of the case; but at best there is little justification for an episode which, if it did not actually cost Maximilian his life, has left an indelible stain on the records of our State department. The book is illustrated by many good portraits.

NO READER of Mr. Arthur Symons's "Knave of Hearts" (John Lane) can entertain a doubt of its author's rare poetic accomplishments, his possession of subtle melody, phrasal suggestiveness, and a vibrant sensibility which reaches the nerves, if not the hearts, of his hearers. The opening for the skeptic lies elsewhere—in the insubstantiality of the work as the poetical outcome of fourteen years of the mature life of an able man. These poems are the mere exhalations—here and there the effluvia—of vague and melancholy moods, from which the author has conscientiously refused to extract either truths or incentives or discipline. If a man substituted the odors of food for food itself—and this typifies pretty clearly the aim of the symbolists—the strongest aromas would no doubt come to be preferred, and a recourse at times to horror or sensuality is the price Mr. Symons pays for carrying the etherealization of beauty to excess. A like reaction is evident in certain wilful interruptions or distortions of the obvious course of the metre, in conformity to the latter-day doctrine that a calculated roughness is the finish of finish. The author uses and abuses the word "dream," and his poems suggest that half-waking state in which realities float dimly upon a surface of hallucinations. Indeed, many qualities in this work, its vagueness, its plaintiveness, and its fleshliness, suggest that the very traits which were once regarded as the disabilities of adolescence have here been set up as the standards of maturity. The collection embraces two powerful brief dramatic scenes from the life of Nero, and a truculent sonnet against women rioting for their rights. More than half

the volume consists of translations, chiefly from Verlaine and Catullus, in which the virtuosity of Mr. Symons meets hard tests successfully, and sometimes reaches a mastership which all but refutes the favorite dogma of the untranslatability of verse. While it is true that English—even an English lightened by Mr. Symons—is too slow and too massive to reproduce the lightness and celerity of a French aerated by Verlaine, the translations are remarkable both for sensibility and for execution.

DR. ARTHUR S. WAY has turned a prodigious amount of Greek verse into English verse, with somewhat uneven success. His "Argonautica," in Morris's flowing ballad lines of six accents, seemed to us an excellent reproduction of the original, though it did not suit the taste of some critics. Certainly his Quintus Smyrnæus, in blank verse, recently published in the Loeb Library, was a masterly bit of translation. But his Euripides, revised for the same Library, was on the whole a commonplace piece of work, and his Sophocles, the second part of which, containing the "Aias," "Electra," "Trachinian Maidens," and "Philoctetes," has just been issued by Macmillan, will not increase his reputation. It is scholarly, it follows the original closely without being servile, it has many virtues, but too much of it bears the brand of "mechanic exercise." A specimen will confirm this judgment—the first words of the chorus:

> Electra, hapless child
> Of mother sin-defiled,
> Why in insatiate mourning dost thou pine
> For him who long erewhile
> Ensnared by treacherous guile
> Of thine own mother's impious design,
> Died by her felon hand?
> Ruin seize them who planned
> And wrought the deed!—if such prayer may be mine.

We submit that this sort of jigging rhyme would not give a non-Grecian reader the slightest notion of the lyrical parts of a Greek tragedy. Elsewhere, particularly when he uses a long free metre, Dr. Way is decidedly more successful, as, for example, in this noble reply of Electra:

> Oh, if the dead is to lie dust, nothingness, ever forlorn—
> Oh, if on traitor assassins shall dawn no retributive morn,
> Out of men's hearts must all honor, all fear of the Gods be torn.

There is something of the swing of the original in that, a little of its spirit, too, although as a matter of fact Dr. Way has allowed himself rather more license here in filling out with conventional poetic words than in the passage before quoted. Perhaps the point is just there. To reproduce the effect of the less ornate lines of Greek poetry it is virtually necessary to heighten the tone, so to speak, by developing the metaphorical or emotional vocabulary; otherwise what is nervous and elegant in the original becomes flat and prosaic in the translation—such is the difference in the genius of the two languages. Dr. Way has not employed this art with uniform cunning—but neither has any one of his predecessors. Sophocles still awaits a translator.

THE death occurred on April 15 of George Alfred Townsend, the newspaper correspondent, novelist, and poet, who wrote under the pseudonym of "Gath." Mr. Townsend was born in Georgetown, Del., on January 30, 1841, and graduated from the Central High School, Philadelphia, in 1860. His first experience of journalism was in the same town, but in 1862 he became war correspondent for the New York *Herald*, and later in the year went to England, where he lectured on the war and wrote for English and American publications. In 1864-5 he served as war correspondent for the New York *World*, and in the following year described for the same paper the Austro-Prussian war. For forty years subsequent to 1867 he resided in Washington and wrote daily correspondence for a number of papers, among them the Chicago *Tribune* and the Cincinnati *Enquirer*. Mr. Townsend was the author of "The Bohemians," a play, 1862; "Campaigns of a Non-Combatant," 1865; "Life of Garibaldi," 1867; "Real Life of Abraham Lincoln," the same year; "The New World Compared with the Old," 1868; "Poems," 1870; "Lost Abroad," 1870; "Washington Outside and Inside," 1871; "Mormon Trials at Salt Lake," 1872; "Washington Rebuilded," 1873; "Tales of the Chesapeake," 1880; "Bohemian Days," 1881; "The Entailed Hat," 1884; "President Cromwell," a drama, 1885; "Katy of Catoctin," 1886; "Life of Levi P. Morton," 1888; "Tales of Gapland; Mrs. Reynolds and Hamilton," 1887; "Columbus in Love," 1892; "Poems of Men and Events," 1900.

CHARLES S. S. PEIRCE, logician, mathematician, and philosopher, who died on April 20, was born in Cambridge, Mass., on September 10, 1839, the son of Prof. Benjamin Peirce, the foremost American mathematician of his time. His mother was the daughter of United States Senator Mills, of Massachusetts. He was graduated from Harvard in 1859. He was connected with the United States Coast and Geodetic Survey for a number of years, and for several years was lecturer on logic in Johns Hopkins University. It was in this subject that his most original work was done, his papers on the algebra of logic and on the logic of relatives being pioneer work, and giving him an international reputation. His most conspicuous contribution to the philosophical thought of the time was the idea of pragmatism, afterwards developed and modified by William James. In 1887 he retired to Pike County, Pa., to devote himself completely to logic. His only companion was his wife, who, before her marriage, was Juliette Froissy. Mr. Peirce was a member of the National Academy of Sciences, and a fellow of the American Academy of Arts and Sciences. He was the author of "Photometric Researches," and of numerous articles upon logic, history of science, metaphysics, psychology, mathematics, gravitation, astronomy, map projections, color-sense, chemistry and the cataloguing of libraries. He contributed a large part of the scientific definitions to the Century Dictionary and some of the chief articles on logic to Baldwin's Dictionary of Psychology and Philosophy. During many years, Mr. Peirce was a highly valued contributor to the *Nation*, his reviews of mathematical and other scientific works being of unusual interest and brilliancy.

SAMUEL RUTHERFORD CROCKETT, the novelist, who died on April 20 in Scotland, was born in Duchrae, Galloway, September 24, 1860. He was educated in Edinburgh, Heidelberg, and at New College. In 1886 he entered the Free Church of Scotland and was minister of Penicuik for several years. It was at this time that he turned his attention to journalism. In 1893 he wrote "The Stickit Minister," his first and possibly his most successful novel. Among his other novels are "The Raiders," 1894; "Mad Sir Uchtred," 1894; "Cleg Kelly," 1896; "Lochinvar," 1897; "Sir Toady Lion," 1897; "The Red Axe," 1898; "The Black Douglas," 1899; "Ione March," 1899; "Kit Kennedy," 1899; "The Stickit Minister's Wooing," 1900; "The Dark o' the Moon," 1902; "An Adventurer in Spain," 1903; "The Bloom of the Heather," 1908; "Love in Pernicketty Town," 1911, and "The Moss Troopers," 1912.

NOTES FROM ABROAD.

THE so-called "federal solution" has occupied a prominent position of late in Parliamentary discussions of the Home Rule bill. Its chief attraction for party tacticians is that nobody knows anything about it, and therefore there is little or no opposition to the idea. Some Liberals are inclined to look kindly upon it in the hope that it may conciliate the Opposition, and on the other side some Unionists see the chance that the prospect of a federal settlement may be used to postpone actual home rule in Ireland until the Greek Kalends. The need of elementary instruction in the subject may be realized from the fact that one member of Parliament actually expressed his preference for a federal system on the ground that it would set up an undivided sovereignty in place of a divided sovereignty.

ALMOST the only voice raised in warning is that of Mr. Erskine Childers, who cautions Liberals against proposals to "federalize" the Home Rule bill by making it conform, without the smallest regard to the special needs and claims of Ireland, to some nebulous plan—undiscussed in the country, unsanctioned even in principle by the country—for the future reorganization of the United Kingdom. He further objects that the suggestion is a return to the vicious attitude of putting English interests first and Irish interests second. "Our business," he declares, "is to give Ireland home rule because it is an act of justice, and to give her the kind of home rule which suits her needs, not the kind which suits British convenience."

ONE never knows in what eccentricity the new enterprise of the *Times* is going to break out nowadays. Here is its latest bid for advertisements: "The capital outlay charged to insure the appearance of an 'In Memoriam' announcement in the *Times* annually in perpetuity is £15 for four lines, and pro rata." No

doubt, while their grief is fresh upon them, many bereaved persons of means will avail themselves of this offer. One of the Labor papers, however, has had the impertinence to work out a sum in arithmetic to find out what this means. The interest on £15 at 5 per cent. per annum is 15 shillings. The advertiser, therefore, in addition to making the *Times* a capitalist to the extent of £15, is paying it 15 shillings for a four-line In Memoriam notice. But the ordinary every-day charge for a single In Memoriam notice in the *Times* is 7 shillings and 6 pence—just half that sum—for anything up to six lines.

MR. EDWARD MARSTON, whose death occurred recently in England, in his ninetieth year, deserves remembrance on other grounds than his longevity. The publisher who brought out Wilkie Collins's "Woman in White," Charles Reade's "Hard Cash," R. D. Blackmore's "Lorna Doone," William Black's "Daughter of Heth," James Payn's "Lost Sir Massingberd," and the early books of Thomas Hardy, certainly played an active part in the production of English fiction of the Victorian period. Oliver Wendell Holmes, Louisa M. Alcott, and Harriet Beecher Stowe were among the American authors whose English editions were issued by Mr. Marston's firm. Mr. Marston was one of the few survivors of the special constables enrolled to assist in the keeping of the peace at the time of the Chartist troubles in 1839.

THE site of the supposed villa of the poet Horace has been excavated by order of the Italian Government with the following result, according to a report from the French School of Rome. The buildings which have been cleared were of three epochs: (1) the beginning of the Empire, when they were part of some rich man's house; (2) the end of the first century of the Christian era, when they were baths; (3) the second century, also baths. Nothing has been found to confirm the tradition of Horace's villa.

SEVERAL years ago the *Nation* had occasion to notice the valuable work done by Nahum Schlousch in his theses for the French doctorate of letters—on the history and literature of the Jewish colony of North Africa, of which he is himself a native. He has now reported to the Académie des Inscriptions et Belles-Lettres the results of the Government mission with which he has been charged in Morocco. Dr. Schlousch crossed through the Glaoua, the mountain passes at a height of 8,500 feet, and came down in the hitherto inaccessible zone of the East by the course of the Oued Dads. He classifies his explorations: (1) Cave shelters of the Great Atlas; (2) so-called Roman ruins; (3) monuments of Berber architecture; (4) historical documents. He has analyzed for the Academy ten collections of manuscripts in Hebrew and Jewish Arabic, relating to several centuries of Moroccan history and revealing many unknown events. Thus, a Christian principality still existed in the Upper Draa after 900 A. D. Also, the Jewish population of the Mellah in the high mountain region is shown to have been of native and not Spanish origin, as commonly supposed, by Hebrew inscriptions of the Great Atlas extending from the fifteenth to the seventeenth centuries.

Science

THE COSMOS OF "PARADISE LOST."

Milton's Astronomy. By Thomas N. Orchard. New York: Longmans, Green, & Co. Illustrated. $2.50 net.

This volume is devoted mainly to an exposition of the many choice passages in Milton which embody astronomical allusions. Mr. Orchard, by way of a suitable background for such interpretation, begins with a brief historical sketch of astronomy, from the time when primitive man first directed his attention to the study of celestial phenomena down to the death of Milton in 1674. Even during his lifetime astronomy made vast progress: the telescope was invented, making possible the discovery of spots on the sun, moons of Jupiter and Saturn, phases of Venus, the stellar composition of the Galaxy; and the definite substitution of the Copernican system for the Ptolemaic, which utterly revolutionized the progress of human thought.

Milton was alive to all this and fully conversant with it. Mr. Orchard's sketch of astronomy, while hardly satisfying from a practical astronomer's point of view, and making overmuch of the picturesqueness of Horrox, nevertheless well indicates the atmosphere of Milton's time; but it is even more important to remember that several years of the poet's young life, while he lived at Horton in Buckinghamshire, were devoted to the study of a type of physical science now known as cosmography, or cosmology. A lengthy chapter deals very fully with this, making it clear how the momentous events of "Paradise Lost" take place in the four regions of universal space, as he conceived it: the Mundane Universe, Hell, Chaos, and the Empyrean.

Students of the modern cosmogony will find much that is suggestive in Milton's poetic fancies. Mosaic and Hesiodic in origin, they improve on Ovid's conception by personifying Chaos, and likening the tumult of the elements, as Mr. Orchard says, to the heat-tormented streams within a molten planet:

> Outrageous as a sea, dark, wasteful, wild,
> Up from the bottom turned by furious winds
> And surging waves, as mountains to assault
> Heaven's highth, and with the centre mix the pole. vii. 212-15.

By a happy anticipation he points out the direction in which modern research has definitely tended: that there is really but one kind of matter in the universe, and that cosmic changes through the lapse of ages may return systems of worlds to the primordial condition of chaos.

No poetic or philosophic system of the Miltonian era would have been acceptable with the infernal regions left out; and in order to localize Hell, the poet partitioned off the lowest depths of Chaos for his Inferno:

> A universe of death, which God by curse
> Created evil, for evil only good. ii. 622-23.

All the Early Fathers, and Dante also, put Hell within the earth, and St. Thomas was quite right in declaring that nobody without a special revelation can say exactly where it is. Milton, by placing it far outside the Universe and at the nether side of Chaos, favored rather the ancient classical and mythological conception.

Upward and out of Chaos sprang the Mundane Universe: matter rolled into whorls and vortices that condensed into suns and systems of worlds, comprising a countless multitude of shining orbs, the fixed stars and spiral nebulæ of the present age. Of course, Milton adopted the Ptolemaic system of concentric spheres in localizing all the known bodies of his Universe, which, as a whole, were pendant by a golden chain from the floor of the Empyrean. These several spheres revolved, earth-centred, with a

> Speed, to describe whose swiftness number fails. viii. 38.

Outside the *Sphæra Stellarum*, or eighth sphere of the Universe, there was nothing save the two huge hollow spherical shells added to the Ptolemaic system by the astronomers of the Middle Ages: the ninth *Crystalline* Sphere, and a tenth or *Primum Mobile*, "the wheel of day and night," which, as Professor Masson says, "strongly shelled us in" against the frightful warfare of the elements which was perpetual in Chaos.

Mr. Orchard makes a most interesting chapter of Milton's brief residence in Italy, especially in relation to the "Tuscan Artist," whom he visited at Arcetri, just out of Florence. "There it was," wrote Milton, "I found and visited the famous Galileo, grown old, a prisoner of the Inquisition, for thinking in astronomy otherwise than the Francisian and Dominician licensers thought." There can be little doubt that their conversation led the poet to inquire into the merits of the new Copernican system. Milton must thoroughly have understood all the arguments for and against the heliocentric system, as is minutely set forth in the philosophic colloquy in Book viii of Adam, Raphael, and the Angel.

Our present-day knowledge of the stars, and their mysteries, of the doubles and multiples, and clusters and

nebulæ, are amply set forth in Mr. Orchard's volume. All these objects in Milton's day were regarded as small and unimportant in magnitude, compared with the sun and the moon, and more distant than the outermost planet, though not excessively remote. It seems not a little remarkable that no individual star is mentioned by name anywhere in his poems, and only the dog-star and one other indirectly. It was not thought in Milton's day that anything could by any possibility be ascertained concerning the physical constitution of the stars; the era of the Herschels had not even dawned.

Very abundant are the allusions to Venus, as both morning and evening star; to the Pleiades, and to the Galaxy,

> that Milky Way
> Which nightly as a circling zone thou seest
> Powdered with stars, vii, 574-81.

which fairly sums up our knowledge of it, after three centuries of interrogation with lens and mirror.

Quite contrary to what we might expect, there are but two cometary allusions; and meteors more often took the poet's fancy, as the Attendant Spirit in "Comus":

> Swift as the sparkle of a glancing star—
> C. 80.

Mr. Orchard is at his best in this scholarly volume, portraying Milton in his more lengthy and numerous astronomical descriptions, from that of Creation in "Paradise Lost" to the contemplative serenity of the concluding lines of "Il Penseroso":

> And may at last my weary age
> Find out some peaceful hermitage,
> The hairy gown and mossy cell,
> Where I may sit and rightly spell
> Of every star that heaven doth shew,
> And every herb that sips the dew;
> Till old experience do attain
> To something like prophetic strain.
> 167-74.

The careful index is a great help, and might well have included first lines of citations. The few obvious printer's blemishes (pp. 48, 287, "Dr. Wallis, Savilian Professor"; p. 118, "colure is still in common use"; p. 126, "Medes and the Lydians"; p. 152, "Ptolemaic theory"; pp. 203, 284, "Houzeau") are worth correction in later editions.

Dr. George William Hill, the astronomer, generally acknowledged the foremost man in the world in the field of celestial mechanics, died on April 16 at the age of seventy-six. Dr. Hill was born in New York. He graduated from Rutgers College in 1859, and subsequently received honorary degrees from Cambridge, Princeton, Columbia, and Rutgers. In 1861 he became assistant in the office of the *American Ephemeris* and *Nautical Almanac*, and later succeeded to the direction of this publication, but resigned to become lecturer on celestial mechanics at Columbia University. In 1887 he received the gold medal of the Royal Astronomical Society of London, on account of his researches in connection with the lunar theory, and in 1898 he gained the Damoiscan prize of the Paris Academy of Sciences. In 1909, he received the Copley medal of the Royal Society, the highest honor awarded by that body. The preëminence of his work in mathematical astronomy was recognized by the Carnegie Institution in the publication, undertaken some years ago, of his "Collected Mathematical Works." A more extended notice of Dr. Hill will appear in the *Nation* at an early date.

Drama

THE NEW SPIRIT OF FRENCH DRAMA.

PARIS, April 2.

The Paris theatrical year is at its turn. Plays have risen, fallen, lived, and died, and lasted. In spite of imported foreign fashions, of new social layers rising to the level of theatre-going, of physical and consequent mental changes in the living of the educated and the rich who furnish theatres their chief public, the Paris stage ever returns to the natural play-acting of the French race. This is never all tears nor all laughter; and a good deal of sermonizing is endured. A hundred years ago Tom Moore did not really believe, as his quotation marks show, what he felt himself obliged to write for English readers:

> I have the bliss
> To date to you a line from this
> "Demoralized" metropolis.

At the two state theatres and at the two dozen other theatres properly so-called which the Paris critic is supposed to follow, the atmosphere is less cosmopolitan or international and more French than it has been for many years. One would almost think that French society—the *bourgeoisie*—were pulling itself together and turning from Bohemian and exotic and doctrinaire pastime to more congenial play. Brunetière worked out his criticism by the evolution of literary forms. Now, plays in France are literature, with forms well defined; and this is a chief reason why Parisians have been unable to support very long the formless, indefinite, unliterary plays of late years.

Not that the Paris stage is becoming a safe moral or social mentor in anything except pronunciation. *Comédie-bouffe*, like *opéra-bouffe*, will always hold its own. I should imagine that "La Belle Aventure" of Robert de Flers and A. de Caillavet at the Théâtre du Vaudeville must be the best money-earner of the year, with the exception of Wagner's "Parsifal" at the Opéra. The theatre's name, of course, has nothing to do with the distorted and vulgarized American use of the word "vaudeville." Twenty years ago it had another very French success in Moreau's "Madame Sans-Gêne," but that was history piquant and well acted. "Le Roi," by Flers and Caillavet, also had a notably long run at the Théâtre des Variétés, which for a century has been the very home of Bouffe. The conversation is always a little free for the Anglo-Saxon who has still to do violence to his Puritanism; and religious men might find, as Bossuet did in all things theatrical, that the temper is too Greek.

> All is laughter, all is dust, and all is nothing!

So the Anthology said, but the Greeks, too, had Prometheus. Of all places in the world, Monte Carlo has just produced at its theatre a new French piece quite as serious. George Rivollet, who gave two successful verse-plays from Euripides to the Comédie Française, has exhaled in it the religious tragedy of certain souls of to-day in devious pilgrimages through "Jerusalem." It is there a skeptical Irish widower in public life, George Lesly, travelling with his young daughter, encounters the widowed Italian princess Domitia. In her intense piety, their mutual love is accompanied by the imperious necessity that he shall be converted, that they shall not be for ever separated by death. At the Holy Sepulchre, with her forehead bowed on the Rock of Calvary, she prays for the victorious grace. At her request he allows his daughter to walk in procession with other young girls clad in white and bearing lighted candles in their hands. Her veil catches fire, and she dies. The Italian woman whose prayer has thus been strangely answered revolts; but the stricken father bows his head in submission, because, if such things happen, there must be a God to make them right some time, somewhere. And he who is comforted by this grace of faith, in turn, has to convert her. She becomes his wife, while others—and the public—moralize. This may or may not be good theology; but the cry of helpless human sorrow is given in real words that are also high poetic tragedy in language and form. If, as is expected, the play should be produced at the Théâtre Français, it would be another sign that Jerusalem still co-exists with Babylon, which is true elsewhere than in Paris.

A mistake might be made from the slow but sure vanishing of the psychological and sociological plays which so long have cumbered the ground of dramatic art. A like death from exhaustion is

noted in the French novel. The old problem play went first. Soul analysis, different from characterization, which is drama's quintessential, still lingers on. It was but yesterday we had the problem transferred from the individual to the undramatic collectivity in such plays as Paul Bourget's "Le Tribun"; and this, too, is going. A moderate success only has met "Un Grand Bourgeois" at the Théâtre Antoine, which was the first stage of the New Art that is already old. It is by Emile Fabre, whose other pieces have proclaimed his narrow but powerful outlook on new-rich society. Here we see the second purse-proud generation between shirt-sleeves and shirt-sleeves. The founder of the money-making business is still alive and has kept the essential temper of a workman, in sympathy with the Social Revolution. He has given over the administration of his fortune to his son, who is eager for power and willing to sweat labor, and who breaks on a rock in the third generation of these sudden riches—his daughter. She refuses to marry the man necessary to the combinations of the *parvenu* Crœsus and fixes her heart on a salaried employee. The grandfather, in the name of the Revolution of 1793 and of 1848 and of the Commune, in all of which the family had a part, has to step in and take the reins again to put all in sociological order. The solution of the sentimental question would be accepted everywhere nowadays; and the playwright's supposition that forced marriages have an air of reality in the French world of to-day is an unconvincing part of his work. In the Labor question, with all the power of his story and human talk, there is mingled a bitterness which also seems rather the resentment of a *bourgeois* with a doctrine than that of a genuine workman. With only faint praise from the Parisian public, but high appreciation of critics and probably foreign favor, it is another sign of French seriousness. This, of course, does not prevent the usual year's production of successful pieces comic in situations wherein Smollet would have revelled, like Paul Gavault's new play at the Variétés, "Ma Tante d'Honfleur."

What folly
To say that the French are not pious, dear Dolly!

S. D.

Since I wrote the above, a sensational event has happened—the resignation of M. Antoine as director of the second French state theatre, the Odéon of Paris. Whether and how far this confirms my observation of changing dispositions in the French theatrical public is a serious question, not to be answered at a moment's notice. In thirty years, Antoine has done more than any other Frenchman to lift the stage from lifeless routine and to direct it along new lines. These sometimes led back to classic French traditions, sometimes forward to New Art—and again toward exoticism. After ten years of struggle at the Théâtre Libre and ten more of fair success at the Théâtre Antoine, he has now passed eight years at the state-subsidized Odéon—and failed from a money point of view.

M. Viviani, Minister of Public Instruction, in these last closing days of Parliament, had obtained for Antoine another $25,000, but it was not enough. Antoine's last production was Molière, Corneille, and Quinault's "Psyché," with Lulli's music and ballet, to the unanimous admiration of critics in the press—and $440 as a nightly receipt! Yet Antoine's direction had brought the annual subscription receipts from $4,400 when he took the theatre to $20,000 for the present year. All this proves that no theatre can subsist on subsidies and subscriptions alone without a regular volunteer public. Why M. Antoine has not secured this also is a problem to which many answers may be given. The case is the same—but not the answers—for the American venture in Paris a year ago.

SHAKESPEARE'S WOMEN.

The True Ophelia and Other Studies of Shakespeare's Women. By an Actress. New York: G. P. Putnam's Sons. $1.25 net.

This is a very clever little book, and particularly interesting as the product of keen and original observation quickened by professional experience. The author, of course, has nothing to offer that is subversive of long established ideals. She writes as a theatrical expert rather than as a commentator, and it is quite possible to disagree with some of the details in her conceptions—sound as these generally are in the bulk—but she always gives reasons for the faith that is in her, and exhibits notable, sometimes excessive, ingenuity in extracting support for them from the text, of which she has evidently been a most conscientious and intelligent student. Plainly, she is not one of those performers content to abide by stage traditions and acting versions. Of the modern spectacular productions, in which dramatic proportion, well-balanced characterization, and the true spirit of the play are too often sacrificed to scenic necessities or the aggrandization of the star, she speaks with sane and vigorous contempt, illustrating, by pregnant examples, the manner in which subordinate but important personages are reduced to meaningless nonentities by unintelligent compression. This is an ancient grievance, but she gives fresh point to the expression of it.

Her chief weakness as an expositor of character arises from her tendency to over-emphasize every word or phrase which can be twisted to fortify her own view and a certain unscrupulousness in arguing from imaginary conditions, wholly unwarranted by the text, if not altogether inconsistent with it. And in her interpretation of certain passages she is occasionally led astray by her desire for theatrical effectiveness. But, in the main, her reflections and conclusions exhibit as much sagacity as independence. Although the essay on Ophelia occupies the place of honor in the volume, it is inferior in interest and value to several of the others. It is not possible at this late day to say anything new about that unhappy lady and to the one vexed question about her, she does not allude. But she tells her story prettily and with very complete appreciation of its emotional and pathetic possibilities. If she ever acted it along the suggested lines, her impersonation must have been worth seeing, but the intimation, in her adopted title, that it was left for her to reveal the "true Ophelia" smacks of presumption. That was done long ago by Ellen Tree, Kate and Ellen Terry, and Helena Modjeska, not to mention others, but it is unfortunately true that the part has often been belittled by most incompetent pretenders.

In her analysis of Lady Macbeth our anonymous actress not only displays fine imagination and intuition, but possibly affords a clue to her own identity. In any case, she rehearses the views and seems to speak with the tongue of Clara Morris. That great actress did not, indeed, fully embody the ideal here set forth—for the simple reason that her technical efficiency was unequal to the task imposed upon it by her artistic inspiration—but she did succeed in making the intellectual intent of it clear, and in establishing its plausibility, if not its correctness. There has always been a critical controversy—which is not likely to be settled—concerning the relative responsibility of Macbeth and his wife for the crimes in which they were mutually engaged. In the theatre the question is apt to be decided by the dominance or popularity of the male or the female performer. Any theory making Lady Macbeth the primary instigator of the plot is plainly untenable. Macbeth conceived it upon the first hint from the witches. But it was she who applied the spur to his faltering purpose and goaded him to action. In this sense she became the leader in the enterprise, developing a nature and will essentially masculine. Charlotte Cushman, with her rugged power—and other famous actresses of similar type—could embody this conception successfully, and

helped to make it traditional. But it involves certain inconsistencies. Would an Amazon of this kind have provoked the tender terms of endearment—"dearest chuck," etc.—which Macbeth addressed to her, or would she have been liable to feminine collapse?

This actress—like Clara Morris, who, indeed, could have portrayed no other—conceives a Lady Macbeth direfully ambitious, subtle and unscrupulous, but with the external fascinations of her sex, beautiful, alluring, guileful as the serpent. Mrs. Siddons is known to have approved this interpretation—while adopting one better suited to her own style and personality—and there is much to be said in its favor, as all candid readers of this book will acknowledge. But it does not dispense with the necessity for tragic force in the great climaxes, and it was the absence of this quality that was the fatal defect in Miss Morris's bold and thoughtful performance.

The chapter on the Queen Mother in "Hamlet," having for its chief object the rehabilitation of that unfortunate lady, is full of sound and acute criticism. The thesis that Gertrude was an innocent, simple, well-meaning woman, the victim of circumstances altogether beyond her control, is argued with convincing skill. And there is a capital dissertation on the character of Portia and the really strong legal point in her defence of Antonio, not the quibble about the "jot of blood," but the fact that, by his refusal to provide a surgeon, Shylock was convicted of a "conspiracy against the life" of a Venetian, and thereby brought himself under the terms of the statute. Her interpretation of the moral of "The Taming of the Shrew" will find cordial acceptance with her own sex. She does not believe in the least in Petruchio's triumph or Katharina's conversion. She holds that Katharina delivers her marital sermon with her tongue in her cheek, stooping only to conquer, and that in the end Petruchio will find out that it is he who has been tamed. The book is very good reading.

Arthur McKee Rankin died in San Francisco on April 17 at the age of seventy-three years, nearly sixty of which had been spent on the stage. Mr. Rankin was born in Canada and first appeared on the stage at Rochester, N. Y., under the name of George Henley. In the sixties he played in London under his own name, and his first appearance in New York was in 1870, when he played with Lydia Thompson. He was associated with the Continental Theatre Company in Boston, other members of which were E. L. Davenport, his daughter Fanny, James Lewis, and Kitty Blanchard, whom Rankin afterwards married. Later, when A. M. Palmer formed his stock company at the Union Square Theatre, Rankin was engaged and established a sound reputation in heavy parts. Probably his greatest success was as Jacques Frochard in "The Two Orphans." Together Mr. and Mrs. Rankin produced "The Danites," founded on Joaquin Miller's novel "The First Families of the Sierras," and "49," another Western drama. They built Rankin's Theatre on Third Avenue, which was opened in 1883 by Joseph Jefferson in "Rip Van Winkle." Recently Mr. Rankin had been associated with Miss Nance O'Neill in Shakespearean productions.

Music

WAGNER'S UNPUBLISHED LETTER.

(The Withdrawal of "Tannhäuser.")

Much has been written about the celebrated fiasco of the first performance of "Tannhäuser" at the Paris Opera House, which occurred just half a century ago this spring. In this connection was published some years ago a letter to Wagner, in reply to one from him, written by the Minister of State of the time, Count Walewski, who, during the Second Empire, had under his control everything pertaining to the subventioned theatres. These, of course, included the Opera House, where "Tannhäuser" was produced, on March 13, 1861. But the text of the letter to which Count Walewski's is the reply has never been made public. Thanks, however, to Mr. J. G. Prod'homme, the Paris musical critic, we are able to give an English translation of this document, even before the French original has appeared in print. The draft of the letter as finally sent was found recently in the archives of the Paris Opera House. The chirography is, of course, that of Wagner, who knew French very well, though there are some changes, in the writing of his warm friend and librettist, Nuitter, who was then archivist of the Opera. The occasion was so important that Wagner had recourse to his collaboration, but in the translation given below, the text of Wagner has been followed, which, it may be stated, has undergone but a few minor modifications by the pen of Nuitter. It may be added that Walewski's reply to Wagner's request was a decisive negative, in consequence of which, and the turmoil of the public at the first performances, Wagner decided simply to withdraw the opera, though all the seats were sold ahead for a dozen nights:

Since, by order of his Majesty, "Tannhäuser" has been admitted to the répertoire of the Opera, it is scarcely necessary for me to assure your Excellency how profoundly grateful I am for this honor. I must add, too, how touched I am by the zeal and talent with which the administration, the heads of the different departments, and the artists themselves, of the Opera have seconded me in this undertaking. Up to the last moment, I felt that the performance would be quite worthy of the high favor with which I have been honored by his Majesty. But there is one point to which I feel I ought to call the attention of your Excellency. I refer to the leadership of the orchestra.

When at the beginning of this affair, M. Royer, director of the Opera, asked me if I would lead the orchestra during the first performances, I declined this honor on the ground that it would be more natural and more in the interest of the opera itself if I were to initiate the regular leader into all my intentions, and in this way make sure that the piece would be well executed, whether I were present or not. So I have made every effort to accomplish this end, and have furnished every possible explanation. But, notwithstanding all this labor, I am now convinced myself and stand ready to convince likewise a committee of artists, that the leader who is going to conduct this opera is not yet in a position to perform this difficult task, which cannot be mastered in a few months. When I am not immediately at hand to aid him, when I leave the stage and sit in the auditorium, I am struck at every moment by his incompetency, his lack of memory, and his inability to keep up the indicated movements; while the singers, who are left to take care of themselves, feel that they are not supported by the leader and the orchestra. Under such circumstances, the performance is sure to be but a mediocre success, which will not repay all the effort put into it. This is a serious risk to run for a work which makes no concessions to ordinary tastes, and which can force attention only by means of perfect execution, which could be had if I were at the head of this so justly famous body of musicians.

This favor, which I at first declined, is everywhere considered a composer's right. When I declined it, I never dreamed that my right to exercise it would be questioned at the last moment when circumstances made me feel that I should exercise it. But now I find it impossible to get M. Dietsch, the leader of the orchestra, to grant me this favor.

In venturing to ask your Excellency to come to my aid in this matter, I am the first to recognize the difficult position in which I place your Excellency. If I were in the ordinary situation of an author in relation to his theatre, I should simply withdraw my opera from the stage before the first night. But it would be impossible for me to act in this way on this occasion, when I have been treated with such high favor. Yet, as matters now stand, I find myself on the eve of a first-night where success seems very doubtful. Consequently, the only course left for me would seem to be to have nothing further to do with this affair, whose direction is no longer in my hands. But before withdrawing, I have felt that I should send your Excellency this protest against the presentation of my work under such conditions, and should declare that I reserve the right to protest also to the public, if what happens in the near future calls for such a protest.

Paris, March 7, 1861.

REAL MUSIC TEACHING.

Musical Interpretation. By Tobias Matthay. Boston: Boston Music Co. $1.50.

Piano Playing with Piano Questions Answered. By Josef Hofmann. New York: Doubleday, Page & Co. $1 net.

For serious students of the pianoforte there is probably no more helpful book than Tobias Matthay's "The Act of Touch." Although its style is not remarkable for lucidity, it throws much light on obscure questions of prime importance to all players. The author, who is professor at the Royal Academy of Music in London, has written several other books of instruction that are much used. His latest work, "Musical Interpretation," includes a series of lectures repeatedly delivered by him. While dealing with the subject mainly from the pianist's point of view, the principles formulated concern also the players of other instruments, including even the operators of mechanical pianos.

Liszt, the greatest teacher as well as the greatest pianist that ever lived, never gave a real "lesson" in his life. He confined himself entirely to hints as to interpretation, to playing examples, and to arousing enthusiasm for the good in art and contempt for the meretricious. A similar result is evidently aimed at by Professor Matthay. While he believes that really great artists are born, he is convinced that even the most talented can be greatly helped by wise counsel, because it prevents their wasting years in futile experiments. The trouble with most teachers is that they do not know how to impart helpful advice. They tell a pupil to "play more sympathetically" or "more rhythmically," without pointing out precisely how it is to be done—many of them for the good reason that they do not themselves know how to do it. Professor Matthay does know, and therein lies the value of his instructions. He makes perfectly clear the difference between mere cramming and real teaching, as well as that between merely directing pupils to "do things" and teaching them to think—to ponder the reason why. This way of imparting information also makes work infinitely more agreeable to the teacher, who, as the author pathetically remarks, not infrequently hears a pupil whose performance is "appallingly unmusical—sometimes enough to make him almost shriek with the downright misery of it."

There is one chapter in this book which cannot be as cordially endorsed as the others, although the author evidently is particularly proud of it. It is concerned with The Element of Rubato. While it is gratifying to find him maintaining that the rubato is applicable not only to Chopin and other modern composers, but also to the classical writers from Bach to Beethoven, one is disappointed to find that Professor Matthay adheres to the absurd old notion that if the player dwells a little on one note, he must shorten those that follow sufficiently to atone for the extra time thus given—a rule as preposterous as it would be to ask an actor, if he dwells on a word or two at the beginning of a line, to accelerate the following words so as to deliver each line of a stanza in exactly the same time.

That is not the way the great pianists play. Their rubato consists in frequent slight accelerations or retardations of the pace, without any regard for the metronome or the mechanical steps of the dance-hall. Yet some of them, while instinctively using the poetic freedom of pace, parrot that same old æsthetic police regulation about restoring in one place the time "stolen" (rubato) in another. There is such a thing as that, but it is of very slight importance compared with the real rubato, about which Paderewski has written so eloquently.

The greatest of Paderewski's colleagues, Josef Hofmann, makes that same mistake in his book on the piano. The first edition of this book appeared six years ago. It is now reprinted with the addition of 175 pages of answers to questions which were first printed in the *Ladies' Home Journal.* As in the case of Professor Matthay's book, the pages on rubato are the only ones to which one can take exception. It is needless to say that Hofmann does not live up to that maxim; he plays poetically, not metronomically; indeed, he repeatedly "speaks disrespectfully" of the metronome, which "kills the vital expression in playing." Hofmann was a pupil of Rubinstein, to whose method of teaching he devotes some pages. The multiplicity of topics touched on by him is indicated by the fact that the index covers sixteen columns. A few of the subjects discussed are: Starting on a Concert Career, Afraid to Play Before People, Can Music Be Studied in America? How to Get Music Published, How to Use the Pedal, International Pitch, Individual Teacher or Conservatory? Organizing a Musical Club, Sex of the Piano Teacher, Watch Your Breathing, Why the Piano Is So Popular.

HENRY T. FINCK.

"Mona Lisa" is tho name of a new opera by Schillings, which is to be produced at the Imperial Opera in Vienna next season.

The object of the new Music League of America is to help talented young musicians to obtain professional engagements of a remunerative character. There has been in recent years a surprising growth of interest in music and a steadily increasing demand for singers and players, but the plums have more often gone to those who have business instincts than to those who are musically the most gifted. The main object of the League is to correct this state of affairs by bringing deserving artists into touch with the clubs and private parties requiring their services. Orders for the services of artists, amounting to several thousand dollars, have already been received. Singers or players, unless already well known, must be passed on by a jury of experts before they will be endorsed. The League is backed up with abundant capital, the officers being Mrs. H. O. Havemeyer, Mrs. Willard D. Straight, Mrs. Otto H. Kahn, Mrs. Linzee Blagdon, Mr. Alvin Kroch, and Mr. Dave Hennen Morris.

During the thirty-nine weeks of the first season of the Century Opera Company twenty-six operas were sung in the following order: "Aïda," "La Gioconda," "Tales of Hoffmann," "Lohengrin," "Jewels of the Madonna," "Madame Butterfly," "Tosca," "Lucia," "Samson and Delilah," "Il Trovatore," "Thaïs," "Faust," "Bohemian Girl," "Carmen," "Louise," "La Bohême," "Romeo and Juliet," "Rigoletto," "Cavalleria Rusticana," "Manon," "Hänsel and Gretel," "The Secret of Suzanne," "Tiefland," "Martha," "Natoma." All the operas were sung in English. The experiment of giving one performance in the original language was soon abandoned. Some of the operas named were sung more than one week; it is pleasant to note that Humperdinck's charming fairy opera, "Hänsel and Gretel," holds the record, having been sung, in conjunction with the International Ballet, twenty-nine times. "Aïda" and "The Tales of Hoffmann" also proved very popular, being sung seventeen times each, while "Madame Butterfly" and "Thaïs" each had sixteen performances, and "Louise" had fifteen. It is worth noting that with the eight performances given last week Victor Herbert's "Natoma" has been sung thirty-eight times altogether, which is a bigger success than any other American grand opera has won. The Century Opera House is to be rebuilt during the summer to make room for 40 per cent. more of the cheaper seats, for which there has been the largest demand. Better translations of librettos are promised for next season, which is to be considerably shorter than the first, because the house will be taken for a time by Mr. Dippel and his operetta company.

Ernest Schelling, on his last tour in America, did a good service in making his audiences acquainted with some of the masterworks of the "Spanish Chopin," Enrique Granados. The Schirmers have just published four of the latest compositions by this original writer: a "Valse de Concert," "A la Cubana," "Danzas Espagñolas," and "Marche Militaire."

The conductor of the New York Philharmonic Society, Mr. Stransky, and the conductor of tho Mendelssohn Choir of Toronto, Dr. A. S. Vogt, have made a plan for repeating in New York in 1915 or 1916 the programmes of the music festival to be held in Berlin on the twenty-fifth anniversary of the Kaiser's reign.

Edgar Stillman Kelley has been invited by the Liszt Society to conduct his New England Symphony at their festival in Altenburg on April 27.

Art

HOW HISTORY IS NOT REPEATED AT THE BRITISH ARTISTS'.

LONDON, April 9.

Probably there never was a time when the English artist relied so implicitly upon precedent to establish his claim to greatness. The sedulous students of Matisse and Picasso find themselves ridiculed and refused; the Pre-Raphaelites and Whistler, they say, were ridiculed and refused, but are now accepted as masters; therefore, we who are exposed to the same treatment must also be masters. The belated Impressionist remembers the years when Manet and Monet and the others of the group could not sell their pictures; he cannot always sell his own pictures as fast as he would like to; therefore, he is convinced he, too, must be a genius misunderstood. Something of the same reasoning has been used in connection with the recent appointment of Frank Brangwyn to succeed the late Sir Alfred East as president of the Royal Society of British Artists. Whistler, the critics recall, revolutionized the Society when he was elected to the same post, and he, with his followers, infused fresh life into it, with such success that in the end the British Artists themselves could not endure it and got rid of him; therefore, the critics argue, Brangwyn, who is an independent, even though an associate of the Academy, must save the Society again from the slough of commonplace.

Before the opening of the first show under his presidency great stress was laid upon the fact of his own independence, of the new members and exhibitors he was bringing with him, of the reforms he meant to initiate, and it really seemed as if the British Artists would a second time take a new lease of life from their president and be prepared to carry on the traditions of independence in art that the New English Art Club has outgrown, and the International all but forgotten; as if the historic gallery in Suffolk Street would again be the headquarters of all that is most alive and promising in English art, and, in its accomplishment, a dangerous and much-needed rival to the Academy.

Let me say at once that, now it has opened, it is a disappointment. History has not repeated itself, for the simple reason that it has not the same material to deal with. Whistler not only reorganized the Society and introduced new methods, but by his presence he gave it a distinction it had never had before and has never had since. Brangwyn, it is already evident, is also ready to reorganize the Society and run it on his own lines. Like Whistler, it is clear that he has due respect for the arrangement of an exhibition and that he believes pictures and drawings and prints should be placed upon the wall with some feeling for harmony and dignity—not crowded together, as many as the wall will hold, with the idea that the more there are the greater the chance to replenish the bank account of the Society and the pockets of the exhibitors. But Brangwyn, though he has the sense to understand the importance of the proper presentation of a work of art, has not Whistler's talent for decorative arrangement. Whistler could make a gallery beautiful; Brangwyn cannot quite do that. The best he can do is to make the British Artists' rooms pleasanter to the eye than they have been for some years past.

Brangwyn, himself, sends to the exhibition only one painting, The Bridge, Avignon, described by the catalogue as unfinished—a large canvas that might be part of a series for mural decoration. An arch of the bridge stretches high up across the composition, its midway tower seen at the far end with an indefinite indication of architectural forms on the farther side; below, a great barge and a confused group of people, with, close by, boys bathing; beyond, framed by the arch, a suggestion of country, but no suggestion whatever of Avignon or Provence in it. The first impression, as in all Brangwyn's work, whether painting, etching, or lithography, is of bigness; the second, of exaggeration, of the sacrifice to this bigness of all finer and subtler qualities, all local characteristics and atmosphere. It is the bigness of the scene-painter, color and design and detail used, it would seem, for their theatrical value. It is immensely able and clever, it abounds in the vigor which is so deplorably lacking in most paintings nowadays. But Brangwyn has not the art, or apparently the application, to hide his artificiality. Moreover, he is in danger of inventing a hard and fast formula, and a formula, no matter how vigorous, is always a serious obstacle to the artist. The danger is perhaps more seriously felt in his etchings and lithographs, but there it is, without question, and a formula cannot take the place of renewed study and inspiration; it must exhaust itself in the course of time.

Another of the more prominent newcomers is James Pryde, who has achieved of late a surprising popularity. He works on a smaller scale than Brangwyn, but on his small canvas he, too, aims at expressing architectural bigness; he, too, grows theatrical; he, too, threatens to reduce his expression of bigness to a formula, if he has not already. Recently he showed at the International an interior in which the upright posts and curtains of a great four-poster rose to colossal heights out of all proportion with the bed itself and the other detail in the room. Now he follows it up with A Sinister Interior, in which the same extravagant effect of height is strained after, and the lines of a door in the background are carried up and up, until one feels, not the desired effect, but the straining to produce it, and the figures dwindle into pigmies, and the rest of the dark and dimly seen room is reduced to an excuse, a peg upon which to hang an exercise in sensationalism.

More unexpected is the presence of George Henry, who many years ago, as one of the Glasgow School, helped startle London, but who, as an Associate of the Academy, has, in the way of most revolutionaries turned into Academicians, ceased to startle or rebel. He sends a portrait which he calls Cherries, appropriately, for the fruit, piled on a plate set in the centre of a white-covered table, is so excellently painted that the eye is drawn to it rather than to the figure of the woman who fills the other side of the canvas and who is only less sweet and pretty than the pretty and sweet women of Frank Dicksee. G. Spencer Pryse, known as a member of the Senefelder Club, has a large lithograph, a triptych, for a poster, Labor the subject, printed in three or four colors, that is one of the best things in the exhibition. It does what a poster should do—it tells on the walls, the lines and masses used to good decorative purpose, the figures well grouped, while it is free from the mawkish sentiment with which artists too often approach similar themes. Pryse is young, he shows power in his drawing, he can work out a large and spacious design, but he seems disposed in his lithographs to rely upon the same color scheme, the same types, the same effects, rather than to seek the new problems and experiments by which the artist develops himself and his talent. However, after his triptych, little else stands out with a genuine note of individuality. Bertram Priestman, who also, I believe, comes in with Brangwyn, and one or two others—now the way has been pointed out to them—seek to express their appreciation of the pictorial possibilities of work in their landscape. But with this short list I have exhausted the special interest of the exhibition; that is, of any new signs it gives of vitality in the present or renewed life in the future. Whatever achievement, whatever encouragement Brangwyn at the British Artists' may hold in store for a world sadly in need of both, he offers little promise as yet. History may repeat itself in supplying the same conditions, but conditions alone do not create the artist.

Finance

"WAR MARKETS."

When the news came suddenly over the wires from Washington, on Tuesday of last week, that the fleet had been ordered to Tampico, to insist on Huerta's making apology in due form for the Mexican insults to our sailors, the stock market was already declining on the news of the President's announcement that the new "Trust legislation" would be pressed. The arrival of this warlike news at once suggested a further and far more violent decline. This did not happen; the afternoon market displayed greater steadiness than that of the forenoon.

Next day the morning newspapers were crowded with black head-lines, pictures of the warships, measures of the naval force, and its belligerent capacity. People came downtown, shaking their heads and declaring that now we were "in for war." The stage was apparently set for a "war market" on the Stock Exchange. But if Wednesday's market answered that description, it foreboded very little concern about the war. When stocks went down, they fell not by points but fractions, and nearly half of them closed at a slight advance. The actual news of Huerta's refusal to submit to the terms imposed by our Government came in last Sunday. Monday's Stock Exchange market, opening slightly lower, promptly recovered all its loss, and showed every sign of coming to an expectant halt. It declined at the close, on the notion that President Wilson's address to Congress, later in the day, would bring on the crisis; but on Tuesday, with the Presidential speech on record, prices recovered all of Monday's loss.

This was at least an enigmatical "war market"; but then the war news itself was an enigma. No one has felt altogether clear in his own mind as to what kind of war this war would be, how long it would last, or how much it would cost.

There is little with which to compare the present episode, as regards the possible bearing of a war with Mexico on the financial situation. Our earlier Mexican War of 1846 throws the least imaginable light on it. Taylor commanded barely 3,600 United States troops when he crossed the border from Texas into Mexico, that year. Scott captured Vera Cruz and Mexico City, during 1847, with an army of 12,000. Our War Department's expenditure increased only $4,700,000 in the first year of that war and only $15,400,000 more in the second, and the total increase in the public debt, between the year, 1846, when war was declared, and the year, 1848, in which peace was signed at Gaudalupe Hidalgo, was only $31,500,000. But those were days of military operations with small armies, and of warfare whose expense was a trifle compared with nowadays, when even the two years' Transvaal War cost England, on the average, by the Chancellor of the Exchequer's subsequent report, $1,000,000 per day.

The composure of the Stock Exchange has been variously ascribed to the fact that even war would not make the financial position, as regards Mexico itself, worse than it was before, or to continued skepticism as to whether the war would actually amount to much in the long run. But stock markets, though often accurate in forecast, do not always display good judgment as to the probabilities at such a time.

In the Cuban war, they did. When our people began to talk of war with Spain, at the opening of 1898, the market was falling rapidly. The blowing up of the Maine in Havana harbor, during February, caused a violent decline; in March, when Spain asked the withdrawal of Consul-General Fitzhugh Lee, prices went lower still. Then all activity seemed to stop, awaiting the actual declaration of war. That came on April 21, and on the same day an advance on the Stock Exchange began, which was hardly checked during the rest of 1898, and which led the way to an outburst of activity and strength a few months later. The market had correctly foreseen a short and quickly successful war.

With the Boer War of 1899, the case was different. That war had similarly been preceded by some months of falling English markets—largely due, however, to tight money and an over-extended speculative position. Kruger's ultimatum brought on active hostilities in October. London Stock Exchange prices declined with considerable sharpness, and the bank rates rose, in England and on the Continent. But the stock market, after this first decline, recovered rather promptly. It was to be a small war; a remote war; a short war, and a war without foreign complications. This impression lasted during the two first months of fighting—after which, in December, the defeat of two English detachments under Buller and Methuen suddenly roused the markets to appreciation of the fact that the war would be long and expensive, and that the gold mines of the Transvaal would in the meantime be blockaded. Then the prolonged decline on the English Stock Exchange began.

When the Japanese fleet attacked the Russians at Port Arthur, in February, 1904, the European markets had been weak, though mainly in connection with the world-wide liquidation of 1903. The French market, where prodigious amounts of Russian bonds were held, and where it was clear that St. Petersburg would have to borrow for its war expenditure, was attacked with great violence on the war news. There was a day of panic; a heavy break in Russian bonds, and then the thrifty "country investor" of France appeared upon the scene. His purchases brought about immediate recovery on the market, which was not thereafter subjected to any violent decline.

How much of the worldwide disturbance of the markets of 1913 was due to the Balkan War itself; how much to fear of "complications between the Powers"; how much to the extravagant heights to which public and company borrowing on those markets had risen, is a still unsettled question. The one certainty of the case is that Europe, when the war broke out in 1912, said that it would be "isolated" and would not be far-reaching in its consequences, but that the event proved somebody to have badly misjudged the matter.

Free Library, Apr 31 1914

Some Scribner Publications

The United States and Mexico, 1821-1848

A HISTORY OF THE RELATIONS BETWEEN THE TWO COUNTRIES FROM THE INDEPENDENCE OF MEXICO TO THE CLOSE OF THE WAR WITH THE UNITED STATES.

By **George L. Rives**, formerly Assistant Secretary of State. With many excellent maps. Two volumes. **$8.00** net; postage extra.

"The appearance at the present moment of this important, instructive, and very enlightening exposition of the relations between the United States and Mexico during the formative and critical period to which it relates, is singularly opportune."—**John Bassett Moore.**

"During these days of strife and crisis in Mexico, and the anxiety of the American Government and people in their attitude towards the Mexican question, Mr. Rives' narrative is a most timely and important work."—**Boston Transcript.**

"There could be nothing more timely, in view of present interest in Mexico, than Mr. Rives' copious and commanding work."—**New York Tribune.**

"It is a happy chance that at a time of strain between the United States and Mexico Mr. Rives' history of the last crisis between the two States should be printed."—**London Saturday Review.**

"The timeliness of the book is a real as well as an adventitious advantage. There is no subject upon which the people of the United States are in more urgent need of better information than that which Mr. Rives has taken for his own."—**New York Sun.**

North Africa and the Desert

By **George E. Woodberry.**

$2.00 net; postage extra.

This is one of that very small group of books in which a man of genuine poetic vision has permanently registered the color and spirit of a region and a race. It is as full of atmosphere and sympathetic interpretation as any that have been written. Chapters like that on "Figuig," "Tougourt," "Tripoli," and "On the Mat"—a thoughtful study of Islam—have a rare beauty and value.

Life Histories of African Game Animals

By **Theodore Roosevelt and Edmund Heller.** With illustrations from photographs, and drawings by **Philip R. Goodwin**, and with forty faunal maps.

Theodore Roosevelt has used the greater part of his leisurable time in the last several years in the preparation of this splendid work. He has produced it jointly with Edmund Heller, of the scientific department of the United States National Museum, who accompanied him on his famous African expedition

The general plan of each chapter is first to give an account of the Family, then the name by which each animal is known—English, scientific and native; then the geographical range, the history of the species, the narrative life-history, the distinguishing characters of the species, the coloration, the measurements of specimens, and the localities from which specimens have been examined, accompanied with a faunal map.

It is one of the most important works in natural history and the only comprehensive work of this kind in the African field.

2 Vols. **$10.00** net; postage extra.

The Influence of the Bible Upon Civilization

By **Ernest Von Dobschütz**, Professor of the New Testament at the University of Halle-Wittenberg, and now lecturing at Harvard as exchange professor of the year.

$1.25 net; postage extra.

This is an attempt to answer by the historical method the great question of the day: "How can Christianity and civilization advance in harmony?" The writer simply follows the traces of the Bible through the different periods of Christian history—a task which, singularly enough, has hardly ever before even been attempted, and never before successfully or even thoroughly done.

Hebrew and Babylonian Traditions

By **Morris Jastrow, Jr., Ph.D.**, Professor of Semitic Languages in the University of Pennsylvania.

8vo. **$2.50** net; postage extra.

An important and extraordinarily interesting study of the relationship between the Hebrews and the Babylonians, devoted primarily to pointing out the differences between Babylonian myths, beliefs, and practices, and the final form assumed by corresponding Hebrew traditions, despite the fact that both are to be traced back to the same source.

Notes of a Son and Brother HENRY JAMES

By **Henry James.** With Portraits. **$2.50 net.**

The Nation.—"Certainly, if one were invited to name the literary masterpiece of the twentieth century, one would do well to hesitate before passing further than Mr. James's autobiography. It is not merely that it gives us a unique analysis of everything that went to the making of a characteristic literary artist of our times. It does more than this. It introduces us to the most charming and wonderful family group a novelist ever found to his hand. . . . It is a book of a warm as well as of a subtle beauty, and is one of Mr. James's masterpieces in characterization."

My First Years as a Frenchwoman, 1876-1879

By **Mary King Waddington**, author of "Letters of a Diplomat's Wife," "Italian Letters of a Diplomat's Wife," etc. **$2.50** net; postage extra

The years this volume embraces were three of the most critical in the life of the French Republic. Their principal events and conspicuous characters are vividly described by an expert writer who was within the inmost circles of society and diplomacy—she was the daughter of President King of Columbia, and had just married M. William Waddington, one of the leading French diplomats and statesmen of the time.

The American Japanese Problem

By **Sidney L. Gulick.** Illustrated. **$1.75** net; postage extra.

The writer believes that "The Yellow Peril may be transformed into golden advantage for us, even as the White Peril in the Orient is bringing unexpected benefits to those lands." The statement of this idea forms a part of a comprehensive and authoritative discussion of the entire subject as set forth in the title. The author has had a life of intimacy with both nations, and is trusted and consulted by the governments of each.

American Policy

The Western Hemisphere in its Relation to the Eastern

By **John Bigelow**, Major U. S. Army, retired. Author of "Mars-La-Tour and Gravelotte," "The Principles of Strategy," and "Reminiscences of the Santiago Campaigning," "The Campaign of Chancellorsville."

With map, **$1.00**; postage extra.

An able and illuminating presentation of the development and history of American policy in its relation to European nations.

of scientific or philosophical literature, or other similar work, desired by scholarship man in science with university experience, familiar with philosophical literature, and with knowledge of French, German, Italian, and Spanish. Best of references. Address Box K, care The Nation.

WANTED—A PERMANENT POSITION, by a competent teacher of English Literature and Rhetoric, in College or Normal School. Will make special arrangement with a Summer School. Excellent references. Address The Nation.

JUST PUBLISHED.
First German Reader
By FRIEDA L. MARTINI.
Assistant in German in Northwestern Univ.
70 cents.

THIS new reader is written to meet present-day class conditions. The stories, interspersed with simple verses, are unvaryingly easy; they tell of things common to the home and school and play life of the German people of to-day; they are set in words which the student must use constantly if he wishes to express himself in idiomatic German.
The author not only repeats again and again the phrases which have been once used, but she places them in new and entertaining surroundings. Martini's "First German Reader" will be found to be a book full of *new material*, easy enough for the first weeks of German work in high school and college, charming, up-to-date, and German to the core.

Animal Communities in Temperate America

A Study in Animal Ecology Designed to Serve as a Reference Work and Textbook. By VICTOR ERNEST SHELFORD, of the Department of Zoölogy in the University of Chicago.

This volume presents the principles of field ecology, illustrated by the more widely distributed animal habitats of the eastern half of temperate North America, and the aquatic habitats of a much larger territory. Six chapters deal with general principles. In several chapters the animal communities are considered from the point of view of modern dynamic ecology. A valuable feature of the book is the three hundred figures of widely distributed animals chosen to represent the chief types of animal communities and their characteristic modes of life.

880 pages, 8vo, cloth; price $3.00, postage extra (weight 44 oz.)

NOW READY

GREAT JURISTS OF THE WORLD

From PAPINIAN to VON IHERING

BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth,* $5.00 *net.*

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny, Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.

Send for descriptive pamphlet of the Continental Legal History Series.

ANCIENT ITALY. By ETTORE PAIS, LL.D. Translated from the Italian by C. DENSMORE CURTIS, M.A. The author, one of the most noted of living archæologists, here throws a flood of light on the ancient history and geography of Italy. Eleven full-page plates from photographs. University of Chicago Press. **Reduced from $5.00 to 90 cents**

"Every available source of information is drawn upon, and the breadth of view is masterly."—*Springfield Republican.*

THE OLD AND THE NEW MAGIC. By HENRY RIDGELY EVANS. A mine of fascinating information concerning stage illusions, tricks of spiritualists, and magic of every sort. It deals with the history of the subject from earliest times, contains sketches of the most famous magicians, and describes in detail the means by which stage illusions are obtained. Second edition, revised and enlarged. Profusely illustrated. Chicago: Open Court Publishing Co.

Reduced from $2.00 to 80 cents

RUSSIA AND ITS CRISIS. By PAUL MILYOUKOV, formerly Professor of History at the Universities of Moscow and Sofia, and Member of the Russian Douma. This is the most authoritative and accurate account of Russian past development and present conditions available in English. With portrait of the author and maps. University of Chicago Press.

Reduced from $3.00 to 65 cents

"It is difficult to find words strong enough adequately to express the inestimable value of this book for everyone desirous of understanding Russia in the past, the present, and the future. It lays bare the historical soul of the country, so to speak, in all its intricate recesses."—*The Nation.*

THE LIFE OF MAXIMILIAN ROBESPIERRE. With Extracts from his Unpublished Correspondence. By GEORGE HENRY LEWES, author of "The Life of Goethe," etc. A vivid, impartial, and brilliantly-written account of the man who, next to Mirabeau, played the leading part in the French Revolution. London: Chapman & Hall.

Reduced from $2.50 to 75 cents

HERALDS OF AMERICAN LITERATURE. A Group of Patriot Writers of the Revolutionary and National Periods. By ANNIE RUSSELL MARBLE. Detailed and original studies of the writers who laid the foundations of our national literature. Numerous illustrations. University of Chicago Press.

Reduced from $1.50 to 40 cents

"A real contribution to the history of American literature. . . . The author has shown much diligence in research and no little acumen in criticism."—*Chicago Record-Herald.*

BEHIND THE SCENES WITH THE MEDIUMS. By DAVID P. ABBOTT. Reveals in detail the means and methods by which are accomplished all the so-called "miracles" of spiritualism, mind-reading, etc. Fourth revised edition. Chicago: Open Court Publishing Co.

Reduced from $1.50 to 60 cents

LECTURES ON COMMERCE. Edited by HENRY RAND HATFIELD. Sixteen papers, written by practical business men of national reputation, dealing with the chief phases of modern commerce—railroad organization and operation, banking, fire insurance, advertising, steel manufacture, wholesale merchandising, etc. University of Chicago Press.

Reduced from $1.50 to 35 cents

"The contributors are all men of authority in their respective fields, and the book contains some valuable special knowledge presented in interesting form."—*Railroad Gazette.*

Delivery charges prepaid by us if "The Nation" is mentioned.

The Nation.

NEW YORK, THURSDAY, APRIL 30, 1914.

Summary of the News

The crisis in Mexico, which by Tuesday of last week, when the naval forces under Admiral Fletcher commenced their occupation of Vera Cruz, had developed into actual warfare, was relieved on Sunday by the offer of mediation on the part of the republics of Chili, Argentina, and Brazil. The offer was promptly accepted by the Administration, with the stipulation that any plan suggested must include the elimination of Huerta and the proviso that in the event of an act of aggression by Mexico the United States should take what military measures it deemed necessary. Huerta's formal acceptance of the proposal for mediation was received by the Spanish Ambassador in Washington on Monday night, and was unconditional. It is understood that considerable pressure was brought to bear on the Federal leader by Great Britain, France, and Germany, as well as by the Powers of South America, to induce him to accept the proposal. The envoys of the mediating Powers began their labors in Washington by a conference on Tuesday.

The occupation of Vera Cruz was effected, with the loss of seventeen Americans killed and more than sixty wounded, by noon of April 22, General Maas and the Mexican garrison retiring to a point some fifteen miles from the city. The civil authorities were invited to continue their customary functions, and the inhabitants to resume their ordinary avocations. It was necessary, however, on Sunday to declare martial law for the proper government of the town, as the civil authorities were reluctant to assume control. The sensation of the week, from the point of view of the Administration, was the message from General Carranza protesting against the occupation and demanding the withdrawal of American troops from Mexican soil, the President and the Secretary of State having inclined to the belief that the assistance of this country in eliminating Huerta by forcible methods would be welcomed by the rebels. As a result of Carranza's attitude the embargo on arms was reimposed on Thursday. Nelson O'Shaughnessy, the United States Chargé d'Affaires, received his passports from General Huerta on Thursday, and arrived at Vera Cruz with his family and the personnel of the Embassy on Friday. A number of American refugees from Mexico City also reached Vera Cruz the latter part of last week, but many more remained or were detained in Mexico City, and until the mediation proposals were accepted considerable anxiety was felt for their safety. Dispatches to Washington on Monday gave the information that nearly 2,000 American refugees from interior points in Mexico had been sent to ports whence they could obtain transportation to the United States.

The Volunteer Army bill, designed to remedy defects in the law of 1898, hastily passed three days before the outbreak of the war with Spain, has been passed by both houses of Congress and signed by the President. We deal elsewhere with the provisions of the new law, one of the most important of which is that regulating the term of enlistment, which is not for a fixed period, as previously, but is ended when the emergency that called for the enlistment has passed.

Fighting of a more serious character than any that has engaged the American troops in Mexico has taken place during the past week in Colorado between the State militia and the striking miners. The strike area embraces a radius of some twenty-five miles from Trinidad, and since September, when the strike was called, it is estimated that not less than three hundred persons have been killed. During the past ten days pitched battles have been fought, the area of violence has extended to the northern mining districts of the State, more than a score of persons were killed last week and nine more on Tuesday. The outstanding cause of the strike is the refusal of the owners to recognize the union, and the passions of the men have been inflamed by the importation of strike-breakers. The State militia is apparently entirely powerless to deal with the situation, and the financial question involved by keeping it in the field has become a serious one. On Tuesday it was decided, after a Cabinet meeting, to dispatch Federal troops to the strike zone, which Gov. Ammons on the same day proclaimed to be in a state of insurrection. On Monday, at the President's request Chairman Foster, of the House Committee on Mines and Mining, had a conference in New York with John D. Rockefeller, jr., representing the interests controlling the Colorado Fuel & Iron Company, with a view to effecting a compromise with the strikers, but without result, Mr. Rockefeller presumably maintaining the position he took in giving evidence before the House committee of investigation, when he insisted upon the right of workers to engage in employment without reference to a union.

A convincing message from Colonel Goethals was read at the hearing on the Panama Canal Repeal bill on Friday, putting himself on record as favoring the repeal of the exemption clause on financial grounds.

The results of the elections held in Venezuela on April 19 to elect a President of the Provisional Government only became known on Thursday of last week. Dr. V. Marquez Bustillos, Secretary of War, was elected President, and Dr. J. Rojas Fernandez, Vice-President. The outgoing President, Gen. Juan Vicente Gomez, was elected Commander-in-Chief.

Official announcement was made on Monday that the Japanese Government would participate in the Panama-Pacific Exposition, for which purpose an appropriation of $600,000 was made as long ago as last May.

Preparations for active resistance to the Home-Rule bill continue to be made in Ulster, and counter-preparations by the Irish Nationalist Volunteers. On Friday night and Saturday morning the Ulster volunteers succeeded in landing 40,000 rifles and half a million rounds of ammunition, which have since been distributed by means of automobiles, and on Monday night the Nationalist organization retaliated by landing a consignment of arms, said to have come from America, at a remote spot on the coast of Donegal. There have been persistent reports that the Government contemplates taking some drastic step (the rumors that Sir Edward Carson would be arrested have been revived), and, according to dispatches from Belfast, five warships arrived off Larne, seventeen miles from Belfast, on Monday night. Despite official denials, the statement is repeated that regiments in Dublin are in readiness to be moved to the north. In the House of Commons on Monday Mr. Asquith was plied with questions on the situation. Concerning the gun-running of the Ulster Volunteers, which he denounced as "a grave and unprecedented outrage," he declared oracularly that the Government would "take without delay proper steps to vindicate the authority of the law and to protect the officers and servants of the King and his Majesty's subjects in the exercise of their duties and in the enjoyment of their legal rights."

The third reading of the bill for the disestablishment of the Church in Wales was passed in the House of Commons on April 21 by a vote of 349 to 245.

The result of the French general elections held on Sunday was to return definitely only 351 of the 602 Deputies. In 251 districts where no candidate obtained an absolute majority, a second ballot will be held on May 10.

The King and Queen of England paid a state visit to Paris, the first since King George came to the throne, on Tuesday of last week, returning to London on Friday. The cordiality of their reception testified to the firmness of the *entente*. It seems clear, however, from the terms of an official note issued from the British Foreign Office on the exchange of views between Sir Edward Grey and M. Doumergue, that there is no present disposition to turn the triple *entente* of England, France, and Russia into a more formal alliance, as the two last countries would desire.

The deaths of the week include: Judge James B. Holland, April 24; Count Khuen-Hedervary de Hedervar, April 25; Very Rev. Dionysius F. Best, George F. Baer, Thomas J. Barratt, April 26.

The Week

During April, in the almanac-maker's phrase, look out for war. Of our chief wars, only one, if we consider that the War of 1912 virtually began with Madison's ninety-day embargo on April 4, has failed to date from that month. Our last entanglement completes a series of coincidences that extends even to the day. April 19, 1775, Parker met Pitcairn at Lexington; April 19, 1861, the first blood was shed at Baltimore; April 19, 1898, the joint resolution with respect to Cuba passed Congress; April 19, 1914, the ultimatum to Huerta expired. The one exception is the first Mexican war. Ezekiel Biglow dated his enclosure of his son Hosea's first poem, with its picture of Boston recruiters rattling away on kettle-drums, to "Mister Eddyter," in "june, 1846." But even that conflict had features appealing to the unretentive memory of schoolboys. The first blood had been shed by Taylor, April 24, six weeks before the actual declaration of war; while Scott fought Cerro Gordo April 18, 1847. The purely mathematical probability of a continuance of April's distinction may be slight; but if peace societies should choose to interpret this train of events as a peep into our Sibylline leaves, they might be forearmed to take special precautions during the third week of the second month of spring.

The National Bureau of Labor Exchange, proposed by the Commission on Industrial Relations, is in line with the recommendations of the recent Conference on Unemployment in New York. While the Bureau would have jurisdiction over all private employment agencies doing an interstate business, its most important service would be the gathering and distributing of information regarding the labor market, and the establishing of free public employment offices. As Professor Pigou, of Cambridge, remarks in his recent volume on "Unemployment," the efficacy of labor exchanges is especially great when they are organized "as an interconnected national system, and when they act, not merely as bureaus of information, but also as centres for the actual employment of hands." In accordance with our general policy in this country, we have hitherto left such matters pretty much to private management, only a few States having undertaken even to supervise the work of private bureaus in any thoroughgoing manner. Students of the problem feel strongly that the time has arrived for more scientific grappling with it on the part of individual States, and also of the nation. The Commission is not rushing into the new ground recklessly, but is to hold public hearings in New York and elsewhere before it attempts to draft a bill for presentation to Congress.

In contrast with the hysteria which has tainted some of the talk emanating from high railway quarters, is the quiet, but none the less forceful, statement of the cardinal factors in the railway-rate question made by I. L. Lee, executive official of the Pennsylvania. It is upon this plane of sober and comprehensive discussion that the subject should be treated by all three of the parties in the case—the railway companies, the Government, and the public. And so far as the public is concerned, certainly so far as the intelligent public is concerned, we believe its desire is altogether for a handling of the question in a spirit of fairness, and of regard for distant consequences no less than of immediate effects. That is the spirit invoked in Mr. Lee's remarks. He points out that we have entered upon a new era in operating railways, "an era demanding elimination of grade crossings, demanding improved railroad stations, steel cars, automatic signals, higher wages to the men, better accounting, and numerous other similar details"; but that we are not giving corresponding attention to the problem of "providing for the cost of these improvements." To maintain the standards exacted by modern conditions and modern opinion in these matters, the railways must have at command a big stream of new capital; and, says Mr. Lee, "there is to-day no established policy on the part of the people or the Government concerning the railroads which enables a man putting his money into a railroad investment to know the kind of treatment he is going to receive."

George F. Baer, who died on Sunday, was one of the ablest, and, in his personal traits as well as his personal achievements, one of the most remarkable, of the men who gave meaning to the title of captain of industry. He combined the talent of a great lawyer with the skill of a great organizer, the expert knowledge of a thorough railway man, and the iron will and fixed adherence to sound business principles which are necessary to make these qualities productive of real success in such an undertaking as he assumed when he took the helm in the affairs of the Reading Company. To him is due the transformation of that railway from a condition of chronic bankruptcy to a condition of assured prosperity. This he accomplished, not only by skill as a manager and power as an organizer and administrator, but by steadily resisting all kinds of pressure by financiers to conduct the road upon stock-jobbing instead of railway principles. He put blood into the road instead of sucking it out. The Reading under Baer fared like the Union Pacific under Harriman, in contrast with the Missouri Pacific under Gould, the 'Frisco under Yoakum, or the New Haven under Mellen. Baer placed the road where bankers would come to it, instead of placing it where it would have to go to bankers. His work as a railway manager must be accounted as remarkable, not only for ability, but for soundness.

There is nothing startling about the scheme developed by employees and officials of the New York Edison Company for investment in the stock of the company by persons in its service. But every movement of this kind is to be welcomed, both as good in itself and as an indication of a tendency which many hope may become general and may assume a character of very great importance. There is, in one respect, more significance in a simple and modest plan like this than in one that is of dazzling attraction; for what it lacks in greatness of immediate effect it supplies in the evident fact that it is capable of imitation in almost any soundly established industrial enterprise. Under this scheme it is free to every employee to invest or not, as he pleases; and the mechanism provided is that of an "Employees' Investment Company," to the stock of which subscriptions of the smallest amounts may be made, these being applied by the ancillary company to the purchase of stock of the Edison

Company itself. The result, in the course of years, says one of the Edison Company officials, will be to "make of the persons working for the electric company one of the most formidable groups of stockholders, and they will have power to make rulings and laws affecting their own business welfare." It is along lines like these that many serious students of industrial conditions hope to find the development of a more wholesome relation between capital and labor.

One of the duties of the Governor of Massachusetts is to veto the annual bill giving the "veterans" of the Spanish War preference over civilians in appointments to the civil service of the State. The effect upon the quality of work done for the State is, of course, beneath consideration. What impresses the outsider is the persistence with which the bill is introduced and passed, only to be vetoed. For a series of years every Governor of Massachusetts, Republican or Democrat, has had the privilege of disapproving it. Do the members of the Legislature secretly hope that he will take upon his shoulders the responsibility of preventing its enactment, while they shake their heads in apparent sorrow over his obstinacy? It must be admitted that the "veterans" of all our wars have never shown reluctance to jog our memory of their sacrifices.

American moralists on the false pride of denominationalism have never had need to go to Kikiyu for a text. A plain one is revealed in the John F. Slater Educational Fund's examination of church schools for negroes in the South. In the cities and towns of twelve States it reports fifty cases of the flagrant duplication of effort by denominational schools; in some, four or five are weakly but eagerly competing with one another or with the public schools. The tactful administrators of the Fund appeal to a sense of denominational expediency. One coöperative school, founded on that at present strongest, should generally suffice. Each church might put the money saved "into some strong, central college or industrial institute, whose graduates would be fitted to carry forth the particular faith. . . . Or if no one church school might be left with the work, especially in primary education, might not all withdraw to advantage and coöperate with the public-school authorities in providing better facilities?" No one thinks money for negro education can be made to go too far; and the churches could recite with more fervor the immense need for contributions if their own failure to coöperate were not in part responsible for it.

The health of Jacob A. Riis, it is stated, has become so impaired as to require his retirement from the activities to which he has been devoted. He is as yet only on the threshold of old age, being not quite sixty-five, and there are not many men in the country who have more fairly won the good wishes of all "men of gentle will" for many years of quiet happiness after a lifetime of active effort. Mr. Riis was one of the vanguard of that army of men and women who, in the past five and twenty years, have been laboring to improve the lot of the least fortunate of their fellow-beings, and have quickened the national conscience in this whole domain of thought and feeling and action. In his work, and his talk, and his writing, about conditions in the slums of New York, there was a quality of heartfelt sympathy, made all the more moving by a kindly and genuine humor, which was peculiarly contagious. A certain simplicity of mind, which in some matters that he touched was not to his advantage, only strengthened him in what he said and what he did about the wretchedness of Five Points, the crying need of downtown playgrounds and parks, and other concrete things that he fought for and won in behalf of the poor of New York. He can take to himself, in his retirement, the satisfaction that goes with having done good work himself, and having been the cause of good work, and of good feeling, in others.

If anything is more wonderfully fraught with chance than history, it is undoubtedly the collection of historical materials. The rich mine in which Assistant State Librarian Swem of Virginia has been delving for manuscripts concerning the Old Dominion, Kentucky, and the Northwest is calculated to make the growing tribe of Western antiquarians green with envy. His zeal and industry in tabulating the mass of material that he discovered in the basement of the Library are undeniable; but how its exploration was left for him is a story paralleling the finding of the Jesuit Narratives and Kaskaskia Records. Mr. Swem's report, "A List of MSS. Recently Deposited in the State Library by the State Auditor," enumerates among the accumulated State and county papers of a century and a half nearly 700,000 pieces of value. Records of property alone are estimated "to constitute the most authentic and comprehensive source material for the economic and social history of Virginia from 1782 to the close of the war between the States." Items abound scarcely less interesting than the following: "Clark, George Rogers. 70 packages of letters, accounts, orders, captured papers, and miscellaneous documents concerning George Rogers Clark and the Illinois country, 1778-1783. 300 pieces per package." Nothing of more interest to the growing army curious concerning the opening of the Ohio and Mississippi country has been recently brought to light; though the work of investigators among buried materials has been a rising monument to the ability of a new historical perspective to bring forth new Columbuses.

How unresponsive to the spirit of the time it is possible for a community to be is illustrated by Indianapolis, which, according to the latest reports, is not to have a "clean-up week." Not to have a clean-up week is worse, if anything, than not to have a "slogan" or a plan for a civic centre. But the Indianapolis Board of Public Works takes the position that the city is cleaning the streets and alleys all the time, and that a special week for that purpose is unnecessary. If citizens have any complaints about the work as at present conducted, they are invited to state them. This line of reasoning may sound well, but it overlooks the main point. What is the purpose of a clean-up week? To clean up? Of course not. The purpose of this institution is to arouse the spirit of coöperation among the citizens, to get them off the beaten track for a few days, to set everybody doing something that he is unused to doing. Clean-up week, in a word, has the same end as reading poetry or listening to a Chautauqua speaker. It makes one feel that one is a part of the great uplift of hu-

manity now everywhere staged, and at the same time it is a novel form of recreation.

Federal Commissioner Claxton holds that the schools should provide instruction through "what is now, in most cities, a long, wasteful vacation." The Chicago *Tribune* supports local educators in pronouncing the three months "an unnecessary waste, and worse than waste." Whether the vacation ought to be shortened may be arguable either from the point of view of the revolutionary schedule of Dr. Claxton, involving completion of eight years' primary work in six, extension of secondary studies to comprehend early college work, and the advanced specialization of the universities, or from that of city residents to whom the long vacation seems an outgrown rural institution. But opposition has heretofore been effective, in a feeling that even slight *ennui* at home was not harmful, if thereby the return to school was made something not to be contemplated with loathing.

A new magazine which challenges the public with such a title as the *Unpopular Review* must expect to stand on its mettle. But if the January issue left any lover of "disagreeable truths" doubting whether this particular quarterly was likely to justify its name over-well, his doubts have probably been removed by the solid substance and brilliant execution of the second issue, now out for April-June. On inspection the truths turn out to be fairly agreeable. Their nature may be gathered from the opening articles of the current number. Thus, the initial paper deals with the "Soul of Capitalism": "a broader and more liberal humanity than the world has known before—such, after all, is the evolving soul of capitalism." It will pass away, being "none too responsive," but in its place will come neither unbridled individualism nor a socialistic regimentation. As a pendant to that thesis stands the article on "Natural Aristocracy," which argues that "the remedy for the evils of license is not in the elimination of popular restraint, but precisely in bringing people to respect and follow their right leaders. The cure of democracy is not *more* democracy, but *better* democracy." Meanwhile the writer of the essay on "A Sociological Nightmare" makes excellent fooling of the wild scramble of theorists who are turning society into an "addled Parliament" of tongues; another essayist, with genial gallantry, rallies the women on their presumed "Right to Be Amused," and still another speaks with grave concern of "Social Untruth and Social Unrest," as seen in the careless, or wicked, habit of exaggerating actual evils in such a way as to promote a revolutionary propaganda rather than a salutary reform.

There is abundant other matter in the *Unpopular*, but from these opening articles its main intention is clear—to laugh the follies of the day out of court, and to stand stanchly for what has been proved and found good; to distinguish between the giddy eddies of conceit and the advancing current of order; to look below the surface glitter at the deeper meaning of the age; to be wise and merry at the same time. To such a quarterly the *Nation* extends the right hand of fellowship. And for Mr. Henry Holt, who is at once the editor and publisher, we desire the success that he merits and all the enjoyment that he is sure to find in his new undertaking. His friends will hope that a goodly number of men and women who have never heard his voice may come, through the pages of the magazine of which he is the animating spirit, to share with them the ripe wisdom of his years and experience.

If the victory of the Oxford relay team at the Pennsylvania games does not excite a shout of gratulation in England, it will be at least "a thought," in Mr. Pecksniff's words on a like occasion, "which is very soothing." The less noise is made over it, of course, the more readily will some Americans correct an exaggerated impression that athletic decadence has been the introspective topic served with British luncheon, dinner, and breakfast for months. Nothing lacked to make the triumph complete. The single American Rhodes scholar among the runners made the poorest race, in comparison with his opponent, of the four. The eight-inch margin at the tape, the pluck of the English runner, who closed up fifteen yards in the last mile and collapsed, the virtual record for a heavy field, united to distinguish the result.

Charges of conspiracy and falsification are steadily hurled against Mr. Asquith, and if Mr. Bonar Law, when brought to the point, will mitigate and explain and postpone, that does not seem to stand in the way of the same accusation being brought forth with the same degree of violence on the next occasion. The Unionist indictment was challenged last week by Mr. Asquith, who offered to set a day for debating the conspiracy charge; whereupon Mr. Bonar Law embattled suddenly became Mr. Bonar Law judicial, asserting that he could not fling himself into the fray for King and country until he had read a Government White Book on the subject.

The personnel of the new French Chamber of Deputies, returned by the general elections held on Sunday, will not finally be determined till after May 10, when there will be a second plurality turn for the 251 districts which gave no absolute majority. It is probable, however, that the Radical and Socialist majority will remain in power, although on Sunday's voting the groups led by ex-Premiers Briand and Barthou, and known as the Democrats of the Left, have made some gains. The murder of the editor of *Figaro*, followed by unpleasant disclosures regarding the close connection between high finance and men high in political power, may have affected the outcome in isolated instances, but it will hardly have broken the established ascendency of the radical elements. The murder of M. Calmette led to the resignation of two Cabinet members and might have overthrown the Doumergue Ministry if the elections had not been so close at hand. The advantage of being in power during a general election is recognized in France as in other Latin countries. The issue which has been most debated during the campaign is the proposal for an abandonment of the three years' military service law, which was enacted almost the other day under the influence of the German war scare. At that time there was every sign that the nation, with the exception of the Socialists, was united in favor of the longer term of service. The fact that a return to two years has now been found a popular election cry shows to what extent national "upheavals" may be exaggerated as the result of manipulation.

MEXICO.

The week that has passed has been one of grave and sobering experience for this country. We have been, not on the brink of war, but actually in armed conflict with another Power—call that power Huerta or Mexico—and while there was on all hands a determination, if the worst must come, to do what must be done, there was evident in the mass of the American people a profound distaste for the whole sorry business, a conviction that somehow, somewhere a blunder had been committed, and that we were going to war for no just cause and with a people against whom we had no just quarrel. Nobody will rightly accuse President Wilson of insincerity in contending that our operations have been directed not against the Mexican people but against Huerta, but the reply of Carranza to the amiable overtures of the Secretary of State is sufficient demonstration of the view that the people of Mexico as a whole take of our action.

The plain facts of the case are these: that the Administration has undertaken hostile operations against a man whom it has refused to recognize as *de-facto* President of Mexico, because he temporized about making reparation to this country for an insult to the flag in the precise form prescribed by international usage. It was not even that an apology had been refused, for it had not. Huerta had made an apology; more, he had undertaken to salute the flag in the manner demanded, the only stipulation being that the salute should be returned and that a protocol to this effect should be put into writing. That was the occasion for the undertaking of an enterprise the end of which no man can foresee, but which has already exacted its price in the lives of Americans and Mexicans. And the reason for the refusal of the protocol? Because it was not in accord with diplomatic usage? But what has diplomatic usage to do with a private individual whose official existence we do not recognize? Or because the mere signing of it might involve that recognition which we have so studiously avoided? So, we may talk to a man through our accredited diplomatic agent in Mexico, but rather than correspond with him we will go to war. It is straining at a gnat and swallowing a camel.

These are the official reasons advanced for our action in Mexico. Nobody pretends that they are the sole reasons. If they were, our justification for the extreme measures that have been taken would appear even more miserably inadequate than it does. Huerta has pursued a policy of pinpricks exceedingly trying to the patience of the Administration, galling to the pride of any but a nation that is truly great and secure in the consciousness of its national honor. The lives and property of American citizens have been in danger in Mexico, and to protect their lives is one of the first duties of a government; but in the part of Mexico controlled by Huerta Americans have enjoyed heretofore a greater security than in those districts which are in the hands of Villa and the rebels. Yet, be it remembered, it is against Huerta, and Huerta alone, not against Villa, not against the Mexican people, Federals or rebels, that all the armed resources of the United States have been arrayed.

These, we think, are the kind of reflections that have been in the minds of many thoughtful Americans during the past week. It is because the majority of the American people realize, perhaps vaguely, the inconsistency which has marked the policy of the Administration, the inadequacy of the grounds on which war has been threatened, that there has been a notable absence of the jingoistic spirit.

The same temperate spirit which made the American people view with distaste the prospect of a war in Mexico has made it welcome with a sense of profound relief the announcement on Sunday of an offer of mediation by the republics of Brazil, Chili, and the Argentine, and the acceptance of the offer by our Government and by Huerta.

Confessedly, the difficulties still confronting us are many and great. Whichever way one looks at it, the Mexican situation appears formidable. The chapter of accidents may go fatefully against the plans of the Administration and of our mediating friends in South America. But a good and hopeful beginning has been made, and the thing to do now is to press on with courage.

Already much has been accomplished. In accepting so promptly, even if with due reservations, the good offices of Brazil, Chili, and the Argentine, President Wilson gave the very best proof of his sincere desire for peace. One needs only to recall the difference in 1898. Then the British Ambassador made a proffer of friendly services, on the part of European Powers, to prevent the war with Spain, but it was politely declined by President McKinley. Mr. Wilson could, in consistency, do no less than welcome the approach of the South Americans. He and Mr. Bryan have been negotiating a series of treaties aiming to bind the nations to agree to a certain "pause" for inquiry and reflection, before passing from a cause of hostility into actual war. The offer of such a breathing space was immediately accepted by the Administration, and President Wilson must have seen how ready his countrymen are to support him in every reasonable effort to ground arms in Mexico.

Most welcome, also, is the instant effect of his action throughout South America. It came in the nick of time; for ugly things were already beginning to be said about us in the Argentine press and in Brazil. In Montevideo, anti-American demonstrations had actually begun. It is evident that a strong feeling against the United States would soon have been manifesting itself in all those countries. If war with Mexico had been resolved upon, for whatever reason and with whatever disavowals of selfish purposes on our part, we should have been denounced up and down South America as a nation of hypocritical land-grabbers. But now all this will be stilled; for it is in the hands of South Americans that we have, as it were, placed the keeping of our honor, with the task of avoiding war with Mexico, if that be possible. The effect will surely be to create a great and favorable revulsion of sentiment in South America.

Even in distraught Mexico, the result must be to revive confidence in the forbearance and good will of the United States Government. The present, surely, is the moment for intelligent and patriotic Mexicans to assert themselves. They must see that here is a last chance to prevent their country from either bleeding to death or being overrun by a foreign invader. In the fact that mediation is now offered by nations of their own race and speech, they ought to see the happiest auguries. The advances made to the Mexican people by the South

American mediators are certain to be sympathetic. So, too, will their advice be intelligent and candid. Now, if ever, there ought to be a great rallying of the better-class Mexicans in the hope of working out a plan that shall at once stay a desolating civil war, put a stop to threatened foreign hostilities, and give promise of a permanent restoration of law and order.

Any suggestion of this kind must perforce be at present only tentative. The great thing is that time for thought has been gained, time for negotiation, time for the humane instincts to reassert themselves. The fighting has been checked. Opportunity for reason to utter its voice has been obtained. The whole Christian world will look on with devout hope that the effort now making to find a peaceful solution may in the end succeed.

THE ARMY AND THE WAR.

Our aggression in Mexico finds the regular army in vastly better condition for a campaign than it was in 1898. Then its authorized strength was 27,164, but its actual numbers considerably less. Many of its officers were incapacitated by dry-rot and advanced years. Many regiments had never met as a whole, and only two or three generals had ever manœuvred a division, much less a corps. The lieutenants and captains of 1898 are the colonels and generals of to-day. Whereas Gen. Shafter was physically incapacitated for active service and sixty-three years of age, Gen. Funston, our senior brigadier, is not yet forty-nine, and of a vigorous and alert personality. To-day the authorized strength is 100,000, and the actual numbers close to 90,000, including the Philippine Scouts. Of the total, 65,000 are in this country, the rest being in Panama, Porto Rico, Hawaii, and the Philippines. These figures include the Coast Artillery.

No one would, of course, contend that our army has reached perfection. The inertia of a body of officials with permanent positions is greater than those unacquainted with it can imagine. There is an almost paralyzing lack of initiative; officers sit at their desks and too readily become the victims of conservatism and of red-tape regulations. Hence, if a large mobilization should be necessary, we should see a good deal of the confusion of 1898, and certainly much of the delay repeated, particularly as the Volunteer Army bill has only just passed. There has been great slothfulness in working out detailed plans for the mobilization of the militia, although most elaborate programmes for the invasion of Mexico by the regulars have been in hand for several years. But for two years many regulars have been in camp in Texas or patrolling the border, between 17,000 and 18,000 being so employed to-day. There probably never were American troops in better physical condition for service, and 4,000 of them were promptly sent by water to garrison Vera Cruz. While Shafter's army was a splendid aggregation of small units, admirably officered as to captains and lieutenants, the present regiments are far better armed and equipped, and their officers have had a much broader training and far greater variety of service, notably in large bodies. Fifty per cent. of them have seen active service in Cuba or the Philippines, and the average age of the officers of every rank is much lower than was the case in 1898, while their physical condition is superior.

But should all of Mexico turn against us, these men would be merely a drop in the bucket. Indeed, the best-drilled militia, like that of New York, would, in the event of hostilities actually developing, do well to expect an immediate call to arms. Somebody would have to take the place of the regulars on the Texas border, even if our operations were confined to the Huertistas. Forts must be garrisoned to relieve the Coast Artillery, which would have to do infantry duty, as it did in Mexico before, and as it did in the Civil War. This use of the militia would be of great service, and would be within the Constitution; the Attorney-General has ruled that, in accordance with the specific terms of that document, militia cannot be sent across the borders of our country. Insistence by certain militia on their right to fight on their own territory was the cause of one defeat in our war of a hundred and two years ago. Under the proposed new volunteer law, State militia regiments will be allowed to volunteer as a whole—which was the principle for which the Seventh New York stood up in 1898 and for which it was so outrageously ill-treated by an unthinking public. But even the New York regiments cannot all go until, in accordance with our Constitution, 10,000 militia are raised to take their place. These would be partly officered, as in 1898, by men who for physical or for family reasons are not able to go to the front.

As for the troops, many would drop out for similar reasons. All talk of the 112,000 militia being ready for war as a whole is nonsense. The regiments would have to be made over largely, as in 1898. Volunteer regiments of wholly new material should come into being, now that the new bill is law, under far better auspices than in 1846, 1861, or 1898. For instance, it will provide a system of recruiting regiments in the field from recruit depots, instead of the wasteful practice of the Civil War of recruiting new regiments when the veteran organizations melted away. It provides for the appointment of staff and general officers; it makes easy the passage of regular officers to the highest places in the volunteer regiments, and provides temporary substitutes for the officers thus detailed away from the regulars. It prescribes that the President, instead of the Governors, as heretofore, shall appoint all volunteer officers, and that preference shall be given to men of experience and training in the army, the militia, the volunteers of 1898, and the military schools of the country. There is also an excellent provision for eliminating unfit or vicious officers. Under this law there should be no payment of bounties and no short-term enlistments, both great evils in 1861-65. Finally, the President is authorized by the law to call out 200,000 men as he sees fit.

But it is an open secret that as time has gone on the army authorities have steadily raised their estimates of the number of troops needed to "pacify" all of Mexico. Originally, the estimate was 250,000 men and five years. To-day some generals estimate as high as 500,000, and an expense of a million dollars a day is expected by all. Should all Mexico be arrayed against us, the country would have to be prepared for terrible sacrifices of men and money. Only two or three of our active generals have commanded a brigade during hostilities; their worth would have to be tested in what one of them has called the "best guerrilla country in the world." The cost of it all might easily be staggering.

THE RIGHT TO PUNISH.

There appeared in the newspapers a short time ago an item to the effect that in Rhode Island a former convict has brought suit for the recovery of wages which he says are due him for labor performed by him while a prisoner under the convict-contract system. The suit is based on the fact that the Constitution of Rhode Island, which contains a prohibition of slavery, does not expressly declare that the prohibition is not to be understood as covering labor, or involuntary servitude, exacted as a punishment for crime. The language of the Thirteenth Amendment to the Constitution of the United States is: "Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction." But we have no desire to enter into the judicial question brought up in the Rhode Island case as such.

What does interest us very much is the attitude that appears to be adopted towards the matter by certain advocates of prison reform. With the general aims of the constantly growing numbers of earnest workers in this field we are in hearty sympathy. There is a tremendous task before us in the direction of improved methods of treatment of criminals, not to speak of the extirpation of outrageous abuses and flagrant inefficiencies in the administration of existing methods. But along with a great deal of admirable endeavor, both in the way of constructive criticism and of intelligent experiment, there is rife nowadays a great deal of crude dogma and dangerous sentimentality. It is stated that this convict's suit is backed by persons interested in prison-labor reform. The case for his claim, as seen by them—and apparently approved by the editor—is thus stated in an editorial in the Chicago *Record-Herald:*

> The theory is that a convict should be paid decent wages, and that his family or other dependents should have the benefit of his toil. Of course, if the convict is a slave, he has no rights that anybody is bound to respect. If he is not a slave, the wages of his toil and conditions of his employment in or out of prison require proper regulation in the interest of justice. It is to be hoped that the Supreme Court of Rhode Island will not seek or find some technical loophole through which to escape, but will tackle the issue in its vital bearings and rejoice in the opportunity to hand down a memorable opinion.

Undoubtedly, the question of a convict's wages and of the conditions of his employment is one that requires "proper regulation." It may be that to give him the full net proceeds of his labor would be a wise policy; it is almost certainly true that some approximation to such a course would be most beneficial to the community as well as to the convict. But to say that he has a right to such treatment simply because he is not a "slave," is to reduce to absurdity the whole idea of criminal justice. Where are you going to draw the line? If he possesses the ordinary rights of a freeman, he possesses the right to come and go, to enjoy the society of his wife and children, to work as much or as little as he pleases. Is he to be mocked with mere wages, to be enjoyed perhaps only after years of waiting, and in the meanwhile to pine away in loneliness and confinement? Is the withholding of wages the only deprivation which the slave endures? Is it the bitterest of the pangs he is called upon to suffer? Is the loss of liberty nothing, so long as a daily dole of money is added to the daily dole of food?

We ask these questions not by way of legal argument on the Rhode Island case, but on account of their bearing on the whole subject of criminal law and criminal administration. Those who undertake to settle the fundamental issues of that subject by an appeal to the mere catchwords of an abstract dogma of human rights are only saved from sinking in a quagmire of impossibilities by failure to carry their dogmatizing and sentimentalizing to its legitimate conclusion. The abstract right of a man to the ordinary prerogatives of a freeman is either forfeitable by crime or it is not. If it is not forfeitable, we have no right to deprive any criminal of his liberty. If it is thus forfeitable, the nature and limits of the deprivations to which he may be subjected must be determined by considerations of public expediency, and not by the dicta of any abstract theory of human rights. Let unnecessary harshness be abolished, by all means; but let it be abolished because it is shown to be unnecessary or ineffective. Let encouragement to thrift be given the convict; but let it be given because there is sound reason to believe that it will promote his reformation, or succor his dependents, and will not injure the community.

We grope sadly, to be sure, in the treatment of these matters. We have given them scant attention; we have blundered in regard to them; we have suffered venality and incompetence to work untold evils in relation to them; we have even been shamefully niggardly in supplying the means for a proper administration of the system we have. To mend all this—slowly if we can do no better, rapidly if we can arouse the community to a sense of its full duty—is an urgent task. It is being carried on by men and women who devote their lives to this unattractive and often thankless work. But with all its faults and shortcomings the system of criminal justice has performed a function absolutely indispensable to the carrying on of civilized life. It has done its work wastefully, stupidly if you please; but it has done its work, and that work continues to be as essential as ever. In order to maintain it, it is necessary to hold, with clear conviction, without tremor or apology, that the right to punish rests on the solid foundation of the highest public expediency. Those who indulge in such talk as we have here been criticising can find no logical stopping-place short of a complete denial of that right as so founded. And that way madness lies.

THE LONELY HEIGHTS OF SCIENCE.

Looking under the name "Hill," in the Encyclopædia Britannica, we find "Hill, Ambrose Powell, American Confederate soldier," "Hill, Daniel Harvey, American Confederate soldier," "Hill, David Bennett, American politician," and other Hills, American and English, but not Hill, George William, American astronomer. Nor did the death of George William Hill, a few days ago, evoke from the American newspaper press anything more than perfunctory notice. Yet he was one of the extremely small group of men in this country whose scientific work was of the highest order. His researches in celestial mechanics will rank permanently among the memorable achievements of the human mind in a domain in which some

of the greatest intellects of the race have exerted their utmost powers. One of the many notable testimonials to his rare eminence was the publication, several years ago, by the Carnegie Institution, of his "Collected Mathematical Works," with an introduction by Henri Poincaré, the most illustrious French mathematician of the last two generations. In this introduction, Poincaré gives an outline of Hill's researches, and discusses their relation to what had been done by his predecessors, and their bearing on the future development of celestial mechanics.

So remote are labors like these, not only from the ordinary interests of mankind, but from the possibility of even a dim apprehension of their nature on the part of any but mathematicians, that it is not surprising that the man whose life is given over to their pursuit gains none of the glittering rewards, such as they are, of popular notice. And in the particular case of George W. Hill, it would be peculiarly inept to treat the absence of such notice of him, alive or dead, as a personal grievance. For Hill was, by deliberate choice, a recluse, a solitary, even in relation to the small circle of the elect who were capable of fellowship with him in the special intellectual field to which he was so exclusively devoted. And yet one can but feel that, in one way or another, the consciousness of this kind of high endeavor and achievement might well be more widespread than it is; and that if it were, the result would be a reciprocal benefit—a benefit to the man of science and a benefit to society at large—of no small value. In the case of an almost freakish simplicity and self-withdrawal like that of Hill, it may be that nothing of the kind would be possible; but his case is highly exceptional. It is not many years since there died an American mathematical physicist of similar scientific eminence, a man whose work is acknowledged to be in the first rank, and who was during his entire career professor in one of our leading universities; but how many Americans knew the name of Willard Gibbs? How many persons in New Haven—how many Yale students even—were aware that this modest scholar was one of the world's leaders in a great field of scientific thought?

It is something of a coincidence that within the few days since the death of Dr. Hill, another American man of genius has been taken away who, different in almost every possible way from Hill, was like him in that his life had for many years been passed in extreme seclusion. A man at once of extraordinary acumen and originality, and of a phenomenal range of intellectual interests, there was in Charles S. Peirce a vein of the erratic, perhaps one may say the unstable, which seems to account for his achievements having fallen far short of what might have been expected of his unquestionably splendid powers. Even as it is, however, he left his mark on at least two branches of the intellectual activity of the age. In that modern development of the science of reasoning which is usually designated by the name of Symbolic Logic, his work well deserves to be called *bahnbrechend;* the leading German writer on the subject, Ernst Schroeder, makes it the foundation of his extensive treatise. And it is from Peirce that William James derived the name "Pragmatism," and the doctrine for which that name stands in James's work; though, in the interest of accuracy, it is necessary to add that Peirce repudiated James's development of his seminal idea. But the concrete fruits of Peirce's labors, many as are the fields in which he worked, are small in comparison with what those who came into contact with him could not but feel would have fallen into his hands if he had but possessed that something—constancy, balance, or whatever it may be—which nature seems to have denied him.

That there might be—that there has been in other times and other countries—an atmosphere more genial and friendly even for those whose labors carry them to those strange and lofty heights in which dwells the mathematician or the abstract philosopher, we have already intimated. But these almost self-condemned exiles from "the kindly race of men" are not the only scholars who suffer from an intellectual isolation that is deplorable, and to the nature and consequences of which we seldom or never give attention. That free-masonry of the intellect which has played an inestimable part in the higher culture of Europe is almost wholly absent, as yet, in our university circles.

Foreign Correspondence

THE BRITISH CIVIL SERVICE—RECOMMENDATIONS OF A ROYAL COMMISSION.

London, April 17.

The British Civil Service has had a hard task to live down the reputation given it by Charles Lamb. His rhyming account of the problems that occupied him daily from ten to four, and his practice of making up for late arrival by going away early, have left a widespread impression that Whitehall is almost a synonym for Lotus Island. But Lamb retired from the East India Office in 1825, and nowadays the interiors of the large buildings that stretch from Trafalgar Square to the Houses of Parliament show little resemblance to a land where it is always afternoon. Indeed, the pressure upon the more responsible Civil Servants when bills relating to their own departments are passing through the House might be compared to that upon the station masters of the big railway terminals during the excursion season.

Not only is the daily round of the Government clerk far more strenuous than a hundred, or even fifty, years ago, but, at the same time, the gate into the service has been narrowed by the modern custom of filling so many of the appointments by open competition. In 1853 it was declared by the Commissioners chosen to report on the existing system of appointment by nomination that "admission into the Civil Service was greatly sought after, but it was for the incompetent and the indolent and incapable that it was chiefly desired." The Government departments then were regarded "as a means of securing a maintenance for young men who have no chance of success in the open competition of the legal, medical, and mercantile professions."

That scandal, at any rate, has been brought to an end. A Royal Commission on the Civil Service that has been sitting for more than two years has recently published its recommendations, based on four considerable volumes of evidence. It finds that the fundamental principles on which the Service is based are sound, and that its organization is, in the main, efficient. There are some defects of considerable importance, for which remedies are suggested, but the Commissioners recommend that the principle of open competition should be adhered to, and, whenever it is applicable, extended.

One of the reforms now proposed is due to the recent agitation against "blind alley" employments. At present, there are about 2,600 "boy clerks" who are recruited between the ages of fifteen and sixteen. Some of these have a chance of getting a permanent clerkship, but most of them are dismissed at eighteen. It is recommended that this class be entirely abolished, and that, in future, the lowest class in the official hierarchy shall be a "junior clerical class," recruited at sixteen, from boys who have completed the intermediate stage in secondary schools. Appointments to this class will be permanent.

Perhaps the most hotly contested question that has demanded the attention of the Royal Commissioners has been the relation of first division clerks to second division clerks. At present the first division is a *corps d'élite* of about 450 officials. They enter the service through the door of one of the most difficult examinations in the British Isles. With few exceptions, the successful candidates are men who already have gained high university distinctions.

The higher status and better prospects of first division clerks are keenly resented by many members of the second division. These are men who enter the service at the age of eighteen or thereabouts, after an examination of a much less advanced type. Their demand is that at least the first division should be largely recruited by promotions from the second, so that a young man who enters at this earlier age, after no more than an ordinary secondary education, should have a chance of some day rising to the highest post in his department.

Some of their most prominent advocates have weakened their case by an absurd attack upon the first division as the apanage of a privileged caste. This is sheer nonsense. Most of the first division men are, in fact, men without private means, who have made their way through a university by scholarships. Some of them, it should be noted, come of working-class families, and have climbed the educational ladder from the lowest rung, by winning scholarships in the first place from the elementary to the secondary schools, and afterwards from the latter schools to the universities.

The Commissioners emphatically reject the proposal that the first and second division clerks should ultimately be merged into a single class. They reach the conclusion that the best education, taken in conjunction with the training and formative influences of university life, produces the best type of public servant. This opinion is confirmed by Sir Francis Mowatt, permanent Secretary to the Treasury from 1894 to 1903. In an interview in the *Times* he points out that "experience in comparatively routine work, industry, and trustworthiness—qualities which distinguish the second division in a high degree—though they are justly entitled to the description of merit, do not of themselves qualify for the higher duties of control and administration."

It is, indeed, a most short-sighted policy to attempt, in the supposed interests of democratic equality, to break down the barrier between the first and second divisions. A young university graduate who has to keep himself by his own earnings finds his great difficulty when he has completed his course at college and is looking round for a career. The scholarships that have hitherto kept him have now dropped. At this point the civil-service first-division competition comes to his aid. If that is to be abolished for the sake of improving the position of youth who enter the service at eighteen, the chief sufferers will not be members of the aristocratic caste, but the ablest sons of middle-class and working-class homes. H. W. H.

THE NEW PARLIAMENT—LEADING PERSONALITIES IN FRENCH POLITICS.

PARIS, April 17.

Five of the six Republican leaders of the past four years are likely to remain the protagonists of the new Parliament which will assemble in June as a result of the general elections on Sunday, April 26. Leaders of the Conservatives and of the Monarchist remnant do not count. All fairly represent a high and not uncommon type of member of Parliament in France.

Raymond Poincaré is fifty-four years old, and has been removed from active politics by his election to the Presidency of the republic. He was elected against the utmost endeavors of Extreme Radicals and Socialists, for, as Prime Minister, he had been directing French interior and foreign policy along other lines than theirs. He belongs to a family distinguished in science, and his cousin Henri Poincaré was the greatest mathematical genius France has produced for a century. He is a man of complete university education, a lawyer occupying a foremost place in the exclusive Paris bar, and a member of the French Academy. He entered Parliament at twenty-seven, was Minister of Public Instruction at thirty-three, and was twice a particularly able Finance Minister; and he was a power in European councils when Foreign Minister during the Balkan troubles.

Alexandre Millerand is fifty-five years old, and is also a leading Paris lawyer. He first appeared in politics as one of Clemenceau's young men on the famous *Justice* newspaper. He was in Parliament at twenty-six, but did not enter a Government until he was forty. Then, from 1899 to 1902, he was Minister of Commerce in the Government which Waldeck-Rousseau organized to settle the Dreyfus affair. He was known as the first Socialist that ever held a post in a French Government.

Like Briand, who came later as chief of Government, he has been repudiated by the Unified Socialist party of Jaurès. In the Poincaré Cabinet he was Minister of War, and he is credited with having prepared the return to the three years' compulsory military service, which has been so opposed by Extreme Radicals and Socialists. His power is in his intelligent, serious, and patient labor.

Aristide Briand is fifty-two years old. He took his university degree in law, but entered politics early as director of the Radical Socialist journal, *La Lanterne*. He was forty before he was elected to Parliament, where he sits as an Independent Socialist for the strong workingmen's constituency of the manufacturing city of Saint-Etienne. He took a leading part, conciliatory as far as possible, in the preparation of the law of separation of church and state. He became a Minister with Clemenceau at forty-four, and he has since been twice Prime Minister.

The French Parliament has perhaps never had a greater master of debate in patient reasoning, ready answer, and warm, persuasive voice. He has also great power over popular assemblies; and his instantaneousness of thought is said to be the result of frequent participation as a college student in the cabaret politics of his native seaport. He is accused by Radical Socialists of leading the republic straight toward Conservative reaction. He will not soon be forgiven two famous words summing up volumes of political argument—that the present Parliamentary constituencies are "stagnant pools," and that the great need of the country is "appeasement." These have damaged vitally the Extreme Radical position. As for Socialists, they have shown themselves capable of alliances with other parties when these advance their peculiar aims.

Louis Barthou is fifty-two, a lawyer of the Paris bar and a writer. He entered Parliament at twenty-seven and Government at thirty-two; and at thirty-four he held the important Ministry of the Interior in the Moderate Republican Méline Cabinet. Beginning with Clemenceau, he has been a member of several Radical Governments in late years and was Prime Minister after Briand until November of last year. Then Extreme Radicals and Socialists, led by Caillaux in an unexpected combination, succeeded in overturning his Government and the "appeasement" policy with it. They accuse Barthou of Opportunism with a Conservative trend, dangerous to the Simonpure republic.

Joseph Caillaux is fifty-one years old, and was the real leader of the Extreme Radicals until the unhappy shooting of his political enemy, Calmette, editor of the *Figaro*, by Mme. Caillaux. This, however, is not likely to keep him from political life. He is the son of Finance Minister Caillaux, of that Broglie Government which all but pushed the young republic into Conservative reaction towards monarchy, and which was overthrown by Gambetta and the Radicals of that time. He has gone to the opposite extreme of Radical Socialism, after specializing in finance. He entered Parliament at thirty-five, and Government the year after, with Millerand and Waldeck-Rousseau. He was again Finance Minister with Clemenceau; and he was Prime Minister at the difficult moment of the German aggression of Agadir. He ceded Congo that France might have a free hand in Morocco. Caillaux is the Radical most feared by Moderates and Conservatives, because of his recognized ability, joined with daring and violent policies, and an apparent willingness to take gamblers' risks.

Jean Jaurès, who is the best known of all abroad, is fifty-five years old, and a university professor of philosophy by profession. He belongs to a family of distinguished naval officers, and certainly has nothing of the workman about him. He was a member of Parliament at twenty-six, and sat in the Republican Centre. He has never been in Government, for he migrated rapidly to extreme Collectivist Socialism. Twice he lost his election, and so skipped two Parliaments; but, in and out of Parliament, he has been leader of the Socialist party. He is inferior as a debater to Briand; but he is by far the most noted orator of France, both popular and Parliamentary, with a voice and chest equal to any strain. S. D.

Clinical Teaching.

DR. JANEWAY TO GO TO JOHNS HOPKINS.

The announcement that Dr. Theodore C. Janeway, Bard Professor of Medicine in Columbia University, and recently elected director of the medical department of the Presbyterian Hospital of New York, has accepted the professorship of medicine in the Johns Hopkins Medical School—the position once held by Sir William Osler—marks the completion of the reorganization of the main clinical departments of the Johns Hopkins Medical School on the full-time or university basis. The origin and significance of the new organization, now for the first time put into effect anywhere, may be stated as follows:

The Johns Hopkins Medical School opened in 1893 with two novel features: in the first place, it possessed an adequate endowed hospital under full university control—the trustees of the Medical School having the complete right to select the hospital staff; in the second place, the professors of the so-called laboratory subjects, anatomy, physiology, pathology, and their assistants, were all full-time men—teachers, that is, devoting their entire time and energy to instruction and research. Hitherto full-time laboratory teaching had not been entirely unknown, but the instances were rare and sporadic.

The full-time basis in laboratory teaching has succeeded so well that nowadays it is everywhere accepted as the only possible arrangement. It has greatly improved the quality of teaching in the laboratory subjects, and greatly increased the volume and quality of scientific research in these branches.

The endowment of the Johns Hopkins Medical School was not, however, large enough to extend the university arrangement to clinical chairs. Nevertheless, the advisability of a full-time experiment in the teaching of medicine, surgery, and other clinical subjects has been favorably discussed from time to time. The arguments in its favor were very substantial. In the first place, as the full-time anatomist and physiologist had amply justified themselves, there was good reason to suppose that the full-time arrangement would be even more advantageous in case of the still more difficult and complicated clinical branches. There is, however, an additional reason arising from the increasing distractions incident to a successful medical or surgical career. For the university professors of medicine and surgery, by reason of the eminence of their academic position and its implication of superior knowledge and skill, are likely to be more and more deeply absorbed by the demands of practice, just at the time when their opportunities for teaching and research are largest.

In response to a request from the trustees of the Johns Hopkins University, the General Education Board in October last made a gift of $1,500,000 to the Johns Hopkins Medical School, to be known as the William H. Welch Endowment for Clinical Education and Research, the entire income thereof to be used for the support of full-time teaching and research departments in medicine, surgery, and pediatrics. It was stipulated that, in reorganizing these three departments, the professor, his associates, and assistants should hold their posts on the express condition that they be salaried university officials and that they should themselves accept no fees for any medical or surgical service that they might render. The university medical or surgical teacher is, of course, in charge of the hospital wards and out-patient department; but over and above his work in the public wards, he is free to render any service required in the interest of humanity and science; he can see any patient that he cares to see. Should these be of the usual private patient type, they would pay the university a reasonable fee. But the time and energy of the professor is fully protected, not only because his salary eliminates financial interest on his part, but because he is himself sole judge as to whether a particular case should or should not command his attention. In order that the time and energy thus safeguarded may be profitably employed under favorable conditions, the endowment was made large enough to provide professors and assistants with well-equipped laboratories, books, and other necessary facilities.

The full-time plan is an appeal to the scientific interest and devotion of the clinician; and it is significant that the first three full-time posts created have been filled by men of conspicuous professional standing, who have all gladly made great sacrifices in order to procure ideal conditions for clinical teaching and investigation. Dr. Janeway, who becomes professor of medicine, is a New Yorker by birth, son of the late Dr. Edward Janeway, himself one of the most distinguished and influential teachers of medicine of his generation. Indeed, the elder Janeway was one of the pioneers in introducing into America the modern conceptions of pathology and histology contributed to medical science by Virchow; he occupied the chair of medicine in the Bellevue Hospital Medical College, and subsequently in the consolidated University and Bellevue Medical School. The younger Janeway, who now becomes leader in another step forward in medical education, was graduated as doctor of medicine of Columbia University in 1895; he was an instructor in bacteriology in the College of Physicians and Surgeons, 1895-96; an interne at St. Luke's, 1897; instructor and lecturer in the University and Bellevue Medical College, 1898-1906; associate in clinical medicine in the College of Physicians and Surgeons, 1907, and professor of medicine, 1909. He has also served as visiting physician to St. Luke's, the Presbyterian, and the City Hospitals. Dr. Janeway is a member of the Board of Scientific Directors of the Rockefeller Institute for Medical Research, of the Association of American Physicians, and other scientific bodies. His incumbency of the chair of medicine at Columbia University has been notable for the close relationship established between the Presbyterian Hospital and the University, and the institution in the Presbyterian Hospital of the single-service organization, headed by the University professors in the several branches. It is only fair to say that the conditions brought about in the Presbyterian Hospital and the College of Physicians and Surgeons represent the most desirable type of relationship between hospital and medical school.

The chair of surgery at the Johns Hopkins on the full-time arrangement will be occupied by Dr. William S. Halsted, most of whose brilliant surgical career has been passed in the Johns Hopkins Medical School. Like Dr. Janeway, he is a graduate in medicine of the College of Physicians and Surgeons of New York, serving afterwards in succession as surgeon to the Presbyterian, Bellevue, and Roosevelt Hospitals of New York city. Called to Baltimore on the establishment of the Johns Hopkins Hospital, Dr. Halsted has ever since been its surgeon-in-chief and professor of surgery.

The chair of pediatrics will be occupied by Dr. John Howland, also a New York man. Dr. Howland graduated as doctor of medicine at New York University in 1897 and at Cornell in 1899; he was a house officer at the Presbyterian Hospital, and subsequently in charge of the Children's Clinic at Bellevue Hospital. He has been associate in pediatrics at Columbia University and professor of pediatrics in Washington University, St. Louis. Dr. Howland was called to the Johns Hopkins a year ago to be physician-in-charge of the Harriet Lane Home for Invalid Children—this institution being the pediatric clinic of the Johns Hopkins Medical School.

One more remark ought to be added. The full-time scheme in medicine and surgery calls for an endowment adequate to support professors, assistants, laboratories, etc. Each department requires a complete organization, and each member of the organization requires facilities adapted to his particular kind of work. The large sum involved makes it improbable that the scheme will be at once generally instituted.

Church as a Social Force

A SYMPOSIUM ON THE QUESTION: HAS THE PROTESTANT CHURCH LOST GROUND IN ENDEAVORING TO MAKE ITSELF A SOCIAL AND SOCIOLOGICAL FORCE?

I.

A CHURCH OF THE CLERGY OR OF THE PEOPLE.

The answer to the question proposed depends upon what is meant by "The Protestant Church." Is it not true that usually when people speak of "The Church" they mean the *clergy*, and that they are somehow obsessed with the idea that an ordained priesthood or ministry is the sole channel by which a church expresses itself? That, to my mind, is a most discouraging error. If the laymen and the laywomen of the Protestant churches do not regard the work of the churches as their own, but are content to do their duty by proxy, then it is a sad day for the Protestant churches.

If, then, by the Protestant Church you mean the ministers, I am inclined to believe that, while there may be sometimes a temporary gain in numbers and notoriety, there is usually a loss of influence and efficiency in the churches whose ministers become known primarily as social agitators. Ministers are very rarely trained to expert knowledge or to sound judgment about social problems. They ought to be, but they are not. They are apt to speak upon such problems without adequate acquaintance with the subject, and thereby to bring themselves and the cause which they represent into deserved ridicule and reproach. One of the perils of our industrial situation is the "valor of ignorance" which tempts impatient and ill-equipped ministers to rush in where the more experienced tread with caution.

A minister cannot wisely compete with politicians, economists, and financiers. His function is to keep alive the fires of faith and hope and love, and to set forth abiding principles. He can show that in all industrial disputes the first necessity is justice. He can declare that the true principle of liberty is freedom, not to do what one likes, but to do what one ought. He can show what equality means, not equality of distribution, but equality of consideration, and that the first principle of fraternity is that "we are all members one of another." His special opportunity is to proclaim the prophetic vision, to preach the spiritual optimism and practical idealism which will induce his people to put principle into practice and transmute vision into service.

If, however, by "The Protestant Church" is meant the *people* of the Protestant churches, then I believe that the most progressive and influential churches of our day are those where the application of Christian truth and principle to social problems is most direct, intelligent, and persistent. The real test of a church nowadays is not its doctrinal accuracy or its sacramental authority, but its practical efficiency. The churches that count for something in the life of this generation are those that are showing their faith by their works. They are the churches whose adherents are helping to solve the problems of education, of charity, of intemperance, of the care of the dependent and delinquent, of the administration of justice, of international law and peace. They are the churches whose people are concerned with the saving of neglected children, in the amelioration of the conditions of labor, in the prevention of poverty and disease, in the promotion of good laws and the enforcement of existing laws, in providing playgrounds, public parks, and village improvements, in making libraries, art, music, and the drama add to the happiness of the people. Such enterprises are not only a high privilege and a plain duty, but also in them has been and will be found the salvation of many a languishing church. The passion for social service is the logical carrying out of the New Testament teachings. It is a return to the ideal that was central in the teaching of Jesus Christ, the bringing on earth of the kingdom of God. That is the most vital mission of the churches to-day. The absorbing social interests of our time must be made to disclose their deeper significance and brought into vital connection with the religious hopes and aspirations of men.

Social regeneration, we have been told, may proceed from without, by schemes of legislation and by the machinery of organization, or it may proceed from within, through the creation of individual character. It is evident that the attention of the present generation turns chiefly to the former method. Never before were there such multiplicities of committees and societies and meetings for the amelioration of social conditions. These movements may be a blessing, yet it is already evident that at best they can do nothing more than provide the mechanism through which deeper and more permanent powers can work. What we need to-day is not only an improved social mechanism, but "a power that can run through that mechanism and make it leap into effectiveness." That is the power that the ministers and people of the churches working together can provide. The Protestant churches will rise to their real power when they more and more make it impossible for men to settle down to the gains and ease of the self-indulgent life. They will take their rightful place when they summon and encourage men to the ventures of faith, the crusades of righteousness, the pilgrimages of peace and good-will.

SAMUEL A. ELIOT,
President American Unitarian Association, Boston.

II.

SOCIAL SERVICE BY THE CHURCH STILL EXPERIMENTAL.

The Church has, in my opinion, greatly strengthened itself by its excursions into social fields. I shall express my opinion more honestly if I say that by its adventures in social service the Church has arrested a decline of power and influence that had aroused in many thoughtful minds grave fears for the future of Protestantism.

Social service by the Church is still tentative and experimental, and it must remain so until the highest councils of the several denominations devise and support a definite policy and plan of work. The timidity of the representative assemblies in dealing with this question has not been reassuring. It still seems to be left to individual ministers to undertake social work or let it alone, as they choose. Unity is Protestantism's great need, and until this is effected, with its resulting economies of money and energy, no great victories for social betterment through religious agencies may be expected.

Where there are instances of failure in the effort to socialize the Church, they are, I think, attributable to causes not in themselves discouraging. They are often due to hasty plunges after novelty—efforts to rally the wavering line by abrupt and ill-considered experiments. The man who has been allowed to assume that he is satisfying every requirement of religious obligation by saying prayers and giving alms to the poor must not be warned too suddenly that he is not promoting his soul's health by loving his neighbor as himself at long range, but that he has a personal responsibility for his brother's peace and happiness.

I became aware, on printing two years ago an essay on the question, "Should Smith Go to Church?" that there exists a great deal of antagonism to the democratizing and socializing of the churches. There remain many valiant defenders of the old orthodoxy, and of the once-a-week church system, who view with apprehension the reorganization of the Church to bring it into touch with the social needs of the twentieth century.

The position of the clergy in this transitional period is one of great embarrassment and difficulty. The prosperous laity are quite often hostile to the discussion of social problems from the pulpit. It is much safer for a minis-

ter to defend points of faith than to speak of social injustice in his own community. Clergymen among my own acquaintance have been severely criticised for offering to act as mediators in labor troubles, when they were animated by the noblest civic and Christian motives. Manifestly, without strong support from the laity, the pulpit is powerless to assert itself greatly along social lines.

A ministry specially educated for social work is imperatively demanded. Specialization is quite as proper in the training of clergymen as in any other profession. It is absurd to expect a man to preach eloquently on Sunday when he is hard-driven all week administering to social needs. The "department" church, which I believe to be the church of the future, will require many kinds of talent for its administration.

A great weakness of the institutional church, as we now know it, lies in the fact that it is usually the fruit of one man's labor, and that his death or transfer to other fields leaves his charge in the air. The first institutional church of which I had knowledge passed utterly with the man who created it, though it had been planned on broad lines and brought to a high state of efficiency. We shall see many lapses and failures until the denominations stand behind such work authoritatively and provide a continuing line of trained men to carry it forward.

The difficulties of this whole matter have been greatly increased by the gradual relinquishment to secular agencies of tasks imposed by Christianity. Social service was seized upon only when Protestantism, deprived of its old appeal to the supernatural, suddenly found itself dying for lack of means to interest the people. In social service lies, I think, Protestantism's main hope of regaining its lost prestige. When Protestantism shall present, as it ultimately must, a united front to a world that sorely needs Christianity, its security and permanence will rest upon an intelligent system of social service, and the Church will regain its power over men's imaginations and become a living testimony to what Arnold calls "the greatest and happiest stroke ever yet made for human perfection."

MEREDITH NICHOLSON.

III.

THE PERIL OF THE COMMONPLACE.

The question, "Has the Protestant Church lost ground in endeavoring to make itself a social and sociological force?" calls for an answer in fact as well as in theory.

As a matter of fact, those churches that have wisely considered the economic and physical life of human beings have added greatly to their influence. Again as matter of fact, those churches that have ignorantly handled economic and social conditions, and have substituted zeal for knowledge, have so far fallen from the respect alike of genuine reformers and of sound citizens. The answers to the questions of gain or loss depend upon the previous question whether the advance has been in wisdom or in folly. When looked at from that point of view, the Protestant Church has gained here and lost there in endeavoring to make itself a social and sociological force.

Two things only should arrest the advance of any church in seeking influence in the evolution of a better social order. The first is incompetence; the second is failure to annex this new human interest to the ultimate sources of religious power, the appeal to God for ideal light in the inner life of the human spirit. There is in preachers no inherent disqualification for social service. They may render themselves competent to deal with this great interest; at the same time they may refuse to accept the commonplace moralities of the market.

One great example may be cited, that of Dr. Chalmers, the Scottish preacher. At the age of twenty-six he published a book that showed rare insight into economic conditions; at fifty he published a Political Economy which a generation later commanded the praise of J. S. Mill. Further, when at the height of his fame as a preacher, he turned the attention of the good people of Glasgow to the problems of poverty, ignorance, and vice. He built schools, organized his parish of 11,000 persons into twenty-five districts, appointed superintendents and visitors for these districts, did away with the state tax for the relief of the poor, originated the voluntary system of help, reduced the expenditure on this system from $7,000 a year to $1,200, and by the action of intellectual and moral forces raised to a new level of independence and efficiency the whole parish. The eloquence of this preacher has shrunk to a tradition; his sermons, then the amazement of his countrymen, are no longer read; but his method of social enlightenment and relief, taken up into the wider human movements of our day, remains a living influence.

A general reason here appears in favor of the church that allies itself with the great distresses of society. It was not the few churches which exposed the social iniquity and inevitable racial demoralization of negro slavery in the United States that lost ground, but the many churches which winked at the evil or undertook an apology for it, that went bag and baggage to the moral rear of the nation. When Wendell Phillips said in his eulogy upon Theodore Parker that while orthodox preachers in their prayers moved cautiously round the subject of slavery, this heterodox preacher flamed against it in his speech to God, and when some one in the audience named three or four orthodox preachers who struck hard at the gigantic wrong, the retort of the orator brought a sense of shame to multitudes of religious men: "Three or four orthodox ministers in the whole country who did not pray that way! Not enough to save Sodom!" The church that detaches itself from the cause of the oppressed may gain in wealth and for a day become the playground of fashion and power; but that church is doomed.

Nevertheless, social service is attended by the two serious perils already mentioned. It is apparently easy; to make some show of devotion to the higher interests of men, unusual intellectual power and character are not an obvious necessity. What if a man is no scholar, no thinker, no preacher, commonplace in mind and spirit, he may still organize his people for social service, arrange Dorcas societies, cry out vociferously for more of the institutional church, belittle the function of the prophet, and plead for the treadmill of unillumined and ill-advised sociological service. If the new passion of our day for closer contact with the conditions of the working and suffering world should encourage these unfit persons to enter the ministry of the Protestant churches, these churches would cease speedily to serve the soul of man anywhere. The peril here is real. Inferior men are a menace alike to social service and to religious insight.

Even where the social worker is not incompetent, he may be uninspired. The earthly life of man should never be separated from the heavenly. Social service is particularly likely to take a limited view of the human being. The physical conditions and distresses, the social and temporal disabilities are apt to dim the sense of the august relation of the soul to its Maker.

These are dangers through which the Protestant Church must pass in her closer and profounder care for the temporal life of men. The Hebrew prophets undertook a similar task; the moral leaders of the Western world have so conceived their duty; the faith of all true Christians has ever been that ultimately the kingdoms of this world would become the Kingdom of our Lord and his Christ. The humanity of Jesus is matched against the inhumanity of the nations; while others abandon him for it, the Church called by his name should refuse to follow the example of treason to the loftiest of man's ideals; it should stand by him against the entire immemorial evil custom of the world.

GEORGE A. GORDON,
Minister Old South Church, Boston.

IV.

THE NEED OF TRAINING FOR THE NEW FUNCTION.

This is one of those questions to which no direct answer can be given. Some churches have lost ground, and some have not. Those which have lost ground have lost it because of the incapacity of the individual church, or group of churches, under the charge of a single minister, to do this social work. The minister is ordained primarily as a preacher. His mission is to "fill the pulpit." The service of preaching requires his whole strength. If to the preaching be added sociological work, it will be found that the preaching has become so ineffective that the Church has lost ground, unless the minister himself is trained for the sociological office and function.

That is the significant condition. Most ministers are not trained; they are unable to meet the existing demands of the practical profession of sociology. They know little of the diverse forces which are included in "associated charities." Tenement-house inspection and reform, the place of play and of playgrounds in the life of the boy or girl, the duty of the city or town towards the health of its citizens, public health nursing, these and many other forms and forces of public welfare are foreign to them. It is no wonder that they are foreign. For the minister has been trained in a professional school which still declares itself as a school theological or a school of divinity. Such a school has its place, and a most important place. But the point is that, if the minister trained on the theological side only attempts social and sociological work, he is attempting a delicate and complex task in which, usually, he is foredoomed to failure, and his church with him.

It would appear, therefore, that there are three paths, any one of which the Church may follow: (1.) It may train its clergy in both theology and sociology. The theological training is, of course, a *sine qua non*. Theology is the science of which religion is the art. If the minister be lacking here, the lack is fundamental. But in addition to such education, he should be educated in social service. Most churches, be it said, are able to support only one minister. Most churches, too, are obliged to undertake social service, be they situated in either town or country. Therefore, it is evident enough that the Church should give to its clergy this two-sided education.

(2.) A second path is open to a few churches, and to a selected number of clergymen. The church large in membership and filling many functions in the community should be provided with a staff of workers, of which one part should be concerned with the preaching and one part with the sociological work. Through this practical method, let man's reformation be achieved. Let the social settlement, or the college settlement, be made an annex to the church. Let clubs and scouts, leagues and societies, associations and organizations, represent the methods and the means which the minister of this type shall use for human betterment. Other members of the church-staff shall preach and "administer the Christian ordinances."

(3.) The third method consists in the Church keeping itself closely to the traditional lines of service—a conservatism of interpretation and of office of which the Catholic Church is a most impressive example to the Protestant. Let it, moreover, accept the leadership and help of all social and sociological organizations in carrying forward its own work of this type. Let it coöperate with all such associations. Let it, for instance, not seek to employ its own nurses for its poor and sick families, but transfer to the Associated Charities or to the Visiting Nurse Association of its city the families to whom such ministries should be offered. Such coöperation is economical and effective.

Which of these three methods is the more useful is largely a local question. The first is better fitted for the ordinary church; the second can be used only in and by the church of large membership and abundant means; the third may prove to be peculiarly adapted to the ordinary church in the ordinary city, a church having an annual budget of not less than four, nor more than seven, thousand dollars.

CHARLES F. THWING,

President Western Reserve University, Cleveland.

V.

THE SUBSTITUTION OF SERVICE FOR CREED.

I would rather ask, "Has Protestantism lost ground?" for Protestantism of right includes a large body of men who are deeply religious, who are influenced by the spirit of Jesus, who are seeking to pattern their lives on His teaching and example, and who yet are so profoundly discontented with the present forms of Protestant orthodoxy that they rarely attend church. Their parents were stanch church-members, and they themselves will be found seeking membership in the Protestant churches again just so soon as those churches shake themselves free from the entanglements of creed and invite all who wish to follow and obey the teaching of Christ to join their society.

If the question is so understood, I would say that Protestantism has greatly gained in its effort to socialize itself. Indeed, it has no future at all, unless it returns to the simple and more human gospel which Christ brought to men. He was the greatest of all Protestants; His life, His teachings, His actions were one embodied protest. He protested man's inalienable right to turn for himself to God, no man, no institution barring his way; and He declared man's supreme duty to believe in a Fatherly God, and to prove that belief by service to his brother man. He found Judaism, which had been the cradle of a pure monotheism, "bound around with grave clothes," and He sought to loose it and let it go. The national religion had been, as He said, the bottle which held a precious vintage, the wine of a true religious life, in trust for all men. But bottles grow old and rotten. They are but the outward forms, the conduits at which men drink; they are not the living draught of religious life itself. Good men, in His view, were so intent on the bottle that they forgot the inherent properties of the wine that made it valuable.

Many things written about Him may perhaps be questioned, but none can question this, that He cared for the multitude, that He lived among and for the poor—He cared for men's bodies as well as for their souls, and He left to all who are willing to follow Him an "example that they might follow His steps."

On sociological matters He is so explicit that any doubt as to His teaching is out of the question.

He will have no one follow Him or claim a place in His band unless one profess oneself willing to try, at least, to follow His example.

He is the great Servant, and all Christians must be servants, too.

In answer, then, to the question proposed for discussion, I would say that Protestant churches must succeed or fail just in so far as they stand or do not stand for what the great Protestant stood for: man's open unobstructed way to God, and man's supreme duty of service to his fellow-man.

In the 1,900 years of our era there have been many Protestant movements. Many of them seemed to die down and fail; some, perhaps, through errors of leadership; some through persecution. But in the end the principles of Protestantism must win, for they are eternally true, they are the principles of Jesus Himself. In seeking to socialize itself to-day, to substitute Christ-like service for Christian creed, Protestantism is only feeling its way back to the great Master's side, only attempting in newer times and with newer machinery to do as He would have done.

For like a child sent with a flickering light
To find his way across a dusky night,
Man walks the world—again and yet again
The lamp must be by gusts of passion slain
But shall not He who sent him from the door
Relight that lamp once more and yet once more?

W. S. RAINSFORD.

Books and Men

COMPULSORY BELIEF IN FAIRIES.

All of us, I am sure, admire Mr. Donald Calthrop for his efforts to give the London children a good time, and to inject a little romance into their lives. There must be some personal inconvenience, even for an actor, in putting on, in broad daylight, the costume which he wears as Puck in Mr. Granville Barker's production of "A Midsummer Night's Dream," cavorting about Kensington Gardens (home of Peter Pan), springing into trees and out again, turning flip-flaps, and trying, in general, to make it as easy as possible for the boys and girls to believe in fairies. No other motive inspires him, I hear. He thinks that the English child needs more fairies in his every-day existence, and he is trying to supply the want.

But I cannot help wishing that Mr. Calthrop had been more fortunate in the choice of the photograph, which has been reproduced in some of the illustrated papers, showing him in action. There he is, cutting didoes before a group of six children. Five of them are gazing at him with a curious mixture of toleration and uneasiness, while the sixth—who is nearest the actor—is plainly bursting into the loud boo-hoos of simple terror. If Mr. Calthrop's Puck should suddenly spring out from behind a bush and confront me as I was crossing, say, Central Park, it is certain that I should feel like Jim, when Huckleberry Finn inquired about his attitude towards Frenchmen.

"S'pose a man was to come to you," suggested Huckleberry, "and say *Polly-voo-franzy*—what would you think?"

"I wouldn't think nuff'n," replied Jim; "I'd take an' bust him over de head."

Is not the actor's dubious success in his attempt to give the children a treat rather typical of the many endeavors to please and instruct children? Actors and playwrights who seek juvenile applause, artists who try to catch the childish fancy, and especially the authors and publishers, teachers and librarians, who urge certain books upon children—all these folk seem amazingly confident of the acceptability of their efforts. Doubtless they are often justified in their confidence; doubtless, also, the child sometimes says he likes the play, the picture, or the book, because he is too polite, or too crafty, to disappoint his elders. There was a painful amount of truth in the picture in *Punch* which represented a perspiring gentleman skipping about with a fool's cap on his head, in order to entertain a children's party.

"Don't feel so bad about it, old fellow," whispers one of the guests (aged twelve) to the son of the house, who is sitting dejected at the back of the room; "don't feel so bad about it: my governor made just such a bally ass of himself last Christmas!"

There is a great gulf between what adults think children ought to like and what they really do like. Sometimes, it seems, children believe in fairies; sometimes they pretend to the belief in order to "play the game." They are often more sophisticated, more self-conscious, than we think. When Miss Maude Adams, as Peter Pan, steps forward and asks all who believe in fairies to clap their hands or wave their handkerchiefs, and thereby save the expiring Tinker Bell, there is almost invariably a small girl or boy who adds immensely to the general merriment by crying out: "I do!" This is very effective, but if you compare notes with other persons who have been to the play, you will find that the thing happens with an uncanny regularity. It may be a genuine testimonial to the powers of the dramatist and the ability of the actress. Or it may be—the suspicion will arise, even in the most innocent breast—it may be that somebody has been coaching.

In the field of books the problem is a very real one. It may be that some people believe the average young lady if she likes to declare that her favorite book is the Iliad, or her favorite author is John Milton. Persons of experience reflect that there is hope of forgiveness, even for Sapphira, and say nothing. The same spoonful of salt must be taken with many of the utterances of children about books. They soon learn what books the teacher or the librarian wishes them to enjoy, and they "aim to please." The shrewd librarian thinks more of the evidence of thumb-marks, and the broken backs of certain popular books, than of any number of sweet assurances that one of her young readers "just loves" the Nibelungenlied.

Other librarians, not less well-intentioned, but more credulous and "optimistic," find it too painful to think that children do not always care for what a conscientious committee of elders has decided is best for their good. It is rather bad form, they think, even to suggest that you can lead a child to the classics, but cannot always make him read.

"'Treasure Island' is approved by all the authorities," a librarian wrote to me a few weeks ago, "and so we keep a large number of copies on hand all the time; but I do not notice that they are read very much." Yet, in other libraries, there is unmistakable evidence that Stevenson's novel is one of the most popular of all stories for boys. This is a case, plainly, where the tastes of communities differ. Such differences are not always taken into account, though surely it is important that they should receive consideration.

Perhaps the game is up; perhaps it is too late to declare for a compulsory belief in fairies. Mrs. Eddy abolished Santa Claus—it may be that the scientific age is upon us, and that Mr. Calthrop's cantrips in the London park are but a last, hopeless endeavor to revive the age of foolish faith. Mr. Maurice Hewlett told the electors that it was senseless for them to agitate for old-age pensions and workmen's insurance when they were deprived of the really important things of life, of jousts and tourneys, of feudal suzerains and over-lords, of battlements and donjon-keeps, and everything else which made life tolerable in the one happy period of the world's history—the Middle Ages. But he did not get into Parliament upon that platform. Tennyson declared, thirty or forty years ago, that there were no longer any children—only over-educated young prigs. This was because his pointing out a "fairy-ring" to some children was met with an astonished explanation: "Why, don't you know? Those are only mushrooms—the fairies don't dance in them; there aren't any fairies!"

EDMUND LESTER PEARSON.

Poetry

"PADDED POETS."

How long, as through the groves of Academe
I wandered, had I sought thee, perfect word!
And sought in vain—till late, amid the scream
Of Brown's department store, my soul was stirred
As with a trumpet, and my eager heart
Warmed to thee, triumph of the critic's art!

The "Padded Poets!" I had known them long,
And by their gentle muse been lulled to rest;
Or, mildly wakeful, had foretold their song,
As one who knows, when some familiar guest
Crosses the threshold, just what he will say,
Because, forsooth, he said it yesterday.

And all the while, despite the willing ear,
Which I had ever lent their prolix strain,
I knew not what to call them, and the drear
Incertitude had gone against the grain—
Until my mental "table of contents"
Grew rich with "Padded Poets, Fifty Cents."

A FRAGMENT OF KEATS.

A nine-line fragment of Keats's "Otho the Great," cut by Severn from the poet's autograph manuscript and given to a Boston lady in 1862, has recently come to light. It contains a speech of Ludolph (Act V, scene 2), noted by the editor, H. Buxton Forman, as missing from the main body of Keats's manuscript of the play ("The Complete Works of John Keats," Glasgow, 1901; Vol. III, p. 126; see also p. 36), and reads as follows:

Ha! there, there, O thou Innocence!
I see it all, he is the Paramour.
There, hug him—dying, O Barbarian,
Shrive him and comfort him at his last gasp.
Kiss down his eyelids—was he not thy friend?
Wilt thou forsake him at his lastest (sic) hour?
Keep fearful and aloof from his last gaze,
His most uneasy moments, when cold death
Stands with the door ajar to let him in?

The first three words are written over the cancelled reading, "There he is"; in line 7, "Keep" takes the place of a cancelled "Stand."

Comparing this fragment with the standard text—first printed by Lord Houghton in 1848, from Brown's copy—one notes several variant readings: nine lines instead of the eight of the printed version; "shrive" (line 4) and "friend" (line 5) in place of "shrine" and "love" of Lord Houghton's text.

While the condensing of the first three lines of the beginning of the speech in the autograph to the two of the printed version, and the later reading "love" for "friend," may represent the poet's revision of the text, the reading "shrive" of the autograph, instead of the meaningless "shrine" of all the printed editions, is obviously the only correct one.

GEORGE B. WESTON.

Harvard University.

II.

THE MANUSCRIPT OF SIR WALTER SCOTT'S "WILLIAM AND HELEN."

The original manuscript of Scott's translation of Bürger's ballad of "Lenore" was given by Scott to Mr. Dugald Stewart. Stewart's grand-niece married a member of the Morris family, of Philadelphia, but did not live long, and her little daughter was sent to England to be educated by her relatives. She received from an aunt the manuscript of "William and Helen." This little girl afterwards married Sir Samuel Romilly. She gave the manuscript, along with a miniature which *may* be of Scott as a young man, to her cousin, Miss Caroline Nourse, of Washington, who married Commander Bladen Dulany, U. S. N. By her the manuscript was bequeathed to her grand-daughter, Miss Rosa Dulany Chew, now Mrs. Richard C. Williams, of Baltimore.

The manuscript of "William and Helen" is of importance as the first poem, except the merest fragments, that Sir Walter Scott wrote. It has been described as a "rough draft," but this is hardly the case, though there are in it numerous corrections and additions which it is the purpose of this notice to record. It is rather a "fair copy," made for presentation, upon which many changes have been entered. The poem is written upon fifteen small sheets, upon one side only, with various additions on opposite pages. The ink is of faded brown; some of the corrections are in another and darker ink. The pages are tied together with a green ribbon. Upon the outside is the title: "William and Helen / from / the German / of / Burger." At the top, in pencil, is written, "Sir Walter Scott's Manuscript." Scott's own autograph signature does not occur.

The chief variations between the manuscript and the published version of so famous a poem are not without interest. Where the change has been very slight I have not thought it worth while to record it. References are by stanza and line. In several cases an original reading has been crossed out and the reading of the accepted text substituted.

II, 3. "Judah's *shores,*" erased and "wars" substituted.

IV, 4. "The *mark* of victory," erased and "badge" substituted.

VII, 2. "She sought *each breast* in vain," erased and "the host" substituted.

VIII, 2-4. *"Rent"* and *"wept,"* erased and "rends" and "weeps" substituted.

IX, 3. *"Broken vows,"* erased and "fleeting heart" substituted.

XI, 3. The manuscript reads: *"No pity is in God for me."*

XII, 2. *"Pious"* crossed out and "affrighted" substituted. The published version returns to "pious." The manuscript version of this stanza was afterwards used for stanza XIX.

XIII, 2. *"O pray for heavenly grace,"* erased and "O turn to God and grace" substituted.

XVI. The manuscript reads:

O take the sacrament my child
And cease this desperate woe
Implore our father good and mild
To wipe these tears that flow.

XVII, 1-2. The MS. reads:

No sacrament can slake this fire
This bosom's scorching pain.

After the seventeenth stanza of the published version there follow three stanzas now for the first time printed:

"Perhaps, my child, thy fickle knight
In Zion's distant land
Has pledged his troth to a new new love
And knit the nuptial band.

"Despise my child the worthless loss
Nor sorrow thus in vain.
A perjured lover's fleeting heart
No tears recall again."

"O Mother! Mother! Gone is gone
And lost for ever lorne
Death only Death can succour me—
O had I ne'er been born!"

XVIII reads in the MS.:

"O break my heart, O break at once
O drink on my life Despair
No pity has our God for me—
For me has heaven no share."

Lines 3 and 4 were crossed out and the following substituted:

"Since heaven has dealt so hard with me
I scorn each idle prayer."

These in turn were erased and the lines as printed inserted.

XX, 4. *"An earthly love replace,"* erased and "Convert thy bale to bliss" substituted.

XXII, 1. MS. reads: *"Despair has fired her maddening brain."*

XXVII, 4. MS. reads: *"Arise! arise! my fair."* This whole stanza was crossed out and the form in which it was published inserted in a different ink.

XXXIV, 1. *"The black barb snorts—* the moon shines clear," erased and "Look here, look here" substituted.

After stanza XXXIV there comes in the MS. the following lines, part of which occur later in the published version:

"Say William whither must we go?
And where thy bridal bed"—
" 'Tis distant far"—"Still short and stern"—
"And narrow trustless maid."

XXXVI, 1. The MS. reads: "Strong love prevailed. *Fair Helen* bounes."

XLIV. This stanza is not in the MS.

XLVIII. The MS. has many small changes and erasures in this stanza (which apparently gave trouble) that are not worth recording.

LXII, 2. *"Martial* steel," erased and "casque of" substituted.

LXVI. This last stanza is not in the MS. The original ending after stanza LXV is, I think, better.

American Oriental Society

BOSTON, April 18.

The 126th meeting of the American Oriental Society was held in Boston and Cambridge April 16 and 17. The attendance was somewhat smaller than usual, though all the leading institutions at which Oriental studies are carried on were represented. The two sessions on Thursday and the one on Friday morning were held in the handsome quarters of the American Academy of Arts and Sciences, admirably adapted for gatherings of scientific bodies, while the session on Friday afternoon was in the Phillips Brooks House at Harvard. Preceding the reading of papers there was a short business meeting, at which various reports were read and the more important correspondence with foreign scholars and institutions during the year.

On the conclusion of the business meeting Prof. Paul Haupt, of the Johns Hopkins University, delivered his address as president of the Society, choosing as his topic "Armageddon"—or Harmageddon, as the Revised Version has it—mentioned in the Book of Revelation, xvi, 16, as the place where the Kings of the earth will be gathered for the "last battle of the race." Interpreting the name as "Mount of Megiddo," Professor Haupt traced the ideas associated with Armageddon to the great struggle of the Israelitish clans, c. 1200 B. C., at the beginning of their national history against the Canaanitish groups under the leadership of Sisera. The

victory of the Israelites is commemorated in the celebrated song of Deborah, in the fifth chapter of the Book of Judges. This production, being contemporaneous with the event, is therefore one of the oldest, if not the oldest piece of poetic literature in the Old Testament. The reference to Megiddo in the poem is an indication that it was there that the decisive battle was fought —because of its position as a strategical point at the entrance to the plain of Esdraelon. The event, marking as it did the beginning of Israelitish independence, never faded from the memory of the people, and Megiddo thus became the name around which there grew up the conception of a great final rallying-place in the contest against the powers of evil. The second portion of Professor Haupt's address was devoted to a critical analysis of the Song of Deborah, the text of which requires considerable emendation in order to obtain a satisfactory interpretation. The metrical translation of the poem which he made on the basis of the restored text, and which in conclusion he read, was marked by great beauty and poetical vigor, bringing out the elemental grandeur of this remarkable production of a semi-barbarous age. Professor Haupt's analysis of the poem was full of suggestions, one of the most striking of these being the evidence advanced for regarding Deborah as the personification of the clan that led in the struggle. The title of Deborah as "a mother in Israel" he regards, in accord with Oriental parlance, as the designation of a tribe or a clan and not of an individual.

Of the thirty-seven papers announced only some twenty were read, the authors of the others not being present. The Indo-Iranian communications predominated this time over those in the field of Semitics. Most of them were exceedingly technical in character, dealing with textual criticism of passages in the Sanskrit literature or with questions of grammar. Of more general interest was the announcement of Professor Edgerton, of the University of Pennsylvania, regarding the progress of a great *corpus* of variants in the Vedas in preparation by Professor Bloomfield, of the Johns Hopkins University, and himself. This work when completed will be an invaluable aid in the interpretation of parallel passages in the Vedas, and in deciding questions of priority as between variant readings in different Vedic texts. It will be published in the Harvard Oriental series edited by Professor Lanman, who has at present some ten volumes of texts and translations in press or well under way—a significant evidence of his editorial activity.

Dr. Ogden, of Columbia University, discussed a passage in the famous Behistun inscription of Darius, which he showed formed a secure basis for the chronology of the events narrated by Darius.

A feature of interest was the active participation in the meetings of two Japanese scholars, Professor Asakawa, of Yale University, and Professor Anesaki, of Tokio University, who is the Harvard exchange professor this year. The former presented a valuable communication on the origin of feudal land-tenure in Japan, which he traced back to the period following upon the great Reform of the seventh century. Professor Asakawa distinguished two main sources of the *Sho*, as the landed estates in Japan are called, (a) lands specially granted by the Emperor, and therefore immune from taxation, and (b) illegally acquired tracts of land, for which after the tenth century charters of immunity were granted. By the twelfth century the immune *Sho* had become more numerous and powerful than the lands that still remained in control of the state. In the course of his paper Professor Asakawa dwelt on the interesting parallel presented between the growth of feudal lands in Japan and western Europe, which, while presenting some minor differences, was in its main features strikingly similar. Professor Anesaki gave an interpretation of two stone carvings from China, now in the Boston Museum of Fine Arts, one dating from the middle of the sixth century A. D. and representing a dedicatory offering for the security of the throne and the national welfare; the second of later date, with sculptures illustrating popular Chinese tales of a Buddhistic character.

Professor Barton, of Bryn Mawr College, presented two communications, one on an important cylinder inscription in the Museum of the University of Pennsylvania, which dates from the dynasty of Agade (c. 2600 B. C.), and which commemorated the rebuilding of the temple at Nippur after a plague that had swept over the land. The other dealt with an investigation of the religious conceptions underlying Sumerian proper names which clearly demonstrate the identity of religious views held by the non-Semitic population of the Euphrates Valley with the Akkadians or Semites, who eventually obtained the control in both Babylonia and Assyria.

The Rev. Dr. J. B. Nies, of Brooklyn, placed before the Society some of the results of his investigations on the original pictures underlying cuneiform signs of Babylonia and Assyria—an exceedingly difficult task on which he has been engaged for some time. He showed in a very interesting manner how, *e. g.*, the sign for honey arose from a picture of a bee in a bee-hive; and the form of the bee-hive in the oldest cuneiform script still shows in its outlines the form of bee-hive used at the present time in Palestine and in other parts of the East.

Mr. F. A. Cunningham, of Merchantville, N. J., discussed the very puzzling problem of the so-called Sothic cycle, *i. e.*, a cycle determined by the Heliacal rising of the Dog Star Sirius, known to the Greeks as Sothis. Mr. Cunningham's solution for the difficulties encountered in Egyptian chronology proposes that the use of the Sothic Cycle began in 3000 B. C., but that two changes were introduced in the course of time with a view of harmonizing the 365 solar days with the actual solar year of 365 days and a fraction. The first change was made in 1774 B. C. under Asseth, adding fifteen days to the year, and a second adjustment in 1321 B. C.

Among the Semitic papers mention should be made of Dr. Worrell's demonstration by means of a Röntgen-ray apparatus of the pronunciation of the Arabic sounds *h* and *kh*. The investigation was made by Dr. Worrell in the Colonial Institute of Hamburg, with natives of Egypt and Yemen as the subjects.

The session on Friday afternoon was devoted to papers on the history of religions and to other papers of a more general interest.

Professor Haupt set forth new evidence for his view that Magan and Melukhkha, occurring frequently in old Babylonian inscriptions, were designations of Egypt and Nubia, respectively, and not, as is held by many scholars, territorial sections in the Peninsula of Sinai.

Professor Jackson, of Columbia University, spoke of a recently acquired manuscript of the quatrains of Omar Khayyam, dating from the year 1340 A. D., and therefore of great value in the study of the genuine quatrains as distinguished from those which represent imitations of Omar Khayyam.

Mr. Schoff, of the Commercial Museum of Philadelphia, presented a paper of striking interest on some aspects of the overland trade routes to the Orient at the time of the Christian era, in which he pointed out the causes that led to the abandonment of the older route from Antioch to Seleucia, thence north of the Persian desert to the Pamirs and the upper Indus, in favor of an independent one, with its terminus in Petra at the head of the Gulf of Akaba, in northern Arabia; thence by caravan or sailing around Arabia to the head of the Persian Gulf, and overland south of the Persian desert to Kabul. The prosperity of this route was due to states not acknowledging Parthian sovereignty (which controlled the older route), coöperating with a power then controlling the passes to India and China, which appears to have been the well-known Kushan monarchy. Through the Roman conquest of Petra

at the end of the first century A. D., the Parthian conquest of the Persian Gulf states and the Chinese conquest of the Pamirs (which overthrew the power of the Kushan monarchy), this trade-route was broken up. Chinese records now come to our aid in confirming this explanation and in establishing the period 50 B. C. to 50 A. D. as the height of the Kushan power in Asia.

Professor Jastrow closed the afternoon session by a paper on the relations between medicine and magic in Babylonia and Assyria, from which it appears that, despite considerable progress in medical treatment, the primitive theory of a cure being effected through the driving out of the demon of disease or exorcising him out of the body continued to prevail. The beneficial effects of certain drugs and of other methods of medical treatment is assumed in the medical texts of the Euphrates Valley, just as in the incantation texts reverting to a very early period, to be merely a consequence of their *real* purpose to disgust the demons by ill-smelling compounds and concoctions or to induce them, by agreeable odors, to leave their victim.

On Friday evening the members and their ladies assembled for the annual dinner in the Colonial Club of Cambridge which marked the close of the sessions. New York was selected as the place of meeting in 1915, and Professor Jastrow was elected president for the ensuing year. J.

Correspondence

THE NEW "NATION."

To the Editor of The Nation:

Sir: As an old and veteran reader of the *Nation* I wish to express my satisfaction at its recent expansion. I consider the improvement momentous. There is no need of specifying the features, all of which are apparent to your coterie, but way out West is an old war-scarred relic very much pleased at the new parturition. L. B. Crooker.

Mendota, Ill., April 20.

THE BIBLIOGRAPHICAL SOCIETY OF LONDON.

To the Editor of The Nation:

Sir: The action taken by the Bibliographical Society of London at the annual meeting in January will be welcome news to American libraries and collectors. Following the suggestion of the Hon. Secretary, A. W. Pollard, that (to commemorate the Society's coming of age) the membership roll, which was fixed at 300 in 1894, might be reopened for a few months, it was unanimously voted that, during the year 1914, the council be empowered to elect members irrespective of the number already on the roll, and that the rule restricting the roll of English and American members of the Society to 300 be for this period suspended.

A rare opportunity is thus given to those who have hitherto been unable to obtain the publications of the Society, which are distributed only to members. The stately series of illustrated monographs in large quarto, the latest of which, R. B. McKerrow's "Printers' and Publishers' Devices in England and Scotland, 1485-1640," was recently reviewed in the *Nation*, includes such works as Ashbee's "Iconography of Don Quixote," Haebler's "Early Printers of Spain and Portugal," Macfarlane's "Antoine Verard," Proctor's "Printing of Greek in the Fifteenth Century," Bourdillon's "Early Editions of the Roman de la Rose," and De Ricci's "Census of Caxtons," to mention only a few. The series in small quarto includes, besides the eleven volumes of Transactions, a number of works almost indispensable to students of English literature, such as Greg's "List of English Plays Written Before 1643," and his supplementary "List of Masques, Pageants, etc.," Miss H. R. Palmer's List of English Editions and Translations of Greek and Latin Classics Printed Before 1641," Esdaile's "List of English Tales and Prose Romances Printed Before 1740," Duff's "Century of the English Book-Trade, 1457-1557," continued by McKerrow's "Dictionary of the Printers and Booksellers in England, Scotland, and Ireland, 1557-1640," and Plomer's "Dictionary of the Printers and Booksellers in England, Scotland, and Ireland, 1641-1667," these three covering very fully the personnel of the English book-trade for a period of two hundred and ten years. The latest issues in this series are Wise's "Bibliography of the Writings of S. T. Coleridge," and the fourth and final part of the "Handlists of Books Printed by London Printers, 1501-1556," completing the preliminary survey for the study of English types in the first half of the sixteenth century; the object of these lists being to put on record all the known books of each printer as a basis for further work.

For the year 1914 it is proposed to issue Volume XII of the Transactions, which, in addition to the papers read in the last two sessions, will contain "Notes on Bibliographical Evidence for Literary Students and Editors," by R. B. McKerrow; a volume containing Gordon Duff's "Catalogue of English Incunabula"; and, if funds permit, Gray and Palmer's "Abstracts of Wills of Cambridge Stationers." Since its foundation, the Society has been able to spend very nearly its whole income from subscriptions on paper and prints, its other expenses being defrayed from entrance-fees, sales of publications to new members, and the interest on invested life-subscriptions; and, without any solicitation on the part of the Society, it has recently received a grant of £100 from the Treasury, mainly to help the publication of Mr. Duff's book. A fuller statement of the objects of the Society, with a list of the books it has printed, can be obtained from either of the Hon. Secretaries (A. W. Pollard, 40 Murray Road, Wimbledon, London, S. W., or R. B. McKerrow, 4 Phœnix Lodge Mansions, Brook Green, London, W.), to whom also names of candidates may be sent. The Hon. Secretary for America is E. D. North, 4 East 39th Street, New York.

George William Harris.

REVOLT OF THE ENGLISH OFFICERS.

To the Editor of The Nation:

Sir: As a former contributor to and present reader of the *Nation*, I have been in the habit of relying on statements made editorially. But the article in the issue of April 2 under the caption "The English Army Mutiny" has given my trust in the paper's reliability a severe jar.

How it happens that the serious and accurate *Nation* asserts that a brigadier-general and fifty other officers "impudently" told "the Government what orders they would and what they would not obey" is explicable only on the assumption that the writer read only the "scare heads" of Radical journals, and neglected to read the declarations of the Liberal Ministers in both houses of Parliament, to the effect that there had been no refusal to obey orders on the part of any officers or men. Sir Edward Grey was not the only one to emphasize this.

The fact, as stated in the House, is that the Government, through the Secretary for War, ordered the commander-in-chief in Ireland to put to the officers two alternatives: to take part in active operations in Ulster—then, as now, perfectly peaceful—or to be dismissed from the army. The choice was to be made at once. Then, and only then, did Gen. Gough and the fifty officers accept the second alternative. It was the Government, not the officers, that introduced politics. The officers never did "protest against the orders coming to them from the duly constituted authorities," as it is further put in your article. Consequently none of them were "mutineers," as you term them, and if "a deadly blow" has been "struck . . . at the army, both at home and abroad," it has been by the Government, not by any of the officers or men.

Your article says "the War Office had acted without Government authority." Again it would have been well to read what Lord Morley said on this point in the House of Lords, for his statement does not tally with yours—and he spoke as a member of the Cabinet.

The repudiation of an important memorandum you do not touch upon, nor on the farce of Col. Seeley's resignation, which he knew was already refused by the Prime Minister.

All grace and truth are not the exclusive property of the Liberal party, and the *Nation*, of all American papers, might well be expected to show itself impartial as between the British parties, at least in questions which do not affect the United States. F. C. de Sumichrast.

London, Eng., April 11.

[What occurred after the date of our correspondent's letter is perhaps a sufficient answer to it. The Secretary of State for War later avowed that he had

acted without the sanction of the Cabinet, and his resignation was accepted. —Ed. The Nation.]

THE INVENTOR OF THE STEAMBOAT.

To the Editor of The Nation:

Sir: In your issue of December 25, 1913, your correspondent Herbert Joseph Fitch contends that John Fitch invented the steamboat. He mentions the claim made in England that Symmington built the first practical steamboat in 1802 and speaks of the credit given to Robert Fulton in America, but does not mention the name of James Rumsey, who from evidence given in various records appears to have been the real inventor. I give a few quotations which support this contention.

From an article in the *Engineering Magazine*, August, 1895, page 878, by James Wier, jr.:

The man who, in America, first discovered a method of successfully propelling a vessel against wind and tide, with steam as the motive power, was James Rumsey. The Government of the United States has recognized this to be an established fact, for in 1839 Congress ordered a medal to be struck in his honor, commemorative of this brilliant achievement. James Rumsey was born of Scotch parents in 1754. Maryland was his native State, but he removed to Shepherdstown, Va., when about twenty years of age. . . .

Machinists were rude and unskilled in their profession, and Rumsey was forced to plan, model and make his own machinery. He even did his most important casting himself, making the moulds and running off the metal with his own hands. Testimony adduced before the House of Representatives in 1839 shows that Rumsey had conceived the idea of steam navigation as early as August, 1783 (*Congressional Record*). Laboring under very adverse circumstances, he succeeded in the autumn of 1784 in making a test of some of the principles of his engine and propelling apparatus.

He wrote to General Washington, about 1784, communicating to him the principle of his invention. General Washington wrote of Rumsey's invention to Gov. Johnson, of Maryland. This letter was produced before the Committee of the House in 1836, at which the resolution was offered and passed, awarding to James Rumsey, jr., the son and only surviving child, a suitable gold medal, commemorative of his father's services and high agency in giving to the world the benefits of the steamboat.

In January, 1785, Rumsey obtained a patent from the General Assembly of Maryland for navigating the waters of that State. In 1786 he successfully navigated this boat on the Potomac at Shepherdstown in the presence of hundreds of spectators. The experiment was eminently successful, as was proven by the affidavits and personal testimony of numerous witnesses who testified before the above-mentioned Committee of the House in 1839.

Rumsey's letters to Mr. West, his brother-in-law, show that he and Fulton were on intimate terms in London. It is definitely known that Fulton never gave a thought to the steamboat until after Rumsey's death.

From Appleton's Encyclopædia of American Biography, Volume V, page 347:

He went to England, where a society similar to the Rumsey Society of Philadelphia was formed, and he obtained patents for his inventions in Great Britain, France, and Holland. A boat and machinery were built for him, and a successful trip was made on the Thames in December, 1792, but he died while preparing for another experiment.

Martha Rumsey Simonds.

Chicago, Ill., April 9.

A CORRECTION.

To the Editor of The Nation:

Sir: In the course of a review of Knut Hamsun's "Shallow Soil" in the *Nation* of April 2, your reviewer, following the publisher's announcement, says: "Yet he [Hamsun] is now first introduced to the English-reading public." As a matter of fact Hamsun was introduced to the English-reading public at least as early as June, 1899, when Smithers, of London, published George Egerton's translation of "Hunger." I remember reading the book in the autumn of that year.

Fred Newton Scott.

Literature

THE POWER OF THE COURTS.

The American Doctrine of Judicial Supremacy. By Charles Grove Haines. New York: The Macmillan Co. $2 net.

The purpose of this volume, the author tells us, is to trace the development of the American Doctrine of Judicial Supremacy, in the law of the United States, and to indicate its importance in the political history of the country —a purpose which has been accomplished in a manner worthy of praise. In these pages is found no plea for the view that our courts of justice attained their position as guardians of our written constitutions by a "great conspiracy" or by "usurpation of authority." On the contrary, abundant proof is offered that the principles upon which the doctrine of judicial supremacy in this nation rests had gained clear recognition before the Federal Constitution was adopted. Chapter iv contains a valuable discussion of colonial precedents and State cases, prior to 1789, while the following chapter deals with State decisions, rendered after the Federal Constitution went into operation and before the great opinion of Judge Marshall in Marbury v. Madison (1803, 1 Cranch 137). The author's careful examination of these precedents leads him to the conclusion (in which every fair-minded student must concur) that the American Doctrine of Judicial Supremacy was well established by State decisions prior to its classical exposition by Chief Justice Marshall. "In practically every case where there was resistance to judicial decrees invalidating legislative acts, the Court's opinion and judgment were ultimately accepted and vindicated. Impeachment proceedings and legislative censure only tended to strengthen judicial power." Slowly but surely other departments of government acquiesced in the doctrine of judicial supremacy, which had won popular approval. "The way was prepared for the general adoption of the practice of judicial control of legislative acts, before the Federal courts were factors to be reckoned with in the law of the United States."

Chapter vi contains an interesting account of a device set up by several States to protect the fundamental law by a council of censors instead of by judicial decision. The plan "failed signally in Pennsylvania, accomplished very little in Vermont, and was not a successful check on the Legislature in New York." Its failure was so conspicuous that "it merely tended to strengthen the cause of those who favored judicial guardianship of Constitutions."

After tracing the development of the doctrine of judicial supremacy, the author proceeds to consider its importance in our political history. In his opinion, its growth and general acceptance during Chief Justice Marshall's term of office were due in large measure to the popular distrust and fear of legislative power. The people had embodied in the Federal and State Constitutions their ultimate conception of a fundamental law. They had committed the guardianship of these legal principles to the courts, whose decisions were to be rendered, not during the heat and partisanship of a political campaign, but in the orderly course of a legal proceeding between litigants, whose interests were affected by legislation which was attacked as violating constitutional guarantees of personal or property rights; decisions reached after full and free argument by counsel and deliberate consideration by the courts.

The triumph of Jacksonian democracy aroused a spirit of opposition to the practice of judicial supremacy both in the Federal and State courts. With the accession of Chief Justice Taney Professor Haines discovers a change of attitude on the part of the Supreme Court and a disposition to interfere as little as possible with Congressional action. In the Charles River Bridge case (1837, 11 Peters 420) he finds the new Chief Justice departing from the doctrine of judicial supremacy, and forestalling the views of present-day progressives, touching judicial interference with public-welfare legislation. Chief Justice Taney was disposed to confine judicial decisions to "those subjects only which are judicial in character and not to those that are political." He was opposed to the tendency in courts to legislate by means of judicial decisions.

The supremacy of the judiciary was challenged from another quarter dur-

ing the War of the Rebellion and the reconstruction period. President Lincoln is represented by our author as "holding a modified form of the Jacksonian doctrine." Congress went very far during President Johnson's term in asserting its supremacy over the executive and the judiciary. At the end of that term, according to Professor Haines, indications pointed to an abandonment of the doctrine of judicial supremacy. After 1870, however, popular distrust of legislative power revived, and the adoption of the Fourteenth Amendment gave to the courts a splendid opportunity to become again the champions of personal and property rights against the aggressions of hasty and partisan legislation.

In the opinion of our author, the courts have gone further than was wise for them to go in this championship. He attributes much of the present opposition to the judiciary to its undue extension of the power of annulling legislative acts. It has failed, he thinks, to observe always the distinction between the wisdom and the constitutionality of a particular piece of legislation. This may be true. It probably is true. But the soundness of Professor Haines's judgment upon particular cases is sadly impeached by his remarks about the Jacobs case (1885, 98 N. Y. 98). He follows Mr. Roosevelt in asserting that this decision "set an almost impassable barrier in the way of tenement legislation"; an assertion that has not a shadow of justification in fact. The law was declared unconstitutional because it was not, in truth, a law to protect the health of tenement dwellers, or of cigarmakers, or of the public, but was a piece of class legislation. It was not aimed at all tenement houses, nor at any tenement houses outside of New York and Brooklyn. It neither prohibited the manufacture of cigars in the living rooms of all tenements, nor such manufacture anywhere for sanitary reasons. It was aimed at a class of cigarmakers who were competing with union men. Mr. Roosevelt has said the act was crudely drawn. It was as insincere as it was crude. The judges, both at General Term (See 33 Hun, 374-383), and in the Court of Appeals, were careful to distinguish this statute from an honest attempt to obtain healthful conditions in tenement houses; and the act was not framed nor advocated by those interested in tenement-house betterment. The decision has been characterized as one made by judges who did not know life. On the contrary, it was because these judges—Davis, Brady, and Daniels, at General Term; Ruger, Andrews, Rapallo, Miller, Earl, Danforth, and Finch, in the Court of Appeals—did know life, that they were not tricked into accepting a piece of class legislation for an honest health statute.

CURRENT FICTION.

Under Handicap. By Jackson Gregory. New York: Harper & Bros.

This is a tale of cowboys and the wild West. Mr. Gregory's purpose, however, extends beyond the mere exposition of the actual conditions of ranch life. He takes up the question of life's handicap and proves to his readers that he is not handicapped who must struggle for food and the elements of an education, but rather he who, born in the life of luxury and receiving every advantage, has learned to enjoy his dependence. For the latter is no man, but only a man's son.

Yet one such "man's son" is made a hero by Mr. Gregory, in whose capable hands he rapidly returns to the field of the worthy poor. "Greek" Conniston en route for San Francisco with the last check the whim of a rich father will advance him, is astounded by the horsemanship of a young girl trying to board the train. He follows her to her father's ranch and enlists as a cowboy to be near his lady. He is goaded on to making a man of himself by the taunts of the latter, and in the end is instrumental in reclaiming a barren tract of land in the Half-Moon country, in which the girl's father has sunk his last dollar. The real romance, however, centres upon the reclamation fight with the waterdam as heroine. Never was bride so eagerly courted or more pursued by villains. For had the reclamation plant not been ready at a given date, the villains, in the form of a rival company, would have reaped the spoils and ruined the original projectors of the scheme. In the end, however, the righteous conquer, the desert is reclaimed, and the man's son becomes a man.

Rung Ho! By Talbot Mundy. New York: Charles Scribner's Sons.

Now the gist of the thing is: Be silent.
Be calm.
Be awake. Be on hand on the day.
Be instant to heed the first note of alarm.
And—precisely—exactly—obey.

When we find gnomic verses of this sort as chapter headings in a story of India, we know where we are. It is interesting to see a literary convention getting started. Perhaps all future stories about India will have to include similar little oracles in verse; and all because Mr. Kipling happens to be as clever at verse as at prose. Anyhow, it is a pleasant custom; and on Mr. Mundy's part it seems to be a sort of courteous acknowledgment of his debt to his master. He is by no means an unworthy pupil. "Rung Ho!" is full of color and of swift and varied action. The scene is in northern India, in the days preceding the Mutiny. The real hero is Mahommed Gunga, the splendid swaggering Rangar chieftain, who in the darkest hour rallies his tribesmen to the English cause and provides them with a leader. Foreseeing the need, he takes young Cunningham, a raw subaltern, the son of his old chief, and trains him to be his father's successor. In the course of this training the reader is made to see through the young Englishman's eyes the astonishing contrasts and paradoxes of Indian life. There is a series of stirring adventures, with the suggestion of a love story; and the book ends with a glorious fight.

Somebody's Luggage. By F. J. Randall. New York: John Lane Co.

An amusing farce involving a confusion of yellow trunks (*Anglice*, boxes) and their owners. The boxes are precisely alike, the product of a big London shop. They all cross from Calais to Dover on the same boat. One of them contains a lottery ticket worth fifty thousand francs; a second contains a letter concerning a fortune; the third belongs to a professional thief; and the fourth to a young Cockney bounder. It is the bounder who becomes the chief person in the action, a foolish and cowardly figure, and rather delightful in his way. He gets the wrong box at Dover. His own box, bearing his name, is supposed to have belonged to a man lost overboard during the crossing, and our Mr. Hopper finds himself advertised as dead. As he has recently lost his job and his sweetheart, he determines to let himself be dead. Then he finds in the trunk a letter about a legacy, addressed to the man who really went overboard. He takes it to the firm of lawyers who have written it, intending to tell the truth. But this is his one independent act; from that moment he becomes the passive hero always dear to farce. How he is forced to impersonate the heir, confounded with the owner of the lottery check, bullied by an hereditary servant, pursued by supposed relatives and real detectives and criminals, and comes out of it all much more comfortably than he might have done—all this makes up a very passable bit of fooling, and might conceivably be adapted to a theatre audience by a skilful hand.

Stories of Red Hanrahan; The Secret Rose; Rosa Alchemica. By W. B. Yeats. New York: Macmillan.

The method and speech of the first six tales here collected are of the Irish peasantry, and they leave a pleasant sense that the legendary material has been but slightly rounded and elaborated. Any the reader chooses will evoke George Moore's vignette of Yeats perched like a great blackbird on some country stile, while Lady Gregory invaded a poor cottage in search of folk stories for the poet to refashion. Hanrahan

was a hedge schoolmaster of misty period, tall, strong, red-haired, with irresistible poetic speech. The main tradition parallels the German story which gave basis to Rip Van Winkle; how Hanrahan entered a cottage a young lover, was tempted forth by an old man whose magic turned a card-pack into a fox-hunt, and slept on the mountains while the world whirled his contemporaries into old age. Of more poetic qualities are stories with so little movement that some seem chiefly designed to mount scraps of Yeats's poetry. There is the song Hanrahan made by the fireside of a wayside hut of Cathleen na Houlahan, till a blind beggar "shook his rags with a sob"; his rhymed curse on Old Age; his vision of times past, before Norman entered Ireland, and his lonely, impressive death. The tales outside this Hanrahan cycle are more dramatic, full of color and clash, with original action plainly added to the wistful beauty of the peasant conceptions. Most have mediæval glamour, with castles, kings, cruel abbots who crucify minstrels, and a brutish peasantry; but for all this objectivity of material, they waver before us like images in shadowy waters. Languorous mysticism has its fullest sway in "Rosa Alchemica," which stands apart from the rest as an unsuccessful excursion into the realms of Poe and Hoffmann.

THE LAST OF A GREAT AGE.

Thomas Wentworth Higginson: The Story of His Life. By Mary Thacher Higginson. New York: Houghton Mifflin Co. $3.00.

Mrs. Higginson's memoir of her husband, though in good taste, is not altogether without the defects which seem almost inevitable when a biography is undertaken by one of closest relationship to the subject thereof. It is also apparent that it adds little new matter to what he himself recorded in "Cheerful Yesterdays." Yet the volume has considerable charm and was well worth doing, for Col. Higginson was one of the most attractive figures of the great New England age of which he was the last eminent survivor. His life was a remarkable blending of literary productiveness and of personal achievement during the crisis of the nation, both inspired by the highest ideals. It is a career upon which every American can dwell with pride, and Mrs. Higginson has well brought out its simplicity, its unselfishness, and its never-failing cheer. Indeed, it is characteristic of the man that he wrote and named his "*Cheerful* Yesterdays" while propped up in bed during a year's serious illness when three score and ten. His faith in American democracy never waned, but waxed as long as he lived, and his humor survived. There are many instances of it in this volume, and some delightful anecdotes of himself and his friends, taken in large part from his correspondence.

There is, of course, no attempt at a critical estimate of the man or his work; to our mind, not enough attention has been given to Col. Higginson's association with John Brown and the struggle for Kansas, thus compelling the student to go to the Colonel's own writings and such books as Villard's "John Brown" for a real picture of his dauntless bravery and moral courage at this time. Of all the New England John Brown conspirators, Higginson alone stood firm when the Harper's Ferry raid came and the others fled to Canada or took refuge here and there. In the Boston Public Library there is a remarkable letter of the Colonel's as yet unpublished in full, flaming with indignation at one of the conspirators who seemed to be showing the white feather. It truly reveals the Colonel's fine character. Higginson stood four-square; he let all the world know where he was, including the United States officers of the law, just as he had during the Anthony Burns excitement. But the pro-slavery forces and their Northern sympathizers in office were careful to let him alone. He was not even summoned to appear before the Mason Investigating Committee of the Senate, although he alone had preserved his correspondence with Brown in full, to the great profit of later-day historians. He was even left free to plan an effort to rescue Stevens and Hazlett, then in the Charlestown jail, which would have been attempted had it been in any degree possible. Naturally, this militant clergyman was the man above all others to command the first negro regiment raised on the Atlantic seaboard. The story of it he has himself recorded for all time; but the heroism he and Shaw and the Hallowells, and the other officers of these negro regiments displayed in going to war with a "halter around their necks," since they were at first foredoomed to death if captured, cannot easily be estimated.

After the war this man of action became purely a man of letters, of steadily growing prestige, and a never flagging and ever-welcome reformer, profoundly influencing all with whom he came in contact. In his every aspect he was a model citizen of the republic. When John Brown died, George Hoadley prayed that God might "give us a little of his courage, piety, and self-sacrificing spirit." It is impossible to lay down this memoir of Brown's brave friend without echoing this wish in connection with Thomas Wentworth Higginson.

The volume contains a most useful bibliography which demonstrates anew Col. Higginson's extraordinary range of journalistic activity. We are happy to note that his long connection as a valued contributor to the *Nation*, from 1877 to 1904, is recorded therein.

RELIGION AND ECONOMICS.

The Reformation in Germany. By Henry C. Vedder. New York: The Macmillan Co. $3 net.

Of making many books about Luther and his work there seems to be no visible end. This latest contribution by Professor Vedder, of Crozer Theological Seminary, makes somewhat extraordinary claims to a hearing. In his "Foreword" Dr. Vedder informs us that the student "will look in vain, in books accessible to him, for the idea that the great religious struggle of the sixteenth century was only a phase of the social revolution then going on in Europe," and that "momentous economic changes were the underlying cause of political and social movements." We had supposed that precisely these ideas had become the current coin of thoughtful writers on the Reformation from Ranke and Häusser down; but all the same we are prepared to welcome an attempt to bring them out into new significance. This is one of Dr. Vedder's justifications for his book; but there is another, which, if we may be allowed to guess, was at least equally important to him. He has wished above all things to avoid the dry-as-dust style which he seems to associate with the scientific method while at the same time he proposes himself to follow that method.

The result is certainly a readable book. Dr. Vedder has selected with good judgment the telling points in the development of the German reform, and has dwelt upon these without unnecessary detail. He has a certain sense for the dramatic, which at times is in danger of getting the better of him. It is a little too much, for instance, to speak of "the new Luther" after 1521, and to describe him as having "drunk the new wine of popular applause" and thus acquired an "insatiable craving for still deeper draughts." There was pain and struggle enough already in sight for the young reformer to make the vision of power anything but one of "sweets."

But what we miss more than anything else is any adequate treatment of that social and economic situation which the author has declared to be the most important aspect of his subject. Only in one chapter, that on the peasant revolt, do we find specific reference to economic questions, and this does not rise above the most ordinary commonplace without serious discussion. The peasants were oppressed and revolted and were crushed—that is about all.

One cannot resist the impression that Dr. Vedder's judgment of the Lutheran Reformation is largely dictated by his

own religious connections. The warmest approval expressed for any religious group is reserved for the Anabaptists. They alone saw the issue clearly, unbefogged by any practical considerations whatever. "If," says Dr. Vedder, "these groups could have . . . won reception for this real Gospel of Jesus, . . . three centuries of struggle and bloodshed and martyrdom would have been made unnecessary, and the world would have been by so much advanced further towards social justice than it stands to-day. The Anabaptists were silenced, trampled into the mud, destroyed; and the clock of civilization was set back three hundred years." Now, one might as well say that, if only men were something other than men, history would be something other than what it is. A similar apology might be made to-day for the doctrines of "scientific anarchism." If men were so made as to need no government, then obviously no government would be necessary; but we can hardly be accused of holding back the clock of time because we do not abdicate in favor of the anarchist party. It is a gross exaggeration to say, as Dr. Vedder does (p. 345): "The Anabaptists were the real reformers, and the only real reformers, of the sixteenth century." It was easy enough then, as it always is, to make logical programmes for the Christian life; the difficult thing was so to present the cause of a true Christianity that society, as it was, would even appear to accept it and so to prepare the way for a fuller and freer acceptance by generations to come. It is to be regretted that Dr. Vedder, with his unusual preparation, did not see fit to develop much further this side of the reform movement, with its manifold reactions upon the more conservative parties. Such a presentation can be made without the continual and, in a very true sense, unhistorical minimizing of the Lutheran contribution towards ultimate religious liberty which marks the present volume throughout.

RELIGIOUS FEMINISM.

Tantra of the Great Liberation: A Translation from the Sanskrit, with Introduction and Commentary by Arthur Avalon. London: Luzac & Co.

Hymns to the Goddess. Translated from the Sanskrit by Arthur and Ellen Avalon. London: Luzac & Co.

The worship of the Supreme Spirit as a female power, and, conversely, the recognition of the female element as supreme, are not traits peculiar to the religious spirit of India. Many savage tribes recognize a grandmother-spirit as one above the gods and the worship of the *magna mater* at Rome was but a weak expression of the full significance of the original idea as held by the Orientals from whom this worship was derived. In India the cult of the female power is much older than would appear, for in its grosser form it gave rise to no permanent literature, while the hymns to the goddess derived from the "right-hand" cult do not date from more than two thousand years ago. In theory, this cult supersedes that of the Vedas and represents the only true religion of the present age.

It was a happy thought on the part of "Arthur Avalon" to present the chief works of this ancient religion in English dress. Both he and his wife are carefully trained Sanskrit scholars of the English school, and their interpretation of the hymns selected for translation is generally unimpeachable. Of these a few only have been translated before, while the "Tantra" now appears for the first time, as the complete text has not yet been published, even in the original. The learned introduction consists largely in a well-ordered explanation of the strange terms used in Tantric worship, knowledge of which is indispensable to any one taking up the subject for the first time. If, as is asserted in the Gayatri Tantra, the cult in this form was first revealed by Ganesha to the Devayoni, it is an involuntary admission of the fact that the literary side of Tantrism must have been a late development.

Nor does the character of the hymns, interesting as they are in themselves, do anything to vindicate a great antiquity for the higher cult. Hymns attributed to Shankara-acarya cannot be very old, and the Durga hymns of the epic are among its latest additions. In some cases the evidence that the mother-cult is forcibly intruded into the epic narrative lies palpably before one. Thus the goddess saves a hero who lauds her and yet has to be saved again by some other means the moment the hymn is finished. In other cases the lateness of the production may be judged from the language and verse.

It is no criticism of these two very welcome additions to our store of translations from the Sanskrit to say that mother-worship is here represented at its best, and that some obscenities are decently veiled. To the ordinary worshipper the female principle was represented as a naked woman, with whom and in the cult of whom nameless orgies were carried on as a religious ritual. Even in the later epic the goddess is preëminently the "naked" Kotavi, and in the ordinary cult the philosophy of the Tantra was practically nonexistent. It was, and is, as crude a cult as was probably the actual worship of the corresponding goddess in the West. Nevertheless, it is an extremely fascinating phenomenon which is presented in the books here translated. That God as mother appeals to higher instincts than any degradation of the cult would imply, may be inferred from the fact that even in this century one of the great ascetic saints of India worshipped God under this form exclusively; not to speak of the tendency in the Christian church to substitute the Mother of God for other manifestations of divinity. The extreme Tantrist, however, holds not so much that the goddess is a form of divinity as that the female element is the only real divine element, the forms of gods being her inferior manifestations. Thus as the older religions derived the goddess *shakti* of Shiva from him as male, so the Tantrist derives Shiva from the goddess, all gods being but manifestations of her. It is religious feminism run mad, of course; even the Hindu poet sings: "She is the goddess who exists in all things, even in the form of error." We are glad to learn that Mr. "Avalon" purposes to translate more of these Tantras. Very few scholars have the training to attempt the task. But why does the author conceal his identity under a pseudonym?

Notes

Dodd, Mead & Co. have in the press: "International Perspective in Criticism: Goethe, Grillparzer, Sainte-Beuve, and Lowell," by Gustav Pollak.

The sixth edition of F. X. Garneau's "Histoire du Canada" (Vol. I), revised and edited by Hector Garneau, has been published by the Librairie Alcan, Paris, The second volume is in the press, and will be published shortly.

The Macmillan Company announces the forthcoming publication of "The Strength of the Strong," by Jack London; "The Return of the Prodigal," by May Sinclair; "Faith Tresilion," by Eden Phillpotts..

The following numbers of a series of Romance monographs will be issued by the Johns Hopkins Press in June or shortly thereafter: "Flaubert's Literary Development in the Light of His 'Mémoires d'un Fou,' 'Novembre,' and 'Education sentimentale,'" by A. Coleman; "Sources and Structure of Flaubert's 'Salammbô,'" by P. B. Fay and A. Coleman; "La Composition de 'Salammbô' d'après la correspondance de Flaubert," by F. A. Blossom.

THE Harness Prize Essay for 1913, "Elizabethan Drama and its Mad Folk" (Cambridge: Heffer), by Edgar A. Peers, is a creditable review of the maniacs and melancholics, the victims of delusions and the pretenders of madness who haunt our early drama. The author wisely sticks close to his texts and to contemporary notions concerning mental troubles and their treatment; he brings to his subject no modern medical or ethical prepossessions. What emerges very clearly from this study of whips, chains, and darkened rooms and of ravings usually intended and no doubt accepted, though the convention is now somewhat outworn, as comic, is the su-

periority of Shakespeare over his contemporaries. This is not merely because Shakespeare in a few striking cases contrives to make madness tragic; it is because throughout he is here as elsewhere a more sensitive recorder of the facts.

A TRANSLATION, with a few slight alterations and thirteen charming illustrations of Charles Bastide's "Anglais et Français du XVIIe Siècle" which appeared in 1912, is published by Lane under the title of "The Anglo-French Entente in the Seventeenth Century" ($3 net). It consists of a miscellaneous collection of essays on the lives and activities of French travellers, merchants, literary men, and refugees in England from the time of Queen Elizabeth to that of Queen Anne. Here one can learn of the various routes from Paris to London in the age of Louis XIV, and the duration and expense of the journey, or the details of the sojourn of Shakespeare in London from 1598 to 1604, at the house of the Huguenot wigmaker, Christopher Mongoye. The careers of such men as Guillaume du Gard, editor of the French weekly newspaper—the *Nouvelles Ordinaires de Londres*—which was published at the English capital from 1650 to 1657, and Thémiseul de Saint-Hyacinthe, the first French translator of Robinson Crusoe, are pleasantly described. There are some amusing and significant specimens of Frenchmen's English, and two more weighty chapters on "Huguenot Thought in England." The accurate preservation in the present volume of the lucidity, grace, and precision of the original French is apparently largely due to the fact that M. Bastide has been his own translator. He is thus more than justified in quoting on his title-page the famous words of Roger Ascham, "Even as a hawke flieth not hie with one wing, even so a man reacheth not to excellency with one tongue."

A FEW weeks ago—March 5—we noticed the first volume of the illustrated edition of Macaulay's "History of England," the first illustrated edition of this work ever published, edited by C. H. Firth, Regius Professor of Modern History in the University of Oxford (Macmillan; $3.25). The second volume has now appeared, and bears out the splendid promise of the first. It is a rich treasury of reproductions of paintings, letters, cartoons, broadsides, medals, and the like pertaining to the subject under treatment. The frontispiece is a reproduction in color of the painting of the Duke of Monmouth, by Sir Peter Lely, in the National Portrait Gallery, and among the other full-page plates in color are those of James II, Queen Mary of Modena, Dryden, and, as prophetic of the Revolution, William III as a child. Military critics will be interested in the sketch-plan of the battle of Sedgemoor, taken from the Pepysian library, and in the "part of a plan of the camp at Hounslow," from an engraving in the Sutherland collection; literary antiquarians will wish to see "Monmouth Routed" and "Rebellion Rewarded with Justice," both from the Roxburghe ballads; while a wide circle will enjoy "The Pope and Devil: the Fool and Cardinal," "Calvinism on Its Death-bed," and other caricatures. Between one and two hundred of these illustrations are scattered among the five hundred pages of the volume, virtually all of them contemporary with the events whose vividness they heighten.

AN anthology of the verse of English Canada ("Oxford Book of Canadian Verse"; Oxford University Press) incurs the necessary disadvantage of representing neither a whole race nor a whole country; it expresses a section of a race and a section of a country. The reader of this volume gathers two main impressions of Canadian life, those of health and of sequestration. Everything is pleasantly suggestive of a grave, manly, and sound people, but suggestive, no less decidedly, by the limitations in theme and sentiment, of a national inexperience comparable to that attributed by Professor Wendell to the earlier centuries of American literature. The limitation is felt even in the able work of the better poets—in the lustihood and ebulliency of Bliss Carman, the penetrating if fitful imagination of Wilfred Campbell (who edits the volume), the sinewy picturesqueness of Charles G. D. Roberts, the lustrous and marmoreal finish of Archibald Lampman, and the quivering suggestiveness of Ethelwyn Wetherald. The pursuit of completeness, the feeling that variety of names, even when unsustained by variety in idea or method, is preferable to maintenance of quality, is responsible for the inclusion in the anthology of many poems which neither amiable sentiment nor facile verse can raise beyond the level of mediocrity. Skill in rhythm is much commoner than power of phrase, and the metrical aptitude is more evident in making the most of the normal beat of the measure than in the coinage of felicitous variations. A subdued and austere, but vital and speaking, landscape serves as the frequent theme and the continuous background or undernote of the verse, and nowhere are the artistic capacities of the writers more happily evinced than in the sureness with which, in this field, they achieve the combination of poetical worth with realistic accuracy. Points meriting a slighter notice are the sufficient body of agreeable patriotic verse, the scarcity of urban and social lyrics, the surprising subordination of the sexual passion even in its most delicate forms, and the savoriness of a few lyrics by William H. Drummond in the French Canadian's dialect English.

THE fourteenth volume of the "Publications of the Colonial Society of Massachusetts" (published for the Society) not only maintains the high level of interest attained by its predecessors, but surpasses some of them in the novelty and value of the communications printed. Five articles appear that are noteworthy contributions of fact and reference. The paper by Francis Apthorp Foster on "The Burning of Harvard Hall, 1764" contains lists of student losses that are so minute in the details furnished as to arouse suspicion in the mind of the reader. Prof. Kittredge's essay and supplement on "Cotton Mather's Election into the Royal Society" put to rest forever all doubts that have been held from Mather's time to the present as to his right to the letters F. R. S., though they show at the same time that he never was a fellow in the technical sense, having never undergone the formality of a ceremonial admission. The same writer's contribution of letters from Samuel Lee and Samuel Sewall to Dr. Nehemiah Grew contains a wealth of learned annotation upon a score or more of *curiosa*, from apothecaries to raccoon grease. Chester N. Greenough's admirably critical study of "John Dunton's Letters from New England" is an extraordinary disclosure of plagiarism, and emphasizes "the necessity of extreme caution in accepting as a fact or as original anything attributed to Dunton or claimed by him as his own." Samuel E. Morison has added a sort of preliminary chapter to his "Life of Harrison Gray Otis," by taking up the question of "The Property of Harrison Gray, Loyalist," and narrating as his most interesting topic the efforts of Gray to recover from John Hancock a debt of nearly £1,000, with the result that he failed to obtain a farthing from Hancock in his lifetime, and left to his grandson the task, as it happened, of procuring two-thirds of the debt from the Governor's widow. The volume includes many shorter communications of consequence, upon only one of which is comment necessary. Albert Mathews, in his remarks upon Henry Newman, would have rounded out Newman's career more fully had he noted the fact that Newman was colonial agent for New Hampshire for many years, and left a large collection of papers that are now in the Bodleian Library.

FROM Mitchell Kennerley we have received "The Fair Haven" and "The Humour of Homer and Other Essays," by Samuel Butler. The latter volume contains a biographical sketch of Butler by his friend H. Festing Jones. The Homer essay gives in epitome Butler's favorite notion that the "Odyssey" is virtually a satire against mankind composed by a clever Sicilian spinster. The eleven other essays contain, besides some delightful fooling, two sketches of the Lombard Alps, the territory covered in "Alps and Sanctuaries," and three essays "The Deadlock in Darwinism," in which Butler attacks with characteristic wit and cogency the theory of a mechanical natural selection. The volume represents Butler's main predilections, is free from his occasional *longueurs*, and may be recommended as a beginning to those who wish the easiest approach to the great thinker and baffling ironist of "Erewhon." "The Fair Haven," on the contrary, is only for the adept, and difficult enough for him. Written in 1873, when theological discussion was rife, it purports to be the eirenicon of a thoroughly emancipated Christian. The imaginary author, John Pickard Owen, a thin disguise for Butler himself, proposes to save Christianity by proving its cardinal miracle, the resurrection. In this vindication he gives the rationalistic skeptics their entire point of view and half their case. Setting side by side the views of orthodox Christianity and of the skeptics—an analysis

made with unsparing candor—he endeavors to find a common ground of understanding. The book ends disappointingly with what can only be called a burlesque substantiation of the resurrection from the equally difficult miracle of the ascension. Some of Butler's most brilliant pages are in this book. It is one of the strongest anti-dogmatic tracts ever penned. Yet the whole effect is unsatisfactory. The blend of seriousncss and irony is baffling in the extreme. At the time "The Fair Haven" was reviewed as a notable work in apologetics and as an insidious manœuvrc of an atheist. Butler, who was at bottom neither apologist nor atheist, was satisfied with the ambiguous effect he produced. His reader of to-day will hardly share such satisfaction. One likes to know where an author stands, particularly when religion is involved. Still the general point of view is highly prophetic. All that Butler says about the spiritual value of historic uncertainty and in general about the right kind of legend as superior to any sort of mere fact might be put in the mouth of any Modernist, and no Modernist has pursued the anti-dogmatic course with anything like Butler's ability and raciness.

THE subjects of Horace B. Samuel's essays, "Modernities" (Dutton), range from personages as comparatively remote in time as Heine, Stendhal, and Disraeli, to Strindberg and Frank Wedekind. The author believes them all reasonably characteristic of the modern movement which started with the French Revolution. Other studies deal with Nietzsche's "Genealogy of Morals," "The Weltanschauung of Miss Marie Corelli" (!), Arthur Schnitzler, Emile Verhaeren, and "The Future of Futurism." The essay on Miss Corelli, by the way, contains a delicious comparison of her work with that of Mrs. Elinor Glyn. Of course, the writer might have chosen De Musset, Ibsen, Gorky, Sudermann, and Shaw for his essays, and have been no more put to it to explain why he grouped them in one volume, and why he called the book "Modernities." As it is, he acknowledges his difficulty, but thinks that his chosen ones possess a "spirit of energy, of fearlessness in analysis, whose sole *raison d'être* and whose sole ideal is actual life itself." This is saying very little. As a matter of fact, Mr. Samuel had written a number of acute, and sometimes ironical, studies of writers who interested him. He thought he should like to put them between book covers. This he has done—and a well-informed book is the result.

THE excellent series of popular handbooks published by B. G. Teubner of Leipzig, under the common name "Aus Natur und Geisteswelt," has been enriched by a revision of the volume entitled "Henrik Ibsen, Björnstjerne Björnson und ihre Zeitgenossen," by the late Professor Bernhard Kahle. In its revised form this little book is nothing short of admirable for lucid simplicity. The outgrowth of a series of popular lectures delivered in Frankfort in 1907, it is conclusive proof that a German critic can be intelligible when he chooses. It has the unpretentious form of a rapid re-telling of the substance of each critic's works in their chronological order. Biography, criticism, and all generalization are for the most part incidental, yet there is enough of unobtrusive comment to place each writer definitely and to qualify his merits and defects very sharply. If ever a series of essays on literary masterpieces were in any sense a substitute for the books discussed, it is true of the essays that make up this little volume; yet no one who reads it can fail to find his appetite whetted for the books described. Besides Ibsen and Björnson, there is detailed treatment of Jonas Lie, Kielland, Amalie Skram, Garborg, and Knut Hamsun.

"CHAUCER and the Roman de la Rose" (Columbia University Studies in English and Comparative Literature: Lemcke & Buechner), by Dean Spruill Fansler, gives us a useful conspectus of the influence of the great French poem upon Chaucer. The ground has been so thoroughly worked that one is not surprised to find that the author has to offer nothing new that is of importance, but the definite classification of the various forms of influence on Chaucer's reading, style, situations, descriptions, etc., makes the debt of the English poet to his French originals clearer than ever. Dr. Fansler sifts with good judgment and sobriety the immense number of parallels which have been suggested by previous scholars, and he adds a few of his own, as, for instance, in the Manciple's Tale, where the lines on the necessity of reining the tongue are traced to the "Roman de la Rose" rather than to Albertano of Brescia, as different commentators have assumed. On the other hand, he suggests that in his description of the God of Love and his train of ladies Chaucer was following Machault's "Dit du Vergier," and not the "Roman." The suggestion, however, does not strike us as convincing.

NOTES FROM ABROAD.

PHILATELISTS, in the course of this year, will have the pleasure of new French colonial issues of postage stamps. For Djibouti, in East Africa, the seaport of the route up to Abyssinia, designs have been made by the painter Montader. They are oblong in shape. One represents goats browsing on rocks, with a native tambourine player framed between. Another, in gray-blue on rose color, is the railway bridge of Hollé-Hollé. A third, in black and green, is a young Arab girl of Djibouti. Other stamps are to be issued for the French Congo and Madagascar. It is expected that their artistic quality, added to novelty, will help to an end not postal—but not to be neglected in postage-stamp issues since the collecting craze has so developed—the sale to amateurs. Such sales in certain cases have gone far towards covering the expenses of the issue.

THE attempted revival of the famous opera balls in Paris has at least recalled their place in French literature and art. They were begun by the Regent in 1716 and were at their highest in Balzac's time. In 1830, the great orchestra leader Napoléon Musard transformed the "cancan" into the "galop infernal," which Daumier illustrated. That which is bound, in spite of all protest, to go down as the Pope's dance—*la furlana*—appeared there, taken from "La Muette de Portici," which Auber produced at the Opéra in 1828. Alfred de Musset danced and Alexandre Dumas, the romancer, brought his son, the future playwright, to see. Gavarni's text to one of his cartoons of the opera ball is still remembered: "What a lot of women—and to think they eat every day! That's what gives a swagger idea of man!"

Science

THE NATIONAL ACADEMY OF SCIENCES.

WASHINGTON, April 24.

The National Academy of Sciences held its annual meeting in Washington on April 21-23. A year ago the Academy celebrated its semi-centennial, and there are many reasons for believing that in the half-century now entered upon it will develop an importance and usefulness greater than that already attained. One of the outward evidences of this tendency is the foundation by Dr. George Ellery Hale, the distinguished foreign secretary of the Academy, and his brother and sister, of the William Ellery Hale memorial lectures on the various aspects of the theory of evolution. These were successfully opened at the present meeting by two lectures by Sir Ernest Rutherford, F.R.S., upon the "Constitution of Matter and the Evolution of the Elements."

In his first lecture on Tuesday Sir Ernest described recent work on the nature of molecules and atoms, dealing first with Perrin's remarkable work on the Brownian movement. This is shown under a powerful microscope by very small solid particles immersed in a liquid, which are seen to be in perpetual motion of an absolutely irregular kind. It has been conclusively demonstrated that the motion of these particles, one one hundred thousandth of an inch in diameter, is due to impacts against them of the molecules of the liquid. They strike them on all sides at random and drive them hither and thither in a manner which, although irregular, conforms in so remarkable a way to the laws of probability that we may calculate the number and size of the molecules.

Another discovery of the last two years is that of the law of reflection of the X-rays by crystals, investigated by Laue and Knipping in Germany and by Bragg in England. It has long been assumed that the properties of crystals are due to the arrangement of their atoms or molecules in simple geometrical order, and investigation of the geometry shows that there are over two hundred possible ways of grouping. It is found that a beam of the invisible X-rays from a vacuum-tube produces on

the photographic plate a large number of spots distributed with great regularity around a central image. The assumption is that these spots are due to the setting in vibration of all the atoms, which send off radiations in all directions. The rays cause an interference like that produced by ordinary light, so that from the measurement of the photographs may be determined not only the wave-length of the X-rays, until now unknown, but even the distances by which the atoms are separated one from another.

Leading up to the subject of the electron, or particle, proved by Sir Joseph Thomson to be 1,800 times lighter than the lightest atom, that of hydrogen, Sir Ernest conducted the beautiful experiment of the beam of cathode rays, made luminous by a fluorescent screen. The beam, being deflected by a magnet held near, is shown to be composed of small particles charged with negative electricity. The discovery of radioactive substances, his contributions to the knowledge of which have won for Sir Ernest Rutherford the Nobel Prize, has made clear that these bodies emit radiations known as beta-rays, which are found to be composed of small particles moving with great velocity and to be identical with the negative electrons of the cathode ray in the vacuum tube. It was suggested that the atoms of all the elements are composed of these primordial electrons, but Rutherford's own work has demonstrated the corresponding importance of the alpha rays, composed of much heavier particles than the beta particles, travelling at a much slower speed, and *positively* charged. It is by means of these alpha and beta particles that the evolution of the radioactive elements, a series which now contains about thirty members, is explained. At intervals an atom explodes with great violence, emitting an alpha or beta particle, and changing its atomic weight and chemical nature. These atomic changes are more violent than any known chemical reactions, and it is to them that the extraordinary properties of the radioactive bodies are due.

In spite of the enormous number of alpha particles emitted per second, Rutherford has accomplished the apparently impossible task of counting them, and the lecturer concluded with a brilliant experimental demonstration of this remarkable feat. A minute tube of radioactive gas, so powerful as to cause fluorescence in a crystal bright enough to be seen by the whole audience, was held near a tube having a fine hole through which the alpha particles might enter, and affected by its electrical action a sensitive electrometer. This instrument, composed chiefly of a very thin fibre, projected by a powerful microscope upon the screen, enabled the audience to count the alpha particles entering the hole, one for each kick of the electrometer fibre.

In the second lecture Sir Ernest prefaced his own theory of the atom by showing the wonderful photographs of C. T. R. Wilson, on which may be seen the actual tracks of the alpha and beta particles, made visible by their action on the droplets of water produced in a fog-chamber. These trails, though in general straight, show sudden angular changes of direction, which are explained as impacts with atoms. The changes of direction are so sudden that they must be caused by enormous forces, an observation which has led Rutherford to his construction of the atom as a positive, very small nucleus, surrounded by rings of negative electrons, like planets around an infinitesimal sun. Through this system the foreign particle penetrates and is strongly deflected by the central nucleus, in a manner comparable with the experiment wherein a magnet, hanging as a pendulum from the ceiling of the room, was suddenly deflected by a fixed vertical magnet under it.

The lecturer described the experiments of his own pupil, Mosely, on the reflection of X-rays and gamma rays from radioactive substances by the different chemical elements. It was long ago shown by the chemist Mendelejeff that if the elements are arranged in the order of their atomic weights certain properties periodically recur, but the reason for this has been very dubious. The spectra found by Mosely have led to the startling generalization that there may be attached to the atoms of the various elements certain characteristic numbers far more regular than the atomic weights, in that they change from one element by the same whole number. Thus the elements fall naturally into a table in which there are only three gaps, indicating elements for the chemists still to discover. What do these atomic numbers represent? According to Rutherford, they denote the number of unit positive charges in the central nucleus, to each one of which corresponds an electron in the planetary ring. This daring generalization, if proved to be true, may well entitle the physicist, Sir Ernest Rutherford, to be considered the Œdipus of the riddle of the chemical sphynx.

Only a few of the remaining thirteen papers which were read in the session of Wednesday can be here reported. W. H. Howell, of the Johns Hopkins Medical School, in a paper on "Causes of the Clotting of the Blood," stated that the fundamental process in the clotting is a chemical reaction between a protein called fibrinogen in the blood with an enzyme called thrombin, which causes the fibrinogen to set into a jelly, as was demonstrated by the speaker by mixing the two colorless and limpid fluids. To the question of the origin of the thrombin it is replied that calcium salts are essential to its production, but it is not clear why the blood does not clot while in the blood-vessels. Dr. Howell does not believe in the "tertium quid," which has been supposed to prevent the reaction, but he has succeeded in separating out a protein compound which has no action on fibrinogen, but which on being brought into contact with calcium is converted into thrombin. There is in the blood a substance that prevents the reaction, which is found in the salivary gland of the leech. Howell has found that a liquid can be obtained from the corpuscular elements in the blood which will not clot. The reason that the protection from clotting ceases when the blood is shed is that when the corpuscles touch solid substances they disintegrate, and from them comes a new material which with the calcium makes the thrombin.

Jacques Loeb, of the Rockefeller Institute, in New York, in a paper on "Heterogeneous Hybridization," undertook to answer the question why the sperm of one species does not fertilize the eggs of another somewhat remote from it. Loeb believed that if some means could be found of forcing the spermatozoa of one species into the egg of another, then fertilization would take place. A controlling influence seems to be exercised by calcium salts in the solution enveloping the egg. When the jelly surrounding the egg of the sea-urchin was removed by acid, the egg could be fertilized by its own sperm, but not by that of the star-fish, but in the presence of calcium the eggs were fertilized by that of the star-fish, and all developed.

W. H. Humphreys, of the U. S. Weather Bureau, in a paper on the "Relation between American Temperatures and European Rainfall," premised by stating that changes in the earth's temperature are due to changes in the sun's surface and the earth's atmosphere. When sun-spots are numerous we have low temperatures, and conversely, when volcanic eruptions cause dust to rise above the highest clouds the dust acts as a screen against the sun's rays and we have lower temperatures. The rainfall changes with the humidity in the atmosphere; for when more water evaporates more must fall to keep the balance. In a hot year much water evaporates and there is more rain, while the cold years are dry, contrary to current opinion. In order to confirm this reasoning Mr. Humphreys has considered the Atlantic Ocean, over which winds blow generally from the west, so that hot weather in America may be expected to evaporate much of the water which falls abundantly in England. The averages of rainfall in England, displayed graph-

ically in curves compared with the American temperatures at corresponding times, show a striking agreement.

Henry F. Reid, of the Johns Hopkins University, in considering the "Movements of Magnets Caused by Earthquakes," attempted to determine whether the observed movements of magnetic indicating instruments are due to changes in the earth's magnetism during the earthquake, or merely to mechanical shaking. Mascart attempted to settle this question by suspending a bar of copper of the same size and shape as the magnet, and since it did not oscillate, while the magnets did, he concluded that the disturbance was magnetic. Reid, however, calls attention to the fact that in the case of the magnet a counterweight is necessary to counteract the tendency of the earth's magnetism to tip the magnet from the horizontal, and that the displacement of the centre of gravity causes an entirely different mechanical effect. By an ingenious examination of the mechanics of such systems he shows in an apparently convincing manner that the shaking of the supports of the magnet will produce all the observed motions.

The annual dinner of the Academy was rendered memorable by the presentation of a new medal, endowed by Mrs. Helen Hartley Jenkins, of New York, in memory of her father, Marcellus Hartley, and given by the Academy for "Eminence in the Application of Science to the Public Welfare." The first award of the medal was to Col. George Washington Goethals for his work in the construction of the Panama Canal, and to his colleague, Surgeon-General William Crawford Gorgas, for his work in sanitation that made the construction of the Canal possible.

ARTHUR GORDON WEBSTER.

The expedition to Dutch New Guinea by Mr. A. F. R. Wollaston, whose entertaining account of it is given in the *Geographical Journal* for March, has made a substantial addition to science, notably that of ethnology. The hill natives, who were most carefully studied, are an absolutely primitive people, apparently without a religious idea. Among the natural history collections made were sixteen new species of rhododendrons and eighteen species of birds of paradise. To the concluding part of Prof. J. W. Gregory's answer to the question "Is the earth drying up?" is added the interesting discussion of it by noted scientists. There was a general acquiescence in his conclusion, fortified by a remarkable collection of evidence, that "in historic times there has been no world-wide change of climate." Among the other contents are a paper on "Relief in Cartography," by Capt. H. G. Lyons; "Physical Characteristics of the Siachen Basin and Glacier System," by Dr. W. H. Workman, and a statement by Sir E. H. Shackleton as to the composition and aims of his proposed Trans-Antarctic Expedition.

Drama

CHRIST AND THE CHURCH.

The Master. By W. G. Hole. London: Erskine Macdonald.

This little two-act play, by W. G. Hole, who has already won a conspicuous place among modern poets and dramatists with his "Queen Elizabeth" and "The Chained Titan," is a work of singular power and beauty, remarkable not only for the dignity and spiritual insight with which it treats a subject of great delicacy, but for compactness of construction, tenseness of dramatic situation, and felicity of literary description. Bold in conception and development, unflinching and logical in demonstration, it is absolutely free from mere emotional sensationalism. Stephen Phillips, in an appreciative "foreword," calls it a "severe masque," but it is a veritable tragedy, unsuitable indeed for the theatre, except before a very special audience, but in all technical respects capable of effective reproduction in action. He lays stress upon the charm of its natural imagery, and very justly, but its preëminent distinction is to be found in its trenchant exposition of the irreconcilable differences between the creed and practice of a dominant ecclesiasticism and the essence of the Christian faith as taught by its Founder. It proposes a problem, but unlike most problem plays, it does not shrink from giving the answer. What, it asks, would happen if Christ came on earth again to-day, as He came before? And the reply is that He would again be crucified if the Church were his judge. The scene, to be sure, is allotted to the seventeenth century, but the moral, in its application, is clearly intended to be contemporary.

The first act occurs in the open space before the cathedral of a great city, whither the Master has come attended by a great crowd of the common people who, as of old, have received him gladly. In the foreground various minor characters discuss the incidents that have accompanied his appearance, until interrupted by the entrance of the Cardinal Prince Bishop, a very frail old man, with his Secretary of State, Gaspardi; his almoner, Silvanus, and his guard. Gaspardi, a clerical zealot of the inquisitorial type, urges the Cardinal to proceed against the alleged Messiah as an impostor and enemy of the Church, but the Cardinal, more devout and statesmanlike, and harassed by a sense of responsibility, is inclined rather to heed Silvanus, a simple priest, who has been listening to the mysterious stranger and been impressed by the magic of his eloquence. In a vivid piece of descriptive verse he depicts the apparently miraculous transformation of a fallen woman of which he has just been the witness, and boldly asks the Cardinal, how, if this should be the Christ, he would choose to meet Him, as a servant bearing office, or one of the crowd? Gaspardi, in a fine speech, impetuously declares that the Church's head would necessarily be greeted with all the Church's pomp, to which Silvanus replies in a passage which contains the gist of the play and is worth quoting as a fair sample of Mr. Hole's work:

What if, as you would have it, at the sign,
The great doors flinging open of themselves,
Bells pealing and the organ pouring forth
Fit welcome for the master of the world,
And in high state the hierarchs of the Church,
Blazing in ordered pomp about the porch,
The Pope, a vassal prince of vassals, ready
To pay low homage—what if then approached
From out the common crowd a common man:
A carpenter with shavings in his beard
Smelling of resinous wood new sawn, or, say,
A strange blue-jerseyed fisherman, his hands
Sodden and chafed from handling midnight nets?
What then would happen, think you? Would the Church,
Her splendor so apparent and her pride
So justified, with joy transfigure him
And make his glory greater than her own?
Or would she fling her wealth aside—that wealth
She has indeed so wisely striven to gain
Else had she failed—slough all her splendor off
And humbly fit herself for such a master?
It must be one or other—this or that.

But Gaspardi is unshaken. He insists, against the protestation of the Cardinal, that the pretensions of the Master, who has been brought to the front, shall be put to a crucial test. Let him prove his divinity by restoring life to the dead child which a poor widow has laid at his feet. The scene which follows is one of rare pathos and dramatic intensity. Throughout it, as throughout the play, the central figure is mute, but his disciple, Melchior, protesting his own faith, avows his wonderment that Gaspardi, after all that he has seen and heard, should demand a special miracle to strengthen his. The colloquy is conducted with fine terseness and point, and the suspense culminates in the final hysterical appeal of the woman for compassion and help, the curtain falling at last upon a tableau of the sorrowful but silent master, the deeply perplexed Cardinal and the triumphant, mocking Gaspardi.

The second act is devoted chiefly to a remarkably subtle analytical study of

the character of the Cardinal, a character intrinsically noble, in which the original instincts of simple devotion have been blunted or confused by the intricacies of theological speculation and pride in the glory of the Church. Utterly opposed as he is, in character and principles, to the fiercely intolerant Gaspardi, he yet finds himself impelled by what he deems the inexorable logic of circumstances to agree with him in the conclusion that the Christ, in whose divine identity he now believes, must die. To his confidant, Silvanus, who has confessed his own conversion, he compares himself with Caiaphas—whom he represents as the predestined instrument of Heaven's will—and argues that the whole scheme of redemption would have failed if his judgment had been other than it was. This leads up to a scene of startling originality and boldness, but so inspired by grave intellectual and spiritual purpose as to offer no offence to the religious. The Cardinal, confronted alone with his prisoner, tells him that he is recognized, and then proceeds, with a really extraordinary grasp of the imagined situation, to expound his case. His argument is too long to be given in detail here, but it is no less remarkable for sophistical skill than for eloquence of literary expression. In effect, it is a plea that the reappearance of a peasant Christ would be a virtual disavowal of all that the Church—meaning ecclesiasticism in general, not necessarily any one particular division of it—has been, and done, through the ages. To go back to first principles, to acknowledge that the whole fabric of modern ecclesiasticism was based on a radical misconception of the true Evangel, would be to shatter faith and work irreparable mischief and ruin. Therefore, argues the Cardinal, I, as Caiaphas, like him a predestined instrument, and, like him, perhaps, incurring damnation, must condemn you to a second Calvary, but a Calvary without publicity—and thus, by your second sacrifice, confirm and strengthen the Church which you originally came to establish. But, at the last moment, the Cardinal, quailing before the steady and silent regard of his captive, is shaken by doubts, and, assuming the attitude of a suppliant, dies, as he asks whether "it is yet too late."

The moral of the parable is clear enough. Whatever variety of opinion may be possible concerning its validity and justice, there can be no question of the literary, imaginative, and dramatic power with which it is conveyed and illustrated.

Small, Maynard & Company announce for publication on May 2 the 1914 edition of "Who's Who in the Theatre."

The Gymnase Theatre in Paris has produced "Pétard," a new play by M. Henri Lavedan.

Music

VALUABLE HINTS FOR SINGERS.

The Lost Vocal Art and Its Restoration. By W. Warren Shaw. Philadelphia: J. B. Lippincott Co. $1.50 net.

Self-Help for Singers. By David C. Taylor. New York: H. W. Gray Co. $1.

How to Sing. By Lilli Lehmann. New York: Macmillan Co. $1.75.

The loss of the Old Italian method of singing is often deplored as the greatest calamity in the history of vocal music. Teachers believe that if its secrets could be recovered, all present difficulties would be overcome, and there would be no more theoretical strife and discord. The decline in vocal instruction was, in the opinion of the author of "The Lost Vocal Art," coincident with the beginning of what is now known as scientific voice production, based on the investigation of physiological facts. Garcia's discovery of the laryngoscope started this method of instruction; but it is significant that, although in his printed works physiological details are dwelt on, in practice he soon ignored them. Santley remarks that in all his conversations with that great teacher he never heard him say a word about larynx or pharynx, glottis, or any other organ used in the production and emission of the voice. Furthermore, no evidence has been found that the old Italian masters called the attention of pupils to the physiological phenomena involved in the art of singing. The physiological method lured later teachers and pupils away by promising a short cut to vocal glory; but the results were disastrous.

Mr. Warren is not one of those who deny that our generation has produced great singers. Individual teachers have trained great vocalists, but their methods have not been made the common property of instructors. What is needed is a movement to standardize voice culture; and this movement should not be along physiological lines, but along the psychological lines followed, in all probability, by the old Italians. Our teachers should train the voice and thereby train the vehicle, instead of training the vehicle in the hope of thereby training the voice. The ear must be taken as guide—and here lies the gist of Mr. Warren's book. Students as a rule have to be taught what is, and what is not, good in the sounds of their own voices. They are therefore dependent at first on the judgment of the master. Gradually, under his guidance, they learn how to detect in the sounds of their own voices and those of others the desirable as well as the undesirable tones. How to avoid the latter and improve the others the author attempts to show in Part II of his book.

David C. Taylor's book on "The Psychology of Singing" is repeatedly cited by Mr. Warren, who, in truth, got some of his main arguments from it. He does not, however, endorse Mr. Taylor's ideas as to the importance of imitating the voices of great singers, because that tends to destroy individuality. However that may be, Mr. Taylor's book is one of the most important treatises on the vocal art ever published. As a theoretical work requiring close attention it is not, however, adapted to the needs of the average vocal student. The author has, therefore, issued his "Self-Help for Singers," a little volume of 64 pages, in which the main lessons of the larger work are set forth concisely and lucidly. It is a most suggestive and valuable treatise, which no teacher or student can afford to ignore. Its scope is indicated by the chapter heads: The Correct Use of the Voice and How It Is Attained; Ear Training for the Purposes of Artistic Singing; Musical Imagination and Its Influence in Singing; The Technical Training of the Voice; Exercises for Developing the Middle Voice; Coloratura Singing.

In 1902 the Macmillan Company published Richard Aldrich's lucid and trustworthy translation of Lilli Lehmann's admirable book on her vocal art ("Meine Gesangskunst"), under the title of "How to Sing." The demand for it was so great that it had to be reprinted in five subsequent years. It is now issued in a new and revised edition, in which some of the points that had remained obscure in the first edition are expressed more intelligibly. It is worth noting that Lehmann, who has possessed the gift of the true bel canto as taught by the old Italians, nevertheless uses physiological directions, even to the extent of printing colored diagrams. Throughout the book the technical instruction is agreeably varied by autobiographic gossip and references to other great singers of her time, and their peculiarities. No other singer has ever described her art and her methods so fully as Mme. Lehmann has hers. At the age of sixty-six she still enchants audiences. To know what she has done thus to preserve her voice should surely be of superlative interest to all teachers and students. She is very severe on the methods by which artists are now "turned out in factories, that is, in so-called conservatories, or by teachers who give lessons ten or twelve hours a day."

HENRY T. FINCK.

Thirty-six different operas have been sung during the present season, eighteen of them in Italian, thirteen in German, four in French, and one in English. Of these thirty-six operas, 154 performances were given at the Metropolitan. This includes fifteen double bills and two benefit performances, in each of which four acts of different operas were presented.

Fourteen of the operas were also sung in Brooklyn, ten in Philadelphia, one in Albany, while Atlanta, this week, will hear eight. In the number of performances Wagner leads (as always) with thirty-six, Puccini coming next with thirty-one. Verdi had sixteen, Humperdinck twelve, Strauss and Leoncavallo nine each; Wolf-Ferrari, seven; Moussorgsky and Mozart, six each; Charpentier, Montemezzi, Victor Herbert, and Ponchielli, five each; Massenet, four; Mascagni, Gluck, and Donizetti, three each; Offenbach, two; Gounod, one.

One of the features of the Cincinnati music festival (May 5 to 9) will be the singing of Bach's B minor Mass, with the assistance of one hundred girls, who will sing the second soprano part, leaving the regular soprano choir of the big chorus undivided. The great May festival chorus of adults is under the personal training of Dr. Ernst Kunwald, who will conduct the entire festival. The Cincinnati Symphony Orchestra will be used, Cincinnati's two famous musical institutions being thus combined. The soloists will be Alma Gluck, Florence Hinkle, Schumann-Heink, Margaret Keyes, Evan Williams, Daniel Beddoe, Pasquale Amato, Henri Scott, and Douglas Powell. "The Damnation of Faust," of Berlioz, will be the opening programme on May 5. On May 6 the Bach B minor Mass will be sung. On Thursday there is a matinée orchestral programme, with Amato and the children's chorus, and the following evening the Verdi "Requiem" will be given. On May 9 the festival will close with two performances. At the matinée Schumann-Heink will be the soloist, and the children's choir will sing in the Mahler symphony, and in the evening Alma Gluck will be the soloist; the closing number will be the Ninth Symphony of Beethoven.

In Monte Carlo, where several of Massenet's operas had their first hearing, a monument to him has been erected. It is the work of the sculptor Bernstamm, who also made the Berlioz monument in that city.

"Czerny: Perfection in Style" is the name given to the twenty-five characteristic études or finishing studies of that famous pupil of Beethoven and teacher of Liszt, issued for the first time in America by Schirmer. It is edited by Sigmund Herzog, who has done his work well. Attention is called to the fact that some of these studies (notably 5 and 22) foreshadow Chopin.

Among the singers who will be heard in Paris in the performances of the Boston and the Covent Garden Opera Companies in the ten weeks beginning last Monday are: Emmy Destinn, Louise Edvina, Mary Garden, Melba, Nielsen, Maggie Teyte, Bender, Schaefer, Margarete Matzenauer, Ferrari-Fontana, John McCormack, Martinelli, Johannes Sembach, Pasquale Amato, Scotti, de Segurola, Marcoux, and Malatesta. The operas to be performed are "L'Amore del tre Re," "Les Masques," by de Lara; "Un Ballo de Maschera," "Il Barbiere di Sivviglia," "Don Giovanni," "Manon Lescaut," "Die Meistersinger," "Tristan und Isolde," and "Figaro."

Art

OLD TIMEPIECES.

English Domestic Clocks. By Herbert Cescinsky and Malcolm R. Webster. Illustrated. New York: E. P. Dutton & Co. $10 net.

To collectors and students of American furniture this book is valuable; to those whose range is international, indispensable. Clocks are notoriously hard to classify, explain, and assign to definite periods and influences. The authors of this sumptuous work have collated and interpreted their data in a painstaking and discriminating spirit.

The advantages of their collaboration are obvious. Mr. Cescinsky, also author of "English Furniture of the Eighteenth Century," has made exhaustive researches among clock cases and their accessories. Mr. Webster is a practical clockmaker, the importance of whose qualifications is not easily overstated. Much current writing on old clocks lacks precision and authority because the writer knows the clock solely as a piece of decorative furniture. Much more than that is, of course, required. Cases are often earlier or later than the mechanism in them. A name-plate may bear the name not of the maker, but of a repairer. To fix a date, even approximately, means to include several factors. All brass lantern, or "Cromwellian" clocks, for example, are popularly supposed to be very old. Yet they really were manufactured, especially in provincial districts, well into the nineteenth century.

The development of the English clocks prized by the collector may be said to begin with the introduction of the pendulum as regulator. This is the point from which Mr. Webster's illuminating chapters on clock construction start. Anent a familiar dispute that concerns the invention, the safe statement is made that "the date of the pendulum as applied to English domestic clocks is approximately about 1660, and the honor of the invention has been variously attributed to Richard Harris, Christian Huygens, Ahasuerus Fromanteel, or Robert Hooke. It is certain that its use was common in Germany and Italy earlier than 1660." The new type of regulator was directly responsible for the long case clock, since protection was required for the pendulum, which, for recording time in seconds, must be nearly 40 inches long.

The date of the appearance of the "grandfather clock" in England our authors are inclined to set back from 1680 to about 1670. Nothing is said regarding much earlier references in American inventories to this kind of timepiece, the existence of which is positively asserted by Miss Esther Singleton and more cautiously urged as probable in Mr. L. V. Lockwood's 'Colonial Furniture in America." Whereas one well-known handbook tells us that the first English tall clocks were made by William Clement about 1680, Messrs. Cescinsky and Webster illustrate a very fine long-case clock signed by "Johannes Fromanteel, Londini," which, on internal evidence, they assign to 1670-5, saying that it "is perhaps the very earliest example of a long-case clock which was ever made."

The book consists largely of descriptions of typical clocks in English collections, private and public. One notes with interest the late introduction of mahogany, probably not before 1760, as the fashionable wood for clock cases. This coincided with the beginning of a decline in standards of workmanship and design, culminating in the gigantic and ugly Yorkshire clocks. The terms "Chippendale" and "Sheraton," as applied to clocks, are, it is shown, often meaningless or misleading. It has never been settled whether the designs of these great artists were actually used by clockmakers. Neither of them certainly knew much about clocks and their manufacture, and the authors give reasons for believing that their published designs must have been derisively received by the trade.

The manufacture of English long-case clocks and other clocks of artistic design languished in the nineteenth century, when even the best of the old work was neglected. Their restoration to honor came, apparently, a little later than in this country, for it is stated that "only during the last twenty years have these masterpieces of the old clockmakers been greatly esteemed and cherished; they were frequently relegated to lumber rooms during the Victorian era, to moulder or rust, the cases broken up, and the movements sold as scrap metal."

"Flanders," by Max Rooses, in the Ars Una series (Scribners), has the merits which characterize these miniature and fully illustrated histories of art. The little volume is densely packed with information, yet written with enthusiasm and very readable. Few readers perhaps will share Mr. Rooses's admiration for certain of the Antwerp Romanists. It seems premature, in a general handbook, to accept any exact identifications for the Maître de Flémalle. Rooses takes Hulin's view, for which the evidence is at best merely circumstantial, that the Maître is no other than Robert Campin of Tournai, teacher of Rogier de la Pasture and of Jacques Daret. The value of the fairly full bibliographies is lessened by the absence of logical classification—a not infrequent defect in this series. A third of the entries arranged by artists would be much more useful, and some notation for especially important articles would be welcome. The proofreading has not been the most careful. These are minor blemishes in an excellent and useful work.

Finance

THE STOCK EXCHANGE AND THE MEXICAN NEWS.

If the movement of prices on the Stock Exchange, at the outbreak or during the progress of a war, were governed by nothing but events in the one direction, it would provide an invaluable index to the trend of affairs. But a stock market cannot cease to "reflect" other influences because it is also measuring the probabilities of war, and therefore there are often perplexing cross-currents in a war-time market. One of these has already occurred in the present episode.

Until Friday of last week, the New York Stock Exchange had stubbornly refused to show the expected signs of dismay and demoralization over the thickening horizon of our Mexican situation. That heavy selling of securities, by home investors, bankers, and speculators, which traditionally accompanies outbreak of hostilities, seemed to be wholly lacking. The market was expectant and apprehensive, but not disordered.

Suddenly and without warning, on Friday, selling orders in our securities were executed for European account, in such quantity as to break prices with great rapidity. It was inferred at once that financial Europe was either drawing conclusions which our own markets had not drawn, or had received news which had not reached our markets. But the cabled news which followed showed that the home securities on the London and Continental markets—notably British consols—were suffering more severely than our own securities. Private dispatches from the foreign financial houses presently set forth the unexpected view that the cause of this selling lay in Europe, not in America. What the trouble was, did not plainly appear. One European market reported that it was the shipment of arms from the Continent to Ulster; another, that it was Russia's accumulation of gold, with a view to military preparations; still another, that it was the illness and approaching death of the old Austrian Emperor, and the political confusion which might be expected to follow.

But the effect of the selling on our own stock exchanges was not altered by the explanation; and in Wall Street the conclusion continued to be drawn, despite the cables, that the Mexican situation lay at the bottom of it. Prices on the New York Stock Exchange, therefore, ended the week with every semblance of a "war market," and, in fact, the market's action provided a very accurate mirror of the mood and feeling of the entire community, in regard to the successive occurrences in the Mexican affair. It is probable that the news and rumor of Sunday, when the Stock Exchange was closed and newspaper "extras" in New York published wildly extravagant stories of what was happening in Mexico, would have thrown the market into still greater demoralization. In the light of what followed, the incident recalled those early July days in the war of 1898, when the stock market closed on Saturday with disquieting news from the army before Santiago, when the dispatch from Gen. Shafter came on Sunday, stating the probability that he would have to draw back his troops, and when only on Monday morning did the country learn of Admiral Sampson's destruction of the Spanish fleet.

Something like this occurred in the present instance, when, following the gloom and despondency of Sunday, the Monday morning newspapers reported Huerta's acceptance of the Latin-American mediation and contradicted the stories of wholesale pillage and murder practiced in Mexico against the American residents. Beginning with an advance in the early London market for American securities, prices advanced with great violence at Monday's opening, rose further that day, and advanced sharply again on Tuesday.

Such a sequence of movements on the Stock Exchange leaves the inference, as to just what is predicted for the Mexican affair, more perplexing than usual to trace. There are three general possibilities in this Mexican adventure. The crisis may be surmounted by some extraordinary accident of good fortune—such as Huerta's unreserved withdrawal, and the assent of Carranza and Villa to a general adjustment—which would presently terminate hostilities. The campaign may be short, effective, and entirely successful. Or we may have a long and arduous struggle in defeating Huerta, destroying or capturing his army, and pacifying the country.

The third of the possible results is not altogether pleasant to consider, even by the very numerous people who have believed that our intervention in Mexico was inevitable. The probable effect on the country's financial and industrial fortunes, however, even of such an outcome, can easily be exaggerated. Nothing has been more certain, throughout all the recent reaction in finance and industry, than that the country's position was fundamentally sound. This war situation, whatever its ultimate result, has not come on a business position inflated by a "credit boom" or on markets overextended with speculation. Such a condition prevailed when the Boer War broke out, and when the Balkan War began, and a good part of the business strain and financial disorder, which accompanied and followed both those episodes, was a far more direct consequence of the pricking of a bubble than of the simple cost of war.

This country's present situation has no resemblance to that which prevailed in 1899 and 1912. To use the market's familiar phrase, we are thoroughly "liquidated," and the liquidation has not even been a consequence of intrinsic weakness. Business and finance have been taking in sail during fourteen successive months, in which the underlying conditions—in the United States, at any rate—would amply have warranted spreading out more canvas.

The reaction of the past two or three months has been largely due to sentimental or imaginary causes. It is difficult to suppose that it has not been greatly overdone. It has ignored what at the moment is an extremely favorable position in that most important in all the fundamentals of prosperity, the outlook for the harvest. All these things being so, it is reasonable to assume that, even if it were to be our ill fortune to find ourselves confronted by a costly war, we should be better prepared to meet the strain than was any nation that has gone to war since we went to war ourselves in 1898.

A Noteworthy New Edition

Prehistoric Times

BY

LORD AVEBURY (John Lubbock)

7th edition, revised and reset, $3.50 net

The American Library Association Booklist says: "Before his death the author thoroughly revised the entire work, cut out the non-essential portions, and added new material, specially on the records of prehistoric man and quaternary mammals. New illustrations have been added or replace old ones. Considerably cheaper than the sixth edition."

Henry Holt & Co., 34W. 33 St. New York

THE NATION, 20 Vesey St., New York

The Justice of the Mexican War

OF 1847-8

A review of the Causes and Results of the War, with a View to Distinguishing Evidence from Opinion and Inference.

By Charles H. Owen

Formerly of Staff Fourth Division, Second Corps, Army of Potomac.

12mo. $1.25 *net*. *By mail*, $1.40.

The author contends that the Mexican War was fought in enforcement of the Monroe Doctrine, and that those who declare it was unjust base their charges upon mere opinion.

"The work is ably and entertainingly written."—*Chicago Advance.*

"A patriotic defence of our Government and its Armies."—*Literary Digest.*

NEW BOOKS **E. P. DUTTON & COMPANY** NEW BOOKS

FICTION

The World Set Free
By H. G. WELLS

Cloth. $1.35 net.

"A breathless story of great wars between world powers, of Kings in council, and the coming of world peace on the sound basis of a consciously planned and noble world state." Its thesis is: "War shall cease," and Mr. Wells makes it believable—on the very eve of war.

The Wonderful Visit
By H. G. WELLS

Cloth. $1.35 net.

A new edition of one of the most bitingly sarcastic and humorous stories this famous writer of stirringly suggestive fiction has ever written.

Liliecrona's Home
By SELMA LAGERLÖF

Cloth. $1.25 net.

"A little gem of local color and atmosphere. . . . Masterly pictures of real Swedish life."

Drum's House
By IDA WILD

Cloth. $1.35 net.

An entertaining, clever picture of the rigidity of the conventions of English county society.

Greek and Roman Sculpture
Translated and Abridged by HORACE TAYLOR from the standard text-book by A. FURTWANGLER and H. L. URLICHS. *With 60 Plates and 73 Illustrations in the text.* *Cloth. $2.50 net.*

Pre-Raphaelitism and the Pre-Raphaelite Brotherhood By W. Holman Hunt
The new edition, though less expensive than the first, is really of greater value, since it contains added material on the special parts played by members of the Brotherhood. *Second ed. Revised with new illus. $7.50 net.*

The Poetical Works of Edward Dowden
Includes the "Poems" published in 1870, with later poems and his numerous notable translations, including the whole of Goethe's "West-Eastern Divan." *In two volumes, each with a portrait in photogravure. $4.00 net.*

Shakespeare Personally By David Masson
Edited and Arranged by ROSALINE MASSON. *Cloth. $2.00 net.*
For thirty years Prof. Masson made Shakespeare a human reality to the succession of his students through the lectures here published, each year revising and adding to his sympathetic picture of the dramatist.

Plays and Poems of George Chapman—Comedies
Edited by THOMAS MARC PARROTT, Ph.D., Professor of English Literature at Princeton University. Uniform with the volume of Chapman's Tragedies previously issued. *Cloth. $2.00 net.*

Pot-Pourri Mixed by Two
By Mrs. C. F. EARLE, Author of "Pot-Pourri in a Surrey Garden," and Miss ETHEL CASE. Each supplies a chapter in turn, producing a very readable book of garden information and general gossip. *Cloth. $2.50 net.*

Women Workers in Seven Professions
Edited for the Studies Committee of the Fabian Women's Group by EDITH J. MORLEY. A Survey of Economic Conditions and Prospects. *Cloth. $2.00 net.*

Cesare Borgia By William H. Woodward
After the attempts of romanticists to replace the traditional horns and hooves of the Borgias with harps and crown, it is a relief to read this competent, fair-minded biography. *Cloth, 8vo. $3.50 net.*

The Golden Age of Prince Henry the Navigator
Translated from the Portuguese of P. OLIVEIRA MARTINS by J. JOHNSTON ABRAHAM and WM. E. REYNOLDS. A sparkling narrative of the adventures of the early founders of Portugal, well-known as a classic in its own and several other languages, but not hitherto translated into English. *Cloth. $3.50 net.*

Handbook of Photomicrography
A thorough exposition by H. L. HIND and W. B. RANDLES of modern methods of recording by photography the results of research with the microscope. Among the illustrations are reproductions in color of direct color-photomicrographs. *With 164 illustrations. Cloth. $2.50 net.*

Dictionary of the Organ By Carl Locher
Newly revised from the fourth German edition of an unrivalled authority which has been translated from the original into eight different languages, and issued in "Braille" for the blind. *Cloth. $1.25 net.*

The Romance of Fraud By Tighe Hopkins
Chapters which deal with romantic mysteries of crime, with curious bits of history discovered by investigating frauds. *Cloth. $2.50 net.*

Eat and Grow Thin. The Mahdah Menus
With a Preface by VANCE THOMPSON. A reasonable method of discarding superfluous fat without banting or the use of drugs. *Cloth. $1.00 net.*

LATIN

A SELECTION OF LATIN VERSE

Edited by Members of the Latin Faculty of Williams College.

In this compilation, representative of the best Latin poetry of all periods, the instructor will find material suitable for freshmen and for upper classmen as well. In their text criticism the editors have secured clearness and simplicity without a sacrifice of scholarship, making a selection full enough to enable the instructor to draw at discretion from the supply contained in a single volume. The book has already been adopted for use in several prominent colleges within three weeks of publication.

16mo. Cloth binding. 134 pages. 75 cents net; carriage extra.

THE INFLUENCE OF ISOCRATES ON CICERO, DIONYSIUS AND ARISTIDES

By HARRY M. HUBBELL

12mo. Board binding. 72 pages. $1.25 net; carriage extra.

IN PREPARATION:

CICERO OF ARPINUM

By E. G. SIHLER, Ph.D.

Author of "Annals of Cæsar," "Testimonium Animæ," etc.

This important work is designed to be a full and comprehensive biography of M. Tullius Cicero. Prof. R. Y. Tyrrell, of Dublin University, says: "The work will prove to be epoch-making and a decided counterblast to Mommsen and Drumann."

ENGLISH

THE COLLEGE CHAUCER

Edited by Prof. HENRY NOBLE MACCRACKEN.

Instructors in English who are choosing their text-books for the coming term will do well to consider this book, which has already been adopted as the official Chaucer text in the English departments of Columbia, Brown, Yale, Wellesley, Smith, Florida State College for Women, Allegheny College, Butler College, Western State Normal School, and the Universities of California, Virginia, Indiana, West Virginia, and Minnesota.

12mo. Cloth binding. 713 pages. $1.50 net; carriage extra.

BOOKS IN DEMAND IN COLLEGE ENGLISH COURSES:

ENGLISH LYRICAL POETRY

From its Origin to the Present Time

By EDWARD BLISS REED

(Second Printing.) 8vo. Cloth binding. Gilt top. 616 pages. $2.25 net; carriage extra.

YALE BOOK OF AMERICAN VERSE

By THOMAS R. LOUNSBURY, LL.D.,L.H.D.

WRITINGS ON AMERICAN HISTORY, 1912

Compiled by GRACE GARDNER GRIFFIN

A bibliography of books and articles on United States and Canadian history published during the year 1912, with some memoranda on other portions of America.

Imperial 8vo. Cloth binding. 180 pages. Index. $2.00; carriage extra.

BOOK OF TOPICAL INTEREST

POPULAR GOVERNMENT, ITS ESSENCE, ITS PERMANENCE, AND ITS PERILS

By WILLIAM HOWARD TAFT

(Second Printing.) 12mo. Cloth binding. Gilt top. 283 pages. $1.15; carriage extra.

SCIENCE

THE MENTAL HEALTH OF THE SCHOOL CHILD

The Psycho-Educational Clinic in Relation to Child Welfare

By J. E. WALLACE WALLIN, Ph.D.

Professor of Clinical Psychology and Director of Psycho-Educational Clinic School of Education, University of Pittsburgh.

In nineteen chapters of pointed discussion and original statistical contributions the author presents a fund of information in regard to the scientific study and improvement of backward, precocious, or mentally unusual children.

12mo. Cloth binding. 450 pages. $1.75 net; carriage extra.

THE FUNDAMENTAL BASIS OF NUTRITION

By GRAHAM LUSK, M.D.

"In this concise and readable manual Dr. Lusk discusses the historical study of nutrition and modern investigations in that field. He includes very important statistics showing how men in different occupations should be variously nourished and how the maximum number of proteins may be obtained at a minimum cost. The whole presents the principles of nutrition which our generation has done so much to discover and in a form to benefit the layman."—*Chicago Medical Recorder.*

12mo. Cloth binding. 55 pages. Index. 50 cents; carriage extra.

THE SPIRITUAL MESSAGE OF DANTE

(William Belden Noble Lectures, 1912-13)

By the Rt. Rev. WILLIAM BOYD CARPENTER, Canon of Westminster, and Clerk of the Closet to the King.

Dante as the world's great interpreter of religious experience is the subject of this study, itself an interpretation of charm and fresh analytical power. Dante's own life is considered as precursor and parallel to the drama of the soul in the *Divina Commedia*. The illustrations, reproduced from ancient portraits of Dante and the drawings in Lord Vernon's famous edition of the *Inferno*, furnish an unusual added interest. Price, $1.50

NEW YORK, THURSDAY, MAY 7, 1914.

Summary of the News

Negotiations for a settlement of the Mexican situation have hardly advanced beyond the preliminary stages, but the general outlook is not unpromising. Following a conference between Villa and Carranza came the news on April 29 that the latter accepted the proposals of mediation. An armistice was arranged the following day between the United States and the Huertistas, and strenuous efforts were made to induce Carranza also to agree to an armistice between his forces and the Federals. In a statement issued on May 3, however, he declined explicitly to suspend hostilities, asserting that to do so would be only to the advantage of Huerta.

The impression that Gen. Huerta's downfall or voluntary retirement is near has gained ground both in Washington and at Vera Cruz. Reports have been current of dissatisfaction with the Huerta régime in Mexico City, and his demand for the resignation of his Foreign Minister, Señor Portillo y Rojas, has given color to rumors that there are dissensions in his Cabinet. In the meanwhile, Villa on Sunday commenced a general advance on Saltillo. The number of the rebel force was stated to be 18,000 and that of the Federal garrison 12,000.

At Vera Cruz on May 1 the civil government under Robert J. Kerr, which had been set up by Admiral Fletcher, was superseded, by direction of Secretary of War Garrison to Brig.-Gen. Funston, by a complete military government. Secretary Garrison assigned as his reason for taking this step that it was desirable, since the city was under martial law, that all officers concerned in its government should be directly responsible to the War Department. A disquieting incident occurred on May 2, when a small force of Mexicans appeared at the waterworks at Tejar, nine miles south of Vera Cruz, and demanded the surrender of the place. The demand being refused, the Mexicans retired after firing a few harmless shots. The garrison at the waterworks has been increased, but some anxiety is felt for its safety. The city is entirely dependent on these works for its supply of water, and it is feared that in case of a determined attack by Mexicans in force the pipe lines might be so seriously injured as to cut off the supply.

The dispatch of Federal troops to Colorado has resulted in a decided improvement in the general situation. The strike zones have been patrolled by the troops, and since their arrival practically all of the Colorado National Guardsmen have been withdrawn. The original dispute between the mine owners and the men is no nearer a settlement than it was this time last week, but at least respect for law and order has been enforced by the presence of a body of trained and well-officered men. Interest for the moment centres principally on the conduct of the State militia, who have been charged not only with having exhibited gross incompetence, of which there appears to be no reasonable doubt, but also with the deliberate slaughter of women and children at the burning of the tent colony at Ludlow. Concerning the latter charge, however, the report of the State Military Board, which has recommended a court-martial of "all officers and enlisted men" who participated in the affair, says also that when the tents were set on fire "it could not be supposed that any women, children, or other non-combatants remained in the colony."

Announcement was made on Monday that President Wilson had selected Richard Olney, formerly Secretary of State in the Cleveland Administration, to be Governor of the Federal Reserve Board, and Paul M. Warburg, of New York, to be a member of the Board.

The Clayton bill, which embodies the anti-Trust legislation favored by the Administration, was reported on Saturday by the House Committee on the Judiciary. It is expected that difficulties will arise when section 7, which relates to labor unions, comes up for consideration. As the bill stands, the legal status of labor unions is recognized, but they are held liable to prosecution for any acts they may commit in contravention of the provisions of the anti-Trust statutes. The Labor group and Progressive leaders of the House will press for an amendment excluding labor unions and voluntary associations of farmers from the operation of the Sherman act.

The Senate anti-Trust bill, entitled "Interstate Trade Commission bill," which was made public on May 1, is of a more drastic character than the House legislation, giving broad inquisitorial powers to the Trade Commission, which is authorized to investigate the "organization, business, financial condition, conduct, management, and its relation to other corporations" of any corporation engaged in interstate commerce.

Little hope is entertained for the rescue of the 172 men who were entombed as a result of an explosion in the New River Collieries Company's mine at Eccles, W. Va., on Tuesday of last week. In the area so far explored numbers of bodies have been recovered and conditions in the mine are such as almost to preclude the possibility of any survivors being found.

Announcement was made last week by Premier Borden that the Canadian Government had decided to guarantee $45,000,000 in bonds of the Canadian Northern Railway. Considerable opposition is expected to the plan, but confidence is expressed on behalf of the railway that it will go through.

It was announced in Washington on Sunday that Alfredo Gonzalez had been elected President by the Congress of Costa Rica. The new Administration will be inaugurated to-morrow for a term of four years.

Prospects of a peaceful settlement of the Home-Rule question appeared to be brighter last week than for some time. In the debate on the vote of censure on the Government, introduced by the Opposition, Mr. Winston Churchill, in particular, adopted a conciliatory tone, inviting Sir Edward Carson to state frankly the amendments he considered necessary to safeguard the interests of Ulster and thereafter to use his influence with his followers to effect a settlement. Mr. Churchill's statement, though entirely personal, was subsequently endorsed by Mr. Asquith, and the vote of censure was defeated by 344 to 264. Meanwhile, destroyers continue to patrol the eastern coast of Ulster, and the inhabitants have extended a cordial welcome to the vessels whose purpose presumably is to check their gun-running exploits. Talk of further "conversations" has been renewed and there seems to be a general feeling in England that an agreement may yet be reached. On the other hand, it is recognized that there is danger of the Ulster "Covenanters," under the influence of religious fanaticism, breaking from the control of their leaders and precipitating conflict by attacking their Nationalist neighbors.

The annual budget was introduced in the House of Commons on Monday. The Chancellor of the Exchequer, Mr. Lloyd George, stated that he had to meet an estimated deficit for 1914-15 of $26,650,000. He estimated the nation's total revenue at $1,003,275,000, while he placed the expenditure at $1,029,925,000.

The trouble in northern Epirus, due to the disinclination of the inhabitants to be included in the new state of Albania and their desire to be annexed to Greece, is assuming a serious aspect. On May 2 it became known through dispatches to the Governor of Durazzo that the Epirote insurgents had attacked and captured Kolonia, the garrison of which had been weakened by the transfer of gendarmes to reinforce Koritsa. It was reported also that there had been a massacre of the inhabitants and that the town was burned. King William announced some time ago that he would head an expedition to suppress the revolt, but it would appear rather doubtful whether the military resources of the kingdom of Albania are adequate to the task, and further intervention by the Powers who assigned northern Epirus to Albania may be necessary.

The deaths of the week include: Wilfrid de Fonvielle, April 29; Dr. Paul Ehrhart, April 30; the Duke of Argyll, Prof. Bazley Lee, May 2; Major-Gen. Daniel E. Sickles, Rev. C. Sylvester Horne, Prof. Newton H. Winchell, Harrison Van Duyne, May 3.

The Week

There is no reason to be surprised at the reports from Washington that a big fight in Congress is threatened over the "labor" clauses in the new Anti-Trust bill. What those clauses are doing in that galley at all, it would be hard to explain. Intricate and conflicting provisions about injunctions and picketing and boycotting read very queerly in a Trust bill, and especially in one aiming to reduce the "debatable area" around the Sherman act. Here is a challenge to a thousand fresh debates, and the first one is apparently going to come in the House itself, or at least among its Democratic members, over the wisdom of including any such matter in the proposed bill dealing with Trusts. As the clauses stand, they are a fine mixture of ambiguity, meaningless phrases, and dangerous stuff. It looks as if a dozen different pens had been at work in drafting the measure. Each sought to get in a favor or guard against a peril, with the result that the whole appears to give with one hand what it takes away with the other. This satisfies nobody, least of all the labor-union leaders. They know exactly what they want, and are breathing out their usual threats of punishment at the polls if their demands are not conceded. If the entire labor hodge-podge in the bill, with its resulting animosities, should cause the Democrats such disgust and political apprehension as to lead them to throw the whole thing into the Potomac, no harm would be done.

The outlook for passage of the Panama tolls-exemption repeal bill, at an early date, is now extremely promising. Whether the Simmons amendment, approved last week by the Senate Interoceanic Canals Committee—the vote standing 8 to 6—is to be incorporated in the bill is as yet an open question. That amendment reads as follows:

> Provided that neither the passage of this act, nor anything therein contained, shall be construed or held as waiving, impairing, or affecting any treaty or other right possessed by the United States.

If the incorporation of this statement in the bill is necessary for the quieting of doubts or fears which may be troubling the minds of some of the Senators who are in opposition or who are hesitating, we see no great harm in giving them that satisfaction. Those who have been urging the repeal do not wish to waive, impair, or affect any treaty or other right that the United States possesses. To deny that the bill does so is to deny what nobody asserts. It is highly satisfactory to note that an amendment having somewhat the color of an assertion of the specific right to exempt our coastwise ships was voted down in committee by 10 to 4; and this though it did not actually make that assertion, but merely declared that the repeal act was not to be "construed as an admission that the United States has no right to exempt its coastwise vessels from the payment of tolls." Both in and out of Congress, the signs point straight to an early settlement of the tolls question, and a settlement in the right way.

Senator Borah's proposal that the question of Panama tolls be "referred to the people" can hardly be intended seriously. It appears like an attempted shift by the minority in the Senate, possibly for delay, possibly in the hope of putting somebody in a hole. The moment one asks for the ways and means of taking a popular vote on tolls-exemption, the fantastic nature of the plan appears. Should there be a special election? If so, under what Constitutional power could the national authorities call one? If the matter were to be voted upon at a general election, everybody knows that tolls-exemption would be mixed up with so many other things that no clear decision could be got. And in what form would the question be submitted? All would depend on that. Senator Borah would doubtless like to put it in this way: "Shall Americans surrender their rights and truckle to England?" But the other side would insist upon some such form as this: "Shall the United States keep its word solemnly given?" Plainly, Senator Borah is merely trying on a tricking little diversion. When this is brushed aside, the Senate will do its obvious duty and itself decide the question, one way or the other.

The possibilities of the right of petition have surely never been so exemplified as in some petitions from Medford, Petersham, Gloucester, and other places in Massachusetts which Senator Lodge presented to the Senate a few days ago. They protested against legislation closing barber shops in Washington on Sunday. Washington itself seemed unaware of the menace, and but for the timely assertion of the right to petition might never have found it out. Another illustration of the almost uncanny omniscience which the existence of this right confers upon our freeborn citizenship is found in remonstrances that have been made against a supposed proposal to alter the shape of the flag. No one in Washington appears to have heard of such a proposal, but the protests against it which the right of petition facilitates should be enough to prevent any Congressman who has been nourishing so treasonable a design from attempting to carry it out. The Massachusetts petitions suggest that we have never used this right as we might have done. If Medford and Petersham feel called upon to express themselves upon the matter of barber shops in Washington, why should not Yonkers and New Rochelle put their convictions with regard to Sunday baseball before the legislators of Madison and Jefferson City? Interstate petitioning must take its place beside the initiative, the referendum, and the recall as a neglected weapon of our democracy.

The Medical Society of the State of New York has passed resolutions petitioning Congress to provide for the mental examination of arriving immigrants by experts in the United States Public Health Service; for the detail of American medical officers on vessels bringing immigrants to this country, in order that their welfare may be safeguarded and those with mental diseases or defects discovered; for the assumption by the Federal Government of an equitable share of the burden of caring for dependent aliens, and for the safe and humane return to their own homes of such aliens in our public institutions as may desire to return. There is doubtless good reason for each of these proposals; and in that relating to the sharing of the financial burden by the Federal Government the State of New York is interested in a special degree. But concerning the extent of the evils in question, it is easy to fall into serious error. The case, as stated by Dr. Thomas W. Salmon—and as usually stated—is as follows:

> Last year there were confined in the State hospitals for insane in this State

31,624 patients. Of these, 13,700 were foreign born, and 9,244 were aliens.

It cost the State of New York about $2,500,000 to care for those 9,244 insane aliens who do not belong here.

Now, of the population of this State above twenty years of age, 41 per cent. are foreign born; and 13,700 is 43½ per cent. of 31,624. Accordingly, reckoning in all those "9,244 insane aliens who do not belong here," the foreign-born population contributes only the least shade more than its proportion to the State hospitals; while, if we left out those 9,244 "who do not belong here," we should have the foreign-born contributing only one-third of their share. Evidently, therefore, the matter requires closer examination; the thing to be ascertained being chiefly how long these aliens who are committed to the hospitals have been in the State, or in the United States.

According to the House Committee on Printing, it is not for cheap fiction alone that pine forests are criminally swept away. The report filed last Friday shows that there are 1,000 tons of useless documents in Government storerooms, and that the last six years have seen 6,000,000 uncalled-for volumes "printed at enormous expense." This is apart from the estimate that $100,000 a year can be saved simply by curtailing the "leave to print" anything in the *Congressional Record*, from an extension of remarks to complete instalments of "Progress and Poverty." By the common-sense plan of appointing a Joint Committee on Printing to govern the supply by study of the public demand, $850,000 a year can be saved. But it is not money figures that will so impress the nation as the fact that evidence of intellectual waste and of official credulity in the enlightening power of the press is to be estimated in the huge totals of tons. Reports of bureaus and commissions, of field operations and investigations, have been printed in thousands to feed no circulation at all; and others have been issued in thousands where scores would have sufficed.

Oregon is not alone in having Commissions which serve mainly by standing and waiting; but as the State which contemplates dispensing even with a Senate, she logically leads the onslaught against them. In the heat of the gubernatorial primaries, the newspapers are shadowing forth what the *Oregonian* calls "an earnest and widespread demand for consolidation of many State boards and for abolition of others." One candidate promises to sweep away the Immigration Commission, the Commission to Investigate Rural Credits in Europe, the State Architect, the Commission for Licensing Sailors' Boarding Houses, the Nurses' Examining Commission, and the State Tax Commission; while he would merge four different bodies into the Industrial Accident Commission, three into the Land Board, three into the Veterinary Board, and two into the Railroad Commission. Even the most conservative aspirant, while pleading for a cautious survey, has "no doubt many are useless, though some cost very little and others are self-sustaining." This is a spirit which has lately been reflected even at Washington. But the remarkable feature in Oregon is that so many permanent bodies are under fire; while it is not so much a demand for economy as for efficiency that prompts the movement.

It has been deemed that there was an impassable gulf between social equality of the whites and negroes, but the members of white labor unions, in voting to affiliate with members of negro labor unions, have made the first move to bridge that gulf.

So, according to ex-Gov. Brown, of Georgia, even industrial equality must be denied the negro, because, like political equality, it casts before it the awful shadow of social equality. The ex-Governor's array of evidence shows that substantial progress has been made in the South towards such industrial equality. Last autumn all the members of the white 'longshoremen's union at Mobile quit work in order to enforce the demand of the 2,000 negro 'longshoremen for more pay; and in various places occurred difficulties between white and negro workmen over the question of the affiliation of the unions of the latter with those of the former, the white laborers urging such affiliation. This is a new attitude, and indicates a growth in the feeling of solidarity among workingmen in the section where such feeling has hitherto been weakest. For the negro, this development introduces another element of perplexity. If he does not affiliate with the white unions, he incurs the hostility of the white workingman who belongs to the union; if he does affiliate with them, he incurs dislike from other classes in the South. Fortunately for his peace of mind, unionism has never made great progress in that section; but these utterances of an ex-Governor emphasize the unique obstacles that confront him even in the elemental problem of making a living in the place where he and his fathers have made it.

The death of Gen. Daniel E. Sickles will undoubtedly serve to revive one of the oldest and bitterest controversies of the Civil War—the question of the handling of his corps at Gettysburg. While his partisans insist that his action was a stroke of genius, the great mass of military judgment is heavily against him. It is usually accepted as true, too, that the loss of his leg at that battle was the only thing which prevented his court-martial. All in all, he was a typical representative of the untrained man who worked his way to high rank by means of politics, and also by undoubted aggressiveness and force of character. If future generations shall wonder as they read the history of the Civil War how Mr. Lincoln could have appointed so many politicians, there was little or nothing in our handling of the war with Spain which indicated that we had advanced much beyond the idea that the army might be sacrificed in order to keep some political fences intact. With the death of Gen. Sickles there survives now but one Northern corps commander, the gifted Grenville M. Dodge, of Council Bluffs, who as soldier and citizen stands high in public esteem. Another brilliant general who survives is James H. Wilson, of Wilmington, who bears the unique distinction of being the only general of our time to take a fortified city by the use of cavalry only. Gen. Nelson A. Miles is, perhaps, the only other survivor of the Civil War whose name stands out, now that the late Gen. Joshua L. Chamberlain, of Maine, a real hero of Gettysburg, has also joined the great majority.

How slowly we emerge from partisanship in matters that are essentially non-political is being shown in Maryland. Steps towards a thorough reform of the prison conditions in that State have recently been taken, and yet we read that,

with the naming by the Governor of three new members of the Board of Managers of the House of Correction, this institution will pass into the control of the Republican party by a majority of one. This change in the political aspect of the Board is apparently not due to excessive partisanship on the part of the Governor, but is the only way by which he can insure the introduction of his ideas of prison management? Why? Because the institution has so long been regarded as one of the opportunities for political patronage. There are as many as twenty-six places, big and little, to be filled by the Board. While it is all very well to talk about what a capable Board could do in the direction of making the institution a model of its kind, there has always been the larger question of who was to have these twenty-six places. The Governor's action is a makeshift. He must know that there is no such thing as enduring prison reform without elimination of "politics."

Senator Poindexter's courage in making himself the champion of Dr. Frederick A. Cook, as he did in the Senate last week, is peculiarly admirable in that he flies in the face not only of the general judgment of intelligent men the world over, but in particular ranges himself in opposition, on this question, to the leader of his party. Col. Roosevelt's recognition of Peary's achievement, and rejection of the Brooklyn man's story, must be well known to the Senator from Washington; and even those who are not Progressives would cheerfully admit the Colonel's special qualifications for judging the merits of a question of exploration. We do not, however, attach any political significance to the episode. The desire to show that the Progressives are not a one-man party has taken many curious shapes, but we cannot believe that an assertion of the authenticity of Dr. Cook's amusing observations of latitude and longitude is one of them. Mr. Poindexter's resolution proposed that Dr. Cook be given the thanks of Congress for his achievement. Congress, of course, will do nothing of the kind, but there can be no doubt of Mr. Poindexter's receiving the hearty thanks of Dr. Cook.

The Filipinos continue cruelly to persecute their ex-ruler, Dean C. Worcester. Only the other day we recorded the passage of a law forbidding the photographing of naked Filipinos for exhibition purposes. Now the mail brings the news that the Commission has passed a law "prohibiting, among other things, the taking or transportation of any member of a non-Christian tribe or entering into any contract with the same for the purpose of exhibiting him either in the Philippine Islands or any other country." A fine not exceeding 10,000 pesos, or imprisonment for not more than five years, is the penalty for violating the act. We submit that this can only be intended as a deliberate slap at Mr. Worcester, whose exhibition of Igorrotes was so successful at St. Louis for all but the Christian Filipinos. Such is the ingratitude of the dependencies of republics. Of course, the Harrison Administration cannot prevent Mr. Worcester's continuing to give his moving-picture lectures in this country on the wild tribes. But we warn it that this last act will inevitably fortify Mr. Worcester's belief that the Philippines are going to the dogs, now that a new Governor-General is in charge and a new policy under way.

What the press dispatches call the "Government announcement" that Canada will guarantee a $45,000,000 bond issue for the extension of the Canadian Northern marks the carrying of Borden's long-awaited proposal through the Conservative caucus. From the magnitude of the sum involved, it has met opposition even within party ranks. Yet it continues a long tradition of state aid to Canadian railways, and in making it possible for the C. N. R. R., on the credit of the Dominion, to raise approximately half the amount required for the completion of the company's transcontinental line, is but another step in the scheme of development long pursued by the country. Only three weeks ago the National Transcontinental ran its first train into Prince Rupert on the Pacific, the 1,480-mile section from Winnipeg having been built through the Government's guarantee of bonds to the extent of 75 per cent. of construction cost. The Canadian Northern can now complete its stretches from the Rockies westward, and to Hudson Bay. The opposition of the Liberals will take the ground that economic policy is being sacrificed, in the Government's exchange of financial aid for a certain control over the railway, to its desire to court the company as a political ally.

When Sir Edward Carson drops his 'Ercles vein and expresses the hope that the new Dublin Parliament will be so successful that Ulster will be glad to come under its rule; when Mr. Balfour admits that Home Rule for Ireland is now inevitable, though it means the shattering of his life-work against it; when Bonar Law affirms that a settlement by consent must be earnestly sought in order to prevent the prestige of the Empire from being further lowered in the eyes of Europe—surely the end which all parties are seeking ought to be readily attainable. Mr. Asquith has not as yet enlarged his offer respecting Ulster; and the working out of a solution by means of applying the Federal principle all round is only in the air. If the Unionists, however, are at last ready to abandon their main contention for twenty years past, a way out may fairly be said to be in sight. It is now so obviously the desire and the interest of all concerned to reach a peaceful settlement that the terms of it should be speedily forthcoming. The old English instinct for political compromise is now asserting itself strongly.

The new Constitution for the Republic of China, promulgated last week at Peking, certainly does not realize the ideals of radical and almost socialistic democracy which the party of Dr. Sun Yat-Sen in the first flush of victory over the Manchus dreamt of imposing upon China. But it is premature to speak of a dictatorship in the person of Yuan Shi-Kai. The Parliament is retained in the form of a single-chamber Assembly, elected, it is true, upon a restricted franchise, but possessing wide legislative functions, even though the President exercises an absolute veto on its acts. China's Parliament may be regarded as exercising about the same authority as the Russian Duma. Its functions, to be sure, fall short of the parliamentary ideal, but nevertheless serve a useful purpose as a check upon the autocracy and a rallying ground for public opinion. The nucleus of representative government remains, and that, after all, is about as much as one could expect.

AN AMERICAN CONCERT OF THE POWERS.

The public has had to hear a good deal of rather unseemly and certainly futile disputing over the question who is entitled to the honor of first suggesting joint action in Mexico by the larger American nations. It matters very little. In its essence, the idea of Pan-American Union goes back nearly a hundred years. Various actual developments have helped or hindered it; but its strength has been, on the whole, increasing through the past two decades. It was much furthered by Secretary Root's journeys in South America; and has also been aided by some things that Mr. Roosevelt has said, both while President and later. Thus the sudden and fortunate coming forward of the A. B. C. countries, in the endeavor to find the path of peace for Mexico, may be thought of as a practical application to a given state of facts of a principle long ready to become fruitful.

Without entering into the debate about priority, we may recall a significant article by Prof. Theodore S. Woolsey, of Yale, which appeared in *Scribner's Magazine* in March, 1909. This was at least an early grasping and statement by an authority on international law of the possibilities for peace and better government which lay in common action by the stronger and more stable American republics. Professor Woolsey suggestively gave his article the caption: "An American Concert of the Powers." The reference to the European Concert was obvious. His main point was that good will and coöperation on this Continent might do much to check revolutions and repudiation of national obligations; and even help in bringing the weaker and more frequently disturbed nations forward along the road of orderly government. The plan was, in general, of a more or less definitely organized "American police force" that might not only prevent wrongs but establish rights. Professor Woolsey did not make light of the difficulties in the way. There would be suspicion and jealousy to overcome. It might even happen that, as in Europe, a general agreement would be displaced by a general conflict. But the scheme of an American concert was well worth considering and striving for, Professor Woolsey maintained. It would not bring on the millennium unawares, but it might easily do great good in unforeseen emergencies. Professor Woolsey stated his conclusion in words some of which have almost a prophetic sound to-day:

> Unity of action too strong to be opposed; peace as a result, instead of revolution and war; the dictator at a discount, since no one will recognize him; political friendship and commercial sympathy instead of suspicion and jealousy; a premium set on stability and solvency, since to be in the concert rather than outside of it would mean so much to the minor states, would be so well worth while; a trade mutually profitable based on mutual good-will; an influence larger in world policies than any one state could aspire to. Such results as these, even if not realized, are at least worth aiming at. Are they not more profitable if the United States joins hands with its fellows on this continent, than they could be if it plays the game alone?

What is uppermost in all minds today, in connection with the mediation undertaken by Argentina, Chili, and Brazil, is the immediate thing sought. But any one can see that out of this movement for a definite and practical result, a large policy may come. Thus far, the plan has worked with gratifying success. Hostilities have been stayed, and an armistice agreed to by Huerta and our Government. The negotiators have been listened to with great respect by all the elements in Mexico. Their efforts are heartily seconded by the Administration at Washington. European nations are impressed, and are lending all assistance within their power. Never did a novel international undertaking start off under happier auspices or give better promise of achieving its objects. These grow under the hands of the mediators, and now include not only the averting of a threatened war, but the restoration of order and legal government in Mexico.

While these main ends are worked for, a by-product of great value is already being attained. A feeling of deep satisfaction and pride is evidently spreading through all South America. Even the meagre cable dispatches make this clear. It came partly as a revulsion in sentiment. The South Americans were on the point of believing the worst of the United States. There we were, in the face of all our virtuous professions, about to invade and despoil Mexico. But suddenly the scene shifted, and it was South Americans who appeared, with the ready acquiescence of the United States, at the front of the stage, charged with the duty of seeking peace and obtaining for Mexico a stable government. The entire effect cannot be other than wholesome. This apparently chance development, in addition to easing the Mexican strain, puts a wholly new aspect upon our relations with the countries to the south of us. It ought to be an easy task for statesmanship in the future so to enlarge and strengthen these new bonds on this continent as to make a Concert of American Powers more than a name—a reality which will also be a blessing to humanity.

THE COLORADO PUZZLE.

It is difficult to recall any great public issue of late years in which the facts have been so difficult to ascertain as is the case with the "war" in Colorado. The public is, we believe, thoroughly puzzled. Mr. John D. Rockefeller, jr.'s, statement had a ring of genuine sincerity about it, yet his assertions are categorically denied by the representatives of the miners. Where does the exact truth lie? Is Mr. Rockefeller misinformed by the men he trusts in Colorado? Or are the miners misrepresenting the situation? What makes the tangle all the more intricate is the fact that a Congressional committee of inquiry has just visited the scene of disturbance, without, however, throwing any light on the merits of the controversy. Even Congressman Foster, who called on Mr. Rockefeller on behalf of President Wilson, is quoted as saying that he does not know just what are the real merits of the case. If he does not, how can the public be expected to understand sufficiently to form an intelligent opinion?

Nor do the newspapers seem able to help in the matter. The most careful statement does little more than marshal fragmentary assertions of both sides, or, rather, of the three sides, there being three parties to the controversy: the so-called militia, the operators, and the union miners. Nobody seems to be speaking for the non-union miners. Almost certainly, there is much to criticise on all three sides. Where the field to be covered is so vast, the mass of witnesses so great, and the occurrences extend over a long period, it would take any judicial investigators, any commis-

sion which might be appointed, like Mr. Roosevelt's Anthracite Coal Commission, months to measure out the exact blame, or even to ascertain whether the declared policy of the Colorado Fuel and Iron Company in such matters as check weighers, store purchases, and an eight-hour day has been carried out by the superintendents.

Amidst all the confusion and conflict of testimony one thing is clear: the total collapse of the authority of the State of Colorado. Its militia has obviously been a disgrace to it and to the country. There appears to be no doubt that at times the armed guards of the companies, comprising in some cases the roughest elements of cities like Pueblo and Denver, have been company guards one day and State militia the next. Their total lack of discipline and control is indicated by the calm refusal of a lot of them to continue to serve because they were dissatisfied in not getting their pay when they wanted it! Again, there seems to be no doubt that they assailed encampments containing women and children, in one case burning the tents over their heads. In short, they appear to have been everything soldiers ought not to be; at least, they have infuriated the strikers by their aggressions, and their total failure to keep the scales even between the other parties at issue, as the regulars now on the spot can always be depended upon to do. Thus, as has so often been the case in our history, social strife has been fomented or intensified by bad government—in this case by the total breakdown of government.

The armed guard invariably makes matters worse. But what is a property-owner to do, if a State, by reason of inadequate or incompetent militia and the absence of a proper State police, is unable to protect him? It is not going to help the strikers if he abandons his property, to have it wrecked by casual passers-by or by lawless elements among the strikers. Many people will recall the mischief done by the Pinkertons during the Homestead strikes, which, if we remember aright, led to a law forbidding the use of private detectives in Pennsylvania, and helped towards the establishment of the admirable Pennsylvania State Constabulary. To this we have often called attention. It has handled the various strikes fairly to both sides, though not without loss of life in its ranks and those of the strikers. No State ought to be without such a body of men, particularly a State like Colorado. The armed guard is a wretched substitute, for he is a partisan, and too often a lawless character himself, and bitterly hostile to the men he is called on to oppose.

Against one bit of confused reasoning, which has appeared, curiously enough, in the *World*, there should be protest: the holding of Mr. Rockefeller responsible for the shameful acts of the militia. That is to assert that he is the government of Colorado. The wild assertion has even been made that he holds the Government of the United States, as well as that of Colorado, in his hands. This is absurd, of course. Whether he has done wisely in refusing to arbitrate, whether he did not needlessly intensify the situation by his statement in Washington that he and those with him would lose their all in Colorado before surrendering on the question of unionizing their men, are matters for discussion upon which there will be two sharply diverging opinions.

THE AMENDING OF CONSTITUTIONS

The farcical vote by which, at the special election of April 7, a Constitutional Convention for New York State next year was decreed has been the subject of much comment. The total vote was 305,000, about one-sixth the normal vote; the majority in favor of the proposal was 1,353, and but for Tammany's ability to muster a comparatively solid array of its followers and allies at the polls, the proposal would have been snowed under. In other words, that "imperative demand" of the people, the assumption of which had all along been the main-spring of the project, proved to be non-existent; and yet the project has gone through.

To draw general conclusions from the mere figures of so peculiar a case would be quite unjustifiable. But it may well serve as a reminder of the dangers attending a loose way of thinking on the general subject of the amending of Constitutions, and especially that of the United States. The adoption of the Sixteenth and Seventeenth Amendments has disposed, once for all, of the notion that the Constitution cannot be amended except through some national convulsion like the great Civil War. It is not easy to introduce into the United States Constitution any change on which the sentiment of the country is not fairly general throughout all sections; but with this condition fulfilled amendment presents little difficulty. The passing of the amendment by a two-thirds vote of each house of Congress almost insures its enactment. In any State Legislature only a majority vote is required to ratify. To obtain this ratification in three-fourth of the States is a requirement easy of fulfilment in any matter in relation to which the country is fairly homogeneous. Especially is this true if, as is generally thought, a State may vote to ratify after it has voted to reject, but may not vote to reject after it has once voted to ratify; the possibility of ratification being thus held open indefinitely, with every favorable change of opinion counted and every unfavorable change of no effect.

The moral is that in the process of amending a Constitution, whether State or national, it is dangerous, as well as absurd, for those charged with a decision at any stage to regard their part as merely perfunctory. When an amendment to a State Constitution is proposed, its advocates are apt to raise the cry that those opposed to it are "afraid to leave it to the people"; in other words, they want the amendment to be adopted with much less real consideration, and much less certainty of what even the popular desire of the moment may be, than is the case with an ordinary legislative proposal. Reference of an amendment to the people for approval is manifestly intended as a check upon the Legislature's action, not as a substitute for it; the object is to obtain a *more* deliberate judgment than is obtained in ordinary law-making, not a less deliberate one. And similar considerations apply—in some respects with even greater force—to the responsibility of Congress in regard to amendments of the Constitution of the United States. If the requirement of a two-thirds vote in House and Senate shall ever cease to be regarded as laying upon each member a solemn obligation of conscientious and patriotic duty, the Constitution will become the play of every passing wind of doctrine, its amendment little more than a matter of chance.

There is now pending in Congress a proposed amendment to the Constitution which, whatever its actual prospects, bids fair to present in an acute form the question we have been discussing. Although the prohibition amendment has not yet been reported out of committee, the plea has already been advanced in its favor that Congress should leave the matter to the States. Even if leaving it to the States meant leaving it to a majority vote of the people, the objections to such a course would condemn it in the eyes of any thinking man, whatever his views on the particular issue of prohibition; for they rest not on the merits of that issue but on the fundamental principles of rational government. But as a matter of fact, leaving it to the States would mean something quite different from leaving it to the people, and something even less defensible. It would mean that if the Legislatures of thirty-six States should, each by a mere majority vote, declare in favor of national prohibition, the people of the other twelve States, even though they might far outnumber those of the thirty-six States, would have to submit.

Now, however great may be the differences of opinion on the subject of prohibition, there is one thing about it upon which there is no room for difference; everybody must agree that it is a question of great importance. National prohibition would mean an experiment to which the world furnishes no parallel, or even approach. Long as State prohibition and local option have been with us, we have never yet so much as attempted to prohibit the sale of liquor in any of the great centres of population; and elsewhere State prohibition has been very different in its working from what national prohibition would be. Whether we shall enter upon a scheme so tremendous in its bearing upon the lives of millions of people, is a national question of the first magnitude. Apart from everything else, it involves an extension of Federal power in a domain hitherto regarded as peculiarly belonging to the States. It may be right to do this; but it is certainly not right to do it without the full satisfaction, in good faith, of all those requirements which the Constitution has prescribed as a safeguard against ill-considered innovation in the fundamentals of government. To insist on a *bona-fide* test of the issue in Congress is the duty of all who, whatever their views on the liquor question, are faithful to the spirit of American institutions.

BELOW THE SURFACE.

The experts of science who have devised amazingly delicate instruments for measuring the length of light waves, the minutest of variations in temperature, and the velocity of radium emanations could do nothing more useful than give us some machine for measuring the speed of the age we live in. We need exact information. "No age has ever moved so fast," says a writer in the May *Atlantic*. His subject is "The Cult of the Passing Hour," and his concern is with the social good and evil we may expect from an age which has grown superbly indifferent to what happened before the present body of first-voters was born. "Never before," says our writer, "has the past receded so rapidly, or has the eclipse of its works been so speedy and overwhelming. We have established a new provincialism, the provincialism which substitutes a slit of time for a nook of space, and the parish of 1914 circumscribes our ideas and interests." This sentence makes it clear why we need a social speedometer. The furious rate of modern progress has become such a commonplace that even those who deplore the tendency do not stop to ask just how fast we are really going and whether the speed of the ship is commensurate with the piercing shriek of the whistle. Altogether, too much generalization in this field has been done on the basis of newspaper "specials," and very little on the basis of the original sources.

Take the case of literature as cited by the writer in the *Atlantic:*

> The reading of the great past literature has become a specialty, abandoned with obvious relief by the general reader to the conduct of the select few. . . . Tested by range and power alike, the spell of Dickens was perhaps the most potent ever exercised by literature, and its appeals were to elementary and perennial instincts; but the youth of to-day are impervious to that magic which fifty years ago counted Dickens among the reasons for being glad to be alive.

This is plausible, and it isn't so. Scan the literary columns of to-day, and the impression cannot be avoided that Wells and Shaw and Masefield and Bennett not only have more meaning to us than Dickens has, but that Dickens has really no meaning at all, for the reason that he died before a great many of those who write and read literary columns were born. But this is what we have called generalizing from newspapers. For that matter, it is unjust to the newspapers. For, by turning from the leading literary articles to the minor literary notes, and, better still, to the book advertisements, we shall find that Dickens is not dead. If we supplement our researches in the publishers' catalogues with statistics from the circulating libraries, we shall find that the magic of Dickens is far from vanished. It would be a perfectly safe wager to make that Dickens has many more readers than Shaw or Wells or Bennett; and that he moves them with greater potency.

No; the reading of the great past literature has not been abandoned by the general reader. The critic who would maintain this, in face of the plainest facts, simply shows that he is himself a victim of the passing cult of the hour, mistaking speed for depth and mere assertion for reality. The publishers of the Everyman's Library have sold dead authors to the extent of millions of volumes. The publishers of Dr. Eliot's famous five-foot book shelf assert that they have disposed of very dead writers by the million. The encyclopædias, concerning themselves as they do with a vast mass of dead literature, dead history, dead art, dead religion, nevertheless continue to sweep the country. We have never been inclined to take too seriously the immense commercial vogue of the standard "sets," the near de luxe editions of the Jane Austens, the Trollopes, with the Balzacs and Voltaires. We have regarded the primary appeal of those long lines of handsome volumes as largely in the nature of wall decoration. Yet even of this immense body of subscription library furniture a very considerable portion cannot in the nature of things fail to become something more than that. Bought as so many yards of gay binding, it ends by being discovered as literature in thousands of homes.

Undoubtedly there is a passing cult of the hour. The only question is to what extent the ardent and fleeting enthusiasms among the small minority of the intellectual youth are representative of the forces and tastes that rule the great body of citizenship. Among the

masses the sense of continuity with the past is not dead, for the simple reason that the present cannot divorce itself from the past, even if it would. Theories and schools flash by on the film, but to the extent that they possess reality they draw their strength from a few simple, slow-changing sentiments and beliefs. We may cite an example to illustrate what we have in mind. To the reader of Socialist literature nothing is more striking than the rapidity with which Socialist theory is being continually modified. With almost every new book from the press the philosophy of the Socialist movement is reconstructed. The writers of such books pride themselves on dealing with the facts of the moment, and not for them is the authority of Socialist thinkers who, whatever they may have been in their day, are now dead. Yet we need only consider such actual manifestations as the I. W. W., Paterson, Lawrence, Colorado, to see that unrest among the workers expresses itself in a few elementary formulas. The soap-box orator for Socialism is not concerned with the influence of Bergson on Socialist philosophy. His appeal is to the fundamental appetites and wrongs which have been the bases of working-class discontent since time immemorial.

FILLING IN THE MAP.

Upon the basis of the dispatches from Manaos, where Col. Roosevelt has emerged from the Amazonian forest, it is impossible to decide whether, with true Roosevelt luck, the distinguished traveller has really found an unknown tributary of the Madeira River, stretching over eight degrees of latitude, or whether he has traced the unknown upper course of a river already known in part to the map-makers. It is true that Mr. Roosevelt's own dispatch to Professor Osborn, of the Museum of Natural History, is characteristically free from doubt:

> We have also put on map a river running from north of thirteenth degree to south of fifth degree, the largest affluent of the Madeira, the upper part hitherto unknown to any one, and lower part utterly unknown to cartographers.

Now, the lower part of a branch of the Madeira River would be that part of the branch stream stretching from its entrance into the Madeira back into the interior. It is hard to see how, being the largest feeder of the Madeira, this newly discovered river could have escaped the attention of the chart-makers, who, whatever their deficiencies with regard to the hinterland, have succeeded in mapping literally dozens of tributaries of the Madeira, at their points of debouchment. We are asked to assume that a river between six and seven hundred miles long cuts such a poor figure at the point of its junction with the parent stream that it has been dismissed by the cartographers as not worth while putting on the map.

Simultaneously with Col. Roosevelt's own dispatch comes a press story from Manaos which seems directly to contradict his assertions:

> The river Duvida, or "River of Doubt," was found to be unquestionably the river Gyparana. The party followed this river from the end of the telegraph line to its junction with the Madeira, a distance of about 630 miles.

It is plain that having sailed down the Gyparana to its junction with the Madeira, Mr. Roosevelt's party could not have sailed down any other stream that debouches into the same river. The distance given, 630 miles, would be just about the length of a stream covering between seven and eight degrees of latitude—"from north of thirteenth degree to south of fifth degree." The Gyparana is not only well known to the geographers, but its course on maps extant for some time is traced for hundreds of miles, along its upper reaches, where it takes the name Rio Machado and Rio Machadingo, to an indefinitely unknown stretch in the uplands of the Matto Grosso, west of Cuyaba, on the river of the same name, the last civilized settlement of any dimensions that Col. Roosevelt encountered before striking out into the wilderness, according to the map of his route published in the April *Scribner's*. Thereafter, Mr. Roosevelt was in a great watershed region cut up with streams running northwest to the Madeira, north to the Tapajos, another tributary of the Amazon, and south to the Paraguay and the La Plata. There, indeed, was virgin soil for the map-makers.

Mr. Roosevelt's experiences are a reminder of what great spaces of the earth's surface still await the work of the explorer. Putting aside the Polar regions, where we can hardly be said to have yet passed from the period of discovery to the period of exploration, the Amazon country is the most extensive field for detailed investigation. Not only are there countless tributaries to be traced to their source, but the origin of the mighty mother stream is not yet established beyond dispute. Dr. Wilhelm Sievers believes that he has found the ultimate source of the Amazon in the Lauicouchar, the most important of the three affluents of the Marañon, which he traced to its ultimate springs in the cordilleras of central Peru; but there is difference of opinion among the experts. Among the great rivers of Asia, the sources of the Brahmaputra are still an unsolved problem, in spite of additional knowledge cast upon the geography of eastern Tibet in the course of the British expedition against the Abors in 1911. A region comparatively so near at hand as the Gulf of St. Lawrence has its tasks for the explorer. In the summer of 1912 Henry G. Bryant, president of the Geographical Society of Philadelphia, gave us virtually a new river in the St. Augustine, which he traced from its mouth in the Gulf on the Labrador shore to its source 140 miles in the Height of Land.

In Asia the geographers' interest has shifted for the time being from the great central plateau to the Arctic coast. A number of Russian expeditions have been at work in Kamtchatka and in the region between the Kara Sea and the Gulf of Obi, almost on the dividing line between Europe and Asia. School-day familiarity with the picturesque name of Spitzbergen tends to give one a wrong idea of our knowledge of the interior of that region, as the fate of the recent German overland expedition testifies. The conquest of Tripoli has brought the enormous Libyan territory within the purview of the cartographers. Here the Italians have set to work on a task that will take years to complete. A region that will wait long for detailed examination is the interior of Australia, so great are the difficulties which confront the explorer and so little promising the practical results, while the romance that hovers over the Polar regions is lacking. When the easily accessible portions of the globe have been exhausted there will remain the immense desolation of the Polar regions. Stefansson's second attempt at mapping the coastland east of the Mackenzie seems at the present moment to have received a serious check. Greenland has its problems. In the Antarctic there is the unknown heart of a continent.

Foreign Correspondence

FRENCH OPINION ON MEXICO—COMMENT OF THE PRESS—THE MEXICAN COLONY.

PARIS, April 25.

Now that we seem to have embarked on an adventure in Mexico, it will be well to state clearly French opinion—so far as there is any opinion in the matter—from all the different points of view. We are too great a nation to show ourselves thin-skinned to current observations which are sure to be made in every country—even at home.

The Government does not dream—now less than ever—of changing its deliberate policy as stated by Prime Minister Doumergue in the declaration to Parliament: "Like other European Powers, the Government of the French republic has refrained from all intervention in the domestic affairs of Mexico—thus giving credit to the policy of the Cabinet of Washington, which is more particularly interested in the reëstablishment of order on its southern frontier."

No small confidence in the United States—or else a strong sense of powerlessness under the circumstances—is required of a Government like the French to remain faithful to such a policy. By every mail it is obliged to hear the despairing appeals of its 4,000 citizens who were prosperously established in Mexico and are now threatened with utter ruin; and it has to watch over the interests of Frenchmen who unsuspectingly invested more than $1,000,000,000 in that country while it still had an air of settled law and order.

As to the Paris press, it was to be expected that strong criticism of President Wilson's policy would be made, just as it is at home. This is the unavoidable penalty of any "waiting" policy, of which the end never comes to relieve nervousness until one day it turns out different from what was expected. In France also, as nearer home, much apparently responsible newspaper work is perfunctory, written day by day without any keen sense of the interpretation which may be given to chance sayings abroad. On the whole, the Paris press has not complained or argued or condemned or protested too much.

No one doubts President Wilson's painful sincerity, although he is often called a theorist. Of course, the general impression here, as throughout Europe, is that it would have been better to recognize Huerta from the start as the lesser of two evils—and this goes along with the prevalent notion that no "constitutional" government is possible in Mexico without a President-despot like Porfirio Diaz. Another prevalent idea that American money started Madero and the Constitutionalists going and so upset all the work of Diaz had its origin in American and English newspapers.

The further idea that Americans wish to annex territory, or at least to establish a virtual protectorate with business predominance in Mexico, is frequently put forward; but it is not expressed so crudely as by the German press. Col. Watterson's declaration published yesterday in Paris, "If our flag goes up across the Rio Grande, it will never come down," is unlikely to mitigate such ideas.

Among the weightier Paris journals, the *Débats*, which once represented the now defunct Liberalism, has taken sides frankly against Washington. "We do not know if the United States, from the point of view of their interests, are acting with foresight. But we believe ourselves sure that they are committing an evil action." The Moderate *Temps* recognizes that "the United States, before the aggravation of Mexican anarchy, was very near being forced to this dilemma: either to acknowledge Gen. Huerta in accord with the Powers and, in concert with them, to give him the means of reëstablishing order, or to intervene by force. . . . Although the last word is bound to remain to the enormous mass of men and wealth represented by the United States, it is easily understood that the American Congress and people manifest but a relative enthusiasm for an adventure which answers to no popular ideal and is contrary even to that policy of Pan-American fraternity on which the Americans pretend to base their Continental system." The military *Echo de Paris* opines that "President Wilson did not engage himself so far without having reassuring news from Tokio!"

As to the opinion of the French people, it is enough to say they have none. Those who have a right to an opinion, that is, those who have invested their money in Mexico, certainly consider that in the United States is their only hope for the final protection of their property and interests. They are showing this now at the Bourse, no matter what judgment they may pass on what has happened before. They have no confidence in Mexico ever pacifying itself.

Correspondents have been doing their utmost since the occupation of Vera Cruz to get expressions of opinion from prominent Mexicans resident in Paris. Their success naturally has been mediocre, as no one wishes to compromise himself. All, of every party, observe the watchword "All Mexicans will unite to face foreign invasion." In undertones there is a pretty unanimous reprobation of Huerta as an impossible President of a united Mexico. I have been unable to find much sympathy with Constitutionalists, although they keep an agency here.

There is a small, but relatively important, Mexican colony in Paris. It is made up exclusively of rich families many of which would be Parisian altogether were it not for their fortunes, which are still in Mexico. Señor de la Barra, the present Minister, is a newcomer; but his predecessor has been a lifelong resident; and one of the secretaries has held his post thirty years. The rich families have had their children marry here or in Spain; and it may be doubted how far they still represent Mexicans at home, even those of the moneyed class. They very nearly resemble the old time absentee colony of our own Americans, which Goldwin Smith said was a prima-facie justification of anarchy. Well, anarchy has come to Mexico—and France will not prevent the United States finding a way out of it, if she can.

S. D.

THE CHANGE OF MINISTRY IN ITALY—REASONS FOR GIOLITTI'S RESIGNATION—THE NEW PREMIER.

ROME, April 22.

Many reasons have been given to explain the Ministerial crisis that led to the resignation of the Giolitti Cabinet; some of them general—the financial problem, and the condition of the Treasury after the war; others particular—the violence of the personal attacks of the extreme Socialist Left upon the Prime Minister, and the difficulty of an understanding at the present moment between the Socialistic groups in the House and the Radical party, which aspires to unite with them in future.

I may affirm absolutely that the determining cause lies solely in the will of the ex-Prime Minister. If he had believed that his remaining in power was indispensable or useful to his country, not all of his opponents put together would have been sufficient to cause the crisis. He believed that he had accomplished his task and that another should now take his place.

Giolitti is perhaps too much the representative man of the middle generation, which grew up in Italy after the revolution—somewhat skeptical, a little greedy, pressed by many needs, by scanty salaries, and the dear cost of living. This generation was prone to compromise, and none too scrupulous, dragged here and there by its necessities. But we must not forget that Giolitti's political education was formed at the time in which the men of our revolution, noble and high-spirited, were still in Parliament. By contact with them, and by their example, in the most secret corner of his mysterious heart, there was planted a constant personal disinterestedness, and a superior conception of politics, which neither the defects nor the errors of the Parliamentary system of the last years in Italy could entirely destroy.

I know that from the day when Parliament reopened Giolitti's firm purpose was to leave the Government. He denied it, and appeared to resist; he oscillated between sickness and health; he wished to give credit to the report that he would remain in power, provided that the Radical party should not be detached from his Parliamentary majority. But these were expedients intended to allow him the liberty of leaving when he desired. And this he did as soon as the discussion concerning the expenses of the war in Libya was ended.

In carrying out his plan, Giolitti, grateful to the Radical party, and desirous of leaving it free to work out its future destiny, begged it to separate itself from him, so as to leave him in a minority in the House. In this way the Liberal and Radical coalition, upon which his Ministry rested, would fall, the Radicals would remain free to arrange their plans in accordance with those of the extreme parties, and the inheritance would belong to the Conservatives. All of which has happened, and we have had the Ministry of Salandra. It would thus seem as if we had a Conservative Ministry after a Ministry both Liberal and Radical, but things have turned out otherwise.

Mr. Salandra is a man of knowledge and cultivation, a professor of public law in the University of Rome, and, by origin, a Conservative—one of those true Conservatives of southern Italy, educated in the school of philosophy of Bertrando Spaventa, the expounder of Hegel in Naples. In politics, he followed the financial theories of Sella and Minghetti; but this did not prevent him from often embittering the existence of Luigi Luzzatti, who is the pious custodian of all the memories of those great men of the old Right, that is, the Conservatives. Salandra was also for many years a constant follower of Mr. Sonnino, until the day when some of his friends, finding Sonnino too imperfect a Conservative, attempted to choose Salandra, willing or unwilling, as head of the new Conservatives. According to appearance, therefore, while Giolitti was head of the Liberal party, and Sonnino was aspiring to succeed him at the time when the Liberal party, devoted to Giolitti, should be purified, Salandra was the head of the New Conservatives.

Instead of this disposition, however, during the period of the last elections, Salandra unexpectedly made a decided step towards leadership of the future majority that Giolitti would probably obtain. He managed to make people forget the name of Chief Conservative, which some of his friends had inopportunely given him, and regained the first place in order of Liberal succession, ahead of Sonnino. Salandra knew Giolitti's purpose of leaving the Government after the elections, and he knew moreover that Sonnino preferred leaving to others the task of reorganizing the Liberal party.

It is necessary to explain that all the political parties, since their programmes are not clearly formulated, have something in common. In the new Italian life, many things are still in formation, pushed this way and that by the inheritance from the past and the hopes of the future. The difference between parties is often more nominal than real, excepting always between those parties which have antagonistic principles, as, for instance, the monarchical and republican parties. Thus it is that Salandra, who was a true Conservative yesterday, desires, by virtue of a brief electoral preparation, to be a Liberal to-day.

In Italy, it is said that the Ministry of Salandra will last as long as Giolitti wishes. And this would be true if Giolitti desired to return to the Government, as he did at the time of Luzzatti's Ministry, which sprang into being at his pleasure and collapsed at his bidding. But again I shall say something which would not readily be believed in Italy: This time Giolitti will not allow himself to be induced to reassume the power, except if an impelling duty should be imposed upon his patriotism. Besides his strict political duty, one ambition only might draw him from the tranquil repose of his home at Cavour into the open field, that is, if a fusion of all the democratic elements in the country should loudly call for him; for he is still vulnerable on this side. These two events, however, appear to be neither near nor probable.

MICHELE RICCIARDI.

AUSTRIA'S TRADE IN THE BALKANS —ART AND MUSIC.

VIENNA, April 16.

The question of commercial supremacy in the Balkans has been much discussed in central Europe during the last fortnight. Much indignation has been aroused by the attacks made on Austria-Hungary in German journals. It is stated that Austria has only herself to blame for her failure to retain the commercial territory which belonged to her exclusively until the outbreak of the Balkan war. She is accused of unloading her damaged wares on the ignorant Balkan folk, and Austrian commercial men are told that they are ignorant of the first principles of business, and do not even trouble to manufacture goods to suit requirements of trade in the Balkans. Long replies to the accusations have been printed, but from the controversy there emerges the plain fact that Austria-Hungary is losing her trade, both in the Balkans and in the Levant.

Every effort will now be made to retain that trade and to prevent German and Italian merchants from wresting the supremacy from Austria-Hungary. She has already begun to take measures to facilitate transportation in the south. She has concluded a railway loan for $54,000,000 for the building of Bosnian railways. There is no doubt that these railways are being built for strategic purposes, in the first instance, but their commercial importance must also not be overlooked. The greater part of the money, raised by a 5 per cent. loan, will be used for laying broad-gauge lines, to take the place of the narrow-gauge, which meant the unloading of goods on the Hungarian frontier, and entailed great delay in transport. New railways connecting various points of the country are also to be laid down, and efforts are being made to encourage agriculture and increase the prosperity of the annexed provinces. Sunday courses in agriculture were held for farmers and others last season, when more than one hundred instructors travelled throughout the country on their missionary work. The courses were attended, for the most part, by youths who had been pupils at the elementary schools and were working on farms, but 46,000 of the pupils were older men.

Dr. Karl Patsch, in a lecture, said that the Government was beginning to carry out an extensive scheme of draining and irrigation in Herzegovina. He attributed the presence of rainless districts, not to the Venetians, who are reported to have cut down the trees and thus ruined the land, but to the carelessness of the inhabitants themselves and to the Turkish Government, that was wasteful everywhere. The Herzegovinians had cut down the forests at random without replacing the trees. He said that the soil was fit for the growing of tobacco, vines, and maize, while the Government intended to introduce silk-worm culture into the country. He referred to the baleful influence of emigration on the inhabitants of Herzegovina. The relations of men who went to the States were so well supplied with money from their relatives abroad that they did not take any interest in the hard toil, for low pay, which was the rule there. Returned emigrants, too, were inclined to invest their money in inns and general stores and neglect the cultivation of the land.

The Vienna Künstlerhaus and the Secession have both opened their doors for their spring shows. The Künstlerhaus, at which the more conservative artists exhibit, and which keeps up a very high standard of artistic merit, includes 100 pictures sent by the members of the Hungarian "Müveszshaz," a fine collection of oils and specimens of architectural designs, including a portrait of the Emperor-King, Franz Josef, which he intends to present to the former British Ambassador in Austria-Hungary, Sir Fairfax Cartwright.

The "Secession," where the "mad" artists, as they are called, formerly exhibited cubist and "secessionistic" pictures, is very quiet this year. Their vogue seems to be at an end. Such "futurist" pictures as were on view were snow pieces, mere blurs, good examples of impressionism, but too indistinct to leave any definite memory. There were also pictures of the severely decorative type without shading of any kind, the light and dark lines being merely drawn in broad and thick, without intermediate graduation. The fairy-tale friezes were very pretty, and have formed a specialty of the exhibition each spring. The general impression was one of great restraint, probably due to changing ideals and an uncertainty as to what the next thing will be.

The Vienna Männergesangsverein recently gave its 1,000th concert. It counts 428 active members, who carry on trades and professions during the day and meet for singing in the evening. The Society has travelled over Europe and to America, and is well known throughout the civilized world. There was considerable disappointment that the Emperor could not be at the concert, but he was represented by Archduke Karl Franz Josef and Princess Zita of Parma. A prologue, by Benjamin Shears, written for the occasion, was recited by Alfred Gerasch, of the Vienna Burgtheater. The Philharmonic Concert Company played the overture to Weber's "Beherrscher der Geister" and other compositions. These, with songs and ballads, rendered by the Männergesangsverein, formed an interesting programme which was concluded by the presentation of wreaths of flowers from various musical and artist societies in Vienna.

The répertoire at the Vienna Court Opera is not satisfactory to many of the Viennese, and recently the Union of Music and Literature in this city presented a memorial to Director Gregor, begging him to put on the old favorites more frequently and objecting to his preference for foreign composers. They say that "Fidelio" was only played once this season, while Puccini's "Girl of the Golden West" was put on twenty-four times. In Vienna there are no long runs at the Court theatres, and the public objects to anything that appears to tend this way. Consequently it is keeping a strict watch on Gregor, whom it suspects of introducing "business" methods into the opera.

L. R.

Poetry

A MINOR POET.

The firefly, flickering about
In busy brightness, near and far,
Lets not his little lamp go out
Because he cannot be a star.
He only seeks, the hour he lives,
Bravely his tiny part to play,
And all his being freely gives
To make a summer evening gay.

AMELIA JOSEPHINE BURR.

MARGARET L. WOODS.

A WELL-BRED POET WHO SINGS OF THE WELL-BRED CLAN.

The conviction gains ground that there is no virtue left in the great Anglican church of poetry, and no honor to be had by those who cling to the decorous but obsolete vestments of its priesthood. The poetic revival appears to be in the hands of Dissenters. How quaintly "academic" sound to-day the old master's words on the conduct of the poet's life: "He shall be like a priest shining in sacred vestment, washed with lustral waters, who goes up to make augury before the jealous gods!" We know that the office-seeker who treads warily in the steps of his predecessors may become poet-laureate; but we also know that we shall never read him. We know that life in the high lonely tower, communion with the sages, select reading and society, and sustained reflection upon the passionate history and destiny of man, will never produce anything but a respectable upholder of an outworn aristocratic tradition. We have closed our history and opened our folklore; turned from the philosophy of Plato to the wisdom of the peasant; symbolized our imaginative impulse in the playboy that cleaves his father to the "breeches belt." Who cares to hear what the well-bred poet says or sings of the well-bred clan? Has not the very language of our classical literature been formally declared bankrupt? He who would now write a living line must forge himself a new instrument of the dialect of Dorset or Yorkshire, or adopt the new hand-made idiom of Dublin, or enrich his vocabulary by familiar converse with publicans and sinners. He must sweat the civility out of his blood by tramping with tramps, cursing with stevedores, sleeping in dugouts, sailing before the mast, or, happily, meditating the mystery of justice behind prison bars. So, in the exhausted society of our times, may he hope for a fresh vision and a new birth of passion. So may he wake the silent harp of Erin or chant in fluent Billingsgate beside the ale-house door. So, in these topsy-turvy days, are the celestial Muses wooed and won.

Only to readers who, unconvinced by the foregoing considerations, occasionally suspect, like the profane Lord Byron, that "we are all upon a wrong revolutionary poetic system, not worth a damn in itself"—only to such readers can be commended the recently collected poetical works of Margaret L. Woods.* So far as the new poetry-reading public is concerned, Mrs. Woods has nearly everything against her. Daughter of a late Dean of Westminster, and wife of a sometime president of Trinity College, Oxford, she responds to the august appeal of great traditions with a loyalty of spirit which involves a certain fine exclusiveness of thought and feeling. She sounds no note of revolt; voices no vagrant gypsy yearning; chimes in with no vague popular enthusiasms. Her poetic life moves and has its being within the ideals and institutions accepted by the normal cultivated Englishwoman. For twenty-five years she has been writing novels, dramas, and poems which have won high approval from English critics: "A Village Tragedy" was declared by Mrs. Humphry Ward worthy to rank with George Eliot's work; "The Princess of Hanover" was named by Thomas Hardy as the most interesting production of the year 1902; "'Aëromancy,'" said Mr. Mackail, "embodies the inmost spirit of Oxford." And now, as the skeptic will say after a glance at the title-page, she has her appropriate reward, she is a member of the Academic Committee of the Royal Society of Literature. Aside from the professional followers of English verse, how many on this side the water know as much of her as that? I confess that the comment on her work with which I am most in sympathy is this by Frederic Harrison in the *Nineteenth Century:* "I have found a new poet." After I had followed her fresh singing voice a little way into the volume, I came upon three lines at a stanza-end which have haunted me since:

Return and tell how all the unfooted pathways
Are white with dew, and deeper in the forest
Dwells the enchanted bird.

I.

Mrs. Woods is intensely English. The American whose sensibilities are outraged by the suggestion that he is of Anglo-Saxon stock will hurry through the Oxford pieces, and the grave commemorative poems of the earlier pages. But the American who, treading the dusky aisles of Westminster Abbey, instinctively bows his head, feeling himself in the presence of his canonized forefathers, will linger with kindred feelings over "The Passing Bell," "The Builders," and "High Tide on Victoria Embankment." One lingers over the first of these pieces because it is so difficult to find any among our morbid singers who has the power to speak worthily of the dignity and the splendor of death. "The Passing Bell" was occasioned by the death of the author's father, Dean Bradley: a sombre revery on the merging of the counted years of a man's life with the infinite past—a revery sombre but broken at regular intervals and gradually brightened to a starry peace by the deep traditionary voice of the Abbey bell tolling—*Justorum animæ—in manu Dei sunt—Non tanget illos tormentum mortis—Pax in æternum Dei.* Less audibly but not less truly religious in its ultimate meaning is "The Builders," of which the occasion was a special service held in the Abbey at the time of King Edward's coronation for a body of Colonial troops who had fought in the South African war. If there were nothing but imperial pride in unhiving the heroic memories of the Abbey in this piece, and in weaving the gorgeous tapestry of empire in the third, we could not resist the magic of single lines and isolated passages like these in "High Tide on Victoria Embankment":

Solitary ships moving in waste horizons,
Out of the wide, lonely dazzle of water and air,

There where the wind-worn bastions
And crumbled towers of Cornwall darken over the Atlantic,
Where southward wild Finistère flashes on the night,

or the superb tribute to Sir Cloudsley Shovel and the old mariners of England in "The Builders":

That footfall passes
Over the old grim conquering Admiral's body
That once ran on the swift Atlantic surges
Hither and thither, tossing rudderless,
To reach the inhospitable Scillian shore.
And many another keen, indomitable,
That swept in thunderous battle long ago
Round England's ocean marches;
Men that have loved the salt spray's buffeting game
Better than sport and better than the dance,
To ride with the slant deck and mark the measure
Of the sluicing scupper's wash and the clap of the sail.

But the imperial pride of Mrs. Woods, springing from faith in the high destiny of the English and exulting in men who have proved their "race," is chastened by such dark visions as trouble the mothers of infant sons and the sweethearts of soldiers in the field. It is a pride more than half composed of pure love, an awful hope, and a fiery prayer

**The Collected Poems of Margaret L. Woods.* New York: John Lane Co. $1.50 net.

that those we have set our hearts upon may be reckoned among the just souls that are in the hand of God. It has the lift of the ancient chivalry in it, and it tunes the spirit up to the concert pitch. In a half-dozen shorter lyrics and ballads—"Young Windebank," "To the Forgotten Dead," "The Mariners Sleep by the Sea," "A Song of Homecoming"—the poet mingles with the eternal pathos of farewells and the praise of the beautiful death of those who die for their country a feminine note of thrilling wistfulness. She kisses the sword with a passionate grace which should make a young lieutenant rush upon a forest of Ashanti spears, and die smiling.

II.

World-without-end love between men and women is recognized by modern critics as an essentially feminine invention of that ingenious Victorian Age which also set up for the first time the monogamic standard for marriage. It is perhaps "going out," with the other derided products of the Black Walnut Period. Mr. Galsworthy, who is in the Movement, has recently published a novel from which it may be inferred that modern love must always be feasting and that sacramental bread palls upon its cloyed appetite. Better in verse hark back to the Cavalier mood which is gallantry, or to the Queen Anne mood which is cynicism, or to the Continental mood which finds its afflatus in revery upon past satisfactions of the senses, than to the Victorian mood which is religious devotion. Mrs. Browning was the arch-priestess—

> I lift my heavy heart up solemnly,
> As once Electra her sepulchral urn.

Now Mrs. Woods is Victorian; she seems still to entertain the feminine Victorian prejudice that the love which makes the face of the world fair and fires the poet's heart results rather from the restraint than from the indulgence of passion. Its symbol is not Dutch bundling, but the sundering sword of old romance. Under a ban and a vow it spiritualizes itself. It knows how to fast till its appointed hour, numbers its renunciations with its ecstasies, and brings its spikenard with tears and adoration to the beloved's feet. Of this paradisiacal passion the sweetest lyrics, alas, in this bad world, are cries of anticipation before the disenchanting dawn of experience and dirges at eventide.

In the lyrics of love rather sparsely scattered through Mrs. Woods's collection there is no very noticeable color of individual feeling. Indeed, a reticence with regard to peculiar and personal emotions is a part of her distinction. Yet here are the breathlessly reverent touch, the right throb, and the authentic rapture. The sequence is mine:

1.

When the world's asleep
I awake and weep,
Deeply sighing say,
"Come, O break of day,
Lead my feet in my beloved's way."

When the morning breaks,
When the world awakes,
Then a dream too dear
Haunts me like a fear,
And as one in sleep I linger here.

If some star of heaven
Led him by at even,
If some magic fate
Brought him, should I wait,
Or fly within and bid them close the gate?

2.

With thoughts too lovely to be true,
With thousand, thousand dreams I strew
The path that you must come. And you
Will find but dew.
. . . . . .
I break my heart here, love, to dower
With all its inmost sweet your bower.
What scent will greet you in an hour?
The gorse in flower.

3.

Cover, O eve, the world with mist
Till we two shall have kist and kist!

Linger, O morn, in the Western skies,
Till we have looked in each other's eyes!

Whisper, O wind! we shall not speak,
Heart upon heart and cheek to cheek

Drown, wild dawn, the stars in fire!
We shall have had our heart's desire!
—Sung by Königsmarck in "The Princess of Hanover."

4.

We have emptied the cup of the earth,
And I break it here at your feet;
What else could hold were worth
The savour of hours so sweet?

III.

Though Mrs. Woods has a poem on "The Eternal" and two spirited songs to the Earth, her work is not burdened with cosmic philosophy. She seems to have accepted her universe blithely and by a happy instinct rather than by the grave and slow processes of reflection. She perceives the Eternal in the image of a "mighty and jubilant heart," and is moved rather to dance than to debate before the Lord. If I were to indicate the relations of her thought to that of the greater Victorian singers, I should say: A woman of the fair outlook and high mettle of George Meredith's heroines has often conversed with Tennyson, Swinburne, Arnold, Browning, and Meredith on many a May-morning jaunt over green English hills and beside the sea. She has not returned with mere hollow echoes of their discourse. She has a clear voice of her own and an independent life, rich and spontaneous. But in this high association she has found directive and sustaining power. She has been helped by Tennyson's long faith to a vision of the Weaver behind the shimmering unfinished web:

One indestructible soul,
Sleepless, unwearied that brings
Order from chaos at length,
Out of the fading and weak infinite splendor and strength.

She has been stirred by the bugle notes of Robert Browning. Indeed, her farewell to Earth, "Vale atque Ave," of which I shall quote the close, is an impassioned development of the theme given in the epilogue to "Asolando":

Up, not to fall again
Into the welter;
Up, see, this urgent
Life of me pushes,
Swings now on white wings where the wave dances
Rhythmical, pipes in the coppice-wood shelter
Low, with strange sweet hesitancies
Till a song floods full on the night of Maytime.
With the galloping rhythm of hoofs it rushes,
Leaps in some merry brown beast at its playtime,
Suffers and dies one way or another,
Learning the lessons that life must learn.
But I shall still blindly fumble and wait
Till the true door open, the true voice call again;
And back to the human high estate,
Back to the whole of the soul, resurgent,
O Earth! O dearest! I shall return,
I shall return to thee, Earth, my mother.

She has been upheld in her imperial pride and in her passion for the sea by the fiery pæans of Swinburne, and in her praise of Earth by the dewy gusto of the voice in the Woods of Westermain. Her delight in the natural has not shaken her loyalty to the civil order. With Arnold she has felt the beauty of the august in character and the uplifting power of high classical traditions in university, state, and church. She has sympathized, too, perhaps even more keenly, with the less frequently emphasized element in Arnold—his exquisite sensibility to the idyllic in nature, to the romantic in history, and to the subtle drifting fragrancies of old poetic memories.

If I were asked to illustrate the quality of Mrs. Woods's non-dramatic verse by a single specimen, I should select "March Thoughts from England." Though in this piece there is a breath of the spirit of all her companions, the enchanting harmony of the poignant *utinam*, the soft dreaming mood of the evocation, and the shining clarity of the images is her own. There has been nothing in English more nearly approaching perfection in its kind since—I had almost said, since the odes of Keats. At any rate, I make an extract from it as reluctantly as I should abbreviate the "Ode to a Nightingale":

O that I were lying under the olives!
So should I see the far-off cities
Glittering low by the purple water,

Gleaming high on the purple mountains;
See where the road goes winding southward.

. . . . . .

O that I were dreaming under the olives!
Hearing alone on a sun-steeped headland
A crystalline wave, almost inaudible,
Steal round the shore; and thin, far off,
The shepherd's music. So did it sound
In fields Sicilian, Theocritus heard it,
Moschus and Bion piped it at noontide.

O that I were listening under the olives!
So should I hear behind in the woodland
The peasants talking. Either a woman,
A wrinkled grandame, stands in the sunshine,
Stirs the brown soil in an acre of violets—
Large, odorous violets—and answers slowly
A child's swift babble; or else at noon
The labourers come. They rest in the shadow,
Eating their dinner of herbs, and are merry.

Soft speech Provençal under the olives!
Like a queen's raiment from days long perished,
Breathing aromas of old unremembered
Perfumes and shining in dust-covered places
With sudden hints of forgotten splendour—

IV.

Mrs. Woods gives us two tragic dramas: "Wild Justice" and "The Princess of Hanover." "Wild Justice" is set on a windy island off the Welsh coast in the early years of the nineteenth century. It tells how the wife and the children of Gryffith Gwyllim, the lighthouse builder, driven to frenzy by his savage brutality, contrive to sink him one night in the quicksands, and how the children in the execution of the deed are swallowed up by the sea. "The Princess of Hanover," of which the nucleus is a familiar historical mystery, is set at the Hanoverian court at Herrenhausen in the last decade of the seventeenth century. It tells how Sophia Dorothea, neglected and abused by her husband, afterwards George I of England, plans to escape with her lover, the Swedish soldier of fortune, Philip von Königsmarck, and how he on the night of the elopement is trapped by the jealous Madame Platen, murdered, and walled up in the masonry of the castle forever.

After the fragments given of Mrs. Woods's verse, I hope it is unnecessary to say that "Wild Justice" and "The Princess" are poetic. An enthralling ballad is the overture to each of them, recurring in a weird undertone at intervals in the play. Lyrics besprinkle them. The blank verse, though not always victorious, though occasionally too frankly reminiscent of Shakespeare, quivers with musical feeling to the extent of tempting one at times to sing rather than to speak it. The "atmosphere" is tense with passion and terror and beauty and doom. These things are "poetic." But all these things can the Irish playwrights do—and Maeterlinck, and the rest of us who are upon the "wrong revolutionary poetic system."

If space permitted, I should like to show, first, that "Wild Justice" and "The Princess" are dramatic, and then that they are tragic, and finally that, whatever their incidental faults, they are constructed upon the *right* poetic system, to which we must return if we are to have a poetical drama of more than ephemeral interest. I should remark in passing that these plays, though poetic, are written in English—for the most part in verse that is simple, swift, supple, hot, and with the pointed accent observable in excited human intercourse. I should add that instead of symbolical vessels of vague emotion, we find here for persons characters—with various internal organs and quite discernible moral lineaments. But I should dwell chiefly upon the presence here of genuine dramatic action—human antagonist pitted against human adversary; upon the flaming restoration of "poetical justice"; and upon the tragic exhilaration of seeing blood shed once more, and a heart fairly and squarely broken, upon a broken law.

JUDGE WOODWARD.

In August, 1817, Judge Woodward, Chief Justice of the Territory, caused to be passed by the legislative machinery "An act to establish the Catholepistemiad or University of Michigania." The bill was drawn by Judge Woodward.

Augustus E. B. Woodward in 1805, the year of his appointment to the bench of the new Territory of Michigan, was a resident of Alexandria or of Washington, the Federal city. It is recited in a deed recorded by him in the District of Columbia, temp. 1797, that his birthplace was in Rockbridge County, Virginia (*Michigan Pioneer and Historical Collections*, XXIX, 664). In 1801 the philosophical Thomas Jefferson came to the White House; during that year young Woodward (b. 1775) published at Washington a small treatise entitled "Considerations on the Substance of the Sun." Woodward's business was the law, and Mr. Jefferson sent him out to Michigan to be Chief Justice of the Territory. Judge Woodward was a managing man, of numerous strange fancies. He may have bullied most people—Gov. Hull, Gen. Proctor (during the British occupation of Detroit); his colleagues, his subordinates, the public. Intricacies of the ground plan of Detroit to-day are due to Judge Woodward's liking for the methods of L'Enfant at Washington.

Judge Woodward's mind was of the speculative sort, but he had a strong impulse for application. He was publishing small or large books from time to time almost to the end of his life, in 1827, on such topics as "The Executive Government of the United States," "The Open Trade with China" (Michigan, doing much with furs, was in a sense very near to China), "The Erie Canal" (by a different channel), "The Republic of Letters," "The Presidency of the United States." His most ambitious literary work, the "Encatholepistemia," was left unfinished. In this he remarks (Vol. I, p. 10): "To us of this age and of this country knowledge is presented in rich and copious stores, abundant in materials, defective principally in arrangement." To offer a system was the purpose of the work.

It is not easy to come at the title of the "Encatholepistemia." The book itself, in quarto, 371 pp., is a fine example of the printer's art of Philadelphia a century ago. Beginning at the stamping on the back, we read merely: "Encatholepistemia Volume I." The title-page stands: "A System of Universal Science. Philadelphia. Published by Edward Earle, Harrison Hall, and Moses Thomas. Printed by William Fry, 1816." Then, next following: "Considerations on the Divisions of Human Knowledge and on the Classification and Nomenclature of the Sciences." What might be called the Preface is at the end of the book:

> The fourth part of this investigation, relating principally to an American National Institute, must necessarily be deferred. The Supreme Court of the Territory of Michigan commences its annual session on the sixteenth day of September, and there remains barely time for the performance of the journey. A. E. B. WOODWARD.
>
> Philadelphia, August 31st, 1816.

Inserted at the back cover are tables that Judge Woodward followed closely the next year in drawing his bill for the establishment of the University of Michigania:

> The catholepistemiad, or university of Michigania, shall be composed of thirteen didaxum or professorships: First, a didaxia, or professorship, of catholepistemia, or universal science, the didactor, or professor, of which shall be president of the institution; second, a didaxia, or professorship, of anthropoglossica, or literature, embracing all the epistemum, or sciences, relative to language; third, a didaxia, or professorship, of mathematica, or mathematics; fourth, a didaxia, or professorship, of physiognostica, or natural history, &c., &c.

The other departments being of physiosophica, astronomia, chymia, iatuca, œconomica, ethica, polemitactica, diegitica [historical sciences], and ennocica "or intellectual sciences, embracing all the epistemum, or sciences, relative to the minds of animals, to the human mind, to spiritual existences, to the deity, and to religion."

It was Judge Woodward's fancy, in contrast to the encyclopædia (or circle of the sciences) to devise an encatholepistemia, a regular and concatenated system. Mr. Jefferson liked to exercise himself in a somewhat similar way, as witness his catalogue of his library. He also was interested in a thoroughgoing scheme for a State University, and, as it happened, got his first bill to that end through the Virginia Legislature in the year 1818. April 3, 1825, Mr. Jefferson wrote to Judge Woodward: "Withdrawn by age from all other public services and attentions to public things, I am closing the last scenes of life by fashioning and fostering an establishment for the instruction of those who come after us."

ALFRED J. MORRISON.

Correspondence

THE TOLLS.

To the Editor of The Nation:

Sir: In your editorial on "Coastwise Trade Insincerities," you speak of the "clap-trap" of "those opposed to repeal." Manifestly, the clap-trap is not all on one side. You state that "A report recently made by Congressman Alexander, chairman of the Committee on Merchant Marine and Fisheries, said that 94 per cent. of all our coastwise shipping, on the Atlantic and on the Gulf, is owned by railways or by combinations in alliance with railways."

The curious observer who turns to Mr. Alexander's report will discover that that statement is made not of "all our coastwise shipping," but only and specifically of "regular line services," which on the Atlantic, Gulf, and Pacific make up about one-eighth of our coastwise tonnage—so that your editorial statement should have read "94 per cent. of one-eighth" of all our coastwise shipping—which is quite a different thing.

The ships of these "regular line services" as a rule are not going through the Panama Canal. In the first place, most of them are not adapted to that trade. No passenger and package freight steamer from Boston to Baltimore or from New York to Jacksonville is likely to leave the service for which it is especially designed, to run from Boston or New York to San Francisco. Of the American lines actually preparing for that service, not one is controlled by a railway or owned by the combinations mentioned.

Moreover, the Panama Canal act of August 24, 1912, absolutely forbids all ships in which railways have any direct or indirect interest, and all ships owned by combinations illegal under the Sherman law, "to enter or pass through said canal." Noting this, one is in a position to appreciate the delicious humor of that assertion of Representative Sims, which you quote, that the "chief beneficiaries" of free tolls would be "largely the railroads on both coasts"! Is it strange that "the other side" "did not challenge" the distinguished navigator from the wilds of Tennessee? A joke is made to be enjoyed, not "challenged."

As to your own solicitude lest there may be some "discrimination" against foreign ships at Panama, I doubt if there is much anxiety on this point among European steamship managers. They expect that President Wilson and Secretary Bryan will win—that full tolls will be imposed on all American vessels in either coastwise or overseas trade, and that thereupon that felicitous condition described by Senator Lodge—who favors tolls for American ships but a subsidy to pay them—will ensue: that foreign governments which pay in subsidy "indirectly or specifically" the tolls on their principal national steam lines at Suez will do the same at Panama—in which case the only actual discrimination will be against the ships of the people who built the waterway and gave it to the world.

What more can foreign governments ask—save, perhaps, a White House *ukase* that any presumptuous Yankee craft approaching the canal shall be instantly sunk by the guns of the fortifications?

New Englander.

Boston, May 2.

[The Panama Act does not forbid vessels owned by railways to use the Canal—that is, if the ships compete in rates with the roads. And all the railways have filed statements with the Interstate Commerce Commission testifying that their ships do compete. In that case, they may enter and pass through the Canal like any others.—Ed. The Nation.]

TREATY OBLIGATIONS.

To the Editor of The Nation:

Sir: The following quotation from De Morgan's "When Ghost Meets Ghost" may perhaps help a few questioners to see the moral issue more clearly. Mr. Jerry began, feebly: "You can't do more than keep your word, Mo . . ." (Mo, a fine old ex-prizefighter, replies):

"Yes, you can, Jerry. You can keep your meanin'. And you can do more than that. You can keep to what the other party thought you meant, when you know. I know this time. I ain't in a court o' justice, Jerry, dodgin' about, and I know when I'm square, by the feel."

Baltimore, May 1.

IMAGINATION IN COLLEGE.

To the Editor of The Nation:

Sir: In a recent newspaper article President Nichols is quoted as saying that "the purpose of Dartmouth is to build the well-rounded man for useful and effective living. The emphasis is not at all on how to make a living, but on how to live. . . . It may reasonably be doubted if one man in a hundred ever takes from college a single fact that he can turn into money. What he should take from college are well-trained faculties which he can turn into anything he chooses." Herein are summed up the salient facts of the situation. Is not the real purpose of any college to develop personality; to give students the opportunity to find themselves and to become through study original thinkers rather than slavish imitators? And does it not all go back ultimately to the question of imagination, which is fostered or blighted according as the surroundings offer mental stimulus or merely material advancement?

College students of a generation back, looking forward to purely material work, regarded the study of the liberal arts as the necessary preparation for their career. They followed precepts and traditions which had proved their value. Nor was the purpose of their education any different—"To prepare us for complete living," says Spencer. But the age of practicality is upon us. In their efforts not to "neglect the plant for the sake of the flower" many of our institutions are cutting off the flower for the more complete nourishment of the plant.

If the study of agriculture and the mechanic arts, or the courses intended to prepare for business life, were conducted with due respect for other branches of learning, all might be well. But the analysis of all the soils in the world will not teach men to live better, to get the fullest satisfaction from life, if there be no background. A purely scientific imagination is no imagination at all. One may dream of unlimited mechanical inventions and be no better off than Lowell's brazen traveller, "who could scarce be induced to expose his unclothed body to a village of prairie dogs," yet "complacently displayed a mind as naked as the day it was born, without so much as a fig-leaf of acquirement, in every gallery of Europe."

The goal towards which our college studies should be directed is the judicious combination of specialized and general training. We do not expect a student of applied science to have a broadly liberal education, any more than the student of liberal arts is expected to talk with intelligent depth on higher mathematics, although the latter case is more common than the former. We should strive for an education of security, and by this I mean the broad education producing the type of mind which can adapt itself to varying situations, can express itself intelligently on many subjects, while at the same time it possesses a detailed knowledge of that subject in which its chief interests lie. Too many of us are inclined to overlook the fact that pleasure has come to be a legitimate aim of our modern life, and educational pleasure is the result of that appreciation of many branches of knowledge which leaves little to regret. But unfortunately this pleasure of which I speak has been perverted to mean comfort, which carries with it the inclination to follow the lines of least resistance, to specialize from the start.

President Nichols's ideal can be attained only by effecting a compromise, by striving for the secure education, the education with lasting satisfaction. Do not train students for their mission in life before giving them an opportunity to discover that mission by means of an individuality and imagination properly trained.

Elza Gordon Bassett.

Iowa State College, April 25.

FREDERIC MISTRAL.

To the Editor of The Nation:

Sir: Frédéric Mistral died one week before his golden jubilee as member of the Paris Society of Dramatic Authors and Composers. His "Mirèio," in the shape of the opera "Mireille," endeared him from the beginning to the whole French people, who could never have understood his poem in Provençal. They took his heroine so to their hearts that long ago the gloom of her tragic end had to be changed for them to a lightsome marriage; but to Mistral they have given all glory and affection for his loved creation. It is not for quite the same reason that German critics are now proclaiming him the greatest of recent French poets—and he would not have denied that Provençal is French writ otherwise. Gounod and

Michel Carré, who were responsible for the opera, presented Mistral for membership to the Society in 1864. In 1859, when the poem appeared, Lamartine, who was still the national poet of France, had already welcomed it in prose that has not lost its significance:

"A great epic poet is born to us. A true Homeric poet in this age; a poet born, like Deucalion's men, from a flintstone of the Crau; a primitive poet in our age of decadence; a Greek poet in Avignon; a poet who creates a language from a dialect as Petrarch created Italian; a poet, who, out of common patois, makes a language classic in image and harmony, ravishing fancy and ear; a poet playing on his village jew's harp symphonics of Mozart and Beethoven; a poet at twenty-five, giving forth in pure waves of melody from his genius' first flow a rural epic wherein the Odyssey's descriptions, and Daphnis and Chloe's innocent passion, mingled with Christian holy sadness, are sung with the grace of Longus and the simple majesty of the blind man of Chio."

All this may be very much out of fashion as criticism; but Lamartine saw clearly that the unrelieved tragedy of the original would never be accepted by French hearts. "The ending is sad—like two lilies lying in the same soft earth after the Rhone has overflowed the gardens of the Crau. Here the poet seems to have failed in that manual cleverness of composition wherein Virgil too failed in the Aeneid, but where Tasso and Ariosto failed never."

The aged poet is frankly prophetic in his welcome of the young troubadour. "O poet of Maillame, thou art the century plant of Provence. Thou hast grown three cubits in one day, flowering at twenty-five. Thy poetic soul makes fragrant Avignon and Arles, Marseilles, Toulon, and Hyères, and soon all France; but, happier than the tree of Hyères, the perfume of thy pages shall not pass for a thousand years."

Mistral himself, in his own extreme age, has written modestly these among other words on "My Tomb":

> Here at Maillame he dwelt;
> The old men of the land
> Have seen him haunt our paths.
> Some day they'll say—'Tis he
> They chose king of Provence;
> But his name scarce survives
> Save in the brown crickets' song.

Paris, April 8.

THE BACONIAN CIPHERS.

To the Editor of The Nation:

Sir: Apropos of your review of the latest book on Baconian ciphers, has it ever been pointed out that the printed volumes of Shakespeare's plays, both the first and second folios, and I believe the quartos as well, end alike with one word, a word which might be considered of extraordinary significance? In cataloguing the collection in the Lenox Library, some years ago, I was struck by the fact that this conspicuous word, *Finis*, standing alone at the end of each book in the manner of a signature, has not only the same number of letters as *Bacon*, but the same arrangement of alternate vowels and consonants, two and three. The resemblance between Finis and Francis is yet more striking, as in both cases we have the initial F, the n exactly in the middle with a vowel on either side and the final s. Considering carefully the make-up of this word Finis, with its two i's, one on each side of that nasal n, just as they occur in the human countenance, may we not infer that in looking for Baconian ciphers the searcher has only to use his eyes?

George De C. Curtis.

Foster, Cal., April 27.

"SIGNBOARDS" IN MAGAZINES.

To the Editor of The Nation:

Sir: May I, through the columns of the *Nation*, protest against the manner in which some magazine articles are torn into pieces by the insertion of paragraph headings.

To illustrate, let me cite an example taken at random from a weekly magazine. There I have been reading about the contradictory advice given to the departing traveller by his friends. Suddenly I find myself at the end of the thread, confronted by the announcement, in prominence that will not be denied: "In Praise of the Admirable Lubly." The fact that the first word of the next line is also exalted into typographical eminence helps to prepare me for the shock of a new chapter. Good! Enter the admirable Lubly!

I attack the next sentences with all the boldness and expectancy bred of this thorough preparation, and find myself grievously disappointed when I discover that the advice of the friends left behind is still the only topic, and Lubly remains a mystery to me. In the next paragraph Robinson Crusoe and Man Friday come on the stage, but still no admirable Lubly. Has he missed his cue?

Another paragraph, and another. By this time my memory has rejected the name Lubly as a foreign, indigestible substance. In the following paragraph I read of a small man in a uniform, stealthily entering the stateroom. It is the English manservant, the traveller's bedroom steward, by name Lubly. Ah! *mehercle*, here *is* Lubly at last, full fifty lines, four and a half paragraphs, distant from the signboard advertisement set to herald his appearance!

But even if these lines were logically placed, as they sometimes are, I cannot say that I regard them as the most grateful investment of space and ink. I can scarcely regard them, in fact, as other than an insult to the average reader. When an intelligent human being reads the ordinary, easily intelligible magazine article, he really does not care to be told at every turn "what's coming next." On the contrary, such a proceeding will impress him much in the same manner as the auditor of opera or concert is impressed if some neighbor continues to dish out, in an audible whisper, explanations on the chief points of the programme. Are not these insertions something which our magazines have adopted from the cheap daily newspaper?

Albert Lehenbauer.

Riverside, Cal., April 26.

Literature

THE PROBLEMS OF MEXICO.

Mexico, the Wonderland of the South. By W. E. Carson. Revised edition with new chapters. New York: The Macmillan Co. $2.50.

Five years ago Mr. Carson published the first edition of his work on Mexico, and recent events have led him to revise it and add new matter. A tour made as a newspaper correspondent and a fairly long residence in the country have familiarized him with the conditions and regions of which he writes. Of the descriptive parts, little need be said. From time to time, however, material for a thorough understanding of the fundamental difficulties in Mexico is provided. Such a passage is that dealing with the wide indulgence in mescal, tequila, and pulque, which have so evil an effect on the lower class. Connected with this is the amazingly high death-rate in the City of Mexico. The chapters dealing with historical matters appear to be drawn, unfortunately, from short manuals. Misleading statements are occasionally found, as that the Emperor Iturbide went to England for a time, and the whole series of events between Maximilian's execution and the *coup d'état* of Gen. Huerta is crowded into a single paragraph.

The section describing the life of the people gives a good idea of the surprising mixture of barbarism and culture in the capital, the jealous seclusion of women among the upper class, the indolence of the servants, and many of the strange paradoxes of the country. The author's personal impressions and observations are usually accurate, but the treatment of such matters as literature in Mexico is quite inadequate. Particularly good is the chapter on the Mexican woman, which discusses conditions that seem almost incredible. The present miserable state of the peon and his unhappy prospects, threatened by the system of peonage, by ignorance, drink, political oppression, and innate indolence, are fully shown.

Most interesting under the existing circumstances is the chapter dealing with events from Diaz to Huerta. Mr. Carson holds that the career of Diaz proves that the benevolent military dictatorship under the form of a pure democracy was exactly the sort of government which Mexico needed, and which it still needs. He records the amazing progress under this great leader's direction, in which foreign investments leaped from $500,000 to $1,400,000,000. Very accurate, however, is his estimate of such government:

That he had enormous difficulties to contend with cannot be denied; but even his admirers are forced to admit that in

the latter years of his Administration he might have done much more for the great mass of the people than he succeeded in accomplishing. As it was, he reaped the harvest of revolution and civil strife which so many autocrats have gathered through their blindness to the consequences of their acts and follies. It is largely owing to the lack of a substantial middle class and a system of small land ownership that Mexico to-day is in such a deplorable condition.

Yet if Diaz could not educate his people and prepare them for actual constitutional government, how can any other benevolent dictatorship succeed? Lesser men, without one-tenth of his capacity and breadth of view, are not likely to do any better under conditions which are enormously more complex than when Diaz gained the power.

Mr. Carson reviews the tragic events of the ten days' fighting in the capital. He thinks that the killing of Madero and Pino Suarez was due to a military conspiracy among the soldiers of their escort on the way to the penitentiary, in revenge for Madero's murder of Riveroll. He describes the personality of Gen. Huerta with evident admiration. After this addition to the first edition of his book, Mr. Carson expounds the machinery of government in Mexico and shows how unsuccessful has been the blind copying of the letter of the Constitution of the United States.

The final chapter deals with Mexican Problems of To-day. The author here advocates the theory of dictatorship as the only suitable form of government for Mexico, and regrets our failure to recognize Huerta, an action which he considers the cause of the continued disturbances. He asserts the need of a Lord Kitchener for Mexico, and lacking one, of a strong Mexican substitute. He repeats the charge against the oil companies, agreeing with another writer that "the whole Mexican situation has reeked with crude petroleum."

Many of the words quoted from Spanish are incorrectly spelled. "Criadors" as the equivalent of "waitresses" is novel. Certain passages, true at the time of the first edition, have been left unrevised in the second. President Diaz no longer lives in his house on Calle Cadena; the Moorish kiosque has not stood in the Alameda for five years; and some of the illustrations are almost traditional, they are now so out of date. Most glaring is the statement that in the old days, on account of the difficulties of communication and transportation, revolutions easily gained head, but the present strong government and the resources at its command result in "little chance of a revolution succeeding, even temporarily." Since these words were written, not one revolution but two have succeeded, and the world now awaits the success of a third.

CURRENT FICTION.

Idle Wives. By James Oppenheim. New York: The Century Co.

No doubt this is a sincere attempt on the part of the author, a writer of popular magazine fiction, to do a novel with a purpose. Like many another earnest man, he observes with consternation the large number of young American wives who have nothing to do but be unhappy. If they would only wash their own dishes and take care of their own children, we should have less neurasthenia and fewer divorces. Not a new lesson, but still worth enforcing, we suppose. It may be that Mr. Oppenheim has taken the right means of enforcing it upon the audience he is aiming at. The vein of voluptuous and at times well-nigh hysterical sentiment which he has found to be effective in his stories for the magazines is here worked assiduously. This is well enough in a tract, but rather contemptible in a work of art. Always we must be insisting that a novel is dead unless it contains human beings with the breath of life in them. The married pair over whose relations we are here expected to yearn are infinitely less real than Punch and Judy. This idle wife and busy husband are mere confused outlines of two wretched types of domestic egotism. Their children are supplied for the performance by the property man. For real characters and action are substituted a quasi-moral picture-show, much sentimental commentary, and not a little of that "frank" speech about matters of sex which it is now the fashion to affect. We submit the opinion that even a physician-novelist may go too far with obstetrical details.

The Heart's Country. By Mary Heaton Vorse. Boston: Houghton Mifflin Co.

The promise of a love story, implicit in the title, is thoroughly borne out. It is less, however, the romance of two souls than a consistent analysis of a girl's mind and emotions under the stress of three successive courtships—the last a successful one. The book has the atmosphere of New England fifty years ago. The closest friend of Ellen Payne tells how the latter, a lovely and ardent girl of eighteen, meets and falls in love with a serious young teacher; how she outgrows this passage to carry on a whirlwind affair with a young man of her own fiery temperament whom she is at last compelled to give up through fear of a nameless undercurrent in his character; and how at last an accident, endangering the life of an old chum, reveals to her that he is the long-sought object of her real affection. In part, the friend through whom the book is written draws her materials directly from observation; in part, they are conveyed by long and illuminating letters from Ellen. The study of a sensitive and attractive girl's heart is done with sympathy and with insight. To those who do not mind introspection, and who are not wedded to complexity of action, it should make a wholesome appeal; though the book is wholly feminine in outline and tone.

Gillespie. By J. MacDougall Hay. New York: George H. Doran Co.

This is a harrowing story of the kind which can only be excused on the ground of its "truth to life." In its realistic character and in the substance of the narrative it strongly suggests another story, by a young writer who did not live to make his calling sure: the "House with the Green Shutters" of George Douglas. The Scottish village setting, the prosperous trader whose pride and greed are to have their fall, his slack wife and imaginative but degenerate offspring, the domestic tragedy of blood towards which all steadily marches—these things both novels have in common. Similar material will be remembered in more than one of the Dartmoor tales of Eden Phillpotts.

We all know the dreadful frequency with which "rural tragedy" means patricide or fratricide—as if the range of rustic action were narrow enough to keep even murder in the family. Every week, every day almost, these savage and apparently wanton acts are reported in the newspapers. But are they wanton? Have they no meaning, no aspect of real tragedy, or at least of real pathos? Such questions may appeal strongly to a serious writer of fiction. Mr. Phillpotts has commonly held a brief for the defence. His murderers are not devils, but warm flesh and eager spirit, like you and me, men or women thrust slowly onward by defect of character or unhappy play of circumstances to the sin of Cain. This is true of young Gourlay in the "House with the Green Shutters." Poltroon and drunkard though he be, he strikes his fatal blow in a last flicker of manhood. Old Gourlay, with murder in his own heart, almost deserves to die at his son's hand. Mr. Hay's "Gillespie" is another Gourlay, with less physical courage and more cunning. Fate takes him not by bereaving him of his wealth and power, but by showing him their uselessness. His neglected wife becomes a drunken wanton and in her final madness kills their son. No detail of the act is slighted: ". . . In a horrible silence she, with the savage strength of a demoniac, slashed his throat open through the muscles, till the razor scraped on the surface of the bones of the neck. A huge gout of arterial blood spouted on her face, blinding her, and pumped far across the room, splashing the wall. . . ."

When this kind of "realism" in detail

is employed by a writer who is essentially romantic and even sentimental, the total effect is simply distressing. Mr. Hay begins with a portent, forewarning that his chief characters are to lie from birth under an hereditary curse. The working out of the curse is described with an emotional intensity far removed from the grim ironic calm of true realism.

Quick Action. By Robert W. Chambers. New York: D. Appleton & Co.

In this volume of ingenious yarns Mr. Chambers has a little fun with his serious-minded critics. There is a preface in which we are told that "the author offers this humble volume to a more serious audience than he has so far ventured to address." It has a Latin motto, not quite correct to be sure, "Amor nihil est celerius." The six stories, all illustrations of this principle, are told by a beautiful crystal gazer, Countess Athalie, to a group of her admirers, including a young realistic novelist. All the stories are bits of real life which she has seen in her crystal. All the heroes have the commonest of names—Jones, Smith, Brown, Gray, Green, White—and, of course, the most extraordinary things happen to all of them. Brides from the blue, so to speak, descend upon Jones and Smith, business trips of Gray and White turn into sudden romances. The most entertaining experiences are those of Brown and Green. Green is a banker who scoffs at the impossible "best-sellers" of his friend Williams. Brown, at twenty-four, "resolutely graduated from Harvard, stepped out into the world, and looked about him very sternly. All was not well with the world. Brown knew it. He was there to correct whatever was wrong. And he had chosen Good Literature as the vehicle for self-expression." For these gentlemen Mr. Chambers reserves his best adventures; incidentally he pokes a little fun at himself. On the whole, "Quick Action" is a clever and readable apologia.

The Substance of His House. By Ruth Holt Boucicault. Boston: Little, Brown & Co.

Wondrous beauty, utter sweetness, and a degree of devout conscientiousness unsurpassed in the calendar of saints are this heroine's modest endowment. Obviously designed for exemplary purposes, her mission is to show how strict obedience to the teachings of Mother Church will bring a woman safely through the most vexed ethical dilemmas known to the holy state of matrimony. Lady Mary had been the innocent victim of an international marriage, and met too late the man she should have married. Through her love for Carmichael she is subjected to two crucial tests. The first comes when she is offered her freedom by her considerate husband; the second, after the husband's death and her marriage to Carmichael, when she is confronted by the prior claim of the woman who calls herself his common-law wife. These are the salient points of this demonstration of idealism. Dramatic novelty is introduced by reversing the usual motives in the first of these scenes—it is the husband who urges love as the supreme law, and Mary who maintains the superior sanctity of the marriage vow—and, in Carmichael's trial for bigamy, by the expedient of having Mary deny on the witness stand the legality of her own status. That the path of duty proves too rigorous for frail mortality reflects no discredit on the author's thesis.

The scenes and circumstances of the story belong to modern London and California, but Mary's convictions are borrowed directly from mediæval legend. There are passages mingling amorous ecstasy with religious exultation, which seem sadly in need of an antiquated setting.

The Full of the Moon. By Caroline Lockhart. Philadelphia: J. B. Lippincott Co.

Miss Lockhart adopts the ingenious expedient of bringing a heroine from New York on no pretext other than a desire to sample life on the Mexican border. Pretty, well-bred, and charmingly gowned, Nan herself proves something of a curiosity in Texas down by the Rio Grande; and is treated to one exhibition of local color after another in gratifyingly rapid succession. After being abducted by a "bad man" and falling in love with a handsome cowpuncher, she is rescued from further imprudence by a formerly misprised suitor from home. He it is who "gets the drop" on murderous Mexicans, saves an innocent victim from frontier justice (a particularly bad bit of burlesque this), and in the very jaws of a cañon flood gives his horse to a lady. He is not only *deus ex machina*, but the standard of perfection by which Nan's cowboy shows up a very faulty mortal indeed, and the poverty of frontier life becomes glaringly apparent. Needless to add, Nan returns contentedly to the effete East.

The Red and the Black. Translated by H. B. Samuel. New York: E. P. Dutton & Co.

De Stendhal's introspective autobiography of Julien Sorel, with its account of the crimes, adventures, and upward scramblings of that morbid and individualistic youth, has been repeatedly translated, and just as often suffered to pass out of print. The latest English rendering is by H. B. Samuel, late scholar of Corpus Christi College, Oxford, and compares favorably with those previously essayed by E. P. Robins and C. Tergie. The difficulties of Stendhal's style, which he is said to have modelled on the Napoleonic Code, reading a few pages before every period of composition, are not great. The worst charge to be brought against the translation is that a number of flagrant errors in proofreading have slipped by. Student and general reader alike may thank Mr. Samuel for making accessible in our tongue a work often ranked not far below Balzac's best novels, and of immense importance to the literary historian. "The Chartreuse of Parma" is already obtainable.

A NEGLECTED HERO.

The Marquis of Montrose. By John Buchan. New York: Charles Scribner's Sons. $3 net.

Mr. John Buchan made an enviable reputation as a charming essayist and raconteur during his undergraduate career at Brazenose; he increased it during the next ten years, by branching out into the field of modern politics and economics; but the work which lies before us marks his first serious effort in the line of historical biography. He has certainly been fortunate in his choice of a subject; for Montrose—in many ways the most heroic figure in the annals of Scotland—has been strangely neglected by historians. Mr. Buchan's book will go far to make him known as he deserves to be. Brief, compact, charmingly illustrated, and very readable, its statements are almost invariably based on the very soundest authorities. Best of all is the author's sense of proportion and perspective. Montrose is placed, not only in his proper relation to the men and events of his time, but also to the whole course and current of the history of his native land.

The centre of the stage is occupied, as one would expect, by an account of the "year of miracles" which began with Montrose's victorious onslaught at Tippermuir in September, 1644, and witnessed his successive triumphs at Aberdeen, Fyvie, Inverlochy, Auldearn, Alford, and Kilsyth, only to terminate in the tragic surprise and massacre of Philiphaugh in September, 1645. The terrible disadvantages under which the Marquis labored, the absence of discipline and subordination of his Highland levies, and the fatal lack of adequate equipment, are all made clear. His extraordinary eye for the country in which he fought, his supreme gift of suiting his scheme of battle to his material, using his horse now as mounted infantry and now as cavalry, and getting full value from the impetuous Highland charge, and, last of all, his unique power of leadership, are described in glowing terms. Interesting comparisons abound. The late S. R. Gardiner is quoted as

rating Montrose's military genius as higher than that of Cromwell (p. 289), and Mr. Buchan points out that "Auldearn was in miniature an anticipation of the tactics of Austerlitz" (p. 145). It is just here, if anywhere, that the author tends to overstate his case. All students of military history recognize the fact that the leadership of an army of five to ten thousand men is a vastly simpler matter than that of a larger one. Montrose never had more than 6,000 men under his command; Cromwell had 30,000 at Worcester, 11,000 at Dunbar, 13,000 at Naseby; Napoleon had 65,000 at Austerlitz, 190,000 at Leipzig, and 125,000 at Waterloo. It is certainly dangerous to compare the leaders, when the forces at their command and the consequent difficulty of managing and provisioning them, were so very dissimilar. By the same token, parallels between the English generals in the Great Civil War and the commanders in the contemporaneous struggle in the Empire, where the forces employed were vastly larger, are likely to be exceeding misleading.

Montrose's religious and political views are in some respects even more interesting than his brilliant career as a soldier. He has had to wait for more than 200 years to come into his own in this respect. "The history of Scotland was written first by the Divines and then by the Whigs, so it is small wonder that Montrose has fared badly." As Milton in England discerned that "the new presbyter was but the old priest writ large," and Cromwell struggled valiantly against the substitution of parliamentary for royal tyranny, so Montrose in Scotland foresaw the consequences of the intolerant theocracy of Argyle. Against it, as against monarchical absolutism, he advocated the rights of the people; "he stood for the Scottish democracy, both against those who would crush it and those who betrayed it with a kiss." But he had the ability to discern that "a direct plebiscitary government was impossible in the Scotland of his day," "that the common people were scarcely conscious of political rights, and needed rather to be wisely protected than to be endowed with ill-understood duties." For the purpose of securing that protection he preferred monarchy, not because he shared the contemporary belief in the Divine Right of Kings, but because it happened to be the form of government in existence in his native land. Kingship, he believed, was necessary to bring order out of chaos and "enforce moderation in a rabble of fanatics and debauchees"; and therefore he drew the sword. But that kingship, he also discerned, must be modified, *pari passu* with the progress of society, through the concession to the common people of political rights, as soon as they should prove themselves able wisely to exercise them. He may, therefore, justly be said to have anticipated the political arrangements of the nineteenth and twentieth centuries: "his ideals are in the very warp and woof of the constitutional fabric of to-day."

EXPLORATION IN CHINESE TURKESTAN.

Les Documents Chinois découverts par Aurel Stein dans les Sables du Turkestan Oriental. Publiés et traduits par Edouard Chavannes. Oxford: Imprimerie de l'Université.

A great many of those remarkable discoveries made by Sir Aurel Stein during his celebrated journeys* in Central Asia would be dead material but for the interpretation of philological experts. This is especially the case with the Chinese documents obtained from the desert, dating, as far as could be ascertained, from the beginning of the first century B. C. to some time during the T'ang dynasty (618-907 A. D.). Under Professor Chavannes's treatment these documents, of which there are nearly a thousand, are restored to new life. The book he has devoted to these specimens of ancient and mediæval Chinese writing is in every respect a masterpiece of Sinological research and the methodical manner in which he has succeeded in extracting valuable results from the hundreds of partly mutilated and very difficult short texts would be a credit to any of our best workers in classical archæology.

The inscriptions, which have been reproduced in an Appendix containing facsimiles (with few exceptions in the original size) of about nine hundred specimens, are partly written on wooden tablets, partly on scraps of paper, and these represent the oldest types of Chinese writing materials of their kinds. It is well known that, before the invention of paper in the second century A. D., the Chinese wrote on bamboo slips or thin tablets of some other wood; but this mode of writing was abandoned later on, though wooden tablets dating from periods as late as the T'ang dynasty have still been found. Professor Chavannes divides these documents into three divisions, according to the time in which they appear to have originated: (1) Those of the Han dynasty (98 B. C. to 153 A. D.); (2) those of the Tsin dynasty (263 to 330 A. D.); and (3) those of the T'ang dynasty (up to about the ninth century A. D.). During the Han dynasty the greater part were written on wooden tablets; only three fragments of thin paper have, on the ground of circumstantial evidence, been assigned to the second century A. D., and these must be looked upon as the oldest specimens of paper now to be seen anywhere in the world. Of the wooden tablets the oldest, so far as can be determined by a date appearing in the inscription, goes back to the year 98 B. C.

The greater part of the documents are of importance not so much by reason of the contents of their inscriptions, many of which contain merely fragments of domestic, military, or governmental records and great numbers of Buddhistic texts, but on account of the material on which they are written and the style of writing used. The most interesting discovery, and for this reason receiving the first place among Professor Chavannes's notes, concerns a few fragments of an ancient glossary compiled during the years 48-33 B. C., under the title "Ki-tsiu-chang," a sort of primer used in teaching young folk the elements of the language. The "Ki-tsiu-chang" was most widely circulated during the first few centuries A. D., and was employed as a model for copying as late as the seventh century, when the well-known scholiast, Yen Shï-Ku (579-645), republished it with a commentary which has become the basis of the work still existing under the title "Ki-tsiu-p'ién," edited with notes of Wang Ying-Lin of the thirteenth century. A copy of this work is in a rare collection of reprints owned by Columbia University. This edition, however, and a few others now existing, are not based on the original manuscripts of the Han dynasty, since which period the style of writing Chinese characters has undergone considerable changes. The wooden slips obtained from the sands of Eastern Turkestan are therefore of the utmost importance as throwing authentic historical light on the development of Chinese writing.

Some of these slips represent undoubtedly the writing of the earlier Han dynasty, and are thus the oldest specimens of Chinese "writing" in the proper sense of the word; that is, if we do not include in it inscriptions chiselled in stone. The characters look odd, but they are, to one accustomed to handle Chinese printed books and manuscript, not nearly so difficult to read as one might imagine from specimens derived from much later periods, of the so-called grass-character, and from the seal characters of the "Shuo-wön Dictionary," published in 100 A. D. It seems that the style represented in the "Ki-tsiu-chang" has served as a model by which writers of comparatively late periods have educated their hand. The handwriting of the Emperor Ming-huang, of the T'ang dynasty (713-752 A. D.), as represented in the celebrated epitaph he wrote with his own hand of the Türk prince Kül-tägin, and in a stone inscrip-

*"Ruins of Desert Cathay." London, 1912. See review in the *Nation*, Vol. XCV, No. 2459. This work followed after an interval of five years the description of his former journey published under the title of "Ancient Khotan." Oxford, 1907. See review in the *Nation*, Vol. LXXXVI, No. 2232.

tion found on Mt. T'ai-shan, bears the almost identical character, and the writer of this review even received not more than twenty years ago a Chinese letter written with characters quite similar in style.

Professor Chavannes's book ought to be in the hands of every scholar interested in Central-Asiatic research.

SPANISH POETS.

The Oxford Book of Spanish Verse. Chosen by James Fitzmaurice-Kelly. New York: Oxford University Press. $2 net.

"The Oxford Book of Spanish Verse," chosen and edited by Prof. James Fitzmaurice-Kelly, is the most recent addition to this well-known series. The editor's fine critical sense and sound scholarship render him peculiarly fitted for his task, and he has acquitted himself in his usual happy manner. Wider in scope than the similar anthologies compiled by Menéndez y Pelayo and other Spaniards, the present book offers by far the completest and most judicious choice of Spanish lyric poetry ever published within the limits of a single volume. The collection gives an excellent *aperçu* of Peninsular verse from the thirteenth century down to the present day. It is admirably suited to serve as a textbook in universities.

In gathering from the most diffuse of literatures, it was necessary for the editor to govern his choice by certain hard-and-fast rules. Exigencies of space and a desire to avoid inclusion of fragmentary excerpts have led him to omit selections from epic and dramatic poets. The drawbacks of such a course are more apparent in a Spanish anthology than in one of any other literature; for the epic and the drama are the two chief glories of Spanish poetry. The epic *genre*, it is true, is represented by a judicious choice of ballads, but there appears no excerpt from the "Poem of the Cid," the most national of Spanish poems. Owing to the same editorial principle, we miss the name of Ercilla, certainly one of the leading Renaissance poets. The reader, too, can gain but a faint idea of Calderon's genius from the sonnet here offered as a sample of his work. Segismundo's soliloquy from "La Vida es Sueño" would have been a far more characteristic morsel. But all this the compiler must have realized better than anybody else. Who can blame him for refusing to open the flood-gates to the vast ocean of Spanish dramatic and epic poetry? We merely wish to indicate that the system followed has excluded the work of many of Spain's great poets, and that some who have been admitted are not represented by their best work.

Proportion has been well maintained throughout. In that part devoted to the Middle Ages we are spared the prosy naïveté of Berceo, and are liberally regaled with the vagrant wit of Juan Ruíz, that Friar Tuck turned poet. The dreary artificiality of John II's rhyming courtiers is passed over lightly. Instead, "The Coplas" of Jorge Manrique, the gifted singer of "the sublime commonplaces of death," are given entire. In the Renaissance period, the places of honor are assigned to the Italienate Garcilasso de la Vega, Luís de León, than whom, Fitzmaurice-Kelly thinks, "the Peninsula has produced no more superb poetical temperament," Gongora, Lope de Vega, and the mordant Quevedo. Cervantes is represented by a lone sonnet, a courtesy to which the great novelist, considered as a poet, is barely entitled. Nearly one-half of the volume is devoted to the nineteenth and twentieth centuries. Esponceda and Núnez de Arce are indubitably the two greatest figures in this period. Doubtless Spaniards will regret that Zorilla is not more generously represented. But mere grace and facility are more appreciated in Spain than elsewhere. The contemporary school, led by the Nicaraguan, Rubén Dario, brings the volume to a close. They deserve credit for their effort to avoid improvisation, that besetting sin of many a Castilian poet. No more conscientious craftsmen than some of these can be found in any land.

Mr. Fitzmaurice-Kelly has never done anything better, in brief compass, than his introductory essay on Spanish poetry. His skill in analysis and talent for pointed characterization are once more in evidence. Brief biographies of all the poets whose works have been drawn from add interest and value to the book.

Notes from Abroad

[We omit "Notes" from this issue owing to the large amount of kindred matter in the Educational Section. The omission of certain other regular features is explained on similar grounds.—Ed. The Nation.]

THE agitation for admitting women to the legal profession in England has been revived of late, and has enlisted in its support several distinguished names, including that of the Attorney-General, Sir John Simon. The promoters of this change, however, are likely to find that this is a most inopportune time for getting a hearing. A Past Master of the City of London Solicitors' Company, for instance, reminds his fellow-lawyers that for several months past many educated women have been exhibiting an utter want of respect for the law. Ought such persons, he asks, to be allowed to have any part in the administration of the laws or the conduct of legal proceedings? His remonstrance is the more pointed in view of the fact that one of the Pankhursts is an LL.B., and would presumably be one of the first women to claim admission to the roll.

THE British Association rarely goes outside the mother country to hold its annual conferences, and special interest has therefore been aroused in the meetings to be held in Australia in August. Labor politicians are not usually supposed to care much about science, but the Federal Government of the commonwealth has sent the Council of the Association $75,000 to pay the travelling expenses of 160 invited guests. Nearly 200 others are expected to undertake the journey. In Australia itself the way of the visitors will be smoothed by free railway passes on the state railways, and by hospitality on a generous scale. Some of the members are hoping to supplement their attendance at the sessions by taking part in geological and anthropological expeditions inland and in the South Seas.

IN Wigmore Street, in the heart of the London doctors' quarter, there will be opened in May, as a permanent institution, the Historical Medical Museum, which has been developed out of the temporary exhibition arranged in connection with last year's International Congress of Medicine. Admission will be restricted to members of the medical and kindred professions. The Museum will include many relics of famous doctors, and such curiosities as models of sixteenth-century hospitals and early laboratories. The section devoted to charms and amulets is widely representative, ranging from the anti-ophthalmic talismans of ancient Egypt to the strands of red silk wound around the necks of Norfolk children to stop bleeding from the nose.

THE latest innovation at a London theatre is said to be an imitation of an Oriental custom. The manager of the Coliseum is arranging for a run of serial plays, producing one act a week until the drama is completed. He will copy the practice of editors who publish serial tales, and will preface each later act by a synopsis of what has gone before. It has been suggested that this method might be tried with "Hamlet," so as to get rid of the necessity of cuts.

OXONIANS of middle age will rub their eyes when they come across the announcement that a University Co-operative Society has been formed and will open a store next term in the High Street. Yet the venture is not such an astonishing one. The coöperative movement has long ceased to be a purely working-class affair. Many years ago the example set by the mill operatives of Rochdale was followed by members of the Civil Service and officers of the Army and Navy. Nowhere is the credit system more mischievous than at Oxford, where the obsequiousness of touting shopkeepers often tempts young men to run up accounts they will afterward find it difficult to meet. Canon Scott Holland and Prof. W. G. S. Adams will be among the senior members of the committee, but the management will be mainly in the hands of undergraduates.

THE Marseillaise of Labor, running—

'Tis the final struggle—
Stand together and to-morrow
The Internationale
Shall be Mankind?

has a beginning of fulfilment in negotiations made necessary by the closing of the Russian frontier to German wheat and rye. Just as Irishmen go for the harvest to England and Italians dig in railways and Hungarians in mines in America, while Spaniards who have worked at Panama are now found along railway tracks near Paris, and Belgians and Italians come harvesting in eastern France, so German agriculture employed last year 412,000 foreign laborers, and German industry 355,000 foreign workmen. In Germany, these foreigners are mostly Slavs from Russia and Austria. Among such agricultural laborers alone there were 260,000 Russian Poles. Of the total number from Austria, 281,000, half were Poles. There were 69,000 Italians, 64,000 Belgians and Hollanders, and 20,000 Hungarians. Without these foreign Poles, East Prussia would be unable to harvest her crops. All this has to be considered in the important negotiations for new treaties of commerce now beginning throughout the Continent of Europe; and it has to be taken into account in all war or anti-war agreements.

ONE or two Paris journals remembered that March 26 was the centenary of the death of Dr. Guillotin, who narrowly escaped decapitation by the machine bearing his name. On October 10, 1789, while the Revolution was still young and philanthropic, he demanded its adoption "to lessen suffering and automatically to make sure of equality before the executioner. With my machine, I cut off your head in the twinkling of an eye, and you do not feel the least pain." Every one laughed, and the vote was unanimous; but when, in 1792, the "little Sainte Guillotine" became the deadly instrument of the Terror, the good Doctor who had never foreseen this protested loudly. He was imprisoned, and would have had to "kiss the Widow" forever bearing his name if Robespierre had not made acquaintance with her first. Ten years later, Dr. Guillotin drew up his own obituary notice, enumerating his various professorships at the Paris Faculty of Medicine and his vaccination experments—but omitting carefully all mention of the guillotine.

THE Souvenir presented to Queen Mary by the committee of Parisian Commerce, in celebration of the English sovereigns' visit, is a notable piece of hand embroidery. It is an apotheosis of the *entente cordiale*, representing France welcoming England, who holds the olive branch. Below, to right, is the British lion, whom a genius crowns with flowers. To left is the Gallic Cock beside a cornucopia pouring out its riches. In the background, the horizon is a calm sea with the rainbow of Peace against the sky. The border is of arabesques formed of roses, thistles, and shamrocks, with the arms of Great Britain. At the four corners there are Louis Quinze medallions showing manifestations of *entente cordiale* between the two nations in the past: (1) Francis I and Henry VIII at the Field of the Cloth of Gold; (2) King Louis Philippe and his English house of Claremont; (3) Queen Victoria and Emperor Napoleon III at the Paris Opéra; (4) King Edward VII visiting President Loubet in Paris. The silver gilt frame, with mother-of-pearl and ivory incrustations, has Queen Mary's coat of arms between those of London and Paris.

ONE kind of literature credited to America has had heavy sales of late years all over France. It is published in paper-covered numbers at five cents each—"Buffalo-Bill," 321 numbers; "Nick Carter," 317; "Capitaine Morgan," 200; "Nat-Pinkerton," 320, and still running, like "Texas-Jack," 270. The sales in France must have gone into the hundred thousands. The numbers are "printed in German" by the same house which prints for German consumption lurid tales attacking the French "foreign legion."

Music

SEVENTEEN THOUSAND OPERA LIBRETTOS.

Catalogue of Opera Librettos Printed Before 1800. By Oscar George Theodore Sonneck. Washington: Government Printing Office. 2 vols. $2.

More than 30,000 operas have been performed in Europe and America since the year 1597. The repertory of the Metropolitan Opera House during the season just closed included thirty-six different operas. Annesley's "Standard Opera Glass," which is perhaps the most comprehensive collection of its kind, contains, in its edition for 1899, the plots of 123 operas, and of these at least forty-eight are obsolete. By a liberal estimate, of all the operas ever composed, not more than seventy-five are now alive and more or less popular. That there is a good deal of interest concerning these is shown by the abundance of books in the market similar to the one just referred to, and the large number of editions which some of them have passed through.

What of the discarded operas? A few of them are referred to in the elaborate histories of music—at least, their music is spoken of; but concerning their librettos hardly any information has been available. The indefatigable Mr. Sonneck, chief of the Division of Music in the Library of Congress, now comes to the rescue with two volumes, amounting to 1,674 pages, devoted to opera librettos printed before the nineteenth century, and there is an intimation in the preface that another volume, concerned with the librettos of the nineteenth century, will follow in a few years.

Even the industrious Mr. Sonneck would not have been able to give the world such an impressively comprehensive catalogue had he not been able to avail himself of the labors of a German, Albert Schatz, of Rostock, who spent forty-two years of his life in collecting librettos, as well as material for a dictionary of operas. In 1908 Mr. Schatz, being in feeble health and feeling that he could not complete his task, offered his collection to the Library of Congress, which promptly purchased it. It comprised about 12,000 opera librettos and a few hundred librettos of oratorios and cantatas. Using this as a nucleus, Mr. Sonneck gradually built up the collection now before us. Comprehensive though it be, it is far from being complete; but the editor hopes that others will now be in a position to help him fill up gaps. Those left by Mr. Schatz were chiefly in the realm of opera in France, Russia, Scandinavia, Bohemia, Hungary, Spain, England, and America. Mr. Sonneck thinks it is a safe estimate that the total number of librettos which have accrued to the Library of Congress by purchase, copyright, gift, or otherwise now reaches, if it does not exceed, 17,000.

Heretofore the only printed catalogue of librettos has been that of Wotquenne, of the Royal Conservatory Library of Brussels. This, however, covers only one century (the seventeenth), whereas Mr. Sonneck's, when completed, will cover the three centuries of the existence of this young art. At first thought, nine-tenths of the matter in this catalogue would seem to come under the head of useless knowledge; but Mr. Sonneck, in his preface, advances sundry reasons why such a collection is of value, especially to historians and other students of operatic evolution. He is inclined to think, and with reason, that the very foundations of opera were laid by the librettist, Rinuccini, as much as by the composers, Jacopo Corsi, Peri, or Caccini. To most persons the word libretto suggests a thing which is neither drama nor literature, and there is abundant reason, even in recent productions, for this notion; but it must be remembered that not only the opera texts of Wagner, but those of Gilbert, Maeterlinck, and, in earlier days, of Zeno, Metastasio, Goldoni, Quinault, Favart, and others, come under the head of high-class dramatic literature, although in judging them it must be remembered that they had to be constructed with special reference to music, and therefore followed different standards from those of the drama without music. This is what is so often forgotten in estimating the value of the poems of Wagner and of others.

For a long time the librettists, particularly in Italy, where opera originated, were the too obedient servants of the composers. Metastasio resented this submissiveness, insisting that librettists had important problems of their own to solve. How difficult these prob-

lems are may be inferred from the scarcity of librettists as compared with the abundance of playwrights. All the composers complain of the difficulty of getting suitable plots and texts. Puccini, for instance, spends years reading manuscripts, and then he usually falls back on some play that has succeeded. He, nevertheless, holds that the music should dominate the play, as it really does in the operas of Wagner, notwithstanding all his theorizing and preaching.

Among the many interesting notes Mr. Sonneck has contributed to this catalogue there are several which show that these questions received serious attention long before Wagner. Isaac Bickerstaff, for example, declared (1765) that the best composition of the greatest master would not make a contemptible poem pass with an audience. Of particular interest, at this moment, when Richard Strauss's "Legend of Joseph" is being staged, is the remark of John Burgoyne (1781) that "music, if employed to express action, must be confined to dumb show. It is the very essence of pantomime; and we have lately seen upon the opera stage how well a whole story may be told in dance." HENRY T. FINCK.

Busoni, who has been engaged by Hanson for another American tour next season, has composed an Indian Fantasie for piano and orchestra, which is said to embody "the impressions received during his last visit to America."

An attractive souvenir of the opera season is Kobbé's "Opera Singers." This book, published by the Oliver Ditson Company, is kept up to date. Caruso, for instance, who was not in the first edition, leads off in the sixth edition with half-a-dozen pages of biography and eight character portraits. Four favorites of the day, Geraldine Farrar, Johanna Gadski, Olive Fremstad, and Mary Garden, are treated at length, and Nordica has two pages. There are many full-page portraits, mostly in costume.

The following operas will be given at the Wagner-Mozart festival at Munich this summer: Wagner—"Parsifal," July 31, August 10, 19, and 28, and September 7, and 15; "Der Ring," August 12 to 17, and August 31 to September 5; "Tristan und Isolde," August 4 and 22 and September 10; "Die Meistersinger," August 7 and 25 and September 12. Mozart—"Figaro's Hochzeit," August 2 and 27; "Die Entführung aus dem Serail," August 6 and September 14; "Don Giovanni," August 9 and September 9; "Die Zauberflöte," August 21 and 29; "Cosi fan tutte," August 24.

A month ago "Parsifal" had already been sung twenty-two times at the Scala, in Milan, and was still drawing crowded houses. Similar results have been achieved in cities all over Europe, including London, where the series of twelve promised performances was extended to fourteen. This means that hundreds of thousands of lovers of music are delighted that the efforts to keep up the Bayreuth monopoly of "Parsifal" for the benefit of Wagner's millionaire heirs were not successful.

Munich has been saving its "Parsifal" première for this summer's Wagner festival. The part of Kundry has been assigned to the American artist, Edyth Walker.

Finance

THE MOVEMENT OF EVENTS.

When the stock market last week, whose course in the week preceding had plainly indicated the probability of a general and severe decline, suddenly reversed its form—starting out on Monday with initial advances of ½ to 2 points, rising further on that and the succeeding days, and rushing into a really violent recovery on Friday—the reversal of the movement was naturally ascribed to the change in the Mexican situation. That change had certainly been very great—how great, the Stock Exchange seemed only slowly to realize. Whether the beginning of a serious war with Mexico would or would not have served logically to demoralize our financial and business affairs, the facts remained that wars are apt to have just that effect, that the week's heavy break might have been interpreted as a "war market," and that the situation which it was "discounting" had been suddenly changed, over Sunday, from open war to at least a truce, if not to actual peace. To a very great extent, this is the explanation of the market.

But it was not the single explanation; at any rate, it was complicated with other considerations. When Europe, on Friday of last week, suddenly began pouring out stocks upon the American market—not until then very seriously disturbed—Wall Street declared at once that, even if financial New York had received the Mexican news with composure, London and the Continent had taken fright at it. But when it appeared that British consols and English home securities were breaking more heavily than our own, there was a bewildered pause in drawing inferences. Presently came cable dispatches, declaring that the trouble was not "Mexico" at all, but Europe's own affairs. When, further, it was asked, with some surprise, what had happened in Europe to provoke that sudden liquidation, the foreign stock exchanges answered that money rates were rising; that financial Paris was again on the verge of collapse; that the Continent was preventing the Bank of England from getting the new supplies of Transvaal gold; that Russia and Germany were growing quarrelsome; that the old Austrian Emperor was dying, and that civil war was about to break out in Ulster.

At the beginning of last week, the foreign markets turned to recovery as suddenly as did our own. British consols, which had fallen 1⅜ the week before, rose nearly a point; French 3 per cents, which had gone down ⅜, recovered more than 1 point; German 3s regained half of their 1-point decline; Russian 4s advanced ½ after falling 1½. How was all this to be explained, in line with the causes assigned by Europe for the break?

The rise in London discount rates, from 1¾ per cent. on April 1 to [illegible] last week, may have been disconcerting to people who had reckoned on continuance of abnormal ease; but it was also a corrective to the adverse foreign exchanges. On April 1, money earned fully 1 per cent. more at Paris or Berlin than at London; it was easy, then, for the Continental markets to borrow on Lombard Street, depress their exchange on London, and draw gold. On Saturday, the London money rates were squarely up to those of the French and German markets, and the process was not so easy. This was in reality a favorable change, which London itself may have misjudged.

Since the Paris Stock Exchange gave a particularly good account of itself last week, and since rentes recovered more rapidly than any other European Government security, it is in point to ask whether London may not, as on so many previous occasions, have become more alarmed about the French situation than Paris was itself. The Austrian Emperor is eighty-four years old; any illness incurred by him is likely enough to bring the end, and it has been the habit of Europe to predict a general break-down of the political structure of the Empire when Franz Joseph, long the personal link in a combination of heterogeneous and jealous states, should die. But the old Emperor survived, and meantime Europe had the opportunity again to ask the question, whether an event long expected, long dreaded, and long prepared for with the greatest care, was not apt to turn out a far less formidable political catastrophe than had been imagined.

To what extent the "Ulster crisis" was taken on the London Stock Exchange as something likely to lead to civil war, has never been possible really to determine. There were those who could not look at the episode as anything short of a political opéra bouffe, and there were those who felt that, whatever either side intended, there were elements of political conflagration in the matter as it stood which might start a most destructive blaze.

It certainly bore that aspect the week before last, when the cables told of arms landed secretly in Ulster and when the London market's break began. But the "Ulster controversy" underwent a

change, the following week, as sudden as that of the Mexican imbroglio, and quite simultaneous with it. First, the Government's pugnacious spokesman, Mr. Winston Churchill, then the Premier, and finally Sir Edward Carson himself, the head and front of the "Ulster insurrection," declared in Parliament their willingness to compromise on the general basis of the allotment of Great Britain and Ireland into federal units under Parliament; of which units, Ulster should be one. But that principle, once accepted, would have meant the beginning of the end of the Ulster trouble.

Which of these various considerations was responsible for the disordered markets, and for the rapid recovery? It is a curious question, and it certainly suggests the possibility that the vagaries of sentiment, political or otherwise, may have had more to do with this year's strange financial situation than the real economic influences.

By the Author of "The Great Illusion"

Arms and Industry

A Study of
The Foundations of International Polity

By Norman Angell

12mo. $1.25 net

The author shows systematically and scientifically, though with the same clearness and simplicity which mark his earlier work, the nature of those forces which are transforming the relationship of states, and indeed, to some extent, the mechanism of organized society as a whole.

A large proportion of the work is devoted to showing the interaction of material and moral forces in politics, the relation of nationality and political idealism to those theories with which the author's name is so strongly identified.

"Mr. Angell has compelled on the part of all honest readers, a new mode of thinking on the whole question of war.—The most pregnant money's worth in Europe to-day."—Daily Chronicle.

New York **G. P. Putnam's Sons** London

A HISTORY OF JAPANESE MATHEMATICS. By David Eugene Smith and Yoshio Mikami.

The scientific attainments of Japan during the past four centuries is one of the marvels of history. This book will show to the West the nature of mathematics indigenous to Japan and serve to strengthen the bonds that unite the scholars of the world. The book is full of very interesting material even for the non-mathematical reader.

New Macmillan Farm, Garden and Outdoor Books

Bailey's New Standard Cyclopedia of Horticulture

—Edited by L. H. Bailey—

The fullest, most authoritative, up-to-date work on Horticulture, entirely new and superseding the old Cyclopedia of American Horticulture, issued fourteen years ago.

Will increase the efficiency of every plant grower

The New York NATION'S opinion

"No one who knows anything at all about the literature of gardening needs to be told that the Cyclopedia is unique. It is the Bible and Britannica of the garden-folk, amateur and professional alike. And the remarkable thing is that, while it is fundamentally a work of reference, it also contains limitless quantities of good reading of the sort dear to the heart of the garden enthusiast."

Six Volumes. Richly Illustrated. Volume One. Now Ready. $6.00 net

THE BEGINNER'S GARDEN BOOK. By **ALLEN FRENCH.** Author of "How to Grow Vegetables," etc. Just the book for the amateur gardener and beginner of whatever age. ***Illustrated. $1.00 net***

FIELD CROP PRODUCTION. By **GEORGE LIVINGSTON** (*Ohio State Univ.*). A work based on actual experiment, and pointing out from every direction the "better" way of raising field crops. ***Illustrated. $1.40 net***

FARM STRUCTURES. By **K. J. T. EKBLAW** (*Univ. of Illinois*). A practical work which enables the farmer to solve his own particular building problems. ***Illustrated. $1.75 net***

THE SPIRITUAL MESSAGE OF DANTE

(William Belden Noble Lectures, 1912-13)

By the Rt. Rev. William Boyd Carpenter, Canon of Westminster, and Clerk of the Closet to the King.

Dante as the world's great interpreter of religious experience is the subject of this study, itself an interpretation of charm and fresh analytical power. Dante's own life is considered as precursor and parallel to the drama of the soul in the *Divina Commedia.* The illustrations, reproduced from ancient portraits of Dante and the drawings in Lord Vernon's famous edition of the *Inferno,* furnish an unusual added interest. Price, $1.50

HARPER & BROTHERS

Animal Communities in Temperate America

A Study in Animal Ecology Designed to Serve as a Reference Work and Textbook. By VICTOR ERNEST SHELFORD, of the Department of Zoölogy in the University of Chicago.

This volume presents the principles of field ecology, illustrated by the more widely distributed animal habitats of the eastern half of temperate North America, and the aquatic habitats of a much larger territory. Six chapters deal with general principles. In several chapters the animal communities are considered from the point of view of modern dynamic ecology. A valuable feature of the book is the three hundred figures of widely distributed animals chosen to represent the chief types of animal communities and their characteristic modes of life.

380 pages, 8vo, cloth; price $3.00, postage extra (weight 44 oz.)

PROBLEMS IN POLITICAL EVOLUTION

By **Raymond Gettell,** Northam Professor of History and Political Science, Trinity College, Hartford, Conn.

A DISCUSSION of the basic principles of political organization—its past development, its present conditions, and its future needs.

Among the questions considered are the nature of the state; the leading factors in political development; the origin of the state; the relation of the state to the family, the church, industrial organizations, and military organization; the composition of the state; the organization of authority within the state; the relations of state to individual and of state to state; the functions of the state; the purpose of the state; and present political conditions and tendencies. . . . 400 pages, $2.00.

Adventurings in the Psychical

By H. ADDINGTON BRUCE

Author of "Scientific Mental Healing," etc.

A comprehensive review of results of modern and psychical research in the realm of the abnormal and the supernormal. Mr. Bruce has long been a student of the psychical, and his examples are gathered from a vast variety of sources, while his explanations are based on the latest scientific data.

318 Pages. Cloth. $1.35 net.

LITTLE, BROWN & CO., Publishers, Boston

IMPERIAL GERMANY

THE STORY OF ITS DEVELOPMENT.

By Prince BERNHARD von BÜLOW.

Ex-Chancellor of the German Empire. *Large 8vo. 342 pages. $3.00 net.*

DODD, MEAD & CO., Publishers, NEW YORK.

A REMARKABLE NOVEL

that will arouse both serious and amused discussion

FRANK DANBY'S MASTERLY WORK

FULL SWING

is a distinct advance over those other successes

THE HEART OF A CHILD and **PIGS IN CLOVER**

$1.35 Net. Postage extra.

Full swing centers about Agatha Wanstead, a woman of noble character, who, incredible as it may appear, is a type of heroine unlike any other in English fiction. That there are Agatha Wansteads in real life is unquestionably true, and her name will soon be synonymous for a class of women just as now we have our Becky Sharps and Maggie Tullivers. The other characters are just as real, and through the novel run two love stories of heart-gripping interest.

JEHANE OF THE FOREST

By L. A. TALBOT. 12mo. Cloth. $1.25 net. Postage extra.

Since Maurice Hewlett's "Song of Renny" and "The Forest Lovers" there has been no finer tale of high romance than this.

TWO IN THE WILDERNESS

By STANLEY WASHBURN, 320 pp. 12mo. $1.25 net. Postage extra.

Here is a romance of rare naturalness—a tale which sweeps one through the splendid forest land of British Columbia.

TRAVEL

UNKNOWN MONGOLIA:

A Record of Travel and Exploration on Russo-Chinese Borderlands

By DOUGLAS CARRUTHERS. With 168 illustrations, three original colored maps, and three other maps. In two volumes. $7.00 net. Postage extra.

This will undoubtedly be one of the biggest travel books of the year. Mr. Carruthers spent nearly two years in exploring Mongolia, and this work is the only authoritative one in English.

THROUGH JUBALAND TO THE LORIAN SWAMP

By I. N. DRACOPOLI, F.R.G.S. 44 illustrations and 2 maps. $3.50 net.

An adventurous journey of exploration and sport in the unknown African forests and deserts of Jubaland to the undiscovered Lorian Swamp.

IN FAR NEW GUINEA

By HENRY NEWTON, B.A. 47 illustrations and a map. $3.50 net.

A stirring record of work and observations amongst the people of New Guinea, with a description of their manners, customs and religions, etc.

THE WAYS OF THE SOUTH SEA SAVAGE

By ROBERT W. WILLIAMSON, M.Sc. With 43 illustrations and a map. $3.50 net.

A record of travel and observation amongst the savages of the Solomon Islands and primitive coast and mountain peoples of New Guinea.

AMONG THE PRIMITIVE BAKONGO

By JOHN H. WEEKS. 40 illustrations and a map. $3.50 net.

A record of thirty years' close intercourse with the Bakongo and other tribes of Equatorial Africa, with a description of their habits, customs and religious beliefs.

Lovers of Beautiful Gardens Will Prize

THE PRACTICAL BOOK OF GARDEN ARCHITECTURE

FOUNTAINS, GATEWAYS, PERGOLAS, TENNIS COURTS, LAKES AND BATHS, ARCHES, CASCADES, WIND-MILLS, TEMPLES, SPRING-HOUSES, BRIDGES, TERRACES, WATER-TOWERS, ETC.

By PHEBE WESTCOTT HUMPHREYS. Frontispiece in color. 125 illustrations. Square octavo. Ornamental cloth, in a box. $5.00 net. Carriage extra. Containing 125 *ILLUSTRATIONS OF GREAT BEAUTY* from actual examples of Garden Architecture and House Surroundings.

It has been prepared: For the owner developing his own property—large or small; for the owner employing a professional garden architect; for the artist, amateur, student, and garden-lover; and is the handsomest and most complete work of the kind ever published. It is written from the standpoints of Eminent Practicality, the Best Taste, and General Usefulness, being equally suited as a guide for either modest or extensive expenditure in city or in country.

FREE ON REQUEST—An Eight-Page Circular describing in detail this Exceptional Work

The TRAINING of a FORESTER

By GIFFORD PINCHOT. 8 illustrations. $1.00 net. Postage extra.

This compact little book gives correct inside information on Forestry in this country. Just the book to put in the hands of the young man who loves outdoor life. Mr. Pinchot has written an inspiring volume on the profession which he has brought so forcibly to public attention.

THE FLOWER FINDER

By DR. GEORGE L. WALTON. With 590 illustrations. Limp leather. $2.00 net. Postage extra.

CLEVELAND PLAIN DEALER: "What's that flower over there in the field? You'll find out in 'The Flower Finder.' Gives many color charts and sketches; grouped so that you can easily find what you are looking for; is bound in leather that permits it to be slipped in the pocket."

A TIMELY NEW EDITION

THE HEART OF THE ANTARCTIC

Being the Story of the British Antarctic Expedition 1907-1909

By SIR ERNEST H. SHACKLETON. New and Revised Popular Priced Edition. With a map and many illustrations in color and black and white. Large 12mo. Cloth. 368 pages. $1.50 net. Postage extra.

The second Antarctic Expedition under the leadership of Sir Ernest H. Shackleton will start from the United States early in the Summer. The people of this country have shown the keenest interest in the various British Polar Expeditions, and it is for the many who could not purchase the original $10.00 edition that this moderate priced volume has been prepared. The complete narrative of the expedition is given, with the scientific discoveries considerably condensed and described in a popular manner.

MISCELLANEOUS

IN CHEYNE WALK AND THEREABOUT

Containing Short Accounts of Some Ingenious People and Famous Places That Were by the Riverside at Chelsea.

By REGINALD BLUNT. With many illustrations from scarce old photographs and engravings. 322 pages. 8vo. Cloth. $3.00 net. Postage extra.

If you are fond of writers and painters and odd nooks and corners of old London and the gossip of that friendly town, you will want to read this delightful volume.

WHERE PHARAOH DREAMS

Being the Impressions of a Woman-of-Moods in Egypt.

By IRENE OSGOOD. With an introduction by Stephen Phillips. Illustrations and initial letters by W. Gordon Mein. 334 pages. 8vo. Cloth. $1.75 net. Postage extra.

This brilliant book about Egypt is not a travel book, but a delightful volume of Egyptian fantasies. Among the various themes touched upon are Illusion, Unrest, Hope, Temptation, Peace, etc., etc.

BUSINESS AND FINANCE

OPERATION OF THE NEW BANK ACT

By THOMAS CONWAY, Jr., Ph.D., and ERNEST MINOR PATTERSON, Ph.D., of the Wharton School of Finance and Commerce, University of Pennsylvania. 430 pages. 12mo. Cloth bound. $2.00 net. Postage extra.

NEW YORK JOURNAL OF COMMERCE: "A timely book which is certain to prove of very extensive usefulness. It will be of exceptional value to all business interests as well as bankers."

A CAREFUL INVESTOR

By EDWARD SHERWOOD MEAD, Ph.D., Professor of Finance, University of Pennsylvania. 12mo. Cloth. $1.50 net. Postage extra.

PHILADELPHIA RECORD: "A work of the greatest importance and its study will save the public many a dollar."

THE CAUSE OF BUSINESS DEPRESSIONS

As Disclosed by an Analysis of the Basic Principles of Economics

By HUGO BILGRAM, in collaboration with Louis Edward Levy. With 9 diagrams. 531 pages. Octavo. Cloth. $2.00 net. Postage extra.

NORTH AMERICAN, Philadelphia, Pa.: "Modern questions of wealth distribution and land tenure, rarely considered by earlier economists, are here dealt with in open-eyed, new-century processes of fearless thinking. The average citizen will be a wiser and more thoughtful fellow after perusing and studying the arguments adduced in this volume."

PUBLISHERS **J. B. LIPPINCOTT COMPANY** PHILADELPHIA

The Nation.

NEW YORK, THURSDAY, MAY 14, 1914.

Summary of the News

Rumors and alarms over the Mexican crisis have been plentiful, but, so far as the United States is concerned, there has been no marked change in the situation since we wrote last week, nor is any decided change anticipated pending the meeting of the mediators at Niagara Falls next Monday. That the military situation at Vera Cruz has occasioned anxiety has been evident from the frequent consultations of the military authorities at Washington, and the preparations made to reinforce Gen. Funston's forces. Gen. Huerta, on Friday, made representations through the mediators protesting that the activities of the American troops at Vera Cruz were in violation of the armistice, and another protest was made on Monday against the "occupation" of Lobos Island, the light on which is being tended by American sailors for the benefit of navigation. It is understood that the agreement in force, which Gen. Huerta terms an armistice, permits of the strengthening or moving of the troops on either side within their own lines, so long as no advance is made.

Two other incidents in the week which at one time caused serious alarm have been satisfactorily settled. The German steamship Kronprinzessin Cecilie, which had on board a consignment of arms and ammunition for Huerta, sailed from Vera Cruz on Monday without having discharged her cargo, and news was received on Tuesday that the Mexican Government had ordered the immediate release of Vice-Consul John R. Silliman, who had been held a prisoner at Saltillo and concerning whose safety considerable anxiety had been felt.

The rebel attack on Tampico was renewed on Sunday, and reports of its capture have been circulated and contradicted with bewildering frequency. At the time of writing indications are that its fall will not long be delayed, and with Tampico in the hands of the rebels it seems probable that Saltillo will be abandoned and that the Federal forces will fall back on San Luis Potosi, or some point even further south. Rumors persist that disaffection is spreading among Huerta's forces.

We comment elsewhere on the wranglings which have marked the proceedings of the Colorado Legislature in connection with the recent mine riots. It is satisfactory, however, to note that the admirable conduct of the Federal troops has had the effect of quieting the strike area and no further disturbances have been reported. On Monday the President issued an order for the compulsory disarmament of all civilians, including deputy sheriffs, five o'clock Wednesday evening being fixed as the time limit for the voluntary surrender of arms. On Monday the Colorado House of Representatives passed the third reading of the bill to provide a $1,000,000 bond issue to pay for past, present, and future expenses of the militia in the strike field.

The Naval Appropriation bill was passed by the House on May 7. The bill carries approximately $140,000,000, and authorizes a building programme of two new battleships, six torpedo-boat destroyers, and eight submarines.

A resolution authorizing the President to increase the strength of the regular army to 110,000 men was presented to the Senate on May 7 by Senator Chamberlain, of Oregon, chairman of the Military Affairs Committee. The resolution was referred to the Committee on Military Affairs.

A report issued by the Agricultural Department on May 7 indicates that the United States will this year harvest the greatest winter wheat crop in its history. According to the report, the condition of the growing crop over the whole of the United States is 95.9 per cent. perfect, and a harvest of 630,000,000 bushels may be anticipated.

The final item of the Administration's anti-Trust programme came before the House on May 7, when the Railway Capitalization bill was reported by the Committee on Interstate and Foreign Commerce. The bill, which has met with a considerable amount of opposition from the big railways, provides that railways, before issuing stocks or bonds, shall obtain authority from the Interstate Commerce Commission; that all facts relating to the issue of stocks or bonds shall be made public through the Commission, and that interlocking directorates shall be prohibited except by permission of the Commission.

Two boats containing the captain and thirty men of the steamship Columbian, of the Leyland Line, which was wrecked by a series of explosions in her hold and abandoned, burning, on May 4, 150 miles south of Sable Island, N. S., were picked up on Tuesday and Wednesday of last week by the Franconia and the Manhattan. A third boat, containing the rest of the crew, variously estimated at nineteen to twenty-five in number, has not yet been accounted for, but it is hoped that she may have been rescued by some steamship not carrying wireless.

There is apparently a prospect that the British Government may reconsider to some extent its uncompromising refusal to be officially represented at the Panama Exposition. A deputation consisting of nearly half of the members of the House of Commons waited upon Mr. Asquith last week to suggest for his consideration a scheme by which the Government should build a special pavilion which should serve as a rallying point for British subjects. The Premier intimated that the scheme, which would involve small cost, might be adopted.

It was officially announced in London on Thursday of last week that Prince Alexander of Teck, brother of Queen Mary, will succeed the Duke of Connaught in October as Governor-General of Canada.

No important developments have occurred in the Home Rule situation. Conversations have taken place between members of the Government and Nationalist leaders, and it was reported that a conference was also held early last week at which Mr. Asquith and Mr. Winston Churchill met Mr. Bonar Law and Sir Edward Carson. If, however, the meeting took place, the results of it have not been made public. A petition from the Unionists of Leinster, Munster, and Connaught, protesting against the Home Rule bill, was sent to the King on Monday.

The French general elections were completed on May 10, when supplementary ballots were taken in the 252 constituencies which failed to give the majorities necessary to elect candidates at the first voting on April 26. The outstanding feature of the elections is the success of the Unified Socialists, who have obtained 102 seats in the new Chamber as compared with 64 in the last Parliament. The grouping of the new Chamber is given in cable dispatches as follows: Extreme Socialists, 102; Independent and Republican Socialists, 30; United Radicals, 136; Independent Radicals and Republicans of the Left, 102; Democratic Alliance, 100; Progressive and Federated Republicans, 54; National Liberals, 34; Right, composed of Royalists and Extreme Conservatives, 26; Independent, 16. The Paris *Temps*, analyzing the returns, gives 308 of the 602 members as in favor of the three years' military service, 279 as supporting the income tax, and 352 for proportional representation.

A severe earthquake occurred on the east coast of Sicily on Friday night, and slighter shocks were felt on the three days following. Nearly a score of villages were destroyed by the shock of Friday, and the number of persons killed is estimated at between 150 and 200. The Italian Government has undertaken the work of relief, and troops are restoring order in the district.

Fighting continues in northern Epirus between Epirotes and Albanians, the former apparently being in the ascendant. A massacre of Mohammedan Albanians was reported to have taken place at Kodra early last week.

The deaths of the week include: Amédée Gasquet, Judge John F. Dillon, May 5; Dr. Charles S. Wainwright, Countess Edmond de Pourtales, May 6; Col. Milton Park, Vincenzo Lombardi, May 8; Charles W. Post, May 9; Mme. Lillian Nordica, Ernst von Schuch, Frau von Bethmann-Hollweg, Sir William A. Smith, May 10; Col. John C. C. Mayo, Daniel de Leon, Arthur Gillespie, Major-Gen. Charles B. Hall, May 11.

The Week

Dispatches from Vera Cruz indicate that the army officers in command there are not losing their heads over the alleged killing of Private Parks, an orderly who, apparently in a state of mental aberration, caused by the heat, rode away from the American lines towards the Mexican lines. Gen. Funston, it is stated, deems it inadvisable to open formal communication with Gen. Maas, and is therefore leaving the case to be dealt with from Washington. But the incident serves to emphasize the special nature of the responsibility at present resting on President Wilson. That responsibility is more acute, and demands more constant and unflinching firmness in the pursuit of a fixed principle of conduct, than at any previous stage of the situation. Now from one quarter, now from another, will come distressing or disturbing stories, true and false. To sift the truth from the falsehood is in itself far from a light undertaking, and yet this is not the most troublesome aspect of these matters. The incident of the Tampico refugees is a striking exemplification of the kind of danger that has continually to be dealt with—the danger of emotion and ignorance getting the better of judgment and knowledge. It is so much more "natural" to get indignant over the fact that the American warships did not go into the harbor and carry off our fellow-citizens than to recognize that in accepting the offer of the British commander we saved the lives of our compatriots instead of exposing them to slaughter by infuriated Mexicans, and gave the peace negotiations a chance instead of plunging the country into war. The President has a trying task before him in steering the ship through these troubled waters; but it is a noble work, and the country trusts him to hold the rudder true.

Congress and President seem to be settling down to a clear determination that the session must come to an end early in July. The decision is a wise one. After the first of July, any consideration that Congress may give to the questions involved in the very important measures which the President desires to have passed is sure to be far from adequate. What it may be possible to accomplish in the weeks still before it, nobody can predict with confidence; the one thing certain is that a jamming-through process at this stage, especially in relation to the Trust bills, would be thoroughly bad. There are many essential points of difference between the legislative situation surrounding these bills and that which existed in regard to the Tariff bill and the Banking and Currency bill. The lowering of the tariff was a clearly defined and central part of the programme to which the Democratic party was pledged. The reform of the banking and currency laws had been for years a universally acknowledged need of the country, and the work of the Monetary Commission, while not disposing of the difficulties and controversies affecting it, had brought public opinion to a point at which a settlement could be compassed by vigorous and patriotic leadership. Upon the Trust bills there is neither any definiteness of programme nor any general feeling in the country of the need of them. On the other hand, there is a widespread and intense conviction that the country is entitled to a rest. If Congress should adjourn without passing any Trust bills, the disappointment would, we imagine, be about as keen as would be the disappointment of the people of New York if the recent Constitutional Convention election should be declared void by the courts.

It is gratifying to learn, from the general testimony of the Washington dispatches, that the Senate is likely to judge Mr. Wilson's appointments to the Federal Reserve Board on the basis of experience, knowledge, and fitness for the duties which will have to be performed. If confirmation is to be determined on these grounds, there will be little doubt of the Senate's favorable action. Indeed, one good result of the thorough Congressional discussion of the Banking law's provisions, in and out of the committees last autumn, is that the average Congressman has gained an unusually clear idea of the peculiarly exacting technical problems which will confront the Board, and of the absolute necessity of competent men to deal with them. No objection has been raised in any quarter to any of the President's nominations, on the ground of incompetence for the office. The most that has been heard, by way of criticism, is the somewhat perfunctory remark of one or two Senators like Mr. Bristow, that the proposed Board is "reactionary in its personnel." "Reactionary" is always a serviceable word when a critic is at loss to find an explicit basis of opposition. In the present instance it might mean that the nominees were too largely men experienced in banking, or that they were men who would hesitate to indulge in haphazard experiments, or that they were likely to shape their official policies through study of the experience of the older and successful state banks of Europe. Inasmuch as Senators of the majority party are aware that the party's prestige will be affected by the practical success or failure of the important experiment, and inasmuch as Senators of the opposition party are committed to the general purposes of the act, we imagine that such an argument will cut little figure in obstruction.

From Para Col. Roosevelt hurled the word "blackmail" at the $25,000,000 which the new treaty proposes that the United States pay to Colombia. This is characteristic, but hardly conclusive. For Roosevelt himself when President, or, at any rate, his Secretary of State, Mr. Root, speaking for him, admitted that Colombia was entitled to money damages from us. He pointed out, early in 1909, when the Root-Cortez treaty was pending, that there were, in the treaty of 1846, as also by the original contract with the French Panama Canal Company, certain "stipulations and reservations running to Colombia," which it was necessary for this Government to quiet in order to make its title to the Canal Zone "unquestioned." In order to do this, Secretary Root offered, among other things, to pay the sum of $1,250,000. Was that blackmail? When the Taft Administration increased the offer of this country to $10,000,000, was it blackmail? Whether the proposed $25,000,000 is too much, we need not at present discuss. But it cannot fairly be called blackmail by the man who himself was ready to pay a smaller sum. Blackmail begins with the first cent, not with the last million.

In 1907 the New Haven found it advisable, so it is declared, to get rid of

some 109,000 shares of Boston & Maine stock which it held. Mr. Billard, a private capitalist, agreed to buy it at $125 per share. For this, and for some additional shares—enough to obtain control—he paid part from his own cash resources and borrowed for the balance, one of the lenders being a subsidiary company of the New Haven itself. A year or so later the New Haven desired to buy back the stock. It did so at $150, paying, not in cash, but in the notes of another New Haven subsidiary. These notes Mr. Billard sold to a corporation which was organized for the purpose and in which he was the only stockholder, and that corporation issued its own notes in return. The New Haven subsidiary which had loaned to Mr. Billard, when he first bought the Boston & Maine stock, now purchased from him the fourteen millions Billard Corporation notes. With part of the proceeds he paid off his debt to that same subsidiary, and his loan to a New York bank. There remained the notes of the Billard Company held by the first of the New Haven subsidiaries, and these were in part redeemed by selling to the lending company the notes of the other New Haven subsidiary, which were collateral against the Billard Company's obligations. Mr. Billard's testimony before the Interstate Commerce Commission did not make it clear how all this remarkable series of financial achievements left the mutual indebtedness of the various participants who had alternately figured as borrowers from or lenders to one another.

None of the outward and visible memorials to the lofty place that Lincoln has already assuredly taken in history will be so striking in its significance as the statue that is to be erected opposite Westminster Abbey in connection with the peace centenary next year. The statue, which is to be a replica of Saint-Gaudens's impressive work in Lincoln Park, Chicago, is to be dedicated on Lincoln's birthday, which happens to fall within three days of the centenary of the signing of the Treaty of Ghent. Next year, it may be noted, will be also the semi-centennial of Lincoln's death. It would be difficult to imagine a more dramatic setting for the statue than the one chosen. Hard by are the stately Houses of Parliament, and statues of such typical British statesmen as Peel, Palmerston, Disraeli, and Canning. What can an Illinois railsplitter, and rough and ready debater on New World questions, have to do with polished gentlemen like these? Even the presence of a statue of Cromwell only emphasizes the wonder of the matter, for Lincoln was neither a zealot nor a dictator. Yet no one will question his right to stand there, in streaming London's central roar, and visitors to the metropolis of the world will not look with least interest and emotion upon the figure of the ungainly man from across the sea.

Gov. Blease's failure to control the Democratic State Convention of South Carolina, which is assured by his defeat in a large majority of the counties that have chosen delegates, does not necessarily mean his defeat for the Senatorship. The chief questions that are to come before the State Convention bear, indeed, upon the primary at which the Senatorial nominee is to be chosen, and virtually elected. These questions are the safeguarding against fraud, charges of which were pointedly made in connection with the primary of 1912, and the restriction of admission to the primary to those who are constitutionally qualified to vote at the regular election. At present, white illiterates are permitted to vote in the primary, which is the real election, and their better educated neighbors then go through the solemn farce of ratifying in November the ticket so chosen. As Blease has always been strong with voters who could be stirred by appeals to race and other prejudices, exclusion from the primary of men who, knowing the law, have grown up without taking the trouble to learn to read and write, would apparently be a severe blow to him. But the Convention is more likely to pay attention to the methods of preventing fraud than to the question of who shall be eligible to vote in the primary.

At this distance, the chief thing that stands out in the doings of the Colorado Legislature thus far is an apparently complete failure to realize the disgrace that has fallen upon the State, and to join hands in an endeavor to redeem its good name. The Legislature was, of course, sure to have to grapple with subjects of controversy upon which feeling would be intense and struggle would be protracted. But in a State conscious of the obligations of its primary duty, and alive to the most rudimentary promptings of self-respect, the reëstablishment of the supremacy of its own government within its own borders would demand and obtain the attention of the Legislature, to the exclusion of all other elements in the situation, until it was provided for. The wranglings at Denver are a most significant commentary on the bloodshed and anarchy in the mining districts. Impotence in the maintenance of the law, there is but too much reason to believe, has been merely a reflection of the lack of that kind of public sentiment upon which, in the last analysis, the integrity and the potency of the law everywhere depend. It is to be hoped that the Legislature will yet show that it has the capacity to rise to the demands of the situation. If it does not—if it shows itself content to leave the duty of maintaining law and order within its own borders to be performed for an indefinite time by the United States army—it will put Colorado in a place which no sister State of her rank in population and wealth has ever been willing to occupy.

Ohio is becoming an experiment station for municipal government. Taking advantage of the constitutional amendment granting home rule to cities, Dayton is trying the city-manager plan, and Columbus has just adopted a new charter which is described as a modified federal scheme. It was adopted by only 1,000 majority in a total vote of 16,000, which is but 40 per cent. of the vote cast at the last election. The features of the new charter are a council of seven chosen at large in place of the present council of sixteen chosen by wards; non-partisan election of, and preferential voting for, Mayor, City Attorney, and Auditor, with the initiative, referendum, and recall. Separation of executive and legislative powers is preserved by leaving in the hands of the Mayor the usual authority to appoint and remove officers whose positions are created by the Council, while the Mayor and the Council are brought together by the provision that the Mayor has a seat in the Council, but no vote. It is not easy to see why the principles of non-partisan election and preferential voting

should not be applied to the Council as well as to the other elective officers.

Lillian Nordica was the greatest vocal artist America has produced. For sheer luscious beauty of tone her voice has seldom been equalled—"glorious" was an adjective frequently applied to it. She had, too, what most singers lack, style, and plentiful powers of expression. She modestly attributed her success to her zeal and industry. "Plenty," she once remarked, "have natural voices equal to mine, plenty have talent equal to mine, but I have worked." Like Lilli Lehmann, her only superior in the parts of Isolde and Brünnhilde, she retained the art of singing Italian florid music brilliantly long after she had become a Wagnerian specialist. She applied the Italian art of *bel canto* to Wagner's "speech-song"; and, conversely, infused the charms of the fervent dramatic style into such a part as Gounod's Marguerite. No artist was ever more eager to benefit by every hint given by the composer, in libretto, score, essay, or letter; yet so well did she know the art of concealing art that the result had the charm of emotional spontaneity. While the opera was her special domain, she was also inspiring in oratorio; the chance to hear her sing the "Inflammatus" in Rossini's "Stabat Mater" always drew a crowded house. As a singer of *Lieder* also she had few equals, often delighting connoisseurs with new touches, as when, in Schumann's "Nussbaum," she emphasized the heart-story in it more than the whispering of the leaves.

Since Lord Elgin's day there has been strong sentiment against the spoliation of relics by the agents of museums, and others; it is pleasant to see it showing itself with regard to defenceless Oriental lands. At a meeting last week of the American Museum of Natural History, "the trustees," we read, "authorized the president to communicate with the Chinese Government endorsing the movement of the Asiatic Institute for the preservation of the antiquities of China." Such action hopefully coincides with that of other institutions in America and Europe. Nowhere more than from the nations eloquent for Chinese unity, have travellers, explorers, ambassadors, teachers fallen into the habit of purchasing or confiscating works of artistic or antiquarian value. In so far as commercial use is made of them, home legislation can check the trade; so far as their collection is by individuals, for public or private preservation, it has remained for the campaign of the Asiatic Institute to foster a sentiment against the graver abuses.

To Irish Home Rule it is presumably appropriate that a lively row should leave the combatants in friendly mood. The army-against-the-people episode brought the House of Commons temper to a high pitch of exasperation, but ended on a strong note of peace. The recent gun-running episode gave rise to a revival of bitter partisanship; but once more conciliation seems to be to the fore. There is good reason for believing that a second peace conference is already in session, and that any day may bring an acceptable basis of compromise. This does not mean that the extremists on either side have been won over. A resolution against Home Rule in any form has just been signed by a hundred Unionists. In view of the fact that some form of Home Rule has been accepted by Carson and Bonar Law, and that Arthur Balfour in a pathetic speech virtually admitted that Home Rule was bound to come, we can look upon this latest manifesto as only another expression of the "die-hard" spirit which has brought repeated misfortune on the Unionist party.

If Mr. Austen Chamberlain was content to say that the proposals in Mr. Lloyd George's new budget are so complex that they require much examination, Americans may well be cautious in passing judgment upon them. The estimated expenditures for the fiscal year 1914-15 pass the billion-dollar mark by $30,000,000. The amount has been growing at an impressive rate, for a long time, and there is no sign of a slackening. Much of this increase has been due to the growing demands of war-preparedness, much to the social-welfare programme which has been the distinctive feature of the present Liberal Government's policy. To neither of these can any assignable limit be set; and there is accordingly likewise no telling to what heights taxation may be carried, especially in the case of the wealthy and the well-to-do. Already, in the proposed budget, the income-tax rate is above 13 per cent. in the case of large incomes, and nearly 7 per cent. in the case of "unearned" incomes—that is, incomes derived from investments—whether large or small; while the death-duties, or inheritance taxes, reach a maximum of 20 per cent. What the ultimate effect of this policy may prove to be, it would be rash to predict. For Americans, it may be sufficient to remark that, if we should ever commit ourselves to the general principle of national provision for old-age pensions, charity subventions, and the like, the scale on which it would be carried out would be pretty sure to make the British experiment seem trifling.

On Sunday occurred the second and final round in the elections to the Chamber of Deputies in France. The one outstanding result is a notable increase in the strength of the Unified Socialists, who will count roughly 100 in the new Chamber, a gain of more than 30. This leaves the official Socialist party in the French Parliament not far behind the German Socialists with 110 members of the Reichstag, and the German record is surpassed if we include the French Socialists of independent standing who do not recognize the discipline of M. Jaurès. Among the other groups that make up the Radical majority in the Chamber of Deputies, there have been comparatively unimportant shiftings. Group and party lines are far from rigid in the French Chamber, and the fortune of programmes and leaders cannot be foretold on the basis of the elections. It is difficult to say even what the opinion of the country has been on issues like the three years' military service or the income tax. On the one hand, figures have been published showing that candidates in favor of maintaining the service of three years have been successful. But this is outweighed by the very striking increase among the Socialists, who are in favor of returning to the two years' service. The quinquennial recurrence of parliamentary elections shows the unquestioned solidification of the Republic. The various monarchist factions and the Conservative Centre have been steadily going down.

LYING FOR THE SAKE OF WAR.

We hear of many complaints about newspaper "specials" from Mexico. The regular press services give cause enough, in all conscience, for disquietude. They feel compelled to send on a certain amount of rumor, but it is plainly labelled as such. No like restraint influences the correspondents in the employ of certain New York newspapers. Of them it is necessary to use plain language. More than one of them is known in the profession to be utterly untrustworthy. They have been detected before in reckless lying. Moreover, the stories they have forwarded are obviously composed in large part of wild romancing. They snap up the most improbable reports and enlarge upon them with every detail that their fancy can suggest. All that one would need to do to demonstrate their entire untruthfulness would be to take a series of their dispatches, covering a period of a week or ten days, and see how assertion after assertion falls to the ground. They do not retract anything proven false, these correspondents; they simply replace one lie with another.

Now, the great harm done by their conscienceless work, and especially by printing it day after day under big headlines, is that it inevitably confuses and misleads the American public. The general newspaper reader cannot be expected to scrutinize narrowly all that is laid before him as coming from Mexico. He knows nothing of the character of the men sending on the stuff. Nor is he accustomed to noting closely internal evidence, or to weighing inherent probabilities. He gets merely the constant iteration of alarming news, and the impression made upon him is that war is inevitable. And, of course, to produce that impression is precisely the fiendish intent of the men who invent insults to the United States in Mexico, and who manufacture outrages out of whole cloth. They are in their hearts for war and would stop at nothing to bring it on.

The sensational newspapers for two or three weeks past recounted the slaughter of Americans by scores. Americans had been set upon and butchered in Mexico City; they had been killed in San Luis and in Orizaba; Saltillo and Tampico and Cuernavaca had their American slain. But we now know, as the truth has slowly filtered out, that all this mass of rumor and insinuation and alarm had the smallest possible foundation in fact. The early statements were not withdrawn; they were stamped as false, one after another, by the mere course of events. It is now well established that there has been nothing like a massacre of Americans anywhere in Mexico. Since the relations between the two countries became acute, there may have been a few individual cases of murder, or attempted murder, but it is now certain that the positive and alarmist reports of a few days ago were one part rumor to nine parts lying.

As the facts become known, it is more and more evident that the Mexican authorities have done all within their power to protect the lives of Americans, and to aid them in leaving the country in safety, when they desire to do so. Tucked away on an inside page of the New York *Times* of last Sunday was a little telegram from Mexico City, conveying the attitude and belief of many Americans there. They think that their danger has been greatly exaggerated. Especially is it untrue that long-time American residents, who have sense enough to refrain from acts of provocation, are exposed to any special risk. The telegram concludes:

> Every day well-known American men and women are seen tranquilly walking in the thoroughfares of the city. Women engage in their shopping or marketing as usual.
>
> So far from being naturally ferocious, the great majority of Mexicans are naturally gentle.

With what special wonder must a first-hand statement like this overcome a reader long fed on the lurid accounts of sensational newspapers! Yet every one who knows anything at all about the Mexicans knows that they have been grossly calumniated by much of the matter that has been published in the American press. Mexico has her turbulent classes. And she has, unhappily, a long tradition of cruelty in warfare. But to suppose, as many of our rash newspaper writers would have us, that the mass of the Mexican people are bloodthirsty and treacherous and without the element of humanity, is monstrous. It is really an affront to our intelligence. All the unbiassed witnesses speak well of the native Indian stock, making up, as it does, three-fourths of the population. The educated classes have manners so fine as to make the ordinary American appear boorish. And they are not behind us in natural kind-heartedness.

"Will lying never cease?" Horace Greeley used indignantly to demand. It is probably too much to hope. But it is not too much to hope that the sentiment of a great people, in a time of national crisis, will not be moulded by systematic exaggerations and misrepresentations. Above all, it is not too much to hope that the policy of the Administration will not be determined by lying newspaper dispatches.

SENATOR O'GORMAN'S SPEECH.

Senator O'Gorman's speech on Panama tolls last Thursday was awaited with natural interest. He is the one leading Democrat in the Senate who has broken with his party and with the President on this question. It was right to expect, therefore, a powerful statement from him of the reasons which compelled him to this course. Moreover, his reputation as a Constitutional lawyer and as a former judge had inevitably awakened hopes of a great argument. We should hear the words of a jurist dealing with law and treaty. Seldom, indeed, have political and personal considerations so joined to give a Senator in advance a wide and attentive audience for a carefully prepared speech. The occasion was made for Senator O'Gorman. Did he rise to it?

A patient reading of the entire text of his speech leaves one with a sense of disappointment. Surely, this cannot be what the Senate and the country had been waiting for! It would be, we admit, unfair to expect Senator O'Gorman to strike out on wholly new lines in a matter which has been so thoroughly debated. He could not but traverse a good deal of familiar ground. But he might at least have given us ordered and coherent argument. He might have spared us the clap-trap about British arrogance and rapacity, and the wicked scheming of our railways, which any demagogue from the West could have got off with better grace than the Senator from New York. Above all, Senator O'Gorman might have addressed himself to the legal points involved with the close analysis and logical grappling of a mind trained by years on the bench. But he did not. His speech is

flung together, rather than close knit; and his arguments in the very matters where he was supposed to be a master are far from being conclusive.

We can touch upon his reasoning only at two or three points. Senator O'Gorman makes a great deal of our sovereign rights at Panama. These cannot be deeded away by treaty, although they are acquired by treaty. He roundly asserts that "the Supreme Court of the United States, in Wilson against Shaw (204 U. S., 33), decided that the sovereignty of the United States over this tract, known as the Canal Zone, is the same as over any other part of the United States." Senator O'Gorman does not cite any of the words used by the Court in the case referred to, and we think it would puzzle him to find any language in it justifying his sweeping assertion. The case of Wilson against Shaw was a suit to restrain the Secretary of the Treasury from paying out money or issuing bonds for the construction of a canal at Panama. And all that the Court held was that, *for the purposes of canal building*, we had sovereign rights on the Isthmus. This is no denial that our sovereignty there is limited. It came to us, by treaty with Panama, impressed with a trust. If we were not to execute the trust we should have no title to the Zone. The point was forcibly put by Representative Stevens, whose speech is, by common consent, reckoned the ablest that has been delivered on this whole subject. Referring to the fact that Panama still has, in ex-President Taft's phrase, "a shadow of sovereignty" over the Zone, Mr. Stevens asked what would happen if we were to abandon the canal project entirely. Why, the land would revert to Panama automatically! So far is it from being true, as Senator O'Gorman affirms, that our sovereignty at Panama is as unlimited as it is in Fourteenth Street.

The United States took the Zone impressed with a trust, and a part of that trust was, as plainly laid down in the treaty with Panama, to build the Canal and to open it, when constructed, "in conformity with all the stipulations of the treaty entered into by the Governments of the United States and Great Britain on November 18, 1901." This is the Hay-Pauncefote treaty, and to that and its interpretation we necessarily come back after all the irrelevant blether about our limitless sovereign rights. But Senator O'Gorman has scarcely the patience to examine in detail the Hay-Pauncefote treaty. He does, indeed, offer an argument to show that the word "vessels" in that treaty does not mean coastwise vessels, but he regards the whole treaty as a "blunder," just as the Clayton-Bulwer treaty before it was a "dismal page" in our diplomatic history. We doubt, however, if Judge O'Gorman would have permitted a suitor in his court to squirm out of a contract on the plea that he was sorry he had ever entered into it; and whether the Hay-Pauncefote treaty was or was not the lamentably bad bargain that it is now asserted to be, there it stands, a national obligation, and there is no way of railing the seal off that bond.

It may be that the main reason why Senator O'Gorman did not, in the "greatest effort of his life," meet the expectations of his friends, is the fact that he felt that the battle had gone against him, and that the archers are pressing him sore. When all is said, there is a perfunctory air about his speech. He had to maintain his consistency. He had to go on record. In the very act, he seems to be aware that nothing which he can say will change a vote or affect the result. Indeed, he says in so many words that he is simply fulfilling a duty in making his solemn protest "before the deed is consummated." Despite all this, there will be disappointment that he was not able to make a better show of argument to justify his course. The hour was there, the high occasion, the great opportunity, but the powerful reasoner was wanting.

THE PRICE OF HEALTH-WORSHIP.

In a recent article Dr. Goldwater, Commissioner of Health of New York, has presented the case for "universal periodic medical examinations" with great vigor and force. So far as regards the advantage of early medical examination for the discovery, and possible effective treatment, of cases of cancer, tuberculosis, and certain other diseases, what he says is calculated to do much good. But there is a larger aspect to the proposal he puts forward—a proposal that has of late been much in the air—and to the doctrine upon which it rests. And it is time this larger aspect were realized in a manner commensurate with its bearing on the whole character of human life.

Whether Dr. Goldwater, or Dr. Biggs before him, or the estimable and distinguished gentlemen who are the backers of the Life Extension Institute Movement, look upon *compulsory* medical examination of all persons as their goal, we cannot positively state. Apparently they do. Dr. Biggs has been quoted as advocating medical examination of all "citizens," which points very strongly that way. No unmistakable statement of such an object has yet been made, so far as we have observed; but we are as yet only in the first beginnings of the movement. Dr. Goldwater's article closes as follows:

> The next great task of preventive medicine is, therefore, the inauguration of universal periodic medical examinations as an indispensable means for the control of all diseases, whether arising from injurious personal habits, from congenital or constitutional weakness, or from social and vocational conditions.

If we see this in the green tree, what may we expect to find in the dry? Will it be much of a step from "universal" examination to compulsory examination? Will it be much of a step from that to compulsory heeding of the results of that examination? Is there any limit that can safely be set to the extension, not of life, but of the meddling with life, which this whole movement promises?

But it is by no means on the score of legal compulsion alone that the proposal of "universal periodic medical examination" is open to objection. Whether brought about by legal requirement or by the pressure of general opinion, the benefits to health and the prolongation of life which it might effect would be purchased at a tremendous price. What that price would be it requires some power of imagination, perhaps, to realize; but some idea of it may be obtained from the very facts which Dr. Goldwater adduces. Take but a single one of them. "In a recent examination of the employees of a New York city bank," he says, "100 per cent. of the employees were found to be abnormal and on the sure road to diseases of heart, lungs, kidneys, or blood vessels." Very likely, this examination will have been the means of stopping the progress of disease in the case of some of these men; but if the fact is as stated, the whole body of them were suddenly con-

verted from a group of normal men, nearly all of whom were doubtless going about their work and their play with no thought of sickness, into a solid body of semi-invalids. Who shall say that the addition of two or three years to the average duration of their existence will outweigh, in the scales which measure real human values, the freedom, the elasticity, the unconsciousness of the trammels of the body, which have been impaired or destroyed by this intrusion?

And even from the standpoint of medical results, in the narrowest sense, there is room for grave misgivings. Not all diagnoses are correct; not all alarms given by medical men are well-founded. It may be said in reply that we must do the best we can. So be it. Let every man who feels that he has some reason to suspect that there may be something wrong get medical advice by all means, and get it early. He must take his chance of a certain average percentage of error. But whatever that percentage of error may now be—and it is not insignificant—would be a mere trifle in comparison with what the new programme bids fair to furnish. "The task before us," says Dr. Goldwater, "is to discover the first sign of departure from the normal physiological path, and promptly and effectually to apply the brake." With this as the ideal before them, will not the false alarms of the physicians outnumber those of to-day ten to one, or fifty to one? Will not thousands of persons who might have lived happily and comfortably to three score and ten before that "first sign of departure" had developed into anything serious, be called upon to exercise care, to be solicitous about their bodies instead of ignoring them, and, in no one knows how many cases, have their lives not only dulled, but actually shortened by hypochondria?

"Those to whom the care of delicate mechanical apparatus is entrusted," says Dr. Goldwater, "do not wait until a breakdown occurs, but inspect and examine the apparatus minutely, at regular intervals, and thus detect the first signs of damage." This is the favorite simile of the health-enthusiasts. But in it are embedded two fatal fallacies. In the first place, the working of a machine is not affected by our concern over it, while our body may be. And secondly, the only interest we have in the machine is that it shall function well as a mechanism; while in the case of our bodies we may deliberately choose to sacrifice perfection of the mechanism to other objects which we prize more highly—indeed, we must do so, at some point or other, if we wish to keep out of Bedlam.

OTHER WORLDS THAN OURS.

If we had a real sense for intellectual values, the centre of public interest nowadays would be found neither in the Mexican situation nor in the Colorado troubles, neither in the railway-rate question nor in the Administration programme as to Trust legislation. Things like these, which, however important they may seem at the moment, are, after all, of comparatively transient significance, would be completely overshadowed in interest by revelations that are being made, in at least two distinct directions, which must affect profoundly all our views of man and nature. We refer especially to two remarkable documents. One is the statement of Gen. Sir Alfred Turner, K.C.B., contained in the cable dispatches of Friday, concerning the visits paid by the late W. T. Stead, or his spirit, to sundry highly respectable persons who have not yet shuffled off this mortal coil. The other is the article by Maeterlinck, in the current number of the *Metropolitan Magazine*, telling in great detail of the intellectual prowess of the gifted horses of Elberfeld.

What to our mind gives special value to Major-Gen. Sir Alfred Turner's statement is that it goes far to remove a reproach often directed against the labors of psychical researchers. Unlike almost any other branch of science, it is said, this appears to be wholly lacking in the quality of progressiveness, of cumulative strength and definiteness. Now, although the casual reader of the news may not observe it, Gen. Turner's statement marks an advance of the highest importance. When Mr. Stead appeared, he tells us, to a group of persons gathered at Cambridge House to receive him, he "came to them in short, sharp flashes, dressed exactly as when on earth." This question of the clothes worn by returning spirits has always been one of the most perplexing in the whole matter; never before, so far as we can recall, has it been settled by authority so impressive as that of a K.C.B. We know now that it is not only the spirit that returns, nor only its wonted bodily accompaniment, but also the outer garments of the latter. Thus a vast new field of research opens up; and there is every reason to expect that in the matter of costume—hitherto strangely neglected—there will be found far greater variety and interest than has as yet been developed by the oral communications of the ghostly visitants, though they have ranged all the way from Socrates to Stead.

Turning to Maeterlinck's article on "The Elberfeld Horses," we find in it an embarrassment of riches, and are reluctantly compelled to name only the one or two things that strike us as most remarkable. It is difficult to choose. One is tempted, for instance, to dwell on the rapidity with which the Arab stallion Muhamed acquired his mastery of arithmetic; so strikingly does it contrast not only with what one expects from a horse, but with what can usually be got out of even the most talented of boys or girls:

> Within a fortnight of the first lesson, Muhamed did simple little addition and subtraction sums quite correctly. He had learned to distinguish the tens from the units, striking the latter with his right foot and the former with his left. He knew the meaning of the symbols plus and minus. Four days later, he was beginning multiplication and division. In four months' time, he knew how to extract square and cube roots.

But, after all, this gives no accurate idea of just what problems the horse could tackle; nor does it preclude the possibility of some kind of deception or mistake. We pass at once, therefore, to what is at once the crowning example of the horse's intellectual powers and a complete demonstration of their genuineness. Dr. Hamel, an investigator, "alone in the stable with the horse," its owner being away travelling, "takes from an envelope a problem of which he does not know the solution," namely, to find the fourth root of 7,890,481. "Muhamed replies, 53. The doctor looks at the back of the paper; once more the answer is perfectly correct."

Interesting as these marvels are in themselves, they are perhaps even more interesting in their bearing on the general question of the principles of belief and unbelief. The great majority of those persons who are usually regarded,

and who usually complacently regard themselves, as sound thinkers attach great importance to the antecedent probability or improbability of a given assertion, its accordance or disagreement with the whole body of human knowledge. When this improbability is very great, when this disagreement is extreme, they not only hesitate to believe it, but are usually unwilling to spend more than a moderate amount of time upon its consideration. It is for this reason that the champions of the view that the earth is flat, though they emerge into a certain conspicuousness at long intervals, can never get more than a brief hearing and a summary dismissal. It is for this reason that the inventors of Bacon-Shakespeare ciphers, though they get up a new one every year that is every bit as good as the one that was cast into limbo the year before, never succeed in having their doctrine recognized. The great service done by the Elberfeld horses lies not in the light they may throw upon the intelligence of animals, but in the rebuke they administer to the arrogance of science and of so-called common-sense. Hereafter, when any one is tempted to reject a tale simply because it is inherently absurd, or a scientific crotchet hatched in an untutored mind because it is ridiculous, the single word "Elberfeld" should suffice to reduce him to silence and shame.

RATIONALE OF SCHOOLBOY BLUNDERS.

By what the English call "howlers" in school recitations, examination papers, etc., amusement has long been furnished. Genuine or invented, undoubtedly often touched up as they are passed on in conversation or in print, they have usually been thought of as mere blunders, chance vagaries of the young human animal undergoing education. But, as was inevitable, they have now begun to be studied scientifically. Here is a range of mental activity—or inactivity—which has not been thoroughly investigated, with the results neatly classified; and it would appear that several inquirers are putting their hand to the work. Prof. John Adams, who holds the chair of Education in the University of London, has been lecturing to teachers on the need of defining "howlers," and tracing them to their source; and the London *Spectator* recently devoted a page to the subject.

A whole large class of schoolboy mistakes must, of course, be set down to lack of knowledge. "Pure ignorance, madam," is still as good an explanation as it was in Dr. Johnson's day. And when you add to it inattention on the pupil's part, with a touch of impudence, you have the spring and origin of many school blunders. The boy takes a shot at a question, when he has no idea at all of the true answer to it, and thereby produces occasionally something brilliantly ludicrous. But these happy strokes of effrontery are not the commonest source of "howlers." If they were, there would be, of course, nothing in them to analyze; no obscure workings of the schoolboy mind to seek to follow. It is the honest blunderer who is in question, not the reckless guesser; and it appears possible to work out rules or reasons to account for different groups of "howlers."

One of them is, obviously, the little knowledge that is a dangerous thing—knowledge misunderstood or not assimilated. The boy knows something about the subject, but knows it hazily, and in trying to come out of his fog makes unconscious jokes. This was the case of the schoolgirl who was asked to explain the "classes" into which the United States Senate was originally divided by the Constitution. She wrote that the Senate was divided into three classes, the civilized, the semi-civilized, and the savage. To those who laughed at this as ignorance, Mark Twain protested that, in fact, the girl "knew too much."

Translation from foreign languages is naturally a fruitful mother of unintentionally humorous mistakes. The venerable instances from the classics it is not necessary to repeat. More recent ones are certified to by English school authorities. Thus we have the unexpected trade turn given to "exempli gratia," which was translated "samples free." Another excellent Latin "howler" is the rendering of "Libertas sub rege pio" as "Our pious king has got liberty under." A third seems, though vouched for, quite too good to be true—namely, translating "splendide mendax" as "lying in state." Considering what were until lately the relations between England and Germany, it is hardly surprising to find an English schoolboy translating "le vieil Allemand," "the vile German."

Merely phonetic blunders make up a large class. The pupil has heard the word indistinctly, or confused it with some other of similar sound. For this the reproach must often belong to the teacher, on the score of indistinct articulation. It was due either to this, or to defective hearing on the part of the pupil, that the latter said that the only pouched animal in America was the "apostle." In a similar way, no doubt, originated the information that Hannibal was a well-known composer of music. And church as well as school is responsible for mixing up sounds in the child's head. It was in good faith that the little girl recited: "Lord, who hatest nothing but the housemaid" ["nothing that thou hast made"].

It is evident that there ought to be discrimination, by teachers and investigators, between "howlers" that are purely foolish, and those that have their natural explanation. "Why," a boy was asked, "is Patti called the Welsh nightingale?" His answer was: "Because she sings at night." In this there was a glimmer of sense that ought to be encouraged, even if it must be laughed at.

Foreign Correspondence

THE IMPROVEMENT IN ANGLO-GERMAN RELATIONS — RESULTS OF THE BALKAN WARS—THE ATTITUDE OF RUSSIA.

BERLIN, May 1.

Berlin looked on unmoved at the cordiality of King George's recent reception in Paris. Germany has got used to the *entente cordiale* and England to the German fleet. In Germany, the idea that John Bull will begin war without notice out of pure envy of Germany's swelling trade returns is dying of want of nutrition. The British shipyards are still active, because of the generous foreign patronage they enjoy. But the German yards, which depend for battleship orders on their own Government, are beginning a period of lean years. They now build two capital ships a year instead of four, and even when the Navy bill is completed they will only receive orders for two battleships and one cruiser a year.

The main factor in bringing about these improved conditions was undoubtedly the Balkan War. The Anglo-German rivalry presented mankind with the august spectacle of two perfect egotisms in conflict. Germany said, "I want." England replied, "Thou shalt not have." Neither harmed the other in any way. England simply could not see how Germany could "have," without possessing the means to "take," which did not fit in with her arrangements. Young Germany was fully convinced that the world had been Anglo-Saxonized long enough, and that it was time to give modern methods a trial, which could not be if the globe was still to be regarded as a prolongation of the London suburbs.

The Balkan War disturbed the magnificent simplicity of this antagonism. As long as England thought there was to be a war with Germany for the mastery of the seas, and Germany thought of the coming struggle as the gateway to the colonial empire of which so many Germans dream, there was no limit to the animosity that both countries could develop. When, however, it turned out that the war was to settle whether the Montenegrins or the Albanians were to have Skutari, the prospect was less appealing. It has become clear to both peoples that neither will attack the other. If they fight, the Anglo-German conflict will be a part of a general European war, which can only arise out of a Balkan quarrel between Russia and Austria; and that will not directly touch any German or British interest, and cannot in any case bring real advantage to either country.

If victory remained with the Triple Entente, the main result would be a huge extension of Russian influence in Europe and Asia, which is not exactly what the English pray for. If the Triple Alliance won, Germany would have the burden of the fighting, her industry would suffer out of all proportion to the losses of economically less highly developed allies, and the profit of victory would go mainly to Austria-Hungary. The dual monarchy would get a new

lease of life. But Germany does not want to take anything from Russia, and her share would be the implacable hate of the Russian people, which is too young and too numerous to suffer permanently from an unsuccessful war.

So that England and Germany are on the side of peace, and throughout the Balkan troubles, which are by no means over yet, both have exercised a moderating and restraining influence on their friends, Germany on Austria, England on Russia. The obvious unwillingness of England to convert the *entente* into a hard-and-fast alliance is another factor in the reconciliation between the two Powers. It seems to be forgotten in France that an English offensive and defensive alliance is not of much use unless England binds herself to keep her main weapon, the navy, constantly within striking distance of the enemy, that is, within European waters. Practically speaking, of course, that state of affairs already exists; but a definite pledge to keep the fleet in the North Sea would alter the situation to the disadvantage England. It would be known to other Powers, and might very conceivably affect the attitude of Japan when the Anglo-Japanese alliance comes to be renewed. At any rate, it is a consideration which makes for peace between England and Germany. On such foundations are international friendships based.

Time and incalculable circumstance have worked for England, as it is the habit of the eternal forces to favor insular and maritime powers. The island sea Powers have as a rule only one enemy at a time, whereas that enemy has to compound with a jealous land-neighbor, who has a coterminous frontier with him. This principle has worked strikingly to the advantage of England during the last five years. When the Anglo-German naval rivalry became acute, Germany was on something like friendly terms with Russia. She had gone out of her way to help Russia during the war with Japan. In consequence of German assurances, Russia was able to denude her western frontier of troops. Russia was, of course, the ally of France, but this was understood to be a measure of precaution on her part, a defensive and not an offensive arrangement into which she had entered a dozen years after the Triple Alliance had menaced her with at least a two-Power enemy in case she quarrelled with Austria.

Further, Russia was weakened by defeat in foreign war, racked by rebellion at home, and in the hands of money lenders. We have changed all that. The revolution is suppressed, a series of good harvests has placed the Government in a condition of financial independence, and the Manchurian bruises have healed. Russia is still without a navy, but a start has been made with a new one, and in ten years she will have a formidable fleet in the Baltic. Whether it will be more efficient than the fleet which rests on the floor of the Straits of Korea or serves the yellow enemy under new names, remains to be seen. But there is the probability that Russia, too, has learned, and in case of war with the Triple Alliance a powerful Russian squadron in the Baltic would be a serious menace for Germany. Now it is certain that in a few years the Russian squadron will be there, and it is equally certain that if Germany tries conclusions with England between the Kentish coast and the Frisian Islands, Russia will be taking a hand on the side of England.

There is no pretence of friendship between Russia and Germany now. The Balkan war has removed the last traces of good feeling on the Russian side. The Russians realized with unspeakable bitterness last year that it was the German army, with which they have no direct quarrel, that crippled their Balkan policy. With Austria they would soon have settled scores, but for Germany they were not ready. They are not ready yet, but they are making feverish efforts to bring their army to the point where it will be ready to challenge the Austro-German combination, and they have the advantage of inexhaustible numbers.

THE POLITICAL CRISIS IN JAPAN —COUNT OKUMA AND THE NEW MINISTRY.

Tokio, April 20.

Japan has recently passed through an ordeal. The naval scandal, culminating in the collapse of the Cabinet, and followed by the sudden death of the Empress Dowager, plunging the whole empire again into mourning, has proved a period of stress to the public mind and a severe test of the national temper. All tendency to rancor and political turmoil has been hushed in the presence of death, and with the inauguration of a Ministry the personnel of which is more popular and hopeful than that of any Cabinet the country has had for many years, Japan looks forward to a season of quietness and prosperity.

The remarkable thing about the fall of the Yamamoto Government is that the charges of corruption in the navy, which were indirectly the cause of the Cabinet's undoing, have yet to be proved in due course of judicial procedure. The late Government was thus virtually condemned and cast out without a hearing. The preliminary examination of the accused officers took a long time, during which the public mind was inflamed through the press by all sorts of rumors tending to prejudge the case, and the people became so exasperated that the Government could no longer withstand them.

The immediate cause of the Cabinet's resignation was the action of the House of Peers in refusing to sanction the naval budget. A subsequent conference of both Houses led to a deadlock, and the Cabinet was forced out.

The choice of Count Okuma, the "Sage of Waseda," for Premier is the most pleasant surprise that Japan has experienced for many years. For more than a quarter of a century he has been the leading champion of popular rights—reform of all kinds, extension of education, modern methods—as well as a leader in the peace movement. Consistently waging warfare against the bureaucracy, he was ostracized by them, and for years has held no public office. Raised to the Premiership once before, in 1898, he overcame the opponents of liberalism. He lost one of his legs by a bomb, but he has never wavered from his course; and now that he finds himself once again in power, the nation is anticipating great things. No sooner was his name announced as the head of the new Cabinet than prices on the Stock Exchange took a leap upwards.

More striking still is the fact that the vernacular press is almost unanimous in its approval. This universal acclaim is doubtless due to the fact that the masses are expecting Count Okuma to carry out all the reforms that he has been advocating for the last fifteen years. But the new Premier will go much more cautiously than the radical element expects; for Count Okuma is no radical. He is a Japanese of the Japanese, and believes that if Japan has much to learn from the West, she also has much to teach the West. He is unlikely to ignore any influential section of public opinion, whether it be bureaucratic, aristocratic, or democratic, though he will insist on the freedom which all progressive peoples demand.

The policy of the new Japanese Cabinet may to some extent be inferred from the personnel Count Okuma has selected. It is a coalition Cabinet, representing the minority parties in the Imperial Diet. The minor parties, thus for the first time united, are likely to prove the discomfiture of the Seiyukai party, which kept the last Government in power. The next most important member to the Premier is Baron Kato, Minister of Foreign Affairs. As Ambassador to Great Britain he was well known to the English-speaking world. His long and successful career as a diplomat revealed him to be a man of uncommon ability and tact, and much is expected of him in connection with negotiations now in process with the United States, and Japan's Far Eastern policy generally. From an Occidental point of view, one of the most interesting men in the new Cabinet is the Hon. Yukio Ozaki, Minister of Justice. For many years Mayor of Tokio, he made a name for himself as an able administrator, winning favorable opinions both at home and abroad.

Most of the other members of the Cabinet are men of eminence. Baron Oura and Mr. Wakatsuki have held Cabinet positions before, the latter in the last Katsura Cabinet as Minister of Finance, and the former in the last Saionji Cabinet as Minister of Agriculture and Commerce.

The new Cabinet represents all that was admirable in the last Katsura Cabinet, with the still greater strength of the Liberal wing of Japanese politics. It is in fact an admirable combination for a nation needing many reforms that should be carried out slowly but surely, so as to avoid what is too radical and revolutionary. Japan is passing through a period of popular awakening, in which too much haste might arouse a propensity to lawlessness and illegitimate means of gaining ends. All the members of the new Cabinet are men of mature experience, with clean public records.

"Dempo."

A Naughty Decade

OSCAR WILDE AND OTHER DECADENTS OF THE NINETIES—PRETEXT OF THE MOVEMENT—ITS REAL SOURCE.

PART ONE.

Mr. Jackson has written a book* that is at once excellent in understanding and perverted in its conclusions; nor, if one considers his theme, is this paradox as singular as it might appear, for it is a common mark of the condition which he expounds as apologist. His subject, with some excursions into alien matters, is the irruption of a sort of decadence into English art and literature in the closing years of the nineteenth century; and his quotations are so apt and abundant, his characterizations so clear and well-instructed, that one scarcely needs to go outside of his pages to form an independent judgment of the school, while the confusion of his own ideas when he tries to interpret the facts is an added document in evidence.

I.

The movement, whose influence to-day is concealed because it has put on a new disguise, may be said to have opened with the publication of Oscar Wilde's "Decay of Lying" and "Picture of Dorian Gray" in 1890, and to have closed with his pitiful death in 1900. By the little band who were working so feverishly in the midst of the surrounding British philistinism it was thought to be the dawn of a new era for art—"a great creative period is at hand," wrote William Sharp. While at the same time it was felt to be the end of all things, and the phrase *fin de siècle* was whispered as a kind of magic formula. "It's *fang-de-seeaycle* that does it," says one of John Davidson's burlesque characters, "and education, and reading French." As one goes back to the productions of these men now, and particularly as one turns over the effusions in the early volumes of the *Yellow Book*, one is likely to be impressed mainly by a note of amateurishness running through their work. In comparison with the decadents of the Continent whom they attempted to imitate, they appear rather like truant boys who need to be spanked and sent again to their lessons. In the first issue of the *Yellow Book*, the "incomparable" Max Beerbohm prints "A Defence of Cosmetics," wherein he observes sententiously that "the Victorian era comes to its end and the day of sancta simplicitas is quite ended." The essay seems to us to-day, with the reek of Broadway in our nostrils, as childlike a piece of extravagance as could well be imagined; yet it succeeded in rousing a little storm of protest, and one solemn critic wrote it down as "the rankest and most nauseous thing in all literature." Another contributor, Lionel Johnson, asks, in surprise at his own naughtiness: "What would the moral philosophers, those puzzled sages, think of me? An harmless hedonist? An amateur in morals, who means well, though meaning very little?" And one is inclined to answer: "My dear sir, be comforted; the puzzled sages would not have thought of you at all."

Yet however we may, and do, pass by these books as largely factitious imitations, there is an aspect of the revolt that is serious enough in all conscience. The disease from which it sprung was no jest, and beneath the antic contortions of their wit these men were suffering the very real pangs of physical disorganization. It is in fact like a nightmare to read their lives. The hectic decay of Aubrey Beardsley is almost health in comparison with the state of most of those who gave to the movement its tone. Of the living we speak not: but there is Lionel Johnson, the best artist of them all, a victim of absinthe, found in the gutter with his skull crushed; there is John Davidson, with his vision of a new universe ended in mad suicide; there are Ernest Dowson and Francis Thompson, mingling their religion with the fumes of alcohol and opium; there are others whose tainted lives and early deaths need not be examined; and, above all, is the hideous tragedy in Reading Jail. These men, who appeared to be treading so fantastically in "the variant bypaths of the uncertain heart," knew also in the flesh the certain terrors of organic decay.

No, we shall do these men less than justice if we merely smile at their mopping and mowing as at the gestures borrowed of a jackanapes. They are worthy of condemnation. They had a real driving motive in the flesh, and they had their ideal philosophy. Through all their works, now in the form of direct argument, now implied in the symbol of verse or picture, you will find running the ambitious design of making life itself into a fine art, of welding life and art into one indistinguishable creation. As Oscar Wilde says of his hero in the book which is the completest manifesto of the school, "There were many, especially among the very young men, who saw, or fancied that they saw, in Dorian Gray the true realization of a type of which they had often dreamed in Eton or Oxford days—a type that was to combine something of the real culture of the scholar with all the grace and distinction and perfect manner of a citizen of the world. To them he seemed to be of the company whom Dante describes as having sought to 'make themselves perfect by the worship of beauty.'" And with this coalescence of art and life, as its very source and purpose, was to be joined the garnering of sensations, in a manner which these young enthusiasts caught up from Rossetti and Walter Pater and the other virtuosos of the vibrating nerve. Thus, to the confusion of the Philistine, the Puritan, and the votary of commonsense, they were to create for the world a new Hedonism: "It was to have its service of the intellect, certainly; yet it was never to accept any theory or system that would involve the sacrifice of any mode of passionate experience. Its aim, indeed, was to be experience itself, and not the fruits of experience, sweet or bitter as they might be."

II.

In this longing after the fulness of experience, without consideration of the lessons of experience, we come close to the heart of the movement, and we also see how it was no vagary of a few isolated youths, but was the product of the most characteristic evolution of the age. "It was," as our present guide rightly observes, "the mortal ripening of that flower which blossomed upon the ruins of the French Revolution, heralding not only the rights of man, which was an abstraction savoring more of the classical ideal, but the rights of personality, of unique, varied, and varying men." Personality was to assert itself in the direction of unlimited and unquestioned expansiveness, in the claim of the individual to be purely and intensely himself, in the free pursuit of those emotions and sensations which are the root of division among mankind, while denying those rights of man, in the classical sense, which mean the subordination of the individualizing desires to the commonalty of the law of reason. And, as life and art were to proceed hand in hand, personality was to manifest itself in a symbolism which should endeavor, in the words of Arthur Symons, "to fix the last fine shade, the quintessence of things; to fix it fleetingly; to be a disembodied voice, and yet the voice of a human soul." The final marriage of life and art was to be in the swooning ecstasy of music. There was nothing discordant between the toil of the artist to fix the quintessence of things in fleeting form and the insatiable curiosity of a chaotic egotism. Nietzsche had said it: "Unless you have chaos within, you cannot give birth to a dancing star"—an idea which Mr. Jackson has developed at hazardous length, thus:

> Indeed, when wrought into the metal of a soul impelled to adventure at whatever personal hazard, for sheer love of expanding the boundaries of human experience and knowledge and power, they [this egotism and curiosity] become, as it were, the senses by which such a soul tests the flavor and determines the quality of its progress. In that light they

**The Eighteen Nineties.* By Holbrook Jackson. New York: Mitchell Kennerley. $3.50 net.

are not decadent, they are at one with all great endeavor since the dawn of human consciousness. What, after all, is human consciousness when compared with Nature but a perversity—the self turning from Nature to contemplate itself? . . . Not even a child has curiosity until it has experienced something; all inquisitiveness is in the nature of life asking for more, and all so-called decadence is civilization rejecting, through certain specialized persons, the accumulated experiences and sensations of the race.

There is no need to illustrate this philosophy by examples. Any one who has read Oscar Wilde's "Picture of Dorian Gray" may waive the pleasure or pain of going through the other productions of the school. Most of these writers, in fact, had a perfectly clear knowledge of what they desired to be and to accomplish. And not seldom they knew the fruits of their philosophy and experience, as any one may discover by turning over the pages of Mr. Jackson's book. The root of the whole matter lay in a febrile satiety of the flesh, in a certain physical lesion, which the sufferers, having no philosophy of moral resistance to oppose to it, translated into a moral fatigue. "It was as though they had grown tired of being good, in the old accepted way; they wanted to experience the piquancy of being good after a debauch." In this mood the literature of exquisite curiosity, whether veiled under the English cant of Epicurean austerity or announced more boldly from across the Channel, fell upon the dryness of their souls like a spark of fire upon parched grass. The consequence is set forth in Dorian Gray's discovery of "A Rebours":

> It was the strangest book that he had ever read. It seemed to him that in exquisite raiment, and to the delicate sound of flutes, the sins of the world were passing in dumb show before him. . . . There were in it metaphors as monstrous as orchids, and as subtle in color. The life of the senses was described in the terms of mystical philosophy. One hardly knew at times whether one was reading the spiritual ecstasies of some mediæval saint or the morbid confessions of a modern sinner. It was a poisonous book. The heavy odor of incense seemed to cling about its pages and to trouble the brain. The mere cadence of the sentences, the subtle monotony of their music, so full as it was of complex refrains and movements elaborately repeated, produced in the mind of the lad, as he passed from chapter to chapter, a form of reverie, a malady of dreaming.

There could not be a better description of the way in which art revealed itself to all the men of the group as a kind of narcotic for the torture of tired nerves, evoking under brush or pen the images of artificial dreaming, whether they displayed "the wan and saintly amorousness" of Burne-Jones's figures or "The Romaunt of the Rose," or waxed "fat with luxury" in the illustrations of Aubrey Beardsley, or flaunted the ghastly cosmetic rictus of Arthur Symons's creatures of the stage. Almost always behind the veil, and too often stalking wantonly into view, is the horror of an impotent sex-inquisitiveness and perversion. The subject is not agreeable to touch on, but any one who thinks such a statement too strong may satisfy himself by the frank confessions of their apologist. Beardsley, for instance, "loved the abnormal, and he invented a sort of phallic symbolism to express his interest in passionate perversities. His prose work, 'Under the Hill,' is an uncompleted study in the art of aberration." The spectacular disaster of Reading Jail has so impressed our imagination that we are apt to regard its victim as a monster among his fellows, whereas in his heart of hearts he was probably less perverted than were many of those who went through life unscathed by public opinion. But if the author of "Dorian Gray" carried the outer brand, the wages of an evil mind fell upon them all. It is said of Aubrey Beardsley that he "introduced into art the desolation of experience, the *ennui* of sin." That is to take him, perhaps, a trifle too gravely, but there is something in the conduct of his later years that may at least remind us of Poe's decrepit "Man of the Crowd." "His restlessness," observes his friend, Max Beerbohm, "was, I suppose, one of the symptoms of his malady. He was always most content where there was the greatest noise and bustle, the largest number of people, and the most brilliant light." And that, adds Mr. Jackson, "is a picture of the age, as well as of its epitome, Aubrey Beardsley." The right of personality to reject "the accumulated experience" of the race, and to expand indefinitely in the search of sensations, turns out in reality to be in no wise "at one with all great endeavor," but to be in the main the unfruitful restlessness of satiety and impotence.

III.

I would not have it inferred that the votaries of the Yellow Nineties produced nothing of pure beauty and intrinsic value. One of them, indeed, Ernest Dowson, who died just as the decade came to an end, left a modest body of verse, which possesses a singular fascination, and which, though Mr. Jackson quotes, I believe, not a line of it, may still be prized when its more assertive contemporaries are all but forgotten. The little collection opens with a variation on the old Horatian theme, *Vitæ summa brevis:*

> They are not long, the weeping and the laughter,
> Love and desire and hate:
> I think they have no portion in us after
> We pass the gate.
>
> They are not long, the days of wine and roses:
> Out of a misty dream
> Our path emerges for a while, then closes
> Within a dream.

That is all: two light stanzas, with no mark of originality, unless it be in the sighing melody of the words. Yet you will not read them without saying to yourself: This is poetry, the ancient, wonderful heritage, though held in feeble hands. And in the whole collection, amid a good deal that flutters ineffectually, you will find some ten or twelve other poems that carry the same note of indefinable charm. Such a product is not to be reckoned with the great and grave things of literature. If you wish to feel this distinction, read the last of the lisping lines at the head of which Dowson has written the majestic Latin phrases: *O mors! quam amara est memoria tua homini pacem habenti in substantiis suis;* and then, having read these, turn to No. 120 of the *Adventurer*, in which Dr. Johnson has unrolled his solemn meditations on the same text:

> Affliction is inseparable from our present state; it adheres to all the inhabitants of this world, in different proportions indeed, but with an allotment which seems very little regulated by our own conduct. It has been the boast of some swelling moralists, that every man's fortune was in his own power, that prudence supplied the place of all other divinities, and that happiness is the unfailing consequence of virtue. But, surely, the quiver of omnipotence is stored with arrows, against which the shield of human virtue, however adamantine it has been boasted, is held up in vain: we do not always suffer by our crimes; we are not always protected by our innocence. . . .
>
> Nothing confers so much ability to resist the temptations that perpetually surround us, as an habitual consideration of the shortness of life, and the uncertainty of those pleasures that solicit our pursuit; and this consideration can be inculcated only by affliction. "O death! how bitter is the remembrance of thee, to a man that lives at ease in his possessions!"

Dowson's is the poetry of weakness, but of weakness that veils itself in subtle reticences and in the praise of silence—his favorite word—and, above all, that wears the loveliness of purity. Strange as it may sound, in connection with his life and his associations, there is something of almost virginal innocence in his muse. To read in his book after hearing others of the decadent band, is as if a silence had suddenly fallen upon a place of unclean revelry, and out of the silence there rose the thin sweet voice of a child singing of pathetic things it scarcely understood. I may be peculiar in my taste, but in my ears he bears comparison well even with the religious poet whose reputation has been growing so portentously these

latter days. His "Amor Umbratilis," simple and unsuggestive as it is, arrests me with a touch that I somehow miss in the more complicated stanzas of Francis Thompson on the same theme of love's renunciation; and in all the gorgeous, stirring pomp of Thompson's odes there is still lacking—to me at least, though his best admirers will judge otherwise—some sweet submissiveness which I find, or almost find, in such a poem as Dowson's "Nuns of the Perpetual Adoration":

Calm, sad, secure; behind high convent walls,
These watch the sacred lamp, these watch and pray:
And it is one with them when evening falls,
And one with them the cold return of day.

. . . . . .

They saw the glory of the world displayed;
They saw the bitter of it, and the sweet;
They knew the roses of the world should fade,
And be trod under by the hurrying feet.

Therefore they rather put away desire,
And crossed their hands and came to sanctuary;
And veiled their heads and put on coarse attire:
Because their comeliness was vanity.

And there they rest; they have serene insight
Of the illuminating dawn to be:
Mary's sweet Star dispels for them the night,
The proper darkness of humanity.

Calm, sad, serene; with faces worn and mild:
Surely their choice of vigil is the best?
Yea! for our roses fade, the world is wild;
But there, beside the altar, there, is rest.

The strange thing, as I have said, yet not so strange perhaps, when we reflect on it, is that this sweetness and purity should be found in one who was so thoroughly corrupt in body and habit. There was the weariness of the devastation in his soul, as expressed in the refrain of the poem by which he is best known:

Last night, ah, yesternight, betwixt her lips and mine
There fell thy shadow, Cynara! thy breath was shed
Upon my soul between the kisses and the wine;
And I was desolate and sick of an old passion,
Yea, I was desolate and bowed my head:
I have been faithful to thee, Cynara! in my fashion.

But it was not the hardening desolation of the inner lie, and decadence kept him, as it were, in a state of fragile immaturity. His face, as we see it in the photograph or in the sketch by Mr. Rothenstein, with its unclean lips and furtive eyes, has the look with which we are too familiar in the degenerate types of our city streets, and from which we turn away with physical revulsion; but it half conceals also something of the expression of Keats—a Keats ruined. He was, as Mr. Arthur Symons says of him so finely in the memoir published with the Poems, "a soul 'unspotted from the world,' in a body which one sees visibly soiling under one's eyes; . . . there never was a simpler or more attaching charm, because there never was a sweeter or more honest nature." He suffered the penalties of perversion without its illusion.

News for Bibliophiles

DRYDEN IN THE DUNCIAD.

"What induced Pope to point the finger of scorn at Dryden?" The answer is, he did not. The story is worth telling.

Seven editions of the "Dunciad" were printed in the year 1728. In the first three, line 94 of Book I stood:

And furious D——n foam in Wh——'s rage.

In the next two London editions the line was altered to:

And furious D——s foam in W——'s rage.

And in the last London edition the "W—'s" was changed to "W—y's."

But in the edition printed by Faulkner in Dublin the line read:

Aud furious *Dryden* foam in *Wharton's* rage.

These seven editions contained few and short notes. The bulky critical apparatus we now associate with the poem was not published until the following spring. For the quarto, the first of the several editions of 1729, the line (there numbered 104) was entirely rewritten:

And all the Mighty Mad in Dennis rage.

And of the two lengthy notes appended to it the second began with this sentence:

This Verse in the surreptitious editions stood thus, *And furious D— foam, etc.*, which, in that printed in Ireland, was unaccountably filled up with the great name of *Dryden.*

In the editions of 1735 and subsequent years this sentence was omitted.

Unluckily for Pope, the scholars of half a century ago resurrected evidence to show that his morality was by no means so impeccable as he would have the public believe it. But the sway-backed virtue of the mid-Victorians was righteous overmuch. It established a tradition of holding up holy hands where no horror was—a tradition lusty still. In what Pope said and in what he did not say, it found alike evidence of devious dealing. Thus, as for the sentence quoted above, it was felt that there was something suspicious about putting it in, and about leaving it out, too.

The line has given rise to a great deal of speculation. "C" (whom I take to be Carruthers, the editor of Pope) once offered a guess. "I cannot for a moment believe that *Dryden* was meant [*i. e.*, by Pope]; but, as Faulkner was Swift's printer, and Swift hated Dryden, may the Dean not have suggested this mode of filling up the blank?" The best of all the anecdotes connected with it, though, is the one in which Macaulay and W. J. Thoms were the leading *dramatis personæ*. It has been well told by the late Edward Solly. He and Thoms were discussing this very line once on a time.

This led Mr. Thoms to say: "Aye, but how about the first name 'furious D—n'? What induced Pope thus to point the finger of scorn at Dryden?"—and he then proceeded to tell in detail, what I had heard him more than once allude to before others, that once in the Library of the House of Lords, he had suggested this very question to Lord Macaulay, in the presence of several peers, whereon Macaulay, turning sharply round, said, "Oh, dear no; you are mistaken; there is no possible reference to Dryden in the *Dunciad*"; and then for nearly ten minutes poured out a rapid and eloquent vindication of Pope, finally taking down a copy of a later edition, and proving to all around that Mr. Thoms was in error, for there was neither Dryden nor yet "D——n." Mr. Thoms bowed and was silent, though he had all the time in his pocket a copy of one of the first editions of the *Dunciad* of 1728 with the name "Dryden."

Now, any one familiar with contemporary copies of this and similar productions in which names were suggested by first (or first and last) letters will recall that the omitted letters are frequently supplied in manuscript, sometimes in the margin, sometimes above the runners that follow or separate the letters. This Dublin edition was set up from a copy of the first or second edition sent over from London, in accordance with the common practice of the day. The sender (I do not think it was Pope himself, though such is possible, but some one who, like Edmund Curll, was familiar with Pope's intentions, but not in his intimacy) had completed the names by writing out the missing letters, as may be demonstrated almost to the point of proof. His handwriting must have been crabbed. Most of the names were printed correctly. But in Book II, line 319, we find *Metbwin* instead of Milbourn (sometimes spelled Milburn), which, as we know from the later editions and the *Keys*, was the name intended. In Book III, line 271, occurs the impossible *Ecyden* where was intended Eusden, a name correctly reproduced in other lines of this same Dublin edition. The combination of a *u* with a long *s* might easily be translated into a *cy*. The Irish compositor, we may surmise, was not familiar with the names of contemporary London men of letters; and when he found in Book I, line 94, the *D——n* and the scribbled letters *unto*, he misread them as something other than Dunton. If the first down stroke of the written *n* was rather long, and *n* placed close to the *t*, and the cross struck through the *t* so as to start from the second peak of the *n*, he would easily have read *ryde*, for an *e* in contemporary script was much more like an *o* than is ours.

Macaulay was right in the main after all. And another one of the charges against Pope proves groundless.

Books and Men

PENGUINS.

The penguin is by no means a new discovery. At least twenty-five years ago a group of penguins stood, in an austere group, at the head of the chapter on Antarctic Regions in my geography. Possibly they were known to man even before that time. But the recent explorations of the South Polar country, the expeditions of Shackleton and Scott, have brought this curious bird into greater publicity. Not only his peculiar habits are better known, but the latent humor of his appearance is more generally appreciated. For although the penguin is in some sense a beautiful bird, he is also an absurd one, a *jeu d'esprit* of nature.

He is beginning to figure in art and literature. The artist-hero of "Buried Alive," it may be remembered, made a sensation by a picture of some penguins, while Mr. E. V. Lucas has introduced into one of his essays a pathetic story about them. Persons who overcame their objections to moving pictures sufficiently to see the records of the Scott expedition—as well as those who had no objections to overcome—will remember the intensely interesting and comic views of penguins in their domestic relations. The tragedy which overhung the Scott pictures was lightened by the representation of penguin parties, and of penguins in peace and war. The reel which showed the men of the expedition chasing the birds on the ice on Christmas morning was amusing, because there was nothing cruel about it. The penguins seemed to have as good fun as did the men—and they kept their feet much better.

A delightful little book, which I have read this week, called "Antarctic Penguins" (McBride, Nast & Co.), has for its sub-title "A Study of Their Social Habits." The author is Dr. G. Murray Levick, of the Royal Navy. Dr. Levick was the zoölogist to the Scott expedition. His book is, in a way, a tribute to the funny and friendly creatures who did so much to cheer him and his companions during their two long years in the far South.

"When seen for the first time," Dr. Levick writes, "the Adélie penguin gives you the impression of a very smart little man in an evening dress suit, so absolutely immaculate is he, with his shimmering white front and black back and shoulders. He stands about two feet five inches in height, walking upright on his little legs."

The droll appearance of the penguins has impressed the explorers of all nations. The men of the Belgian and French parties noted it, before Shackleton's first trip, and penguins had a vogue in Paris. Their ceremonious attitudes caught the fancy of one of *Punch's* artists, who likened them to floor-walkers of Chesterfieldian deportment—bowing, with one flipper extended across the breast.

Dr. Levick observed the penguins arriving, at the beginning of the Antarctic summer, at what he calls the "rookery." That is hardly an appropriate word, though it is not so awkward as *penguinery*. They came not in battalions, but as single spies. There were two on the first day, but twenty on the next. "On arrival," he writes, "they wandered about by themselves, or stood or walked about the beach, giving one the impression of simply hanging about, waiting for something to 'turn up.'"

One certainly needs the pictures, with which the book is fully supplied, to understand the scene. Of all the animal photography during the past dozen or fifteen years—and there has been no small amount—hardly anything has approached in interest these views of the Antarctic penguins. They lent themselves to the work of the camera as few live animals have done. The photographers mastered the difficulties of the snow-covered ground, and the black coats and coat-sleeves (for that is what they look like) of the penguins stand out vividly against the glare.

The arrival of the main body of the penguins took place on October 21, about six days after the first ones had been seen. They came in thousands, all on foot, and from the north. They poured on to the beach in a continuous stream—"the snaky line of arrivals extending unbroken across the sea-ice as far as the eye could see." The photographs of the procession make it look very much like a straggling throng of people walking to some picnic ground—a host of little clergymen in black "cutaway" coats. All they need is small baskets in their flippers to make the illusion complete.

But the penguins travel without baggage. Out of the mysterious and awful polar distances they come, led on by the migratory instinct. These spring pilgrimages—for October is spring down there—are often hundreds of miles in length, and the penguins walk a good part of the way. Or rather, Dr. Levick writes, they have two modes of progression:

> The first is simple walking. Their legs being very short, their stride amounts at most to four inches. Their rate of stepping averages about one hundred and twenty steps per minute when on the march. Their second mode of progression is "tobogganing." When wearied by walking, or when the surface is particularly suitable, they fall forward on their white breasts, smooth and shimmering with a beautiful metallic lustre in the sunlight, and push themselves along by alternate powerful little strokes of their legs behind them. . . . When quietly on the march, both walking and tobogganing produce the same rate of speed, so that the string of arriving birds, tailing out in a long line as far as the horizon, appears as a well-ordered procession. I walked out a mile or so along this line, standing for some time watching it file past me, and taking the photograph with which I have illustrated the scene. Most of the little creatures seemed much out of breath, their wheezy respiration being distinctly heard.

After the arrival, and a little moving about and examination of the rookery, begin courtship, marriage, and the setting up of housekeeping. As a matter of fact, however, the order is somewhat reversed, for the hen-penguins begin to construct uncomfortable-looking nests of pebbles before they have contracted any alliances whatever. The nest is built upon the ground, and after the hen has settled in it a cock penguin comes along and offers himself as husband. Frequently more than one such offer is made, and then there is a resort to arms—or, rather, to beaks. The cocks fight long and savagely, though never to the death. The defeated bird is usually in the condition of the hero of Henley's poem: his head is bloody but not bowed. One of Dr. Levick's photographs of such a fight seems to show the coy lady penguin with her head buried in the breast feathers of a friend of her own sex—ostensibly horrified, but secretly pleased at the awful bloodshed she is causing.

The victorious suitor then waddles off and procures a pebble as his contribution towards the household arrangements. If the bride accepts the gift, the affair is evidently legalized, though the husband has first to undergo a terrific pecking from his wife, inflicted in order to put him in his place at the outset.

The tameness and extreme curiosity of the penguins enabled Dr. Levick to observe them very closely. The photographs show them at the nearest possible range. All the details of their life are exhibited—the nest-building, fighting, social gatherings and gossipings, and the various amusements. Swimming and diving are among the latter, and one of the most appealing of all the pictures is that which shows a group of penguins peering over the edge of an ice-cake to watch one of their number whom they have just pushed overboard.

The sea leopards by water, and the skua gulls by land, are their chief enemies. Those who saw the moving pictures of the Scott expedition will remember the piratical skua gull who pounced upon the penguin's egg and sailed away with it, a sardonic grin upon his face as he watched the pitiful flapping of the mother penguin.

Dr. Levick devotes nearly all of his book to the Adélie penguin, though there is a short chapter, with two excellent photographs, about the Emperor penguin. The Emperor is the largest of the species, as he weighs between eighty and ninety pounds. Only one rookery is known, and that, at Cape Crozier, was visited by a party from Capt. Scott's first expedition. Temperatures of 78 below zero Fahrenheit were encountered, and in such cold as this, and in "the dark days of July," the Emperor penguins lay their eggs upon the ice and hatch their young.

EDMUND LESTER PEARSON.

Correspondence

"THE CONSTITUTIONAL POWER OF THE COURTS."

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 23 appeared under the above caption a communication in reply to a short note of an earlier date by the present writer.

My critic repeats my quotations from the Federal Constitution, and states that I offered them "as proof" of the contention that the Constitution confers upon the Supreme Court the power to declare acts of Congress unconstitutional. I beg leave to say that I did not cite these quotations as proof at all, but merely as the basis of the argument. I admitted the possibility of two interpretations, but proceeded to mention a train of historical facts that favor the usual interpretation by our courts.

My critic replied by citing the same passages from the Constitution, and then, to controvert the various historical facts mentioned in my article, he stated *one* alleged fact which is in reality directly contrary to the truth of history. In his last paragraph he states as his ultimate argument "that nowhere at the time the Constitution was framed was there a judiciary endowed with such power." If my critic had examined a standard general history of the United States, to say nothing of many special treatises by eminent authorities, he would not have made that statement.

For example, I quote from Prof. A. C. McLaughlin's "The Confederation and the Constitution" ("The American Nation," Vol. X, pp. 250-251): "When the Federal Convention assembled, the nature of a written constitution, emanating from an authority outside the Government, had already been made manifest by several judicial decisions. In New Jersey, as early as 1780, the court refused, in the case of Holmes vs. Walton, to regard as valid an unconstitutional act of the Legislature. Two years later a similar doctrine was laid down in Virginia, and in 1786, as we have already seen, the Rhode Island court announced the same principle." The author, continuing, cites a similar case in North Carolina.

Any one wishing to examine further the historial facts bearing upon this question may follow with profit the books and articles cited by Professor McLaughlin in his foot-notes and bibliography. Of especial importance is the recent work by Charles Grove Haines, entitled, "The American Doctrine of Judicial Supremacy," which was reviewed in the *Nation* of April 30. See also the opening essay in McLaughlin's recent work, "The Courts, the Constitution, and Parties."

RAYNER W. KELSEY.

Haverford, Pa., May 2.

TO THE EDITOR OF THE NATION:

SIR: If the two passages from the Federal Constitution mentioned in the letter in your issue of April 23, signed "E. M. H.," were the only ones upon which to base the authority of the Federal courts to declare acts of Congress unconstitutional, and hence void, there might be some foundation for the contention that these courts had arrogated such power. But these passages must be read in connection with that part of the Constitution which defines the power of Congress wherein is stated upon what subjects it may legislate, and upon what it may not. Therefore, in a case in law or in equity, where a question is raised as to whether some enactment of Congress is within or without the scope of its defined powers, and hence as to whether it is or is not binding, there can be no doubt that such a case is one "arising under this Constitution," and hence included within the grant to the judicial power.

How else could the power of Congress be tested? It would be destructive of that coöperation between the Executive and Congress which is essential to the working of our system of government if the Executive were to assume the power of denying the validity of an enactment of Congress. Discussion of this point is useless. Should Congress be the judge of its own power? If so, the carefully worded grants of and limitation upon its power might as well not have been written.

But, again, the powers not granted to Congress are reserved to the States, or the people thereof. Should the States be the judges of the validity of Congressional enactments? To ask the question is to answer it, for that would mean the destruction of the Federal system, and would lead to a condition worse, if anything, than that under the old Confederation, for the correction of which the Constitution was adopted. The reference by E. M. H. to the experience of European countries acting through Legislatures free from control by the judiciary is not in point. Nowhere is there any limitation placed upon the Legislature—no reservation of powers. In Great Britain, where alone there is true parliamentary government, Parliament is the sole source of legislative power—there is no instrument with grants, limitations, and reservations. There is no Federal system, with its division of power between central and local divisions. No question can arise as to the power of Parliament—the only question that can present itself is whether in any particular case the exercise of that power is acceptable to the nation. The legislative bodies of other European countries are so differently constituted and are subject to such different checks, that comparisons with them are valueless.

It seems strange that, at this late date, the question of the right of the Federal courts to exercise this power should be raised. It is purely academic, but since it is seriously advanced, it is most desirable for the correct political education of our citizens, especially of those of the generation now coming upon the stage, that the true and necessary position of the Federal courts in our complicated system should be correctly apprehended. Whether the past action of the Supreme Court has been beneficial or not, is a matter of opinion. Whether it has the ultimate power to keep the Federal Government and the State Governments within their respective limits by reference to the grants, limitations, and reservations of the Constitution, ought *not* to be a matter of opinion.

EDWARD C. PEARSON.

Plainfield, N. J., May 1.

PRESIDENT WILSON'S MEXICAN POLICY.

TO THE EDITOR OF THE NATION:

SIR: It is very easy to talk of "the inconsistency which has marked the policy of the Administration [towards Mexico], the inadequacy of the grounds on which war has been threatened," and of "our aggression in Mexico" (*Nation*, April 30). It is, of course, perfectly futile to predict what the outcome will be, but I venture to think that so far Mr. Wilson's policy has been extraordinarily successful.

First of all, the refusal to recognize Huerta, which has often been criticised as the cause of the present situation, rests on a firm basis. When in 1903 Peter Karageorgevitch ascended the throne of Servia over the dead bodies of King Alexander and Queen Draga, the Powers of Europe refused recognition to the new régime till it was demonstrated, after several years' waiting, that the new King commanded the support of the country. Not only were the circumstances of Huerta's accession to power more suspicious than those surrounding King Peter's, but the Mexican dictator has slowly but surely lost ground. There is nothing to show that our attitude has handicapped him, for he has been able to obtain money; he has had every opportunity to show that he was the requisite "strong man," and has miserably failed to do so. The assumption of President Wilson that Huerta was an eternal guarantee against a permanent peace in Mexico has been borne out by the course of events, that is, by the astonishing success of Villa and his army.

Secondly, Mr. Wilson has declined to take sides in Mexico. When it became clear that the closing of the Texan border was working out to the advantage of Huerta, the embargo on arms was raised. Since then, each faction could secure all the war material it could pay for. But when our occupation of Vera Cruz shut off Huerta's supplies, Villa's were also curtailed by restoring the embargo on the frontier. And it is worth remembering that Carranza has not been recognized, for the very good reason that his government is no more legitimate than Huerta's.

Thirdly, had our Government taken stern measures to protect the lives and property of Americans and Europeans in Mexico, however desirable that protection might be, the result would surely have been a real war with Mexico. Fortunately, the situation was saved by Huerta's tactlessness. Mr. Wilson was careful to state, in his address to Congress, that an official dispatch of the United States Government had been held up, and that the flag incident at Tampico was merely the culmination of a series of insults to our Government. At no time in the last year has the wisdom of our policy been so clearly demonstrated, for the fact that we were dealing with an irregular government enabled us to base our demands, not on international law, but on expediency.

What has been the result? The seizure of Vera Cruz has had a profound effect, as Mr. Wilson intended, upon Mexican opinion of all classes and factions. The truth seems to have dawned upon our unfortunate neighbors that further trifling with the United States could have but one result, the occupation of Mexico by our troops, and, if our history is any guide to the future, the end of Mexican independence. Two weeks ago Mexico seemed on the eve of a complete collapse. To-day, so far as one can judge from the daily press, a permanent settlement is more likely than in many, many months. It is to this end that the South American mediators appear to be devoting their energies rather than to an adjustment of the American quarrel with Huerta, for we still insist that he must retire. For the great improvement in the general situation, Mr. Wilson's diplomacy is entirely responsible.

BERNADOTTE E. SCHMITT.

Western Reserve University, Cleveland, May 2.

[The *Nation's* criticism on the recent acts of the Administration in Mexico is precisely on the grounds that, as our correspondent suggests, they might lead to "the occupation of Mexico by our troops" and ultimately to "the end of Mexican independence."—ED. THE NATION.]

THE PASSING OF A MASTER MIND.

TO THE EDITOR OF THE NATION:

SIR: I desire to record a word of tribute to one of the master minds of America. The recent death of Charles S. Peirce removes an heroic figure from the field of American learning. Living for the most part in retirement, he was known to a relatively small circle. Yet where known, his name was spoken with exalted respect; and his fame, critically appraised, placed him with the chosen few of any generation. How far he sought and failed to find the wider recognition that falls to those whose labors are in fields open to public approbation, how far he did not care to pursue the accredited steps to preferment and recognition, I cannot say. Yet this aspect of his career is significant.

My acquaintance with Mr. Peirce began in 1882 when I came as a graduate student to Johns Hopkins University. He was there lecturing on "The Algebra of Logic"—a subject which he in large measure established in this country. He had interested certain able students—all of them since distinguished in various fields—in his explorations into a broad domain of thought; and of this enterprise a volume of studies by himself and his pupils bears record. In those days there was gathered in Baltimore a group of scholars and productive intellectual workers that would have been exceptional in any scholarly community. Their names would suggest the notable contributions of American scholarship in their generation. Yet among them the impression of Mr. Peirce stands forth most prominently *primus inter pares*. The impression that I retain of his analyses of logical and philosophical problems is that of observing a plummet line descending through troubled waters foot by foot, sounding the depths, avoiding the weeds and the shoals, and reaching an undiscovered bottom; for to the student many of the problems in a controversial sea seemed bottomless. It was not argument, but discovery.

It was Mr. Peirce who introduced me to the possibility of an experimental study of a psychological problem. He provided the problem, the instruments which I set up in my room, the method, and the mode of reaching the results; these were printed over our joint names. He also introduced me to the mode of attack upon larger psychological problems by methods of statistical inquiry. He gathered about him a group of five or six students and proposed a study of "great men." He drew up the questionnaire; we gathered and collated the results. The work was not finished; though I was permitted to publish one or two aspects of the material in brief papers. My personal indebtedness gave me the opportunity to gauge the measure of the man. Only one other produced upon me an equal impression of original greatness. I refer to William James. The two men may well be associated, for each held the other in high regard. Professor James recognized in Charles Peirce the true founder of Pragmatism, a way of thinking which James made popular, the significance of which he expounded. If, in addition, it be remembered that these logical, psychological, and philosophical pursuits were in a sense avocational, and that Mr. Peirce was for a long time actively connected with the Geodetic Survey, was a physicist and mathematician by profession, the scope of his attainments will be more truly perceived. In a sense he represents the American Helmholtz.

I do not know that Mr. Peirce ever held any academic position other than the lectureship for a few years at Johns Hopkins University. That his was the personal temperament that may well be called difficult may be admitted; such is the disposition of genius. It cannot but remain a sad reflection upon the organization of our academic interest that we find it difficult, or make it so, to provide places for exceptional men within the academic fold. Politically as educationally, we prefer the safe men to the brilliant men, and exact a versatile mediocrity of qualities that makes the individual organizable. All this has its proper place and is doubtless more or less inevitable, even sound; but the penalty paid for safety is too heavy, when it excludes the use of rarer gifts, the choice product of exceptional power of sustained thought. Of this lamentable lack of efficiency—to turn the sting of an abused word against itself—Mr. Peirce is not the only example. Other master minds knocked in vain at academic portals, and were refused as too elect. Or, more truly stated, the small group of their liberal-minded friends within the hallowed precincts failed to persuade the authorities to adjust methods to men. Certainly it remains true for all time that no more effective stimulus to promising young minds can be found than to give them the opportunity of contact with master minds in action. The service that a small group of such men can perform is too fine, too imponderable, to be measured; and likewise too intangible to impress its value upon the judgment of those with whom these issues commonly lie. Yet nothing would have shown better the greatness of a great University than to find a place in it for rare men like Charles S. Peirce. His memory invites not only the personal tribute, but is a reminder of our neglect of the true worth of genius.

JOSEPH JASTROW.

The University of Wisconsin, Madison, Wis., May 6.

THE LATE EDUARD SUESS.

TO THE EDITOR OF THE NATION:

SIR: On the 26th of April there died at Vienna, in his eighty-third year, one of the greatest of European scientists, the distinguished geologist, Eduard Suess. Strange to say, his death has passed unnoticed in the American press, although few scholars have ever lived who deserved better of their fellow-men. I must leave it to competent hands to point out in the *Nation* Professor Suess's service to science. Suffice it to say, in this place, that his principal work, the monumental "Das Antlitz der Erde," is regarded as the most authoritative exposition of the principal features of the earth's surface and their correlation, and that it has been translated into four languages. In the preface to the French edition Marcel Bertrand likened the appearance of the work to the action of a sudden ray of light in penetrating chaos, and the London Geological Society, which conferred on him the Wollaston medal, congratulated him on his seventieth birthday as the greatest living geologist.

From 1857 to 1901 Suess was professor of geology in the University of Vienna, and from 1899 to 1911 he was president of the Vienna Academy of Sciences.

But over and above his scientific work, Professor Suess achieved renown as one of the most indefatigable and most unselfish workers in Austrian public life. As a member of the Municipal Council of the city of Vienna, of the Diet of Lower Austria, and of the Reichsrath, he was a champion of liberal measures and a parliamentarian of remarkable power. The city of Vienna is indebted to him for its present water supply, the plans for which he drew, and which

were adopted by the Municipal Council in 1864. He was the most modest of men, and refused all his life decorations and other outward distinctions offered him by his grateful monarch.

Professor Suess was in frequent contact with various American scholars, notably with the late Angelo Heilprin, and on various occasions he evinced great interest in our public affairs. He was of striking personal appearance, tall and distinguished looking, most winning in discourse, and of undiminished mental powers even in extreme old age. Racial and religious bigotry he combated with all the fervor of a noble soul.

GUSTAV POLLAK.

New York, May 11.

TEXTUAL CRITICISM.

TO THE EDITOR OF THE NATION:

SIR: It seems that on Sunday, April 12, 1914, that pious statesman, Senator Penrose, conducted religious services at Whitehall Baptist Church, Tacony, Pa., and preached a sermon. It was a fine sermon, so fine that, as appears from the *Congressional Record* of April 16, by reproduction it has been made part of the proceedings of the Senate. I would draw attention, however, to the absence of a prefixed text of Scripture, indispensable to sermons, according to all preacher opinion. Perhaps a text, once prefixed after the orthodox fashion, was omitted when the sermon was transformed into a State paper. Be this as it may, the theme of the deliverance was President Wilson's attitude as to the claim of one V. Huerta to be President of Mexico, and the single excerpt here following makes it plain what the text was:

"It is fairly obvious now, even to a partisan supporter, that the man most likely to secure peace in Mexico was the one who was rejected."

Text: "Had Zimri peace who slew his master?" 2 Kings ix, 31.

And Mr. Penrose takes the affirmative of the proposition. WILLIAM GEORGE.

Sausalito, Cal., April 25.

THE ANNIVERSARY OF EL GRECO.

TO THE EDITOR OF THE NATION:

SIR: The little city of Toledo, Spain, has just commemorated the three hundredth anniversary of the death of the painter known as "El Greco"; three festal days were set apart by the Mayor, including a general holiday for every one.

A more favorable day for a pilgrimage to Toledo could not have been desired. The balmy air blowing up the valley of the Tagus, a matchless sky, and blossoms everywhere made it evident that spring had come at last. Everywhere the farmers were at work irrigating their plots of land, in which process the chief part is played by a blindfolded mule, which, walking an incessant round, moves a water-wheel, a method used in Spain since time immemorial. An occasional herd of fighting bulls could be seen, black against the bright green of the lands bordering the river.

There is no mediæval town in Spain that offers so many picturesque sights as Toledo. Situated on the top of a cliff surrounded on three sides by the river Tagus, which here assumes the form of a horseshoe, it has, because of its almost impregnable position, played an important part in every epoch of Spanish history. An ancient bridge still forms the chief approach, and the rickety diligences, the ox-carts, the venders of fruits and vegetables, all indicate that the character of the traffic has undergone but little change in the course of time. Near the entrance to the bridge is an old fountain where the muleteers who come from without water their beasts, or where many-shaped earthen jars are filled by the servants, who still carry the water as in mediæval times, to the houses which have neither fountain nor faucet.

The great question which confronts Toledo is the preservation of its innumerable ancient monuments. Many are being cared for, but others are growing unsafe, and the characteristic procrastination of the Spaniard is already responsible for the collapse of several buildings. A few years ago the beautiful patio of the Hospital de Santa Cruz, one of the great structures of the early Spanish Renaissance, fell in, but a national Art Commission immediately set to work to restore the building, and when it is completed it will be opened as a museum. The refectory is still in ruins, but the patio, with its noble plan, its delicate columns, its striking lights and shadows, can be enjoyed again, and constitutes, together with the great chapel, one of the chief glories of Toledo.

El Greco, who was a Cretan by birth, seems to have come to Toledo about 1576 or 1577, producing up to the time of his death a most astonishing number of paintings, of which Toledo is still the great treasure-house. Here he is supposed to have acquired immense wealth, and if the scanty details of his life, as recorded by his biographers, are to be trusted, the immense house in which he dwelt was not only filled with paintings of his own, many half-finished, orders on which he was constantly at work, but the wealth thus made was lavishly spent in festivities and entertainments.

To form a comprehensive idea of El Greco, one must spend many days in Toledo, where churches, monasteries, and noble houses were once filled with his innumerable paintings of every conceivable subject. Unfortunately, his ardent admirers have made a cult of his peculiar art, and it is therefore impossible for a layman to follow their unqualified praise of all that he has done. Notably the creations of his last period are most difficult to appreciate, nor does his own explanation of the fantastic outline of objects "which, when seen through certain mediums, appear larger than they are," entirely justify his presentation of the human form.

The most satisfactory interpretation of his genius makes him not only a great painter, but also gives him a prominent position among the Spanish mystics. Warm reds are replaced by transparent blues or veiling grays, giving all of his last great compositions a purely celestial atmosphere. For this reason many of his paintings should never be viewed on a level with the eye. This grouping, as well as the attitude of individual figures, improves vastly when seen from below. Like those of a true mystic, all of El Greco's creations are wholly serious; hardly a smile brightens the general impression made by his canvases. Even his portraits, stupendous as they are in their variety and individuality, indicate an unvarying preference for a serious or thoughtful moment.

The three festal days in honor of El Greco were filled with the usual merry-making, including fireworks at night and bull fights by day, without which even a mystic of the Renaissance cannot be properly honored. The numerous antiquity shops also celebrated after their fashion by raising the price for the benefit of visitors, and the hotels added a slight sum to the bill of the unsuspecting guest. But Toledo can never lose any of its charm. After I had lost my way for the twentieth time in the labyrinth of a hundred crooked passages, I felt that I was at last becoming acquainted with the old imperial city. R. S.

Toledo, Spain, April 15.

Literature

AUSTRIA-HUNGARY.

The Hapsburg Monarchy. By Henry Wickham Steed. New York: Charles Scribner's Sons. $2.50 net.

Hungary's Fight for National Existence, or The History of the Great Uprising Led by Francis Rakoczi II, 1703-1711. By Ladislas Baron Hengelmüller. New York: Macmillan Co. $3.25.

The Life of the Emperor Francis Joseph. By Francis Gribble. New York: G. P. Putnam's Sons. $3.75 net.

The author of "The Hapsburg Monarchy" is in some respects unusually well qualified for his task. He has, as he says, lived for ten years the daily life of the country, and he has had access to excellent sources of information. He has thus learned to look upon the complex political and social conditions of the Empire, not with the eyes of an English critic, but as an interested observer, who, detached as he is, has in some ways adopted an almost Austrian point of view.

The very title of the book gives us a clue to the author's general attitude. He identifies himself with those students of Austrian history who find in the essential unity of all the lands of Austria-Hungary under the Hapsburg dynasty the best guarantee of her future existence. The dynastic tie seems to him far stronger than the dualism which now unites Austria and Hungary. Singularly enough, his political creed is in the main that of the pre-revolutionary, conservative Austrian Liberal—dissatisfied with existing conditions, recognizing the need of change in many directions, yet having no particular remedy to suggest,

and turning, after all, to the Hapsburgs as those best qualified to hold together the strange medley of races, nationalities, religions, and classes that constitutes the Austro-Hungarian monarchy. Of this type the poet Grillparzer was the most distinguished representative, and Mr. Steed fortifies himself by quoting in his preface Grillparzer's famous lines which, in 1848, were intended to impress upon Austrians of whatever nationality the need of rallying around the dynasty and the army in support of the state.

It seems a curious anomaly that a country so difficult to govern as Austria-Hungary should have found in Francis Joseph—a ruler of no well-defined political convictions, not even of consistent political leanings—precisely the man best able to command that personal loyalty which, again and again, has temporarily reconciled the warring elements of the monarchy. Were Mr. Steed fully acquainted with the characteristic traits of the Austrian rulers of past times, he would find the present Emperor less of a psychological riddle. Francis Joseph appears to him "personally unselfish, generous and just, ever ready to redress a private injury," and yet, as a ruler, often "callous to the point of injustice," willing to tolerate, as long as recruits and money are forthcoming, Ministerial policies that press hard upon whole sections of loyal subjects. Such a judgment leaves wholly out of account the many insoluble problems that have beset Francis Joseph from the beginning of his reign. There is, however, greater justice in the following summary of the contradictions of his career:

> The youth, not illiberally educated, who in 1848 succeeded to the throne of an empire in revolt and learned to distrust constitutionalism, liberalism, and all forms of progressive political aspiration; the absolutist ruler, led by stress of circumstance and reactionary advisers to believe that the army, the church, the police, and the bureaucracy are the only reliable pillars of a throne, and induced on his twenty-fifth birthday to present his peoples with a Concordat involving an abject capitulation of the state to the church; the defeated commander-in-chief at Solferino, whom the loss of Lombardy and the imminence of state bankruptcy caused to doubt the wisdom of his reactionary counsellors; the semi-constitutional Emperor of 1860-65, anxious to save his leadership among German princes, but who, being outmanœuvred by Bismarck at the Frankfort Diet of Princes in 1863 and by Moltke at Sadowa in 1866, was compelled to fall back on his hereditary peoples, to bargain with Hungary and to bedizen Austria with constitutional robes in the vain hope that what was irrevocably lost might yet be retrieved; . . . and, finally, the Constitutional King of Hungary and Constitutionally absolutist Emperor of Austria . . . such a man or some such man is Francis Joseph of Hapsburg-Lorraine.

The sketch is too rapid to be wholly life-like. Elsewhere in the volume other aspects of Francis Joseph's long reign are discriminatingly touched upon, such as his determination, in the late sixties, to subordinate the Church to the State, and his active interference, in the Conclave of 1903, against the election of Cardinal Rampolla to the Papal throne. In fact, faithful Catholic as Francis Joseph always has been, the interests of the state have ever been his first concern. No priest has been among his intimate counsellors, and he has never given countenance to religious and sectarian prejudice. That no monarch of recent times has, on the whole, been actuated by a higher sense of duty towards all his subjects must be conceded by every fair-minded critic.

The author's general familiarity with his subject is most apparent in the chapters dealing with such topics as The Bureaucracy, The Police, The Church, and The Press, though not infrequently there is manifest that tendency to overemphasize abuses which is inherent in his peculiar mental attitude. The Austrian bureaucracy has many sins to answer for, and as a circumlocution office it has perhaps had few equals, but to imagine that only "a new Joseph II, or a new Lueger," could simplify its procedures is to adopt precisely the hopeless tone of the old-fashioned Vienna burgher, and to ignore the fact that the Austrian civil service has during recent years made great strides in efficiency and is approximating Prussian standards. Similarly, in speaking of the pervasiveness of the Austrian police, the author exaggerates the functions of that petty tyrant, the city house porter (*Hausmeister*). It is not correct to say that the police—whether in ordinary times or at critical moments—keep strict watch over the movements of foreign visitors in Austria. "The stranger is unaware," says Mr. Steed, "that the porter of his house is a *confident* of the police, and that his goings and comings, his manner of life, the number and names of his friends, and all personal details are carefully communicated by the porter to the police, which preserves them in a *dossier* ready for communication to the political or to the fiscal authorities as occasion may require. Unless warned from some friendly quarter, he may not know that his correspondence is being watched, his telephone 'tapped,' and his intercourse noted." It seems worth while to point out the glaring exaggerations in this statement, in view of the fact that an American publicist of the first rank has adopted a similar view of the functions of the Austrian police, following, probably, like Mr. Steed, the account of antiquated conditions in Dr. Ignaz Beidtel's "Geschichte der österreichischen Staatsverwaltung, 1740-1848."

Mr. Steed has a keener eye for certain peculiarly Austrian incongruities, such as the discrepancy between the rigor of the press regulations and the ease with which a confiscated journal can bring the obnoxious article before the public. If such a journal is on a friendly footing with a member of Parliament, it simply asks him to embody the confiscated matter in a parliamentary interpellation. "The journal is then able to reproduce its confiscated article from the parliamentary reports and to wave it under the nose of the public prosecutor and the police."

The passages characterizing the principal Vienna papers are among the most interesting in the book, though they are marked by an anti-Jewish animus which is its chief defect. Mr. Steed finds Jewish influence so pronounced in every field of activity throughout the Empire that he feels impelled to devote to the solution of the "problem" many pages and much ingenious speculation. The simple solution, lying in the fact that in Austria, as elsewhere, intellect and character find in the long run their natural level, has escaped his notice, although he unconsciously pays both the Austrian Jews and their country a high tribute in saying that the Hapsburg monarchy, "despite its reputation for conservatism, might with justice claim that it offers even to its humblest citizens a career open to talent, especially when the talent is that of the Jew."

The author's remarks concerning army conditions in Austria-Hungary are fair-minded and instructive. He contrasts the officers favorably with those of Germany:

> The bulk of Austro-Hungarian officers are drawn, not as in Germany, from the aristocracy and the nobility, but rather from the middle and lower middle classes. Austro-Hungarian officers are, for the most part, hard-working, hard-living men, unspoiled by luxury, and striving to subsist on little more than their meagre pay. They stand nearer than the German officers to the common soldier. Cases of ill-treatment of men by officers are rare. The subaltern who should restrict his intercourse with his men to the shouting of a few words of command would soon be found wanting. The bulk of Austro-Hungarian regiments are racially composite. Their officers must speak enough of the languages of the men to be able to supplement the German words of command with detailed instructions and explanations in the mother tongues of the rank and file. There results a personal relationship that renders the army in Austria-Hungary a more human and humanizing organization than in Germany.

The author finds also a certain educative force, as compared with other countries, in the Austrian Socialist movement, which has acquired increased momentum since the introduction of universal suffrage in 1906-7. He speaks

with deserved praise of the organ of the party, the *Arbeiter-Zeitung*, which "frequently treats the larger political, social, and even diplomatic issues with a breadth of view and statesmanlike grasp that would honor any independent journal in Europe." The Socialist leader, Dr. Victor Adler, "a Jew of the prophetic, self-sacrificing, zealous type," has devoted his personal fortune largely to the maintenance of the journal.

Mr. Steed draws a sombre picture of the future of Austrian Liberalism, which is giving way, on the one hand, to the radicalism of the Social Democrats, and, on the other, to the brutality of the Christian Socialism of Lueger, that "genial, irreverent demagogue," who gave such a powerful impulse to the present "middle-class policy" of the Government, and whose tactics are in no small degree responsible for the parliamentary degeneracy that has disgraced Austria.

The chapter on the foreign policy of the Empire, though pervaded by the author's usual pessimism, contains an interesting historical retrospect. He indulges in the day-dream of a modification of the dual system and its possible replacement by a Federalist organization which would give the Southern Slavs a commanding position in the domestic and foreign relations of the Empire. "From the standpoint of the internal cohesion of the monarchy," he says, "the Magyar state has acted as a repellent force, powerless for good, powerful for evil; and, pending proof to the contrary, students of Hapsburg affairs are constrained to regard the Magyars rather as a liability than as an asset of the Crown." All this in spite of his full recognition, as elsewhere expressed in the volume, of the clear-sighted wisdom of Deák and Andrássy, both as to the demands of Hungary and the requirements of the monarchy. But with all its contradictions and marked prejudices, Mr. Steed's volume forms a valuable contribution to the study of present-day conditions in Austria-Hungary, and well repays careful reading.

No one better fitted to speak for the right of Hungary to her present position in the monarchy could easily be found than Baron Hengelmüller, for many years the Austrian Ambassador to this country, who has had the happy thought to write the first English story of Rákóczy's romantic rising against the Hapsburgs early in the eighteenth century. The struggle was of European significance, inasmuch as its varying phases implicated France and the Germanic Empire during the war of the Spanish Succession, and enlisted the sympathies of the envoys of England. Mr. Bryce, in his preface to the volume, briefly points out the connection between Rákóczy's resistance to the Hapsburg policy and that national sentiment which culminated in the revolution of 1848-49 and led to the triumph of Francis Deák in 1867.

Baron Hengelmüller's work, which is to be followed by a second volume, is the fruit of most painstaking research, and, as might be expected from a man in his position, his story is a model of tactful presentation. He has drawn largely on Rákóczy's own "Autobiography," which, written for himself, was deposited in a French monastery and not discovered until 1858. Baron Hengelmüller has carefully pointed out the discrepancies between the "Autobiography" and Rákóczy's "History of the Revolutions in Hungary," which was written partly in Latin and partly in French and published at The Hague in 1739.

The volume deals largely with military movements and diplomatic transactions and with the blunders of Austrian officialdom that often enough played into Rákóczy's hands. The statesmanlike sagacity of Prince Eugene emerges from the crowd of the incompetents, whom the author sketches with an unsparing hand. The policy of Austria during the time of Rákóczy's warfare is condemned as hopelessly short-sighted. "There is no doubt that the Austrians of the period looked upon Hungary very much as the English did on Ireland."

Rákóczy's personality, from the time of his election as Prince of Transylvania till the breaking off of the peace negotiations in 1706 (with which the volume closes), does not, perhaps, stand out with as much distinctness as might be wished, but Baron Hengelmüller did not intend to write a biography. As an historical investigator, he certainly has achieved a notable success.

It is to be regretted that the author has departed from established usage in discarding Hungarian accents. There is no good reason for a change which gives a strange and linguistically unwarranted appearance to many historic names, including Rákóczy's own. In the case of Széchényi alone the accents have been retained. It is to be hoped that the second volume will have the benefit of more careful proof-reading than the first, which contains numerous misprints.

Francis Gribble, the author of "The Life of the Emperor Francis Joseph," takes himself seriously. He sees no reason why the "historian" who is not under obligations of loyalty or hospitality should not criticise freely. Accordingly, he has dished up one of those messes of love affairs, intrigues, scandals, and back-stairs gossip which it has become the fashion to call memoirs or biographies. Barring what he has gleaned from others, he knows very little of "Austro-Hungary" and its history. The name Rudolph, he says, had not been borne by a Hapsburg ruler for five hundred years, and in the next sentence he speaks of Rudolph II, "who had died mad"—in 1612. The author, in summing up, finds the reign of Francis Joseph "an intensely interesting period of history. It is interesting from the personal point of view as the story of Nemesis overtaking the oppressor; the story which we have presented symbolically as the story of the fulfilment of Countess Karolyi's curse." This curse and other portents furnish him with historical material, which he also finds abundantly in the career of Princess Louisa of Tuscany and other wayward scions of the house of Hapsburg, among whom he includes King Ludwig of Bavaria. "The Martyrdom of an Empress" appears to him of doubtful authenticity—but he pads his pages all the same with specimens of its long-exposed falsehoods. It is pitiful that such rubbish can find publishers and readers.

CURRENT FICTION.

Grannie. By Mrs. George Wemyss. New York: The Macmillan Co.

Having just received a pen, a blotter, and a pig—in reality an inkwell—as gifts from her grandchildren, Grannie could not better show her appreciation of these tokens than by applying them to the description of her rôle as grandmother. She has reached the age when one gives counsel with authority and judges matters by feeling rather than by reasoning. The confessions of this unassuming, good-natured, mellow little old lady are refreshing. She speaks of her family, of modern Claudia who rules the household and insists upon calling a spade a spade; of Putts, who calls Grannie "Patts"; of Patricia, whose romances Grannie furthers. She speaks of the village folk, and particularly of Miss Cherry, whom they honor by reading to her model obituary notices that will appear when she dies. Grannie's chronicle is most successful when dealing with the young. Their prattle has a naïve spontaneity. Grannie's success comes from her understanding of the nature of her flock. The characters of the narrative are varied. Had they been cut in more deeply, the book might have aspired to the permanence of "Cranford."

Sunrise Valley. By Marion Hill. Boston: Small, Maynard & Co.

Related in this lively, spontaneous fashion, the adventure of teaching country school and boarding with a "director's" family makes a surprisingly gay little story. It has been stretched to include a legend of hidden treasure and one incongruously heavy love scene, both of which seem mistakes, though more forgivable ones than the thinly disguised didacticism that crops out

from time to time. It is certainly a pity to find it in a tale otherwise so full of merry humor and accurate observation. Anybody who has ever had to contend in the schoolroom with the idioms of western Pennsylvania can vouch for the naturalness of those scenes of educational effort pervaded by the "agonizing proficiency" of Loleda Jones Toledra, "who could complete all tasks mapped out for her quicker than a cat can lick cream," but in whose vocabulary the preposition *behind* had no place, *in back of* flourishing in its stead. Nor could the delightful Aldriches possibly have grown elsewhere, with their efficiency and kindliness, their strictly practical ideas, their affectionate home wrangles, and their unstinted pride and indulgence reserved for their own.

Dodo's Daughter. By E. F. Benson New York: The Century Co.

Mr. Benson is supposed to have regretted "Dodo" as a youthful indiscretion, but his penitence on that score may be doubted since twenty years after he comes out, effervescent and unashamed, with "Dodo's Daughter." His last novel is not nearly as shocking as was his first, but that is probably less poor Mr. Benson's fault than our own. The science of moral anti-seismography has been highly developed since Mr. Benson, an archbishop's son, tickled pleasantly the naughty aspirations of the British middle classes, and to-day it takes something particularly strenuous from Germany or the Scandinavian countries to make us feel even the semblance of a shock.

The bitter truth must be admitted; Dodo is not as naughty as we had pictured her through the telescope, no, opera glasses, of youthful recollections, and Dodo's daughter and her friends are almost mid-Victorian in the propriety with which they marry and are given in marriage—Ouida would turn in her grave at the domesticity to which the British aristocracy has descended. For not only does Dodo's daughter, after some rather perfunctory misadventures with a character whom in essentials Mr. Benson has used in a previous book, contract a happy alliance with an ideally commonplace young man, but Dodo herself, having divorced Prince Waldenech, the bibulous nobleman with whom we left her twenty years ago, marries her first love, the fiancé whom she so unceremoniously jilted early in her career, and, of all bourgeois achievements, at the age of forty-five, presents him with an heir. As Dodo herself says, "Isn't it ridiculous?"

The author has not wholly lost his knack of social satire, and his tongue is in his cheek when Nadine and her friends patronize the Victorianism of the "souls" among whom Dodo in her heyday was a daring leader. "Dodo's Daughter" is a readable book, and it is plain that Mr. Benson has mellowed with the years, but it is not as clever either as "Dodo" or as some of the other novels that he has written in the interim.

My Lady of the Chinese Courtyard. By Elizabeth Cooper. New York: Frederick A. Stokes Co.

The changes that China has undergone in the last quarter of a century are reflected in the sequestered life of a Chinese lady of rank. The record consists of two series of letters. The first of these are written to her absent husband from a home where a mother-in-law of the old school rules severely. They describe at length the daily life and customs of an aristocratic Chinese household untouched by the invasion of Western ideas. The later letters are addressed by this wife in middle age to her erstwhile tyrant of a mother-in-law, and tell how official life in new China looks on the domestic side. The culture and wisdom of the old civilization to which the spirit of the Occident has proved so inimical, is often beautifully defended, and from time to time one comes on an adage that compares amusingly with one of our own, as "When a man has been burned once with hot soup, he forever after blows upon cold rice." Probably no woman, East or West, ever wrote private letters so full of description and exposition. It is a book written about a Chinese woman, not by one, and creates as little illusion as to the personality of the writer as did a sagacious Englishman's treatise of some years ago, entitled "Letters of a Chinese Official." There are plenty of excellent photographs by way of illustration.

Ezekiel Expands. By Lucy Pratt. Boston: Houghton Mifflin Co.

Miss Pratt, in this further study of Ezekiel, her gifted negro-child creation, writes with perfect control of the negro dialect and rare understanding of the race, acquired during her residence at Hampton. The extraordinary imagination of Ezekiel and his power of casting a spell over his audience, whether black or write, are again set forth. But this is something more than entertaining writing. It is the negro character which in many of its phases is here portrayed. The pathos of the negro child and of the cruel color-line is well brought out in the quaint sayings of the brave and shrewd little boy. And there are not a few deserved hits at the superior race. Whoever has attended a conference on the negro will enjoy Ezekiel's definition of such a gathering:

"W'y, it's where dey all *talks* about 'em. Doan't yer know, it's where dey talks about uplif'in' de culled people, an' 'bout how dey's gwine help 'em. Ain't yer nuver hyeah 'bout it?" Upon which his listener, Archelus, responds: "Doan't look like it's sense ter talk 'bout 'em *all* time, is it?" only to meet with this crushing retort from Ezekiel: "I doan' know ef it's sense or not, but it's de onlies' thing dey does, anyway."

Miss Pratt must have been a rarely sympathetic teacher. At any rate, there are valuable lessons here for a reading public which needs to have its sympathy aroused for a struggling race.

IDEALS OF HINDUISM.

Studies from an Eastern Home. By Sister Nivedita (Margaret E. Noble), with Prefatory Memoir by S. K. Ratcliffe. New York: Longmans, Green & Co. $1.20 net.

Now that Nationalism has become endemic, the historian of the future cannot fail to consider the subtle influence that the author of these studies exercised among her followers, apart from her unconscious share in revivifying an otiose Hinduism. Sister Nivedita's Irish ancestry explains, in a large measure, the passionate enthusiasm with which she invested an ill-understood propaganda, and the mysticism in which she apparently immersed a keen, aggressive mind. Only in a small degree is she unlike the disciples of the Celtic Movement.

But it must be remembered that the real force of her personality impinged on the Hindu imagination through an utter effacement of creed, dogma, and nationality, that must ever be the despair of the ideal missionary or educator in India. As Max Müller has somewhere remarked, in India you find yourself between an immense Past, and an immense Future. As a pioneer in education, Sister Nivedita caught the dual vision. She championed an education for the Hindu in the tradition of his race, religion, and custom, as opposed to the hybrid that is the ideal of the English university system in India, and in adopting this attitude she discovered a means of contact and a policy for all those who wish to understand and interpret the subject races in India. From platform and press she thundered at British blunders in reform. Yet so completely did she identify herself with Hindu ideals and standards that she failed to express herself against such evils as child-marriage and perpetual widowhood.

In the present volume are collected studies of Hindu myth, custom, and legend, translated with something of the same shy, rare understanding that we associate with Lafcadio Hearn's interpretation of the Japanese. Here, however, the angle of belief is more acute, and the association with a religion, alien in its native *milieu* both in

practice and interpretation, is more complete. Still, we imagine that the exponents of a new Hinduism as typified in the Arya Somaj or the Brahmo Somaj, whether or not they approved of her, lost in Sister Nivedita a valuable ally.

These studies, taken with her previous volume, "The Web of Indian Life," embody the results of a life spent in a quest of the soul of a people. While it must suggest the failure of a rare personality to come to grips with the essential problem of Hinduism—its stagnation, and its apathy towards the new spirit animating the younger generation of its adherents, the refusal to avail itself of the rising tide of Nationalism—yet this failure may be otherwise explained. Sister Nivedita's attitude, doubtless, had its definite spiritual rewards. Prof. William James referred to this condition of mind, using the words of Saint Teresa, as "the orison of union"; and as such we must understand Sister Nivedita's mystical absorption in Hinduism.

A NEW NOTE IN FRENCH FICTION.

A far-away melody is heard more and more in the fiction of younger French writers. It lingers round the race's traditional life in provincial families whose youth are forced into the modern hurly-burly. This may be natural reaction, and it may prove short-lived; but it is spontaneous and often comes from those who can have no consciousness of reaction. It is like Walter Scott preparing Englishmen for the Oxford Movement, as Newman noted.

In form, it goes little further back than Balzac, who was a prime reactionary, and to Flaubert's "Education Sentimentale." But these Neo-Classicists, as some of them dubiously label themselves, look on dead Zola and living Anatole France like Christian on Pagan and Pope in the Pilgrim's Progress. For them, the attempt to show "how entirely *non compos mentis* the world was till our time" is a failure. Anatole France has expressed his annoyance at this new generation which escapes him: "It has not faith—since faith is lost—and it makes a show of faith." Perhaps the show is revival in a race that has been examining its conscience.

"Laure," by Emile Clermont, is not really open to this suspicion of faith or reaction; yet it follows the new trend. All last season it was the novel most canvassed, coming up for the Academy's great prize of Literature and barely missing it, the prize remaining unawarded. The Immortals were too equally divided between its merits and those of a Nationalist book by Jean Variot, of Maurice Barrès's school. Not that there is the slightest taint of Exoticism in "Laure," for whose French quality Ernest Lavisse stood sponsor. The book begins:

> You must take your way through monotonous countries without a past and devoid of history to know the inestimable value of the spiritual air breathing through places that have brought forth noble events. . . . Ancient houses with shutters falling and disjointed, châteaux lonely in their valleys—how many there are through this country of France which all along their past have sheltered high tragedies! Sacrifice, devotedness, piety, deep inner dialogues, and wills freed from the world's common motives, and lofty wisdom won in tears—all this does not evaporate in an hour. An imprint remains, a fragrance of legend and respect.
>
> . . . For nigh two hundred years the Engérand family has occupied this house and park. . . . The scions of its four primitive branches have stayed on in the country in fair number, with varying fortune and names, still keeping the remembrance of common origin and often brought together again by new marriages. But, among all these cousins, from far back, there was a settled and particular consideration for this house of La Mettrie.
>
> . . . There, only a few years since, such deference was paid to the two last representatives of the name—Maximilien—Foël Engérand, who was near seventy and seemed chief of all the kin, and his son Charles-Armand, who retired here a widower with his two daughters—Laure and Louise.
>
> . . . Laure and Louise were united by an affection which was visible to everybody. It was not only attachment, confidence, mutual attentions; it was more still, an indefinable, secret agreement, as if each, at every moment, took the other to witness of her feelings and behavior.

In this leisurely way a story unwinds which is not unknown to literature, for it can end only in the love of both sisters for one unsuspecting and undecided man. Hence, that the true love of one may run smooth, the other's true love must be sacrificed—and the other is Laure. Her inner trials and victories and the lack of understanding around her are the subject of this book. Her last victory is over the man himself, who little recks of her tragedy.

> "It is true," said Laure, "I have been troubled for some days to see that Louise and you have not protected as your most precious good the affection which has united you."

The man, Marc, chiefly wonders that his sister-in-law should leave them altogether for life in a convent; and so the story ends.

> "Dear me, Laure! perhaps your desires and your knowledge and even your virtues need to be very reserved. You think so and we must believe you. But for those like us who have only a simple, common life, it is a great thing by itself—to know that such as you exist."
>
> With words like these, he assured her several times over that, from her retreat, some radiance would still fall upon them.
>
> Thus they finished their farewells, full of promises.

It should be said that the convent part of the story counts for little, and the writer seems respectful of religious realities, rather than familiar with them. But the very old French idea of the sacrifice of one for another as opposed to the modern "right to live one's own life" is brought out strikingly.

"Les Survivants," by René Behaine, leads us into another traditional and provincial world—gentry ending their race in unpropitious days. Here we are back with Walter Scott and his Osbaldistones; but the French author has never a Di Vernon to light up the perpetual afternoon. Here, too, the convent, which may have been suppressed by law, but is not yet driven from French tradition, is brought in for the education of young girls of a declining caste—a picture full of simplicity and charm.

Jean Morgan, in two successive novels, "Au Seuil de l'Amour" and "Parmi les Ruines," moves also in such belated French lives with which belated New England consciences should have much sympathy. In the first the heroic young maiden sacrifices her own prospects of worldly happiness to make a current man of her young brother, when the death of their parents leaves them without the fortune to which they were accustomed. There is a charming picture of noble, needy University life; and when the sacrifice of legitimate affection is over, perhaps unappreciated, the hospital sister continues in other works of love. The second is the story of a family shaken and rent by infidelity and divorce to the great danger of the children, until, by some Providence, it swings back to tradition:

> The house of the family which lives after the man, the sacred place where the elders see the little ones grow up and these, in turn, remember their forefathers before they go to rest at their life's end.

"Les Demoiselles Bertram" is a novel of Paul Acker, who hovers still round his loved Alsace, but in an Alsatian family which has chosen to remain in France—the country of their heart. The story is entirely taken up with the failing fortunes of the holder of a small office in the state service of Finance, when the age of retirement has come. His three amiable daughters are dowerless—a tragedy relieved only by love and sacrifice in this old-world community in which each one clings to his social grade. One daughter marries happily—beneath her; one is sacrificed, and one realizes yet again the idea which occurred to unimaginative Lady Ambrose in "The New Republic":

> Do you know, my dear, I have a set

of eight cousins, all unmarried; and when I look at those girls' faces, I do confess, my dear, that I positively wish your religion was true; for then they could all go into convents.

Perhaps it is because the French republic has left so few convents standing that this solution of a grave social problem recurs so often in the literature of Young France. It is true that France has as yet no suffragettes to regulate the position of women who are shut out from marriage by the present state of society.

None of these young French writers' books—upsetting surely all English notions of "French novels"—has been taken from among the many which ostentatiously proclaim religious faith. Those centre upon names only beginning to be known abroad, particularly Charles Péguy, with his periodical "Cahiers"; Paul Claudel and Francis Jammes, oftenest mentioned as poets; Robert Vallery-Radot, the son-in-law of Pasteur and his biographer and also a poet. Of these Anatole France will have it that "their wrongheadedness may amuse at first and end by annoying."

"La Révolte des Anges," by Anatole France, excites mixed feelings. With these angels who learn on earth Darwinian eugenics (euphemistically), there is neither reverence nor respect of the limitation of religious ideals, nor even wholesome comedy as in "The Wonderful Visit" of Wells; nor is it the inappropriate love-making of Byron and

Woman wailing for her demon lover.

In the known pellucid, artistic language there is more than irony and the laughter of Mephistopheles; there is something very much like human animus, illogical and therefore unfair.

"La Force mystérieuse," by J. H. Rosny *aîné*, is a story of future possibilities, very scientifically evolved from the supposition that a molecular force of the universe somehow goes wrong—that is, not like what we expected from past observation. It has a particular interest from its preface, in which the author calls attention to the use of the same supposition—after himself—by Conan Doyle, who seems not to have been able to work out the science of it.

In "La Rose des Ruines" Victor Margueritte, who is now one of the older French novelists, continues that modern view of life and love in quick, clear, sharp sentences which distinguish him and his brother. There are, as we have seen, more modern than they. Of intensely provincial pictures, real, rollicking, sordid, tragic, there are two excellent examples—"Le Vieux Garain," by Gaston Roupnel (not for babes), and "Sicoutrou," a tale of love and poaching, delightfully close to the ground, by a new writer, Francisque Parn.

S. D.

Notes

In the educational section of last week's *Nation* the title of a book by Dr. G. L. Walton was by an error of the reviewer incorrectly given as "The Plant-Finder." The correct title of Dr. Walton's book is "The Flower-Finder."

McBride, Nast & Co. have in preparation for early publication "The Political Shame of Mexico," by Edwin I. Bell.

The Macmillan Company announces the forthcoming publication of "The Soul of America," by Stanton Coit; "Feeblemindedness," by Henry H. Goddard; "They Who Question," Anonymous.

Frederick A. Stokes Company announces for publication in June "The League of the Leopard," by Harold Bindloss.

"Juvenile Courts and Probation," by Bernard Flexner and Roger N. Baldwin, will be issued by the Century Company early next month.

The Oxford University Press announces the immediate publication of "Princeton," by Prof. V. C. Collins, which is the second volume in its American College and University series.

Longmans, Green announce for publication shortly: "Modern Industry," by Florence Kelley; "The Economic Organization of England," by W. J. Ashley; "Fight Without Formulæ," by Commander Duchêne; "Factory Administration and Accounts," by Edward T. Elbourne.

Barrett H. Clark's "Continental Drama of To-day" will be issued by Henry Holt & Co. on Saturday. The same company announces another edition of Anderson Nexo's "Pelle the Conqueror—Boyhood." The second volume of the trilogy will be published about November 1.

Brentano's will publish on May 26 a new volume of Bernard Shaw's plays. The volume, in addition to Mr. Shaw's preface, will contain "Misalliance," "Fanny's First Play," and "The Dark Lady of the Sonnets."

The John Lane Company announces for publication to-morrow: "The Purple Mists," by F. E. Mills Young; "A Girl's Marriage," by Agnes Gordon Lennox; "The Trend," by William Arkwright; "Curing Christopher," by Mrs. Horace Tremlett; "Macdonald of the Isles," by Mrs. A. M. W. Stirling; "The New Optimism," by H. de Vere Stacpoole. The same company will publish "The Titan," by Theodore Dreiser, on May 22.

A VALUABLE contribution to our knowledge of an interesting country is Mr. John Claude White's description of his experiences in Bhutan, in the *National Geographic Magazine* for April. The head of a mission representing the Government of India at the inauguration of the present King, Sir Ugyen, in 1907, he had unequalled opportunities for seeing everything of interest and for gathering information otherwise impossible to procure. The reproductions of his photographs show the beauty and variety of the scenery in the heart of the Himalayas, and also the remarkable decorative architecture of the forts, palaces, monasteries, and even of the native houses. The people are a fine race, who do excellent work in suspension bridge building, and are skilful artisans, as is shown by their ironwork, casting of metals, gold and silversmith's work, and especially weaving and embroidery. The personality of the King and his family life are attractively pictured. The new building of the National Geographic Society, whose membership is now 285,000, is described, and some interesting facts are given as to its present aims, exploration, and geographic research work.

IN choosing such a work as the "Barlaam and Ioasaph" of St. John Damascene for a volume of the Loeb Library (Macmillan; $1.50 net), the general editors are, we think, following a wise policy. No doubt the great classical writers are of the first importance for the series, and these, as a matter of fact, are receiving the proper precedence; but, by making an author like St. John—not to mention Philostratus and Quintus Smyrnæus, already published—easily accessible, in a form suitable for rapid reading, the Library may do something to enlarge the contracted interest of our classical scholarship. And it often needs enlargement. How many professors in this country whose business it is to know Greek literature have never read more than a few pages of Philostratus, for instance; have never looked into "Barlaam" (which may be excusable), and have not even had the ambition to make themselves familiar with the stirring poem of Quintus (which is inexcusable)? The answer, one suspects, would be a sad confession of mechanical routine taking the place of a quick and contagious interest.

MESSRS. G. R. WOODWARD and H. Mattingly, the translators of the "Barlaam and Ioasaph," conclude that it was certainly composed "during the Iconoclastic Controversy, in the eighth century," and probably about the year 750 A. D. The author, they contend, was either St. John of Damascus himself or some other monk of the name John who was intimately acquainted with the works of the Damascene, quoted from them largely, and held the same views. The conclusion will probably not be disputed by anybody in this country, and by few anywhere outside of Germany, where it is still not quite orthodox to accept a traditional attribution. For their English version, Messrs. Woodward and Mattingly have adopted a style strongly flavored with scriptural idiom. They were led to this by the difficulty of finding any other style that would fit the constant Biblical quotations into the text without disagreeable transitions and a general effect of patchwork. The result has been a greater freedom in the rendering than would have been necessary with a less artificial medium; but the freedom seldom descends into license, and the manner is suited to the matter. Despite its considerable interest, religious and in places fairly human, "Barlaam and Ioasaph" has never before been completely translated into English from the original, and the present undertaking is

a work of considerablo valuc, carefully executed. Tho marginal references and elaborato indexes add to the scholarly character of the book. On page 191, "man of hell" is an odd misprint for "maw of hell," and on page 345 "I am thy debtor" reverses the meaning of the Greek. Other negligences could be pointed out.

IN "The War of the Roses, 1377-1471" (London: Crosby Lockwood & Son), Mr. R. B. Mowat, after a painstaking study of the printed sources, has written a convenient and trustworthy guide for those who desire a short history of this confusing period. While he does not differ materially in his account from Stubbs, Gairdner, Ramsay, and Oman, he has added numerous incidents to illustrate the spirit of the age and has given some especially good character sketches. The primary cause of the War of the Roses, Mr. Mowat says, was the family settlement of Edward III, by which that ruler hoped to establish powerful royal families to act as a counterpoise to the hostile feudal barons. The result was just the reverse. Instead of families bound to the king by ties of blood and self-interest, he created the "over mighty subject," who could well boast that he was "of as good birth as the King, only richer." Early in the fifteenth century, the five appanaged houses were reduced to two, Lancaster and York, whose bitter rivalry and struggle for the crown plunged England into a long internecine war. The ultimate causes of the downfall of the house of Lancaster were the loss of French territory, the weakness and virtual bankruptcy of the central government, and the spirit of lawlessness engendered among the nobles and their retainers during the foreign campaigns of the Hundred Years' War.

MORE vigor and definiteness of purpose are attributed to Henry VI by the author than others have usually assigned to him. He rejects Stubbs's dictum that "constitutional progress had outrun administrative order," and shows that the so-called Lancastrian experiment did not foreshadow modern responsible government. Henry VI frequently violated the rules of the Constitution, packed Parliament, interfered with the administration of justice, and strangely disregarded the demands of Parliament and public opinion. A good chapter is the one dealing with English Society during the War of the Roses. The rural and urban population were, on the whole, prosperous. Prices remained virtually the same. Trade and commerce were rapidly developing, and the old spirit of isolation was breaking down. Plundering by the soldiers was not common, for, indeed, such a policy would have been fatal to the party practicing it. The war was largely restricted to the barons and their retainers. The bitter family feuds precluded giving quarter, and the battles were usually followed by unrestrained murder and assassination. Lord Clifford exclaimed when he stabbed the youthful Earl of Rutland after the battle of Wakefield, "By God's blood, thy father slew mine; and so will I do thee, and all thy kin." Tho virtual extermination of the caste nobility opened the way for the control of local government by the middle class. A strong monarchy, a nobility of service, and a wealthy middle class enabled England "to go through the tremendous crisis of tho Reformation without the internal conflicts which devastated other countries."

MRS. ELIZABETH DOUGLAS VAN DENBURGH is the author of "My Voyage in the United States Frigate Congress" (Desmond Fitzgerald; $2.50 net). She has rewrittcn a diary kept by herself as a girl of fourteen on a long voyage in 1845-46 of the Congress from Norfolk to Hawaii, upon which she was a passenger with her father, Joel Turrill, Consul-General to Hawaii, and the other members of his family, and Anthony Ten Eyck, Commissioner to Hawaii, who was also acompanied by his family. It was a long and uneventful voyage, with a very stormy passage around Cape Horn. The book is interesting only as a picture of conditions on a warship just at the period when sailing frigates were disappearing and steam warships coming to take their place. Mrs. Van Denburgh and her sister are the sole survivors of this cruise. Of the ship's company only two were really distinguished, Commodore Robert F. Stockton and the commander of the ship, Samuel Francis Du Pont, later the well-known Admiral of the Civil War.

A COLLECTION of thirty-five brief impressions of places is comprised in "The Tower of Mirrors," by Vernon Lee (Lane, $1.25 net). France, Switzerland, Germany, and Italy are put under contribution to provide fine sensations. At her best Vernon Lee is superlatively good in this swift notation of personal reaction to place. Such an essay as "Sterzing am Brenner," with its dream pageant of the folk who through the ages have halted at the German outpost above the Venetic plain is extraordinarily evocative. Sens and the Nun of the Bon Pasteur is exquisite. The Victor of Xanten, a parallel of the myths of Siegfried and St. Victor suggested by the sight of Siegfried's legendary birthplace at Rhine mouth, is a delightful essay. It illustrates the blend of vivid impressionism with nice and apposite historical associations, which is the distinguishing merit of Vernon Lee's work. She envisages a sharply seen present in the light of all the past, and this without sentimentalism. The occasional defect of this work is a sort of priggishness, insistence on small impressions, forcing a sensation when none arrives spontaneously, a trick of deliberately avoiding the larger point of things as too obvious. It would be hard, for example, to tell less about Vallombrosa in an equal number of words. Still this is a kind of writing in which the rule is whim, and a too natural and expansive Vernon Lee would be a dire disappointment to her readers. For her devout admirers, among which the reviewer counts himself, the best of these slight essays will convey the very quintessence of her strong and delicate genius.

THOMAS SPENCER JEROME, who died on April 12, at Capri, in his early fifties, was a fine representative of a type rare among us, tho privato, unattached scholar. For many years he had pursued exhaustive studies of the Roman Empire. Recently his lectures beforo tho American Academy at Rome and the Historical Society at London had gained him a long-due recognition among his colleagues and had aroused high expectation of the great work he was not to live to complete. Jerome was of pioneer Michigan stock. His father, David Hewell Jerome, made a fortune in mining and railway building, becoming eventually Governor of Michigan. The son was graduated from the literary department of the University of Michigan in 1884, studied in the Law School for a year, and took his master of arts at Harvard in 1887. For a time he gave himself to the practice of the law at Detroit, but his scholarly predilections soon became overmastering. Freed from the usual task of money-making, he decided to move to the scene of his favorite studies. With his friend, Charles W. Freer, the well-known connoisseur, he bought the delightful Villa Castello on the heights of Capri, assumed the quito honorary function of consular agent, continued the building up of a remarkable historical library, and began the excerpting of a truly formidable mass of notes. Though a delightful host and stimulating companion with his intellectual peers, his life was very much that of a recluse. Inordinate application to his studies unquestionably shortened his years. The marking feature of his history was to have been, first, a radical critique of the Latin historians; second, a fuller use of non-literary sources, epigraphic especially, than had ever been undertaken; finally, a reinterpretation of the crude data in the light of modern science and psychology. A characteristic comment on the famous dictum *Latifundia* destroyed Italy was "Read *malaria*." To his task of reinterpretation he brought a keen and robust intelligence, good humor, and common-sense.

ONE of the rarer scholastic pleasures was to hear him trim and discount historians of the moralizing type of Seneca, Tacitus, or Suetonius. His researches swung a wide orbit, as is shown by the fugitive studies recently collected into the volume, "Roman Memories in the Landscape Seen from Capri" (London: Mills & Boon). From his study window were visible all the greater landmarks of Campania, a landscape truly eloquent to such an observer. Two volumes of similar preliminary and incidental studies are about to be issued by the Putnams. Gradually the knowledge of his studies brought him the acquaintance he most valued, and his bachelor establishment and library became a resort and a resource for all scholarly visitors to Capri. His championship of the traduced Emperor Tiberius and his own serviceable good sense won him also the affection of the natives of the island. After his lectures at the American Academy, this admiration took the form, embarrassing to a modest scholar, of a serenade by the village band, an address of thanks by the Mayor, and the quaffing of official champagne to the memory of the best, and worst-entreated, of Emperors and to the health of the American consular agent. Mr. Jerome's voluminous notes

are so legible and admirably arranged that a skilful literary executor might be able to carry the work forward. He often surveyed the huge tables on which his material lay in appallingly complete order and said ruefully, "I shall be the Lord Acton of America." The jest hit near the mark. It is to be hoped that some continuer of his studies may be found, and that some adequate salvage be made from the notes that represent many years of indefatigable labor and alert selection.

NOTES FROM ABROAD.

THE Channel Islands—where there is still in everyday use a patois almost identical with the Norman French spoken by William the Conqueror—are the home of other quaint antiquarian relics. One of them, an ancient form of injunction, was revived in Guernsey last month. A local politician, whose election as "jurat" had been annulled by the Royal Court of the island on the ground of his having been sentenced to a term of imprisonment some years ago, knelt bareheaded at the entrance to the court house and exclaimed: "Haro! Haro! Haro! à l'aide, mon Prince, on me fait tort." The effect of this appeal, technically called the "clameur de Haro," is to stay proceedings until the petitioner's case has been heard. In modern times the cry has most frequently been raised to interrupt building operations on land to which the title is disputed—much to the annoyance of unsuspecting strangers who have settled in the islands without being aware of this curious tradition. Popular etymology explains "Haro" as an abbreviation of "Ha! Rollo," thus making the cry a direct appeal to the first Duke of Normandy.

HUNTERS of autographs will be justly envious of the good fortune of Glasgow University in obtaining the MS. notes of Arthur J. Balfour's Gifford Lectures. They are written on large, cream-colored envelopes, and consist almost entirely of headings and catchwords. The Glasgow *Herald* publishes this sample: "Paradox of chance. Poincaré. But à priori. Pennies? Monte Carlo. No drift. Random. Sufficient reason. Knot. Objective to subjective. Dice. Theism."

REGIS MICHAUD is bringing out in French two volumes (Paris: Armand Colin) of an "Autobiographie d'Emerson," boiled down from the ten volumes of the Journal, with notes to aid the French understanding. An effort is made to follow out the spiritual evolution of the "American philosopher." Emerson is bound to be known in France, as Montaigne, whom he resembled in many ways, is known everywhere, as "the author of the Essays." In the sixties, Victor Cousin, who thought himself as omniscient as his reading was omnivorous, said of Emerson—"Much erudition and no logic!" The "young" of the passing generation in France know more than that, thanks largely to initiating theses of a *doctoresse*, Marie Dugard. Translations have followed and commentaries by current philosophers. It is true that Young France, now crowding forward, appears little likely to pursue the acquaintance. Still, Emerson has at least dawned on French literary consciousness more than Walt Whitman, whom he appreciated and who has been similarly studied, but infinitely less and sixty years later than Poe, whom he despised. He may catch up ultimately with Carlyle, who has been pushed of late years for his French Revolution. Emerson had a strong opinion about France, "where poet never grew"; but a judicious choice of his own poetry, esoteric and pragmatic, might yet win him a place among "foreign classics" acknowledged by the French. Poe's Tales, thanks to Baudelaire, long since became a French classic. Fenimore Cooper has been taken even more closely to the heart of the nation as a universal schoolboys' writer—another reversal of criticism by Humanity.

THE French version of the fourth volume of Dierauer's monumental "Histoire de la Confédération suisse" has lately been published at Lausanne, the narrative being brought down to the year 1798. The author is director of the famous library at St. Gall, and his work not only displays an accurate and thorough knowledge of the subject, but is written in an admirably lucid style. The part which will be read with most interest by students of Swiss history is that relating to the imposition by France of the Helvetic constitution, during the last decade of the eighteenth century.

A YOUNG author of Geneva, M. Frank Grandjean, may be regarded as the epic poet of the Nietzschian school. He attracted some attention by his popular lectures at the university on Bergson; and has now published a partly pessimistic, partly supermannish, poem entitled "L'Epopée d'un solitaire." Apparently he is the "solitaire" disguised under the name of Helios. It is doubtful whether many admirers of belles-lettres will find the eight cantos of this long and somewhat lugubrious work very enticing; nor will philosophical readers recognize in the Geneva poet a new Lucretius, although he has evidently read Lucretius. Ideas like those of the Non-Ego, the Mâyâ, the Uncreated, and "the nightmare of Evolution" are troublesome in prose, and are more troublesome when veiled in the language of poetry.

WHAT promises to become a serious agitation is in progress against the Federal Council of Switzerland because of its failure to suppress the public gambling now so prevalent at the chief Alpine resorts. The legal prohibition is perfectly explicit, but the authorities seem reluctant to enforce it—not the local authorities, but the executive Government itself. The clergy, university professors, and the principal newspapers are very insistent in their protests. But the blame is put upon the foreign visitors to Switzerland. They would not like, it is said, to be deprived of this form of amusement. This excuse has added fuel to the flame of opposition; for the Swiss are greatly concerned at the way in which their political and economic life is dominated by foreign, especially by Teutonic, influences. The *Bund*, the Government organ at Berne, is thoroughly German in its spirit and tendencies. The army is said to be in danger of becoming Germanized; officers are accused of introducing Prussian ideas and manners into the service; artillery is ordered from Krupp; Swiss industries are being everywhere absorbed by Germans; and the more important hotels are owned, managed, and served by Germans. Germany cannot, however, be held responsible for the gambling.

Science

A PHILOSOPHER'S SELF-REVELATION.

Glimpses of the Cosmos: A Mental Autobiography by Lester F. Ward, LL.D., comprising his minor contributions now republished, together with biographical and historical sketches of all his writings. Vols. I-III (to be completed in twelve volumes). New York: G. P. Putnam's Sons. $2.50 net each.

This "mental autobiography" is to be a reprint in full of every essay, minor article, or note that the author has ever written and published during his entire life, or from the age of sixteen to seventy, with but a single exception, that of a certain newspaper article of which both print and manuscript have been lost. There are 557 bibliographic titles, which with a few notable exceptions cover most of the subjects upon which the human mind has exercised itself. To the title of each of these entries is added the date of publication, the age of the author, and the history of the article, or the circumstances under which it came to be written. The author's numerous books and scientific monographs are duly listed and their history given, often at great length, as in the case of "Dynamic Sociology," the account of which is extended to nearly one hundred pages; but these works are not reproduced.

The author explains that the three volumes now before us are offered in response to those admiring readers who wished to have ready access to his scattered writings, and to know more of his personal history; this work they must accept in lieu of a more formal biography. His further object and his method of attaining it are explained in great detail; his multifarious papers are not classified by subject, but are all entered in strict chronological sequence, because, as he says, the sciences are all mutually related. "Of course," as he further explains, "between a paper in which I describe a hundred new species of fossil plants and one on the principles of social mechanics there seems to be as wide a chasm as can be conceived of, but when under social statics, which is one of the great subdivisions of social mechanics, I am obliged to range the

principle of sympodial dichotomy, supposed to be a strictly botanical principle, and little understood by botanists themselves, and to show that it is the main principle governing cosmic, organic, and social evolution, we see that the two apparently so remote ends of the series are brought together, and that all nature is ultimately one." "I have never been able," he adds, "to treat any subject except in its relation to all other subjects, and my main purpose has always been to point out those relations."

It is evident that the author took a serious view of life at an early day, for he had kept a diary steadily from the age of nineteen. To these sources he could turn for a history of his activities, but he had at command still other and more extensive scrap-books, numbering twenty-three volumes, and devoted to "Reviews and Press Notices," "Autograph Letters," and "Biography." To illustrate his desire to know everything that he had ever thought, said, or written, it may be noticed that he made a great card-index to the whole of this material, "sparing no pains to cross-index every name, subject, or word on every page." Moreover, as the work of compilation progressed, he decided to make another card-index of his entire manuscript, which in the end required 10,000 standard cards. "I saw," said Dr. Ward, "that a complete index of this manuscript would place my entire life-work within my reach, and I cared quite as much for this as for the republication of my essays." Probably no author has ever been so well primed upon his own labors, or has ever presented so precise and exhaustive a history of his own literary or scientific career.

Professor Ward could not bring himself to skim the cream from his writings and throw away the milk, for each paper, as he naïvely remarks, will be found to harbor "at least one thought." His aim, in short, was "to put into accessible form all the thought that he had ever given to the world." Not only do these essays, ranging from the period of his youth to old age, serve to show the metabolism of his mind, but they "supplement" his system. Taking a warning from the experience of Auguste Comte, who, by rejecting much of his early work as premature, sacrificed one of the brightest things he ever said, "Tout est relatif; voilà le seul principe absolu" (or would have done so had it not been reproduced), our author would preserve every line, not only "believing," as he says, but "knowing that a considerable proportion of readers would be grievously disappointed . . . if even the least of my utterances were wanting in this place."

In deciding upon so unusual a course, he assumes "that the reader is a reasonable being," that after reading the preface, he will "know what to expect, and that he will make the proper allowance for all the circumstances." But the reader assuredly has the same right to expect the author to be reasonable, and we think that after scanning the contents of these volumes, most will agree that Comte adopted the wiser course.

The author does not hesitate to analyze and classify the new ideas that he has contributed to the world's thought. "Now, what constantly strikes me," remarks this philosopher, "is that ever and anon some modern writer comes forward with the claim to the discovery of an entirely new truth. In every such case that I have thus far met with, if it is really a truth, it is one, or small part of one, that I have not only stated earlier, but, at least in most cases, have fully set forth, carefully analyzed, and connected with other related truths, as an integral part of my system of philosophy." Such instances the author would not necessarily ascribe to plagiarism, but thinks that they often arise from ignorance of his work, when not "due to the *Zeitgeist* itself, which is at last tardily overtaking" him.

In support of these rather extraordinary claims, the "Creative Evolution" of Henri Bergson is held up as a flagrant example, for many ideas therein, upon which our author has "been ringing the changes for thirty years, are served up as something wholly new to the world." Bergson has been credited with giving an entirely new character to evolution by showing that it is creative, but, says our author, "I should like to know if I have not been holding this idea up throughout my whole career. I have not only shown *that* evolution is creative, but *how* it is creative. Bergson scarcely gets beyond his title." Again his doctrine of the "*élan vital*," says our author, "embodies a great truth, but it is not new. In fact, it is nothing less than the manifestation in the organic world of the *nisus* of nature, the universal energy, making for higher stages of being." "In the latter part of his book Bergson shows his colors completely, and comes forth a pure metaphysician. But he thinks that he has made a great discovery that distinguishes him from all other metaphysicians. Instead of regarding the conception of *time* as derived from that of space, and that of space from that of matter and motion, as is becoming quite fashionable to do, he makes time (duration) the basis of everything, and plants his entire system upon that idea." Spencer, whose ideas have chiefly inspired this work, according to Bergson, "is not a philosopher at all, and all because, instead of making a universe out of whole cloth, as a true philosopher must do, he took the one he found, and did the best he could with it. If Bergson had known me and deigned to mention me, I should have shared the same fate, and so of all who deal with realities. . . . In fact, there is no place in his scheme for observation and the only faculty called out by it is imagination." Similarly, Germany is being flooded with new books, in support of the monistic philosophy, but, says Professor Ward, their claims to originality are unfounded; not even their principles are new; "the greater part of them are to be found in my books, dating back ten, twenty, or even thirty years." The outlook is rather discouraging.

Professor Ward deals rather briefly with his biography, under the head of "Personal Remark," for he declares that his mind had "always been trimmed toward the future rather than the past"; accordingly he was never interested in genealogy, and regarded pride in ancestry as a mark of degeneracy. He was born at Joliet, Ill., on June 18, 1841, his father, a mechanic by trade, having gone thither to build one of the locks on the Illinois and Michigan Canal. As a youth, he developed a great love for nature and an aptitude for languages, opportunities for exploring the woods and fields meantime being rarely neglected. When he was twelve years old his family emigrated from Illinois to Iowa, travelling the entire distance in a small covered wagon, to take up a quarter section of land, for which his father held a warrant on account of service in the War of 1812. This was a memorable journey for the boys, who slept on the ground at night, had many adventures by day, and supplied the family generously with game. Returning to Illinois after his father's death in 1857, young Ward went to work on a farm, and was soon able to pay his tuition at school and to satisfy in some measure that persistent thirst for knowledge which was as characteristic of the boy as of the man. He joined his older brother the following year in a wagon-hub factory in Pennsylvania, and though the business was a failure, he made great progress in Latin, Greek, German, and French. He went through Ollendorff's Greek Grammar while at his work, and it was "over the arch" that he studied Loomis's Physiology and many other text-books. His next school showed the advantage to be gained by such studious habits, for he was advanced over class after class, until he was soon reading Livy and Herodotus. In the winter of 1861-62 this "autodidact" was teaching school and preparing to enter college, when, catching the fever of the times, he entered the Civil War instead. He served as a soldier two years and three months, and was engaged at the battle of Chancellorsville, where he had the unusual experience of being shot three times in as many min-

utes, and of recovering almost completely afterwards.

Shortly after the war Lester Ward entered the civil service of the Government at Washington, where he remained, first in the Bureau of Statistics, and afterwards in the office of the Geological Survey, for upwards of forty years. Determined not to relinquish his plans for a higher education, Mr. Ward entered Columbian (now George Washington) University, where he was graduated in 1869, and two years later he had completed its law course. His scientific career began at this time, when he determined to study botany and began to plan for his first extensive work in philosophy, which later developed into the "Dynamic Sociology."

While engaged at the Bureau of Statistics he made a careful computation of the number of immigrants arriving in this country prior to 1820, and placed it at 250,000, which is still regarded as approximately accurate, and while a member of the Geological Survey he published nine extensive monographs upon fossil plants, not to speak of a vast number of minor papers upon a great variety of subjects.

In 1869 Mr. Ward was instrumental in the formation of the National Reform League, a secret organization devoted to freedom of thought, particularly in religion, and became the editor of its organ, the *Iconoclast*, which appeared the following year and ran through eighteen numbers, when it died of inanition. Some sixty articles which were contributed anonymously by the editor to this magazine are reproduced in the first volume of the present work. At this time Mr. Ward was obsessed with the idea that the Church was not only a great hotbed of superstition, but society's most insidious enemy, which should be rooted out and destroyed. This feeling is well illustrated in his editorial, which appeared as the opening gun of the first number of the *Iconoclast:* "We have thoroughly examined," said the editor, "the teachings, character, and effects of the great and popular institution known as the Orthodox Church; we have inspected its leading doctrines and satisfied ourselves that they are only the modified superstition of barbarous ages, the natural offspring of man's primitive ignorance." Professor Ward was, we believe, very outspoken on the subject of religion, and, so far as we are aware, he never changed his views upon this subject.

The "Dynamic Sociology," Dr. Ward's first extended work, had a hard time in finding a publisher, or even a magazine that would print any part of it, but it was finally accepted by the Appletons on the guarantee basis. Though its sales were small, the work has gone through two editions, and has been on the market for over thirty years; to the author it was a moral, if not a financial, success. Shortly after its appearance four laudatory reviews appeared in as many Washington newspapers. In one of these articles, which was contributed anonymously to the Washington *Post*, the writer said: "That this book is destined to produce a profound impression upon the more thoughtful classes of society, and one that will grow with repeated and extended perusal, we cannot doubt. That such a system of thought should have emanated from an American is a most hopeful sign, and Washington is to be especially congratulated on being the focal centre from whence it has proceeded." Now, it is not a little curious to find that the writer of this amiable criticism and of the other three was no other than the learned author himself, who not only reproduces the articles as part of his bibliographic output, but candidly writes the history of his own criticism of his own work, adding that "any one who should read all these [articles] consecutively would not suspect that they were from the same pen, as in each case I presented the work from a different point of view."

Whatever inconsistencies one may find in Lester Ward's philosophy, or however one may differ from those who think that they have found in him a Moses to lead them into the promised land, all must acknowledge that he united to an intellect of very exceptional powers an ardent love of truth and an industry that was truly phenomenal. His "Glimpses of the Cosmos" is a remarkable human document.

Volume II of "The Bodley Head Natural History" (Lane) is devoted to three or four families of the order Passeres of British birds. The text, of indifferent merit, ordinarily states the habitat of the bird, describes it, gives the facts regarding its nest and eggs, and tells something of its song, or any of its idiosyncrasies. The chief merit of the enterprise lies in the illustrations, a flood of pen sketches, roughly tinted, which decorate the margin of the page. They show an eye for the pose of birds which is decidedly uncommon.

The *Annales de Géographie* for March opens with a report of the recent conference in Paris on the international map of the world, by its secretary, M. E. de Margerie. The increasing interest in this undertaking is shown by the fact that while at the previous conference in London there were only twenty-four delegates from eleven countries, at this there were sixty-six delegates from thirty-five countries. An article by M. G. Capus, based on seven years' observations in the Tonking delta, asserts the economic value of tropical rains. The other subjects treated are the plain of Valence, and the recent abrupt change in the level of the Caspian Sea. A brief account is also given, in the geographical chronicle, of Archdeacon Stuck's ascent of Mt. McKinley.

Drama

RECENT LONDON PRODUCTIONS.

THE SUCCESS OF "PYGMALION" — MR. SHAW'S PROLIXITY — GALSWORTHY'S "THE MOB"—THE INDISCRETION OF A FUTURIST PRODUCER.

London, April 30.

There seems to be no doubt that "Pygmalion" is a success at His Majesty's. I had difficulty in securing a seat for last Wednesday's matinée, and found the house crammed. Appearances in the theatre are not always "veridical"; but as appearances in England are borne out by unquestionable results in Germany, we may fairly conclude that Mr. Bernard Shaw has this time "backed a winner." Why resort to stable slang, it may be asked, to convey the simple fact that he has made a success? I do so because I think the secret of the success is revealed in that phrase. Mr. Shaw happens to have hit upon one of the stock themes which are perennially attractive to popular audiences, or, in other words, which may be trusted to win whenever they are handled with reasonable skill. It is very significant that the title of one of Sir James Barrie's early successsses, "The Professor's Love-Story," would suit "Pygmalion" to a nicety. Mr. Shaw's Professor Higgins is in all essentials Sir James Barrie's Professor Goodwillie over again—the absent-minded, unpractical, unworldly man-of-science, who considers himself an old bachelor and, when brought face to face with the devotion of the charming girl, cannot understand either her feelings or his own. This simple romance —note that Mr. Shaw calls his play a romance—is susceptible of several variations. Mr. Shaw has chosen one which heightens its poignancy. The lady, in Professor Goodwillie's case, was merely his secretary; in Professor Higgins's she is an uneducated flower-girl, on whom the Professor has conferred the gift of articulate speech, and (incidentally and inadvertently) a soul. It is here, of course, that the analogy to "Pygmalion and Galatea" comes in; but several other analogies could easily be found without going either to Sir William Gilbert or to Greek mythology.

The play is, withal, one of Mr. Shaw's most human, if not most brilliant, productions. It contains some gems of comedy, such as the scene between Higgins and Alfred Doolittle, the flower-girl's father, and the converted flower-girl's first appearance in polite society. It is more or less amusing throughout; but technically it cannot escape the reproach of diffuseness, not to say prolixity. Its five acts might with advantage have been compressed into three.

The first scene, which shows us the meeting of Henry Higgins and Eliza Doolittle, on a rainy night, under the portico of St. Paul's, Covent Garden, may be valuable from the point of view of picturesqueness and oddity, but is not dramatically essential. Perhaps I should have appreciated it more but for the fact that Mrs. Patrick Campbell's cockney dialect was so uncompromising that I did not understand a word she said. Then, again, the fourth act, in which the perfected Galatea shows her astonished Pygmalion the difference between a woman and a gramophone, is curiously short and perfunctory. In parliamentary language, we look for a full-dress debate, and no sooner has it begun than the house is counted out. A dramatist more careful of his craft than Mr. Shaw would either have run the fourth and fifth acts into one, or would at least have placed a crucial scene in the fourth act, and made the fifth, which, in fact, is long and rambling, a brief, bright epilogue.

The crimson expletive of which so much has been heard occurs at the end of the delightful scene in the third act, in which Miss Doolittle shows that she has mastered English pronunciation, but not the grammar, vocabulary, or conventions of polite society. For my part, my objection to the word is simply that it is undramatic. It is flatly incredible that Higgins and his coadjutor, Colonel Pickering, should not from the first have put an embargo upon that word of all others in the language. It would have been quite right and very amusing if, in a moment of excitement, Eliza had caught herself in the act of saying "bl——" and had hastily substituted "very" or something equally colorless. As it is, she brings out the word quite calmly and confidently, without any stimulus of emotion. There may be some question as to how far a dramatist should extend his vocabulary in the interests of dramatic truth; but here the question does not arise, for dramatic truth demands, not the utterance, but the suppression, of the offending word.

It remains to be said that in the performance at His Majesty's we can see but as in a glass, darkly, the play as Mr. Shaw conceived it. Mrs. Campbell's performance of Eliza Doolittle is a brilliant piece of acting, and no doubt contributes enormously to the success of the production; but an actress who made her first great success twenty-one years ago, and was then no novice, obviously cannot give us the sensation, so to speak, of Mr. Shaw's heroine. Curiously, and yet quite comprehensibly, she was most convincing as the draggled waif of the first two acts. Huddled up in rags, and bedizened with the flaunting picture-hat of the slums, a woman may have any age or no age. But when Eliza comes out in the height of Bond Street fashion, and especially in the gorgeous evening gown of the fourth act, she is so obviously a radiant and conquering woman of the world that we cannot believe for a moment that Higgins and Pickering could overlook and ignore her as they pretend to do. Our powers of make-believe, of provisional credence, are overtaxed. To give the thing a moment's plausibility, Eliza should be an unripe slip of a creature, whom it is possible for men with eyes in their heads to consider insignificant and negligible. As for the character of Henry Higgins, one can but dimly divine Mr. Shaw's intention through the haze in which it is enveloped by Sir Herbert Tree's overpowering personality and all too familiar methods. Sir Herbert is clever and amusing just as we have seen him clever and amusing in a score of other parts. He has long given up the attempt to subdue his personality to his author, and has adopted the opposite plan—as a star actor almost inevitably must—of subduing his author to his personality. Mr. Shaw, one fancies, must find in his heart a new fellow-feeling with Shakespeare.

At the Coronet Theatre, Bayswater, Miss Horniman's Manchester company has been presenting with success, for the past two weeks, Mr. John Galsworthy's four-act play, "The Mob." It does one good to see so distinguished a piece of work received with acclamation by popular audiences; but if you ask whether it is a great play, or whether it stands on a level with "The Silver Box," "Strife," and "Justice," I am bound to confess that I cannot think so. Frankly, Mr. Galsworthy has let the humanitarian get the upper hand of the artist. He seems in this play to be going the way of Tolstoy; but Tolstoy knew how to put into his most doctrinary work a marvellous wealth of life-like detail, which we miss in "The Mob." I would not grumble at the sacrifice of the artist to the humanitarian if the humanitarian profited by it. But he does not. Mr. Galsworthy's indictment of The Mob would be much more telling if the play were more life-like. His humanitarianism is for once a little inhuman.

Stephen More is a statesman who resigns his place in the Ministry in order to protest against an unjust war into which England is being hurried. His friends all draw away from him; his wife, the daughter and sister of a soldier, is shocked at his proceedings; even his little daughter wishes that her daddy would be on "our side." News of disasters arrives; popular feeling is intensely wrought up, and Stephen More insists on undertaking a "stop the war" lecture-tour through the country. The mob spits upon him and stones him, but still he keeps on. When news arrives of her brother's death at the front, his wife deserts him, carrying off his child. The mob breaks his windows; the servants are driven from his house, and, at news of the first victory, the "mafficking" populace rushes in upon him and kills him. Then the curtain rises for a moment on the "Aftermath"—a silent tableau exhibiting the statue erected to his memory.

Evidently this is not so much a play as a symbol. The characters have no independent life; they are simply there to illustrate a theme. The theme is exactly that of Ibsen's "Enemy of the People"; but oh, what a difference in the humanity of the two plays! "The Mob," no doubt, has a certain impressiveness. It reminds us forcibly of the danger of being carried away by the rush of some cheap and shallow collective frenzy. But it overshoots its mark. While we feel the theoretic danger, we also feel, "No, there is no practical danger of our being carried away to such insensate extremes." All of us but the very young remember clearly the fever of the Boer War, which Mr. Galsworthy obviously has in mind. We know that feeling ran very high, and that the Pro-Boer minority was far from popular. We know that some violent partisans of the Boers held meetings of a more or less stormy character. Some of them, I dare say, were broken up. We know that, after black months of tense anxiety, the relief, first of Ladysmith and then of Mafeking, was hailed with rejoicings in which a great deal of regrettable rowdyism was let loose. But it is not the case that the most outspoken Pro-Boer was treated like a leper by his family and friends. It is not the case that mob-patriotism went the length of serious personal violence—much less of assassination. I do not remember that a single window or a single head was broken. "Mere questions of degree!" Mr. Galsworthy may say: "My picture of the bestial vulgarity of epidemic patriotism remains substantially right." But degree is everything in these matters. It is useless to quarrel with the mob for not being always in the right. The question is whether they are apt to carry their shallow, unreasoning passion to the pitch of gross inhumanity; and here I think that, so far as England is concerned, the evidence is against Mr. Galsworthy. How much profounder, how much bitterer, is Dr. Stockmann's mob-psychology, as he gathers up the stones that have come through his windows:

> Just look at them! Upon my soul, there aren't more than two decent-sized lumps in the whole heap; the rest are nothing but pebbles—mere gravel. They stood down there and yelled and swore they'd half kill me; but as for really doing it—no, there's mighty little fear of *that* in this town.

Mr. Chesterton's "Magic" has been

followed at the Little Theatre by a play named "Account Rendered," by Mr. Robert Elson. It deals, very inexpertly, with a good theme. The clever wife of a stupid Cabinet Minister manages to keep him in office by playing on the passion of his chief opponent, and practically inducing him to betray the interests of his party. She well knows, but will not admit to herself, what reward he expects for his sacrifices; and when he "renders his account" she refuses to pay. This theme is capable of very interesting developments; but it is feebly handled and comes to nothing. I mention it on account of the entertaining "Foreword" which the manager, Mr. Kenelm Foss, prints on the playbill. Mr. Foss has taken several leaves out of the books of Mr. Granville Barker and Mr. Gordon Craig, and apparently aspires to be the Futurist producer of London. He says:

It may possibly be remembered that in "Magic" I solicited adverse criticism by two (if no more) eccentricities of decoration. The Prelude on a Hill-top was presented with the artificial coloring and decorative unreality of a Japanese print; while in the play itself I deliberately broke the restfulness of the Hall of an English Manor-house with shimmering esoteric curtains that instantly became a most vital factor in the pictorial scheme. The instance will serve for my entire method. My conception of the duty of a producer is to take the real message of the author (whether he himself knows what it is or no) and to convey it (in spite of themselves) to the audience, either with the aid of, or in defiance of, the actors.

He then goes on to explain that "Account Rendered" demands "queer" treatment, and that, therefore, he is presenting it "in a whimsical and new manner. . . . And if this new setting should set a fashion, as genuinely new things have a way of doing, no one will be more pleased than I." The whimsical novelty of the setting mainly consisted in making a Cabinet Minister's drawing-room look like an extremely cheap and dirty Italian restaurant. But Mr. Foss is, I believe, a really clever young man, and no doubt he will live down this amusing indiscretion.

William Archer.

"THE CHARM OF ISABEL."

The charm of Isabel, in the play of that name, produced last week by William A. Brady at Maxine Elliott's Theatre, is, at the best, rather a negative quality, consisting, as it does, principally in the lady's inability to say "no." Misunderstanding on this point is impossible, for the author, Sydney Rosenfeld, has apparently created one rather long part, that of Caroline Leighton, expressly for the purpose of testifying to this peculiarity in Isabel's character. Consequently, the intelligence of the audience is relieved of whatever strain might be imposed upon it by having to draw its own conclusions from the development of the characters and the action of the play.

Mr. Rosenfeld understands the familiar machinery of the theatre, but the oil of inspiration is lacking. "The Charm of Isabel," in motive and construction, is thoroughly hackneyed. The first act is redeemed only by the excellent acting of Albert Brown, as an impressionable stage Frenchman, who breaks into Isabel's room when she is in bed to propose to her. There seems to be no particular reason for this situation rather than for another, and neither the indifferent stage settings nor the unreposeful comedy of Miss Marie Nordstrom, as Isabel, can be commended. In the second act, in which Isabel, still unable to say "no," is embarrassed by the attentions of various members of a sanctimonious New England household, Miss Nordstrom is more at home, and there is some excellent dialogue in a scene at an organ between Isabel and a young probationer, which shows that the author is capable of better work than on this occasion he has produced. The promise of this act, however, is not fulfilled in the third, and the play comes haltingly to a conclusion, by no means unforeseen, but wholly unbelievable, in the engagement of the flighty Isabel to the probationer, while the amorous Frenchman finds consolation in the ample charms of her friend, whose function in the universe has heretofore been to insist on Isabel's infirmity in the matter of saying "no." S. W.

NOTES.

It was announced recently that Paul Gavault has been appointed director of the Odéon Theatre in succession to M. Antoine, after eight years of artistic effort which met with liberal appreciation from the critics, but with insufficient support from the public. M. Gavault was the author of "Mlle. Josette—Ma Femme," the amusing farce, which enjoyed a long run in Paris, and, in Anglicized form, was successful also in London.

In reference to the performance of Henry Porter's "The Two Angry Women of Abingdon" at the Shakespearean Festival at Stratford this year, the critic of the London *Times* says: "It is all first-rate, honest, homely fun, ingeniously woven, and racy in every word with Elizabethan wit and Elizabethan flavor. That, of course, is not all appreciable by modern ears and modern taste. These servingmen and their jests are a little out of touch with us of to-day. Mr. Kirwan's Elizabethanism turns out to have nothing excessive about it beyond the small 'noise,' as the men of that time would have called the band of strings which plays music of the time between the acts and the trumpets which announce the performance. But Mr. Kirwan and his company have undoubtedly succeeded in catching something more important than detail. They have caught what we must suppose to be the Elizabethan spirit in the acting—a hearty, jovial spirit that makes the most of this Elizabethan farce."

Music

MUSICAL HISTORY AND INSTRUMENTS.

Familiar Talks on the History of Music. By Arnold J. Gantvoort. New York: G. Schirmer. $1.50.

Outlines of Music History. By Clarence G. Hamilton. Boston: Oliver Ditson Co. $1.50.

The Story of the Flute. By H. Macaulay Fitzgibbon. New York: Chas. Scribner's Sons.

Advice to Violin Students. By Wallace Ritchie. New York: Chas. Scribner's Sons.

The Art of Tone Production on the Violoncello. By Emil Krall. New York: Chas. Scribner's Sons.

For more than twenty years Arnold J. Gantvoort has lectured on the history of music to students of the Cincinnati College of Music. He has now printed the substance of his lectures in a volume of 285 pages which has considerable merit and some faults. The most serious of the faults is a lack of proportion. Like most other historians of music, he gives a great deal too much space to the early stages as compared to the later and more important epochs. To allow thirteen pages to the Hebrews, Greeks, and Romans, and four to the Chinese in a treatise so short that there is room for only one page on Chopin, and little more for most of the great masters, is surely a mistake. When space is so valuable, why dwell on such unimportant personages as Gombert (who gets half as many lines as Chopin!), Ducis, Verdeleet, and dozens of very minor musicians? The absence of an index is another defect, and there seems no reason for retaining the spelling Monteverde, since that composer in all his letters signed himself Monteverdi. As against these blemishes one must concede to the author a good style, comprehensive and usually up-to-date knowledge, and the art of presenting information in language free from needless technicalities. One of the best features of the book is the use of copious illustrations in musical type, some of which —especially those taken from early operas—the student would have difficulty in finding elsewhere.

Musical illustrations abound also in the excellent "Outlines of Musical History," by Clarence G. Hamilton, of which a new edition has been issued. The chapter dealing with the most modern developments has been entirely rewritten, to give room for brief mention of Schoenberg and other composers of the day who make a specialty of false notes. The author himself strikes a false note in declaring that those who do not like the "cataclysmic dissonances" and oth-

er peculiarities of these "progressives" are "compelled by public opinion to wage a losing fight." Figures and nightly experience in opera houses and concert halls do not bear out this statement. One of the most valuable features of Mr. Hamilton's book consists of judiciously compiled lists of books after the several chapters, in which the epochs or composers referred to can be studied in greater detail. For class work these lists are invaluable. Although it is only within a few decades that American musicians have shown merit worth remembering, Mr. Hamilton devotes half-a-dozen pages to the principal native composers, headed by Edward MacDowell, who has "achieved the most far-reaching reputation for originality."

In the history of musical instruments none goes back as far as the flute, although the particular shape of the flute now in use is of comparatively modern origin. Mr. Fitzgibbon discourses learnedly but with the eloquence of a devotee of the various transformations this instrument has passed through. Biographic as well as technical details are given about those who, in several countries, helped to improve the flute, their number being surprisingly large. Military fifes and piccolos are not ignored. The gradual improvement of flute music is also described, with many interesting glimpses of the peculiarities of diverse composers, from Bach and Handel to Richard Strauss, in their treatment of this instrument. Regarding Strauss the author remarks that "in his works the extreme limit as regards the technical difficulty is assuredly reached; whether the result obtained, however, is commensurate is certainly open to question."

Advice to violin students is always in order—their number is growing from year to year. Wallace Ritchie, in his little book on this subject, emphasizes his own discoveries and observations during a long experience as principal of a violin school in London. A chapter is given to the Sevcik method, which he considers "by far the most complete and perfect system the world has yet seen." It is well to remember, however, that Sevcik's work lies entirely in the field of technique. Among the other topics treated by Mr. Ritchie are the art of practicing to most advantage, the choice of teachers, and what ought to be taken into consideration in buying a violin.

Of violoncello players there are not nearly as many as of violinists; but Emil Krall's book on Tone Production appeals to the latter, too, for it is concerned with the art of bowing, on which expression depends, and which, in the opinion of Mr. Krall, presents more difficulties even than the left-hand technique of fingering. His book is based on "The Physiology of Bowing," by Dr. Steinhausen, who was the first to give scientific reasons for the practices resorted to by the greatest violinists. There are many pictures showing how to hold the instrument and the bow, and how to guide the latter so as to secure always the appropriate tone and expression.

HENRY T. FINCK.

Fourteen eminent soloists have already been obtained for the Philharmonic concerts in Carnegie Hall next season. Among them are five singers: Lucrezia Bori, Alma Gluck, Lucille Weingartner-Marcel, Julia Culp, Pasquale Amato; four violinists: Fritz Kreisler, Efrem Zimbalist, Arrigo Serato, Jacques Thibaud; six pianists: Ferruccio Busoni, Ossip Gabrilowitsch, Carl Friedberg, Ernesto Consolo, Eleanor Spencer, Germaine Schnitzer. Kitty Cheatham will be the soloist at two concerts for young people. The concerts will begin on October 29 and last till March 26.

Lulli (who died in 1687) has recently been remembered in Paris by the revival of his tragic ballet, "Psyché," which was designed by Molière. It was performed as nearly as possible under the conditions that prevailed in the time of Louis Quatorze. Lulli was the composer of no fewer than thirty ballets between the years 1658 and 1671.

Mme. Lillian Nordica, who died at Batavia, Java, on May 10, was born on May 12, 1859, at Farmington, Me. Her early musical education was received from John O'Neill and at the New England Conservatory of Music, and her first public appearance of note was at the age of seventeen, when she sang in a "Messiah" performance given by the Handel and Haydn Society. She was advised by Tietjens to go to New York and study with Mme. Maretzek, and through her she became acquainted with the eminent bandmaster, Patrick Gilmore, who engaged her as soloist for a Western tour and subsequently took her to England, where she sang at seventy-eight concerts. In 1878, the year of the Exposition in Paris, she was the first vocalist to be heard in the new Trocadero. Then she went to Italy, where she took lessons from Sangiovanni and sang in the opera at Brescia for three months. During two seasons at the Paris Opéra, Mme. Nordica had the advantage of studying some of her rôles with Ambroise Thomas and with Gounod, in whose "Faust" she sang in New York in 1883. After singing year after year in the various opera centres of Europe and America, she was invited to impersonate Elsa in "Lohengrin" at Bayreuth, by Cosima Wagner, with whom she studied for three months. Her principal Wagner studies were made, however, with Anton Seidl at the Metropolitan Opera House, and under his guidance, and with further aid from Jean de Reszke and her second husband, Zoltan Doeme, her impersonations grew more and more poetic and dramatic. After the deaths of Grau and Conried, Lillian Nordica, like Emma Eames, left the Metropolitan company while still in her prime. For some years she spent part of her time on concert tours, which were attended with the greatest success, but her proper sphere, because of her dramatic impulsiveness, was the opera.

After conducting the Royal Opera in Dresden for forty-two years, Ernst von Schuch died there on May 10, at the age of sixty-seven. He was born in Graz, Austria, on November 23, 1847. After studying with Dessoff in Vienna, he began, in 1867, his career as conductor. In 1873 he was appointed court conductor in Dresden, where the opera soon acquired a world-wide fame through his efforts and influence. Richard Strauss chose him to preside over the premières of several of his operas. Heinrich Conried once brought him to New York, but he did not remain, being unwilling to give up his position abroad. In 1897 he was ennobled by the Austrian Emperor. He married, in 1875, the eminent opera singer, Clementine Schuch-Procházka.

Art

THE INTERNATIONAL.

LONDON, April 20.

Seldom has a society of artists been more successful in throwing off the responsibilities of its name than the International Society of Sculptors, Painters, and Gravers. Having had the courage to give to sculptors the priority other societies reserve for painters, it has finally established itself in the new Grosvenor Gallery, where no provision is made for the exhibition of sculpture and it is impossible to show more than a few small bronzes and marbles and perhaps one or two larger pieces, as this year, when Rodin's Eve commands the centre of the first large room. The Society, having also had the courage—and it required courage in England—to call itself International, and to be for several years as international as its name, is now as British as the Royal Academy, to which many of its members have been called, the foreigner being hardly less of an exception at the Grosvenor than at Burlington House. Nor has it been any more faithful to its principles and traditions. In the beginning it asserted its independence of the Academy by allowing no Academician to be elected to its ranks or to remain an active member. Now, one Associate of the Academy is the vice-president—virtually the president, since Rodin presides but in name—and five are on the Council.

In the beginning space was found for earlier work that seemed to set the standard for the Society, and that it was a delight to see again in an exhibition. This year, only three early works of conspicuous note are included: one of the interiors Alfred Stevens knew so well how to paint, with such beauty and quality in every detail of furniture and ornament that the figure, as in this lit-

tle painting, becomes almost an intrusion; one of Daumier's small, tragically sombre versions of Don Quixote; and Millais's Mrs. Heugh, painted before he had lost all memories of his Pre-Raphaelite training to develop into the popular and pleasing portrait painter, an amazing study of old age, full of character in the stern, seamed, wrinkled face and the folded wrinkled hands, full of beauty of tone in the rendering of the passages of white about the head and shoulders. The portrait, I believe, was once owned in America; it should not have been allowed to return to England, for already the small proportion of Millais's work that represents him at his best has passed into permanent collections.

Serious as are these lapses and infidelities, more serious is the fact that, although the exhibition just opened is only the sixteenth to be held, it should fall so far below the level of interest and excellence attained during the Society's first years in the spacious rooms at Prince's Skating Rink, Knightsbridge. In the beginning, the International, even in its British section, was the most formidable rival the Academy had ever been obliged to face. Now it is almost as oppressed by convention as the Academy, and, to a certain extent, like most other societies of artists in London, has degenerated into a sort of annex to the Academy. There is no question of the effect of a divided allegiance upon those members who have become Academicians. It may be that John Lavery sends nothing this spring because he is reserving himself for the show he is to give in the same gallery during June and July. But if Charles H. Shannon restricts himself to some of his already-known woodcuts and to a study in pastel for a decorative design, a big, bad prig from Puvis de Chavannes; if William Orpen has only a weak, superficial portrait of a woman the critic would hardly stop to look at save for his name in the catalogue; if William Strang is so reticent as to send only one of his large, inanimate groups gathered together in a discord of shrill, acid color; if Anning Bell is among the absent, and D. Y. Cameron rather emptier than usual in a Scotch mountainous landscape—the reason is evident. In three more weeks the Academy opens, and, despite everything, the Academy remains, to the British public and the British painter, the exhibition of the year, for which, therefore, the artist with an eye to the main chance naturally keeps back his most important work.

Other members are evidently in danger of sacrificing themselves, not to the Academy which has not yet opened its inner doors to them, but to their own conventions. Here and there you will come upon an artist who seeks the new life in his work that new problems will give, as, for instance, Professor Sauter, who, whether altogether successful or no, finds a new scheme of color, a new expression of character, in his presentment of Prof. H. G. Fiedler, of Oxford, and, because he paints portraits, is not blind to the fresh loveliness of spring foliage out of his London windows, or to the solemn dignity of the Alps. Here and there among the few foreign exhibitors, Mancini, with his vigorous Eve and St. John; Breitner, with his sombre, tragic architecture; Frieseke, with his decorative fantasies; Morrice, with his harmonious landscapes, lend interest and variety to the walls. Here and there among the prints and drawings, the water-color of a Cock by Joseph Crawhall; the lithographs by Joseph Pennell, Spencer Pryse, Copley, Kathé Kollwitz, Ethel Gabain; the caricatures of Dulac, who seems to have found himself as a comic draughtsman, and is genuinely funny in his elaborately carried out idea of Ricketts and Shannon as a couple of many-armed fakers; the pastels of Henry Muhrman, strike a distinct personal note.

But the tendency of too many who have once achieved a success is to repeat it until they find themselves held fast in the chains of a formula of their own creation from which, apparently, there is no escape. Year by year, James Pryde exaggerates, by the cheapest of scene-painting tricks, the height of the architecture he paints and deepens the colors on his palette until he now begins to produce but parodies of himself. Year by year, Charles Ricketts emphasizes what would once have been called the "literary" interest in his faked-up classical and Biblical legends, until it has become the critical fashion to look into them only for what the present criticism describes as "intellect." And so it might be easy to go through the list. When it comes to the painters who make the most strenuous show of individuality, they do so chiefly by sacrificing to the movements and fashions of the moment. Simon Bussy, an artist of some distinction when uninfluenced by others, seems now to vie with the most decayed of the Matisse group when he paints a leopard against a vivid pink background with such an absence of atmosphere and detail that it is nothing more than one of his mild little sketches enlarged; or when he makes of his portrait of a little girl a flat pattern in a high key, so that it would tell best as an open-air advertisement. George W. Lambert, in a group of a prize-fighter in costume, a flower girl, a baby, and a man in a silk hat and black coat, to which he gives the title Important People, is evidently vacillating between his desire to be in the modern Post-Impressionist mode of simplification and his determination to force people to come to his shop, as his address is printed on the barrow in the background, and to make them talk, as John Collier, with his academic popular "problem pictures," sets them talking every spring at the Academy. By whatever new name it may be disguised, the old-fashioned ambition of a certain type of artist to *épater le bourgeois*, continues to flourish, though the phrase has dwindled into a *cliché*.

Perhaps more characteristic of the tendencies of the new generation is the pretended return to Pre-Raphaelitism of a young painter, Eric H. Kennington, hitherto unknown, whose Costermongers is sure to prove, to use another venerable *cliché*, the *clou* of the exhibition. I do not mean that his tribute to the Pre-Raphaelites by studying them is characteristic; it is rather his tendency, shared with so many other young men, to express personality by borrowing it from somebody else. Of all the movements of the nineteenth century, Pre-Raphaelitism probably had less lasting influence than any other. And yet here is an unquestionably clever young man starting out upon his career by pretending to imitate the Brotherhood in their concern with detail, their love of pure color, their heroic pursuit of realism. He goes for his subjects to the life about him, as the Pre-Raphaelites did at times—Millais in the Blind Girl and Autumn Leaves, Holman Hunt in Strayed Sheep, Rossetti in Found; above all, Ford Madox Brown in Work. But he does not really get them there. In the rendering of his Costermongers he has burdened his canvas with the minute detail which he never saw, and the minute treatment of it that with the Pre-Raphaelites passed for observation. It happens, however, that the great defect of the Pre-Raphaelites was just the lack of that observation supposed to be their chief end as realists. They were too apt to see nothing but details, and each detail separately. Millais could paint leaf by leaf the creepers covering a brick wall, never noting the change that each hour of the day brought with it. Holman Hunt could camp out in the desert with his loaded gun in one hand and his palette in the other, to get the right background, and then turn out a Scapegoat as clean as a newly washed baa-lamb. It is the same with their latest disciple. One of Kennington's Costermongers, who are busy cooking potatoes out-of-doors, stands in the gutter, but his boots are spotless and his trousers are pure; all, presumably, have been doing hard work, but their hands and arms are beautifully clean; one girl kneels on the skirt of the other, but does not even ruffle it with her heavy weight. The observation, the realism, when examined, suggests nothing more real than the studio and models painted without brains—

only with lots of seriousness. It is this sort of work, this reëcho, clever often, laborious always, serious sometimes, but at the best a faint reëcho, that makes one understand the distinguished American artist who, after his first introduction to the masterpieces of the young British geniuses, wanted to hurry to the National Gallery "to wash his eyes."

N. N.

Finance

THE REMARKABLE HARVEST OUTLOOK.

The Government's "May estimate" last week on winter wheat—the early-planted crop which usually makes up two-thirds or more of the country's total wheat yield—brought forcibly into consideration a very remarkable factor in the financial outlook. That estimate was fully up to the hopeful expectations of the trade, and as rainfall and sunshine have alternated, since the data for the report came in at the end of April, in such manner as to improve even the favorable outlook of a fortnight ago, the official forecast of a 630,000,000-bushel yield was all the more readily accepted. This would be more than a hundred million bushels above the largest previous winter wheat crop—that of 1913.

The forecast by the Department of Agriculture did not take the grain trade or the markets by surprise. Agricultural conditions have probably never been better at this season. The winter wheat crop certainly has the best promise of the past two decades, on the largest acreage ever known. The crop is within five weeks of harvest in the extreme Southwest, and every additional day of good weather means millions of bushels saved to the yield. The Southwest has of late had more than the usual supply of moisture, and growing conditions are at present as nearly perfect as they can be. There is likely to be some loss here and there from insects, but there is a large enough acreage more than to offset the average accidents and still leave a wholly satisfactory crop. Even western Kansas, which is the most precarious section of the wheat belt, and which has not had a really good crop of wheat in years, has the best of promise on this occasion.

The Government's estimates are habitually based, first on what is called the "condition percentage" of the crop at a given date—that is to say, its relation to a perfect growth, as compared with the crops in a group of preceding years. The condition assigned last week was 95⅝, the highest May condition since that of the great winter wheat crop of 1891, and the third highest condition ever reported in the grain trade's history. Not only is the total of planted acreage abandoned during the winter season the smallest of any but one of the past fifteen years, but the larger part of the past season's loss was in States where the usual yield of wheat is small. Kansas has the promise of a 132,000,000-bushel crop, the greatest ever known, and 40,000,000 bushels over the maximum yield of 1912. For the four States west of the Missouri River—Kansas, Nebraska, Oklahoma, and Texas—the indicated yield is 246,000,000 bushels, or 71,500,000 more than was harvested last year.

The four leading "soft-winter-wheat States"—Missouri, Illinois, Indiana, and Ohio—can claim, on the basis of the estimate, 176,000,000 bushels, or 20,000,000 over last year's harvest. With the present outlook, the country can lose 107,000,000 bushels between now and harvest, and still leave as much as was harvested last year. On the basis of the average marketing, there would be 378,000,000 bushels to be marketed, of which the railways will get the greater part, or a very much larger aggregate than ever before.

The later-planted or "spring wheat crop," is not yet far enough advanced to admit of safe prediction. It has not been as remarkably favored as the early wheat by the season's weather, but it has met no serious setback. Since present promise for the winter wheat yield is undoubtedly better than the Government's forecast of 630,000,000 bushels as of April 30, and since the average spring wheat yield of the past five years (which included one partial failure) has been 245,000,000 bushels, the grain trade persists in asserting that a 900,000,000-bushel wheat crop this year is at least a reasonable possibility. Last year's yield was 763,000,000, exceeding all previous harvests, and the largest wheat crop raised in the five years 1907 to 1911 inclusive was 683,000,000.

The Stock Exchange made practically no response to the high crop estimate—a fact which attracted wide attention and inspired some misgiving. But its attitude, and the continued absence of revival in general trade, need not blind any one to the necessary significance of that news. Waiving entirely such questions as doubt over the political developments of the day, or over "rate decisions," or over Mexico, there are a few perfectly obvious inferences to be drawn. We have not yet reached harvest time; even the early wheat crop cannot yet be measured with absolute assurance. But in that one important crop, we are long past the possibility of harvest failure.

Only a most unusual combination of adverse circumstances can prevent the maturing of the largest winter wheat crop in our history. When it is borne in mind that a bountiful harvest is the one certain tangible addition to a nation's wealth, and the one infallible source of an expanded foreign trade, and when it is also remembered that the produce of the farms must be carried to market, and that therefore quantity, and not price, determines the direct profits of the railways from the harvests, it is superfluous to ask what the present promise of the crops ought to mean to general prosperity.

There have been years when "bumper harvests" have served only to avert or temporarily postpone a formidable industrial reaction; that was true of the great crop seasons 1906 and 1891. But those were years in which bank credits and trade engagements had been previously brought to a scale of precarious inflation, which is precisely the reverse of the conditions which prevail to-day. Furthermore, even on those occasions the influence of the crops on the general situation, though only temporary, was powerful enough to shape the financial history of the year.

This is so unvarying a lesson of our past industrial history that any one who ignores its natural bearing on the future history of the present year is likely to miss his calculation. He may assume that a blight will fall on the growing crops in June or July; that we shall be plunged in war by midsummer; that Congress will run wild in anti-corporation activities, and that some great catastrophe will occur in the foreign credit markets. But these are assumptions, for which there has been quite as much warrant, at this time in half a dozen recent years, as there is to-day. That being so, it is not altogether unreasonable to accept the actual news from the grain country as having at least equal significance, in its relation to the future, with the action or inaction of prices on the Stock Exchange.

MODERN INDUSTRY

In Relation to the Family, Health, Education, Morality

By FLORENCE KELLEY

General Secretary, National Consumers' League

Crown 8vo. Pp. vi+144. $1.00 net (Weight, 12 oz.)

The author sets forth changing social and industrial conditions seen at close range, and suggests immediate hopes and plans related thereto.

LONGMANS, GREEN, & CO. - 4th Ave. and 30th St., New York

Folk Ballads of Southern Europe

By SOPHIE JEWETT

Associate Professor of English Literature at Wellesley College, Author of "God's Troubadour."

12mo. $1.50 net

"Miss Jewett has spread her net wide in the shaping of this collection. . . . Our author is particularly successful when she uses for her renderings the simple short-line metre. . . . In the translations of the wild Roumanian Folk Songs Miss Jewett is seen at her best. The introduction is excellent and the notes informing."—*London Athenaeum.*

This Letter Suggests

the thought that you may wish to name a deserving student. The Nation is prepared to offer an exceptional proposition to College Students who are "working their way" through college. If you will clip and send the blank below today, you will help the student and favor the Nation.

The Nation,
20 Vesey Street,
New York, N. Y.

Gentlemen:

I was interested in receiving a letter from your circulation department, for I have thought for a long time that a paper as useful as the *Nation* is should reach the hands of a much larger number of subscribers.

In these days of radical tendencies the influence of your paper ought to be extended, and it seems to me that if an effort could be made to put it before young men, it might have a decided influence on their opinions and later lives. I know that in my own case it seriously influenced me, and I believe would many others.

In this connection a method of increasing the circulation of the paper recently was brought to my attention, and it occurred to me it might be one which you would care to consider.

I received a call a short time ago from a young man who was working his way through college, and who was obtaining subscriptions to ——. Inquiry developed the fact that he was a student in good standing and worthy of support, and when he told me that he had been able to pay his expenses through Yale by this means, and that a number of other men were doing the same thing successfully in different parts of the country, I was much interested.

You are probably quite familiar with this method, but it seems to me if students were selected in various universities, and strong efforts were made to get subscriptions to the *Nation* from young men who are about to enter life, it might not only extend your circulation, but influence a large body of men in the right direction.

Latest Important Books

They Who Knock at Our Gates

By MARY ANTIN. A powerful presentation of the Immigration Problem by the Author of **"The Promised Land."** Mary Antin knows what it is to be an immigrant, poor, oppressed, and ignorant. She has come up by her own efforts helped by our free schools and libraries. What she has done she believes other immigrants can do, and she believes, furthermore, that the immigrant may be as great an advantage to America as America may be to the immigrant. Illustrated. $1.00 *net.* Postage extra.

The Monroe Doctrine and Mommsen's Law

By CHARLES FRANCIS ADAMS. A vigorous assertion of the obsolete nature of the Monroe Doctrine and the obstacles to the hegemony of the United States over the Americas. Mr Adams believes that history enforces the law formulated by Mommsen that an organized state and civilized people absorb their neighbors who are in political or intellectual nonage. 50 cents *net.* Postage extra.

The New Politics

By WILLIAM GARROTT BROWN. Lord Bryce, *ex-Ambassador to America from Great Britain,* says: "The scattered articles from the pen of the late Mr. William Garrott Brown well deserved to be collected and published in a volume, not only as a memorial to a young writer of the greatest promise, but also in respect of their intrinsic excellence. Mr. Brown's mind was singularly fair, penetrating, and judicious." With photogravure portrait of the author. $1.75 *net.* Postage extra.

Letters of a Woman Homesteader

By ELINORE PRUITT STEWART. Tells a connected story of pioneer life, full of buoyancy and pluck and the spirit of adventure. The writer's world is full of attractive people who have long since learned that without good will a pioneer settlement cannot endure. The letters tell a story—a love story, too—and make one of the most humorous, touching, exciting, and inspiring documents in recent literature. Illustrated by N. C. Wyeth. $1.25 *net.* Postage extra.

Nurses for Our Neighbors

By DR. ALFRED WORCESTER. This book gives a history of nursing both here and abroad and makes a strong plea for the infusion of a more personal human interest into the nurse's work. It will be of interest not only to nurses and doctors, but to all who have had or are likely to have experience in caring for the sick. $1.25 *net.* Postage extra.

The Place of the Church in Evolution

By JOHN MASON TYLER. This very vigorous and readable book, written from the point of view of a biologist, emphasizes the naturalness of moral and religious development and of such an organization as the church; also gives a manly and wholesome view of what the church ought to be now and in the future. $1.10 *net.* Postage extra.

The Ministry of Art

By RALPH ADAMS CRAM. These papers embody and eloquently exploit that view of the relation of mediæval ideals to modern life which has made the author the most brilliant exponent of Gothic architecture in America. $1.50 *net.* Postage extra.

Religious Confessions and Confessants

By ANNA ROBESON BURR. Readers of Mrs. Burr's able literary and psychological study of "The Autobiography" will be in a measure prepared for the wealth of material that she has brought together in her account of the religious confession throughout the ages. $2.50 *net.* Postage extra.

A Handbook of Mexico

By T. PHILIP TERRY. These chapters, from Terry's Mexico, contain the author's information regarding the country, its people, and their history from earliest times to the present. The book is obviously timely and contains the recent and reliable information which is so much called for now. With railroad map, 75 cents *net.* Postage extra.

The Art of Spiritual Harmony

By WASSILI KANDINSKY. Translated from the German, with an introduction by M. T. H. Sadler. Kandinsky gives a critical sketch of the growth of the abstract ideal in art, forecasts the future of the movement, and says in what way he considers Cubism to have failed in its object. The fairness and generosity of his argument, together with the interest of his own daring theories, will certainly attract the English as it has attracted the German public, who called for three editions of the book within a year of publication. Illustrated. $1.75 *net.* Postage extra.

Before Vassar Opened

By JAMES MONROE TAYLOR. This is an authoritative and readable account of the early days of the education of women in America, with a full record of the events leading up to the founding of Vassar, including a vivid character sketch of Matthew Vassar. Illustrated. $1.25 *net.* Postage extra.

THE SPIRITUAL MESSAGE OF DANTE

(William Belden Noble Lectures, 1912-13)

By the Rt. Rev. William Boyd Carpenter, Canon of Westminster, and Clerk of the Closet to the King.

Dante as the world's great interpreter of religious experience is the subject of this study, itself an interpretation of charm and fresh analytical power. Dante's own life is considered as precursor and parallel to the drama of the soul in the *Divina Commedia*. The illustrations, reproduced from ancient portraits of Dante and the drawings in Lord Vernon's famous edition of the *Inferno*, furnish an unusual added interest. Price, $1.50

PROBLEMS IN POLITICAL EVOLUTION

By **Raymond Gettell,** Northam Professor of History and Political Science, Trinity College, Hsrtford, Conn.

A DISCUSSION of the basic principles of political organization—its past development, its present conditions, and its future needs.

Among the questions considered are the nature of the state; the leading factors in political development; the origin of the state; the relation of the state to the family, the church, industrial organizations, and military organization; the composition of the state; the organization of authority within the state; the relations of state to individual and of state to state; the functions of the state; the purpose of the state; and present political conditions and tendencies. . . . 400 pages, $2.00.

A NEW LOGIC. By Charles Mercier, Physician for Mental Diseases at Charing Cross Hospital, London; also Examiner in Psychology in the University of London.

It was as an introduction to the study of insanity that the author was first moved to examine logic. He holds the doctrine, that, in mental disorder, as in bodily disorder, the study of order is an indispensable preliminary to the study of disorder; the study of the normal should always precede the study of the morbid.

Cloth, 422 pages, $3.00.

May 28th
The Last Day

Unless You Act at Once--To-day--

you run the risk of missing the last chance to get an indispensable book at a price which is only possible because of the exceptional circumstances of its publication. You may, or may not, decide to buy now. But if you do buy, it will be at a substantial saving, and you will have the added satisfaction of acquiring a thoroughly good book at a price which is really a great bargain. *Cut out the order form on this page and use it TO-DAY.*

The New Encyclopaedia Britannica

29 volumes, 41,000 articles, 44,000,000 words of text, the one great work of human knowledge, superseding and displacing all other editions and all other works of reference.

The "Ideal" Encyclopaedia—Because

It is easy to buy—counting quantity alone, the cheapest book you can purchase,—and counting quality, too, so cheap that there is no comparing it with anything else you could buy. You can pay as little as $5 down and make the remaining payments in nearly any way you like.

It is easy to house—a compact book, printed on India paper, so that its 44,000,000 words are contained in less than two cubic feet of space, only 31 inches of shelf room.

It is easy to handle—each volume, though it contains as much letter press as 15 ordinary books, is only an inch thick, weighs a little more than a couple of monthly magazines and may be held comfortably in one hand.

It is easy to consult—to get a quick answer to any question—an elaborate index gives you the exact whereabouts of every item you want.

It is easy to read for study or amusement, being interestingly and attractively written by masters of style.

And also THE NEWEST, MOST AUTHORITATIVE, MOST PRACTICAL

AVESTA AS THE SOURCE OF THE RELIGION OF CYRUS

A DICTIONARY OF THE GĀTHIC LANGUAGE OF THE ZEND AVESTA, by Professor Mills of Oxford, being Vol. III, pp. 623-1138+lix of the FIVE ZARATHUSHTRIAN GĀTHAS (four plates). Vols. I. and II. were subventioned by his Lordship the Secretary of State for India in Council and by the Trustees of the Sir J. Jejeebhoy Translation Fund of Bombay; edit. exhausted. A further Government subvention was later conceded toward a second edition, including in addition this present first edition of Vol. III., 1913, then not yet begun. That antiquated subvention ('97) has just been kindly declared by Government to be still in force. The Trustees Sir J. J. T. Fund have also subventioned the Dictionary.

This Dictionary is in the original Avesta characters, with a complete Grammar of the Gāthas, including lengthy excursuses upon both the danger and the value of the Pahlavi, Persian, and Sanskrit translations edited and translated in Vol. I., and here also reproduced in full, with the original Avesta. All serious opinions, ancient and modern, are here produced with the Author's own. Pp. 518+xxvii, price 18 shillings, Brockhaus.

This work, together with Vol. XXXI. of the Sacred Books of the East (same author), and with the editions of the Pahlavi Yasna published in the *Zeitschrift* of the German Orient. Soc. with all the MSS. collated, some forty chapters, translated in *J.R.A.S.*, exploits the MSS. of the Yasna now in the Bodleian Library, especially the leading one, which contains 770 photographs, with an introductory note by L. H. Mills (Ten Guineas). *S.B.E.* XXXI. is the official translation of its Avesta text.

For the Author's translations into Sanskrit, see *Y.* I., 1910, sep. printed, 2s.:—*Y.* XXVIII., see Roth's Festgruss 1893, and the Bombay memorial vol. of the Sir J. J. College, 1914:—for *Y.* XXIX., Muséon, Louvain, 1912;—for *Y.* XXX. see *Z.D.M.G.*, 1914;—for *Y.* XXXI., the Muséon, 1914;—for *Y.* XLIV. see Acts. of Orient. Cong., Paris, 1897, and *Z.D.M.G.*, 1911-12.

A few copies of ZARATHUSHTRA, PHILO, THE ACHÆMENIDS, AND ISRAEL, pp. 460+xxx (Open Court Pub. Co., 1906, $4.00), still to be had of Kegan Paul, Trench, Trübner & Co., and booksellers in Oxford, 12s. 6d.

"He treats his subject thoroughly and exhaustively . . . deep and patient studies."—J. J. Modi, Head Priest of the Parsis, Colaba, Bombay, in the *Parsi* of Bombay, 1906. "A wealth of learning and thought."—*Nation*, N. Y., Aug. 30, 1906.

AVESTA ESCHATOLOGY COMPARED WITH DANIEL AND REVELATIONS, by L. H. MILLS, to be had of Kegan Paul, Trench, Trübner & Co. SAGGI DI LETTURE, TENUTE ALL' UNIVERSITA DI OXFORD, SULLA RELIGIONE DELL' AVESTA, dal Prof. MILLS, being sections of lectures delivered in the University of Oxford, with ZOROASTER AND THE BIBLE, by L. H. MILLS (*Nineteenth Century Review*, 1894, first translated into Gujarati by N. D. COORLAWALA, of Bombay, 1896), now translated into Italian by an accomplished Italian man of letters upon his own initiative, 1910. G. Sacerdote, Turin, Italy. Pp. 75. Price 2s. *Gratis* to students of the Universities of Rome and Naples.

OUR OWN RELIGION IN ANCIENT PERSIA, 1913, being a collection of Lectures delivered in Oxford, collating the pre-Christian Exilic Pharisaism with the *dogmatik* of the Avesta, so advancing the Persian Question to the foremost position in our Biblical Criticism, pp. 193+x, 1913. 6s. To be had of F. A. Brockhaus in Leipzig, of Booksellers in Oxford, and of the Open Court Publishing Company, $3.

The Author holds that the Avesta contains approximately the Lore of Cyrus in its original form, but by no means traces all our Exilic orthodoxy to its influence, however great, while its lessons are urgently needed to-day as religious philosophy, and that its texts are imperatively necessary to the historical exegesis of Ezra, etc.

"Professor Mills's name stands foremost in the ranks of those who have explored the field of Avestic literature." The *Rast Goftar*, Bombay, April 18, 1909.—"Beyond question our leading authority now living on the Gāthas." The *Nation*, N. Y., Aug. 30, 1906 (Dr. Gray).—[Earlier] of Mills' Gāthas) "Das Ergebniss einer erstaunlichen Arbeit sehr mannigfaltiger Art—unser Verständniss der Gāthas mächtig gefördert. *Gött. Gelehr. Anz.*, May 13, 1893.—"Insbesondere von Mills, der diese schwierigen Gedichte in gründlichster Weise behandelt hat." *Preussisches Jahrbuch*, 1897, Prof. Justi (Lexicographer).—"Tous ceux qui s'occupent de l'interprétation des Gāthas rendront hommage a l'immense labeur scientifique de M. Mills . . . son livre reste un instrument indispensable pour l'étude." Prof. James Darmesteter, *Revue Critique*, Sept. 18, 1893.

"Alles was für die Erklärung der Gāthas nothwendig ist." (So also Dr. West in *J.R.A.S.*, 1906).—"Immer wird es die Grundlage bilden, auf der sich jede weitere Forschung aufbauen muss . . . einen hervorragenden Dienst."—"It will always form the foundation upon which all future research must be built—an eminent service." *Zeitschrift der deutschen M. G.*, 1896 (the late) R. Pischel (first Sanskritist of Germany).—A new edition has been inquired for, and is in progress.

A few copies of the Gāthas (Av., Pahl., Skt., Pers. texts, and Comm. pp. 622+xxx, 1892-4) are still to be had for libraries. £3. BROCHKAUS Leipzig.

JUST PUBLISHED

SYNTAX OF EARLY LATIN

Vol. II.—THE CASES. 409 pp. Price $4.00

By CHARLES E. BENNETT, *Goldwin Smith Professor of Latin in Cornell University*

EXTRACTS FROM THE REVIEWS OF VOL. I. (THE VERB):

"Man darf dem zweiten Teil mit Spannung entgegensehen; fällt er eben so gediegen aus wie der erste, dann haben wir eine Syntax des Altlateins, welche allen billigen Ansprüchen entsprechen kann."—*J. H. Schmalz, in Berliner Philologische Wochenschrift.*

"Professor Bennett is to be congratulated on having accomplished a heavy and important task. The mass of material covered is large. The style is lucid, flowing, and interesting. The book deserves wide reading."—*Wm. Gardner Hale, in Classical Philology.*

"Professor Bennett has discharged a huge task in a manner highly to his own credit and to that of American scholarship, and has earned the thanks of all students of Latin for the rich array of facts presented and for the criticism to which he has so often subjected the views of others concerning them. We are a long step nearer to a real Historische Grammatik der lateinischen Sprache."—*Charles Knapp, in American Journal of Philology.*

"Here at length we have for Early Latin a book containing a rich and convenient collection of the facts, together with a clear summary and honest critique of the theories put forth to explain the facts. Of the great usefulness of the book there can be no doubt."—*Arthur L. Wheeler, in The Classical Weekly.*

"The book will stand as one of the most important products of American classical scholarship, and add much to our prestige in foreign circles."—*The Nation.*

"Das Vorhaben wird mit Freude begrüsst werden, zumal der erste vorliegende Band einen so guten Vorgeschmack gibt."—*Gustav Landgraf, in Blätter für das Gymnasial-Schulwesen.*

"(Steht) auf der Höhe der Forschung. . . . Eine der erfreulichsten Erscheinungen auf altsprachlichem Gebiet."—*Ignaz Golling, in Zeitschrift für österreichische Gymnasien.*

The Nation.

NEW YORK, THURSDAY, MAY 21, 1914.

Summary of the News

The persistent rumors of the past two weeks that the fall of Gen. Huerta would not long be delayed have finally crystallized in a report, published on Monday, which is apparently well authenticated, that the Mexican delegates to the mediation conference have power to submit the resignation of Huerta if that course is found to be necessary to a settlement. The conditions on which Huerta will consent to be eliminated, it is said, may be expected also to eliminate Carranza and Villa from any personal share in the future government of Mexico, and the further suggestion is made that a commission form of government may be adopted, consisting of representatives appointed by the Federal and Constitutional parties, and possibly also by the Zapatistas, acting with the support of the United States.

Whether conditions of this character would commend themselves to the Constitutionalist leaders or to President Wilson is another matter. From recent dispatches from Washington it appears certain that the President has in contemplation a more far-reaching scheme of settlement than a mere temporary adjustment of the immediate problems of Mexican government, and that his aim will be to effect a radical reorganization of the present system of landholding in Mexico, which the Administration regards as the fundamental cause of the chronically unsettled condition of the country.

The attitude of Carranza and Villa, while increasingly friendly towards this country, remains, on the question of mediation, uncompromising, their position apparently being that they will hear proposals for a general settlement of the question only in Mexico City itself. Few obstacles now bar their approach to the city, although it is estimated that six weeks must elapse before they can reach it. Tampico fell on Wednesday of last week, and Tuxpan, a rich oil town, 128 miles north of Vera Cruz, on the following day. The attack on Saltillo was commenced on Saturday or Sunday, Villa's forces have been reinforced from Torreon, and the town is gradually being hemmed in. It was reported from Washington on Monday that the Constitutionalists are exhibiting a disposition to exact money for their campaign from business interests at Tampico, and representations on the matter have been made by Secretary Bryan to Gen. Carranza.

It was announced on Saturday that, in response to strong representations made through the Brazilian Minister in Mexico City, Gen. Huerta had undertaken to investigate the case of Parks, the American private who, while insane, wandered into the Mexican lines at Vera Cruz and is reported to have been executed, and if murder was committed to punish those responsible. Other incidents of the week have been: the sudden appearance of Zapata, the rebel leader in Morelos, in the suburbs of Mexico City; the confirmation by Gen. Funston of the report published two weeks ago that Federals had destroyed the San Francisco bridge on the Interoceanic Railway near Vera Cruz, and the arrival at Vera Cruz on Monday of Dr. Aureliano Urrutia, formerly Huerta's Minister of the Interior, who had escaped from Mexico City on learning of a plot against his life.

Notice was served on Chairman Clayton, of the House Judiciary Committee, on Monday that a fight would be made by organized labor to force the adoption in the Clayton Anti-Trust bill of a provision exempting the labor unions from prosecution under the Sherman law.

As we write, indications are that the Tolls Repeal bill will not come to a vote in the Senate until late next week. Senator Thomas, of Colorado, whose position on the tolls question has been in doubt, announced on May 13 that he should vote against the measure in deference to what he conceives to have been the Baltimore platform, although personally he was in favor of the repeal.

We deal elsewhere with the situation in Colorado, the most notable developments in which have been the President's message to Gov. Ammons, on May 16, criticising the action of the latter in permitting the adjournment of the Legislature without making adequate provision for the resumption by the State of control of the situation, and the somewhat evasive reply of Gov. Ammons.

Colonel Benavides, the acting head of the Government of Peru since the expulsion of President Billinghurst, was elected Provisional President on May 15. Col. Benavides has taken the oath of office and has appointed a Cabinet, but the followers of Roberto E. Leguia, the constitutional Vice-President, who was his opponent for the provisional Presidency, have protested against the election on the ground that it was held in an unconstitutional manner, and on Monday a group of 121 Senators and Deputies declared themselves a national Congress and proclaimed Leguia Vice-President of the republic.

President Menocal in a special message to the Cuban Congress on May 13 recommended the chartering of a national bank with a capital of $20,000,000, and the privilege of issuing twice this amount in bills against the Government, giving bonds as security.

The last of the three boats containing the crew of the steamship Columbian, which was abandoned burning on May 4, was picked up by the revenue cutter Seneca on Sunday. Only five of the sixteen who were in the boat when she left the Columbian were rescued, and of these one died after being taken aboard the Seneca. The remaining eleven had perished of exposure and starvation. The boat when picked up was 140 miles north of the point where the Columbian was abandoned.

An interesting development in the Home Rule situation last week was the statement by Mr. Asquith that the Government would introduce an amending bill to the Home Rule for Ireland measure, in the hope that it would be passed by agreement between parties, in which case both the Home Rule bill and the amending bill would be passed simultaneously. Mr. Redmond, on behalf of the Nationalists, declared that he would hold himself free to deal with the measure on its merits when it came up.

The report of the Carnegie Commission on the Balkan wars, on the findings of which we comment elsewhere, was made public on Monday. The investigations of the Commissioners leave no room for doubt that abominable atrocities were perpetrated by the troops of all the countries engaged in the two wars, the conduct of the Christian armies in their internecine struggle revealing no favorable comparison with that of the Turks.

The reports circulated in this country that a German syndicate had been organized, with the endorsement of the Government, to finance Hayti in return for a coaling station and other concessions, has been officially denied. The only step taken by Germany in the matter, it is stated, has been to enter a demand for a share in the control of Haytian finances, should they be reorganized.

The celebrations in connection with the centenary of Norwegian independence from Denmark were inaugurated on Friday of last week by the opening of the exposition by King Haakon and Queen Maud.

Count Okuma, the new Premier of Japan, in a statement of the policy to be pursued by his administration, issued on May 15, endeavored, apparently, to reconcile the conflicting claims of those who clamor for material increases in the country's armaments, and of the general public which is already crushed by a burden of over-taxation. While emphasizing the necessity for retrenchment in the national finances, the Premier promised increases in the army and navy "compatible with the resources of the empire."

The Russian Duma last week rejected the budget by a majority of seventy.

The arbitration treaty between the United States and Japan, which expired on August 24 last, was ratified on May 13 by the Privy Council of Japan.

The deaths of the week include: Paul L. T. Heroult, May 12; Otto Magnus, Mrs. John R. Mayo, May 13; William Wainwright, May 14; Frederick D. Monk, May 15; Consul John L. Griffiths, May 17; Edward Burns, Admiral Sir Charles Drury, Charles Sprague Pearce, May 18.

The Week

Signs that the Huerta régime is rapidly crumbling are now so thick and ominous that no one longer doubts seriously that its end is near. It may not be literally true that the Provisional President has empowered his agents at the peace conference to present his resignation, on terms, as a part of the agreement they are to strive to reach; but it is evident that he cannot long maintain himself. That the Mexicans who have been his main support are now prepared to abandon his cause, and do the best they can for themselves and their interests, is hardly questioned. With the rebels passing from victory to victory, and with the United States Government not relaxing its hostility to him, the result is inevitable. Huerta has held out longer than most people expected—certainly, much longer than President Wilson expected. He has displayed some admirable qualities. He has been tenacious and he has been calm. He has had skilled diplomatic advisers. But the great stakes for which they played are now hopelessly lost. The most at present hoped for by the large property-owners and the wealthy business men who have thus far stood by Huerta—the party known in Mexico as the "Cientificos"—is that some way may be found to safeguard them and avert the setting up of a proscriptive government by Villa and Carranza.

Thus the problems upon which the peace commissioners are engaged have already passed far beyond the scope of the original questions contemplated. This is now the understanding of all parties to the conference. It is not merely to avert war between the United States and Mexico that the South American diplomats have been exerting themselves this month past. That end they may well believe has already been attained, or is plainly in sight. What they have been so zealously and so disinterestedly working for is something much more far-reaching. It is known that the South Americans have been straining every diplomatic nerve to bring about a real concert of the American Powers in dealing with this large question which so greatly concerns them all. That they clearly perceive the need of a broad policy of reconstruction in Mexico is obvious. They apparently contemplate some form of temporary government in that country, able to point to a mandate, as it were, from all the American republics, and containing the promise of order and upbuilding for Mexico. They will not stickle over nice distinctions about intervention. They must see, as all the world does, that the United States has long been actually intervening in Mexico; and the problem now is to make that intervention joint, effective, and constructive.

It was never probable that the "émeute" of certain Democrats in the House over the side-tracking of the bill for rural credits, would grow into a revolution; and the thing has already calmed down. The gentlemen making the disturbance had the double motive of wishing to annoy Mr. Underwood and the President, and of striking an heroic attitude in favor of the farmer. But their idea of the nature of the real legislation proposed is doubtless very shadowy. They apparently have in mind something like the enactment of a pious wish that farm loans could be marketable at easier rates of interest. But we may be sure that if they were asked to go through the proposed bill in its entirety, and explain and defend all of its provisions, they would shrink from the task. It is, indeed, a formidable document, forty-eight pages long. That it bristles with financial and administrative difficulties is clear on simple inspection; but its framers had the ingenious notion of referring the knottiest of these to the Federal Reserve Board for solution. This feature by itself would be enough to make it most unwise to press it to passage at the present time. The Federal Reserve Board will be sufficiently loaded down with work during the months of organizing the new banking system, and setting it in operation, without having all these rural-credit puzzles thrust upon it. It has been confidently stated that President Wilson is opposed to the bill in its present form because it involves a subsidy from the United States Treasury. The reference would seem to be to that section of the bill which authorizes the Secretary of the Treasury to "purchase from Federal land banks farm-loan bonds, not previously issued or sold, in an amount not to exceed $50,000,000 during any one year."

The Hon. James E. Gaffney, who is supposed to know something about the process which Mr. Mellen described as dealing with the devil, but which others know as doing business with Tammany, gives it as his expert opinion that the former president of the New Haven was "buncoed." If he thought he was buying Tammany's favor he was deceived; and if anybody came to him, as from the Wigwam, bearing Westchester stock to be exchanged for New Haven stock, the man was simply an adventurer or impostor. Especially does Mr. Gaffney scorn the idea that the late Inspector Byrnes was, at the time Mr. Mellen made the bargain with him, in a position either to influence or to "deliver" Tammany. All this may have truth in it. Nothing is more probable than that, after it became known that Mr. Mellen had "due-bills" to distribute in order to obtain "modifications" of the Westchester charter, his office was made the resort of many a gentleman who lives by his wits. Moreover, it is a well-known rule in the process of corruption, that when you have paid out $100 in bribery, you soon have to follow it up with $200 for blackmail. And it will be observed that none of these things go to the point of Mr. Mellen's willingness to sup with the devil, if he could find a spoon long enough to do it in safety. On his general proposition regarding the devil as a business agent, the Chicago *Record-Herald* interviewed a number of railway men and bankers. They all with one consent advised against entering into transactions with his Satanic Majesty. Apart from moral scruples, there was always the strong probability that the devil would beat you in the trade!

The Yankee enterprise implicit in the proposal reported to the Senate for a globe-wide system of commercial attachés is another index of the rapid disappearance of our self-satisfied outlook upon foreign markets. Devoting their entire time to investigations and reports to which the Consuls have been able to give only half their energy, and having wider range of movement, these "trade-scouts" should infuse a more con-

sistent energy into our rather fitful skirmishings for business. The enthusiasm of commercial men for the "virgin fields" which they are vaguely assured await them has been observed to be largely spasmodic, rising highest when the home market is a bit dull. Communicating with them through the Department of Commerce, the attachés should help dissipate the persistent obstacles to North American trade—ignorance of language, customs, and market-demands, bad packing and transportation, and indifference to foreign credit systems. The greatest stress is to be laid on the fact that, supplementary to our present foreign representation, any such corps of trade servants should be placed on a civil-service foundation.

The one spot in the Mexican war zone on which the attention of the General Staffs of the German and British armies must be fixed is neither Vera Cruz, nor Saltillo, nor Tampico, but Mazatlan, on the Pacific Coast, where the aeroplane seems at last to be realizing its much-debated possibilities as an actual engine of warfare. It is true that Mazatlan is a beleaguered city, and that the reports of the havoc wrought by Constitutionalist aeroplanes come from the Constitutionalists themselves. Nevertheless, there is no reason for questioning the main fact that flying machines have been dropping bombs into a fortified city with some effect. The aeroplane has been employed in Tripoli and Morocco, but hurling bombs at ill-armed Arab cavalry is a different matter from attacking a fortified place presumably equipped with long-range artillery. In the Balkan War the aeroplane was employed exclusively for reconnoitring purposes, and not very extensively at that. It is still a question whether a flying machine could venture with equal impunity over Metz or Strassburg as over Mazatlan.

Liberal expenditures by a candidate for Congress from North Carolina have called attention to the severity of the corrupt-practices act of that State. The law allows campaign expenses amounting to 50 per cent. of the salary of the office sought, and this provision is strengthened by the regulation that all financial or similar service rendered in aid of a candidate must be reported to him. It would be a violation of this law for a friend of the candidate to give a cigar to a voter, with a view to influencing him, without reporting the incident to the candidate. The candidate must make a report of receipts and expenditures, as must secretaries or chairmen of executive committees. The latter are required to make two reports, one not later than ten days before the election and the other within twenty days after it. To promise a job to any one in return for electioneering services is a felony. The law goes into subtler matters when it provides that no one may publish a derogatory charge against a candidate without signing his name, and the circulation of false reports is heavily penalized. All that is necessary, as the Charlotte *Observer* sagely remarks, is to see that these provisions are enforced.

In certain respects, the "supposed speech" by John Adams is now displaced. While school children will still be made to recite it, as representative at once of a state of mind that had a great influence on our history and of Websterian oratory, their real wonder will be reserved for the supposed speech of La Follette, winding its leisurely way through 368 closely printed pages. In mere length there is no comparison between the earlier and the later effort. Nor can the former be said to have the variety of the latter. It did not occur to the Massachusetts orator to stuff his remarks with editorials, interviews, letters, and comment of one sort and another; and telegrams, of course, were not yet. In all of these phases of oratory the Wisconsin Senator has outdistanced, not only his New England rival, but every other public speaker of any age or country. It is easy to imagine the smile of gratification that will light up the face of every Wisconsin farmer as he lifts his bulky *Congressional Record* into wagon or automobile, and hastens home to begin at his earliest opportunity upon the ample supply of summer reading with which a generous Government and a not too reticent Senator have provided him.

In conclusion the letter [of the Rev. Bouck White] warns Dr. Woelfkin that, if his suggestion is rejected, "the wild element" will be stirred to "desperate means," and will attempt to "justify violence by the assertion that an orderly exchange of views is not possible."

Thus we see that the right to hold a "joint debate" in church is regarded by some of our advanced thinkers as one of the self-evident rights of man, and one so fundamental that its refusal furnishes a passably good justification for violence. And the queer thing is that not a few good people, who would be shocked at the idea that they had anything in common with "the wild element," see nothing absurd or intolerable in this notion. They don't quite subscribe to the view, but they think that "there is something to be said for it," that "it is not so very far wrong," or the like. Unfortunately, there is "something to be said" for almost anything. There is something to be said for the abolition of property, for free love, for letting children grow up without discipline and without learning anything but what they have a fancy for. But we live in a world in which, in regard to any particular thing that is to be done or suffered, what we have to decide is not whether there is "something to be said for it" or not, but whether, in point of fact, it is wise or foolish, rational or irrational, tolerable or intolerable. If any one does not see that Bouck White's idea is foolish, irrational, and intolerable, perhaps he will be helped by trying to imagine the actual nature, number, and extent of the debates in Mr. Rockefeller's church which would be necessary to satisfy "the wild element" that it had really got a square deal in the matter of "an orderly exchange of ideas."

Baltimore's dropping of "Peace Day" from this year's schedule of school events seems hard to justify. The reason assigned for the action is that a militant Colonel made a speech before the School Board, in which he attacked the policy of "peace at any price," and denounced the publications of the American Peace Society, which in the past has supplied most of the material for the occasion, as "seditious." By its action, the Board virtually confesses either that it does not care to have the ideal of peace emphasized before the school children, or that it does not know how to do it without weakening their spirit of patriotism. Neither alternative reflects credit upon it. It is quite safe to

say that most persons manage to be patriotic and peace-loving at the same time, and that very few indeed believe in peace, or in much of anything else, for that matter, at "any" price. To omit the usual observance of Peace Day at this particular time, moreover, is peculiarly unfortunate; it gives the impression that advocacy of peace is proper only when there are no war clouds on the horizon.

The first number of the *Unpopular Review* appeared at the opening of the year, and the publishers state, in an advertisement, that a third impression of that issue, as well as a second impression of the current issue, has just gone to press. It appears, then, that there are still among us some individuals who think it possible that a series of articles published in a quarterly review so far back as four and a half months ago may be worth reading to-day. This is most discouraging. We had supposed that the entire public had been educated to the point of recognizing that "timeliness" is the one cardinal virtue in a magazine or review, the lack of it the one capital sin. It may, indeed, be pleaded, in behalf of these queer people who wish to read—and go so far as actually to buy—a review hoary with four months of age, that the articles in it deal with the larger questions of the time, and are not dependent for their value on the momentary mood of the public or the events of the day.

Announcement has recently been made of "A Cambridge History of American Literature," in preparation for the Cambridge Press. In two volumes, it will deal with the subject from colonial times, after the model of "The Cambridge History of English Literature." The general editor, who is to have wide collaboration, is Professor Trent. Needless to say, the work will fill a distinct gap. America no more has her Lanson—her single compendious historian—than has England. The new history will show a range of specialized subjects investigated by experts. The forthcoming work should signalize a change in the rather cold spirit of American scholarship towards our literature. Whereas twenty years ago scholars in this field with special training, Tylers and Cookes and Stedmans, were rare if outstanding, to-day a number can be enlisted. The sub-editors of the work are Professor Erskine and Professor Van Doren, of Columbia, and Professor Sherman, of Illinois.

How radical is the temper of our time is shown by its effect upon that moss-encrusted conservative, the college undergraduate. Who had any great hope at the beginning of the public agitation two or three years ago that reform of Yale's Tap Day would be brought about before men then freshmen had attained to the dignity of seniors? Yet this has been achieved, and in just the way it should have been, without larger sacrifice of the old than was necessary to remove the abuses that had crept in. The senior secret societies last week selected forty of the fifty candidates proposed by the juniors. There is regret over the vanishing of the picturesqueness of the historic ceremony, but one of the excrescences of the institution of Tap Day was its public character, with the consequent exaggeration of the tenseness and the disappointments connected with it. This feature of the occasion had given it an altogether false importance in the minds of those interested, as if one's life, liberty, and happiness were bound up in what happened in that brief but momentous interval between the first tapping and the last. Too much cannot be said in praise of the juniors, who took their social lives in their hands in demanding sweeping alterations in the affair, or of the seniors, upon whom rested the decision whether the day was to assume a somewhat new and better significance.

The decennial redistribution of seats in the Canadian Commons has not passed without friction; and as protests of the Maritime Provinces against the old basis of distribution, on which their representation must increasingly be cut down, involve amendment of the Constitution, it is notable how vexed is the question of sovereignty thus raised. The anomalous uncertainty as to the amending power in Canada is in marked contradistinction to the definite provisions on that head in South Africa and Australia. Though the British Parliament nominally retains this power, it would, of course, exercise it only in conformity with the will of the people of Canada. But does the Federal Parliament, or the Provincial Legislatures, or both, voice this will? When the North America Act was amended in 1907, the unanimous approval of the Dominion Parliament and of eight Provinces determined the matter against British Columbia's objections. If the present contentious question should be pressed, however, it could find only small majorities in the Federal Parliament, and the support of five of the nine Provinces. Would this suffice? The issue, not now serious, is distinctly marked for the future; for no Constitution can remain satisfactory for all time. Our "House of Governors" would find interesting the opinion of one expert that, whatever the final determination, the proper agency to initiate an amendment is the Inter-Provincial Conference of Premiers.

Of nearly ten thousand women who voted on the question submitted by the Parisian journal, *Femina*, "If you were not a woman, what man would you prefer to have been?" nearly all gave first preference to Napoleon. Next in order came Pasteur, Victor Hugo, Edison, Poincaré, Rostand, Blériot, Wagner, Beethoven, and De Musset. Here is an apparently shattering rebuttal for Olive Schreiner and other feminist-pacifists who have argued that the emancipation of women would bring about the cessation of war because the mothers of men would refuse to be partners in the wastage of lives. The answer, of course, is that the women who voted for the greatest war lord in history have done so because they are still slaves to the ideals of masculinism. That is, provided the feminists do not prefer to turn the vote to their own purposes by showing that the ten thousand women voted very much as ten thousand men would have voted under the same circumstances, and that consequently there is no inherent difference in sex outlook upon the world. Nevertheless, it is rather disconcerting, after so much has been written about the peculiar sensibility of the feminine soul to poetry and music, to find only one poet among the first five men, and more women who would rather have been a merely respectable politician like Poincaré than Wagner or Beethoven. Just what light the contest throws on the value of the statistical method we decline to say.

THE TWO VOICES.

It is needless to dwell upon the great strategic and moral significance of the capture of Tampico by the Mexican rebels. It is the heaviest blow they have yet dealt Huerta. Their cause is now at high-water mark. With a seaport on the Atlantic in their possession, in control of the chief fuel supply of Mexico, with Saltillo and its Federal garrison cut off and likely to fall any day, and the way open to a movement against the capital by short interior lines, it is not strange that they believe ultimate victory to be within their grasp. Diaz fled before Madero after suffering far fewer military reverses than those which have now been heaped on Huerta's head. But Huerta is made of stern and obdurate stuff and presumably will not yield, even yet, without conditions. On the other hand, he would seem the less likely to take any aggressive step against the United States, or to interpose obstacles to the progress of the peace negotiations. The whole Mexican situation, in fact, as it stands after the fall of Tampico, appears fitter than ever for mediation and adjustment in a broad and lasting way.

At such a juncture, the American people and their Government are thrown back upon the question of the large and wise policy to be pursued. Troublesome details will have to be dealt with as they arise; but behind them we must ever look to guiding principles. What are they to be? Two voices are heard in advocacy of two different courses. One of them is the voice made familiar to this country in slavery days: it preaches indefinite expansion, involving conquest and annexation, always echoing the words of Stephen A. Douglas: "Just as fast as our interests require more territory, in the North, in the South, or on the islands of the ocean, I am for it." A picturesque revival of this old fashion of American speech appears in the Louisville *Courier-Journal*. It has a characteristically flamboyant article headed "All Aboard for Panama!" Every foot of land to the Panama Canal, and as far beyond it as we may care to go, should be taken by the United States. Talk about peace with Mexico is humbug. It is mere "chatter" to say that we will not take Mexican territory. We cannot fool the South Americans by any such pretences. They do not like us; they suspect us; they will not trade with us; therefore there is nothing for it but to go and take their land away from them. And listen to this:

> Once more we are a united country. Slavery no longer stunts our growth, divides our counsels, and discredits our pretensions as a brave, enlightened, and free people. Behold the results. Alaska! Hawaii! The Philippines! Puerto Rico! Cuba in abeyance. Mexico in anarchy. The Panama Canal right across Central America. And over all, suspended in the air, the shining sword of Damocles, ready to come down at the bidding of whatever ambitious President utters the word; the Monroe Doctrine; not as Monroe said it and meant it, but as Seward applied it to the French in Mexico, as Cleveland applied it to the English in Venezuela, as Roosevelt proclaimed it, and Wilson construes it; our right and might; armed *cap-a-pie;* the army and navy to do the nervy act—Johnny on the spot to enforce it—and don't-let-any-of-you crowned heads of Europe, or Latin sons-of-guns in South America—greasers, mongrels, whelps, or hounds—forget it!

This may be said to be only the Wattersonian dithyrambic style. But it has many echoers and imitators. At one with it in sentiment are all those who take the high and mighty tone of race superiority as regards the Mexicans; those who talk of settling their business with the rough hand of a soldier; of there being no way except for the United States to go into Mexico and "clean it up" and then never come out. These voices have not been as numerous as might have been feared, nor have they swayed popular feeling; but they have been heard, and still may be.

Fortunately, from the first we have had counter-voices. Early and weighty among them was the utterance best entitled to catch the nation's ear because it came from the nation's chief. The speech which President Wilson made at Mobile last October enunciated the principle by which he is actuated in all our relations to the countries south of us, and it is a principle which, in every application, cuts athwart the raucous Jingoism exemplified in the *Courier-Journal*. More territory? "The United States will never again seek one additional foot of territory by conquest." A brutal consulting of our wishes alone? "We must show ourselves friends by comprehending their interest, whether it squares with our own interest or not." Proud and fierce domination over the weaker republics of the Continent? "Our real relationship with the rest of America is the relationship of a family of mankind."

These sentiments have been, and are yet to be, put to a more severe test than Mr. Wilson could have imagined when he gave them expression. Whether they can be made regnant in the final Mexican settlement is the great question. We note only one point. They do not mean flabby acquiescence by this country in whatever may occur or may be proposed. The United States has a duty to its own nationals in Mexico. It has, moreover, assumed an international obligation which will not permit it to be indifferent if merely Amurath to Amurath succeeds in Mexico, and if revolution is piled on rapine. We have to strive for a complete and permanent solution. This is the great task laid upon the peace conference; and in attempting it, there is deep satisfaction in being assured that the Administration will be throughout guided by the determination to work for justice along with healing, and to insist upon the righting of great wrongs at the same time that it is considerate and generous.

COLORADO AND THE NATION.

The adjournment of the Colorado Legislature leaves the situation in that State as full of doubt, perplexity, and the potentialities of grave trouble as it was when the Legislature was convened. So long as the mining districts are under the control of the military forces of the United States, order will be preserved; what may happen when the Federal troops are withdrawn is matter of conjecture, but certainly matter for the gravest solicitude. The task for which the Legislature was assembled was to reestablish the State in its primary function of the preservation of order and security, and to restore confidence in its ability and determination to do so. In such a state of feeling as that now existing in Colorado, as a result of the collapse of the home government, the restoration of confidence in that government is as essential to the reëstablishment of order as is the mere provision of means for the execution of its immediate duties. Unfortunately, as matters stand, neither the material nor the moral elements needed for a cure of the State's disorder have been supplied in anything like adequate measure.

It is stated—and we have seen no contradiction of the assertion—that Gov. Ammons had in his possession, some

hours before the two houses of the Legislature had come to a final agreement to adjourn, the telegram which President Wilson had sent him urging the duty of the State to resume its constitutional sovereignty. He did not communicate this to the Legislature until it was on the point of adjourning *sine die*. His failure to present it in time to influence action was most unfortunate; and if, as seems to be the case, it was deliberate and intentional, it was inexcusable. In this telegram the President declares that his "constitutional obligations with regard to the maintenance of order in Colorado are not to be indefinitely continued by the inaction of the State Legislature," that he "cannot conceive that the State is willing to forego her sovereignty or to throw herself entirely upon the Government of the United States," and "that it has no constitutional right to do so when it is within the power of her Legislature to take effective action." In his reply Gov. Ammons says that the President has been misinformed—that in point of fact the Legislature has taken action that will enable it soon to "control the situation." But the things done by the Legislature do not, at this distance, appear to answer that description; and it seems plainer still that they are by no means so regarded at home. The provision of a $1,000,000 bond issue, all but $300,000 of which is to be absorbed in meeting past expenses for the militia; the conferring on the Governor of the power to close saloons in times of disorder; the enactment of a law prohibiting the carrying of firearms at such times—these seem to constitute an extremely feeble apparatus for coping with a situation of such desperate character. The Governor speaks also of a "mediation" committee; but what that may accomplish is in the highest degree problematical—let alone the fact that opponents of the Governor describe what has been provided for, not as "mediation," but only investigation.

Notwithstanding the emphasis of the President's words, we do not believe that he will entertain any idea of withdrawing the troops from Colorado until he has substantial assurance that the State can be counted on to preserve order. He is unquestionably sincere in his desire to end the present anomalous situation at the earliest practicable moment; but he cannot afford, and the country cannot afford, to throw away the benefits that have resulted from the Federal military occupation, and invite a recurrence of the trouble that gave rise to it. What the President will do, we have no doubt, is to apply—as he endeavored to do in his telegram to Gov. Ammons—such pressure as will make it morally impossible for Colorado to fail to do her duty; and in the application of such pressure he will be backed by the sentiment of the whole country.

Unless all signs are deceptive, such a moral certainty cannot be brought about in Colorado without further action by the Legislature. That this action cannot be had without great difficulty, and that every question connected with it is full of perplexity, is only too evident. But the thing with which Colorado has to grapple is no ordinary affair of routine. The present trouble is not a temporary or accidental trouble. It is but the latest manifestation of a deep-seated disease which has shown itself in various forms of lawlessness, both on the part of the mob and on the part of persons in authority, for many years. The melancholy thing about the emergency session of the Legislature that came to an end on Saturday is not so much its failure to accomplish all that was needed, but its failure to show any true realization of the greatness of the need, to manifest the spirit which should have been evoked by the humiliating pass to which the State had come. But unless Colorado is hopelessly deficient in the qualities that we believe are inherent in the citizenship of every State of this Union, means will yet be found of causing her government to rise to the demands of the situation.

BALKAN ATROCITIES.

The report of the International Commission of Inquiry into the causes and effects of the Balkan wars, made public on Monday, is a shocking addition to the literature of horror. Writers of fiction have been busy of late in depicting the devastations of war. Their efforts pale before the matter-of-fact recital produced by a body of investigators who went at their task in a spirit of scientific impartiality and accuracy. Treachery, massacre, devastation, and pillage, culminating in indescribable acts of bestiality inflicted upon men, women, and children—such is the sad tale of a struggle which in the beginning was hailed as a war in the cause of civilization.

The International Commission was instituted largely upon the demand of the Bulgarian Government. Bulgaria, beaten to her knees in a war in which she found herself completely encircled by her enemies—Greece, Servia, Turkey, Rumania—compelled to sign a humiliating treaty, deprived of the greater share of her conquests from the Turk, nevertheless refused to be quiet under the additional stigma that it was the inhuman conduct of her armies and irregular partisans which forced her Christian allies to turn upon her. The Greeks were particularly active in giving publicity to the tale of Bulgarian excesses, and the march of the Greek army into the Ægean territories was described as a necessary act of reprisal against an enemy of civilization.

On that point the Commission's report vindicates the Bulgarian Government and nation. The Bulgarians were not the first to begin the game of massacre and pillage in the conquered territories. There is evidence that the Greek "reprisals" took place before the Bulgarian "provocations," and that in their nature they were more cruel than most of the acts the Bulgarians were guilty of. When so much is said—as in all fairness it must be said—it still remains true that the burden of responsibility for precipitating the second Balkan war does rest with the Bulgarian military party. While the Government at Sofia was earnestly trying to bring about arbitration of its quarrel with Servia and Greece, the military party took matters into its own hands. A Bulgarian peace representative was actually on his way to St. Petersburg when Gen. Savoff gave orders for an advance that proved the undoing of his country and deluged Macedonia and Thrace for a second time with the blood of a peaceful population.

The very course of the Balkan wars, like the passions to which they gave rise, harks back to primitive conditions. Modern war usually passes over the countryside like a swift blast of destruction; the agony may be intense, but it is short. Here it was less a war than a grapple between drunken combatants stumbling back and forth in their fury. The inhabitants of Thrace and Macedonia had to endure the pas-

sage, not of an army, but of armies and bands. It was like the Thirty Years' War. In Thrace, for instance, the Bulgarian armies first swept the Turks before them, burning the villages as they advanced, as the Commission's report describes. Then came the Bulgarian *débâcle* and the Turkish return to Adrianople bearing a second crop of slaughter and pillage. So it was in eastern Macedonia, except that there the Bulgarians gave ground before the Greeks, whose vengeance was no less summary. It is not the regular troops against whom the worst atrocities are charged up, but the national militias—bashi-bazouks, comitadjis, and the Greek *antartes*—and the inhabitants themselves, stirred to blood-fury by their own sufferings.

What makes the story more painful is that such exhibitions of blood-lust were not altogether the outburst of passion under the stimulus of war frenzy. Too often the atrocities enumerated by the Commission were the results of deliberate policy, or at least the outcome, not of a normal racial antipathy, but of a racial hatred nurtured through years of civil warfare. One need only recall what the history of Macedonia had been for the decade preceding the Turkish revolution. Sooner or later Macedonia was to be lost to the Turk. While waiting for the heritage the Balkan nationalities set themselves to "nationalize" Macedonia in preparation for the Sick Man's demise. The country was ravaged by guerrilla warfare. Bulgarian, Greek, and Servian bands carried on the "conversion" of Macedonian villages with fire and sword. If such hideous practices were tolerated in times of peace, one can imagine what would come under open warfare. Here the Commission's report is damning against the Servians and Greeks, when the unexpected successes of the war against the Turk left them in control of large territories with a Bulgarian population. It became the business of the moment to convert these villagers to Greek and Servian allegiance before peace brought the partition of the Turkish provinces. The simplest way to create a *status quo* favorable to Servian or Greek pretensions in a village was to massacre the male inhabitants wherever they showed the slightest aversion to conversion—and not infrequently after conversion. As the Commission's report says, it recalled the Assyrian method of conquest by extermination.

The report, in its present form, lacks the introduction by Baron d'Estournelles de Constant, in which presumably the lessons of the inquiry are summarized. For the present the Commission can only suggest the institution of some form of international supervision over the conduct of future warfare in the Balkans. How practical such a suggestion may be it is hard to say. Yet uo endeavor should be omitted to prevent or mitigate a repetition of such barbarous fury.

LEGISLATORS UNDER FIRE.

The people's right to grumble at the men whom it has delegated to make its laws is an inalienable and continuously exercised privilege of democracy. Having instructed a number of men to come together and talk things over, it is only human nature that we should accuse them of talking too much. Having elected such men from duly apportioned districts in order that from the clash and conciliation of local interests they might shape a just and equitable national policy, we naturally proceed to complain of the parochial outlook that guides the conduct of the average legislator. Legislative bodies have far from mastered the art of pleasing all of the people all of the time, but as a rule they are too aggressive or too subservient, too ready to take orders from their constituents or too ready to take orders from anybody other than their constituents. Such popular discontent with representative government may find expression in the good-natured irony which is our own peculiar attitude towards things of importance, or may take the form of bitter criticism as it has done abroad. At the present moment "parliamentarism" is under heavy fire in the two principal European democracies, Great Britain and France.

In France, which has just gone through a general election, the "crisis of parliamentarism" is chronic. This crisis is supposed to consist in the fact that the representatives of the people are misrepresentative. The Chamber of Deputies, in which the supreme legislative and executive powers of the Republic are vested, is described as a conglomeration of groups and cabals, actuated solely by self-interest, by lust for Ministerial office on the part of the leaders, by desire for minor advantages, political and financial, on the part of the rank and file. The main object of the member of Parliament is to get himself elected and to stay elected. To that end he becomes largely a ward leader on a large scale, with the distribution of patronage as his principal function. France has been peculiarly prolific in government scandals arising from the close affiliation between politics and high finance. To the opponents of the present régime the results of the parliamentary elections, coming so close on the heels of the Calmette tragedy and the latest Rochette revelations, are only another illustration of the evil grasp of parliamentarism on the life of the nation. In spite of the unsavory discoveries regarding the influence exercised by the swindler Rochette in the highest Government quarters, the Ministers and ex-Ministers involved have obtained vindication from their constituents.

At first sight such a vindication would disprove the charge that the representatives of the people do not represent the popular will. But the reply is that parliamentarism, by its control of the electoral machinery, by the free use of patronage and directer forms of corruption, is able to impose its own will on the electorate. Needless to say, that is the case as presented by the enemies not only of the parties now in power, but of the republican régime as a whole. It is the view recently formulated by that ingenious and learned Anglo-Frenchman, Hilaire Belloc, whose personal sympathies are apparently in favor of a Cæsarean democracy or an imperialism by plébiscite, whichever phrase we may prefer. The downfall of parliamentarism, says Mr. Belloc, is inevitable:

> The whole effort of the professional politician nowadays in every country is to prevent a direct appeal to the people, and the professionals in France have decided to meet the threat of it this time by a continued resistance. That resistance will prove their ruin. Their success in carrying the machine through these next elections will appear to the future historian much as the success of James II in forcing his schemes upon the English people appears to us now. But, I repeat, Governments upon the point of breaking down always act thus blindly.

British parliamentarism does not come so sharply under the suspicion of

being corrupt; but the inefficiency of the House of Commons, its clutter, its endless talk, its concern with petty issues, its elaborate staging of pseudo-hostilities between a Government and an Opposition that are one at heart, have been severely handled by the radical thinkers of the day. Mr. Galsworthy protests against the House of Commons from the humanitarian standpoint. Mr. Wells protests from the standpoint of modern scientific efficiency. Mr. Chesterton clamors in the name of true democracy. It is the spirit of the times. Sir William Harcourt declared that we are all Socialists. To-day it is true that we are all direct actionists; that in our zeal for getting done the things we are convinced ought to be done, we are impatient of the means, and that the abstract principles of representative government lose their validity in the face of the pressing need of the moment. It is true that representative government, as it functions to-day, is criticised in the name of a truer, more democratic representative system; but so far there has been little useful suggestion as to what form this newer representative government is to take. It may be, of course, that Mr. Belloc's ideal Catholic monarch, placed high above the petty interests of the electioneering market, may more truly represent the aspirations and needs of the people. It is possible that Mr. Wells has in mind the ideal of a scientist-king, or perhaps a Board of Scientists, who could govern England more justly and more economically than the present debating club at Westminster. But it is well to recognize that these are the things people mean when they speak of a perfected representative democracy. In other words, it is not representative at all, and it is a democracy only in the sense in which Napoleon III might have used the word.

The case against the unfortunate representatives of the people suffers, of course, from exaggeration. There is no need to minimize the wire-pulling and log-rolling activities of our representative assemblies; but it is absurd to speak of parliamentary business as consisting solely of personal and petty local interests swimming in a sea of talk. The English radicals sneer at the Westminster Debating Club at the very time that this debating club is grappling with a public question whose roots run back almost half a thousand years in English history, and whose reality is attested by the threat of civil war. The French Government, which we are asked to think of as a band of corruptionists, gave to the world in the Dreyfus case a magnificent example of justice and far-sighted patriotism. Undoubtedly parliaments mingle broad issues with petty politics and great motives with mean ones. Undoubtedly the representatives of the people talk much more than they ought to. But in this mingling of motives, in this blundering, wasteful method of doing parliamentary business, the legislator is, after all, representative of our poor human way of going at things.

LITERARY INFLUENCES FROM RUSSIA.

An English reviewer, speaking of the recent revolution of the Russian theatre, declared the other day that Moscow is now the theatrical capital of Europe, and that soon it will be the literary capital. The prophecy is extra-hazardous, but it does serve to emphasize the extent to which influences dramatic and literary, emanating from Russia, have been making themselves felt in the West and, of all countries, in England. The English writer just referred to is by no means alone in describing the Theatre of Arts in Moscow as the premier stage of Europe. The extraordinary development of the drama, during recent years, in the direction of that elaborate stage managership with which the name of Max Reinhardt is most closely connected, has been carried to perfection in the ancient Russian capital. It is highly probable that from Moscow Reinhardt drew his inspiration, indirectly perhaps, by way of the Russian ballet, which has swept both continents and emphasized the trend away from the spoken drama to spectacle. Moscow was the first to apply Gordon Craig's radical theories regarding the future of the theatre in which the drama will take the form of a sublimated puppet-show. The Russians have not gone all the way with Gordon Craig; they have not yet abolished the actor. But they have produced Shakespeare with Craig's iconoclastic scenery, and they are now producing dramatizations of Dickens and Dostoievsky in elaborate spectacle with a predominant striving for atmosphere.

It is now announced that the company of the Moscow Theatre is to have a season in London. It is not unreasonable to suppose that if London shows itself appreciative, we may be able soon to see the latest ideas of Russian theatre craft in this country. Reinhardt, with his "Sumurun" and his imitators, has prepared the way. The picture-play has been popular here for some time, suffering partial eclipse only during the late visitation of Tenderloin drama. The season just passing out saw two plays of this *genre*, "A Thousand Years Ago" and "Omar the Tentmaker," following in the wake of "Sumurun," "Kismet," "The Garden of Allah," "Joseph and his Brethren," and the less successful Chinese spectacle, "The Daughter of Heaven," by Pierre Loti. That London is not yet tired of the new dramatic form in which the actor's art has been subordinated to spectacle, music, and the dance is indicated by the latest play from the hand of Mr. Knoblauch, author of "Kismet." In "My Lady's Dress" he has written a series of what are virtually nine tableaux laid in pretty nearly every picturesque corner of the globe, thus attaining the fluidity almost of the musical comedy. Nor should the present rage for the dance fail to contribute to the success of a dramatic form which retains such close affiliations with the ballet.

In the field of literature the Russian influence is not so marked—scarcely at all in this country. Yet in England there is growing up a school of young novelists in whom it is impossible not to discern the influence of the Russian realists. It is true that at first sight there is no need to go outside of England for the origins of the contemporary school of realism in fiction. The popularity of Arnold Bennett and H. G. Wells—but particularly the former—should be enough to explain the appearance of a large group of young Englishmen who write with their eyes courageously fixed upon life. But Arnold Bennett's is not the intense, almost hysterical probing into the tragedy of existence for which the very newest men in England are now going in. A first book like J. MacDougall Hay's "Gillespie," recently reviewed in the *Nation*, by its volence, its insistence on nerve-

racking details, its groping into the anarchy of human motive and passion, points strongly to the influence of no less a master than Dostoievsky. So the London papers are now commenting upon a just-published play by D. H. Lawrence, who has to his credit at least one elaborate experiment in realism, the psychological novel, "Sons and Lovers." In his play, "The Widowing of Mrs. Holroyd," just published in this country by Mitchell Kennerley, the influence of Dostoievsky is easily discernible in the choice of a painful subject, the eschewing of the formally "dramatic" exposition, the drab atmosphere, the emphasis on the ruthless details of the under side of life, and the tragic catastrophe relieved by a flash of that idealism of which the Russians have never lost sight in the ugliest depths of life.

It may be too much to say that this new literature is being produced under the sole inspiration of the Russians. The contemporary English novel of tragedy—if we must look beyond Bennett and Phillpotts—need not go further away than Thomas Hardy for its source. Only, youth has a way of going abroad for discoveries that it might make by delving into its own family history. The foreign commodity attracts where the domestic article is passed over as a matter of course. Dostoievsky is a novelty to the new generation. But in addition, Thomas Hardy cannot offer meat strong enough for the present-day palate. The native tradition—the Hardy tradition—is sufficiently apparent in the first stages of the present realistic advance. The author of "The Widowing of Mrs. Holroyd," like the late Stanley Houghton, author of "Hindle Wakes," like the author of the drab London play, "Chains," like the author of the Welsh play, "Change," began with the realism of gray tints and flat voices, with monotonous domestic interiors and unpretentious tragedy. But the advance has been rapid towards the combination of cold settings with hot passions, with tortuous soul analysis and harrowing detail. The problem of Mr. W. B. Maxwell's "The Devil's Garden" is one the Russians would recognize for something of their own. Not that the parallel with the author of "Crime and Punishment" can be pressed too far, but the resemblance is too close to be altogether accidental.

Foreign Correspondence

ALCOHOL IN EUROPEAN COLONIES OF AFRICA—THE INTERNATIONAL CONFERENCE—RUSSIA'S EFFORTS TOWARDS SOBRIETY.

PARIS, May 16.

At the Musée Social, of Paris, the International Anti-Alcohol Conference has closed its sessions. From the preceding conference of Brussels, some good results have been obtained, and there is every reason to hope for similar results again, since the work of the conference has been directly practical. Now that the United States is a country with colonies and protectorates, this should be of interest to us. For the chief issue is, "Shall civilization and alcohol spread together?"

Authorities of the French colonies took part in the conference, and Germany was represented. There was a good deal of plain speaking, which was well received. The main difficulty will be solved only when, from neighboring colonies of different countries, dealers can no longer run their alcohol across frontiers for a get-rich-quick sale to natives.

Progress is being made, although local governments are hampered both by foreign antagonism and by political influence on the part of liquor-sellers in their own central governments. England's policy towards opium in China and alcohol among inferior races has not set a good example in the past. French and Germans and Belgians have all been at fault in the beginning of their colonies, by allowing too great liberty of trade, and by holding to the public revenue which flows from it. So this combined anti-alcohol movement of the African colonies of these nations is all the more encouraging.

In the past year, among French colonies, Dahomey has been subjected to absolute prohibition of alcohol-selling; and three-fourths of the Ivory Coast are under like restrictions. There is a special prohibition of absinthe in Upper Senegal and Niger, as well as in Dahomey and in the Ivory Coast.

The new decree which Gen. Lyautey, as French Resident, has obtained from the Sultan of Morocco continues the same work. The Grand Vizier had already forbidden Mussulmans, in accordance with their religion, to keep or frequent liquor shops of any kind. The native Municipal Council of Fez had asked and obtained the prohibition of all liquor-selling in that capital, outside the closed Jewish quarter of the Mellah—"since alcohol is the principal cause of the physical and moral degeneracy of men, and brings with it scandal, strife, and murder." This was not enough to cope with the evil, for European traders were sending into every port of the country quantities of alcoholic drinks, particularly of absinthe, already bottled, which were carried by caravans into the most remote parts. Just as was the case with the American Indian, the first contact with alcohol has become a danger to the Moorish race.

Gen. Lyautey has once more shown himself the man of the situation. The importation, manufacture, circulation, and sale of absinthe are prohibited throughout the French protectorate. Other measures are being taken elsewhere. In the French colonies of Western Africa—Senegal, Upper Senegal and Niger, Mauretania, French Guinea, Ivory Coast, and Dahomey—and in French Equatorial Africa, the duty on alcohol is to be increased to $60 a hectolitre, that is, on every 26 American gallons.

The Governor-General of Equatorial Africa, M. Merlin, assured the Conference that any seeming loss of time in concerting such measures is not due to disagreement among the authorities. The general principle has been adopted for all the colonies. Its application is to be followed out according to varying circumstances, but steadily, as a condition essential to the well-being of the colonies.

The French Colonial Administration employs three kinds of means: customs and excise duties, limitation and regulation of the sale and circulation of alcohol products, and zones of prohibition where possible. Universal prohibition under present organization, and with the present number of officials available, is impracticable; and the authorities are unable to prevent entirely smuggling and clandestine distilling, or "moonshining."

In neighboring colonies of different European Powers there already exists an agreement among the English Gold Coast, German Togo Land, and French Dahomey. Dr. Zacher, director of the Imperial Statistical Service of Germany, called the attention of the Conference to this point. These partial understandings among Powers having neighboring colonies have great advantages, when added to the more general international conventions, and good results may be expected from them. It was the evident feeling of the conference that the entire future of European colonization depends on this struggle against alcohol.

Russia is not a European colony, but it is Europe still struggling towards civilization. There alcohol has been made a state monopoly—an instrument for good or evil, according to its management. The Imperial rescript to the new Finance Minister seems to show that the state has been too anxious to get revenue from its monopoly of alcohol. The Minister is pressed to find other sources of income for Government. He answers that temperance will be of slow growth, no matter what the state may do; and that, when temperance has diminished the present revenue from alcohol—why, then the state will have to catch up its revenue from a monopoly of tobacco and matches.

Meanwhile, he has instructed the excise officials in accordance with the Czar's wishes, which amount to a moral prohibition of vodka. They are first to do their best against clandestine sales of liquor. Next, communities are to be encouraged to ask for the closing of a part or all the state liquor shops of their territory. Thirdly, a law is to give official quality and countenance to the temperance societies which have done so much good work in the past twenty years. It is acknowledged that no thor-

ough reform can be made until legislation secures three things: a reduction in the number of liquor shops; a reduction in the selling hours; and an increase in the price of the liquors sold.

The Duma is in earnest in its support of what the Emperor has declared to be his dearest wishes. The fear is that the Imperial Council, which can block or soften the force of the laws, may look at the question from the point of view of revenue for the state rather than of protection for the citizens who make the state. S. D.

COMPROMISE ON HOME RULE—THE UNIONIST LEADERSHIP—THE BUDGET.

LONDON, May 8.

The most probable forecast of developments in the political situation is that the Home Rule bill, unaltered, will shortly pass through all its stages in the House of Commons; that it will be rejected by the Lords; that it will then become law by means of the Parliament act, and that thereupon an amending act will be carried which will grant the Ulster dissentients, as a reward for their display of force, what they would never have gained through constitutional agitation. Thus each party will have "saved its face." The Liberals will have prevented the Parliament act from becoming a dead-letter. The Conservatives will have saved "loyal Ulster" from coming under the control of a Parliament at Dublin.

A compromise of this kind, presumably, will deserve to be hailed as an achievement of consummate statesmanship. But there are likely to be a few awkward moments during the process. Ardent Liberals will want to know whether a victory that is gained through surrender is worth calling a victory at all. And zealous Tories will complain because their leaders have asked so little from a Government that is obviously willing to make concessions under pressure. There is at least a possibility that at some stage of the process the scheme of a peaceful settlement may be wrecked by a revolt of one of these sections. The Radicals and Nationalists may decide that neither the Home Rule bill nor the Government is worth saving at such a price. Or the extremists on the Unionist side may so increase their demands that a sense of ordinary self-respect will compel the Ministry to break off negotiations.

There have been significant reminders lately that Bonar Law is not the leader of the Unionist party. Mr. Balfour's retirement in November, 1911, was from the leadership of the party as a whole, as well as from its leadership in the House of Commons in particular. Mr. Law's election was to the latter post only. It was understood that the Marquis of Lansdowne, the leader of the party in the Lords, would presumably be called to the Premiership by the King in the event of a Unionist success at a general election. But the representative House, especially since the passing of the Parliament act, is so much more important a factor in the government of the country than the Lords that Mr. Law has come to be thought of by many as at the head of the Unionists as a body.

A corrective to this mistaken idea was supplied by Lord Curzon, when he recently expressed the hope that Lord Lansdowne would live to fill the highest office in the gift of the Crown. He certainly did not mean that Lord Lansdowne, now in his seventieth year, would succeed to the Premiership when Mr. Law, who is to-day only fifty-six, had completed his political career. The day after Lord Curzon's speech, the *Times*, in an editorial article, spoke definitely of Lord Lansdowne as "the leader of the Unionist party." These references become more significant still in view of a statement of Mr. Law's in the House of Commons debate on the vote of censure. "If for any reason," he said, "the right honorable gentleman [Mr. Asquith] prefers to have negotiations either with Lord Lansdowne or with my right honorable friend [Sir E. Carson], whom he met before, no feeling of wounded *amour propre* will stand in the way, but I shall gladly welcome such a step."

If Sir Edward Carson takes Mr. Law's place in "conversations" on the Irish question, and these "conversations" result in a settlement between the parties, the logic of events will compel Sir Edward to undertake in permanence the leadership to which he has thus been promoted for the occasion.

The budget comes conveniently for both parties to divert attention to other matters, while the leaders are occupied with their subterranean work on the Irish problem. On the political side, as distinguished from that phase of them that interests the Stock Exchange, the proposals of the Chancellor of the Exchequer mark a new departure as facilitating the social activities of the local authorities. A good deal of recent social legislation has been comparatively ineffective in practice, because the county and borough councils have been hampered by the lack of funds to carry it out. As the *Westminster Gazette* puts it: "If we took all that the Legislature said ought to be done by local authorities, there could scarcely be a better code on paper, but a large part of it was like a motor without petrol in it. The present budget puts the petrol in, and should enable us to set in motion, with the aid of the local authorities, a great deal of machinery which has hitherto stood idle, and to speed up other machinery that has hitherto worked slowly."

Mr. Lloyd George now offers the local authorities from the Imperial Exchequer additional grants for specific purposes—public health, education, etc.—conditional on their activity and efficiency in carrying out the Parliamentary schemes of social progress. As this money will have to be raised mainly by increased taxation of the rich, there will be an inevitable outcry against "spoliation." But the more prosperous classes will be compelled, sooner or later, to accept increased taxation as inevitable—at any rate, as long as the present enormous expenditure on armaments continues; and in any case it will not be easy to arouse a popular revolution against the intolerable outrage of reducing the super-tax limit from incomes of $25,000 a year to those of $15,000. H. W. H.

A Naughty Decade

PART TWO.

IV.

If Mr. Holbrook Jackson, in his study of the "Eighteen Nineties," has passed by the frail and almost incorporeal Muse of Ernest Dowson, he has given abundant illustrations from the artists and writers whose souls were infected with the malady of the flesh. It is not easy for a man to admit that he is simply futile or vile, and when the decadent is not flaunting his corruption wantonly in the face of the world as a sign of superior vigor, you are likely to find him posing as a martyr of the spirit. This, indeed, is the very sign manual of decadence as distinguished from mere sensuality. So we have the aphorism of John Davidson: "Decadence in any art is always the manure and root of a higher manifestation of that art." So we have the illusion taken up in Mr. Jackson's apology: "All the cynicisms and petulances and flippancies of the decadence, the febrile self-assertion, the voluptuousness, the perversity, were, consciously or unconsciously, efforts towards the rehabilitation of spiritual power." And it has been expanded with Celtic fluency by Mr. Yeats:

> I see, indeed, in the arts of every country those faint lights and faint colors and faint outlines and faint energies which many call "the decadence," and which I, because I believe that the arts lie dreaming of things to come, prefer to call the autumn of the body. An Irish poet, whose rhythms are like the cry of a sea-bird in autumn twilight, has told its meaning in the line, "the very sunlight's weary, and it's time to quit the plough." Its importance is great because it comes to us at the moment when we are beginning to be interested in many things which positive science, the interpreter of exterior law, has always denied: communion of mind with mind in thought and without words, foreknowledge in dreams and in visions, and the coming among us of the dead, and of much else. We are, it may be, at a crowning crisis of the world, at the moment when man is about to ascend, with the wealth he has been so long gathering upon his shoulders, the stairway he has been descending from the first days.

That is very pretty and sweet, and no doubt our wings are growing, but it is hard to associate these beautiful hopes of progress with such a movement as that which was represented in the Nineties by the particular band of rebels of whom Mr. Yeats was the leading mind, as he is the most distinguished survivor. The little "Book of the Rhymers' Club," published in 1892, lies before me now, and as I turn its pages I discover nothing very wicked or startling, but of notable promise equally nothing. Are we to expect new life

from young men to whom "the very sunlight's weary"?

Nor did this confusion of weariness and the spirit end here. It may be unkind to say it, but one cannot study the lives of these men without feeling that the conversion of so many of them, including Aubrey Beardsley, to Catholicism was only another manifestation of the same profound illusion of the decadent which speaks in his theories of art. There is an unpleasant savor of truth, though not at all as Mr. Jackson meant it, in his saying of Francis Thompson, that "he took to poverty as he took to opium, as a sedative for the malady of spirit." Religion was not altogether for Thompson an opiate for *malady of spirit*, but with some of his contemporaries the two were as closely associated as their art was dependent on opium and alcohol. Too often conversion meant the same thing as perversion.

V.

This is rather the personal aspect of the decadent paradox, but it wore a social aspect which is more dangerous, as it is more deceptive. This was the dream of creating a gentle communism out of lawless individualism. "It will seem, then," observes Mr. Jackson, "that the two paths of the modern art movement resolved themselves into two very definite and very different aims: the communal and the individual, the public and the private." There is nothing unusual in this, but we enter into the region of paradox when we find that many of the votaries of the modern art saw no incompatibility at all in these different aims. "All really great works of art are public works—monumental, collective, generic—expressing the ideas of a race, a community, a united people; not the ideas of a class," says Mr. Walter Crane, speaking for himself and William Morris and other temperamental socialists. Now, again, in a sense, that is true: art does spring naturally from a convention and a certain higher community of feeling; but it is at least questionable, in the face of the records, to define this convention as contrary to the ideas of class, for hitherto all "great art," as contrasted with popular art, whether in Greece or Italy or France or China or Japan, has been aristocratic in its purpose and support. And, certainly, to suppose, as so many of the artists of the *fin de siècle* did suppose, that there was any bond of sound communism in their search for the last refinements of personality and in their theory of untrammelled expansiveness—certainly, there is in this something almost grotesquely absurd. Here, too, Oscar Wilde is a type and exponent of his fellows. He was not jesting, but rather stating their sober practice, when he boasted that "there is nothing sane about the worship of Beauty," and that "the beautiful sterile emotions that art excites in us, are hateful to its (Society's) eyes": nor was it altogether a piece of idle persiflage when he took as his hero of the artistic temperament that master of "pen, pencil, and poison," Thomas Griffiths Wainewright, who, being reproached for the murder of Helen Abercrombie, merely shrugged his shoulders and said, "Yes, it was a dreadful thing to do, but she had very thick ankles." Were not the story too repulsive for print, I could parallel that seemingly childish effrontery with what I heard told only yesterday here in New York in perfect seriousness. But what shall we think of the sincerity of the author of "Salome" when he begins to indulge in humanitarian dreams, of this citizen of a Utopia for dandies when he undertakes to write solemnly of "The Soul of Man Under Socialism"? As a matter of fact, he was as sincere in this as in any other of his attitudes, and his inability to see anything incongruous in a humanitarian communism of totally undisciplined individualists was only one phase of the extraordinary illusion which held most of his comrades. With his usual, and characteristic, combination of insight and blindness Mr. Jackson gives a vivid hint of what this excess of expansive emotionalism actually means when the people themselves, "drunk with sight of power," "loose wild tongues":

> There was no turning back. The people, bitten by an unseeing pride, expressing itself in a strangely inorganic patriotism, forgot art and letters and social regeneration, and marched headlong into Mafeking Night.

Mr. Jackson sees the connection of this phrensy of inorganic imperialism with the movement of which he is the historian, yet can add, almost on the same page, that "the most strenuous and the most exalted individual emphasis was not necessarily antagonistic to a balanced communal feeling." No, when all is said, it is not true that we must have chaos within us to give birth to a dancing star. The trained physician does not prescribe the dissipation of our bodily energies as a means to obtain health; the wise conductor of souls does not point to deliberate indulgence in vice as the way to the knowledge of virtue; the experienced statesman does not teach license as the road to lawful liberty; and probably Milton was near the truth when he announced that the poet who contemplated the production of a great enduring work should first learn to live greatly in the austere discipline of character.

VI.

The particular movement of Mr. Jackson's eulogy has come to its end, and most of the Rhymers who formed the little revolutionary club have fallen into one or the other silence. They were never a great force in English society, and I trust that the title of this essay will show how seriously I take the naughty decade in itself. But the twin illusion which formed the real creed of the decadents has by no means disappeared with them, as it by no means began with them. It had its source in one of the great guiding movements of the nineteenth century, was caught up in self-justification and noisily bruited about by a band of men who were really and physically diseased, and now it is becoming the common property of innumerable good citizens of England and America who would shudder at its practical application.

It is scarcely necessary to observe that the abundant fountain of the stream is in the Germany of the later decades of the eighteenth century. One of its earliest manifestations was Heinse's tale of "Ardinghello," in which "the evangel of art went hand in hand with naked, unveiled sensuality," and which announced with sufficient frankness that "the decency of our common prosaic life is not permitted in art. Add to this such maxims of Wackenroder's as that "art is a seductive, forbidden fruit, and he who has once tasted its inmost sweetest sap is forever lost for the practical living world," and that "the fairest stream of life springs from the coming together of the streams of art and religion"; illustrate them with the identification in Novalis of beauty and sickliness, and crown them with Schleiermacher's glorification in the pulpit of the man who, "in the caprice of liberty, makes his personal view of the universe the centre of all religion"—combine these variously with a thousand other similar sentiments, develop them into a vast literature of prose and verse, and you will know whence the Continental artists of the nineteenth century learnt their creed of uncontrolled personal expansion, with the illusions that follow in its wake. Nor has the source dried up. One of our distinguished German professors has just lent his name to the propagandist publication in English of the morbid obscenities of Friedrich Schlegel's "Lucinde," and another well-known teacher of German has made himself the public defender of a group of unwholesome moderns who still believe that "decency is not permitted to art."

But the main literary source of this perversion to-day is undoubtedly in the group of powerful Russian writers, with their congeners in Scandinavia and the other northern countries, whose works for some time past have been flooding the world in French and English translations. How deeply this literature is tainted could be shown by innumerable examples; one must suffice. If there is any book thoroughly typical of the Russian and Scandinavian ideal it is "Crime and Punishment," and if there

is a single passage in which the moral of that book is typified it is the scene selected by its latest editor in English, Mr. Laurence Irving, as the epitome of "the animating spirit of Dostoievsky":

His eyes gleamed, his lips trembled, and, resting his two hands on her shoulders, he cast an angry look on this face bathed in tears. In a moment, he bent downwards, kissing the girl's feet. She started back frightened, as she would have done from a madman. For Rashkolnikoff's face at this moment was that of one.

"What are you doing? And to me?" stammered Sonia, growing pale with sorrow-smitten heart.

Upon this he rose. "I did not bow down to you, personally, but to suffering humanity in your person."

Not long since, at a dinner with a philosopher and two professors of French and English literature, respectively, I observed casually that my summer had been darkened by dwelling in the nightmare of "Crime and Punishment" and other books of its class. At this my friends, better read in this literature than I, no doubt, admitted the nightmare, but clamorously rebuked me for not feeling uplifted by its spiritual implications. There it is. Somehow we are to be lifted up by sympathizing with a madman worshipping humanity in the person of a girl of the street. Filth, disease, morbid dreams, bestiality, insanity, sodden crime, these are the natural pathway to the emancipation of the spirit; these in some mysterious way are spirituality. And the same lesson runs through Tolstoy and Strindberg and a dozen other moralists who are, as it were, the Prophets of our young. In subdued form, befitting what remains of the reticence of the English temperament, it lurks among the present-day inheritors in London of the Yellow Nineties. It will be found hidden in some of the writings of Mr. Galsworthy, who is perhaps at this moment the most notable of the group—scarcely concealed at all in his latest novel, "The Dark Flower," with its sickly analysis of illicit emotion, its satirical desiccation of the intellectual life, its presentation of virtue as a kind of impotence, its constant insinuation that the only escape of the spirit from stolid defeat is through "the passionate obsessions that cannot decently be satisfied." One is reminded of the old scornful saying of Swift: "The corruption of the senses is the generation of the spirit."

What else is the meaning of the recent outburst of filth on the stage under the pretext of "social uplift"? Would any sane man, in the name of virtue, defend the representation before young men and maidens of the inner nastiness of the stews (made nastier by the dramatist's imagination), or the exhibition of the revolting details of physical corruption, if his understanding had not been obscured by the insidious theory that associates art and spirituality with license and disease? Alas, it is still true that the human heart is deceitful above all things. Some time ago a friend of mine was present at the Boston opera when a certain morbid piece was sung. He was amused, and, being somewhat old-fashioned, was a little shocked, at seeing the dowagers of the town, in their conspicuous circle, clapping their hands at the exhibition of a theme of perverted sexuality. The next day he was less amused, and more shocked, to read the names of the same dowagers among those who had met together to hear the horrors of "white slavery" discussed and to concert means for its repression.

Even more pervasive is the illusion that through the very license of personality men are to be brought into the bond of social communism, and the kinship of this illusion with the other and their source are clearly implied in the typical scene from Dostoievsky already quoted. Or, if a stronger illustration of this theme in Russian is desired, it may be found in a tale of Leonid Andreyeff's which was the occasion of comment some ten or twelve years ago. In decency—shall I say, unfortunately?—I can do no more than hint at the narration. We are to suppose, then, that a proper young man is walking through a lonely country with his betrothed. They are attacked by a party of tramps, and the girl is killed. After the departure of the tramps the young man, by yielding to a like bestial instinct, comes to realize that he is essentially of the same stuff as the outcasts of society, and that in the lowest depths of the heart is the common meeting-place of humanity. It used to be held that the peculiar bond and unity of mankind was to be sought in the higher plane of reason, with its law of self-restraint, whereas by the passions we were united with the unreasoning beasts; it has remained for certain doctors of modern literature to teach us otherwise.

There may seem to be a great gulf between such a writer as Andreyeff and the socialistic wits now entertaining London. There is, indeed, a gulf—and yet! Strip off the rags of decorum which Bernard Shaw, despite his protests, still wears as an Englishman; look at the real meaning of the thing, and you will find that the moral of "Fanny's First Play," for example, which our kindly good folk enjoy so innocently, is not very different from that of the more barbarously logical Russians. What else does Bernard Shaw's laughter mean, when he represents a girl of modest upbringing as awakened to the hypocrisy of convention and the solidarity of mankind by getting arrested at night in the streets of London for disorderly conduct? It is the comedian's way of saying that spirituality is the product of vice, and that the uniting bond of society is the revolt against restraint. Mr. Shaw is a delightful humorist. Some one should suggest to him, as a subject amazingly suited to his genius, the state of life in a communistic society made up of such effrontories of egotism as himself. Perhaps I am myself eccentric in this, but, after all, I can read with less insult to my reason the rather childishly flaunted paradoxes of the naughty decade, and am inclined to think their perversion less insidiously dangerous, than the smug prurience of Mr. Galsworthy and Mr. Shaw and the other bourgeois wits who are to-day taken with a certain seriousness as critics of our social conventions.

These men, and this is the whole charge against decadence whether old or new, forget that art, so long as it is human, must concern itself with the portrayal of character—triumphant or defeated, still character—just as surely as morality is concerned with the creation of character. The truth of it is summed up in a sentence of a great divine who was preaching when Milton was writing his poems: "For we all say, that which doth not proceed from the judgment of the mind, and the choice of the will, is not an *human act*, though the act of a man." P. E. M.

Books and Men

AN UNWRITTEN BOOK.

An entertaining book is notably missing from the spring publications. It is always missing, though never a publisher seems to be aware of the fact, and no writer tries to supply the need. This book, so desirable and yet so shy about making its appearance, is a volume of essays on various outdoor amusements, treated strictly from the point of view of the amateur.

You will object, immediately, that there are many such books, and many such essays. Your objection is noted—and disallowed. There is none to be had anywhere. The difficulty comes over the definition of the word "amateur." The original meaning of "lover" has, practically, been lost for ages, and its secondary meaning of "non-professional" has been allowed to usurp too much importance. Except in wrangles between colleges the distinction between the amateur and the professional is of little interest to any one. The really important significance of the word lies in its connotation of lack of skill in this or that game or sport. And it is seldom so used—sincerely.

Therein lies the trouble. There is no end of books on angling, on golf, on tennis, all purporting to be by "An Amateur." It is the sheerest affectation. You

cannot read one of them for half an hour without discovering that this self-styled amateur, this gentleman of violet-like modesty (on his title-page) is a wizard at his special game. Only the fact that he does not take money for it distinguishes him from the out-and-out professional. And what do you care about that when you are reading his book? Indeed, there would be less exasperation in a book by a professional. You do not object if *he* outdistances you hopelessly. But this person who shrinkingly calls himself an amateur, and then proves, inside twenty-five pages, to have performed the most astonishing feats—he plunges you into a fit of depression from which you may well be hours in emerging.

No; our book of athletic essays must be by undoubted amateurs. More than that, they must belong to the duffer class. Here again is a relative term—let it be understood, if the subject is golf, that they shall be duffers not only in the presence of the lords of the game, but duffers anywhere, duffers amongst the humblest. In tennis, it is better that they should never get beyond the second, or perhaps the third, round of a tournament. The yachtsman whose point of view is most to be desired is the one who tends the sheet, perhaps—never the one who comes to the wheel in a pinch. And so on through the sports.

From these men, it is my contention, we should get new and refreshing work. They know the full joy of the game—and the full sorrow—and no more. Nothing of the mathematics of sport has corroded their souls—they do not bicker, overmuch, whether they took six or seven strokes at the fifth hole, but are content to cover the tragedy with a decent silence.

Not that they are without a respectable desire to win, if the sport is one involving contest. We want nothing mawkish in the book. Of course, they hope to beat their opponents. But this desire must be nicely measured; winning is an important ingredient in their pleasure, but not the whole of it. The contest is something, the surroundings are much. The man to whom it is of no importance whether the tennis court is in the midst of green meadows or between brick walls in a city, and the man who leaps upon the court with an iron face and wields his racquet like an axe, will not be asked to contribute.

Tennis, golf, angling, and yachting—these have already been named as subjects for the essays. To them should be added riding, motoring, with possibly an historical note on bicycling, mountain-climbing, plain walking, camping—with an excursus on camp cookery, canoeing, and swimming, the most delicious of all.

One section might be devoted to croquet, provided that special stress was laid on the peculiarly disagreeable dispositions of all persons who are expert in that game.

This should be a soothing book, a book for summer days, one to be carried, by the way, in a canoe, and read on quiet streams. It should suggest the click of golf-balls, the smell of spring and autumn fires, and lengthening shadows upon the court. There should be a little of the heat of contest in it, but almost none of the wrath. The swimming should not be a five-mile race at top speed, but rather it should deal with floating lazily upon one's back, hung between earth and sky, watching the clouds, surely the position in which man shakes off more of the bodily limitations—but the swimming is to be described by some one else.

EDMUND LESTER PEARSON.

News for Bibliophiles

"THE QUERIST."

Bishop Berkeley's "The Querist, containing Several Queries, proposed to the Consideration of the Public," appeared originally in 1735 as an anonymous tract. By a typographical slip the title page was dated "MDCCXXV," and Joseph Massie, careful bibliographer that he was, actually included the work in the issues of that year in his "Catalogue of Commercial Tracts." A continuation, designated as "Part II," was issued in 1736, and a further installment, "Part III," in 1737. All three parts were published in Dublin, being "printed by R. Reilly, on Cork-Hill,"—Parts I and II for "G. Risk, G. Ewing, and W. Smith, Booksellers in Dames-Street"; Part III for "Jos. Leathley, Bookseller, in Dames-Street." The brochures seem to have been issued in small editions and soon became scarce. In 1746 Dean Gervais could not procure a copy for the Lord Lieutenant of Ireland, and the want could only be supplied by Berkeley's direct intervention. In 1750 Berkeley edited a second edition with "some few queries added, and many omitted," and this redaction was reprinted by Foulis in 1751. In this form it was again included by Berkeley in the "Miscellany" of his own writings in 1752, and these editions served as the basis of subsequent reprints.

As to the original edition of 1735-37, even Professor Fraser—Berkeley's scholarly biographer and editor—was unable to come upon a copy until the virtual completion of his labor, when the discovery of a copy in the library of the Royal Irish Academy permitted a *variorum* reference thereto in the Appendix to his edition (1871) of Berkeley's works; this was made more ample in the revised edition published in 1901. An exact reprint of the "Querist," as originally published, was included in Mr. George Sampson's excellent three-volume edition of Berkeley's writings, published in 1897-98. More recently the work has been made available in "The Reprint of Economic Tracts," issued by the Johns Hopkins Press.

It has always been a matter of surprise to students of English economic thought that, despite its early rarity, the "Querist" should have been well known and should have exerted considerable influence, apparently in its original form. This perplexity is somewhat reduced by the fact, heretofore unnoticed, that Parts I and II of the "Querist" were reprinted in London in 1736 by J. Roberts in Warwick-Lane—well known as a publisher of economic and commercial pamphlets. It is possible that Part III was likewise reprinted after its issue in Dublin in 1737; but I have no evidence as to this. The title page of Part I sets forth that the work is "Now first Re-printed from the Irish Edition, lately publish'd in Dublin. With an ADVERTISEMENT to the READER, on Occasion of Re-publishing it." The title page of Part II adds to the publishers' imprint, "Where may be had Part I." The vignettes are omitted from both title pages, and a few significant changes are made in the text. In Query 144 (Part I) the word "good" is inserted before "Land"; in Query 304 (Part I) the phrase "when bound out in Apprentisship to Protestant Masters" is omitted; in Query 117 (Part II) the word "Overseers" after "Stock-jobbers" is omitted. The errata noted in the Dublin text are corrected and minor typographical variations occur.

The "Advertisement on Occasion of Republishing the Querist" prefixed to Part I is unsigned, and I have come upon no clue as to possible authorship. It is of sufficient interest to justify citation in full:

It hath been a common Practice to reprint from Ireland, those several little Pieces of Wit and Entertainment, which of late Years are so frequently publish'd there. It must be confess'd, That many of those Pieces abound with Spirit and Humour; but, at the same Time, they often contain the most poignant Satire; which tho' it gives Delight to many Readers, yet, as it exasperates the Minds of Persons affected thereby, does not always manifest either the Policy or good Nature of the Authors; as this way of treating the Subject is more likely to frustrate than promote the good Ends for which perhaps the Piece was principally written. It would be therefore surely more to the Purpose of those who mean a practicable Good to both Nations, to endeavour to reconcile rather than provoke, and by removing Jealousies on both Sides, try to conciliate the Interests of the British and Irish Nations: Which must needs have a better Effect, than to offer Schemes, which only tend to promote the Interests of the One at the Expence of the Other: The Consequence of which is, That the wished-for Benefit becomes impracticable to Both.

But the little Piece we now present to the Public from that Kingdom, carries with it a quite contrary View; It contains a Multitude of useful Hints, delivered in the concisest and most intelligible manner, by way of Query, which may be improved to the Prosperity and Happiness of the one Kingdom, without affecting its Dependance upon, or in any manner hurting the Interests of, the other; and that by such Means and Methods as are intirely in its own Power, and want nothing but Industry and Application to effectuate: For 'tis one of our Author's Queries, and the Sentiment by which he seems to be govern'd through-

out the Whole, "Whether the hankering after the Woollen Trade by the People of Ireland, be not the true and only Reason, which hath created a Jealousy in England towards Ireland? And whether any Thing can hurt the Irish more, than such a Jealousy?"

This has induced the Republishers of this Piece (who are less sollicitous to amuse than to edify, and who have the Happiness of both Nations in view, in Cases where they cannot interfere with one another's Interests, but, like Children of the same Father, may be made to promote the general Good of the united Family), to present the same to the Public, as intirely worthy of its Consideration, and as affording useful Hints, as well to the Governors as Governed of both Nations, and pointing out Methods to be pursued by the Irish,* that instead of creating Jealousies in the English, will mutually endear each to the other, and knit both together by the firmest Ties of Interest, which alone can create and cultivate that good Understanding so necessary to the Welfare of both.

JACOB H. HOLLANDER.

Johns Hopkins University.

A NEW POEM OF SAPPHO.

Dr. B. P. Grenfell and Mr. A. S. Hunt, directors of the Egypt Exploration Fund, have, it is said, discovered a new poem by Sappho at Oxyrhynchus, in Egypt. An account of the find, together with the text of the poem and a translation by Mr. J. M. Edmonds, is given in the London *Times* and the *Classical Review*. As the brackets in the text, which we reprint, will indicate, the papyrus has been damaged and is defective. In some places the context has made restoration easy; in others the words and letters supplied are entirely conjectural.

Ο]ἱ μὲν ἰππήων στρότον, οἱ δὲ πέσδων
οἱ δὲ νάων φαῖσ' ἐπὶ γᾶν μέλαιναν
ἔ]μμεναι κάλλιστον· ἔγω δὲ κῆν' ὄττω τις ἔραται.

πά]γχυ δ' εὔμαρες σύνετον πόησαι
πά]ντι τ[οῦ]τ'· ἀ γὰρ πόλυ περσκόπεισα
κα]λλος ἀνθρώπων Ἐλένα τὸν ἄνδρα
κρίννεν ἄρ]ιστον

ὃς τὸ πὰν] σέβας Τροΐα[ς ὄ]λεσ[ε,
κωὐδὲ πα]ίδος οὐδὲ [φίλ]ων το[κ]ήων
μᾶλλον] ἐμνάσθη, ἀ[λλὰ] παρᾱγαγ' αὔταν
πῆλε φίλει]σαν

Ὤρος· εὔκ]αμπτον γὰρ [ἀεὶ τὸ θῆλυ
αἴ κέ] τις κούφως τ[ὸ πάρον ν]οήσῃ·
οὐ]δὲ νῦν, Ἀνακτορί[α, τ]ὺ μέμνα
ὐῆ] παρεοίσας,

τᾶ]ς κε βολλοίμαν ἔρατόν τε βᾶμα
κ]ἀμαρυγμα λάμπρον ἴδην προσώπω
ἢ τὰ Λύδων ἄρματα κἀν ὄπλοισι
πεσδομ]άχεντας·

εὖ μὲν ἴδ]μεν οὐ δύνατον γένεσθαι
λῴστ' ἐ]ν ἀνθρώποις· πεδέχην δ' ἄρασθαι
[τῶν πέδειχόν ἐστι βρότοισι λῷον]
[ἢ λελάθεσθαι.]

Mr. Edmonds's translation follows:

The fairest thing in all the world some say is a host of horsemen, and some a host of foot, and some again a navy of ships, but to me 'tis the heart's beloved. And 'tis easy to make this understood by any. When Helen surveyed much mortal beauty she chose for best the destroyer of all the honour of Troy, and thought not so much either of child or parent dear, but was led astray by Love to bestow her heart afar; for woman is ever easy to be bent when she thinks lightly of what is near and dear. Even so you to-day, my Anactoria, remember not, it seems, when she is with you, one of whom I would rather the sweet sound of her footfall and the sight of the brightness of her beaming face than all the chariots and armoured footmen of Lydia. I know that in this world man cannot have the best; yet to pray for a share in what was once shared is better than to forget it. . . .

"The manuscript in which the poem appears has the tantalizing subscription, 'The First Book of the Lyrics of Sappho, 1,332 Lines,' on the last of the fifty-six fragments from which barely a dozen stanzas, besides those quoted above, can be restored."

Other discoveries made by the same expedition include fragments of Alcæus and the remains of an extra-canonical gospel.

*See particularly *Qu.* 69, 70, 71, 72, 75, 76, 79, 81, 83, 87, 88, 89, 121, 140, 144, 179, 195, &c.

Correspondence

THE TOLLS.

TO THE EDITOR OF THE NATION:

SIR: In your issue of May 7, in a note commenting upon the letter of "New Englander," you state that the Panama Canal Act does not forbid vessels owned by railways to use the canal if the ships compete in rates with the roads. You add that all the railways have filed statements with the Commission testifying that their ships do compete, and you conclude that the ships may consequently pass through the canal like any others.

I am at a loss to reconcile this statement with the wording of the act, and would greatly appreciate a further explanation. The act reads as follows:

"From and after the first day of July, nineteen hundred fourteen, it shall be unlawful for any railway company . . . to own, lease, operate, control, or have any interest whatsoever . . . in any common carrier by water operated through the Panama Canal or elsewhere with which said railroad or other carrier aforesaid does or may compete for traffic, or any vessel carrying freight or passengers upon said water route or elsewhere with which said railroad or other carrier aforesaid does or may compete for traffic."

The Commission is given power to extend the time of ownership of water routes by railways where such ownership proves to be of advantage to the public, but such specified service by water must be "other than through the Panama Canal." FRANK HAIGH DIXON.

Hanover, N. H., May 11.

[The language of the Panama Act is not as clear as could be desired. We incline, however, to accept the opinion of Representative Stevens to the effect that, under the Act, "no railroad-owned ship can pass through the Canal, tolls or no tolls, unless the ownership is a legitimate and proper one within the meaning of the law."—ED. THE NATION.]

WILLIAM THORNTON AND JOHN FITCH.

TO THE EDITOR OF THE NATION:

SIR: Allow me to add a few facts to the letter of Herbert Joseph Fitch in the *Nation* for December 25, 1913, and that of Martha Rumsey Simonds in your issue of April 30 last, and to bring into the circle of pioneers in steamboat invention a more remarkable man than either John Fitch or James Rumsey.

William Thornton was the first Superintendent of Patents, holding the office from 1802 until his death in 1828. He was educated to be a physician at the University of Edinburgh. He invented a system of lip-reading for deaf mutes, and of simplified spelling. He was a leader in the movement for emancipation of American negroes and their civilization in Africa twenty-five years before the American Colonization Society was formed. He designed the Capitol, and several other examples of his unique talent as an architect survive, notably the Octagon House, which is now one of the show places in Washington. The object of this communication, however, is not to speak of his versatility nor of the boldness of his intellect, but of his connection with John Fitch's steamboat and the part he had in making it go. I am able to do so because his papers are in the Library of Congress, having been given to that institution by the late J. Henley Smith, who inherited them from his grandmother, Mrs. Samuel Harrison Smith, to whom Thornton's widow had given them. Thornton himself had been the custodian of Fitch's papers, and deposited them with the Government before his death, and they, too, are in the National Library, with the exception of Fitch's autobiography, which Fitch gave to the Philadelphia Library.

Thornton was born in the Island of Tortola, one of the Virgin Isles in the Caribbean Sea, but he early determined to live in America; and when he was a young man, in 1787, went to Philadelphia in search of a wife. There he met John Fitch, who had already built a steamboat and was soliciting financial aid for his invention. Thornton was then a man of property, and his bent was towards great enterprises. He had himself invented a steam cannon, of which a reasonably successful demonstration had been given, and he was not ignorant of steam power. He regarded Fitch's experiments with enthusiasm, and gave him money, advice, and mechanical assistance. Fitch was the very opposite of Thornton. He had little education and no power of sustained industry. He never worked continuously at his trade of watchmaker and silversmith. He was always in debt, and did not support his wife and family, nor even himself, all the time. He liked to carouse at taverns, and he became a drunkard. He was an atheist who scoffed at death, and was not ashamed of his ill-spent life. He was a man marked for

failure, and he never really deserved success.

Thornton came into Fitch's steamboat company in the summer of 1788, and when a list of subscribers was drawn up in January, 1789, he and Richard Stockton were put down as the two largest stockholders. From this time on he not only paid a considerable amount of money into the company, but frequently assisted Fitch personally with loans, varying in amount from a few shillings to ten pounds. The notes of hand which the inventor gave him are among Thornton's papers, and now have some value as autographs. When he received them they had no value. Fitch had never seen a steam engine, and the first boat which he built failed at the most vital point. It crept through the water at the rate of three miles an hour, and the engine worked very irregularly, sometimes going so furiously that the boiler was in danger of bursting, and sometimes hardly going at all. Thornton proposed that each shareholder in the Fitch Company should agree to relinquish one-half of his shares to any one who should construct an engine that would send the boat through the water at the rate of eight miles an hour. This being agreed to, he himself made the engine, which showed many improvements over Fitch's, the most notable being a boiler that was entirely surrounded by fire.

Early in the summer of 1790 a group of people gathered on Front or Water Street, in Philadelphia, to see the new steamboat tried, and a committee held watches in their hands to test its speed. A mile was flagged off on the river, and the boat swept over it at the rate of eight miles an hour. The boat sustained the speed, and in one day went eighty miles. This was the first successful steamboat, the invention of John Fitch made successful by William Thornton.

The Fitch Company determined to build a new and better boat; and when it was under way Thornton answered the call of his old mother on the plantation in Tortola, and went thither with his bride, Anna Maria Brodeau, the daughter of a widow who had been a successful school teacher in Philadelphia. All the time that he was in the West Indies he never ceased thinking of the boat that was building on the banks of the Delaware. He asked his mother-in-law to see Fitch and find out what was being done. She answered that Fitch reported unfavorably and wanted more money. "I find," she said, "that you are the vivifying spark that gives life and animation to the steamboat." Thornton sent money and encouragement to Fitch. The work went on, and in the autumn of 1791 the new boat was tested. The new engine spluttered and smoked, but it had not power to turn the paddles. The very thing which Thornton had cautioned against had been done; the engine had been simplified and the boat lay motionless in the stream. Mrs. Brodeau informed Thornton of the failure October 9, 1791, one year after he had left Philadelphia. He felt certain that the boat would have been a success if he had been in Philadelphia to superintend the building.

There was apathy in America towards the enterprise, so Fitch went to France. On February 12, 1793, ten days before he sailed, he executed a power of attorney in Thornton's favor giving him authority to sue all persons who might infringe on his inventions, and he wrote to Thornton: "I have never seen a man that I can place the same confidence in as I can in yourself," and added, "although you, sir, are a passionate man and frequently give your opinion before you consider the subject you are to determine." He gave Thornton a partial list of his debts and a few days later borrowed some more money from him. On February 21, on the eve of embarking, he wrote to him again about his disordered affairs. He said that if he never returned Thornton must be his executor. He corresponded with Thornton while he was abroad, always about the steamboat. He returned to America, landing in Boston June 6, 1794, absolutely penniless, and the next day wrote to Thornton telling him of his sufferings and asking him to buy a half-interest in the Columbian Ready Reckoner, a system of sea reckoning which he had invented and had dedicated to Thornton. He required money to pay for his homeward passage. Again on June 30 he appealed to Thornton in extreme distress.

With the return to America Fitch's career as a steamboat inventor really ended. He made some further experiments, but they amounted to little. After lingering in the East with some relations for three years he went to Bardstown, Ky., where he had acquired lands. There a tavern keeper agreed to keep him in lodging, food, and drink as long as he lived in return for a bond for a portion of his land. On February 1, 1798, he wrote to Thornton that he had made his will, leaving him a thirteenth part of his land, and the remainder of his property in equal shares with four others. His greatest obligation, he said, was to Thornton and Aaron Vail, the American Consul at L'Orient, also a member of the Fitch Company, who had befriended him in France. He begged for one more letter from Thornton. "I am going fast to mother clay," he said; but alcohol did not carry him fast enough, and four months later, at the end of June, 1798, he killed himself by an overdose of the medicine which his doctor had left for him. On June 25, a few days before his death, he made another will, in which, after leaving his beaver hat, buckles, and walking-stick to one of his friends, he placed first in the list of his other beneficiaries the name of William Thornton, to whom with three others he bequeathed his entire estate, share and share alike.

There was little that was tangible for them to inherit, but Thornton took over as his own the steamboat. No one had been as closely associated with Fitch in its invention as he, and no one was so competent as he to carry it forward now that Fitch was dead. Many years afterwards Thornton stated the fact—"that John Fitch, who was a poor, ignorant, but worthy and ingenious man, was the true inventor of the steamboat, and that I had a principal hand in perfecting it."

The connection of Thornton with subsequent events in steam navigation is too long a story for this communication. His negotiations with Fulton, when Fulton built a boat on Fitch's and his model, as he declared; Fulton's offer to him of partnership; Thornton's subsequent exclusion from any participation in steamboat building; his accusations against Fulton; their furious quarrel, and Fulton's death when Thornton's rage against him was at white heat—are another chapter in the history of the invention of the steamboat which was a tragedy in the life of Thornton as it had been in that of John Fitch. As late as 1819 he wrote to the Abbé Correa da Serra, the Portuguese Envoy at Washington, applying for a patent for steamboats in Brazil. "I am the person," he said, "who thirty years ago made a boat go at the rate of eight miles an hour," and up to the time of his death in January 28, 1828, he was still clamoring for recognition as the man who had made John Fitch's boat a success.

GAILLARD HUNT.

Washington, May 5.

NATIONAL PREJUDICES.

TO THE EDITOR OF THE NATION:

SIR: When one reads the fiery speeches that have recently been delivered in Congress and the fierce diatribes that appear from time to time in some of our periodicals on the free tolls controversy, one can hardly help recognizing in such phrases as "truckling to England," "surrendering our good right to Great Britain," and more of the same sort, expressions that are familiar to readers of the history of the United States.

When President Washington interfered with the pernicious activities of Citizen Genet he was as bitterly denounced as his successor is now. When the Oregon boundary dispute was a live issue, a great many American patriots were ready to take up arms against Great Britain to the cry "Fifty-four Forty or Fight," albeit at that time such a cry represented the acme of folly. When the news of the Trent affair was telegraphed over the country, there was another clamor for a war with England in which a good many men joined who were opposed to coercing the South. The clamor was just as senseless as it had been fifteen years before. Not many years ago this country was reported to have been actually invaded by Great Britain. Although the invasion was a peaceful one conducted by the Cobden Club for the purpose of breaking down our high tariff wall, it was thoroughly characteristic of the insidious ways of that country.

The Irish in America have had a good deal to do with keeping alive the spirit of ill will against England; but they are not wholly responsible. When a boy, I was taught to believe that there was no act of injustice or of perfidy which the English Government was incapable of committing. This belief was not engendered by Irishmen, but by the school histories. One would suppose that the present generation of Irishmen on both sides of the Atlantic would be generous enough

to give the party in power credit for doing all it can to make amends for the wrongs done to Ireland in past years. Nevertheless, one hears few expressions of appreciation in this country. Recently the Germans have taken it upon themselves to warn the American people against the wiles of perfidious Albion.

One would suppose that the vast increase of information during the last few decades and the easy facilities for international intercourse would have well-nigh extinguished national prejudices. But progress in this respect has been painfully slow, and it still holds good that "knowledge comes but wisdom lingers." While it is not true that people are "mostly fools," many men who are level-headed in all the common affairs of life come dangerously near to making fools of themselves when they are called upon to take a stand on a question of international politics.

Literature

JAPANESE GEOGRAPHY.

Japan's Inheritance: The Country, Its People, and Their Destiny. By E. Bruce Mitford. New York: Dodd, Mead & Co. $3 net.

Mr. Mitford's book is a real contribution to our knowledge of Japanese geography. He has gone far afield, north and south, knows the Alpine regions that lie to the northwest of Fujiyama, the craters and solfataras of Kyushu, and the lakes, rivers, forests, and mountains of the Hokkaido. It is now several decades since another Mitford, known to-day as Lord Redesdale, gave the world the classic volume, "Tales of Old Japan," and to have associated the name with something inferior in workmanship would have been a matter for keen regret. Happily, this book needs no apology. Mr. Mitford is at home in geology, and brings a scientific eye to his survey of the landscape; which in no way interferes with his æsthetic enjoyment.

Even if the northern and southern islands had not recently been before the world because of famine and volcanic disasters, the author's detailed descriptions of the Hokkaido and of Kyushu would yet be of great value. In the south it is the midwinter season that is sunny and attractive; the summers are wet and cloudy. Consequently, the tourist is not likely to find his way thither. The Hokkaido in the north is still a field for the settler; in its foliage and natural attractions it differs radically from the central island; during the early summer particularly the climate is foggy and the air raw, though stimulating. And yet in southern Kyushu are found those "impossible mountains" which are so often depicted on Japanese screens, and which an artist must delight to behold in actual nature. And in the northern island, far beyond the tracks of Miss Isabella Bird, when she visited the Aino chief, nestles Shikotsu, "Japan's sublimest lake, . . . whose deep-hued waters give weird glimpses of submerged crags and pinnacles." Facing page 252 is a photogravure of Komagatake, an extinct volcano, with graceful curves, lying north of Hakodate and familiar to residents. The photograph was taken from Lake Onuma, close by, on the west, and bears a sub-line in italics, "The margin of the lake has been made into a 'landscape garden.'" Indeed, to follow Mr. Mitford in his rambles and expeditions is a constant stimulus to the lover of natural scenery, both in its native form and as interpreted by the Japanese artist and gardener. Facing page 9 is a key map of Japanese scenery in colors, indicating granite, schist, and gneiss formations.

Chapter xii, entitled The Gateway of the South, the author devotes to a detailed description of the island of Kyushu. Opposite page 238, he gives an excellent photogravure of the island volcano of Sakura-jima, which rises from Kagoshima Bay, only a few miles from the city, and recently worked such woful havoc. The fine contour of its cone, alas, has been shattered. Our author has a good deal to say of it. "Sugar-cane," he remarks in his opening chapter, "is grown, and left standing all the year round, on the southward slopes of Sakura-jima—the only place, I believe, in Japan. That most malodorous radish, the *daikon*, here grows as big as a man." And again at chapter xii: "I question whether Mother Earth has anywhere a finer combination of land and sea scapes than this prospect from Sakura-jima's splintered crest." The fertility of this garden-spot has helped to remove the fallacy that the infertility that marks the soil of Japan in many districts is due to volcanic products. Our author ascribes it rather to disintegrated granite and crystalline schists, seeing that tobacco flourishes remarkably in soil derived from volcanic material. The lower half of the page that gives a picture of Sakura-jima has a still finer view of the active crater, known as "The Horse's Bone," of Takachiho, a mountain hardly less sacred than Fujiyama, for here the grandson of the Sun-Goddess Amaterasu alighted when he came down from heaven to pave the way for the conquest of Japan. Thirty years ago it was dormant, but now it is, next to Asama, the most active in Japan; unless the recent activity of its neighbor to the south gives the second place to Sakura-jima. Sakura-jima has a bad record; an eruption in 1779 "was of such a nature that the people could walk from the island, a distance of eight to ten miles, on the floating pumice ejected from the crater." The distance to-day, by the way, is only about two miles.

Mr. Mitford gives an excellent account of that dangerous volcano, Asamayama, which has of late years shown such signs of activity that a cordon of police is stationed round its foot to keep sightseers away. Its cone is peculiar in having a dome-like shape. "Its position at the intersection of two lines of volcanic activity doubtless accounts for the huge bulk of the cone, the unusual depth of the crater, and its long-continued activity." Ten years ago the author subjected the crater to a close examination, and saw, from a projecting dike or promontory, the floor, lying some 600 feet below him, "a broken, rocky expanse of ground, strewn with big boulders and steaming pools." Counting up the outbursts of the past five years, seventy in all, which mean a steady rise of the floor of the vent, he calculates that if this activity is kept up for the next twenty-five years the floor will be level with the lip of the crater. Seismologists fear a really great eruption at any moment.

The author's observations of the people in various parts of the empire have led him to the conclusion that the inhabitants of the mountain districts are superior to those of the lowlands; that the inhabitants of Northern Japan are superior to those of the south; and that the fisher-folk in general, but especially in the north, are the best developed of all. The Japanese fisherman has earned for himself a reputation for quarrelsomeness, and the police have often difficulty in enforcing regulations in seaside villages. The number of fishermen throughout the country shows a serious decline of 15 per cent. in the last few years. They find it a hard task to earn a living, the monthly proceeds per head averaging less than three United States dollars; and this last winter, when extreme cold drove away the fish from the shores of Hokkaido and northern Hondo, will accelerate the ominous decline.

In drawing his conclusions regarding the temper of modern Japan, Mr. Mitford has wisely gone to other cities than the commercialized, tourist-haunted centres which are in everybody's mouth. To find cities that are neither ultra-modern nor hopelessly behind the times, he has sought "those provincial centres which, not many years ago, were the headquarters of some great Daimyate, or clan, and thus retain amid the commercial activities a feudal aristocracy of their own. Of such are Kagoshima and Kumamoto in the south, Kofu and Mito in the east, Sendai and Wakamatsu in the north. . . . Each has its characteristic industry and its local color." His political conclusions regarding the

people are discriminating and sound; and few weightier or more illuminating discussions, dealing with the Japanese question from the international side, have appeared than the closing three chapters, Japan as a Colonial Power, Where East Meets West, and A Peep Into the Future.

As an ethnologist and historian Mr. Mitford is less satisfactory, and statements made on pages 315, 317, and again on pages 331, 332, need careful revision. Nor is he at his best as a stylist; his somewhat lavish use of French and Latin would at once bring him under the ban of the poet-laureate's Society for Pure English. Why *la haute politique, grande passion, clientèle, fait accompli;* or *ad Græcas calendas, terra firma, flagrante delicto,* when quiet English equivalents would serve the purpose better? Especially objectionable are the intrusions when there was reason to use so many Japanese words, like *soroban, andon, yadoya;* and with a little care he might even get rid of many of these. But such defects are hardly worth mentioning, in a production that is full of solid worth from beginning to end, and is specially to be welcomed at this time when the places he portrays so vividly with pen and camera are attracting keen and sympathetic attention all over the world.

CURRENT FICTION.

The Wonderful Visit. By H. G. Wells. New York: E. P. Dutton & Co.

This is the kind of volume Mr. Wells writes as a diversion from the press of weightier endeavors; we can imagine him proud of it as a proof of his facility, but scarcely for its intrinsic quality. It is a sketchy bit of satire, built on the imagined dropping of an angel to this earth, and his painful efforts at readjustment to our warped and imperfect scheme of things. As such, it has effective scenes. Mr. Angel (so he is called, and is regarded by the vulgar as a simple humpbacked creature) is taken under the protection of the scientific Vicar who shot him in the air, and who fully credits his supernatural origin, though he despairs of convincing others. The Vicar carries him about the countryside, and tries to initiate him into all the snobberies of local society. The satiric culmination comes at a musicale, where the angel plays divinely, but is mercilessly crushed by the guests because of his inability to read notes. When he gallantly assists the maid in an awkward predicament, the whisper runs around that he is drunk. Having thus employed him as an agent to exhibit the vapidity of provincial life and the falseness of our conventions, Mr. Wells removes him by a simple, heroic expedient. Into a cottage fire the angel rushes to rescue a girl, the roof falls, and he disappears in flame and a burst of music. Truth to say, the celestial visitor is made too much of a prig and a visionary to give the story the impressiveness it might otherwise have.

From an Island Outpost. By Mary E. Waller. Boston: Little, Brown & Co.

An appropriate sub-title to this volume would be "Thoughts and Rhapsodies of a Lady Novelist in the Country." The "island outpost" is Nantucket. The book seems to be made up of extracts from a diary of the last five years, written always with a view to publication. It contains random moralizings and theorizings on all sorts of subjects, well mixed with descriptions of Nantucket and a great variety of things of which Nantucket reminds Miss Waller. The descriptions, though rather exclamatory in style, are sometimes attractive. Readers of Miss Waller's novels will no doubt be interested in her opinions on education, the latest fashions in women's dress, Ibsen, the future of New England, etc. Some of these opinions are shrewd and sensible. Of the exploiters of sex, for instance, she writes:

"There is a humorous side to these moderns' 'output.' Reading their plays and novels we would receive the impression that their creators are hardly yet fully awake to the fact that this earth has been peopled for thousands of years. . . . Looked at from the right angle, through a normal medium, there is no such problem as the 'sex-problem.' The facts in evidence do not constitute a 'problem.' . . . What is termed 'sex' is a force, and like gravitation it solves itself."

The Marryers. By Irving Bacheller. New York: Harper & Brothers.

This is a little humorous sketch in the vein of "Keeping Up with Lizzie." Lizzie, it will be recalled, nearly devastated a countryside by infecting it with city fashions and extravagances. If we remember arlght, the malady was taken in time, and there was a general return to the simple life and happiness ever after. The idea here is not more subtle. The "marryers" are the female title-hunters who have certainly lost nothing of their usefulness to novelists and playwrights during recent years. About the figure of the American heiress pursuing her favorite big game abroad, Mr. Bacheller's carefully rustic humor plays with a good deal of effectiveness. The Hon. Socrates Potter, of Pointview, Connecticut, is supposed to tell the story, and prefaces a brief: "*In re* America vs. Sundry Feudal Tendencies." His friend Norris, father of the heiress, is, like all American millionaires, helpless in the hands of his women-folk. He is, in fact, exceptionally inefficient in the management of his household, even for a millionaire. For example, he does not fancy Italian counts, least of all rascally ones, but when his ambitious wife determines to marry Gwendolyn to one of them, there seems to be nothing to do but sigh. Norris's specialty is domestic self-sacrifice. As a youth he went to prison to save his father's name, and through manhood he paid blackmail to save his wife and daughter the anguish of knowing him for a jailbird. The blackmailer is a preposterous person, reformed in the last act, and married to a good and rich woman, who knows and forgives all. As for Gwendolyn's fate, it bas to be determined largely by the efforts of Uncle Socrates. It involves, of course, the frustration of all possible counts, and the success of the good and athletic and handsome and prosperous young American who has been marked for Gwendolyn's mate from the very first page.

Viennese Idylls. By Arthur Schnitzler. Translated by Frederick Eisemann. Boston: John W. Luce & Co.

Mr. Eisemann has brought together six of Arthur Schnitzler's short stories under a title little befitting their character. These studies of mental obsession dealing with strange fits of passion, remorse, fright, and the disillusionment that follows upon great emotional crises are scarcely to be classed as idylls. Viennese these stories certainly are, inasmuch as they embody that peculiar mixture of the tender and the ironic, that faculty of feeling and of contemplating one's self at the same time which distingulshes the Young Austrian writers from their more single-minded North German contemporaries. Five of the stories are analyses of erotic experiences with a blend of mysticism. "Blind Geronimo and His Brother" is the tale of a brother's fidelity: a single episode in the life of two strolling musicians whom the carelessly spoken word of a stranger throws into a situation where each reveals his heart to each. The concentration and reallsm of the treatment remind one of Maupassant, but there is a warm note of compassion in Schnitzler that is far removed from the French writer's impersonallty. The translation lacks the grace and dlstinction of the original.

Sweetapple Cove. By George Van Schaick. Boston: Small, Maynard & Co.

Sweetapple Cove is a Newfoundland fishing village, just inshore of the Grand Banks. It has a parson, but no physician, till our John Grant, a doctorling just out of hospital service, comes there to cut his teeth as a practitioner, and to find out what he is good for "as a man among men." He quickly becomes the

idol of Sweetapple Cove. Two things might naturally happen: the American way would be to have him find in one of the humble cottages one of nature's noblewomen, and in the end take her to himself. The British way would be to have him, after proving himself a man to the Queen's taste, suddenly translated to a title and estates At Home. Quite another thing does happen. An American millionaire brings his daughter to Sweetapple Cove, for salmon-fishing, and promptly breaks his leg. She remains intact for Dr. John. Though city-bred and ignorant of the wilderness, she shows amazing ability under Dr. John's tutoring, lands a record salmon at her first cast, and a record caribou at her first shot. There are divers adventures, giving scope for the heroism of both young parties, and the end is all that could be desired. Though the "love-interest" is slight and rather commonplace, the local atmosphere is well conveyed. The patient old parson and his perfect wife are worth more than the young pair, at least to a middle-aged reader.

THE PITFALLS OF PRECOCITY.

The Early Life of John Howard Payne. With contemporary letters heretofore unpublished. By Willis T. Hanson, Jr. Boston: Privately printed. $13.50.

The author of that bit of deathless doggerel, "Home, Sweet Home," has not lacked his biographers. They have inclined to harp on the insufficiency of his reward for all the labor of his years. So sad to be remembered only for a casual lyric when one has written sixty-odd plays, many of them in blank verse! Still, there have been industrious and versatile writers who have not been remembered at all. Lacking "Home, Sweet Home," Payne would not have been the first author with eleven tragedies, nine comedies, twenty-six dramas and melodramas, seven operas, and ten farces (or their equivalent) more or less to his credit—he would not have been the first hero of this species to vanish from this earthly scene and leave no trace behind. And to Payne's bit of doggerel must be granted one good line.

In his own day, at least, he was an effective and picturesque, if never quite prosperous, figure. He was the first American to make an impression abroad as a dramatist. Two of his plays and two of his operas were very successful. His "Brutus" was produced by Edmund Kean in 1818, gained immense applause, and survived on the stage for fifty years; McCullough, Forrest, and Booth played it in America. As a boy, he had been a leading "American Roscius." His country eased his last decade by giving him the consulship at Tunis. Such a career cannot be called disastrous; its unhappiness (for it was unhappy) must have sprung from the nature of the man himself. This is made clear—though the chronicler does not seem to perceive it—by the present detailed account of his early life.

His father was a New Yorker, of the same family as Robert Treat Paine and Dolly Payne, wife of President Madison. His mother was a Jewess. The senior Payne was a schoolmaster of repute, and became head of an academy in Boston in 1796. There young Payne had his schooling, with extraordinary results, on the surface, at least. He was not a scholar, but had a clever and acquisitive mind and the knack of turning all his acquisition to display. It was a day of prodigies, and the most famous of them, young Betty, the "infant Roscius" of England, was just Payne's age. As it chanced, the Boston schoolmaster was a specialist in the teaching of elocution. The small son had already become an admired performer when the amazing tale of young Betty's exploits reached America. Young Payne determined to be an infant Roscius, too, and was encouraged in the notion by a well-known Boston actor who had heard him speak. But this was too much for the father, who saw no essential relation between elocution and the stage. The eleven-year-old had to confine himself to writing theatrical criticisms which the newspapers accepted, says our biographer, "on their merit." Through these criticisms he met a youth who, by a quaint chance, was to write the only American poem which approaches "Home, Sweet Home" in popularity—Samuel Woodworth, cooper of "The Old Oaken Bucket." Woodworth was not, as Mr. Hanson states, "a boy of about Payne's own age," but some five or six years older. He was a printer's apprentice, and amused himself by publishing a little paper of his own, *The Fly*. Payne contributed to it, and no doubt it suggested his own *Thespian Mirror*, which, a year or two later, we find him editing. He was then supposed to be working in a New York business office, and his employer had been instructed to keep him away from the theatre. To undertake a theatrical weekly in these circumstances showed valor, if not discretion. The surprising thing is that the boy succeeded not only in writing most of its contents, but in getting it printed and pretty widely read. Mr. Hanson evidently thinks it remarkable as criticism, and prints several numbers in facsimile. It is undoubtedly precocious, and probably as good as most of what passed for criticism at the time. A paragraph from the preface to the first number may show the kind of thing:

> It cannot be denied that the Stage is circulated for purposes, at once the most laudable and useful. From its glowing and impressive representations, the Tyrant is induced to relax his wonted severity, the hand of Avarice is opened to the generous influence of benevolence; the wantonness of the profligate is succeeded by philosophic thoughtfulness; the asperity of Misanthropy is softened into charity and cheerfulness; the conscience of the criminal is struck to repentance, and those absurdities and follies which pervade the
>
> "Living manners as they rise,"
>
> and are not immediately cognizable by the criminal or canon laws, are made to shrink and retire before the lash of dramatic satire:
>
> "Safe from the bar, the pulpit, and the throne,
> Yet touched and shamed by ridicule alone."

Such writing gained local fame for its young author. Coleman, editor of the New York *Evening Post*, asked him to tea, was greatly impressed, and wrote (in the *Evening Post*): "I found that it required an effort on my part to keep up the conversation in as choice a style as his own." Public curiosity about the remarkable boy grew sufficiently to justify the production of a play by him in 1806, and its publication in the same year. Coleman projected a subscription to get Payne a college education; but a merchant named Seaman took the whole matter over. He seems to have been infatuated with the boy at first, and offered virtually to adopt him.

But the prodigy was already spoiled. He felt that his acceptance of this generosity was a condescension. His genius gave him the right to do as he chose. After a year or two at Union College, where everything was done for him, his insolence and insubordination brought about a final breach with his patron. He then succeeded in getting his father's permission to try the stage. On his first appearance as young Norval in "Douglas" he scored a great success. With a little common-sense he might have won a permanent place in the theatre, but his bumptiousness soon embroiled him with managers and fellow actors, and after a brief season of triumph he found himself without backing. He had made a good deal of money, but it was gone. There were still friends to coddle him. They now raised a purse of $2,000 to give him a year abroad. He stayed nearly twenty years, toiling indefatigably and always discontentedly at his plays and playing. He expected more of life than it gave him; the world was never quite at his feet. America fêted him when he found time to return to her, and gave him a comfortable berth for his last years. But he had never realized the doubtful promises of his precocity, or admitted to himself that his relative failure was due to inward rather than outward causes. Few men have been born to a more kindly earth, have been more generously dealt with in the body, or more gently (if vaguely) held in memory.

HASTY COMPOSITION.

The Reign of Henry VII from Contemporary Sources. Selected and arranged in three volumes, with an Introduction by A. F. Pollard. New York: Longmans, Green & Co. $9 net.

These three substantial volumes are the product, so Mr. Pollard informs us, "of the few leisure hours that have fallen to him in the last fifteen months." A very cursory glance at them will suffice to explain why such an apparently imposing piece of work has been accomplished in so brief a time. They consist, almost exclusively, of a selection of documents, bearing on the narrative, constitutional, social, and economic history of the reign of Henry VII, reprinted for the most part from already published sources or transcripts, without collation with the original MSS. It is certainly convenient to have accessible in a single set documents hitherto scattered through such collections as Campbell's "Materials," Gairdner's "Letters and Papers," the "Paston Letters," Bentley's "Excerpta Historica," etc. A few misprints and errors of chronology have been rectified, and an occasional helpful explanatory note has been added. Save, however, for these very obvious merits, it is difficult to discover precisely wherein the present collection justifies its existence.

The introduction, too, bears evidence of careless and hasty composition, and is in no sense worthy of Mr. Pollard's high reputation. It abounds in minor errors, and its statements and reasoning are by no means always convincing. One does not see, for instance, why the mother of Charles V should be constantly referred to as "Juaña" (pp. lvii-lx *passim*), or the Great Captain as "Gonsalvo di Cordova" (p. lviii), or the infant son of Ferdinand's daughter Isabella and of Emmanuel, King of Portugal, as "Michael or Emmanuel" (Vol. III, p. 58, *n*); nor is it at all clear, in view of its subsequent fate, why Navarre would have escaped the Emperor, if Ferdinand's child by Germaine de Foix had survived (p. lx). The author's economic horizon would have been considerably broadened by a perusal of Schanz, whose name, by the way, does not figure among "the fewer than half-a-dozen modern writers on Henry VII" who in Mr. Pollard's judgment "need be considered" (p. xv). Nor should he dwell twice on the results of Lord Bacon's mistaking Bernard André's "*lætanter*" for "*latenter*" (pp. x; 11 *n*) without giving Dr. Gairdner credit for discovering them. The footnotes are often inaccurate and misleading, *e. g.*, "Cely Papers, Camden Soc." (Vol. III, p. 321).

The simple fact of the matter is that Mr. Pollard has not taken time or pains enough in the preparation of this last work. At his best he is exceedingly good; but when the slap-dash fit comes, he hurries and stumbles frequently; and the vigor, even dogmatism, of his style aggravates his defects, just as, in his more careful work, it enhances his merits. There is evidence of a deplorable tendency among some recent English historical scholars to regard the editing of documents as mere hack-work, and as a task demanding far less skill and precision than the writing of history. The present work is a case in point. In this respect, if not in others, English historical scholarship still lags far behind that of France, Germany, and the United States.

CONGREGATIONALISM.

Theodore Thornton Munger, New England Minister. By Benjamin Wisner Bacon. New Haven: Yale University Press. $3 net.

It is appropriate that a life of Theodore Thornton Munger should have been written by the acting-pastor of Yale University Church in the city of New Haven, the ancient seat of New England theology, where Munger was for fifteen years pastor of the United Congregational Church. There is a fitness also in its publication by the Yale University Press on the morrow of the Kansas City Convention of Congregational Churches, where the Dean of the Yale Divinity School was highly honored, and the progressive platform of the Congregationalists was adopted. In Munger's life we have in biographical form a history of the struggles of Congregationalism during the last eighty years to throw off denominational exclusiveness, and to restate Congregational principles in terms of catholicity. This movement, finding its first expression at Boston in 1865, and at Oberlin in 1872, culminated at Kansas City in 1913 in the final rejection of a denominational creed and excessive decentralization. That was a victory in which Munger, with reverent satisfaction, would have rejoiced, as defining Congregationalism in terms of principle and not of sect, and making for a progress in theology that would open the door more widely than before to the abiding presence of God.

The early years of Munger's life were a time of religious restlessness and discontent in New England. The Calvinism of Jonathan Edwards, with its doctrine of the second birth and the need of a conscious experience of salvation, seemed a hopelessly deadening creed to many an earnest thinker of that day, and led to the withdrawal of many who were distressed by the sorry note of New England theology into more congenial spiritual atmospheres. But Munger, though congratulating his friend, Elisha Mulford, on his contentment in Episcopacy, and thoroughly disheartened with the prevailing orthodoxy, found that he had too much of the Puritan in him to leave the church of his fathers, and sought for continuity and catholicism within the fold of Congregationalism. Therefore, while Mulford, contented with Episcopacy, was writing his great book, "The Nation," Munger was working out plans for the reconstruction of the Republic, not of man, but of God, under the inspiration of Robertson, Maurice, and especially Bushnell, and of the new forms of philosophic thought that were born of the doctrine of evolution.

In this effort Munger became the bearer of the torch that Bushnell had lighted. It is the great merit of Dr. Bacon's book that, while dealing with the simple annals of the quiet life of a New England minister, he has realized the significance of that life for the world at large. He writes of Munger as a man of more than ordinary talents, leading in the protest against the uncatholic, self-centred spirit of the denominationalists, who, taking advantage of "the unbounded liberty of independency," fought for the perpetuation of a congeries of local churches, each possessed of the inalienable right to shape its own creed. Himself of Munger's own school of theological thought, he has devoted many pages of his book to a discussion of the crisis of reconstruction of the church in the seventies, and with admirable candor, but with strong and sympathetic utterance has formulated a trenchant indictment of those who would have built up competing churches on the denominational plan. When he reaches Munger's pastorates at North Adams and New Haven, 1877-1900, he has entered the freer atmosphere of liberty and democracy in the church, and can turn to the more personal characteristics of Munger's influence, as seen in the latter's writings, especially "The Freedom of Faith," "The Appeal to Life," and "Horace Bushnell, Preacher and Theologian." The last-named is in large measure but an unconscious expression of Munger's personality. Yet even here Munger is seen as a typical New England minister of the "progressive" school, one whose circle of influence was ever widening as recognition of his place in the theological world came from those to whom the New Theology made an irresistible appeal.

Munger's call to New Haven was coincident with the opening of a new era in the history of the Divinity School, and throughout his pastorate he was a pillar of strength to that younger generation of the Divinity School which has since become its dominant influence. His election to membership in the Yale Corporation was deemed a triumph of liberalism, promising greater changes to come in the composition of that hitherto exclusively ministerial body.

Notes

The Century Company will publish "Henry of Navarre—Ohio," by Holworthy Hall, on June 12.

The forthcoming publication of "The Story of Duciehurst," by Charles Egbert Craddoek, is announced by the Macmillan Company.

"The Intervening Lady," by Edgar Jepson, is announced for publication on Saturday by the Bobbs-Merrill Company.

John W. Luce & Co. announce the forthcoming publication of "The New Foolish Dictionary," by Gideon Wurdz (Charles Wayland Towne).

Houghton Mifflin Company announces for publication early next month: "Clark's Field," by Robert Herrick; "What Is it to Be Educated?" by C. Hanford Henderson; "The Sister of the Wind," by Grace Fallow Norton; "Where Rolls the Oregon," by Dallas Lore Sharp.

"POST-IMPRESSIONS" (Dodd, Mead; $1 net), by Simeon Strunsky, consists of thirty-four brief and mirthful essays which the New York *Evening Post* offered to its readers in 1913. Readers who, like the writer of this note, are devoted followers of Post-Impressionism will recall with delight how, a couple of years after the appearance of Halley's comet, certain large opaque bodies became suddenly transparent in their transit of the field of Mr. Strunsky's newly invented "Outlooking Glass." A similar power of penetrating the figures of the transitory show with light appears in this volume. Readers who, like the writer of this note, have upon their shelves Mr. Strunsky's first volume of essays, "The Patient Observer," will know why to place "Post-Impressions" beside it. The new collection contains, no doubt, some pieces produced under journalistic pressure; for these, a single reading will suffice. What strikes this reviewer is the number of pieces that he has marked for reading and repeated re-reading aloud on occasions when the conversation of chance groups by his fireside falls a little flat: Alma Mater Broadway, The Contemplative Life, Summer Reading, Noeturne, Harold's Soul, I and II, Thorns in the Cushion, Romance, Rhetoric 21, Low Grade Citizens, Two and Two, the "unauthorized interview" with Bergson called Brick and Mortar, the brilliant little burlesque of Arnold Bennett called Realism, the laugh on the modern business man called The Quarry Slave, and—perhaps most "delicious" of all—the dialogue between the Explorer and the Lady at a five-o'clock tea, called The Monotony of the Poles.

ONE who takes up Mr. Bryan's lecture, "The Prince of Peace," now put out in book form (Revell: 35 cents), will be puzzled over the title. There is as much about evolution as peace in the production, and only a few sentences about peace in its international bearings. Mr. Bryan is skeptical of the Darwinian theory. "I am not yet convinced," he says, "that man is a lineal descendant of the lower animals. I do not mean to find fault with you if you want to accept the theory; all I mean to say is that, while you may trace your ancestry back to the monkey, if you find pleasure or pride in doing so, you shall not connect me with your family tree without more evidence than has yet been produced." Mr. Bryan objects to the theory "for several reasons":

> First, it is a dangerous theory. If a man links himself in generations with the monkey, it then becomes an important question whether he is going towards him or coming from him—and I have seen them going in both directions. I do not know of any argument that can be used to prove that man is an improved monkey that may not be used just as well to prove that the monkey is a degenerate man, and the latter theory is more plausible than the former.

It is a little difficult to believe that this is the sort of thing which tens of thousands of persons have paid good money to hear.

THREE essays of Kuno Franeke have appeared in an excellent German translation, together with a reprint of an article originally contributed by him to the *Deutsche Rundschau*, the whole forming a brochure under the title, "Deutsche und Amerikanische Ideale" (Berlin: Verlag der Deutschen Bücherei). This is in line with his double rôle of interpreting German ideals to Americans and American ideals to Germans. One may find, here and there, his definitions strained—Emerson is to him the Jean Paul of New England—and refuse to follow him in his estimate of Strauss's "Tod und Verklärung," Hauptmann's "Der arme Heinrich," and Kühnemann's "Schiller," and yet acknowledge that there is something wholesome in the sustained enthusiasm of a scholar who sees in the striving for high ideals the best connecting link between two continents. "Weniger Nietzsche und mehr Emerson" is certainly a good motto, whether stated in English or German.

A WELL-BRED, well-tempered spirit is everywhere discernible in "The Edge of the Woods, and Other Papers" (Revell; $1.25 net), by Zephine Humphrey. Though her subjects range from In Praise of Everyday to The Joyous Company of the Possessed, she is always restrained without being sober, animated without being garrulous, and emotional without being sentimental. Her style is eminently that of an educated woman—sensitive, accurate, various in tone, sometimes a trifle precious. Some of the best essays among the twenty-five are The Edge of the Woods, The Passing of Indoors, and Hoosick Junction. The following extract from the second of these is typical of the writer's usual mood:

> Sleeping out of doors was the next phase in the open-air movement. That also began casually and charmingly. A wakeful dreamer lingered long in his hammock, watching the stars, musing in the still summer night, until, lo! there was the dawn beginning behind the eastern hills. A happy experience. Not much sleeping about it—there is seldom much sleeping about real experiences—but so much pleasure that the heart said, "Go to! why not have this good thing always? Why not sleep out of doors every night?" Which is, of course, exactly the way in which human nature works: very reasonable, very sane, and convincing, but unfortunately never quite so successful as it ought to be. That which has blessed us once must be secured for our souls to feast on perpetually; revelation must fold its wings and abide with us.

That attitude towards revelation, according to the writer, betokens a lustful spirit and brings inevitable defeat. She proceeds to quote a stanza from Blake that sets forth one of her main beliefs:

> He who bends to himself a joy,
> Does the winged life destroy;
> But he who kisses a joy as it flies,
> Lives in eternity's sunrise.

And, with a characteristic quiet humor, she applies this idea to the matter in hand: "The stars and the dawn do not condescend to such paraphernalia for waylaying them as sleeping-bags, rubber blankets, air-pillows, and mosquito netting."

SIXTY-ODD short essays, grouped under Nature, Man and Society, Art and Letters, Education, and Facetiæ, are included in "Little Essays in Literature and Life" (Century; $1.55 net), by Richard Burton, professor of English literature in the University of Minnesota. "The way of the familiar essay is one," says the "Foreword," "of the formal essay another. The latter is informational, it defines, proves; the former, seeking for friendlier and more personal relations with the reader, aims at suggestion, stimulation." In the essays that follow these aims are not strikingly fulfilled. The language, indeed, is remarkably neat, polished, and flexible, and, as a matter of style, the essays are agreeable reading. But they suggest little and stimulate less. One feels throughout the cultivated intelligence of the scholar, but the exercise of thought is hardly sufficiently strenuous for insight, and neither "dives deeper than any plummet line of the intellect," nor rises above intellectual commonplace. Doubtless, this is the outcome of the theory that the art of letters (though it should also be spiritually elevating) is "primarily for the pleasure of the world." In any case, the essays seem always to come to an end in an Aristotelian golden mean just when there is something to say. The difficulty is that they are too brief to say much, and they fall short of the wit and genius needed to make such "little essays" a success.

FOR some time past Mr. William H. Ferris, a colored graduate of Yale University, has been promising to the world a scientific and philosophical work on the negro, to assist him in which undertaking he obtained financial aid from many friends of the race. The resultant work is now before us in two volumes under the title "The African Abroad" from the Tuttle, Morehouse & Taylor Press of New Haven, Conn. ($5 net). We regret to state that the work is without value, a mere jumble of opinion and quotation, without order of any kind, which would seem to point the moral that no such undertaking should be financed by those interested in the race without ascertaining first the competence of the writer. As it is, the book merely reflects upon the educated American negro.

THE author of "The Tragedy of Mary Stuart" (Boston: Little, Brown; $3 net), Henry C. Shelley, gives as his excuse for adding to the already vast mass of literature on this topic the fact that earlier biographers of the Scottish Queen have not recognized that, though Mary's life exceeded forty-four years, the crucial events of it were compressed into a space of fifteen months—from February, 1567, when Darnley was murdered, to May, 1568, when Mary was defeated at Langside and fled to England. Save for a brief prologue and epilogue, then, Mr. Shelley's book deals exclusively with this brief period. It is not an argument for or against the Scottish Queen; the author is strictly non-partisan, and has simply striven to be a chronicler. In his preface he warns us that absence of footnotes and references does not indicate ignorance of the literature of his subject: for twenty years past, so he assures us, he has read far and wide in the sources and secondary authorities of his subject, and visited the scenes which he describes. He is apparently absolutely convinced of the genuineness of the Casket Letters, and gives no hint that any one has ever maintained that they were forgeries. As Mr. Shelley does not observe the rules of ordinary historical writing, it would not be fair to judge his work as such. It gives, however, a truer picture of the time than many of the more minute, learned, and partisan treatises on the same subject, and, for the average reader, is considerably more worth while.

NOTES FROM ABROAD.

AT the British Museum the first stage has been completed of an extensive series of additions to the main building. The top floor of the wing just opened has been allotted to the Department of Prints and Drawings. It is divided into an exhibition gallery, about 220 feet long, and a large room for students. A lower floor is occupied at present by the collection of Chinese paintings, manuscripts, etc., recovered by Sir Aurel Stein from the sands of Chinese Turkestan. Another part of this annex, the North Library, will take the place of the old supplementary reading-room, where in past years special students have had the privilege of special tables and their own collections of books.

AN important move is about to be made in England for the promotion of training in art as applied to industry. Hitherto the Royal Academy has confined its activities to the fine arts, and has officially kept aloof from the educational work in industrial arts carried on by the Government at South Kensington and the various provincial centres. Negotiations are now on foot between Mr. J. A. Pease, president of the Board of Education, and Sir Edward Poynter, president of the Royal Academy, to coördinate the work of the Government schools with that of the Academy.

A STIMULUS to the textual criticism of the Koran is likely to result from a discovery just made at Cambridge. Among the palimpsests in the possession of Mrs. Lewis is a document of which the underscript is a version of the Koran. An examination of this by Dr. Alphonse Mingana has revealed the fact that it contains a large number of variations from the received text, many of them decided improvements. According to British Museum experts, the handwriting is of the end of the ninth century. The whole document will be published shortly by the Cambridge University Press.

THE new building of the University of Zürich, which is imposing by reason of its situation on a hill above the town, but architecturally is not beautiful, was badly needed. For Europe, the growth of the university has been very rapid. In 1833, it was merely a high school, with about 160 students. Since that time, the Government has liberally endowed it, and in 1903 the number enrolled was 1,507. While the school has counted among its professors many distinguished scholars, it has passed through some difficult days in seeking to insure academic freedom. When Strauss, after the publication of the "Leben Jesu," was called there to a chair of theology, the people of Zürich were so indignant that the authorities were obliged to cancel the appointment and to pay an indemnity to the professor. The university was called a "hotbed of atheism." Another great light of the Tübingen school — Eduard Zeller — also lectured there, and among other names on the roll of professors in the past are those of Keller and Bluntschli, two of the most distinguished jurists of the nineteenth century; Oken, the naturalist-philosopher; Vischer, the æsthetician, and Lang, who declined the call to take Haeckel's place at Jena. In philosophy, Zürich has had upon its faculty Lange, the author of the "Geschichte des Materialismus"; Wundt, and that singularly profound and ingenious metaphysician, Avenarius.

VIRGILE ROSSEL, who not long ago published a complete but superficial history of Swiss literature, has written a less ambitious but much better book, "Histoire du Jura bernois," which has appeared at Geneva, to celebrate the centenary of the admission of that territory into the Confederation. It is a curious fact that this part of Switzerland should not have formed an independent canton, instead of being absorbed by Berne. The character of its people and its traditions make it one of the most homogeneous regions in Switzerland. It has been lately resisting the efforts of the Berne Government to impose the German language upon the people, many of whom prefer to hear and to speak French—of a certain kind.

ONE of the legacies left to the Italian Premier, Signor Salandra, by his predecessor, Signor Giolitti, was the menacing agitation of the state railway servants. This had been encouraged by the dangerous policy followed during the last few years of giving way to demands, even if unreasonable, provided they were backed up by threats. The movement was organized by the Railwaymen's Syndicate, a union of a decidedly revolutionary character, and the chief demands were an increase of wages to the tune of 90,000,000 lire and the suppression of promotion by merit, which would be tantamount to the triumph of the unfit. The Government has handled the situation with considerable firmness and skill. It declared itself ready to raise the wages of the least paid men, involving an expenditure of 15,000,000 lire, which is as much as the Exchequer can stand at present, but absolutely refused to abolish promotion by merit. At the same time, it was prepared to "militarize" all railwaymen who had served in the army, *i. e.*, to retain them at their posts on the railways, but under military discipline, and to take all other measures necessary to carry on a reduced service and to preserve order. The Syndicate blustered, and threatened a general social revolution, but public opinion, realizing that a railway strike meant the disorganization of the commercial life of the country, lent it no support, and the bulk of the railwaymen themselves saw that such a movement could have little chance of success. Finally, after a series of stormy meetings at Ancona, the general council of the Syndicate, while declaring itself dissatisfied with the Government's terms, adjourned the strike "to a more favorable occasion," *i. e., sine die.* The outcome has been welcomed with general satisfaction, but even the threat of a strike has caused the nation a loss of many millions from the reduced tourist traffic.

Science

HOUSEWIFERY AS A SCIENCE.

Foods and Household Management. By Helen Kinne and Anna M. Cooley. New York: Macmillan Co. $1.10.

The Efficient Kitchen. By Georgie Boynton Child. New York: McBride, Nast & Co. $1.25 net.

English Cookery Books. By Arnold Whitaker Oxford. London: Humphrey Milford. 5 shillings net.

Eat and Grow Thin. By Mahdah and Vance Thompson. New York: E. P. Dutton Co. $1 net.

Some of the extreme feminists maintain that all women, even though married, should seek work in shops and factories and offices because there is so little left for them to do at home. The busy, ideal housewife smiles at this assertion, and any one can find out how foolish it is by reading the textbook of the household arts issued by two professors of the Teachers College, Columbia University, under the title of "Foods and Household Management." Here are 400 pages, many of them in small type, with every one of which the "compleat housewife" ought to be familiar, and able to apply the knowledge it imparts as occasion arises. While a considerable number of recipes are included, it is far more than merely a cook-book. Those of our housewives who have to do their own cooking—as eleven out of every dozen have to—should read

it in free moments while preparing the meals, because the information it imparts will greatly increase their interest in their tasks, besides teaching methods of economy and improved processes, while the more fortunate women who can afford servants should none the less know all the things Professors Kinne and Cooley are ready to tell them, because hired domestic helpers—as well as grocers and butchers—are much more likely to give satisfaction if they find out that the mistress knows what is right and good and what isn't. Among the topics discussed are rules for buying goods, bargain sales, trading stamps and prizes, purchase of clothing and household textiles, care of rooms, household insects, economics of laundering, savings and allowances, the cost and purchase of food, menus and dietaries, table service, water and other beverages, foodstuffs, kitchen furnishings, fuels and stoves, food preparation, disposal of waste food. The psychology of eating is briefly discussed (p. 12), with a closer approximation to the truth than is usual in culinary treatises; but in enumerating the flavors that are detected by the sense of taste the authors oddly omit the mention of those that are bitter, which are among the epicure's chief delights.

Until recently cook-books consisted entirely of recipes. Gradually, miscellaneous information useful to cooks was introduced, and to-day there is a tendency to give the recipes much less space (as in the book under discussion), or else to crowd them out altogether, as in another excellent volume before us, "The Efficient Kitchen," by Georgie Boynton Child, of the Housekeeping Experiment Station at Stamford, Conn. This is a monograph of 241 pages by one who "tried to do efficient work in kitchens diabolically contrived to waste every human effort," and then set to work to solve for herself and others the problems of practical kitchen planning and equipment. Among her topics are scientific grouping, built-in conveniences, heating the kitchen and keeping dishes warm, choice of fuel, time and labor-saving equipment, disposal of waste, dishwashing, the laundry problem, the business side of the kitchen. Special attention should be called to the section on cooking by steam. While this method has been practiced in some form or other for many years, to most cooks and housewives its conveniences are unknown. "The greatest advantage of cooking by steam lies in the fact that it conserves in the food all the delicate flavors and mineral salts which are lost in boiling, and gives us a wholesome, delicious fare with a minimum of effort, expense, and work. All kinds of vegetables and fruits are delicious when prepared in this way." Were it only for the timely hints regarding this labor-saving process, Miss Child's book ought to be in the hands of every progressive housewife.

From this last word on improved cooking it is interesting to turn back a few centuries to see what kind of books used to be written on this subject in those days. The list of Dr. Oxford's English cookery books begins with "This is the Boke of Cokery," dated 1500, and ends with "Common Sense for Housemaids," dated 1850. The author's object has not been to provide a complete list of all the books on domestic art issued in that period, but to select those that offer some interesting peculiarity in title or content. The doctors of our day seem to have lately rediscovered the extreme importance of dieting in medical treatment. In the olden times doctors were expected to know a great deal about the science of cooking; to what extent, may be inferred from the author's remark in the preface that his real interest is in this "combination of cookery with medicine, which is found in most of the early books, and which, continuing through the first quarter of the nineteenth century, was gradually destroyed by the growth of railways." For quaintness of title these old books have few equals. Here are some samples: "Hygiasticon," "A True Gentlewoman's Delight," "The Queen's Closet Opened," "The Compleat Servant-Maid," "A New Digester," "The Whole Duty of a Woman," "Adam's Luxury and Eve's Cookery."

Somewhat in this antique style is the title of a book for which Vance Thompson has written 32 amusing pages of introduction: "Eat and Grow Thin." It shows how any one may, little by little, and without starving or sacrificing table joys, win back the winsome waist of youth; a matter of extreme importance for health and for good looks, since "our ideal of plastic beauty is the panther and not the pig." All you have to do to become panther-like is to follow a few simple "don'ts": don't sleep too much, don't take a cab, don't drink with your meals, don't drink alcoholic beverages, don't eat bread, don't overeat, and, above all things, don't eat much food containing starch, sugar, or oil. A list is given of edibles that should be avoided; it looks formidable, yet the list of things that may be eaten is far longer. It is embodied in this book in a series of menus for every month in the year. There are also some recipes. Altogether, an admirable little book; and one of the best things about it is that it also serves as a guide to those who wish to eat and grow fatter.

Brief mention must suffice for half-a-dozen other culinary books that have accumulated on our shelves. Edward Spencer's "Cakes and Ale" (Duffield & Co.), an anecdotic "dissertation on banquets," appears in its fourth edition, and its publishers have just issued a companion volume by the same author on drinks of all countries and periods, under the title of "The Flowing Bowl." The gentle art of concocting pure and delicious sweets is taught in Ellye Howell Glover's "Dame Curtsey's Book of Candy-Making" (A. C. McClurg; 50 cents net). The Scribners add to the list two little books for which there ought to be a large demand: "One Hundred Salads" and "One Hundred Desserts," both by Linda Hull Larned (50 cents net each). "The One Maid Book of Cookery," by Mistress A. E. Congreve (E. P. Dutton & Co.; $1 net), is more comprehensive. It contains select recipes of all varieties, with plenty of the general information that is becoming essential in books of its kind.

Drama

POMPEY THE GREAT.

The Tragedy of Pompey the Great. By John Masefield. New York: The Macmillan Co. $1.20 net.

When the author of the "Tragedy of Nan" revives the most turbulent days of the Roman republic, we anticipate a union like that of "fire and powder, which, as they kiss, consume." In Mr. Masefield's "Tragedy of Pompey the Great," reissued with modest alterations, the explosive mixture results in a drama startling only by its mildness. The author ignores plot, like a true scion of his century; so far from troubling himself with the passions and situations that would have stirred our unexacting forefathers, he serves us with tactics and politics, administration and seamanship; in a word, with calculations and expedients. The final scene—Pompey's assassination—is so incorrigibly dramatic that it resists all the author's efforts to tone it down to the prevalent colorlessness. The drama, however, stakes its all on the attempt to revivify and rehabilitate the character of Pompey.

Take the solemn melancholy of Shakespeare's Brutus, the ceremonial elegance of Virgil's Æneas, add the recessive and insidious military tactics of Tolstoy's Kutuzof in "War and Peace," and the quality of Mr. Masefield's Pompey becomes clear. He is unassailably correct; towards his associates, reproachfully, compassionately correct. He convicts every one else of bad form; beside him Metellus, the father-in-law, is a trooper, and Cæsar, in his neighborhood, sinks into a Jack Cade. The creation of prigs is the last mischance to which the author of the "Everlasting Mercy" should have been subject, but Pompey's plaintive gentlemanliness almost classes him with that fraternity.

This may be Nature's revenge on Mr. Masefield for creating desperadoes, or, possibly, the difference between the types has been overestimated. It is unfortunate that the magnanimities of Pompey—retreats, refusals of battle, submissions, blindfold walkings into traps—are of the sort which are more defensible than attractive.

Mr. Masefield often writes English of this brand: "Dead men's souls. They want blood. Licking. Licking blood in the night." This method was once confined to burlesque and there is nothing in Mr. Masefield's employment of the trick to make us regret the forbearance of his predecessors. His diction is often picturesque, magnetic, or hauntingly suggestive, but a fine phrase will cajole him into falsifying a situation or a character.

An experiment in temperance (even of comparatively early date) on the part of a man who has gained renown by audacities, is full of literary interest, but the present play suggests that when Mr. Masefield forsakes his violence, he is forsaken by his strength. He may hold new surprises for us in his inkpot, but at the present hour he ranks with poets and impressionists rather than with thinkers or creators. The whole tragedy moves us less than the two noble concluding lines of the brief lyric that closes the volume:

> God make my brooding soul a rift
> Through which a meaning gleams.

STAGE IMPRESSIONS.

Second Nights. By Arthur Ruhl. New York: Charles Scribner's Sons. $1.50.

In this collection of papers, new and old, Mr. Arthur Ruhl, well known as a writer of facile skill and humorous observation, records his impressions of various theatrical entertainments, ranging from Shakespearean tragedy to the lowest forms of burlesque, offered in New York during the last ten years. They are, as a rule, entertaining rather than instructive reading, although by no means devoid of incisive comment. The sanity displayed in the more serious passages, all too rare, makes it matter for regret that so much space should be devoted to clever but flippant persiflage concerning persons and things of no dramatic or artistic consequence. It may be granted, without reservation, that in his sketches of the cheaper and baser shows the superficial aspects of the performers and their audiences are delineated with a light and veracious touch and broadly comic suggestion, but it may be doubted whether this is just the mood in which some of these subjects, the viler burlesque exhibitions, for instance, ought to be treated.

But if Mr. Ruhl is more often intent upon journalistic glitter than upon artistic proportion or sound analysis, he shows himself possessed of shrewd insight and ample information. And if his appreciations are apt to be over-enthusiastic, his summaries of plays and players are often marked by admirable discrimination. He is particularly felicitous in his treatment of Bernard Shaw, paying the fullest tribute to the brilliancy of his wit and to his phenomenal cleverness, while pointing out that his success is largely due to his astonishing faculty of putting the strongest argument on the wrong side of every question into effective dramatic form, and thus carrying momentary conviction in the theatre by a series of paradoxical strokes. This, doubtless, is part of the truth if not the whole of it, although it will not be accepted by those who still have faith in Mr. Shaw's sincerity as a philosophic thinker. Mr. Ruhl is happy also in his definition of the subtle charm of Miss Maude Adams, which has proved more than equivalent to histrionic genius, and of the artistic petrifaction of Mr. John Drew by the star system. His brief references to a number of other prominent actors of the day—Faversham, Sothern, Gillette, Miss Marlowe, and others—are deft little thumb-nail sketches, mainly true in outline, but too deficient in detail to justify consideration of them as actual portraitures. It may be remarked, however, that his inferential comparison of them with the Italian Novelli is scarcely fair and not at all illuminative. Novelli was a good eccentric comedian, with an extraordinary gift of mimicry and the characteristic theatrical skill of the school in which he was trained, but he was not in any sense a great actor. In actual conception, invention, or emotional power he was not comparable for a moment with Rossi, Ristori, Piamonti, Duse, or Salvini. The particular value of his representations lay in the demonstration by himself and his company of the superiority of the repertory system to any other as a school of acting.

One of the best chapters in the book is that on The Great American Play. It contains an admirable appreciation of Moody's "The Great Divide," just in estimate and clear in comprehension, and an excellent, if cursory, review of the work of Augustus Thomas. The rest of it, dealing somewhat summarily with Sheldon, Bootb Tarkington, Bronson Howard, Clyde Fitch, and other dramatists, does full justice to their several excellences. His discussion of the "relentless" drama of Eugene Walter, in another essay, is also a notably sound bit of critical work, although some persons might employ less complimentary adjectives. It is a pity that the sober judgment in the book should be so disproportionate in amount to the purely journalistic matter.

"Tout à Coup" is the name of a new play in which Sarah Bernhardt has just appeared in Paris. It is the first effort of Paul and Guy de Cassagnac, sons of Paul and grandsons of Granier de Cassagnac.

A dispatch from Paris to the London *Times* says: "M. Jean Richepin, the Academician and poet, is rehearsing 'Macbeth' at the Comédie Française. His version in blank verse of the Shakespearean drama is said to be spirited, and at the same time remarkable in its fidelity. The play in its French dress will be superbly mounted by M. Albert Carré, the new director of the Comédie Française."

M. Bulgakoff, formerly secretary of Count Tolstoy, has been lecturing in St. Petersburg on the contents of the great writer's library, which, he said, numbered 6,950 works (10,000 volumes), in thirty-two languages. The Russian section comprised 3,505 works, the English 3,413, the French 1,045, and the German 602. Among the MSS. was the scenario of a play entiled "Peter Mytar." The chief character is a man who has devoted his life solely to the acquisition of wealth. He has performed no good works. He falls seriously ill, and one night in a dream sees himself being weighed in the scales on the Day of Judgment. The scales are turned in his favor by an old beggar man, who lays in them a loaf which he had thrown at his head to get rid of him. Peter recovers and becomes as open-handed as he was close-fisted before, although his wife and others endeavor to persuade him that his generosity only excites envy and jealousy among the beneficiaries. Eventually he allows himself to be sold into servitude. A friend discovers his whereabouts, and then he "flies away or disappears."

"Chitra," a play in one act, was composed by Rabindranath Tagore some twenty-five years ago, and has been performed in India without scenery, the actors being surrounded by the audience. The author has now translated the little dramatic poem from the Bengali into English for the series of his books which Macmillan is bringing out in uniform style. The subject of the play was suggested by a scene in the great Sanskrit epic, the Mahâbhârata, but Mr. Tagore has developed the theme with entire freedom, as was, of course, quite within his rights. Nor could any one censure him for changing the purport of the incident chosen to something very modern; only the unlearned reader should be advised that the inner spirit of the play is far removed from the ancient India, where the events are supposed to occur. Chitra, the Princess of Manipur, has been brought up in masculine exercises, wearing man's clothes, and has nothing soft or winsome about her. Despite her warlike mind, she has filled her heart with a passionate longing for Arjuna, the divine Prince of the Kurus, whom she has never seen. When Arjuna, in his wanderings, comes to Manipur, Chitra obtains from the gods of Love and Spring a year of perfect beauty, and in that guise, in her proper female attire, she wins the Prince to her arms. But she is not satisfied. She knows that Arjuna is in love with the ephemeral beauty lent her by the gods, rather than with

her real woman's heart, of which he has no knowledge. Meanwhile Arjuna, too, is dissatisfied—longing for action, cloyed with mere feminine charms, and desirling in his wife a partner in his manly duties. It is a pretty situation, prettily worked out. And there is something piquant in the combination of the old Hindu metaphorical style, half mystical in allusion, with what is really a plea for the emancipation of women.

William Greet, who died recently in England, was widely known in the theatrical world, if not to the general public. He started life in the British navy, but soon tired of the sea. His first theatrical venture was as the business manager of Willie Edouin, but he soon formed a partnership with E. C. Engelbach, and was successful in the provinces with musical comedy. Finally, they got possession of the London Lyric, where they produced "The Sign of the Cross," sharing with Wilson Barrett, and made a fortune. Later, they were associated with the Garrick, Comedy, Adelphi, and other London theatres, and with a number of American enterprises.

Music

MODERN CHORAL CONDUCTING.

Choral Technique and Interpretation. By Henry Coward. New York: H. W. Gray Co.

Latin Songs with Music. Edited by Calvin S. Brown. New York: G. P. Putnam's Sons. $2.

Swedish Song Games. By Valborg Kastmann and Greta Köhler. New York: Ginn & Co. 75 cents.

Sixty Musical Games and Recreations. By Laura Rountree Smith. Boston: Oliver Ditson Co. 75 cents.

Of the hundreds of choral conductors in Great Britain none is more esteemed than Dr. Henry Coward, whose fame, according to Grove, "rests on his remarkable gifts as a trainer of choirs, in which his magnetic personality, poetic insight, boundless enthusiasm, and original methods find full scope." Of these "original methods" his book on choral technique and interpretation gives an account which must be fascinating as well as helpful, not only to conductors of choirs, but of bands and orchestras likewise—in fact, to all students of music who wish to keep abreast of the times. That times have changed is a fact emphasized by Dr. Coward. The advanced and critical audiences of our day demand more dramatic expression than used to characterize choral performances as late as two decades ago; they expect a body of singers to show the same refinement in tone production and shading as a string quartet; they insist on "good diction, that pearl of great price"; they are not satisfied unless a chorus, besides singing beautifully, can also at times "exemplify the sob, the exclamation, the snarl, the laugh—playful, mocking, derisive, or fiendish—the shout of triumph, etc." Modern compositions exhaust the gamut of dramatic emotion. Such things are difficult of execution, and until recently both conductors and societies were inclined to treat them with scant courtesy. "The way difficulties were shirked used to make my blood boil," the author exclaims, "because many new, strange effects were never realized, and the works were consequently damned." To this state of affairs he attributes the fiasco, at its first performance, of Elgar's "Dream of Gerontius," which to him is a masterwork that marked an epoch in choral composition.

Dr. Coward frankly confesses that he began his career as one of those who sought merely for technical finish. He was informed, by one who knew, that while his singers got through the music in a wonderful manner, they missed all the points of expression that go to make singing worth while. This cold douche set him to thinking, and altered his whole course. His chapter on musical expression sums up what he learned. It is preceded by others, on methods of rehearsal, homogeneity, and power of voice, attack, nasal resonance, preservation of voice, breath control, articulation, vowels, consonants; and followed by pages on the swell, climax, attack, characterization, onomatopœic effects, different styles of singing, facial expression, etc. Under the last head he has some amusing comments on the difficulty of making British singers acquire the power of using their faces as a living commentary on the words spoken; a difficulty almost as great as that of obtaining agreeable voices. Dr. Coward informs his readers that in most choral societies, even in those where the voices have been tested, there are "a great majority of untrained voices, which may be roughly classified as follows: Weak and quavery, worn and tinny, harsh and shrill, strident, metallic, shouty, throaty, cavernous, hooty, scoopy, and nondescript." With such voices he has been wrestling for more than thirty years, achieving results that have been praised in superlative terms. All honor to Dr. Coward! Maybe he eulogizes himself a little too loudly in the first chapter, in which he intimates that he was a pathfinder who raised the artistic standard of singing throughout the world. It would be interesting to know if Siegfried Ochs and Dr. Vogt, who have such wonderful choirs in Berlin and Toronto, were influenced by his method and example.

Most of the numbers included in Calvin S. Brown's "Latin Songs" are arranged for choirs. He began to collect these songs merely for his own amusement, but decided to publish them on becoming aware that no representative Latin song-book existed. The collection includes classical lyrics, mediæval church hymns, Christmas carols, convivial songs, school songs, lullabies, nursery rhymes, love lyrics, folk-songs, and translations of popular English and German pieces. Those of the Latin poems which are translations are accompanied by the original versions. More good specimens of melodious music are seldom brought between two covers. Many of them are folksongs.

The lilt of folk music will also be found in the illustrations accompanying the Swedish song games devised for school, home, and playground by Valborg Kastman and Greta Köhler. Miss Köhler has had a wide experience in teaching these games in Sweden, and many of them have already become popular in this country. Some are simple enough for the kindergarten. A number of full-page pictures illustrate the principal games. With the intention of making pupils' recitals interesting, Laura Rountree Smith has prepared a volume of a somewhat similar character to the foregoing, and equally commendable for its purpose. Some of the games have a distinct educational value, as they teach time and keys, and in other ways awaken an interest in music.

HENRY T. FINCK.

Sinding's "Der Heilige Berg," the Norwegian composer's first opera, was produced on April 19 in the Hoftheater at Dessau in Anhalt. The work had a very good reception from the public, but critics did not praise it highly. Sinding's genius is much more lyrical than dramatic. The music is said to be very beautiful in parts, and its workmanship thorough and scholarly; but it is deficient in real passion, and gives the impression that the composer is following his models too closely, and has not chosen a medium in which he is happy.

In an interview in the London *Daily News*, Mr. Albert Visetti, the veteran music teacher, advises English singers against going to the Continent to be trained. Owing to the humidity of the climate the English voice is naturally weak, whereas the Italian voice is robust. In Continental classes the English pupils, being in a minority, have to conform to methods of training that are unsuitable for their needs. Further, the great aim of the Continental master is to produce an operatic star, but singers who will have to earn their livelihood in England need especially to be taught oratorios and ballad singing. It is disastrous for English singers to go abroad to be "finished." Having been trained for years to sing in one way, they are expected to learn in a few months to sing in a totally different way, and the result is fatal. At the same time, Mr. Visetti strongly recommends a course of Continental travel for the singer whose voice is fully developed or "set."

Art

RODIN'S "CATHEDRALS."

Les Cathédrales de France. By Auguste Rodin. With an Introduction by Charles Morice. Paris: Armand Colin. Illustrated. *Broché*, 50 francs; bound, 70 francs.

What Rodin thinks of the cathedrals of France is interesting because the world is interested in knowing what to think of Rodin himself. It has about made up its mind that Rodin the sculptor is a great and a very original disciple of Michelangelo—and Michelangelo means Renaissance, and French cathedrals mean Gothic Middle Ages. Is Saul also among the prophets?

It is not certain that some subconscious work of conversion is not going on here—for Rodin is a Frenchman, and the French national mind is changing ground, which is a prelude to movement, backward or forward, as may be seen from Maurice Barrès's newest book on "La grande pitié des Eglises de France." Nor is Rodin like Pugin, who, three-quarters of a century ago, whirled English Romantics about to look at the "contrasts between the noble buildings of the fourteenth and fifteenth centuries and the productions of an age marked by the decline of taste." For Rodin has written and illustrated not art history and not archæology nor art criticism—and still less religious art. His own words shall tell the tale:

I, too, have changed, and I find the new in the known—beauty in forms which of old I understood not. These transformations of mine have come most of all from my work: still studying and more sedulously, I can say I have always more ardently and more lucidly loved.

Little by little I have come to our old cathedrals, and have been able to penetrate the secret of their life, ever new under the changing heavens. Now I can say I owe to them my best joys. . . . Snow, rain, and sun find me often before them like a road-tramp of France.

In my pilgrimages, I have had few companions. They were neither architects nor sculptors nor poets nor priests nor statesmen—they were foreigners, verifying what Baedeker says. . . .

At every visit, they entrust me with new secrets. They have taught me the art of using the shadow with which it is meet to envelop the work; and I understand the lesson they give us by the swelling lines they always practice. *French cathedrals are born of Nature in France.* . . .

Do you pretend when the Druidic majesty of great cathedrals appears far off and amazes you, that it results from natural and chance causes; for example, from their isolation in the open country? You deceive yourself. The soul of Gothic art is in that voluptuous decline of shadows and lights, giving rhythm to the whole edifice, and constraining it to live. A science is there which has been lost—an ardor reflective, measured, patient, and strong, which our avid, agitated age is incapable of understanding. We must live again in the past, go back to principles, to recover strength. Taste reigned in other days in our country—we must become French again! Initiation to Gothic beauty is initiation to the truth of our race, of our sky, of our landscape.

As might be expected from Rodin's art, such vital thoughts are thrown out in his writing exuberantly, unexpectedly, without order or system or philosophy—or religion. At times you would think some cultured Walt Whitman passing by had been caught by the joy of life in these cathedral carvings of Space, with their poetry of light and shadow, and was singing it back to our puzzled ears:

It is the air, at once so light and so sweet, that gave our artists their grace and refined their taste. The adorable national skylark, alert and graceful, is the image of their genius. With like flight he darts upward and the soaring of the lace-wrought stone takes rainbow hues in the gray air like birds' wings.

By dint of repetition, as when we come back again and again to look at some obscure sculpture of Rodin, we begin to understand. Perhaps we understand more than Rodin himself intends, for in him, as in Socrates, thought and emotion grow precise only by a deliverance of the spirit; or as with Wordsworth:

A timely utterance gave that thought relief.

Rodin's emotion may be helpful to the cathedral-gazer who would fain be heir of all the ages and tune his impressions to these persistent rhythms and harmonies. Even the most rooted renouncer of Rodin, his works and pomps—for such there are, as in the days of Puvis de Chavannes's glory, when reactionary Paris art schools gave rendezvous to the cry, "Mort à Puvis!"—will never deny him an extraordinarily sensitive response to all that penetrates into the soul through the eye. Knowledge and intuition of the religion giving the impulse creative of cathedrals—"The conscious stone to beauty grew"—may be thought infantine in him; but there, where they were wrought ages ago in sad sincerity, he comes now with keen and trained eye to appraise their lights and shadows and contours defining Space for the eye's pleasure. This constituted Beauty for the philosophers of the cathedral-builders' time—"Pulchrum est quod visum placet." Rodin, from his own working art, utters his "initiation to the Art of the Middle Ages":

Cathedrals impose the feeling of confidence, conviction, peace—how? By harmony.

Harmony, in living bodies, results from the counterbalancing of masses under displacement; the cathedral is constructed after the example of living bodies. . . .

Every one knows that the human body, in movement, sways from the perpendicular and regains equilibrium by compensations. . . . This carrying the weight of the body from one leg to the other is called, in popular workman's language, "untiring one's self"—and so a Caryatid might change shoulders with her burden.

Such indications are not without interest for cathedrals. The sway from the perpendicular, thus compensated, and the constant and unconscious gestures of life, explain for us the principle which the architects of the flying buttress applied, having need of it to stay up solidly the tremendous weight of their roofs.

And since every rational application of a just principle has happy consequences in every domain, beyond the immediate foresight of wise man and artisan, so the Gothics were great painters because they were great architects. Of course, we are taking the word "painter" in a vast, general sense. The colors wherein the painters of whom we speak dip their brushes are the very light and shade of day and the two twilights. The planes, obtained by the great oppositions which cathedral-builders were bound to seek, have not solely an interest of equilibrium and solidity; they border off beside those deep shadows and beautiful lights which clothe the edifice so magnificently.

Only effects of such intensity could ring out to great distances. Now the cathedral rose up to dominate the city gathered round it as if under its wings, and to serve as a rallying point and refuge to pilgrims lost in far-off ways—their lighthouse to strike living eyes as far by day as Angelus-bell and tocsin could strike living ears by night.

Are not these sovereign aims of architecture those, too, of sculpture? . . . The sculptor attains great expression only by giving all his study to the harmonic plays of light and shade exactly as the architect does. . . . Sculpture is only a species in the measureless genus of architecture, and we ought never speak of that without subordinating it to this.

How "masterpieces (*chefs-d'œuvre*)" are masterpieces I know—and I am glad to know. It is just the same as how great souls are great souls. . . . All masterpieces quite naturally would be open to the crowd if the crowd of men had not lost simplicity. But, even in a time when crowds have become incapable of understanding, it is still with the popular feeling—with an *âme de foule*—that the artist must live to be able to conceive and create the masterpiece. . . . .

Gothic architecture, which presupposes the crowd, and is intended for the crowd, speaks to it the great simple language of masterpieces.

This is as it may be—and we have severely left out technical, yet quite accessible, proofs from example—but this is enough to show we have here no common voice crying in the wilderness of present art. Such living utterances must be taken in pages where they are found, for the most experienced index-maker would give over with Rodin. There is a division on Nature in France and Notes on the Romanesque style; then, for Gothic, there are notes at Etampes,

Nantes, Nevers, Amiens, Le Mans, Soissons (at even-tide), Rheims (by night), Laon, and Chartres (these worth comparing with the prodigious volume of Huysmans). The plates—most Rodinesque, with illumination and visible darkness, and a resistless linking with Renaissance contours showing the artist's conversion is not exclusive—are scattered amiably without offensive connection with the text. A word remains to be said of Charles Morice's Introduction, leading the Philistine by the hand from Middle Age and Renaissance through the life, death, and resurrection of the cathedral to Rodin's mission. It has missed only the seminal principle: *Cathedra*—the seat of the crowd's bishop, his functions, prayer, and pomp.

Finance

PUBLIC OPINION AND THE NEW BANKING SYSTEM.

With membership of the Federal Reserve Board, which will supervise the new banking and currency system, nearly completed, and with preliminary work for organizing the regional central banks already under way, the beginning of that highly important experiment is now in sight. The attitude of the public towards it, and particularly that of the financial community, has been alternately hopeful and doubtful, and with some reason for each attitude.

That the passage, in December, of the amended bill was greeted with great enthusiasm, every one will remember. Following that outburst of cheerfulness came numerous disappointments (from the point of view of the financial markets) in President Wilson's general policy on the question of corporation legislation, and misgiving began to spread as to what class of appointees would be selected for the national board of the new banking system. This attitude of distrust was probably emphasized by the feelings with which the somewhat erratic assignments of regional banks and of the banking districts, by the Organization Committee, were received. This in turn was dispelled by the excellence of the President's appointments to the Federal Reserve Board, announced two weeks ago. Three of the strongest of these five nominees have accepted the appointment; the other two have declined, but the general purpose shown in the selections seemed to guarantee that they would be replaced by equally competent men.

Thus the matter stands, on the eve of the actual building-up of the machinery for the new banking system. As the time approaches for the inauguration of this country's experiment in banking and currency reform, which may prove to be epoch-making, the interest of the financial markets and of the people at large, in what is to be its actual bearing on the situation, naturally increases. The single wish of all classes in the community is that the new system may be wisely, prudently, and successfully introduced, and it is fully realized that the manner and spirit of its introduction will have much to do with insuring a maximum of immediate usefulness.

It hardly need be said that confidence in the wisdom, broadmindedness, and conservatism of the men who will administer the system is a prerequisite of paramount importance. It is equally certain that the public speeches and public attitude of these men will do much to shape opinion as to their probable policy in office. Whether last week's speech to the North Carolina bankers by the Controller of the Currency, who will be ex-officio a member of the Federal Reserve Board, can be said to have contributed to such public confidence, may reasonably be doubted. Mr. Williams had some sensible things to say regarding the real purpose of the new plan of centralized banking. He pointed out its anticipated effect in rendering impossible, hereafter, just the kind of panics with which we have habitually been confronted at the end of our cycles of prosperity, and indicated clearly what it can accomplish and what it cannot accomplish.

Unfortunately, this was not the real burden of the speech. The financial organism which centred in Wall Street, during the days of mad promotion and speculation, a dozen years ago, made itself, through its excesses of the day, a proper target for vigorous public condemnation and for effectual restrictive legislation. Sober critics pointed out the evil and attacked the practices—with eventual success in stopping their continuance—at the time when they were in full tide of seeming success, and when it was not so popular a task to assail such abuses as it is to-day, when every street-corner gossip has his own verdict of censure to set forth to his admiring associates. But those who fought the battles of 1901 and 1902 against the arrogance of the Captains are the very people who have been most impressed with impatience, verging on contempt, at the wild vituperations and wilder superstitions in which the La Follettes, the Lindberghs, the Henrys, and their like, have been indulging, now that they find the public ready to accept whatever any one has to say in denunciation of the Money Power.

This is the reason why the Controller of the Currency's talk at Raleigh about "the walled city from which the barons levied tribute" (meaning New York); about the "sudden swoop of feudal magnates" who could at will "precipitate a panic," and about this unhappy United States which "bleeds and sweats to the big financial centres," was something to be received with emphatic disapproval. One would not need to dispute the allegations of a vicious system, in order to feel very positive objection to this rodomontade, proceeding, in a discussion of a great economic experiment, from a public official who will be on the national board to conduct it.

We are living, as every one knows, in times when extravagance of ideas on the one hand, and extravagance of speech on the other, have grown to be pretty much the order of the day. But people in charge of delicate and important experiments in public affairs are subject to particular requirements as to sobriety of speech and serious mastery of the subject. This latest incident compels the inquiry, whether it might not at least be more becoming, if men entrusted with great public responsibilities of this sort were to discuss such problems in the style of Walter Bagehot, and not of Thomas W. Lawson.

The Masters of Modern French Criticism

BY

IRVING BABBITT

A Survey of the Intellectual Life of France During the Nineteenth Century.

"One of the triumphant achievements of American scholarship and criticism."—Professor EDWIN MIMS in *South Atlantic Quarterly.*

"Un livre de premier ordre."—D. MORNET in *La Revue du Mois.*

"Un livre exceptionnellement remarquable . . . très docte, infiniment agréable, débordant d'idées, dont beaucoup sont frappantes de justesse."—A. FILON in *Le Journal des Débats.*

"Le livre est d'un lettré et d'un penseur qui organise en ordre lumineux une masse imposante de matériaux. C'est aussi l'œuvre d'un écrivain vigoureux et fin qui trouve le mot juste, manie habilement les nuances, use de distinctions délicates et fortes, enferme la pensée dans des traits alertes et pittoresques, marqués à l'occasion d'une veine d'humour ou égayés d'une anecdote significative. La logique française et la verdeur anglo-saxonne s'y unissent en une heureuse harmonie."—C. CESTRE in *La Revue internationale de L'Enseignement.*

"Der hochbegabte Amerikaner I. Babbitt, dessen 'The New Laokoon' auch in der deutschen Kritik lebhafte Anerkennung gefunden hat, bietet in seinem neuen Buche eine Reihe gedankenstrotzender Essays über französische Kritiker von Frau von Staël bis Brunetière. . . . Der Hauptwert dieses prachtvollen Buches liegt in dem kühnen Idealismus des Verfassers, der mit überlegenem Geist der verhängnisvollen modernen Sucht, den Menschen als willenlos determiniertes Naturprodukt aufzufassen, den Fehdehandschuh hinzuschleudern wagt."—O. HACHTMANN in *Literarisches Zentralblatt.*

Social Forces in England and America

By H. G. WELLS.

"In this book Mr. Wells has evidently put his house in order. He has set forth clearly and consecutively his thoughts upon human society, what it is now and what it promises to be, or may, by careful guidance, succeed in becoming. He has come to certain decisions and has cleared away a lot of vague fancies."—*N. Y. Times.* ***$2.00 net.***

A BRIEF STATEMENT OF THE WORK OF THE OPEN COURT PUBLISHING CO

If one asked for a brief description of the work of the Open Court Publishing Company, one would probably get the answer that the Company publishes books and articles on Science, Religion, and Philosophy. That is not quite exact; for that describes the ideal to which the Open Court Publishing Company is continually striving rather than the actual work it is doing. The ideal is Religion on a firm basis of Science, a Science of Philosophy, and a Philosophy of Science: the only path which can lead to this great ideal synthesis is the detailed and careful study of sciences, religions, and philosophies.

It is this ideal that prompted the late Mr. Edward Carl Hegeler, of La Salle, Illinois, to found a company to publish books with the object of establishing ethics and religion upon a scientific basis. Such ideals are as old as philosophy itself. Among modern philosophies, that founded by Comte tried, probably in the most explicit fashion of all, to found a religion on the basis of positive science; and at one time it appeared likely to have a lasting success. But it is now quite plain that no philosophy which hopes to be permanent can neglect history or put itself into uncritical opposition to the systems that have for centuries expressed some of the dearest and highest aspirations of mankind. It is unprejudiced and fearless historical and critical investigation—non-sectarian in the widest sense—in both religion, science, and philosophy, that must go before any satisfactory synthesis. This is a great part of the work of the Open Court Company.

SOME IMPORTANT RECENT BOOKS OF THE OPEN COURT PUBLISHING CO.

PROBLEMS OF SCIENCE. By Federigo Enriques. Authorized translation by Katharine Royce; with an introduction by Josiah Royce.

The author is professor of projective geometry and geometric drawing in the University of Bologna, and one of the most conspicuous of contemporary Italian scientists. Cloth, 375 pages, $2.50 net.

THE PRINCIPLE OF RELATIVITY, in the Light of the Philosophy of Science. By Paul Carus.

The author recognizes the correctness of the Principle of Relativity, but criticises the exaggerated statements which have done much to confuse students and to mystify the reading public. Cloth, 165 pages, $1.00.

THE MECHANISTIC PRINCIPLE AND THE NON-MECHANICAL. By Paul Carus.

The essential feature of all higher organic life is the appearance of purpose, and the task which the author of the book sets himself is a careful investigation of the problem how purpose is possible in a mechanically regulated world. Cloth, 123 pages, $1.00.

A HISTORY OF JAPANESE MATHEMATICS. By David Eugene Smith and Yoshio Mikami.

The scientific attainments of Japan during the past four centuries is one of the marvels of history. This book will show to the West the nature of mathematics indigenous to Japan and serve to strengthen the bonds that unite the scholars of the world. The book is full of very interesting material even for the non-mathematical reader. Illustrated, Cloth, 300 pages, $3.00 net.

ALGEBRA OF LOGIC. By Louis Couturat. Authorized translation by L. G. Robinson; with a preface by Philip E. B. Jourdain, of Cambridge.

"Couturat's treatise is fitted to serve as an introduction to the study of mathematical logic. Mr. Jourdain's preface is of an historical character and gives a very thorough account of the development of the subject and the various phases of it especially emphasized by each of its different representatives." Cloth, 98 pp. $1.50.

NIETZSCHE, and Other Exponents of Individualism. By Paul Carus.

"A two-fold purpose is served by this book—a study of philosophical anarchism and an interpretation of Nietzsche." — *Brooklyn Eagle.* "A brilliant refutation of the mad philosopher's doctrine."—*Toronto Globe.* "This exposition of Nietzsche's life and philosophy is probably both truthful and fair, and as nearly just as any that can be made."—*Chicago Daily News.* Cloth, 150 pages, $1.00 net.

HARPER & BROTHERS

Important Appleton Books

One of the Strongest Pleas for the Home that Has Yet Appeared

LOVE AND THE SOUL MAKER

By MARY AUSTIN, Author of "The Land of Little Rain," etc.

The author of this book looks upon love from a new point of view. Thinking men and women to-day are being brought face to face with problems that few have realized would ever exist, and Mrs. Austin shows how necessary a thorough understanding of the problems of love and marriage are to those who look forward to a future in which the home will become first in the interest of the individual and the nation. This book is bound to be one of the most discussed books of the season.

$1.50 net. Postage extra.

WITHIN PRISON WALLS

By Thomas Mott Osborne

This book contains an absolutely faithful account of the experiences of the author as a voluntary exile in Auburn Prison. It states the reasons for making the experiment and studying prison conditions from within instead of without, and it is a sympathetic document full of humor and pathos, unusual revelations, and suggestive of needed improvements. *$1.50 net. Postage extra.*

HAIL AND FAREWELL "Ave," "Salve," and "Vale" By George Moore

In these three volumes the author brings us into very close touch with many men and women who have helped to make the history of art and literature during the last decade. "It is a wonderful tour de force in literary art, with scarcely a parallel since Rousseau's Confessions."—*North American, Philadelphia.*

Cloth, gilt top. $1.75 each volume. Postage extra.

Vacation Camping for Girls

By Jeanette Marks

A book for the outdoor girl that tells everything one need to know about camp life. It devotes several chapters to physical training out of doors and after creating an appetite for the delights of camp life it tells in detail the very methods to follow to satisfy it.

Send for descriptive circular

16 pages of pictures. $1.00 net.

FORTY YEARS OF IT

By Brand Whitlock

This is one of the most sympathetic, virile, and complete autobiographies that has appeared in recent years. "It is an intensely graphic portrayal of American life and its social upheavals as viewed by a sturdy man who is not afraid to speak and write as he thinks."—*Boston Transcript. Cloth. $1.50 net. Postage extra.*

BEATING BACK

By Al Jennings and Will Irwin

The startling autobiography of Al Jennings, who was at one time one of the most daring bandits and train robbers that ever infested the Southwest. This is a frank, straightforward account of his life as a train robber, his imprisonment and pardon, and his final determination to "come back." His success is strongly evidenced in the fact that he is now candidate for Governor of Oklahoma, his native State. *Illustrated by Charles M. Russell, and with photographs. $1.50 net. Postage extra.*

THE LIFE OF ST. AUGUSTIN

By Louis Bertrand

A splendid, clear picture of the life of St. Augustin throughout his boyhood, youth, and manhood. The author also describes faithfully the cities of Rome, Milan, Carthage in the early days of the Church, presenting many new, unfamiliar facts in the history of that period. *8vo. Cloth, gilt top. $3.00 net. Postage extra.*

PSYCHOLOGY IN DAILY LIFE

By Carl Emil Seashore

Professor of Psychology and Dean of the Graduate College, University of Iowa.

A clear, non-technical interpretation of the relation of psychology to everyday affairs. It offers an excellent method for cultivating a good memory and for obtaining the maximum mental and physical efficiency. "It may easily become as fascinating as a novel."—*The Epworth Herald.* *$1.50 net. Postage extra.*

D. Appleton and Company, Publishers, New York

NEW BOOKS OF TRAVEL

Hunting in the Arctic and Alaska

By E. Marshall Scull,
Author of
"A Bit of Wild Africa," etc.

Mr. Marshall Scull tells the story of an adventurous big game hunt, of which the trophies included specimens of practically all the game to be met with in Alaska, the western Arctic Ocean, and the shores of Siberia. Notable as an account of the first successful hunting expedition to the northeastern shores of Siberia.

Crown octavo. 320 *pages with* 106 *valuable illustrations and* 10 *new maps.* $2.50 *net.*

From the Congo to the Niger and the Nile

By H. H. Adolf Friedrich,
Duke of Mecklenburg

An account of the German Central African Expedition of 1910-1911—one of the most remarkable of all African expeditions in point of results. The description of the native tribes, flora, and fauna has an interest no less absorbing because of its permanent value.

2 *vols. Cloth.* 526 *pages,* 514 *illustrations.* $9.00 *net.*

The Story of Mexico

By Charles Morris,
Author of "New Century History of the United States," etc.

"A timely and comprehensive work."
—*New York Sun.*

Includes a history of this romantic and beautiful land, with a graphic description of its civilization and its magnificent resources. The author deals frankly with the present unrest of Mexico and its causes.

Octavo. Cloth. 400 *pages,* 100 *illustrations.* $1.20 *net.*

Italy in North Africa

By W. K. McClure
London "Times" Correspondent

A full, fair account of Italy's war for a desert. The diplomatic history leading up to the occupation of Tripoli, together with a careful review of the campaign, precedes interesting chapters on the Italian army, the Arabs, and the Turks.

67 *half-tone illustrations. Five maps and a full index. Crown octavo. Cloth.* $2.50 *net.*

The Story of The Panama Canal

By Logan Marshall

Adopted by the Sheffield Scientific School of Yale University, for the course in Physical and Commercial Geography, because of the clearness and completeness with which it covers the history of the Isthmus and the building of the canal.

Appendix. Numerous illustrations and maps. 12mo. Cloth. $1.00 *net.*

PROSE NARRATIVES

Edited by Chauncey W. Wells
Associate Professor of English in the University of California

A volume supplying more than 20 models for the writing of simple narration. It is a departure from the ordinary manual in that it excludes stories. It covers, however, a wide range of history, legend, and autobiography, from the Bible and the Sagas, Herodotus and Pliny, Benvenuto Cellini, Defoe, and Franklin, Macaulay, Carlyle, Froude, and Stevenson. An appendix gives supplementary readings with the names of the more available editions.

12mo, 301 pages, $1.25.

NEW LANE BOOKS

The New Optimism

By H. DeVere Stacpoole

Author of "The Children of the Sea," "The Blue Lagoon," etc. 12mo. Cloth, $1.00 net.

Dr. Stacpoole conjectures as to the heights to which man may yet climb, now that he has developed a mind that thinks collectively instead of individually. He argues in a strain which is in striking contrast to the lamentations of some of his contemporaries.

What Sculpture to See in Europe

By Mrs. L. M. Bryant

Author of "What Pictures to See in Europe in One Summer," "Pictures and Their Painters," etc. Over 150 Illustrations. Cloth, $1.35 net.

A concise guide to the best sculpture in Europe. The most representative pieces, both interior and exterior, have been chosen in the cities generally visited by travelers. The book is invaluable as a guide to European sculpture.

"A Masterful Book by the Most Significant American Novelist"

THE TITAN

By Theodore Dreiser

Author of "Sister Carrie," "Jennie Gerhardt," "The Financier." Etc.

"The Titan" is the story of a Mirabeau of finance—a born leader, unquenchably desirous of the applause of both men and women, and uncannily endowed with the faculty for attracting their loyalty. "Frank Cowperwood," genius of finance, protagonist of great business mergers, art patron, and light-o'-love, is the incurable individualist who has been produced by the business conditions of the last two decades, a man we condemn, yet, for his hugeness, must admire.

Cloth. 552 pages. $1.40 net.

The Best Selling Novel of the Year

The Fortunate Youth

William J. Locke's Glorious Success

"The whole story is as light, as joyous, as iridescent as a soap bubble; it glows, radiant with the very spirit of youth, of joy, and of adventure. But it has its philosophy, too. It is a charming tale, one that only Mr. Locke could write."—*New York Times.*

Timely New Macmillan Books for Reading

"One of the most famous of modern debates."

SOCIALISM

PROMISE or MENACE?

A New Book by

Morris Hillquit, LL.B.
Author of "History of Socialism in the United States," "Socialism in Theory and Practice," etc.

A N D

John Augustine Ryan, D.D.
Professor of Moral Theology and Economics, St. Paul Seminary; author of "A Living Wage," etc.

The chapters which constitute this book originally appeared in "Everybody's Magazine." The large and generous interest with which the discussion was received by the reading public has called for its reproduction with slight revisions, in permanent book form.

The novel feature of this work is that for the first time the opposing arguments are presented with the greatest completeness and highest competence, and side by side, in a form available for the immediate comparison of argument.

The object of the discussion is to present to the reading public both sides of a much-mooted social problem, and to draw attention to the promise or menace of a movement which is yearly growing in influence and extension. ***Cloth, 12mo, $1.25 net.***

Mr. Walling's New Book

Progressivism and After. By WILLIAM ENGLISH WALLING. A forceful survey of radical political progress with special reference to the practical, economic standpoint. ***$1.50 net***

Soul-Stirring Romance of Historical Interest

The Story of Phaedrus: How We Got the Greatest Book in the World. By NEWELL DWIGHT HILLIS. A charming romance of unfailing interest with the irresistible appeal which new light throws on life in the early years of the Christian Era. ***Illustrated. $1.25 net***

The Truth About the Philippines

The Philippines: Past and Present. By DEAN C. WORCESTER (Secretary of the Interior, Philippines, 1901-13). A timely, accurate work on conditions in the Philippines by "the one man on earth who knows most about the subject."
Two vols. Richly illustrated. $6.00 net

A Novel of Life, Wit and Humor

Sandy. By the late S. R. CROCKETT, author of "The Stickit Minister," "Patsy," etc. "Full of life, vigor, wit and humor, (the last and) as satisfactory a novel as Mr. Crockett ever wrote; the hero as captivating as his previous attractive heroine, 'Patsy.'"

Mr. Hunter's New Book

Violence and the Labor Movement. By ROBERT HUNTER. A dramatic, historical narrative of the labor conflicts of the last half century presented in vivid and well balanced pictures. ***$1.50 net***

The Development of Humanity

The Childhood of the World. By EDWARD CLODD. A popular work in simple language which tells the story of man's progress from his appearance upon earth to the present day. ***Illustrated. $1.50 net***

The Most Readable Account of Mexico

Mexico: The Wonderland of the South. By W. E. CARSON. A new, revised, enlarged edition, with additional chapters on present conditions, bringing this standard work up to date. "The most authoritative account of Mexico that we have." ***Illustrated. $2.50 net***

The Countryside Manuals

I. **The Suburban Garden Guide.** By PARKER THAYER BARNES. "The best, most compact and handiest of the garden manuals published." ***50 cents net***

II. **Things Mother Used to Make.** By LYDIA MARIA GURNEY. The good, old-fashioned, but ever new recipes for the best products of kitchen cookery.
50 cents net

"The one book that every American should read."

Theodore Roosevelt:—*An Autobiography*

With the return of Col. Roosevelt from the interior wilds of South America, renewed interest is aroused in his own story of his life which has been well described as "An American Standard for Right Living," "a straightforward account of a career which has always stimulated public confidence." Abounding in personal experiences of national interest, personal opinions and doctrines of world-wide significance, absorbing incidents, striking episodes, picturesque situations, this exceptional work from beginning to end is "a display of unbroken brilliance" which makes a special appeal to American citizenship both private and public. ***Decorated cover. Gilt top. Richly illustrated. Octavo. $2.50 net; postpaid, $2.75***

The Nation.

NEW YORK, THURSDAY, MAY 28, 1914.

Summary of the News

The statement issued by Justice Lamar on Tuesday sums up fairly accurately the status of the Mexican mediation proceedings: "We have begun to discuss the terms and details of a plan of pacification. On a number of them we find ourselves in substantial agreement. Others are still under discussion, and as to them there has been no disagreement." The most vital part of the statement is in the last sentence: so long as active disagreement is avoided there are good grounds to hope for a favorable settlement. The crux of the matter is the land question, it being understood that the American delegates are instructed to insist on a guarantee in some form that the land system will be reorganized. A statement on the matter was expected from the Mexican delegates on Tuesday, but at the last minute the information was given out that they considered it would be unwise at the present juncture to issue any statement. Efforts were made last week to induce Gen. Carranza to participate in the mediation proceedings, but without result, although it is stated that at Washington some hope is still expressed that he may eventually join in the negotiations.

The Constitutionalists advanced another step towards Mexico City by the capture of Saltillo on May 20. The Federal garrison of 10,000 men, under Gen. Maas and Gen. De Moure, evacuated the city and retreated towards San Luis Potosi. Villa's forces have not followed up the retreating Federals, but are preparing to attack Zacatecas. Admiral Badger has reported that a large Constitutionalist force has also landed in Vera Cruz state, and it is understood that another force is marching south from Tuxpan. These movements are thought to be preparatory to a general advance on Mexico City, and also for the purpose of cutting off Huerta's retreat from the city to Vera Cruz. Huerta's position is rendered the more precarious in that Zapata, the rebel leader, is at Cuernavaca, within striking distance of Mexico City, and has with him a force sufficiently large to block the railway to Puerto Mexico.

Since Col. Roosevelt's return from South America the air has been full of rumors concerning his future political activities. The report that he would accept the nomination for Governor of New York State has been disposed of by his own emphatic denials, and speculation since then has concentrated on the Presidential prospects for 1916. There has been much talk of a reunion of the Republicans and Progressives, but the Progressive attitude does not appear to be particularly conciliatory, if we may judge by the dictum of Representative Hinebaugh, of Illinois, chairman of the Progressive Congressional committee: "The Progressive party will nominate Mr. Roosevelt as its Presidential candidate in 1916. If the Progressives of the Republican party are in control of that organization they will endorse Mr. Roosevelt."

The jury in the second trial of Charles Becker, the New York police lieutenant, who was charged with having instigated the murder of the gambler Rosenthal on July 16, 1912, returned a verdict of guilty. The case will again be appealed.

We comment in our financial columns on the testimony of Mr. Mellen in the New Haven investigation, in the course of which he gave evidence indicating that the late J. P. Morgan concealed from him, the president of the company, facts which he should have known. A statement was issued by Mr. Morgan on Monday denying Mr. Mellen's charges and explaining the part which his father had played in the affairs of the New Haven.

A statement made by Mr. Asquith in the House of Commons on Monday dispelled the impression which has gained ground recently that Great Britain would reconsider her decision not to be officially represented at the San Francisco Exposition. The Premier declared that in view of the representations made by a deputation of members of Parliament on May 5 the Government had carefully reconsidered the question, but had come to the conclusion that it must adhere to its original determination.

The past week has seen remarkable demonstrations of militant hysteria in England. On Thursday of last week a ridiculous attempt to force a way into Buckingham Palace resulted in the arrest of several of the women, including Mrs. Pankhurst and her daughter, Sylvia. In retaliation for this more pictures were slashed in the National Gallery and at the Royal Academy, and a demonstration was made at a theatre where the King and Queen were attending a performance. On several recent occasions only the efficiency of the police has saved the women from severe treatment at the hands of the public.

The week has been a stormy one in the House of Commons, in which the final stages of the Home Rule debate have been enacted. On Thursday of last week the session was adjourned by the Speaker, on account of the uproar created by the rank and file of the Unionist party, who were incensed by Mr. Asquith's refusal to disclose the terms of the bill amending the Home Rule bill, which he had undertaken to introduce. On Monday the final reading of the Home Rule bill was passed by a majority of 77 without debate, Mr. Bonar Law refusing to take part in what he characterized as "a contemptible farce." Mr. Asquith, at the Speaker's request, informed the House as to the Government's plans for the amendment bill. Failing any agreement at the time of the introduction of the Home Rule bill in the House of Lords, he said, the amending bill would embody in substance the proposals outlined by him on March 9 for the partial exclusion of Ulster. As we write, no disturbances have taken place in Ireland, but the situation is tense, and there is a general feeling of anxiety as to what the effect of the passage of the bill will be.

Two seats have been gained by the Unionists at by-elections recently. On May 20 the interposition of a labor candidate caused the defeat of the Liberal at northeast Derbyshire; and on May 22 Mr. Masterman, who was recently promoted from Financial Secretary to the Treasury to a seat in the Cabinet as Chancellor of the Duchy of Lancaster, was defeated at Ipswich by a plurality of 532.

The source from which the British Admiralty will obtain the oil for use as fuel on its new battleships, concerning which Mr. Winston Churchill has been frequently questioned, became known last week. The Admiralty proposes to obtain control of the Anglo-Persian Oil Company, which has a concession for nearly the whole of Persia. Parliament will be asked to subscribe for the purpose $110,000,000 of new capital.

The Swedish Defence bill, which was the cause of the resignation of the last Government, was introduced in the Riksdag on May 23. It provides for an extension of the term of military service and for the construction of eight new battleships and sixteen destroyers, to pay for which there will be a special levy of $20,800,000.

The difficulties of Prince William of Wied, the new Mpret of Albania, with his turbulent subjects are multiplying. Following his resignation as Minister of War, Essad Pasha was accused of being at the head of a revolt against the Mpret and was banished, sailing on Wednesday of last week on an Italian steamship for Brindisi. His deportation was the signal for a revolt on the part of his followers, who prepared to attack Durazzo, after defeating a force of Government troops. The Mpret and his family took refuge on an Italian warship on Friday, but returned to the palace on the following day on the insurgents requesting permission to present a petition. The International Committee of Control is attempting to treat with the insurgents with a view to adjusting matters, but the position of the Mpret is regarded as unstable.

The deaths of the week include: William Aldis Wright, May 19; Lieut.-Col. Carlile P. Porter, Dr. Stephen Townsend, May 20; Rudolf Tombo, jr., Sir Francis Henry Laking, May 21; Sir Thomas C. Rayner, May 22; Senator William O'Connell Bradley, May 23; Gen. Clinton Dugald MacDougall, Rev. Jerome Daugherty, May 24; Francis Kossuth, Charles Goodwin Bennett, Sir Francis Flint Belsey, May 25; Jacob A. Riis, May 26.

The Week

The Wilson Administration has been attacked, and not without some justice, for its lack of intelligent and exact information about Mexican affairs. But in one matter it has not been misled. This is the part which the land question has played in recent Mexican revolutions. Madero put it in the forefront of his grievances, and had it on his programme of reforms after he had turned out Porfirio Diaz. That Madero failed miserably in satisfying the hopes he aroused, does not alter the fact that those hopes existed, and still exist, and that some attempt will have to be made to meet the demands for a breaking-up of the large semi-feudal estates in Mexico. Nevertheless, it is impossible to read the President's entire interview on the Mexican question, in last week's *Saturday Evening Post*, without doubts of his wisdom in giving it. He has declined to speak on Decoration Day, on the sensible plea that this is no time for him to be discussing in public the matters on which he would be expected to touch. And in his unburdening of his heart about Mexico, he gave occasion for his friends to pause as well as to admire. They might well fear that, at times, he was dealing with words rather than realities. Yet no one can fail to perceive, if not to applaud, the fine idealism of the man. In putting first the motives of justice and sympathy in our attitude towards a much-suffering people, he has indicated a policy and raised a standard of the highest honor both to himself and to his country.

Interest in the Supreme Court's decision on Monday regarding charges made by railways for carrying freight over "tap lines" connecting industrial plants with the railway's own line, arises chiefly from the bearing of the decision on the Interstate Commerce Commission's conclusion in the rate case. The Commission last January ruled that "pro-rating" transportation charges over such connecting lines was unlawful, because delivery to such a line was delivery to the industrial plant with which it connected. On this ground, it had been recognized as possible that the Commission might reckon the savings, made through abolition of such special charges, as part of the grant of needed increase in railway revenue. The Supreme Court, however, declares of certain "tap lines," which were parties to an older suit, that they are really common carriers, and as much entitled to "pro-rating," on through freight, as any other connecting railway. But it is not at all clear how far this decision will apply to the "tap lines" discussed by the Commission last January. Commissioner Harlan's opinion, in that matter, pointed out that some of the connecting lines in question had no locomotives of their own, and that transportation was supplied by the railways; that in others, the industrial line owned no physical property at all, but that the railway over which the freight of the industry passed performed free of charge the service on the "tap line." Apparently, the character and actual ownership of the "tap-line" and its equipment are still pertinent considerations; and the Supreme Court's opinion is careful to point out that the right and duty remain to the Commission of determining if, under the circumstances of any given cases, "the divisions of joint rates are such as to amount to rebates or discriminations."

Although Representative Henry declared last week that the anti-Trust bills would be so amended as completely to exempt labor unions from their operation, he admitted that he was not authorized to speak for the President on that subject. But Mr. Wilson could not, without stultifying himself, sign any bill containing such an amendment. Indeed, the positive statement comes from Washington that the President has notified the American Federation of Labor that he should be compelled to veto the anti-Trust bills if the clauses giving labor unions immunity should be written into them. But Gompers and the other labor leaders are to keep up their fight in Congress. They can, no doubt, make a great deal of trouble; and there will be much demagoguery and dodging and insincerity on the part of members coming up so soon for re-election. But so long as the President stands firm for the principle, the mischief cannot be done. It would be a thing partly tragic, partly comic, if the bills outlawing vicious practices by corporations and bankers and railways had to be vetoed because the labor unions had insisted upon their right to be allowed to indulge in those vicious practices!

The death of Senator Bradley leaves vacant a seat that in all probability would in any case have been filled by a Democrat after the fourth of next March. Bradley was elected to the Senate by a Legislature that had a Democratic majority of eight, a fact that attests at once the relative state of harmony in the two parties in Kentucky in 1908, and his personal popularity. He was a picturesque figure, but it is the political aspect of his death that is of national significance. Even if he had no immediate successor, the Administration forces would be strengthened upon the one measure that is to some extent dividing parties in the Senate, for Bradley was vigorously opposed to the repeal of the tolls-exemption clause. But Kentucky has been forehanded enough, it appears, to pass a law since the adoption of the Seventeenth Amendment continuing the power of the Governor to fill Senatorial vacancies temporarily. Consequently, we may expect the prompt appointment of a Democrat to take the place of almost the only Republican that Kentucky ever sent to the Senate. Nor is it likely that the Democrats will lose the seat thus gained in the popular election this autumn.

The Hon. Joseph G. Cannon fell into his old habit last week of announcing his candidacy for Congress. It has been a trifle of forty years since he began this practice, and only twice in that time has he failed of election. Age cannot wither, nor custom stale, his hankering. But his latest announcement will be received as significant of something more than the assertion of an old habit. It is evident that all the post-mortems that have been held over the Republican party have not convinced him, any more than they have convinced Penrose or Lorimer or Barnes, that the breath is out of its body. Accustomed to smell the battle afar off, these discredited but not discouraged chiefs are beginning to put on their armor, as if the conflict were to be between them and their hereditary foe instead of between that foe and the infant prodigy, the Progressive party. And if returns from primaries and elections of one sort

and another count for anything, the Danville Representative has an excellent fighting chance of returning to his familiar post. Despite a Progressive defection in his district which drew away a third of the Republican vote, he lost his seat in 1912 by less than 800 votes. The return of one-tenth of the Progressives to the Republican ranks would be sufficient to reëlect the former Speaker, and in almost every test since 1912 a far larger proportion of Progressives than this has rejoined the Republican forces.

The victory of Senator Penrose in the Republican primary is not surprising, although the increase in the Republican registration, with the corresponding falling off in that of the Progressives, gave hope that he might be defeated by the return of the latter to their former fold. His majority was more than double that by which Roosevelt carried the Presidential primaries over Taft. At the same time, he was evidently cut by a large number of Republicans, as the vote for Brumbaugh for Governor exceeded his by 40,000 or more. The result is to be ascribed to excellent organization, the lack of an opponent of popular appeal, and the inherent tendency of a Pennsylvania Republican to vote for the regular as against the insurgent. On the face of the election figures of 1912, Penrose's chances in the election are nil. Roosevelt had a plurality of 50,000 over Wilson, and Wilson was ahead of Taft by 120,000. It is hard to see how any voter who balked at Taft could swallow Penrose. But there is no underestimating the force of the protection cry in Pennsylvania, and neither Representative Palmer nor Mr. Pinchot will be certain of defeating their discredited opponent in advance.

It ought not to be necessary to warn intelligent persons that the stories now being so industriously circulated about the militia outrages in Colorado are to be viewed with the utmost skepticism. In regard to the chief accusation, that of the wanton slaughter, and worse than slaughter, of women and children in the Ludlow camp, there is no reason to believe that there is a shred of truth in it. In some cases, the form the story takes is in itself sufficient to stamp it as the result of cumulative distortions of the truth by excited or hysterical narrators. Speaking to Senators Kern, Kenyon, and Martine, says a Washington dispatch, "Mrs. Jolly and Mrs. Thomas declared that mine guards were seen pouring oil on tents in which women and children were sleeping, and later setting fire to the oil-soaked tents." The women and children were not "sleeping in tents," but were hidden in a covered pit under one of them; there is no reason to suppose that the militia had any suspicion that they were there at all. If Mrs. Jolly and Mrs. Thomas, who "acted as nurses after the conflict," are actually spreading this story, it only shows that a person may be very good and kind without having either sound judgment or a well-developed sense of responsibility.

The recent statement by David Jayne Hill that "diplomacy has a technique not only as important as that of the law, but one more complicated and more difficult to acquire," is in line with the proposals made by another ex-Ambassador. Curtis Guild's plan for a diplomatic training school, similar in administration to West Point and Annapolis, may be impracticable; but it rests on a conception of diplomacy as a profession. None are more anxious to have it put on that plane than those who have themselves served in high positions abroad. Originated, as Mr. Guild says, in conference with President Lowell of Harvard, his plan implies that not only ability is wanted, but peculiar training, with a basis of foreign languages and technical knowledge. The fact that the regular promotion of Consuls serves much the same end may be an argument against a special Government school; it is anything but an argument against the view that young men should be encouraged to fit themselves to enter the foreign service, confident of continuance and promotion by merit.

The tendency to ride a free horse to death is exemplified in the demands that are made upon public libraries, or rather public librarians, as bureaus of general information. The woman who requests a recipe for "strudel küchen" is followed by one who wants "books for my husband to get his papers"—naturalization papers? Then there are the curious individuals who wish to know whether any member of the English royal family ever committed suicide, whether Woodrow Wilson ever wrote "The Chinese make better citizens than Poles or Italians," the value of a cent dated 1860, a good profile view of Brig.-Gen. Horace Porter, the value of hat manufactures in the United States, the exact area of Chesapeake Bay, the identification of a certain quotation from an opera, and a list of the leather manufacturers of Cologne. All such inquiries give a new significance to the phrase "working library," which apparently ought to read "working librarian." That the public library and its guardians owe something to the public in the way of furnishing miscellaneous information may be granted, and the marking of metes and bounds to their duty in this regard is as necessary as it is difficult. The ideal would be for librarians to stop with directing the inquirer to the source of the information sought, leaving its actual finding to him as at once a time-saving and an educative process. But this would imply a kind of omniscience in librarians as hard to come by as that with which their questioners tacitly credit them.

Last week's primaries in Oregon for Senator and Governor—the first in which women voted—will scarcely justify Progressive pride in the strength of their State organizations. In 1912, Oregon cast 37,600 votes for Roosevelt, as against 47,064 for Wilson, and 34,673 for Taft. Yet this year's primary registration listed only 6,255 Progressives—compared with the enrolment of 59,986 Democrats and 134,687 Republicans. The women's vote, it may be assumed, would not affect the proportions of the parties except in a way favorable to the Progressives. The Republicans cast over 60 per cent. of their registered vote, and the Democrats and Progressives between 50 and 60, the Governorship being most hotly contested. Apart from this index of party strength, the primary is of chief interest as strengthening a sentiment for the preferential voting system. One of the candidates was nominated on approximately 20 per cent. of his party vote. As the Portland *Oregonian* remarks, the State has now had its primary law ten years without amendment—an unconscionable period for a really progressive commonwealth.

Possibility of anything like the "Guthrie rush" of 1889, or of the recurrence of that picturesque but unpleasing phase of our earlier development—speculation about the course of new railways—seems removed by the Government's action as regards the Alaska road. Along its three possible routes, fourteen town sites have already been picked out, and many more are to be chosen. When the country is opened, lots will be sold to actual settlers at reasonable prices. One kind of speculator is thus definitely provided against—the speculator who is first on the ground for the simple purpose of levying tribute on late-comers who are the real builders of the community. That the faith of men who come with the sincere motive of making homes may be rewarded with a just increment, will still exist as a spur to settlement. How far the Government will go in applying similar principles to the agricultural country adjoining, dependent for its value mainly upon the proximity of markets, remains to be seen.

Canada faces a troublesome question in the arrival of 500 Hindus at Vancouver, and one of great interest to our own West. The answer to it will demand a careful balancing of Imperial and Dominion interests. Out of it may come final settlement of an issue which has been regularly postponed since 1907, when East Indian immigration first began on a large scale. This the Indian Government then undertook to discourage, and an Order-in-Council in Canada excluded any newcomer who arrived otherwise than by a continuous journey—a really effective barrier, as there has been no direct steamship communication between the two countries. This Order has been annulled by Chief Justice Hunter as *ultra vires*, and to obtain time for consideration Canada has temporarily suspended all labor immigration into British Columbia. The nature of the ultimate action seems inevitable, for not the most rabid Imperialist would abandon a "white Canada" policy for a theory of Empire. But the method of evading the dilemma will be instructive to Australia and South Africa, and will be watched on our Coast for its effect on the whole Oriental policy—Canada already being alarmed at the number of Chinese who are entering under a head-tax of $500 each.

The fight for Home Rule, in one form or another, has been going on for seventy-five years. It is thirty years since Gladstone, by making Home Rule an article in the creed of the Liberal party, made an Irish Parliament a political possibility again. A weary path has in the meantime been traversed, and it would be idle to pretend that the controversy has not come to wear new aspects. Consider, for example, the question of Irish land. It was probably the greatest single driving power in the original movement for Home Rule. Absentee landlords, rack-renting, the peasant insecure in his tiny holdings—these were among the bitterest of Ireland's grievances. Home Rule was to give the land back to Irishmen. But it has been virtually given back without Home Rule. A series of Land Acts for Ireland, including a vast scheme of buying out the landlords by Government aid to the tenants, have radically changed the whole situation, and given new hope and prosperity to Irish agriculture. Yet the Home Rule movement had gained such momentum, and still spoke for such a genuine national aspiration, that it could not be killed by kindness. The Irish would represent a permanently discontented element unless they had a chance to administer their own local affairs. Their age-long desire is now about to be granted. The passage on Monday of the Home Rule bill in the House of Commons, for the third time in this Parliament, virtually makes of it law; the labors of O'Connell and Butt and Parnell and Redmond and Gladstone and Campbell-Bannerman and Asquith are crowned—so far as the end can crown the work.

What remains to be done in Parliament with the Home Rule bill seems a rather intricate process. But this is made necessary under the provisions of the Parliament Act. It has already been put into effect with the bill for disestablishing the Welsh Church, and it is to be soon with the Plural Voting bill. These two, with Irish Home Rule, were the chief measures which the Liberals were pledged up to the hilt to pass before the present Parliament was dissolved; and, in order to do it, they were compelled to proceed under the Parliament Act. This makes it necessary to pass a bill three times in exactly the same form. The Lords can reject it twice, but the third time it becomes a law whether they reject or accept it. Yet it must come to the Lords each time in identical language. That is the reason why Mr. Asquith refused to permit in the House any amendment of the Home Rule bill whatever. He had to follow the strict procedure. It is well known, however, that amendment is intended. Two ways are possible. The bill may be amended in the Lords. Then it would go back to the Commons, and if the amendments were there accepted, they would become part of the law; if they were rejected, then the original bill would be put on the statute-books just as it stood. The other way is by a separate amending bill. This, if once through the Commons, could be taken or left by the House of Lords. The probability is, however, that it would be taken. Indeed, this seems the more likely way of throwing additional safeguards about the Protestants of Ulster.

A third Balkan war, over Albania, is not among the probabilities of the immediate future; but within the borders of the newly constituted state the outlook is for a continuous play of civil strife and diplomatic intrigue. Unrest is what the protecting Powers—Austria and Italy—most desire. The erection of a strong government would mean a postponement of hopes cherished at Vienna and Rome. So we are justified in regarding the unfortunate beginning of Prince William's reign as the first of a succession of episodes which will keep the pot boiling without actually causing it to spill over for some time to come. There will be small uprisings and civil wars, plots and counterplots, until the time seems ripe for a decisive stroke either from the north or from across the Adriatic. The elements of possible confusion are almost countless in Albania. Except for the tragic consequences, opera-bouffe would well describe it. A German prince ruling over a Mediterranean people, half-Christian, half-Moslem, under the protection of Powers hostile to each other, having for his Minister of War a rival claimant to the throne, and for the defence of his realm a native gendarmerie under a Dutch military officer—here is a combination that should render Albania a prolific source of news for some time to come.

PLATFORM SOLEMNITIES.

I do not dread so much the vengeance of the people against the party of which I am a humble follower as I do the distrust that will be bred by such an open repudiation of a solemn covenant touching the promises of all political parties and incidentally of representative government. Were it proposed by any man other than the President of the United States, holding the high place he does in the confidence and affections of the people, we should all recoil from it with horror.

To those who entertain any doubt of the exalted character of our political morality at the present time, we commend a thoughtful consideration of these impressive sentences from Senator Walsh's speech on the Panama tolls question. At no previous time in the history of the Republic could anything like this lofty view of the nature of platform pledges have been uttered without provoking a smile. We say nothing of the cynics whose attitude was summed up in the epigram that political platforms, like car platforms, are made not to stand on, but to get in on; what we have in mind is the position of honorable men, dealing in a patriotic spirit with public affairs. The idea that the whole document is to be regarded as a "solemn covenant," every part of which must be held equally sacred with every other—that the violation of any single clause would be an act of perfidy from which every decent man must "recoil with horror"—this idea was virtually unknown in former times, and stamps the present day as one of almost superhuman moral beauty.

In their platform of 1888 the Republicans "demand the reduction of letter postage to one cent per ounce." They carried that election, and had full control of both houses of Congress; but they have done nothing about the matter from that day to this, though they repeated the pledge in 1892. Mr. Walsh, as a good Democrat, may say that this is only what is to be expected of Republicans; but the point is that no human being, of either party, so far as known, has shown any symptoms of "recoiling with horror" from the performance. Moreover, the Democrats have at least as bad a record as the Republicans. In 1896 they declared against "life tenure in the public service" and in favor of "fixed terms of office"—in other words, they declared for the overthrow of the merit system as actually established in the civil service of the United States. But neither as a minority nor as a majority in Congress has the Democratic party, from that day to this, made any attempt to pass a law carrying that declaration into effect. So much for matters not in the centre of the stage; but it would not be difficult to point to bigger things. The plank in the 1864 platform declaring the war a failure, and demanding that a settlement be made by peaceful methods, was, of course, converted into pulp by military events; but long before its destruction had been thus completely effected, ninety-nine Democrats out of a hundred were glad enough to forget it. And the declaration four years later in favor of paying off the bonds in greenbacks was thrown on the scrap-heap in deference, not to the march of events, but to the general growth of sanity and intelligence on the subject. Nobody seems to have realized that such conduct, however rational and even necessary, was infamous or sacrilegious.

And, indeed, much as we dislike to accept a moral rating lower than the best, we have to confess that to our mind practical realities preclude the acceptance of the "solemn covenant" idea of a political platform. Take the particular case at issue. Nobody pretends that the Convention considered the tolls question even for an instant; the platform was read in its expiring moments, after the close of the exhausting struggle over the nomination, and was "adopted with a shout." But, it may be said, the sub-committee of eleven, which drafted the platform, represented the Convention in the matter. If, for the sake of the argument, we grant this, what did the sub-committee do? Senator Walsh says that while the plank was doubtless, as usual, inserted by some one person, it was adopted without objection in the sub-committee. He does not say that any person other than the proposer gave it any thought; he does not say that the fact that a majority of the Democrats in the House had voted against the tolls-exemption was mentioned; above all, he does not say that any consideration whatever was given to the crucial question of whether that exemption was a violation of the Hay-Pauncefote treaty. On the contrary, his statement that it was adopted without objection is virtually a statement that it was adopted without discussion, and that neither the record of the party nor the question of the treaty was brought up at all.

To regard every sentence written in a platform as invested with sacred authority is, therefore, tantamount to turning over to the decision of a few gentlemen sitting around a table, in the heat of a convention gathering, questions which, in the natural course of things, are matter for extensive Congressional debate and investigation; and to accepting that decision as unchangeable, no matter how superficial or thoughtless may have been their consideration of it. What the country is to do, or abstain from doing, during four years, on a large range of questions, is determined without recourse in a few hours, in a wholly haphazard manner, and by men not clothed with the responsibilities of either legislative or executive office.

MR. MELLEN'S TESTIMONY.

It is natural that Mr. Mellen's story of last week, on the inside financial history of the New Haven in the decade which ended with the panic of 1907, should be described as "amazing testimony" and "startling disclosures." Yet his narrative ought not to have caused the least surprise to any one who watched the course of affairs in that strange financial period. On this occasion, as in the life-insurance inquiry of 1905, the real source of interest lies rather in the extraordinary frankness with which one of the participants in the performances of that day unburdens his mind when he gets the opportunity, and in the details which his testimony provides for a background already familiar to intelligent observers.

Mr. Mellen's account of the "humiliating scene" in which, as the New Haven's president, he asked Mr. Morgan why the Westchester purchase should have cost the New Haven $11,155,000, when its tangible value did not exceed $4,000,000, and in which Mr. Morgan, according to Mellen's account, was "abrupt and very severe," and refused the information, has attracted the most attention. One obvious comment on it would have to do with the subservience of the president of a great corporation, in permitting what he declares he knew to be improper use of that corporation's funds. Yet we imagine that a similar

story might be told of a dozen episodes of that period.

Conditions in company finance which made possible the cornering of a $78,000,000 railway stock with borrowed money, by two competing financial autocrats; the using by inside financiers of $25,000,000 subscribed for the Steel Trust underwriting, and its repayment with 200 per cent. cash profit, but without a pretence of accounting; the tossing, to a group of stock-jobbers who had "held up" the Louisville & Nashville property, of ten or twenty millions profit, raised by mortgaging another railway; the demand that shareholders of a $52,000,000 city-railway property, when asked to lease it to a four-mile street-railway line, should "vote for it first and discuss it afterward"; the insistence, in the face of almost unanimous remonstrance by the Steel Corporation's shareholders, that $200,000,000 of its stock should be turned into mortgage bonds; the vote of the directors of a $200,000,000 railway company that their chairman be individually empowered to borrow such money as he should see fit, and "to execute in the name and on behalf of this company a note or notes for the amount so borrowed"—such a state of things, it appears to us, would lead very logically to "abruptness" and "severity" when some one not of the inner circle ventured to ask for a detailed statement of the amounts expended.

These were typical incidents of the times which Wall Street was accustomed to describe as the era of "thinking in hundred millions." It was, in fact, an era of complete infatuation, in which our great financiers had come to believe that the investor's money was theirs, to use as suited them. The old-fashioned notion that the directing of corporations was a trust, for whose proper exercise a strict accounting was the right of the investor, cut a negligible figure in the exploits of the period. If it so happened that investors' interests were a necessary topic of discussion, the public was assured that its welfare depended altogether on control by self-perpetuating directors, and on a capitalization so inflated that nobody could challenge or unseat them.

We are setting forth, in this brief summary of the period, facts which have long been known to every observant reader of the news, and to which Mr. Mellen's testimony merely adds a few typical retrospective details. It is nevertheless particularly instructive that the details should in this case concern a property whose treasury has been emptied and whose investment value has been shaken by the financial experiments of the autocrats. For nothing has come more clearly into view, with the progress of our financial history, than the fact that the judgment of the great financiers regarding the nature of a financial situation was repeatedly as bad, their methods as wasteful, and their use of capital as reckless, as might reasonably have been expected from men who were subject to delusions about American finance not less wild than any which now surround the social and political problems of the day.

It is of the first importance that the public which reads such revelations as those of Mr. Mellen should not lose sight of the fact that the system which made possible these episodes in our company finance has completely broken down. It was bound to do so, from the seeds of destruction which it bore within itself, if not from the active interference of the law. The severe readjustment of 1903 and the panic of 1907 were directly and immediately a consequence of the kind of financiering that prevailed in the New Haven. Had it been possible to resume and continue those financial methods in the whole field of company finance after 1907, the probability is that the system itself would have come to earth in a far more formidable collapse than had yet occurred.

But as a matter of fact, the shattered machinery could not have been reconstructed, unless the delusions of 1901 and 1902 had been again instilled into the brains, not only of the financial autocrats, but of the public at large—which, it should not be forgotten, shared enthusiastically in the imaginations and superstitions of a dozen years ago. Disappearance from the scene of two such leaders as Mr. Harriman and Mr. Morgan was of itself sufficient to break the spell. When Mr. Mellen further testified that, in his judgment, the present troubles of the New Haven are due primarily to Mr. Morgan's death, he might as well have said that only Mr. Morgan's individual force and power had made possible the rash experiments of the preceding decade.

RIGHTS AND DUTIES, THIS SIDE THE MILLENNIUM.

An editorial which appeared in the *Nation* under the title "The Right to Punish" has called forth a letter which we print in another column. Our correspondent appears to approve both the reasoning and the conclusions of our article, but asks whether it would not have been just as well if the summarizing sentence had been changed so as to read: "It is necessary to hold, with clear conviction, without tremor or apology, that the right *to protect society from the criminal* rests on the solid foundation of the highest public expediency."—the words italicized being substituted for the words "to punish" in the original sentence. "Is it clear without apology or tremor," he inquires, "that we ever have the right deliberately, without his consent, to inflict pain on any human being?"

Sincerely as we sympathize with the spirit of our correspondent's letter, thoroughly as we approve the idea of making prison life conduce in all possible ways to the prisoner's own ultimate good, we have to answer the first question in the negative and the second in the affirmative. The point is simply this: If in order to protect society from the criminal—that is, from crime—it is necessary to punish the criminal, to inflict pain or hardship on him, with or without reference to his own reformation, then society has the right so to punish him. Whether this be necessary or not is a question of fact, upon which indeed we may not be able to arrive at absolute certainty, but regarding which we have to act according to the best wisdom we can command. If it should be found possible to have prisons such that every discharged prisoner should look back upon them as "the best thing that ever happened" to him, it would still be a question whether or not the protection of society required that a punitive element should enter into the conduct of those prisons. And that question society would have to answer from the standpoint of its own needs. Supposing, for example, that it might be possible to reform each individual prisoner by giving him a perfectly delightful time during the whole period of his sentence, the question would remain whether this would deter other persons from crime in such degree as was de-

manded by the public welfare. If not, we should be bound, with our eyes open, and "without tremor or apology," to resort to punishment as punishment.

The point is by no means "academic." It is in the highest degree practical. Throughout a large part of present-day humanitarian discussion, not only of punishment, but of all questions relating to vice and crime and personal responsibility, there runs an underlying idea of the relation of society to the individual which must be firmly and fearlessly rejected if we are to have sound thinking and sound action in this whole domain. The root of the error lies in a tacit assumption that society has no right to do anything which in a perfect condition of society would be unnecessary; or, if you please, that it is the duty of society to be perfect, and unless that duty is fulfilled the responsibility for all transgressions of individuals rests on its shoulders and not on theirs. Whether avowed or not, this notion is at the bottom of the contention that when a poor boy becomes a ruffian, or a poor girl adopts a life of shame, it is not they, but society, that must be blamed. There ought to be no such thing as poverty, we are told; and doubtless if the idea of legislative eugenics should grow in strength and acceptance we should likewise be told that society is responsible for the shortcomings of every person, rich or poor, whose parents were unwisely allowed to marry.

The truth is, however, first, that nobody knows that it is practicable to abolish poverty or to establish a high standard of eugenics for the race; secondly, that nobody knows that the accomplishment of either or both of these things would in point of fact put an end to vice and crime; and thirdly, that whatever may be possible in some distant future, society must live in the meanwhile. It cannot live, it cannot make life decent and tolerable for the great mass of its members, otherwise than through supporting by such means as it has actually at command the fundamental institutions of morality and civilization. Of all those means, the most vital and indispensable is the enforcement of the idea of personal responsibility for personal conduct. It is this which operates everywhere and all the time. The overt acts of Governors and Legislatures, of courts and juries, touch but here and there the salient points of human conduct and misconduct. What keeps society whole is the play of character and motive in the millions of individuals composing it. Relax but by a small fraction the pervading sense of individual responsibility, diminish but by a shade the efficacy of that force which strengthens the thousands who are weak or perverse against the manifold temptations that beset them, and the injury will be beyond calculation, and beyond the power of any mere apparatus of reformation to remedy.

EUROPE ON WHO'S WHO IN AMERICA.

Sound literary criticism can hardly flourish on a Hoboken transatlantic pier in the presence of the United States Custom House inspectors. Yet in the case of a leader in criticism like Dr. Georg Brandes, we take it that even a hasty opinion uttered in the face of a battery of newspaper cameras is something more than a happy thought. Until fuller evidence appears to the contrary, we must assume that the eminent Danish critic's judgments on American literature as recorded by the ship-news reporters represent his seasoned belief. It then appears that of contemporary American novelists Jack London holds first place because he is so distinctly American in ideas and spirit; that close to him stand the late Frank Norris and Mr. Upton Sinclair, for the same reasons; and that Edgar Allan Poe is the greatest American poet. This appraisal may differ in detail from the standard verdict upon American literature by experts from abroad. The observant reader will be struck, for instance, with the omission of Walt Whitman, whose vogue among our foreign visitors is enormous. But as a whole, Dr. Brandes speaks quite in the tradition. The roll of fame in American literature drawn up for us by distinguished students from abroad is striking in its inclusion of names that we should hardly look for, and its omission of names that we should expect as a matter of course.

Just what is the American spirit which finds fullest expression in Poe, Jack London, and Frank Norris is rather difficult to define. But all foreign estimates of our literature until recently seem to be based on the assumption that, since we are a young, energetic, and rather barbarous nation, our literature ought to sound the note of youthful freedom from convention, of lust of living, of zest in barbaric conflict and victory. The "raw of life" is something quite appropriate to our genius. Our writers should be like our railways—swift, and disdainful of safety. Europe expected us to be reckless, spontaneous, original. American civilization, being young, ought always to be heretical and in revolt. "Be young, American poet and novelist, let those who will be sober." It sounds condescending, but it was often quite sincere.

Such, one imagines, was the way foreigners always reasoned and still do very frequently. But of late, visitors who land in Hoboken have begun to impose quite a different standard upon us. It resembles the first in being a standard which makes us rub our eyes. But it differs from the first in demanding just the opposite qualities in us. When Mr. H. G. Wells or Mr. Arnold Bennett lands in this country, he tells us that our greatest novelist or poet is some one of whom few of us have heard, but who, in obscurity, has been producing work quite in the spirit of European literature. That is, Messrs. Wells and Bennett, and a growing group of native critics who follow in their steps, congratulate us on the fact that we have outgrown the kindergarten stage of literary appreciation which rejoices in blood-and-thunder adventure or chocolate-cream romance, congratulate us on the rise of novelists who envisage life soberly, objectively, and with the remorseless honesty which characterizes the best realistic literature of Europe. When Dr. Brandes praises Jack London he speaks in the older tradition. When Mr. Bennett praises Theodore Dreiser and Robert Herrick he speaks in the new tradition. Now we are exhorted to remain young. Now we are reminded that we are grown-up, and must act and write accordingly.

Between the two catalogues the ordinary American stands dazed. On the one list Poe and Jack London; on the other Robert Herrick and Theodore Dreiser; on neither apparently is there room for Hawthorne, Mark Twain, William Dean Howells, Edith Wharton. The puzzled citizen is constrained to ask: How if we are not quite so youth-

ful as some foreign critics imagine us to be and yet not so grown up as other foreign critics would have us be? How if we have outgrown the stage where Jack London can be said to express perfectly the American spirit and have not yet reached the stage where we recognize in Mr. Dreiser's experiments in European realism the true expression of that spirit? How if the truest expression of the national spirit is to be found, after all, in the man who combines the American humor, the American optimism, the American shrinking from the dregs of life and character, with a faithful study of the broad realities of the national life and character, of life as it is incorporated in the great mass of ordinary American men and women? Dr. Brandes as an expert in the correlation of literature and life could construct a much more real American type from the pages of "Silas Lapham," "A Modern Instance," "The Lady of the Aroostook," and "A Hazard of New Fortunes," than he will derive from the pages of Jack London on the one hand or Theodore Dreiser on the other. Foreign critics, having urged us to be ourselves, promptly pass over the books in which we have come nearest to showing ourselves as we are.

GOLF "INVASIONS."

American mortification over the inglorious failure of our best amateur golfers to carry off the British championship may be tempered by the reflection that, anyhow, we gave the English a good scare. This was perhaps the most ludicrous part of the whole matter. No one who has read the anticipatory comments of English golfing critics can doubt that the believers in the supremacy of the "British cleek" were in a good deal of a funk. Here was a carefully planned invasion. The Americans were not only sending over their finest golfers, but were applying scientific principles to the game, were taking long weeks of practice, studying every point, exhibiting to the full the national genius for organization. Who was sufficient for these things? This was the alarmed question in English golfing circles when the American invasion "o'er pale Britannia passed." A gallant resistance was undertaken. But the prevailing trepidation was unmistakable; so that the result, with not one American contestant surviving to the last sixteen, is almost as much of a joke on the English as it is on us.

But the joke of jokes is now seen to be the whole theory upon which this American invasion was planned. It was all fatally in the limelight, and accompanied by a blare of trumpets. These means were certain to defeat the end. For not only the public, but the players themselves, were tremendously keyed up nervously by all the preliminary advertising and shouting. Their every step was dogged by reporters and cameramen. Every game they played, nearly every shot they made, was gasped at and exclaimed over and duly recorded. Moreover, nearly all the best American players engaged themselves to cable thrilling descriptions of the championship matches, including their own sensations. Thus their tension was in every way made as great as possible. When Travers stepped to the tee a week ago last Monday he felt in every fibre the concentrated gaze of the world upon him. Is it any wonder that he played like a duffer? Could there have been, in fact, a more ingenious method devised to put our golfers off their game than to have surrounded them for all these weeks with an atmosphere of clamor and puffery, and thus made them—what every experienced golfer knows to be deadly—intensely self-conscious?

Only contrast what happened this year with what took place in the 1913 amateur championship in England. Then we had a player entered of whom few in this country had ever heard. He quietly slipped off his ship and, almost without any practice, began playing in the tournament. And this American, Heinrich Schmidt, came very near winning. He went to the semi-finals, where Hilton beat him only on the nineteenth hole. But Schmidt went over unheralded. When we began to read of his beating Englishman after Englishman, people were everywhere asking, "Who on earth is Schmidt?" We were conducting no "invasion" that year. A sturdy young golfer was simply let alone to do his best, his nerves not fluttered by loud thundering in the index, and his fingers left to grip his clubs instead of a pen.

It is not pretended that the self-defeating methods of our golf invasion of England tell the whole story of the American downfall at Sandwich. Some of our men pulled themselves together, notably Evans. He had the bad luck last week to be pitted against a man who, for nine holes, played superhuman golf, against which no man living, amateur or professional, could have stood. That the display was merely one of those magic intervals that sometimes come to a player and seem to make it impossible to miss a shot, is shown by the fact that the wonderful performer was only an ordinary mortal in his next round, where he was beaten. But the possibility of meeting such a man is always before the American who faces the whole British field, and it must enter into any sober calculation of his chances. So must the English custom of making the matches at eighteen holes, instead of our new plan of thirty-six. Evans might have beaten MacFarlane in thirty-six holes; nobody could have beaten him in eighteen.

Our golfers should have learned something from this year's experience. They ought not to repeat the folly of going to hunt the British cup with a brass band. Moreover, they must have discovered that the quality of English golf is higher than ours. England has three or four times as many amateurs in the first flight as we have. It is this fact which makes the chances so heavily against any one man. Two English ex-champions were put out at Sandwich, along with our men, besides several players whose winning was thought quite possible. It is not only that the English have been longer at the game, but their golfers have more skill in adapting their style of play to the modern architecture of the links. This has imposed heavy penalties on a "pulled" ball. It used to be the favorite shot, when malign traps were not placed to catch it; but now the best English players have given it up. Americans, however, still have a weakness for it. James Braid warned Travers against it, when he saw him play at Walton Heath. But at Sandwich Travers was pulling into bunkers on half the holes. And Ouimet actually "hooked" a ball into a trap on another hole than the one he was playing! We fancy that our golfers, returning on their clubs if not with them, will be frank to say that the English can yet teach us several things about the fine points of the game. One lesson is that golf cannot be played as Alfred Jingle played cricket—banging the ball one moment, the next twanging the lyre.

Foreign Correspondence

MR. ASQUITH AS DEBATER AND LEADER—SUSPICIONS OF WEAKNESS—A COMING TEST.

LONDON, May 15.

It would be an interesting study for a psychologist to analyze the popular conceptions of the characteristics of political leaders. Public opinion has a strange way of affixing a label to prominent statesmen before they have advanced far in their career, and then of interpreting all their subsequent actions in such fashion as to conform to this premature judgment.

It is conceivable that the reputation enjoyed by Mr. Asquith as the strong man of modern English politics, wise in judgment and firm in determination, may be a case in point. In some respects, of course, the general opinion of his qualities is beyond the risk of any destructive criticism. When Lloyd George declared that the Prime Minister, in a single short address, had told his audience more of what was meant by the Government's land policy than he had himself been able to do in five speeches of an hour and a half each, he paid a just tribute to his chief's unrivalled gifts of concise and lucid exposition. In parliamentary debate to-day, both Mr. Asquith and Mr. Balfour are unapproachable in their respective styles. The Conservative ex-leader can take an apparently hopeless case and so play upon it with the subtleties of his dialectic as to make the most convincing objections to a certain course seem like irrefragable arguments in its favor. When he has no longer a leg to stand on, he can stand on his head, and can almost persuade his hearers that that is the only proper attitude from which the world should be viewed.

Mr. Asquith, on the other hand, is at his best when such clever minds as Mr. Balfour's have been at work on a great question, confusing the issues or distracting attention from main points to unimportant details. When the House is getting muddled by this artificial complexity, Mr. Asquith will rise from the Treasury bench and, in a few sentences, straighten out the whole tangle. His manner is unemotional and unrhetorical, but his words have such an effect that his conclusion appears not only right, but inevitable.

So far public opinion is agreed, nor is it likely that this estimate of Mr. Asquith's debating power will ever be disturbed. It is with regard to other qualities of his that the final verdict is still in the balance—to be decided, possibly, by the events of the next few months. "Trust Asquith" is the Liberal watchword. "Wait and see" is his own counsel to those who are perplexed by his action or by his inaction. If he seems to be yielding, the retreat is only the preliminary to a victorious advance. If he appears to have foolishly given an advantage to his opponents, they will find presently that they have not gained an opportunity, but have walked into a trap. If you think he has been taken off his guard, his apparent inadvertence will be proved sooner or later to be a consummate stroke of tactics.

An adherent of the accepted Asquith theory would probably quote the most sensational development of this year's army crisis in disproof of any reluctance to admit his hero's grasp of a difficult situation. The Prime Minister's dramatic resolve to take the War Office into his own hands was a coup that was both courageous and prudent. It did much to restore the shaken confidence of his followers, and to check the premature self-congratulations of the Opposition. But the story of his attitude on the Curragh affair as a whole can scarcely be put forward, on reflection, as illustrating either shrewd judgment or prompt decision. The very necessity that sent Mr. Asquith to the War Office was a result, not by any means the first, of the loose rein that he had been giving to Cabinet Ministers whose policy should have been under the control of their chief. It was a revelation of astounding slackness in a body whose members are supposed to be under a discipline that is inconsistent with individual initiative of this wayward kind.

The gun-running in Ulster, bringing to a head in open defiance of the King's authority the rebellion that had long been threatened, might have been expected to arouse the most pusillanimous Prime Minister to the need of making a firm stand for law and order. Mr. Asquith expressed his opinion of these proceedings and of his own duty in his characteristically direct style. "In view," he said, "of the grave and unprecedented outrage in Ulster, the Government will take without delay appropriate steps to vindicate the authority of the law." Three weeks have passed since the "outrage." Nobody has been punished for it, and nobody is going to be punished.

And now in this present week the Prime Minister has announced that the concessions which were originally offered to the Opposition as the price of a "settlement by consent" are to be embodied in an amending bill whether the Opposition is willing to treat or not. The country has waited, and it has seen. It has seen the Government retreating, not inch by inch, but mile by mile, from the unassailable position it held under the Parliament act, and, with all its professions of firmness, answering every insult to its authority by a fresh surrender. How long, some are asking, shall we have to wait before we see the collapse of the Government and of the Liberal party in an electoral débâcle? So far they have been saved by the almost incredible ineptitude of the Unionist official leadership. If Unionists had the wit to put Sir Edward Carson in Bonar Law's place, the Ministry might no longer be able to presume on the continuance of its good fortune.

At any rate, the test that is rapidly approaching is likely to settle, once and for all, whether the Prime Minister has really the stanchness and determination with which he is credited, or whether, as Bismarck said of an earlier British statesman, he is only "a lath painted to look like iron." H. W. H.

AUSTRIA-HUNGARY'S RELATIONS WITH RUSSIA—EFFECTS OF THE NEW MILITARY SERVICE—DEALINGS WITH SERVIA.

VIENNA, May 12.

The scene of political activity in Austria-Hungary has been shifted from Vienna to Budapest, the Hungarian capital, where the meetings of the Austrian and of the Hungarian delegations have been taking place.

The most anxious question disturbing the tranquillity of the country is that of its relations with Russia. It has long been known that they are merely "correct." Count Berchtold referred to the question in his exposé, and in his courtly manner described them as "satisfactory." Count Berchtold is an old aristocrat, a travelled man of the world, and his diplomatic language is ever carefully chosen, his words deliberated upon and smoothed down until they lose the force given to the communiqués issued by his predecessor, Count Aehrenthal, who was a new man, the grandson of one who had risen from the ranks.

Other utterances made by men with no authorization excepting their mandates as delegates plainly showed where the trouble between the two countries lies. The resentment felt in Austria-Hungary at the propaganda carried on so incessantly by Russia on the frontier, among the Ruthenes and the Little Russians, who are Austro-Hungarian subjects, was plainly expressed, and the politicians on the Neva were given to understand that Austria-Hungary was well aware of the machinations of Russian political agents all along her frontier, whether as religious enthusiasts anxious to obtain converts for political purposes, or as spies.

Reference was also made to the relations with Rumania. The news of the two alliances, with Greece and Russia, respectively, has caused considerable annoyance here. A large number of Rumanians have lived quietly and peaceably under the central government, and will continue to do so so long as there is a good understanding between Rumania and Austria-Hungary, but should Rumania accept the overtures made by the Czar, there is likely to be trouble on the frontier.

One of the most important subjects under discussion at the meeting of the delegations has been the results of the introduction of two years' military service in this country. The immediate effect will be a considerable numerical increase in the effective force of the Austro-Hungarian army. Under the three years' service system there was always a much larger number of recruits available than could be trained with the existing machinery. The standard of selection for recruits was thus always kept high, the strongest and healthiest men being chosen. Even under these circumstances a large number were sent home, as unwanted, the men being selected by lot. Under the new system the strength of the Austro-Hungarian army will be increased by a fifth. The new law has already begun to have a beneficent effect, which will be seen more clearly in the course of five or six years, parents being

less inclined to send their children to the gymnasium and university to prepare for a learned profession. This last course was necessary for all young men who wished to avoid the long military service, as only youths who could produce a certificate from their gymnasium or college, showing that they had completed the course, were allowed to serve as "volunteers," that is, for one year, at their own cost.

If the signs of the time may be trusted there will now be a great reaction against the common practice of educating boys for the learned professions. Parents, relieved of the three years' service bogey—for it has long been known that the new service rule would be introduced—send their sons to modern schools and business colleges. Employers have long deplored the present state of affairs, which gives them a man with a degree, but no practical knowledge of business. They want a young man who is an expert at shorthand and typing, not an encyclopædia of useful knowledge. Another factor, which will make parents welcome the change, is the great increase of cases of suicide in this country, especially among boys who have been spurred on to study too hard by parents, who considered that they were ruining their careers by failure to get through the course at a secondary school. Pressure was thus put upon boys who were quite unfitted for study. The diversion of some of the best brain power of the country and of the services of sons of the moneyed classes from the professions to trades and to ordinary business will have an excellent effect on commerce.

The Austrian delegates left Vienna for Budapest, to attend the delegations with instructions from all and sundry to do their best to prevail on the Hungarians to deal with Servia in a neighborly manner, and to attempt to win back the territory lost during the war. It is realized that much toil and money must be put into commercial effort before the situation of supremacy enjoyed ten years ago can return. A large river shipping company published its balance sheet some days ago, from which it was seen that the losses caused by the war and the cholera had been immense. Traffic on the lower part of the Danube was stopped during the war, and afterwards the precautions rendered necessary by the cholera maimed trade for months. The company has, however, now resolved to increase its capital and to put on a number of new boats, to repair its losses, and this is the spirit shown everywhere in the country, just at present, instead of the former attitude of "it can't be helped."

Meanwhile, the news that Servia and Greece have come to a decision that Salonica, the great port for the Levant shall become a free harbor for fifty years causes but slight satisfaction here. Greece is to administer the port, but all Servian goods may be loaded and unloaded without payment of duty, and Servia instead of depending on Austria to take her agricultural products and to purchase her superfluous meat, will seek new markets along the coasts of the Adriatic and the Mediterranean. L. R.

French Watering Places

CURES AND ARCHÆOLOGY.

PARIS, May 9.

Some years ago I noticed in Government statistics that France had 1,026 licensed watering places, each with its thermal or mineral springs. Looking through memories of many years, I found I had seen fifty-six of them. More have been licensed, and I have visited more since. Who has heard of Escouloubre and Carcanières, separated only by the river Aude, in the eastern Pyrenees? Yet they have three establishments between them, furnishing board and lodging "with the use of the waters" for seven francs ($1.20) a day if you eat at the first table, and five ($1) if you eat at the second!

Last year I made an excursion to the magnificent ruins of the château of Beaucens, in the central Pyrenees. The straggling village below is away from the beaten track, and there was no hotel, though I noticed a large building going up. A black-coated man arrived and asked the farmer who was my guide why the "cabins" were not yet up at the spring. This was the primitive provision for bathers, of whom there are a few hundreds every year. It was a professor of the University who came for his annual cure. He told me he took a room with a peasant, and that the sulphate water was immensely strong for sciatica and varicose affections. It has been known through the region ever since the château was built, in the twelfth century; and the new building is a regulation establishment. A company has at last taken hold of the springs, and will try to make money out of them. Medical authorities assure me the waters are really good in a few specific complaints; and the low mountain air—more than 1,500 feet high, however—is good, and the region picturesque up the valley from Lourdes. Why should not over-eating, un-exercising Americans find their way thither some day? But let them first learn if the accommodations are possible to their exacting habits of life.

There is no class of the French population, rich or poor, which does not "take the waters." It came to them with their civilization. It was the universal remedy of the Romans, who tried always to set up their fortified camps where the soldiers could heat and steam away their ails in hot springs.

At Néris, in Auvergne, I have seen cheap bathers packed like sardines into a surviving Roman piscina excavated in the rock above one of the bicarbonate of soda springs—temperature 120 Fahrenheit, with steam never-ending. At Ax, in the eastern Pyrenees, over towards Spain, there is still the "Bassin des Ladres"—a great open-air pool built by St. Louis, King of France, for his crusaders, who came back with what they called leprosy. Light clouds of steam mount up from it; and I saw housewives coming for the hot water ready to their hand. Business clerks, street-car men, school-teachers, domestics, all like to take their yearly few days off at such waters. Day laborers and miners are not shut out altogether, if some of these baths are within reach. I have seen coal miners from Commentry and factory workmen from Montluçon coming to Néris in their Sunday clothes.

Michigan's proud device: "If you want to see a fine peninsula, look around you," might have its answer from France: "If you want to take waters, hot baths, or mineral drinks, all my roads lead to them!" The state licenses these watering places after the Academy of Medicine has certified that the waters are profitable. The region of the locality always reserves their free use for its citizens, and often builds a hospice for them. At Cauterets they have clean beds, good food, and the best medical attention, besides stimulating mountain air, 3,000 feet up, for 40 or 50 cents a day. Dr. Meillon tells me that, with these patients, he never has any trouble in applying such modern methods as weekly blood analysis, which he has great difficulty in proposing to the rich. The poor wish to get all that is going, and so he is able to acquire precious results for medical science; but the rich are afraid he is going to impose some new expense on them for his own purposes. At least, the doctor's sensitiveness makes him think so.

The use of mineral waters at their source, with their radioactivity at its full, and with possibilities of varied applications, is rapidly becoming a separate and fruitful branch of practical medicine. This has been recognized at recent congresses of hydrology; and a special professorship has been organized for it in the medical faculty of Paris. What the life-loving Romans learned by experience, modern science with infinitely wider experience confirms and develops. In England a national movement has begun to bring back the native public to such springs, which were far more frequented in less travelled times. At the German baths you are pretty sure to find Americans, whom I have seen as far afield as the Hercules Baths of Hungary, down by the Iron Gates. But I believe there is no country where hot springs and mineral springs, to soak the outside and rinse the inside, are applied to such a number of the whole population as in France.

To one who has time and is not looking for the cosmopolitan fashion of Vichy and Aix—and who has a little use of the language—half the pleasure of these watering places is in the history that crops up all about and in the mem-

ories of noted men and women who have passed that way. For these watering places are not limited to their "cure," which is universally and mathematically twenty-one days. Nor are they mere resorts of summer travel, such as the mountains and seacoast have. As they are not new discoveries, most of them have a little or a great deal of archæology to show. And, of course, any amount of literature has grown up around them as the centuries pass.

Néris pretends to a visit from the Emperor Nero. The terraces of the soldiers' camp are still plain, overlooking the valley; and here is the pleasant main road along which remains are dug from their officers' villas. There the legions marched, cursing like an Englishman, by Jove, or by Castor and Pollux—"Edepol!"—or by Hercules—"Hercle!"—as we learned in our grammars when Latin was studied. In a rose garden, which has more varieties than the Roseraie at Bagatelle in the Paris Bois de Boulogne, and sends cuttings to New York and New Zealand, I saw a well of one of these rich Roman houses emptied of the débris of the ages. The rubbish must have accumulated until somewhere about A. D. 1000, as nothing was found that could be dated after that time.

This was genuine archæology, for the gardener came on it in enlarging his watering pool. There was nothing of great value, but all was interesting. There was the handle of a jug, with the stamp in Greek letters of the maker, probably a Greek of Marseilles. There was a brooch with the antique safety-pin seen in Gallo-Roman remains of the French National Museum at Saint-Germain, worn by some young officer to fasten his cloak. And there was a long black spoon, like those used by Egyptians to extract aromatic unguents from bottles. At the other end of the town, in an old manor house of the time of Francis I, where the artistes of the little theatre troupe were lodged, I found the garden walks marked off with bits of broken sculpture of the Roman days.

Not all these watering places go back so completely to the time when Gaul was a flourishing Roman province; but very many have their little ruins, and make the most of them. One of the excursions of Luchon is to the quarry where the Column of Trajan, which is at Rome, was cut out of the perpendicular face of the rock. It makes a very striking scene in the midst of a delightful mountain landscape; but I regret to say that last summer I found the village to which the quarry belongs has given permission to begin working it again. From the same rock marbles were taken for the Trianon at Versailles by Louis XIV. At Uriage, just outside the city of Grenoble, in a lovely valley overshadowed by the last western peaks of the French Alps, only vestiges remain to show Roman work. At Plombières, in the Vosges Mountains, with twenty-seven springs whose temperature ranges from 59 to 160 degrees Fahrenheit, the ancient "Etuves Romaines," or public vapor baths, are still in use below the level of the street; and you get to them by going down from the "Bain Stanislas," which has its name from the Duke of Lorraine, whose daughter was the lonely, unloved Queen of Louis XV of France. Napoleon III and Empress Eugénie brought Plombières into fashion again, as they did Vichy; and the French Republic continues, as at Vichy, to control the use and sale of the waters by farming them out to a company.

Most of these places drop out of known history through the dark and middle ages, when people wrote little or else their writings about their doings have not survived or been studied. It would be a great mistake to take it for granted that there was any age when men abstained from the use of such evident and easy healing. Néris has an unbroken record, with remains and testimonials of its cures for every century since Nero and before. The present property rights of the springs at Cauterets are held by seven communes of the valley in virtue of deeds of A. D. 945; and even then one of the conditions which the local sovereign, Raymond I, Count of Bigorre, made to the monks of Saint Savin was that buildings should be forever kept up for the baths. Here Marguerite of Navarre, sister of Francis I, wrote her tales of the Heptameron; and Rabelais came to talk them over. One of the excursions nowadays is to the farm up the hills where Queen Hortense, daughter of the Empress Josephine, rode horseback over the mountains to take the waters.

There are twenty-two springs giving out 400,000 gallons of waters a day, variedly combining sulphur, sodium, and silicon at still more varied, but not extreme, temperatures from cool to warm. Last summer I took the treatment whole and entire, scientific, severe, efficacious, and not unpleasant. At five o'clock in the morning, on an empty stomach, I started by an electric railway for a particular spring a mile and a half up the mountain—drank and gargled. Then I walked on a half-mile to another spring, very powerful—and drank. Then further, to Swedish gymnastics and a douche. In the afternoon there was more drinking and gargling at a spring in another direction, with another good walk to get to it. Walking in high mountain air may help; but the waters do surely work. And this is what Anne of Austria, mother of Louis XIV, said of Forges, and Madame de Sévigné—in plainer speech than is customary nowadays—of the abundant drinking at Vichy.

S. D.

Golf on the Campagna

The only way to see a country is to walk over it, and the only thing in these days that induces most people to walk is golf. The syllogism completes itself: to see the Roman Campagna it is necessary to play golf over it. It is curious how relatively few visitors to Rome have discovered this elementary truth. They may have heard that somewhere on the outskirts of the city is a golf course, but somehow in popular estimation the game, however royal and ancient, does not seem to gibe with the eternity of the city, and golf is assumed to be one of the things that the Romans do not do. I have often, in point of fact, cried aloud my doctrine of the Campagna in a wilderness of superior and archæologically minded persons, recommending them by all means to include their golf sticks among the impedimenta of travel which they intended taking with them to Rome, and have only partially assuaged their scorn and saved my reputation as a person of moderate intelligence by assuring them that the learned head of the British Archæological School may not infrequently be surprised pursuing his accustomed work of excavation on the golf links of the Campagna.

Some two miles from the Porta San Giovanni on the Via Appia Nuova two splendid fir trees stand out against the blue of the sky, forming a landmark that is seen for miles around. They are familiar objects in the foreground of many pictures of the Campagna, and they possess an added claim to distinction in that they figure conspicuously on one side of the monthly medal of the Rome Golf Club, the design for which was made by an American, Mr. Breck, formerly the head of the American School at Rome. A little to the right of the trees is a small cluster of firs, among which nestles an unpretentious-looking farm building, which serves as the clubhouse.

Roughly speaking, the golf courses which are now scattered over the Continent of Europe may be divided into two classes. There is the one which partakes of the nature of a country club, with an elaborate clubhouse, furnished with showers and upholstered lounges and a French chef—and, incidentally, a links; and there is the other, a less prosperous and fashionable institution, which is the pride and joy of a small colony of English and American residents who have banded themselves together to play the game of golf on an alien soil. Of the former class the links at Cannes, where the Grand Duke Michael solaces his exile with the semblance of a court, is an excellent example. There, until a few years ago, when some revolutionary souls of Anglo-Saxon

extraction insisted on a cold collation at a side table, from which they were permitted to rise without the august sanction, the luncheon was a tedious process, which began only when the Grand Duke felt hungry and ended when his Imperial Highness gave the signal to rise. Not the least of the charms of the Roman club is its friendliness and informality. Spaghetti and omelettes are within the resources of the smiling Hebe who presides over the clubhouse, but this fare is usually supplemented by the player himself, who brings with him from the city whatever form of sustenance his heart most desires—and proceeds to share it with his neighbor.

I notice these details of the domestic economy of the clubhouse only to emphasize the fact that the spirit of Roman golf is in tune with the spirit of the Campagna. A modern clubhouse, with stretching lawns and spacious verandas dotted with the white expanse of waiters' shirts, would be anathema. Here is nothing that intrudes on the brooding peace of the Campagna. At the very start one is brought into tune with one's surroundings, so that even a drive topped into the yawning valley that should be carried, yet taxes the capacity of a short driver, may be accepted in a philosophical spirit; for from the first tee is obtained a view of the whole expanse of the Campagna. To the left is the long line of the Aqua Marcia, stretching snake-like across the plain, still bringing water to the city from the Sabine Mountains as it did two thousand years ago, and nearer still two or three great arches stand out in ruin, the remains of the aqueduct that Claudius led from Subiaco. On the other side is the old Appian Way and the tomb of Cæcilia Metella; and, further away, in the middle distance, looms up the great dome of St. Peter's, as ever, dominating the city. Straight ahead, over the plain, are the Alban hills, bright splashes of white marking the Castelli Romani, Tivoli and Frascati and Rocca di Papa; and on a clear day on the far horizon may be descried the gleaming peaks of the snow-capped Apennines.

Along the Appian Way, the new one, which is already old, trudges a procession of wine carts, gayly painted, on each a sleeping man and a wakeful dog, and dotted over the Campagna, and invaluable to us in keeping down the grass of the course, are flocks of sheep with uncannily human Roman noses, and their picturesque but, except from the windward, somewhat unapproachable guardians.

The scene is not to be taken in at a passing glance from a hired carriage, but those who frequent the links at Acqua Santa (the name is from a mineral spring near by which once had a considerable reputation for its curative properties) grow to know and understand it, and even the most irascible golfer, I think, finds himself insensibly mellowed by its influence. Remove the aqueducts and Cæcilia Metella's tomb, the clubhouse and the red flags from the greens, and it is much the same scene that Numa Pompilius looked on when he made his way to the clump of oak trees, not a quarter of a mile from the links, now called the Bosco Sacro, to seek counsel or comfort from the nymph Egeria. It is not surprising to learn from Plutarch that he loved to pass his time "wandering about alone in the sacred groves and lawns," and perhaps, like the irascible golfer, he was assisted by the charm of his surroundings to the exercise of "patience, discipline, and philosophy" (the ideal golfing temperament), which, we are told, were the means by which he still further subdued "a mind naturally disposed to virtue." S. W.

Poetry

THE WHITE SLAVE.

"Sincerely seeking to make the great idea of universal peace triumph."—Nicholas II, August 24, 1898.

With her mock-marriage still the heaven rings:
The holy hope, the spousal flush she bore,
The White Czar's kiss, the acquiescent Kings,
And that bland hypocritic smile they wore
While unplumbed knaves and cynic underlings
To Crœsus sold her privily behind the door.

Dragged in the ruined wake of war aghast,
Mid drums and trumpets smothering her cries,
Her wooed, unwedded, stricken life is passed;
By corpses in the cold moonlight she lies;
With all her soul abhors her lot is cast:
I marvel how she keeps the love-light in her eyes.

What profit tears? What profit countless hands
Held up in prayer? Or hearts that for her ache?
Is not her sale-price known through all the lands?
What others traffic for shall we not take?
The White Slave of the Nations there she stands
And waits—till we betray her for our honor's sake.

STUART P. SHERMAN.

Some Modern Painters

PERSONAL NOTES IN TWO CHAPTERS.

By SIR HENRY LUCY.

CHAPTER I—A PRIVATE ACADEMY BANQUET—HORSLEY—SIR FREDERICK LEIGHTON—FRANK HOLL—HERKOMER.

For some years previous to his death, Sir Henry Tate, the munificent donor of the picture gallery that will perpetuate his name, was little seen in London. He took his rest in his mansion at Streatham Common, with its far-reaching garden and its long glass corridor, filled with hothouse plants leading to his beloved picture storehouse. He, nevertheless, almost up to the last, made a point of coming to town for the private view of the Royal Academy, staying for the banquet, at which, for many years, he was an honored guest. His upright figure, his ruddy countenance, his bright smile, and his cheery manner did not indicate the approach of the end. But he had passed the limits of four score, and was suffering from what Gladstone, talking of his own case, used to call the "incurable disease of old age."

Every year, on the eve of the opening of the Royal Academy, he had his own private and peculiar Academy banquet. It is a far cry to Streatham Common, and a long drive back, more especially for those living in the painters' colony north of St. John's Wood. But the R.A.'s and the A.R.A.'s rarely missed foregathering at Sir Henry's hospitable board. On one occasion only I met Horsley at these pleasant gatherings. It was at the time when his crusade against painting from the nude or anything approaching that state of nature subjected him to good-natured badinage. I happened to sit at dinner between him and Boughton. Leaning across me Boughton said:

"I was afraid, my dear Horsley, when I heard you were going to be on the Hanging Committee, that what I regard as my best picture of this year would be rejected."

"Why?" asked Horsley, puzzled at such an apprehension.

"Well, the scene is winter-time in Holland. I painted a tree in the background and all its limbs are bare."

With the exception of Sir William Agnew, head of the great house of picture dealers, I was the only outsider habitually present at these delightful dinners. It is sad to think how many whom one used to meet there preceded their host on the journey into the silent land. The first to go was Frank Holl, leaving behind him in Sir Henry's gallery some of his earliest work, now the property of the nation. Then Lord Leighton, better known as Sir Freder-

ick, and Sir John Millais dying in the same year, and Stacy Marks, who survived his old friend Leighton not quite two years.

All these artists found their earlier selves reflected in work hanging on the walls of the picture gallery built in the garden at Streatham. Dinner over, the company assembled in the gallery for a smoke. To me nothing was more interesting than to see men like Millais, Leighton, Alma Tadema, Orchardson, Luke Fildes, Frank Dicksee, and Briton Riviere sitting contemplative before pictures painted at a time when they were still struggling into assured position. In the days of its fulness there was no private gallery containing so many masterpieces of modern British art as Sir Henry Tate's. His treasures are now on view in the Picture Palace on the Embankment with which he endowed the nation. What it must have cost him to strip his home walls of familiar and cherished treasures he only knew. But he made the sacrifice, as he did all things, cheerily.

For the first time for many years the Academy banquet of 1894 lacked the grace of the presidency of Sir Frederick Leighton. Stricken by a fell disease, he went off to Algiers, there to seek the absolute rest and quiet which the doctors peremptorily prescribed. A short time before he left I met him in Pall Mall, and was shocked at the altered appearance wrought in a brief interval. Up to within the last twelve months there was a breezy summer-day look about him, refreshing in the dusty world of London. His fresh-colored complexion, with the flowing necktie whose equally bright tint artistically contrasted whilst harmonizing, his bright eye, his brisk walk, his cheery talk, seemed to promise vigorous old age. He was not at this time sixty-five, as the almanac reckons. But the previous twelve months added as many years to his life. Angina pectoris was the dread disease that clutched him at an age when he might have reckoned upon enjoying some years of further opportunity of work. Sir Frederick possibly plumed himself more on his banquet speeches than on any other section of his Academy work. Year after year for seventeen years he was obliged to propose the same round of toasts, no slight task for an orator even of Gladstone's versatility and resource.

It is interesting to recall the fact that at the outset when there was talk of the imminence of a vacancy in the presidential chair of the Academy, the name of Sir Frederick's actual successor was not mentioned. It appeared reasonable that Sir John Millais, who filled the chair at the Academy banquet in the rare absence of the president, might expect to be nominated permanently to occupy it. But Sir John was himself getting stiff in harness, and the prevailing idea among painters pointed to the selection of a younger man. The favorite was Val Prinsep, who, apart from his position in the art world, had some special qualifications for the post. He was rich, well connected, and in personal appearance scarcely less decorative than Sir Frederick Leighton. He had not long been a full Academician. The circumstances attending his election were at the time regarded as significant. J. W. Waterhouse was in the running, and was by many severe critics regarded as standing on a higher level than Prinsep. His being set aside in favor of the latter when there was a vacant chair among the R.A.'s was regarded as part of an organized movement for bringing Prinsep to the front as candidate for the presidency.

In the late 'eighties visitors to the Royal Academy on private-view days would come across a gentleman wheeled round the gallery in a bath chair. It was naturally presumed that this privilege was reserved for a person of high distinction. As a matter of fact, the occupant of the chair was a gentleman in the tombstone line of business, hailing from far-off Aberdeen.

He obtained this exceptional privilege of admission to the Academy as he won another and rarer possession, by sheer persistency. If he wanted a thing he asked for it, and kept on asking till he got it. The importunate widow was, by comparison, an unenterprising person of retiring manner.

The worthy tombstone dealer's greatest triumph through a long and industrious life was the acquisition of a unique picture gallery. His idea was obviously founded on the Uffizi Gallery of Florence.

Aberdeen isn't Florence, nor was Mr. Macdonald's modest mansion a gallery of world-wide renown. But following the line adopted by the directors of the Uffizi Gallery, he met with amazing success. He wrote to an artist offering for his portrait done with his own hand some small sum, varying, I believe, from £15 to £25, according as the work would be in oils or black and white. He admitted the sum was inadequate, but he explained that he was forming the gallery with intent to bequeath it to Aberdeen. He rarely met with refusal, and when he died his collection was as valuable as it was rare. He did not leave it to Aberdeen, but to his wife, who, upon her death, faithfully passed it on to the city.

The last picture Frank Holl had in hand when death interrupted his work was a portrait of John Walter, of the *Times*. He had finished the head, making a striking likeness, but the rest of the canvas was a blank. It had been arranged that the painter was to receive £600 for his work, but as it was not completed the contract fell through. Sir William Agnew, acting in the interests of Holl's family, took the matter in hand, and brought it to a happy conclusion. At his suggestion Herkomer undertook to finish the picture. Mr. Walter gave him a sitting for the hands and figure, and Herkomer filled in the canvas, which thus, in these rare circumstances, embodies the work of two masters of their craft. Mr. Walter cheerfully paid £600, and Herkomer refusing to take a penny for his work, the whole of the sum went to Mrs. Holl. The picture is now in the possession of the chairman of the *Times* proprietorship, grandson of the subject.

I saw Frank Holl only a few weeks before his death at his studio near Swiss Cottage. He was looking a little languid and over-tired, but spoke bravely of the amount of work he had done and had undertaken to do. Nineteen portraits, he told me, he had painted in the year. I suppose he was earning more than any other living English artist. He was a silent man as a rule, never a good talker, but, like every great painter, observant. While painting his portrait of Gladstone he was much impressed by the magnitude of his head and by the pride he took in the size of his hat. He told me that Mr. G. made him feel his bumps, and pointed out how much more developed they were on the left side than the right.

Like other great painters, he seemed an imperfect judge of his own work. I don't think he at all appreciated the merits of his portrait of Lord Spencer. He much preferred Sir Richard Webster's (now Lord Alverstone), which certainly is not among his successes. His house, called "The Three Gables," was one of the handsomest in that street of palaces, Fitzjohn's Avenue. It stood next door but one to Pettie's. I don't know how much it cost to build, but it is no secret that Holl paid the purchase money out of a single year's earnings, and houses of Norman Shaw architecture in Fitzjohn's Avenue are not cheap. In his early days, when he was a painter in Camden Town, he certainly had to battle with poverty, and the sadness of his first canvases was due to personal surroundings.

Herkomer was a marvellous compound of vitality, genius, and variety. Master of the brush, he with equal success etched, engraved, and worked in metal. If he had not been a painter, he would have been a musician or an actor. Passion for the last profession assailed him midway in his career, and, as was usual with a new idea, took possession of him. In its pursuit he made a sacrifice from which most men would shrink. For years he was known in society and in the studios as the possessor of shapely whiskers, beard, and moustache. At a private view of the Academy some

time in the early 'nineties I was looking at a picture when a man came up, shook hands with impressive friendliness, and indicated some points in the canvas I had been studying. I turned and scanned the clean-shaven face without recognition. There was something familiar in the voice, and as he proceeded it flashed upon me that this was Herkomer, like Bottom, but in different fashion, translated. He told me he had written a play to be produced at his house at Bushey in which he would take the part of the principal character. As whiskers, beard, and moustache were incompatible with it, he ruthlessly sacrificed them.

Eighteen months before he died he wrote me a cheery letter on the state of his health:

My Dear Luey:

It is too bad that we have met so seldom, but I was for years not able to go out. Now I am *re-born*, with a *newly made* inside,* and after twenty years' constant suffering feel the perfection of health. I trust, therefore, after the holidays, to see more of you and Lady Luey.

My wife joins me in all good greetings.

Ever Yours,

HUBERT VON HERKOMER.

This reference indicates the performance of a marvellous surgical operation of the kind which restored the French General Gallifet to life after fearful wounds received at Gravelotte. In another letter he told me that, like Sargent, he had resolved to give up the profitable work of portrait-painting and devote himself to landscapes. With that object he drove about the country in his motor car sheltered from the inclemency of coming winter, and made sketches wherever he happed upon an attractive point of view.

During my editorship of the London *Daily News*, Herkomer approached me with a characteristic suggestion. He proposed that he should, anonymously of course, perform the functions of art critic of the paper. For reasons I do not remember the piquant prospect was not realized. Dining with me some eight years later I reminded him of the incident. He wrote on the following day:

Mar. 3, '94.

Dear Mr. Luey:

No, I fear I was rash when I suggested to you the desire to criticise work of art—I *do* speak on art matters, and speech is my form of expression, and I always have opportunities to give vent to my feelings. Besides, signed articles would cripple my hands—speech is different—

Thank you all the same. Certainly send Mrs. Lucy's fan; after the *20th*.

Yours ever,

HUBERT HERKOMER.

I had a most enjoyable evening with you. The fan alluded to was a birthday present to my wife on each blade of which some of the principal painters of the day drew an original sketch in black and white.

*I am a living Wonder of Surgical Art.

Books and Men

MR. HOWELLS'S SHAKESPEAREAN FANTASY.

Mr. Howells, attending an open-air performance of "A Midsummer Night's Dream" at Cheltenham, had his attention attracted by two men who sat in front of him. They were of good height, but one was bulkier than the other, and seemed of a more cheerful disposition. At the end of the scene in which Bottom and his men rehearse their play, the slighter of Mr. Howells's neighbors leaned towards the other, and said:

"It always seemed to me that this was one of the places where you fell down."

"I know it," the stout gentleman acknowledged. "But it always got a laugh."

"From the groundlings."

"From her Grace herself."

"The taste of her Grace was not always to be trusted. In matters of humor, of fun, it was a little gross, no? A little rank?"

"She certainly had a gust for the high-flavored in anecdote; but I don't know that this scene is exactly of that sort. Coom to think of it, Oi——"

"*Coom? Oi?*" the other challenged.

"*Come* and *I*, Oi *mane*," the stout gentleman owned with a laugh. "I do forget my London accent mostly, now that I've got permanently back to my Warwickshire; it's so easy; after a language a dialect is like slippers after tight shoes. . . ."

It does not require a great deal of this conversation to convince Mr. Howells, and the reader of his book, that he is in the presence of the author of "A Midsummer Night's Dream." He is in that presence whichever theory you hold about the authorship, for the other, the melancholy gentleman, turns out to be the ghost of Lord Bacon, as his companion of the Warwickshire dialect is the ghost of Shakespeare.

The travels and adventures of the two Elizabethans with the American are described by Mr. Howells in his new, and slim, volume: "The Seen and Unseen at Stratford-on-Avon" (Harper; $1 net)—a title to which he honestly, and obviously, adds the explanation, "A Fantasy."

Together they go up to Stratford for the Shakespearean festivals, they experience difficulties—especially the ghosts—in finding lodgings, they visit the sights of the town, and talk about many things. They talk about the Baconian theory—a delusion which nearly puts Lord Bacon into a frenzy.

"Paucity of biographical material!" he roars, when Mr. Howells gently suggests that as a reason for the repetition of unpleasant stories about Shakespeare, "let me tell you that there is comparatively a superabundance of material, as Andrew Lang shows in his excellent book on 'Shakespeare, Bacon, and the Great Unknown.'"

And he bangs the open page of the book in his hand. It is a copy of the Encyclopædia Britannica, by the way. Bacon has been reading up on Virgil. He goes on about Shakespeare.

"Far more is known of his life than of the lives of most other famous poets."

"Shakespeare smiled at me," writes Mr. Howells, "with a shrug of helpless protest, as if he would say, 'He *will* do it.'"

Later, Lord Bacon admits that he does not covet all of Shakespeare's fame. "I shouldn't mind having written the sonnets," he says, when their author was not by, "but the 'Venus and Adonis,' the 'Lucrece,' and some of the plays—excuse me! Honestly, would *you* like to have written 'Pericles, Prince of Tyre' or 'A Comedy of Errors'?"

Lord Bacon delivers a considerable address on Virgil. It rather bores Shakespeare, who takes refuge in watching a gardener—they are in the garden of New Place—trying to destroy some wasps. "He watched with a scarcely conscious smile the antics of the much-carbuncled gardener who had been pouring hot water down the wasps' nest in his flower bed and was stiffly capering about with the kettle in his hand to avoid the pursuit of the exasperated insects. As he finally disappeared in the direction of the kitchen, Shakespeare burst into a shout of laughter. . . ."

"May I ask," Bacon demanded, severely, "what is so very diverting in the suggestion I have made? We will not pursue it if you prefer not."

"Oh, it isn't that," Shakespeare choked out, "it's the ga-ga-gardener and the wa-wa-wasps!"

"I hadn't noticed," Bacon returned, with dry offence. "You must excuse my inadvertence," and he moved towards the house.

The ghost accompanies the living man to the Memorial Theatre, to the "Birthplace," and even to the church and grave. He talks most tenderly of his wife and of the son who died when a boy.

In the intervals, when the two great phantoms are absent, Mr. Howells wanders by himself in and about Stratford, engages in a quietly amusing quest for tea, is beset by the wasps which make tea-time in England (when accompanied by jam) an hour of peril, and has other pleasant adventures. The book would have been an agreeable book even if no ghosts had come from the grave—but I am glad they did come.

EDMUND LESTER PEARSON.

News for Bibliophiles

THE HISTORY OF ILLINOIS.

For several years Prof. Solon J. Buck, of the University of Illinois, has been gathering data for a comprehensive bibliography of the history of Illinois. A section of the work, in three parts, has just been published by the State Historical Library. The first, and more interesting, portion is an account of the books of the earlier travellers and writters who visited or described the country now embraced within the limits of the State, from 1763, when the Illinois country was, by the treaty of Paris, transferred from France to Great Britain, down to 1865. The earlier books of the first French explorers are reserved for another volume covering the French régime in Illinois.

The books of Travel and Description in the volume before us are arranged chronologically by date of writing, manuscripts not printed until recent times being entered under their original date. The journal of Col. George Croghan, who was sent out by the Government after the treaty of peace of 1763, is entered under 1765, though it was first printed in a magazine in 1831. It is interesting to note that the first English book containing an account of Illinois printed after the British took possession is Major Robert Rogers's "Concise Account of North America" (London, 1765). The earliest book of real importance was Capt. Philip Pittman's "Present State of the European Settlements on the Mississippi" (London, 1770); Pittman having been an English engineer who was in the Illinois country from 1765 to 1768. It contains a series of interesting maps. Most of the eighteenth century books included in the bibliography are general histories like Mitchell's "Present State of Great Britain and North America" (1767); Entick's "Historical and Geographical Description of the British Empire" (1770), and "The History of the British Dominions in North America" (1773); but there is one other important book by a captain in the British army, who spent several years in the Illinois country. This is Thomas Hutchins's "Topographical Description of Virginia, Pennsylvania, Maryland, and North Carolina," of which two editions were printed in 1778. A very rare pamphlet of fifteen pages, written in French, by a resident of Kaskaskia, "Invitation Sérieuse aux Habitants des Illinois," was printed in Philadelphia in 1772. Only a single copy is known, but should another come into the market, it would probably prove to be the most expensive book on Illinois in print.

In all, down to 1865, six hundred and sixty titles are given, generally with full transcripts and short collations, while numerous re-issues are recorded in the notes. Collectors of books on the Mississippi Valley generally will find this a useful compilation of books by many Western travellers such as Pike, Ashe, Schulz, Melish, Flint, Darby, James, Schoolcraft, Hall, and others who passed through Illinois, including also a large number of emigrants' guidebooks, gazetteers, and general works.

With books it is generally the small pamphlets which are the most difficult to procure. Sabin records a work by George B. Douglas, with the title "Valley of the Mississippi and Customs of the Indians," published in Philadelphia in 1858, which, if ever printed, has totally disappeared. The book is only known from a German edition printed in Düsseldorf, probably in 1858, with the title "Das Illustrierte Mississippithal," which is itself very rare. It is a volume of 431 pages, with eighty colored views, by H. Lewis, a landscape painter of St. Louis, showing cities and points of interest along the whole length of the river. It is generally entered under the name of the artist. While the book was certainly written in the English language, it is doubtful if it was ever printed.

The second part of Professor Buck's volume describes no less than four hundred and fifty-nine county histories, atlases, and local biographical collections.

The third section records various issues of territorial and State laws of Illinois from 1788 to 1913. The introductory matter to each of the three sections is interesting, and there is an elaborate index.

Correspondence

COLUMBUS'S NEW CHARTER.

To the Editor of The Nation:

Sir: In your editorial mention of the new charter of the city of Columbus, O., you say: "It is not easy to see why the principles of non-partisan election and preferential voting should not be applied to the Council as well as to the other elective officers."

As to the first matter, allow me to quote from the charter itself: "The ballots used in all elections shall be without party marks or designations." (Sec. 201.) And again, "Candidates for the office of City Councilman shall be nominated only by a non-partisan primary election." (Sec. 202.) The charter further provides that those candidates receiving the highest number of votes at the primary are to be on the ballot at the regular election, in number not exceeding twice the number of vacancies to be filled. (Sec. 205.) Whether this will secure the ablest Councilmen is a question for experience to answer, but it is certainly non-partisan.

It was felt by the Commission, and almost generally conceded, that to choose three or four men for Council by preferential ballot would so complicate the ballot that it would be a veritable mathematical problem. Perhaps they believed that the problem of choosing five men to conduct the affairs of the city was a heavy enough burden for the electors.

L. S. Paxton.

Columbus, O., May 18.

[Our information was obtained from Columbus newspapers. We are glad to have it corrected by reference to the charter.—Ed. The Nation.]

"THE RIGHT TO PUNISH."

To the Editor of The Nation:

Sir: In your discussion of the right attitude towards malefactors, would it subvert your conclusions if the summarizing sentence were to read: ". . . It is necessary to hold, with clear conviction, without tremor or apology, that the right *to protect society from the criminal* rests on the solid foundation of the highest public expediency"?

"To punish" suggests to the average mind "An eye for an eye; a tooth for a tooth"—in a word, revenge. Its meaning actually is, to inflict pain, to chastise, to castigate, to chasten. Is it clear, without apology or tremor, that we ever have the right, deliberately, without his consent, to inflict pain on any human being? Society to exist certainly has the right to protect itself from everything that is noxious, harmful, or destructive; to segregate the contagiously diseased, the irresponsibly insane, and the criminal; to deprive them of their liberty until such a time, if ever, when they are no longer a menace to society. But that right does not imply the right to punish, in the old, familiar sense of the word.

Without a trace of weak sentimentality, but out of the deepest fountains of wisdom, justice, and pity, based on ample experience, it is quite possible to contrive a prison, the counterpart of the modern hospital and insane asylum, of which the discharged prisoner shall say: "That is the best thing that ever happened to me!"

Does the deliberate infliction of pain often win that reaction?

"THE HONOR SYSTEM."

To the Editor of The Nation:

Sir: If among the various honor systems of conducting examinations which have been adopted by the colleges of this country the definite article is to be applied to one *par excellence*, it may fairly be claimed by the honor system of the University of Virginia—not only because of its seventy-odd years of successful working, but because it has served as a pattern for so many other institutions. I hope I may be pardoned, therefore, if I err when I understand Professor Firkins's article in the *Nation* of May 7 as intended to apply to a system having the essential features of the one in use here. If this be the case, his misunderstanding, both of the spirit of the system and of the letter of its code, is almost complete. His misconception is shared by many college teachers who have not a first-hand acquaintance with the subject, and I believe it will be of interest to your readers to learn the essential features of the honor system of the University of Virginia.

The absence of the instructor from the examination room is *not* an essential feature of the system. If Professor Firkins's view of it as a bargain between the faculty and the student body to abolish surveillance in return for a written pledge were a correct interpretation of its spirit, I fully agree that it would be

"honesty by purchase"—and at too high a price. As a matter of fact, the instructor is supposed to be present; not as a spy, but to give dignity and formality to the occasion. Far from resenting his presence, the students prefer it. Nor is the honor system primarily a method of making honest men out of rogues.

As I regard it, there are four conditions necessary for the successful working of the system: a student body made up of men with a keen sense of personal honor; a tradition of uniform working; the written pledge, and a single penalty of dismissal for infractions of the code. Let us consider these in order.

In the first place, an overwhelming majority of the student body must be personally honorable. The percentage of men who could even be tempted to cheat must be very small. The honor system makes each of these students throw the cloak of his personal honor about the fair name of the university and the class; it makes of the individual consciences of the honest men a corporate conscience, powerful in moulding public opinion and in enforcing the law of the code. Its essence is the soul of democratic government. It is well known that the average student prizes the rewards and honors which his fellow students bestow far more highly than the empty academic honors which emanate from faculty approval. He is taught by the honor system to fear their judgments. The faculty takes no part in this; if an instructor has evidence of cheating, he lays it before the student "honor committee," which takes the matter out of his hands. The real gain to the university is not the honest examination. That is only a by-product. The gain is in the possession of a student body trained to self-government.

Secondly, there must be no failures of justice. An undiscovered cheat does little harm to any but himself, but it is essential that punishment should follow detection as surely as night follows day. It is this tradition of uniform working which gives to the student opinion its assimilative character, so that it moulds the usually susceptible freshman spirit until it enters into its full share in the understanding and guardianship of the honor of the university. This feature is very hard to copy; it is what makes the adoption of the honor system *de novo* by an institution a different matter from the adoption of a card-index system or the installation of a heating plant.

Thirdly, no feature of the honor system is more misunderstood than the pledge, and I have heard criticisms similar to those of Professor Firkins from a number of college teachers. The effect of the pledge is to make the offence specific. "Cheating" is a vague term; a man may obtain or give aid in an examination in various ways. It is hard for a body of students to estimate the moral obloquy attaching to this or that particular line of conduct, and in no case should they be required to do so. The honor system is not a system of ethics. It is a code, and any breach of the code should be as clear and definite as possible. The pledge accomplishes this. The offending student can plead no ignorance after signing that pledge, can make no claim that he failed to understand the requirements. "I, A. B., do hereby certify upon honor that I have neither given nor received aid during the time of this examination, whether written, oral, or in print, in giving the above answers." Here is no room for interpretation—he is not supposed to interpret. Even if he gives aid unintentionally, or receives it unwillingly, he is required to state the fact, and failure to state it is a breach of honor. And not only to the offender, but to his fellow students the pledge supplies a basis of action. The requirement of the pledge makes of the honor committee, not a set of judges to interpret the law, but a jury to determine the facts. The question is not, "Did A. B. do a dishonorable thing?" but "Did A. B. knowingly sign his name to a false pledge?" Honest men might differ as to the first question, but reasonable men would agree on the second.

Finally, there is the single penalty. Just as the honor committee is not required to interpret the law, it is not called upon to fix the sentence. The sentence is automatic and unchangeable.

I hope I have succeeded in removing some of the misconceptions to which I have referred. I have tried to show that the honor system is not a device to save the faculty trouble, neither is it an ethical system holding before the students a collection of abstract principles and monitions. In its essence it is student self-government, and a government by law. CARROLL MASON SPARROW.

University of Virginia, May 9.

TO THE EDITOR OF THE NATION:

SIR: In reply to my article on the "Honor System," Professor Sparrow suggests that my misunderstanding of the system now in force in Virginia is "almost complete." I regret my unfortunate condition the more because it casts a stigma of negligence upon an institution which I unite with Professor Sparrow in respecting. Some two months ago I wrote to the president of the University of Virginia, telling him that I had written an article on the honor system which I was unwilling to offer to the public without some first-hand official information as to its practical workings in his University; I asked for printed matter, reports or bulletins, and begged him to add a single word of personal testimony to the effectiveness of the system in his own day. The president ignored my appeal to his private judgment, and contented himself with handing my letter to a graduate student of twenty years who shared with me in a very courteous and obliging way his personal experience of the workings of the honor system. There was, it seemed, nothing documentary or official to be shared. But let us see how far Professor Sparrow's interpretation of the system is subversive of my points.

He makes much of the instructor's presence in the room on test days in Virginia. But the instructor's departure from the room, both in my article and in life itself, is merely a pictorial symbol, so to speak, for that renouncement of supervision in return for which the student undertakes to play the part of an honest man. While this understanding persists, the objection is valid, whether the instructor leaves the room or turns his back or shuts his eyes or merely shuts his mind and his mouth.

Professor Sparrow lays down four conditions for the successful working of the system. The first two of these are "a student body made up of men with a keen sense of personal honor" and "a tradition of uniform working." These conditions restrict greatly the application of the system, and it is the question of suitability to schools in general rather than its prosperity in the parent institution that interests the public at large. The proposal to introduce the honor system into a given school disavows the existence of the tradition and hints pretty clearly that the standard of student honor is inadequate. In the absence of two of his indispensable conditions, Professor Sparrow's estimate of the probable fortunes of the honor system in these troubled institutions must be quite as lugubrious as mine.

The most interesting and the most curious part of Professor Sparrow's argument is the reason he assigns for the institution of the pledge. The jurisdiction of honor, it would seem, is universally and reverently acknowledged in Virginia, but the meaning of honor is so elastic that the only way to bind the most honorable man to any particular act of virtue is to pledge him beforehand to that act. Honest men might differ as to whether A. B. did a dishonorable thing when he gave or received aid in the examination; in other words, some honest men approve of cheating, others not, and the only way of circumventing the difficult class of honest men who endorse cheating is to pledge them at the outset not to cheat.

These are logical, not actual, consequences: I am neither so unjust nor so stupid as to accuse our brothers in Virginia—least of all the gentlemanly critic of my own views—of living up, or rather down, to the deductions from their philosophy. But I believe that the argument in question discloses the existence of a real danger, the danger that concentration on the merely verbal aspect of honor may diminish or confuse the sensibility to its other obligations.

O. W. FIRKINS.

University of Minnesota, May 17.

"ONE OF THE GIANTS."

TO THE EDITOR OF THE NATION:

SIR: If those who go to press every week or so on the subject of Mediævalism in graduate English study have time for facts, the following, taken from the Official Register of Harvard University, may be commended to their attention. I list ten primarily graduate courses for 1912-13, giving immediately after each the graduate registration. The courses of special study are placed by themselves.—Romantic Poets, 34; Seventeenth and Eighteenth Centuries, 21; Early English (1200-1450), 19; Early English Metrical Romances, 19; Beowulf, 17; Carlyle, 13; Drama from 1590 to the Closing of

the Theatres, 12; Shakespeare, 12; Wordsworth and Coleridge, 11; Seventeenth Century Prose, 9. Special study was pursued in Anglo-Saxon by three graduate students, in Middle English by two, in Modern English (under the direction of Professors Greenough, Kittredge, and Neilson) by five, not counting the work in drama by two. Observing that Beowulf and the Early English courses fill comfortable berths between the seventeenth and the eighteenth century course on the one hand and Carlyle on the other, should you say either that mediæval studies are neglected or that they are cultivated at the expense of other subjects?

The following list of doctoral thesis subjects is instructive: William Godwin; Horace in English Literature from 1500 to 1800; Joseph Dennie and his Circle: A Study in American Literature from 1792 to 1812; Illustrations of Chaucer in the Life of the Fourteenth Century; Humanitarianism in the English Periodical Essay and English Poetry, 1700-1760; Dramatic Irony: Studies in its History, its Definition, and its Use Especially in Shakespeare and Sophocles; Celtic Influences in the English Literature of the Eighteenth Century; A History of English Stage Conditions from 1800 to 1870; English Pageantry: An Historical Outline. Note the subjects involving special study of the classics. And in this connection, should we not account it one of life's little ironies—not to say a piece of its general foolishness—that an accomplished classicist, whose English scholarship is based squarely upon classical learning, should now be accused of casting his influence against the humanities? Indeed, the thing is ridiculous; and must seem so except to those who confuse the humanist on parade with the humanist of solid attainment. To such persons we can only say: *Procul, O procul, este profani.* H. S. V. Jones.

University of Illinois, May 15.

SAINT-SAENS'S ESTIMATE OF GOUNOD.

To the Editor of The Nation:

Sir: M. J. G. Prod'homme, one of the best-known Parisian authorities on musical matters, has recently issued two volumes of documents, nearly all here published for the first time, bearing on the life of Charles Gounod ("Gounod: Sa Vie et ses Œuvres"; Paris, Delagrave). The work opens with a short Preface by M. Camille Saint-Saëns, who gives this estimate of his fellow-composer:

> Gounod tenta de faire en France ce que Mozart avait déjà effectué si heureusement en Autriche, un opéra tout ensemble vocal et instrumental, mélodique et symphonique, laissant à la voix le rôle principal, recherchant avec soin la vérité dans la déclamation, cette vérité, principe fondamental de l'ancienne Ecole française, que l'Ecole moderne, légère, coquette, ne cherchant qu'à plaire, avait eu le tort de négliger.
>
> Quels obstacles il eut à surmonter, ceux-là seuls qui l'ont vu à l'œuvre peuvent en avoir connaissance. "Vous ne réussirez jamais," lui disait-on; "vos œuvres ne sortiront pas d'un cercle d'admirateurs intimes." Il laissait dire et marchait dans sa voie.
>
> Les œuvres pondérées, discrètes de Charles Gounod, si elles font hausser les épaules à nos modernes esthètes, n'ont pas pour cela démérité près du grand public; celui-ci n'a pas cessé de se laisser prendre au charme de cette musique où la saine raison s'allie si naturellement aux voluptés permises, celles qui ne blessent ni l'oreille ni le goût.
>
> Est-ce à dire que les œuvres de Gounod soient parfaites? Non. Nul n'est parfait. Mais ce qui manque à Gounod est si peu de chose! Possédant à fond l'art d'écrire, cet art qui manquait à Gluck et même à Berlioz—deux génies!—il n'eut pas cette grande virtuosité de la plume dont certains maîtres ont fait leur gloire, mais dont certains aussi n'ont pu se défendre d'abuser, au détriment de la clarté, au détriment du bon sens. Dire simplement ce qu'on veut dire, le dire bien, le dire juste, n'est-ce pas quelque chose? C'est assez, c'est exactement ce qu'il faut dans la musique d'église, aussi trouvera-t-on dans le Temple ce que Gounod a écrit de plus pur et de meilleur; à certains égards, il est incomparable.
>
> Mais ce n'est pas là ce qui l'eût rendu populaire; pour le grand public, Gounod, c'est "Faust," c'est "Romeo." Il est bien à regretter que des scrupules, assurément respectables, aient empêché les héritiers de Gounod de laisser représenter "Maître Pierre," son œuvre posthume; il y a là des pages exquises, apportant à son œuvre une note inédite. Sa gloire peut s'en passer; ses admirateurs y auraient trouvé de nouveaux motifs d'admiration, de nouvelles raisons de chérir le maître que ceux qui ont eu le bonheur d'entendre sa voix charmeresse, de goûter son enseignement, n'oublieront jamais.

Paris, May 10.

THE GOTHIC ROMANCE.

To the Editor of The Nation:

Sir: Mr. Chesterton has somewhere defined a Socialist as a man who thinks an umbrella and a walking-stick are the same, because both go into an umbrella-stand. What shall we call the historians of the Gothic Romance who class Beckford's "Vathek" with Walpole's "Castle of Otranto," because both contain thrills? Frequently the classification is made, explicitly or by implication. Prof. Herford, for example, says, "The novel of terror, created in jest by Horace Walpole, had taken imposing shape in the Oriental imaginings of Beckford's 'Vathek.'" ("The Age of Wordsworth," p. 92.)

Is there, as a matter of fact, any but the vaguest connection between the two, so far as either external or internal evidence shows? Shall we not, indeed, clarify all our muddy discussion of the sophisticated romances written under the Gothic revival, and afterwards, if we first make even such simple distinctions among them as the older romancers made among their writings?

> Ne sont que trois matières à nul home entendant.
> De France, et de Bretagne, et de Rome le grant.

The sophisticated romances of the eighteenth and nineteenth centuries, similarly, embrace matter of miracle, of chivalry, of magic, of myth, of pseudo-science. If we are to study creative impulse, contact with audience, and narrative workmanship in these romances (and little else in them is worthy of interest), we need to study them in these divisions. To group together all t' tales of wonder written in prose, as if they formed a school or carried on a tradition, leaves us with Chesterton's Socialist. Harry W. Hastings.

Hanover, N. H., May 20.

"ACROSS UNKNOWN SOUTH AMERICA."

To the Editor of The Nation:

Sir: Such marked publicity has been given to Mr. Henry Savage Landor's "Across Unknown South America," so many favorable reviews of it have been written by writers not conversant with the country discussed, and the two volumes are so imposing and attractive in appearance, that it seems desirable to call the attention of your readers to a review of this book written by Dr. J. C. Branner, which has just appeared in *Science*.

Dr. Branner, who has recently become president of Stanford University, is probably the foremost living authority on Brazilian geography.

Any one can see by looking at Mr. Henry Savage Landor's volumes that the only part of South America which he covered in his journey that was at all "unknown" was in Brazil. As no one is better qualified to speak authoritatively on Brazilian exploitation than Dr. Branner, I should like to call your particular attention to the following sentences from the review just referred to:

> After a few days in this "unknown" region he came out in the road leading from Rosario to Diamantino, and near the latter place took a canoe, without the necessary outfit, and descended the Arinos and Tapajos.
>
> Here again he seems to regard the region as unknown. But the Arinos and Tapajos, in spite of their many and difficult falls and rapids, have been navigated constantly for more than a hundred and fifty years.

After referring to various accounts of this journey printed in the older works of travellers, Dr. Branner goes on to say:

> If it is too much to expect that the writer of such a book should take the trouble to acquaint himself with the older literature of the subject, surely it is not unreasonable to expect him to look through the indexes of the Royal Geographical Society of London in order to find out whether the region he traversed was unknown. Volume thirty-two of the *Journal* of that society, pages 268-280, contains an account by Chandless of his trip down that river more than fifty years ago, together with his determinations of latitudes and longitudes. . . .
>
> Pages 181 to 230 of Volume I are devoted to the Bororó Indians, their customs, and legends. One is amazed at the great amount of material gathered by a person who knew nothing of the language. The length of his stay among them is not definitely given, but he left them before May 20 (p. 233), and as he had entered Matto Grosso May 11, it is clear that he was with the Bororós less than a week. . . .
>
> From a scientific point of view, such a book is not worthy of review space. The cosmic and ethnologic theories propounded in the preface, and the evidence on almost every page of untrustworthiness of statement, put it quite out of the rank of books that can be regarded as contributing to any branch of science. It is a great pity that so much energy and money should have been expended to such little purpose.

Hiram Bingham.

Yale University, May 18.

Literature

MONARCHS OF THE MANCHU DYNASTY.

Annals and Memoirs of the Court of Peking (from the Sixteenth to the Twentieth Century). By E. Backhouse and J. O. P. Bland. Illustrated. Boston: Houghton Mifflin Co. $4 net.

The authors of "China Under the Empress Dowager" laid the world under obligations by writing the life of a woman of the East whose appetite for power was nearly equalled by her capacity for ruling; they present to us now a prologue and a sequel to their account of the "Old Buddha" in a review from contemporary sources of all the monarchs of the dynasty. To Mr. Backhouse must be ascribed the selection and translation of the material. Mr. Bland's share in the book is apparently that of the "practiced writer" who has employed his more experienced pen in the discursive remarks connecting the various translations. Only those familiar with the abundance and diffuseness of the originals from which these excerpts are made can appreciate the skill that has welded them into a volume of such dramatic interest as the one before us. To Mr. Bland are also probably due the reflections upon "the surface phenomena of Young China's political activities," echoing the opinions of his "Recent Events and Past Policies," reviewed in these columns last year. His skepticism as to the worth of the doctrinaire revolution of 1911 is fairly supported by its failure to transform a race attitude and political habits acquired by ages of experience. What he says supplies a proper corrective to sentimentalists in our part of the world who have misinterpreted the signs in the recent upheaval in China and imagined a complete reversal in the secular operation of an antique governmental system. But while we cannot expect and ought not to desire a denial of China's inheritance on the part of her people, change of a drastic sort is necessary before she can assume her rightful place among nations; and such a change Young China has at least initiated.

Even whilst we recognize that its shrill-voiced iconoclasm and loud beating of imported drums present but little justification for optimism, yet this, at least, must be placed to its credit, that its fervor of zeal for Western learning has been, and is, an intelligent protest—a conscious reaction—against the petrifaction of the Confucian system, against "the letter that killeth"; a wholesome breeze of dawn, stirring the dead bones in the dark valleys of Chinese tradition. The lamp which they have lighted can never again be extinguished; the old order must pass, giving place to the new. It will be well for China and the world if, in destroying the fetters of the past, the leaders of the people find grace and wisdom to seek once more the pure well of moral philosophy from which the early sages drew their sweetness and their light.

Those already familiar with the outlines of Chinese history will be curious to learn if these new sources materially modify the standard accounts. Only one statement seems to call for comment here, mainly because the authors follow Manchu rather than Chinese authorities. The conventional story of the establishment of the Manchus upon the throne of Peking attributes their success to the heroic decision of Wu Sankeui, that great Chinese commander preferring to invite the Manchus to the capital rather than to serve under the successful rebel Li, whose capture of Peking had driven the last Ming sovereign to suicide. Wu's moral greatness at this crisis does not appear to be of quite the same sort as that ascribed to him by Chinese historians. There is no question of his military genius; he must be placed high among the world's great captains, "but of his principles and patriotism," we are warned, "the less said the better. . . . His final decision, to throw in his lot with the Manchus against the rebel and violate his avowed allegiance to the Ming Heir Apparent, was due, not to love of his country, but to his passion for a certain singing-girl, of whom, after the fall of Peking, Li had deprived him." Upon the authority of a contemporary diary it appears that Wu first fought and defeated Li because the latter had taken the singing-girl into his harem; then, when Li in great straits sent him the girl, together with the acknowledged Ming Heir, he agreed to an offensive and defensive alliance with the rebel commander against the common enemy, on the basis of dividing China into two empires; but upon Li's retreating toward Peking the general joined the Manchus, renouncing both his treaty and his allegiance to the Mings.

The situation was extremely critical for all parties, and it is scarcely surprising that the testimony should be conflicting, but the Manchus proved themselves to be superior politicians and won their success by the promptness with which they saw and seized their opportunity. It was at this juncture that they showed their hand and gave Wu San-kwei no option but to throw in his lot with them, abandoning the Mings, or to fight against their superior forces. Wu hoped to be able to keep the Manchus busy with pourparlers while he carried out his plans and took stock of the situation at Peking, but Prince Jui, the Manchu Regent, suspicious of his intentions, hurried on from Shan-hai-kwan to Chin-chou. There, hearing of Wu's loyalist proclamations, he sent him an urgent message forbidding him to enter Peking in state and declaring that no Ming Emperor would be recognized. "Wu made his choice, and the Ming dynasty's chances of restoration went with it."

Wu's military prowess subsequently aided the Manchus, when for seventeen years the Chinese resisted their domination, but they paid dearly for it in the end. One of the few Chinese generals consistently loyal to their service throughout the period of the conquest, he was rewarded with the satrapy of the two southwestern provinces, where he held royal state and maintained an army of his own. But he rebelled at last, when K'ang Hsi, in 1674, undertook to reduce his independent authority, and carried on a war against overwhelming odds, which for sheer courage and desperation was one of the most amazing adventures of modern Chinese history. He died unbeaten in the fourth year of a fierce but futile reaction against a dynasty that had already proved its fitness to govern China. Wu is China's last great heroic figure.

With the wars and policies of K'ang Hsi—made known long ago to Europe by the Jesuit missionaries—this volume has little to do. It is not a history, or it might be accused of offering us a distorted portrait of her greatest monarch. As an amplification of history it is, however, both significant and thoroughly interesting. So graphic is the delineation of these documents that the whole nature of the man is made plain, shifting from strength to silliness, from dignity to pettiness, until we see him at last stripped in the nakedness of truth. Such a view of an Oriental despot is rarely vouchsafed to Occidentals. He began his reign as a child under a regency appointed by his father, but at the end of five years, aided and abetted by a strong-minded grandmother, he dismissed the regents, partly, we are told, through displeasure at their treatment of the Catholic fathers at the capital, and assumed the government at the age of thirteen. One of these regents, the Duke Ao Pai, was quite too powerful to be crushed off-hand. While visiting the palace of his grandmother to consult her upon a safe method of dealing with the haughty Minister, K'ang Hsi found a eunuch throwing dice, and, taking them up, made a cast on his own account. They fell, as it happened, "all different"—the highest possible throw in the Chinese game—upon which the old lady exclaimed, "You needn't fear him any longer!" The young Emperor was so heartened that he immediately got the Princes together to consult upon the proper punishment for the offending grandee. There is no one so great, it appears, as to be regardless of support, even on an Asiatic throne. The Emperor of China has never been safe unless he could count upon the backing of

the members of his family and the palace officials. The authority of the old Dowager also calls for comment, here as in other incidents. No decisive step was taken in her lifetime without consulting her, and wisdom in the present instance seems to have been justified in her children, for by advising against Ao Pai's execution by the "lingering death" and in favor of a gracious permission to commit suicide, she prevented a dangerous palace *émeute* on the part of his numerous henchmen.

K'ang Hsi had thirty-five sons, twenty-four of whom attained to manhood. The domestic history of his long reign is retailed here as a striking indictment of the results of polygamy partially to "explain the failure of the East's patriarchal system as an integrating social force." The conclusion advanced is not altogether obvious, for European history in the days of absolutism reveals about as much discord within its dynastic houses as does Asiatic. The great Ottoman Sultans met this difficulty in a masterful manner by murdering their brothers before they could imperil the succession by fomenting rebellion; polygamy cannot in their case be accused of producing a weak or incapable line of rulers. Among the Manchus, as among the Mongols who preceded them in China, the decay of the family on the throne seems to have been due to the enervating influence of a culture higher than a semi-barbarous race could endure, while a continued peace deprived them of their normal occupation of fighting. K'ang Hsi and Ch'ien Lung, its two great monarchs, wisely employed their warlike clans in extending the limits of empire, but when the task was accomplished by the conquest of every territory within reach of their arms, the Manchus displayed no ability in amplifying the institutions of an ancient state or in so ordering its economic life that it could profit by the commercial and industrial expansion made possible by intercourse with Europeans. While the inception of a "hermit nation" policy, checking the normal advance of the country, cannot truthfully be imputed to the Manchus more than to their Chinese officials, we may see that the desire for isolation was inspired in each of the two races by different motives. The Tartar was indifferent to trade and did not care to promote it; the Chinese, desiring trade intensely, feared the competition of new peoples. All this has been changed recently; but while the Chinese, abandoning his high-protection theories, is able to live and learn, the Tartar, deprived of his old vigor by two centuries of palace life, sinks helplessly into that stronger racial mass which has absorbed so many of the same masterful stock.

To the disorders arising from family dissensions in the reigns of K'ang Hsi and his son was added the demoralization of government by favorites under his grandson, Ch'ien Lung. This Emperor's Grand Secretary, Ho Shun, a Manchu guardsman raised to the highest office in the empire, amassed by incredible rascality a fortune roughly estimated at seventy million sterling, which was, of course, taken from him when the day of reckoning came at the accession of Chia Ch'ing. The example of his prodigious and systematic corruption demoralized the whole official class of the empire under whom, as in every patriarchal government, the morals of the people suffered deterioration when they began to reflect the disorders of those in authority over them. So matters passed from bad to worse in capital and country during the whole nineteenth century. With the ascendency of favorites at court came inevitably the return of eunuch influence, the peculiar curse of the Ming dynasty, and the canker which eats into the heart of all despotisms where the harem is maintained. We know already something of this influence in the story of the Empress Dowager and her myrmidon, the eunuch Li Lien-Ying. Her successor, Lung Yü, Kuang Hsü's widow, imitated her in establishing one Chang Yuan-Fu as head eunuch of the household, and into his supple hands were gathered during the brief course of the regency powers so considerable as to make him in fact the Government of China. A story is told of this insolent parasite having a duke of the Imperial line publicly whipped by his retainers at a horse-race, and so completely did his mistress regard herself and her retainers above the law that no one was punished for the scandal. This occurred only a few months before the Manchu dynasty, their ill-gotten gains and their misbegotten issue, were swept from the throne. One cannot regret their fall. If this volume has a moral, it is that the Tartar clan, under which China has been so humiliated before the world, was incorrigible, and that the first step in her regeneration necessitated their removal.

Taken all together, we have in these pages a wonderful repository of the big and the little, the sublime and the stupid in old China. The book has a value, far transcending its interest as a series of stories and scenes, in relation to our estimate of the Chinese people and their ideas. It shows how far wrong we were a few years ago in our endeavors to interpret the motives of their conduct towards us, and to what an extent foreign speculation upon these matters was sheer guesswork. And when it came to guessing, the intuitions of some Americans, like Burlingame, who were laughed at for their opinions, prove to have been nearer the truth than those of many merchants and diplomatists of other nations.

CURRENT FICTION.

A Child of the Orient. By Demetra Vaka (Mrs. Kenneth Brown). Boston: Houghton Mifflin Co.

Under the thinnest disguise of fiction we have here another attractive volume of reminiscences dealing with domestic life in the Turkish capital, both Ottoman and Greek. Demetra Vaka is herself a child of the Orient and of Greek parentage, and her narrative begins with memories of childhood. She recalls her fifth birthday when her uncle presented her with a Greek flag and impressed it upon her that the flag stood for the highest civilization the world has known. He also reminded her of her duty to hate the Asiatic yoke and to rear sons for the great war of liberation. Convinced of the inferiority of Turkish civilization and of the falseness of its Prophet, the child endeavored to spread her views among her Turkish playmates. Nevertheless, the passive quiet of the Mohammedan life won her, and to the moment of her departure for America her closest friends were of the hated race. The book is rich in anecdote illustrative of the attitude of Turkey's Greek subjects to their masters. Amusing are the author's own escapades of childhood, which brought her into touch with extraordinary persons and places.

The Salamander. By Owen Johnson. Indianapolis: Bobbs-Merrill Co.

What Will People Say? By Rupert Hughes. New York: Harper & Bros.

The meaning of a city is always written large in its women. The French understand this, and their language permits them a graceful expression of the correlation between Paris and the Parisienne. We have no name for New York's feminine product, nor has her existence been very fully recognized in our literature. This is the advantage that Mr. Johnson and Mr. Hughes shared when it occurred to the former to write the drama of the Girl and the City, and to the latter to record afresh one of the ever-recurring fatalities of passion.

In his choice of a heroine Mr. Johnson was blessed with a bright idea —the idea alluringly developed in his "Foreword." The Salamander of the preface is a phenomenon we have all watched and wondered at—the innocent adventuress, precocious at substituting the vivid enterprise of being a woman for the dull problem of self-support, who has acquired the rudiments of her curious art somewhere in the obscure hinterland of the interior and is drawn to New York like a moth to the flame. The degree to which she can safely make good looks serve in lieu of any other livelihood is, of course, the chief point upon which

speculation centres. With some lack of discretion, it seems, Mr. Johnson has gone the full length, and represents his golden-haired Dodo as subsisting altogether upon the proceeds realized from the gifts of admirers (a whole host of these kept in a state of properly respectful subjugation), yet all untempted by the powerful capitalist who wants her for his mistress, or the theatrical manager who proposes to marry and star her. A further moot point—what becomes of a Salamander?—is settled by letting an ex-inebriate (saved by her influence and possessed of a comfortable number of millions) marry her just in the nick of time to prevent her elopement with an unhappily married city magistrate. It will be seen that the author himself has quickly put an end to all interest except that inherent in the development of an amusing absurdity. He recognizes the Salamander as the baffling little animal she is, surmises that hers is merely the brief impunity of youth, but goes no further towards explaining her. In his anxiety to keep her lovable, he has reduced her to a dainty impossibility, a pretty actress giving an exhibition of childish incorrigibility in a stage picture of New York.

"What Will People Say?" is a much more vigorous piece of work. The author has seized upon the current dance craze as a mood of civil self-revelation. He has written with some verbal gesticulations that are truly extraordinary, not to say grotesque, yet after all not inappropriate to a tale of the barbarous tango era. It is word-slinging, nothing less, and often of the rudest sort, but surprisingly deft in conveying a lively impression of New York, characteristic sights and sounds, sensations of speed and danger, costly perfections, ostentations, crudities, and always the smell of money in the air. His heroine is the cool-headed society girl who understands everything except the passions latent in her own heart. A loveless marriage puts her at their mercy with no defence beyond an instinctive dread of scandal. She is the tragic exponent of all this need of luxury and excitement bred by artificial conditions, very lovely in her exotic perfection, very pitiful in her helplessness before the tempest—a life lacking the beauty of any guiding principle, lived in a hurry without time to think. Wherever else the author's artistry fails him (and the plot is the oldest known to man and clumsily patched at that), the conception of this character at least seems to us very fine. Not less interesting is the genuine thrill of enthusiasm with which Mr. Hughes communicates his discovery that an old cosmopolitan truism can flourish admirably in our own soil—"He only knows a city who has loved its soul in a woman."

"AFRICA FOR THE AFRICANS."

The Real South Africa. By Ambrose Pratt. Indianapolis: The Bobbs-Merrill Co. $2.50 net.

Whatever opinion may be held as to the general conclusions at which Mr. Pratt has arrived, there can be no doubt that he has written a book of extraordinary interest. In undertaking to give a picture of the "Real South Africa" he has essayed an ambitious task, and it is certain that, particularly in South Africa itself, some of his conclusions will be bitterly criticised. Mr. Pratt accompanied Mr. Andrew Fisher, the Prime Minister of Australia, when the latter visited South Africa in 1910, "to convey to the people of the South African Union the fraternal greetings and good wishes of the people of the Commonwealth of Australia on their achievement of union" (we quote from the introduction written by Mr. Fisher), and some of the material included in the present volume was contributed originally to the Melbourne *Age*. The author possesses the instinct for news of the trained journalist, and adds to an indefatigable industry in the acquiring of facts the gift of presenting them in an orderly and readable manner. Furthermore, he has spared no pains in going to the first sources of information and his arguments are supported by liberal quotations from Government reports and statistics. On the other hand, it may be argued that it was hardly possible in the course of a comparatively brief visit to gain an experience of the country sufficiently comprehensive to warrant as definite a statement of conclusions as he gives us, and it will almost certainly occur to those who differ from him that his investigations, with however honest an intent they were undertaken, may to a certain extent have been influenced by preconceived ideas and by the sympathy with the point of view of labor that is to be looked for in an Australian.

The British jingo who still considers the South African war to have been a just and holy enterprise and is fond of alluding to the new dominion as "the brightest jewel in the crown of empire," will find little comfort in these pages; but neither will those who used to be termed Pro-Boers. The two parties in South African politics are, in his view, playing the same game that Mr. Chesterton accuses politicians in England of playing, but with a more sinister purpose. They have their petty differences and are sharply divided along racial lines, these differences showing themselves principally on questions of language and education, but "apart from that they aim at cognate goals, they profess the same ideals, and their policies are undistinguishable. Both parties are essentially conservative." The business of the Dutch Nationalists is to look after the Boer farmer and to protect him from taxation, and in return for this they are willing to let the British Unionists have their way with the mines, whose interests they represent. Both are banded together to check the rise of the native from a position of virtual servitude.

The native question is the crucial one in South Africa, and Mr. Pratt preaches from the text, "South Africa is a black man's country." The root of all the evils which afflict the land, as Mr. Pratt sees it, is in the pernicious caste system which has been substituted for slavery, and this system, while putting grievous injustice on the black, is working even more insidious harm for the white population. Through it the black man has attained a practical monopoly of the unskilled labor of the country. Work that a Kaffir can do a white man must not do; that is the unwritten law of the land, and it has its consequence in an alarming spread of indigence among the white population. Those who have not been trained to skilled labor—and the enervating caste system tends to deny to most of the rising generation the opportunity of being so trained—are destined not to labor at all. Mr. Pratt sums up the situation pessimistically as follows:

> For the unskilled laborer, the farm hand, the moneyless agriculturist, the shop assistant, the clerk, and the professional man, South Africa has little to offer save a miscrable existence and a pauper's grave. There are thousands of such people scattered all over the country seeking work and finding none; eating the bread of charity and living by crime.

These are the people who, to quote from the report of a Royal Commission on ndigency, "are bound to join the ranks of those who have already become the victims of the caste system—the poor whites."

It is interesting, in this connection and in view of recent events in South Africa, to read Mr. Pratt's estimate of the Labor party, as he saw it, in the owly position of which at the time he ound "something infinitely pathetic":

> . . . its ideals are broad-minded, progressive and democratic, without being tainted or defaced with rabid Socialistic doctrine. It aims at the establishment of a South African democracy; the opening up of the unskilled labor market to the whites; the destruction of caste prejudice; universal compulsory education; a standard living wage; an eight-hour day, and equality of opportunity for all.

Yet, we learn, "the Dutch Nationalists ignore its existence, and the Unionists treat it as a joke." The joke recently narrowly missed being on the Unionists, and the Nationalist Government recognized the existence of the labor movement to such an extent that it put the

country under martial law and exported ten of the leaders.

The black man, meanwhile, according to Mr. Pratt, is profiting by his opportunities and is gradually insinuating himself more and more into the field of white labor. Two opposite solutions of the problem are offered: to repress the black man by every means, which is the method that most appeals to the average South African, be he Boer or British; or to assist the Kaffir in his efforts to rise by affording him increasing facilities for educating himself. Whichever method be adopted, the author takes a gloomy view of the outlook for the white man. The South African natives are "naturally a capable and gifted people," and it will be quite impossible to keep them down. They exhibit a passion for education, in marked contradistinction to the phlegmatic Boer of the veld, who opposes education by every means in his power and even demands payment for allowing his children to attend school, and already there is a well-defined movement, centring in the Ethiopian Church, which has for its motto "Africa for the Africans." The hopes of the black people are focussed on Basutoland, the independent negro state, subject only to the suzerainty of Great Britain, concerning the development and resources of which Mr. Pratt writes a chapter of extraordinary interest, containing information of a somewhat startling character. From here is expected to come the salvation of the race, and Mr. Pratt hardly disguises his conviction that the day will come when the question of the supremacy of black or white will have to be decided on the battlefield.

For the Boer of the veld Mr. Pratt has little admiration. He is an anachronism, lazy, shiftless, dirty, and ignorant. His methods of farming are obsolete, and he is satisfied to produce a bare subsistence for himself and his family. The work of the farm, such as it is, is done by Kaffirs; the Boer lounges on his stoep and smokes.

> The veld Boer's ideals of life are sensual. He exists for the pleasures of the flesh. He eats hugely. He marries early. He lives in his wife's apron pocket. The woman who commands universal Boer admiration is the sturdily built, well-sexed house frau—the big feeder and big breeder.

The fine physique of the race is a striking illustration of Darwin's theory of the survival of the fittest:

> The truth is that the average Boer farm house is no nursery of weaklings. The surroundings are so filthy, insanitary, and rough, and the Boer housewife's ignorance of the simplest duties of motherhood is so dense, that, although many babies are born, few outlast their infancy. Child mortality on the veld is positively appalling, and were it not that the Boers are enormously prolific the race would have long since tapered towards extinction.

On the other side of the picture, however, is the small class of cultured Boers, of whom Mr. Pratt says:

> It would be impossible to discover, the wide world over, a stronger, and in every sense a more satisfactory, human type. The women are bright, intelligent, and witty. The men are little short of intellectual giants. Educate the average Boer, and the result is a man whose mentality, strength of character, energy, initiative, and resource can compare favorably with the highest types of the Anglo-Saxon race.

Subject to the reservations which we noted at the beginning of this review, Mr. Pratt has written a book of great value, one that should be read with careful attention by all who are interested in the problems of the British empire, and one, too, that reflects infinite credit on the school of Australian journalism.

MEXICO VIEWED BY AN ENGLISH JOURNALIST.

Modern Mexico. By R. J. MacHugh. New York: Dodd, Mead & Co. $3.50 net.

After accompanying the Servian army in the Balkan War, Mr. MacHugh was sent by the *Daily Telegraph* to investigate Mexico. He has performed his task well, and his methodical handling of materials shows that, however brief his visit, judicious use of the best authorities available and the serious efforts of a trained and balanced writer have produced one of the most satisfactory of recent books on this subject. It is true that his work discloses no hitherto unrevealed solution of the Mexican problem; his style seldom rises very high, but neither does he betray the absurd ignorance of some journalists. He marches steadily forward; his fixed opinions, due to lack of sympathy with the American point of view, or to British prejudices, are entirely apparent, deceiving nobody; and he succeeds in preparing an informed report of the conditions which may be received as wholesome and sound.

In introductory chapters the author outlines what is known or assumed of Mexico before the Spaniards came, and traces the transition from colonial dependence to independent disorder. Independent Mexico presents a difficult problem for summarizing. Mr. MacHugh refers to such excellent sources as Noll's "From Empire to Republic" and Mme. Calderon de la Barca's "Life in Mexico," but his emphasis is sometimes mislaid, and insignificant points are presented when they deserve no place in so brief a review. His treatment of the Mexican War of 1846-48 is indeed more just than that which many American historians have accorded it. The discussion of Maximilian's empire is unusually able, coming from a writer evidently familiar with the history of European diplomacy and finance. He brings out the interesting point of the projected arrangement between the Mexican leaders at that time and the seceding States of the American Union. The most admirable writing in the whole book is inspired by the unhappy end of Maximilian's rule.

In the seventh chapter, Mr. MacHugh traces the gradual development of the present situation from conditions in the closing years of Porfirio Diaz's Presidency. The causes and relations here traced surpass in detail and logical sequence most other accounts. He even mentions the recourse which President Madero had to spiritualism, and he takes into consideration many factors which have escaped the attention of other writers. One must differ with him, however, in his refusal to allow the Zapata movement political significance. Agrarian troubles, which this movement represents, certainly constitute one of the most difficult and fundamental of Mexico's problems.

A report on Mexico's resources—industrial, mineral, and agricultural—is so glowing that it reads like a promoter's prospectus, and yet it is all justified and authoritative. British enterprise and capital are mentioned rather often, but it is well to be reminded that there are other interests in Mexico besides ours. The development of electrical power from the falls at Necaxa by the Mexican Light & Power Company is a notable monument of such interest.

In the concluding chapter on Mexico and the United States, Mr. MacHugh records the large amount of opinion on his side in believing that "the policy of President Wilson is a mistake." He also notes the remarkable similarity between the President's attitude and that of Gen. Carranza, in demanding the elimination not only of Huerta, but of his Government as well. He is plainly mistaken, however, in another assertion:

> One unpleasant feature of the situation as between the United States and Mexico—at least so far as Great Britain is concerned—is that there is a party in the United States whose opposition to Gen. Huerta is based on the assumption that his Government was rendered possible by the support of British interests in Mexico, and that they are bound, as a matter of policy, to oppose it.

Mr. MacHugh, at the time of writing his book, feared that since the American people are "subject to very remarkable outbursts of sentimental public opinion," if Americans were murdered

in Mexico, "the United States Government would find itself face to face with a popular demand for intervention which it could not possibly refuse." The case for annexation is presented thus:

From the European point of view, so far as the internal peace and welfare of Mexico and her people are concerned, there is little doubt but that United States intervention would, after a certain period, be the very best thing that could happen, especially if it were followed by the establishment of something in the nature of a protectorate over the Mexican republic, similar to that which is exercised over the republic of Cuba. The United States would then become a guarantor for the maintenance of peace and settled conditions, and whatever injury might be inflicted upon the national sentiments of Mexicans, the material prosperity of the country and her people as a whole would benefit enormously from the new order of things that would be bound to result.

Yet Mr. MacHugh reminds us that the French under Napoleon III tried to subdue Mexico with an army of 200,000 men, and he estimates that at least a quarter of a million men would have to be maintained by us in Mexico for a decade or longer, and that the cost would be incalculable.

In view of the scope and detail of this work, the errors of fact and the misprints are comparatively few. "Licenciado" is often misspelled, however, as is the name of our former Minister, Mr. Poinsett. Although Señor Lascurain enjoyed the Presidency for only twenty-six minutes, he does not deserve to have his name given as Lauriscan in one place and Laurican in another. Texas would rise in arms again at reading April 23 as the date of the battle of San Jacinto, instead of April 21, and Senator Bacon would scarcely have been pleased at the reference to him as "Señor Bacon."

Most interesting of the few genuine errors is the author's distortion of judgment regarding General Felix Diaz. Throughout he speaks of the General in terms of admiration. He even regards him as the possible "*deus ex machina* who can restore public order." Testimony to his character and ability is presented in his record as Commissioner of Police for Mexico City. He is actually credited with having been the real leader of the successful revolution against Madero. The support of Porfirio Diaz and the administrative ability of Governor Landa y Escanon were, however, what maintained General Felix Diaz as Commissioner of Police, and General Mondragon far outstripped the younger man in the arts of conspiracy and revolution. The ease with which Gen. Huerta eliminated young Diaz from the situation, and the subsequent failure of the latter's pretensions, seem to establish his weakness.

GEN. REYES ON PANAMA.

The Two Americas. By Rafael Reyes. Translated by L. Grahame. Frederick A. Stokes Co. $2.50.

Gen. Rafael Reyes, ex-President of the Republic of Colombia, made a tour through the two Americas, in which he visited several of the larger republics. Numerous articles based on his experiences were published in the New York *Times*. Gen. Reyes speaks excellent English himself, but was, nevertheless, fortunate in having had his essays translated from the Spanish original by Mr. Leopold Grahame, who was for many years the editor of an English journal in Buenos Ayres. These articles have now been considerably revised and put in the form of a book. Coming from an ex-President of that South American country which has been dealt with more harshly by the United States than has any other, this book is noteworthy for its moderate tone and its marked desire to increase, as far as practicable, that friendly recognition of the other nation's laws and usages commonly called international comity. Gen. Reyes makes some interesting animadversions on the now much-discussed Monroe Doctrine, in which, although assuming a very friendly attitude towards the United States, he says:

President Monroe proclaimed the doctrine of "America for the Americans," which surely implied that that eminent statesman included the Ibero-Americans as well as those of the north. The devotees of modern Imperialism in the United States appear to reject this view by their belief that the term "Americans" signifies only those born under the Stars and Stripes; and that they are the absolute owners of the two Americas, although, as I have already said, that spirit of mischievous exaggeration is, happily, confined to very narrow limits.

One wishes that these limits were so narrow as to leave no room for further misunderstanding on this subject.

The portion of the book which covers some of the smaller republics that Gen. Reyes did not visit is rather dull. On the other hand, the chapters dealing with the author's own early explorations, and the paragraphs relating to the Panama Canal, will be found very profitable reading. Particularly striking, in contrast with a certain recent Autobiography, is Gen. Reyes's modest statement of the difficulty which he met in attempting to put down the revolution in Panama in 1903:

A few days later, when my Government placed me in command of a military force to reëstablish order in the Isthmus, these cruisers prevented our landing, and, being then unaware of the causes of the attitude so taken up by the United States, I directed a note to the commanding officer, Admiral Coghlan, requesting to be informed on the subject. The reply to that note by Admiral Coghlan simply stated that "his peremptory orders were to prevent the disembarkation of Colombian troops with hostile intent within the limits of the State of Panama."

. . . At that time the Colombian army consisted of 10,000 men under arms, a force more than sufficient to have suffocated the rebellion in Panama if the Government of the United States had not prevented the embarkation at Puerto Colombia of the troops under my command, and at Buenaventura, in the Pacific, of others under the command of various general officers.

To conclude this narrative of the circumstances in which Colombia was deprived of her sovereignty and her territory it is only necessary to add that, having prevented the Colombian Government from using the forces at its disposal for the suppression of the revolution, the United States Government, with unusual haste, within two days of the declaration of its independence, recognized the republic of Panama as a sovereign and independent State, and fourteen days later entered into a treaty with that republic guaranteeing its independence, and providing for the construction of the canal in that territory.

Even to those unaccustomed to the methods adopted by the nations of the world in the recognition of newly formed States, the action of the United States in relation to the republic of Panama can leave no doubt in the minds of intelligent persons that it was a wide departure from conventional custom.

Rarely has an actor in a bitter political drama spoken so moderately of the deeds of his opponents.

A LAND OF FASCINATION.

Picturesque New Zealand. By Paul Gooding. Boston: Houghton Mifflin Co. $3.50 net.

We cannot be too grateful to the author of this work for reminding the world that New Zealand is something more than an economic laboratory. Without minimizing in the least the importance of the colony's sociological and industrial innovations, we are glad to read that the main purpose of these chapters is to afford a panoramic view of the group of islands that form one of the outposts of the British Empire.

New Zealand itself stretches a thousand miles along the Tasman Sea, which separates it from Australia, its extreme breadth being only a fifth as great. Its governmental jurisdiction, however, covers forty-two degrees of longitude and forty-five of latitude. Its northernmost possession, near the pearl-shell lagoon of Penrhyn, is only eight degrees below the Equator, while its southernmost limits, the mountainous Campbell Islands, are more than three thousand miles from Penrhyn's Shoals. The largest land divisions of the colony are the North Island, about the size of Pennsylvania; the South Island, approximating the area of Florida; and Stew-

art Island, slightly more than half as large as Rhode Island. New Zealand is largely mountainous; consequently less than half its surface is suitable for agriculture. In the South Island, the more mountainous of the two main islands, elevations of from eight to ten thousand feet are common. In the North Island few of the mountains are more than four thousand feet high, and only on the loftiest of them, steaming Ruapehu, are glaciers found.

Climatically, New Zealand has been likened to Italy, with which it closely corresponds in latitude. To a large extent it is a rainy land, but as most of the precipitations are at night and in the early morning, parts of it have sunshine records equal to some of the best obtained in Italy. The climate is varied and healthful; in the last twenty years the average annual death-rate has been less than ten per thousand, one of the lowest rates recorded anywhere.

Obviously, this is a land of high destiny—and yet a destiny beset with difficulties. In 1642 the Dutch navigator, Abel Tasman, got sight of it, only to shun it, three of his crew being murdered by the Maoris. One hundred and twenty-seven years later came Capt. Cook, who also sailed away after a similar disaster to one of his crew. For many years thereafter European navigators, terrified by these and other tales of deadly strife and often bloody feasts, feared to land on New Zealand's inhospitable coasts. In 1814 the missionaries began to tame the Maoris, but white settlement did not really begin until seventy years ago. Troubles innumerable occurred for many years, and it was not until the early nineties that anything approaching stability was reached.

It would be hard to know where to begin or where to stop in noting the points of interest in these islands. Persons familiar with the Yellowstone geysers will wonder if they compare with those of the thermal region of New Zealand. Weird caves also abound. Mr. Gooding thus describes the Glowworm Grotto:

> As we approached it in the darkness, for effect, we saw what looked like a roof of gems. These "gems" were the steady gleam of thousands of glowworms, shedding day and night a dim light suited only to goblin worlds. On this scene the guide flashed a magnesium light. The result was startling. Hanging closely together from the roof were countless tiny pendants resembling fine wire strands and weighted with millions of drops of moisture. The whole formed one glistening, gently swaying screen across the damp ceiling. These filaments were the threads of glowworms. Looking down, we saw the glittering canopy reflected in a dark expanse of water.

He tells also of cañons and depths matching those of the Yosemite and the Grand Cañon of Arizona, and of mountains that rival the Swiss Alps. "The German," he declares, "is proud of the castellated Rhine; the Frenchman's eyes sparkle at mention of the historic Seine; the Englishman grows poetical over the upper Thames; the American points to the palisaded Hudson; and the New Zealander says, 'Behold the Wanganui.'" For the greater part of its length Wanganui flows through a deep gorge, with lichen-draped cliffs and higher, forested slopes. It has many rapids, and in passing through these the voyager has exciting moments. In the southwestern part of the South Island lakes and sounds divide the land among themselves, and ramble irregularly over the country, cutting into the heart of the mountain ranges, forming islands, peninsulas, and promontories, and receiving the waters of innumerable streams. In this region is Milford Track, "the finest walk in the world."

The tantalizing character of Mr. Gooding's descriptions is enhanced by the excellence of the numerous illustrations with which his book is enriched.

CHRISTIAN FAITH IN A JAPANESE SETTING.

The Faith of Japan. By T. Harada. New York: The Macmillan Co. $1.25.

To insure a sane and well-balanced judgment of the Japanese personality and people it is imperative to inquire sympathetically into their religious ideals and proclivities. Hitherto the faiths of the East have been so associated with feebleness and folly as to produce in the progressive Occidental an attitude of indifference and contempt. But the real power shown by Japan in her national and international development during the last quarter of a century, and the growing appreciation of the tremendous latent power of China—power that must be interpreted in a spiritual way—have been changing this attitude; and the public is prepared to welcome a volume such as that of Dr. Harada. Of all the colleges founded under missionary auspices in Japan, the Doshisha of Kyoto, of which he is president, has been the most successful. It was the result of the junction of two intellectual currents: ardent young Samurai from the island of Kyushu and able Congregational missionaries from this country. The leader among these young men was Joseph Neesima, a real personality, who has left his impress on the institution. It is pleasant to note that the present volume—essentially the "Lamson Lectures," delivered at Hartford Seminary several years ago—is "In Memory of My Teacher and Predecessor, Joseph Hardy Neesima, Educator, Patriot, and Christian."

In the chapter on Michi: the Way of Humanity, the term used in translating the Greek λόγος of the Gospel of St. John, there is a significant paragraph. It is well known that modern Hegelianism, which has been of such aid in the reaction against materialism, has been fructified from the Orient. Dr. Harada says:

> As one studies the religious and ethical ideas of the far East, it becomes increasingly evident that the Oriental mind is indeed intuitive, mystical, and poetic rather than strictly rational, scientific, and practical. . . . Certain scholars are disposed to make light of what does not submit to analysis or allow of expression in scientific terms, failing thus to grasp its real, though elusive, content. Yet the unrationalised protoplasm of psychic life is coming to be recognized as the matrix of the greatest influences, the most far-reaching forces of soul control, exercising a power in the lives of the people far greater than that of any conceptions which are clearly defined and easily grasped by the intellect.

None of the various faiths that have taken root in Japan, Shinto, Confucianism, Buddhism, has been monotheistic, insisting on what the Shorter Catechism calls in its opening statement "the chief end of man, to glorify God and enjoy Him for ever." Consequently, sin as something hateful to God and demanding a penalty as from a taskmaster, is alien to Japanese thought. Recognizing no divine Judge, the Japanese have little dread of a coming punishment after death. Pantheistic Buddhism, polytheistic Shintoism, positivistic Confucianism are alike silent on this theme. Dr. Harada associates the absence of any clear perception of a personal God among Japanese with the lack of a clear perception of the personality of man himself. "It follows that they have never attained to an adequate conception of the worth of the individual. Sometimes the idea of duty has been confused with the idea of submission to authority; blessedness has been identified with happiness, and sin has been confused with crime. Hatred of sin and love of righteousness have been but feebly felt."

Loyalty and filial piety, regarded as the two cardinal virtues by the Japanese, are at the heart of the teaching of Shinto and Confucianism. The seeming depreciation by Christianity of these virtues presents a great barrier to its reception in the Far East. Dr. Harada, in this connection, quotes the passage in St. Matthew where Christ declares that "He that loveth father and mother more than me is not worthy of me." Still less to the liking of conservative Japanese is the more emphatic form of the saying in St. Luke, "If a man cometh to me, and hateth not his own father and mother . . . he cannot be my disciple." The solution of the difficulty is aided by Buddhist ideals, where the principle of renunciation or self-sacrifice holds a vital place. Indeed, later on in the same chapter in

St. Luke the saying is repeated in terms of renunciation. And the Cross, from the standpoint of self-sacrifice, declares Dr. Harada, presents no special difficulty to his countrymen. "Though the cross may be a stumbling block to Jews and foolishness to Greeks, it is not to the Japanese."

Mr. Y. Okakura, in his recent "Life and Thought in Japan," concedes that his countrymen are revengeful. Yet Dr. Harada asserts that they have a spirit of magnanimity, which is incompatible with revenge: and history seems to bear out his statement. The greatest of Japanese generals, low-born, "monkey-faced" Hideyoshi, was ever magnanimous to his foes. In the late war the Japanese treatment of their Russian prisoners was admirable. It is true that passionate loyalty, as in the case of the Forty-seven Ronins, often took the form of deadly revenge; but this may be regarded as the "defect of a virtue." Revenge has not been a ruling passion in the story of the people.

The late Baron Kato, at one time president of the Imperial University in Tokio, grimly disliked the Christian faith and published a book entitled "The Evils of Christianity." Yet there he admits its age-long devotion to philanthropic ministration, and its pre-eminence in this field. Dr. Harada would not, however, rest his defence of Christianity on what he terms "by-products" like these. He mentions five points where it seems to have appealed most strongly to his countrymen: a Father in heaven who completely meets their ideal; the personality of Christ Himself—pure, exalted, comprehensive; a positive, optimistic conception of life; a comparatively satisfactory world view which avoids, on the one hand, the extinction of personality, or Nirvana, taught by higher Buddhism, and, on the other hand, the physical paradise held out by popular Buddhism; and lastly, the innumerable examples Christianity produces of its power to produce repentance, transformation, and new life.

The introductory chapter has some details regarding Shinto which will interest women particularly. Among the thirteen sects that it includes, there is one of recent origin which approaches a monotheistic faith and makes Amaterasu, whose emblem is the sun, the Mother-God, whose sunny spirit pervades the universe, giving birth to all things by her light and heat, and unceasingly nurturing them all. Two other popular modern sects, Tenrikyo and Remmonkyo, have been established by women. It also contains an interesting account of the development of Buddhism in Japan, differing so markedly from its history elsewhere. Accepting the native gods or Kami as incarnate forms of one or other Buddha, the Indian faith was harmonized with the national consciousness and became secularized. But the chapter has nothing to say of the military type of Buddhist monk, which became a national menace in the sixteenth century.

The author, who contributes the article on God (Japanese) to Hastings's "Encyclopædia of Religion and Ethics," has a wide and accurate knowledge of his subject, and furnishes ample footnote references. It is a pity that the books mentioned, with details of place of publication, translations, and editions, are not given in a bibliography at the close. Some of the poems he quotes, translations of Japanese *uta*, require revision. Twice the vulgarism "lay" for *lie* spoils the whole passage; and on page 120 "vice-regent" appears for *vicegerent*. The diction throughout, however, with a few exceptions, including an awkward use of "claim," is idiomatic and clear, and the whole is a weighty contribution to a live subject.

Notes

The forthcoming publication of "The Great Society," by Graham Wallas, is announced by the Macmillan Company.

The Oxford University Press has in preparation an authorized translation, by G. McN. Rushforth, of Signor Rivoira's new book, "Architettura Mufulliana, sue Origini e suo Sviluppo."

"Punch and Judy," by Edwin Pugh, will be published by the Bobbs-Merrill Company on May 30.

The Century Company announces for publication next month "The Renaissance, the Protestant Reformation, and the Catholic Revolution," by Edward M. Hulme. The same publishers are bringing out a one-volume edition of Shakespeare's "Principal Plays," edited with notes and introduction by J. W. Cunliffe and others.

Houghton Mifflin Company will publish on June 13: "When Thoughts Will Soar," by Baroness Bertha von Suttner; "Broken Music," by Phyllis Bottome; "The Story of a Thousand-Year Pine," by Enos A. Mills. An English translation of Wassili Kandinsky's "The Art of Spiritual Harmony" has been added to the list of Houghton Mifflin's publications announced for June 3.

THE entertaining account of Thomas W. Wilby's attempt to cross Canada in an automobile from Halifax to Vancouver, contained in "A Motor Tour Through Canada" (Lane; $1.50 net), should help forward the movement for a national east-and-west road through the Dominion similar to the proposed Lincoln Highway. The book may not incite others to emulate Mr. Wilby's feat at the present time, but it reveals most graphically the splendid possibilities of such a route. The author left Halifax in August, 1912, over roads reduced to the consistency of a batter pudding as the result of weeks of rain. He drove through Truro and the beautiful Evangeline country, around Minas Basin, and up through the peninsula to the Tantramar Marshes on the New Brunswick border. From Moncton he followed the north shore of the Bay of Fundy to St. John, up the St. John River to Fredericton and Grand Falls, and on through Quebec to Rivière du Loup. The north shore of the St. Lawrence was taken from Quebec to Montreal, thence to Ottawa, through eastern Ontario to Toronto by way of Kingston and the Thousand Islands, and north to Lake Simcoe and North Bay on Lake Nipissing, over unspeakable roads, and with many breakdowns.

AT North Bay the plucky traveller was faced with the fact that there was no road of any description to the westward. He was reluctantly compelled to ship his car by rail to Sudbury, from whence a road of sorts took him to Sault Ste. Marie. There the situation became hopeless. No road of any kind was available around the north shore of Lake Superior. He must, therefore, take a steamer up the Lake to Fort William, and traverse by rail the roadless country between Fort William and Winnipeg. From Winnipeg it was comparatively good going over the prairie to Brandon, Moosomin, Regina, Moose Jaw, Lethbridge, and Macleod. Roads of very doubtful quality took him through the Crow's Nest pass to British Columbia and down south to the International Boundary, where fourteen miles westward had to be negotiated over the railway ties. Then came a zig-zag course up and down the beautiful British Columbian valleys, and finally down the Fraser to Vancouver. Some day it will no doubt be possible to cross the Dominion by a similar route and enjoy all the charms of the country with none of the discomforts.

QUEBEC politics and the working of municipal and parliamentary institutions are only slightly touched upon in Mr. Beckles Willson's book, "Quebec; The Laurentian Province" (Stokes; $3 net). In describing Montreal he is interested only in the best aspects of the city, and there is no suggestion that the city has also its slums. It is Sherbrooke Street and the St. James's Club that are emphasized. Moreover, while adequate attention is given to the iron, lumber, and wood pulp industries, and to farming, the author quite ignores Valleyfield and Ste. Hyacinthe, where, better than in the industrial suburbs of Montreal, French-Canadians can be seen as workers in the textile mills. Apart from these defects, Mr. Willson's book is one of the most comprehensive and satisfactory on the old French province that have been published in the last ten or fifteen years. His description of the place of the Catholic Church in the life of the province has seldom been excelled by a writer who was neither a French-Canadian nor a Roman Catholic. Mr. Willson is not invariably in agreement with the church; but its adherents cannot complain that he is unsympathetic. Similarly, the habitant has never had a more favorable interpreter than Mr. Willson. Occasionally it would seem that his admiration of the characteristics of

the French-Canadian carried him a little too far, as in his strictures on the author of the "Tragedy of Quebec." This is the story, as told by Mr. Robert Sellar, who has lived for half a century in Huntingdon, of the gradual displacement of families of British stock in the Eastern Townships by French-Canadians, and of the part that the church has played in the transformation of what was two generations ago the only English-speaking area of rural Quebec. The chapter on the Eastern Townships is scanty; for there is no mention of the large immigration from Great Britain that was organized by Edward Ellis—Bear Ellis, of Hudson's Bay and House of Commons fame—in the thirties of last century, at a time when in England it was deemed expedient that there should be a line of English-speaking colonists between the American border and the settlements of French-Canadians.

A BRIGHTLY written manual of information on the people, the missions, the hunting and fishing, and the possibilities in commerce and exploration of a semi-Arctic land, Cuthbert Lee's "With Dr. Grenfell in Labrador" (Neale; $1.50 net) represents special knowledge gained in a year's work as volunteer aid among the "liveyeres," or white natives, the Eskimos, the Indians, and the sailors of the coast. The author has a missionary purpose in what he writes; and his account of two narrow escapes from drowning, of his clerkship in Labrador's one court (of which Dr. Grenfell is magistrate), of storms on sea and land, and of hunting adventure, together with his sense of humor and color in native life, dissipates effectively any conception of the country as dull and bleak. He represents the "liveyeres"—the descendants of English fishermen intermarrying with Eskimos—as a hardy, religious, and picturesque race, and the land as one by no means without stern natural attractions. Dr. Grenfell writes a chapter upon its economic possibilities, with especial reference to his project, recently noticed in the daily press, of stocking Labrador with reindeer as a substitute for its fast-disappearing salmon and seals. Already a herd of twelve hundred of these animals is multiplying in Alaska; and, with proper funds and legislative encouragement, he believes that the barren lands of the peninsula can be covered with many thousands.

IF Mexico of to-day were only as charming and delightful as Mexico of 1840 appears in the pages of Mme. Calderon de la Barca, there would be little need for us to worry about the future. Few American countries have given rise to volumes of travel that have, or will, become classics. Mexico is an exception, and the editors of Everyman's Library have done wisely in recognizing this fact, and in issuing as one of their latest numbers that fascinating "Life in Mexico During a Residence of Two Years in that Country" (Dutton; 35 cents), whose first publication was largely due to the urgent recommendation of Prescott the historian. Originally published anonymously in 1843, these letters of the Scottish wife of the first Spanish Minister to Mexico achieved a deserved popularity. Even the critics received the book kindly, the *Athenæum* remarking that Mexico had hitherto never been visited "by any one gifted with so keen an eye and so pleasant a pen"; and the *Edinburgh Review* observing that the book has "all the natural liveliness and tact and readiness of remark which are sure to distinguish the first production of a clever woman." It is, indeed, the kind of volume which one may open anywhere and dip into with perfect assurance of being entertained.

IN "South America" (Macmillan; $2 net), Mr. W. H. Koebel, already favorably known for his excellent books on Uruguay, Argentina, and Chili, has attempted to give a brief history of the continent. It is not a success, and yet there are so few books like it that until a better one is written it must be reckoned with. There is no attempt at any analysis of the leading movements. Most readers will feel that too much space has been given to the Colonial period. There are too many names, and there is too little explanation of their significance. On the whole, the book is considerably below the standard set by the author's other works. It is one thing to be able to go into a country, analyze its present conditions, and give a faithful picture of prevailing tendencies, economic and political; it is quite another to digest the complex and kaleidoscopic histories of a number of different republics. There is still room for a good one-volume history, although the reader who has Mr. Koebel's latest work, for the early period, and Akers's "South America," for the latter part of the nineteenth century, should be able to arrive at a fairly good understanding of South American history.

IN the field of travel and description, Mr. C. Reginald Enock is apparently endeavoring to emulate what the late Andrew Lang accomplished in literature and criticism. Hardly has one laid down what appears to be his annual volume when another suddenly appears. This time it is "Ecuador: Its Ancient and Modern History, Topography and Natural Resources, Industries, and Social Development" (Scribner; $3 net). As an excuse for his temerity the author rightly contends that there has hitherto been no comprehensive book in English dealing with this troublesome microcosm. To be sure, Whymper's highly prized "Travels in the Great Andes of the Equator" will continue to be for most people a preferable means of getting the real flavor of the country. Whymper's volume is, however, already difficult to procure, and not at all comprehensive, so far as the republic is concerned, whereas Mr. Enock has endeavored to give a fair amount of space to history and geography, archæology and politics, flora and fauna. This Andrew Lang of peripatetic writers has a facile pen; he has procured some good pictures and a passable map, and he has tried to fill a real need. The demand for books about Ecuador is not so great as to make it likely that similar volumes will be required in the near future. It would be ungracious to criticise too harshly the work of a compiler who so obviously depends for his information on his own explorations, his own books, and the ever-useful encyclopædia, particularly as he has taken the trouble to collect a mass of information not readily accessible. It is significant that while most of the volumes of Scribner's excellent South American series have working bibliographies, there is none in this case. Although Mr. Enock can make no pretence of being an authority on Ecuador, his latest book is better than some of his earlier productions.

THE popular edition of Sir Ernest Shackleton's splendid account of his farthest south, "The Heart of the Antarctic" (Philadelphia: Lippincott; $1.50 net), calls for no special review, as it is merely a cheaper reprint of the author's earlier, more comprehensive work. The scientific results are omitted, the narrative including all matters of general public interest. The conventional result of a modern trip of exploration is a twelve-dollar, two-volume publication, which is beyond the purse of most persons; so that a less expensive reprint such as the present one is a real boon. Many of the excellent photographs of the other edition are scattered through the text.

BRITISH self-complacency amusingly crops out in Anne Warwick's "The Meccas of the World" (New York: John Lane Co.; $2 net). Of course, "the world" means Europe and a very small part of America. Moreover, it includes only the parts of Europe the author happens to have been enough interested in to visit—not Berlin or Munich or Athens or Florence or Rome, but Paris, Madrid, Vienna, and London. On turning the pages you discover that these oddly chosen cities are not meccas at all—they are a dramatic entertainment, in which, for example, Vienna is the children's performance and Madrid the broken-down actor. Under such varied and disconcerting figures does the writer present sketches and criticisms of the peoples she has eyed askance, of their manners and amusements, of their morals and women. In her imperfect sympathies she finds some pleasure in the frank love-making of the Parisians, looks indulgently on the child-like gayety of the Viennese, but is inclined to frown on the traditional pride of the Spaniard. Of the two latter she seems to have taken more than fleeting glimpses, but in the United States she becomes rather supercilious. In New York, crude, vulgar, ugly New York, she cavils vigorously even at our providing for comfort and convenience, at our demand for efficiency, and also at our opera. The further one reads the more convinced one becomes that the reason why England is perfect is that no other place except Spain has such respectful servants, and even in Spain they are apt to be suspicious. Yes, it must have been the domestics that inspired her to compose this unwillingly insular book.

NOT a few travellers in Italy would gladly acknowledge their indebtedness to the pleasant companionship of Mr. Egerton R. Williams, jr.'s, "Hill Towns of Italy" and "Plain Towns of Italy." Mr. Williams has now completed his trilogy with "Lombard Towns of Italy" (Dodd,

Mead; $1.75 net), which does for the district of Lombardy what the previous volumes have done for the cities of the Appenines and for Venetia. Those who, like the writer of this note, confess themselves held by the spell of that flat, fertile country, intersected with great *cavone*, dust-laden in the burning heat of summer, snow-covered in winter, the architecture of whose cities reflects the stern, independent genius of its people, will acknowledge and accept Mr. Williams's apology for seeming to rank this district as only "third in interest and fascination," and will agree with him that "there can be no real rank amongst those three most alluring provinces." In an admirable preface, the author summarizes so much of the general history of Lombardy as is indispensable to an intelligent interpretation of its art. A commendably clear map is in its right place, at the beginning of the book (facing the first page of Chapter I), and not at the end. As a matter of make-up, this map would be even more useful were it extended from a blank page, so that it might be consulted readily, without the necessity of turning back to it. All the cities of Lombardy are included in the volume with the exception of Milan, which, as the author explains, "would require a volume in itself," and of Como, which is omitted for the obvious reason that, as it is situated in a mountainous district, it does not properly belong to Lombardy. Mr. Williams follows the general method which he has found successful in his previous volumes, prefacing his description of each city with an historical outline, and then giving an account of his own wanderings through the place, supplemented by quotations from other writers and by references to the authorities. Some of the descriptive chapters are more likely to prove of practical value to the tourist than to sustain the interest of the general reader, but it is almost inevitable that a narrative of this kind should in places become somewhat pedestrian, and as a companion of a journey to supplement the severely businesslike Baedeker, this book can be cordially recommended. The index, so far as we have tested it, is full and accurate.

THE reader of "Siciliana," sketches of Naples and Sicily by Ferdinand Gregorovius (London: G. Bell & Sons; $1.60 net), will wonder why such delightful and informing essays have waited sixty years for a translator. Most of the material comes from the author's "Wanderjahre in Italien," published in 1853, though the concluding chapter, on Segesta, Selinus, and Mount Eryx, is from the "Kleine Schriften," which appeared in 1888. Nearly half the volume deals with Naples and the regions round about. The treatment is both historical and descriptive, and the description loses nothing in interest from the fact that so much of it applies to a Naples that has been swept out of existence by philanthropic and sanitary measures which can be commended more heartily for original good intentions than for intelligent execution and satisfactory results. His remarks on life in Santa Lucia, within the narrow limits of which he spent six weeks, should be read in connection with Matilde Serao's "Il Pellegrino Appassionato," which voices in the form of an excellent short story its author's feeling that the *risanamento* which followed the cholera epidemics of the eighties attained its maximum in the destruction of the charm of the old Naples and its minimum in enhancement of the welfare of the new.

A NEW historical guide to Geneva, "La Genève des Genevois," by Professor Doumerque, the author of the well-known biography of Calvin, has permanent value, and will be of especial interest to many of those who this summer attend the Geneva centenary, and *Fête de la Réformation*.

WE have received Baedeker's "Russia" ($5.40), "Southern France" (sixth edition, $2.40), and "Egypt" (seventh edition, $4.50). The "Russia," the first edition of this guidebook to be published in English, includes also Teheran, Port Arthur, and Peking. The volume is prepared with the same care for accuracy which habitually marks the Baedeker handbooks. In the introduction of sixty-two pages, besides special information of a practical kind, are given excellent short sketches of the geographical and ethnological history, and of the political, economic, and social history of Russia, as well as chapters on Government and Administration and on the Russian Church. The book is accompanied by forty maps and seventy-eight plans. The "Southern France" and the "Egypt" are enlarged from the previous editions, the most noticeable additions being in the number of maps and plans.

AS the sub-title informs us, "A Pepys of Mogul India" (Dutton; $3.50 net), translated by William Irvine and abridged by Margaret L. Irvine, is an edition of the "Storia do Mogor" of Niccolao Manucci, who ran away from home in Venice at the age of fourteen and passed a life of adventure in India from 1653 to 1708 (1717?). He found employment under Shah Jahan's son Dāra, till the latter died, when he took other service and eventually, "turning himself into a physician," obtained a position at court. Here, as elsewhere, regular employment soon began to fret his vivacious spirit and he escaped to Goa, where he was knighted for diplomatic success with the Mahrattas. Later he went to Madras, where he married and became a theologian, whose interest in the disputes between Capuchins and Jesuits succeeds at last in extinguishing the reader's interest in Manucci himself. For this reason the editors have cut down the four volumes of the "Storia," by omitting theology and other tediosity, to one handy volume of three hundred pages, which has not a dull page in it. It is a delightful story of a scrupulous adventurer, whose piety and dare-devilry combine to make fascinating his personal experiences, as his high position and the stirring times he lived in make his record of great historical value. He is in constant danger of his life and is robbed frequently, but with equanimity. He helps to save a woman from committing suttee; he sees another leap into a pit of flame instead of ascending a pyre; he amuses himself with starting a panic among the Emperor's elephants, etc., etc. These are chance items in a notable record. But why should "our Manuchy" be called a Pepys? He had few of Pepys's characteristics.

THE death was announced on May 19, in London, of William Aldis Wright, vice-master of Trinity College, Cambridge, from 1888-1912, and author of "The Bible Word Book" and works on Shakespeare, Bacon, Milton, and Edward Fitzgerald, and a commentary on the Book of Job, from a Hebrew manuscript. Mr. Wright was editor of the Cambridge Shakespeare, and was a contributor to Smith's Dictionary of the Bible, 1860-1863. He was also secretary to the Old Testament Revision Committee, 1870-1885, and joint editor of the *Journal of Philology* from its commencement in 1868.

RUDOLF TOMBO, JR., who died on May 21, was associate professor of Germanic languages and literature, and director of the Deutsches Haus at Columbia University, and secretary of the Germanistic Society of America. Dr. Tombo graduated from the College of the City of New York in 1895, and later studied at Columbia, receiving the degree of master of arts in 1898, and of doctor of philosophy in 1901. In 1902 he was appointed to the position he held at his death, and at times he was also registrar of the University, and secretary of the Alumni Association, and editor of the *Columbian Quarterly*. He was also one of the editors of the *Germanistic Society Quarterly*.

NOTES FROM ABROAD.

THE secretary of the American circle of the Lyceum Club, Mrs. John Hartness, is advocating in the English press the erection of an American church in London as a permanent memorial of the centenary of peace between England and the United States. The building is to cost about $1,250,000. American churches, it is argued, have been successful in Paris and Berlin; why not, then, in London? The projector seems to overlook the difference that is made by the fact that in Continental cities the local churches do not provide services in the English language. The question of establishing in London a social centre for American residents and visitors—which forms part of Mrs. Hartness's scheme—is quite another matter.

MR. BALFOUR'S English Association address on the comparative value of prose and verse as the vehicle of didactic argument has been widely commented on in the London press. The *Times* points his moral by urging the Association to help to enlarge the common conception of literature, which excludes great preachers and philosophical writers from the circle to which poets and essayists are admitted. "It is perplexing to think of the comparative neglect of Jeremy Taylor and South, and many others who might be mentioned, and the unending care and reverence with which Bossuet and Massillon and Bourdaloue are studied in France." There are many preachers "who are rich in golden sentences, though their the-

ology may be obsolete or dubious" and philosophical writers "who, when not busy with the technique of their systems, merit to be read as much as the classics of the age of Louis XIV."

THE same discussion has induced the editor of the *Westminster Gazette* to give his readers a peep inside his own sanctum. He finds on his table, he says, every morning a pile of manuscripts in verse and prose. The verse contributions are positively more numerous than the prose, and their level of accomplishment is on the whole higher. It is apparently more difficult for the majority of these contributors to produce a good prose article than to turn out a quite accomplished set of verses. While really good poetry remains as rare as ever, the power of rhyming, of writing to measure, of managing the sonnet form or ballade form without catastrophe, seems constantly on the increase.

REFERENCE has already been made in the *Nation* to the discoveries and restorations in and around the Lausanne cathedral which have given that town an additional interest for the antiquary. The municipality has granted to the Musée du Vieux Lausanne the building with the square tower or dungeon near the old Episcopal palace, which is being reopened and restored by M. Otto Schmid, who accomplished such good results at Chillon. The main part of the building is of the thirteenth and fourteenth centuries, but it has been much concealed and disfigured by subsequent patchwork. Prior to the work of restoration, considerable excavations must be made. These have already revealed some interesting details as to the construction of the building, a part of which probably belongs to a much earlier date than the superstructure.

THE famous manor of Steen, near Vilvoorden in Belgium, once the residence of Rubens and his beautiful wife, Helène Fourment, was offered for sale the other day by its owner. The house as it stands is still the same that the artist inhabited; and in the country around, several views can be recognized by the amateur of art who is familiar with Rubens's landscapes. In the house the old massive table is still to be seen at which the painter used to work. Even a copy of the printed notice announcing the sale at which Rubens, in 1635, purchased the estate, is also extant. Senator de Becker-Remy, of Louvain, into whose possession the castle has passed, is a well-known lover of art, who will doubtless take pride in preserving this wonderful record of a famous period in the history of Belgian painting.

ANOTHER no less celebrated treasure of the Belgian nation, the Museum Plantijn-Moretus, at Antwerp, is to lose its director, Mr. Max Rooses, the well-known essayist and art critic. Mr. Rooses has completed his seventy-fifth year, and he feels that, at his age, he should cede his place to a younger man. American admirers of the Flemish school of art will remember his publications dealing with Rubens and the Antwerp painters. Since 1876 he has been in charge of the Museum Plantijn-Moretus, which has attained its world-wide renown, thanks largely to his devoted activity.

Science

PREVAILING CONCEPTIONS OF LOGIC.

Encyclopædia of the Philosophical Sciences. Vol. I: Logic. By Arnold Ruge, Wilhelm Windelband, Josiah Royce, Louis Couturat, Benedetto Croce, Federigo Enriques, and Nicolaj Losskij. Translated by B. Ethel Meyer. New York: The Macmillan Co. $2 net.

The purpose of this encyclopædia, as vaguely explained by the German editor, Dr. Ruge, is to set forth the systematic unity of the philosophical sciences, after the fashion of the "Encyclopädie" of Hegel; only not, of course, the unity of a personal system, but the unity of tendency among philosophical thinkers; "unity with freedom," as explained by the English editor, Sir Henry Jones. The unity seems to lie mainly in the fact that Royce, Couturat, and Enriques are all more or less interested in the symbolic logic; or, as Couturat prefers to call it, the algorithmïc logic, or logistic. The freedom is represented by Croce, who likens the logisticians to peddlers crying up "specious and glittering wares" which no one wants. Indeed, what the volume chiefly teaches us is the variety, contrariety, if not the mutual irrelevance, of the prevailing conceptions of logic.

According to Royce, logic is the theory of rational order. According to Croce, it is the process of history become self-conscious; the philosophy of philosophy; the finally critical process of all critical thought, for which poetry and ordinary experience supply the material. But more than his brief article is needed to make his Hegelian pragmatism intelligible. Windelband presents a thoroughly Kantian scheme of logic, but he again is too condensed for one who is not at home with Kant, though full of suggestiveness for the student of philosophy; while the article by Enriques, in which logic is identified with scientific method, is so summary as to seem superficial. Losskij strikes an important note in contending that the foundation of all logic is the principle of sufficient ground. How far this agrees with Windelband's recognition of the "principle of consequence," how far Royce rejects the principle of sufficient ground in calling it inadequate, is left for the reader to say.

The truth is that logic, which, after many centuries of slumber, is only lately awake, and still rubbing its eyes, is a poor subject for the exhibition of unity. What the present volume offers is an interesting collection of personal views of distinguished writers, French, German, Russian, Italian, and American; and, in the most satisfactory articles by Royce and Couturat, an excellent introduction to the mysteries of the symbolic logic and to newer ideas about scientific method. Judging only from the English, we should say that the translation, a most difficult task, deserves high praise.

Couturat makes it clear to us that the symbolic logic (or logistic) is the natural outcome of an attempt to remedy the defects of the Aristotelian logic of the syllogism. The syllogism deforms and, one might add, bleaches our meanings by reducing all their shades and complexities—their variety of terms and relations, as Couturat puts it—to relations of inclusion or exclusion between classes. Thus the pregnant suggestion of Socrates that virtue is knowledge, which owes all its philosophical significance to the implication that all knowledge is likewise virtuous, is reduced to the insufficient and seemingly empty statement that virtue is but one of the kinds of knowledge. Logistic is to remedy this insufficiency, as Couturat explains, by a "calculus" which will cover all kinds of terms and all kinds of relations. Yet this, it might be urged in reply, is also the intention of the syllogism. But the syllogism, as we all know, is unable to handle a proposition until it is reduced to a statement of "extension," or range: all virtue is some knowledge. And it is this that rouses our suspicions. For when we discover that, for purposes of argument, "virtue is knowledge" can mean only that a little circle, named "virtue," lies within a (possibly) larger circle, named "knowledge," we are led to wonder whether we are now talking about virtue and knowledge or only about circles, conveniently so named.

To the reviewer it seems that suspicions of this character are suggested only more strongly by the algebraic formulæ of logistic, if not confirmed by the explanation of the formulæ—the suspicion, namely, that logistic is, after all, only a calculus of symbols, or counters. We are then justified in asking whether the symbolic logic, so far from covering a wider variety of relations, is not simply developing the category of extension to the crude and bitter end. To this question Couturat supplies no answer. Like most of the logisticians, he seems to care little about giving his science a foundation in the nature of thought. It is worth noting, in passing, that his article closes with an appeal for a universal language, though why he should seek to enlist the philologists is hard to say; for in a culture ruled by a perfect logistic we should expect the symbolic language to be sufficient for poetry and philosophy as well as for science.

Royce undertakes to give the symbolic logic a local habitation and a respectable name in the world of thought and being by showing that it reveals to us

an "infinitely rich" realm of ideal objects which is at the same time implied in all rational thinking, in the procedure of empirical science, if not also in the possibilities of rational conduct. The question may be asked, how, from certain facts given, we may infer others; how we may know that the given facts are a "fair sample" of the whole. The principles of the uniformity of nature or of sufficient ground, which are usually invoked here, Royce rejects as insufficient, and holds that a certain determinate distribution, or order, in the constitution of the field studied is implied in the activity of any rational agent. Royce then uses the formulæ of logistic to illustrate the principal types of order. From this point of view the symbolic logic becomes a further and more detailed extension of Kant's "deduction of the categories"; and, according to Royce, the theory of order will be a fundamental science in the philosophy of the future. Meanwhile he seeks to throw light upon the types of order by regarding them as necessary types of rational action. And this seems to leave us with a pair of bitter alternatives: either our personal thought and conduct must attain to the seemingly pale impersonality of logistic, or they must abandon all claims to rationality and truth. Yet here, in the end, lies the problem of logic: to show how personal thinking may also be objectively true.

Petermann's Mitteilungen for March contains a careful summary, by E. Banse, of what is known of an almost unexplored region of Africa, the Libyan Desert and Tibesti. A study of the different seismological charts by Prof. Rudolph and Dr. Szirtes shows the geographical distribution of earthquakes. All the known volcanoes, both active and extinct, are indicated on the accompanying maps. The military department treats of the strategic changes in Russian Poland, the defences of the Gulf of Finland, and the inadequacy of the new boundaries of the Balkan States from the military and economical point of view. Among the contents of the same journal for April are an account of a journey by caravan from Mosul to Aleppo, the present condition of the Libyan Desert for exploration, and a treatise on the terminology and classification of mountains. The work of the air-ship in the exploration and service of the German colonies is also described, and, in the military department, an account is given of the fortifications of the Algerian and Tunisian coast.

The *Geographical Journal* for May opens with an account by J. Lied, director of the Siberian Company, of a voyage made last summer from Norway to the Yenisei River. Accompanying him was Dr. F. Nansen, who gives the results of his scientific observations on the ice conditions, showing the possibility of regular navigation. This is essential to the development of central Siberia, and to assist it the Government has established three wireless telegraph stations on the Kara Sea, and will probably add an aeroplane service. It is not impossible, as the Russian Consul-General in London maintained, that this region will become the granary of the world and the chief source of the timber supply. There are also accounts of journeys through central Arabia by Capt. Leachman, and in northern Burma by the late Capt. Pritchard, and a description of Canberra, the new capital of Australia, by G. Taylor. A valuable map of the Balkan States shows their boundaries, in accordance with recent treaties, and in the accompanying text some of the frontiers are traced in detail.

A congress of Spanish-American geography and history was held in Seville during April, in commemoration of the quadricentennial of the discovery of the Pacific Ocean by Vasco Nuñez de Balboa. An interesting and valuable collection of maps and documents was loaned by the Spanish Ministry of War to aid in the discussion of political, geographical, and historical facts by special investigators from many countries. This first public exhibition of priceless Americana was due largely to the active interest taken in the celebration by King Alfonso.

Sir Francis Henry Laking, M.D., physician in ordinary and surgeon apothecary to the King of England and the Prince of Wales, and apothecary to his Majesty's household, died in London on May 21. Sir Francis was born on January 9, 1847. He was educated at Heidelberg and at St. George's Hospital, London. He was a Knight Commander of the Bath and a Commander of the Legion of Honor, and was created a baronet in 1902. He also received the Grand Cross of the Crown of Italy, the Grand Cross of the Immaculate Conception, Portugal, and the Grand Cross of the Dannebrog Order.

Paul Louis Toussaint Heroult, the scientist through whose research work the production of aluminum was first made commercially profitable, died recently in Paris. H. Heroult, who was of Norman stock, was born on April 10, 1863, at Thury-Harcourt, Calvados, France. As a boy he was educated in London, later entering the Lycée de Caen, Calvados, France, and his education was completed at the Collège Sainte Barbe and Ecole des Mines in Paris. He invented and patented the Heroult aluminum process in April, 1886, and the following year became the technical manager of the aluminum works at Neuhausen, Switzerland. In 1889 he came to the United States, and in 1890 he was made a director of the French Aluminum Company, known as Société Electro Metallurgique Française. In 1899 M. Heroult invented the electric steel furnace and process, and in the appliance of his method he was officially connected with the United States Steel Corporation, and with many other companies in this and foreign countries. The results of a survey which M. Heroult made of Canada's mineral deposits are embodied in a textbook on the subject.

Drama

THE STAGE OF HENRI BECQUE.

"The Vultures" and Other Plays. By Henri Becque. New York: Mitchell Kennerley. $1.50 net.

There was a time, thirty or forty years ago, when the name of Henri Becque occupied a very prominent place in the list of contemporary French playwrights, but his works seem hopelessly old-fashioned now, and it is not easy to divine the special reason which induced Mr. Edwin Björkman to include these pieces in his Modern Drama series. Still more difficult is it to acquiesce in the judgment of the translator, Mr. Freeman Tilden, who, in his preface, acclaims Becque as an epoch-making revolutionary, the discoverer of the drama of the commonplace, and a pioneer for Ibsen. Admirers of the famous Norwegian will not be pleased by the insinuation. Unquestionably, Becque, going to the masses for his subjects, was an innovator when compared with such writers as Augier, Feuillet, Sardou, and the younger Dumas, and was, in one sense, more of a realist than any of them. But he was essentially either a melodramatist or a *farceur*, and was inferior to his rivals in constructive skill, imagination, the composition of emotional climaxes, and polished dialogue. He had wit, a good sense of situation, an honest indignation against public abuses, and the courage of his convictions, but in his illustrations he was not much nearer to the truth of nature than the romanticists themselves.

This is the reason why "The Vultures" ("Les Corbeaux"), instead of being an effective satire upon an iniquitous system and professional rascality, becomes a diffuse and conventional melodrama of no particular significance. The subject—the opportunities afforded by then existing French regulations to greedy and unscrupulous practitioners to rob the widow and orphan under the cover of legal technicalities—is a good one, and it need not be doubted that, in selecting it, M. Becque was animated by sincere and philanthropic purpose. But he spoils a strong case by the extravagance and manifest artificiality of his premises and the complete theatricality of his personages. All the conditions of his story are prescribed, transparently, to insure a predestined issue, and would therefore be impotent as a demonstration, even if they could be regarded as fairly typical. His lewd and usurious old financier, his grasping and scoundrelly lawyer, his speculative architect, his dishonest tradesman, and the lesser vultures who batten upon the unfortunate Vigneron family, are one and all ancient puppets of the melodramatic stage. Madame Vigneron and her daugh-

ters, and the fortune-hunting Madame de Saint-Genis are almost equally destitute of originality or freshness. None of the characters, with the exception of the faithful old nurse, conveys the impression of an actual living human being. For their inveterate loquacity, which constantly clogs the action, the responsibility, of course, rests upon the author, who has made them the mouthpieces of his explanations and protests; but the mixed literary quality of their discourse must be put to the credit of Mr. Tilden, who has employed all sorts of current American colloquialisms which seem strangely inconsistent with the supposed place and time, however ingenious they may be as English equivalents of French phrases.

"The Woman of Paris" ("La Parisienne"), which was vehemently denounced at the time of its first production as a gross libel upon the sex, is written with a certain cleverness and vivacity, but is no way brilliant either in form or in psychological analysis. It is a simple variation of a formula upon which hundreds of farcical comedies have been built. The fickle wife, who deceives an abominably complacent or phenomenally stupid husband, has, in this case, two lovers. There is a domestic quadrangle instead of the usual triangle. The construction is arbitrary rather than plausible or ingenious, and the use of prolonged soliloquies is excessive. Theatrically it is inferior, in sparkle, point, and essential veracity, to scores of pieces of a similar character, while as literature or drama it is of infinitesimal value. As for "The Merry-Go-Round" ("La Navette"), described as a comedy in one act, that is an ordinary French farce, in which an unprincipled little baggage plays at fast and loose with three of her lovers at once, the first of whom she dismisses, only to take up with him again after she has failed to make satisfactory terms with either of the other two. It is a cynical trifle which skilled French comedians doubtless could make fairly amusing, but why it should be thought worthy of translation into English as a choice example of modern drama, French or other, passes comprehension.

In the *Burlington Magazine*, Mr. William Grant Keith describes his discovery and identification of the original designs for the entire scenery of Sir William D'Avenant's "Siege of Rhodes," as well as the plan and section of the stage upon which it was mounted, when first produced at Rutland House, Aldersgate Street, London, in 1656. The drawings are by John Webb, pupil of Inigo Jones, who was D'Avenant's collaborator in the production. The importance of the find lies in the fact that these drawings reveal the staging of D'Avenant's opera (the first play produced on an English public stage mounted with movable scenery in a modern sense) as the hitherto missing link between the Court Theatre as developed by Inigo Jones during the reign of Charles I and the public theatre of the Restoration; for Webb is shown to have modelled his work entirely on that of his master.

The Irish Players from the Abbey Theatre, Dublin, begin their annual season at the London Court Theatre on Monday, June 1, when Miss Sarah Allgood rejoins the company. In addition to their regular repertory, two new plays, a one-act comedy by Lady Gregory, named "The Wrens," and a three-act piece, "The Supplanter," by an untried dramatist, J. Bernard McCarthy, will be presented.

Lord Howard de Walden, who conceals many of his artistic activities under the pseudonym of "T. E. Ellis," has a scheme for providing Wales with a national theatre on wheels. As the Welsh, in the country towns at least, cannot go to the theatre, the theatre is to go to them. The "house"—including scenery, pit, gallery, pay-box, greenroom, and stage door all complete—is to be taken from one suitable pitch to another. As the *Daily Citizen* wittily remarks, "the Welsh national theatre at any rate will be in the van of the movement."

In an interview in London on his return from his recent American tour—which drew receipts of over half a million dollars—Sir Johnston Forbes-Robertson expresses his regret that nothing has come of his suggestion as to the Shakespeare Memorial National Theatre. He proposed that, instead of acquiring a fresh site and building a new theatre, the promoters of the project should purchase Drury Lane, "without exception the most beautiful and wonderful theatre I have ever played in." Even America, in his judgment, has no such stage for Shakespeare. Sir Johnston, who was a Royal Academy student in his boyhood, is likely to pursue painting as a hobby after his retirement. "I do not think," he says, "the colors ever become quite dry on the palette of the man who has once expressed himself with the brush, no matter how absorbing the work set him by another Muse."

The movement for a "People's Theatre Society" in England had an excellent send-off at a meeting held at Drury Lane on April 25. The condition of membership is to be the payment of a shilling subscription, which will entitle the subscriber to two reserved seats at any one performance given under the Society's auspices. The scheme is welcomed in the interest not only of the prospective audiences in the poorer districts of London, but also of actors and actresses, many of whom find themselves crowded out by the popularity of the picture palaces and music halls. It was a misfortune that some of the most prominent speakers at the Drury Lane meeting complicated the issue by introducing the vexed subjects of Sunday performances and restrictions on the employment of children. Some of the best friends of the new movement fear it will be seriously hampered if it is mixed up with other proposals on which there is a strongly marked division of opinion.

Music

DRAMATIC OPERA IN PARIS.

ALFRED BACHELET'S NEW WORK—AN ATTEMPT TO MAKE MUSIC A LIVING THING WITH THE TEXT—ANOTHER'S OPERA WITHOUT WORDS.

PARIS, May 16.

"Scemo" is a "lyric drama" and a new piece at the Paris Opéra; and it is new music. Its composer, Alfred Bachelet, carried off the Grand Prix de Rome and so has the right to three representations of one of his works at the Opera subsidized by the State which bestowed the prize on him. His piece has reached its fourth night, and, to all appearances, will go further. The similar new piece of last year—"Le Sortilège," by André Gailhard—had five representations. "Scemo" has an interest independent of the musical impression on opera-goers, which has to determine its long or short life, and cannot be foreseen. The prize work of its composer was remarked at the time for its wonderful mastery of all that is modern in musical technic; and now he has tried to interpret a text and its dramatic action on the stage closely, completely, and by adequate music.

In the old Italian opera the text was ridiculous for the most part, and, at best, was little more than an occasion for vocal flights. A like method was used in the poetry of serious tragedy, sometimes with undeserved felicity. At the end of the first scene of the third act of Metastasio's "Artaserse" the great King releases in profound secrecy his misunderstood Arbace from a prison cell. Not unaffectingly, he bids him escape. In the very nick and peril of time Arbace cannot be gone without first expressing dignified thanks. Then he risks more precious time for a few verses good enough as poetry, but of little pertinence:

> Water divided from the sea
> Bathes valley and mountain;
> A traveller in the river,
> A prisoner in the fountain;
> Murmuring ever and moaning
> Till it returns to the sea—
> To the sea of its birth
> Where its moisture arose,
> Where from long wanderings
> It hopes to repose.

Thereupon "he departs," according to the author's parenthesis for stage direction. Such was Arbace's conventional finale, impressing on the public his previous solemn declaration:

> I hope not to find peace till the day
> I return to my country and friend.

It pleased the audience at the Court theatre of Vienna mightily; and it

pleased Sir Arthur Helps, quoting it in his "Friends in Council." After other long intervals, historians of our own drama and opera may discover parallel instances in Maeterlinck and Debussy.

To Wagner's devotee of Latin race, text comes as little more than a *Vox Humana* mingling with other instruments of nerve-swaying, soul-compelling harmonies—for he cares little to know the German legend, and the German's philosophy he does not respect. In "Scemo" the composer obviously tries to make the music one living thing with the text. Now, the text, with all its romantic violence, is a poem of literary merit. It is by Charles Méré, who wrote the text for "Les Trois Masques" of Lara—the last piece given by the unlucky Théâtre des Champs-Elysées, which has just been taken over for an American season in Paris. Here again the scene is laid in wildest Corsica, where Prosper Mérimée, the author of "Carmen," also found the loves and hates of his "Colomba."

"Scemo"—the Fool—is the nickname of a half-mad shepherd. Francesca, wife of the village great man and herself daughter of the chief of the clan, loves Scemo because his eyes are so bright—remember we are in the land of the evil eye—and because he sings mysterious songs, and doubtless for reasons of her heart which her reason does not know. The suspicious husband seeks her in the shepherd's hut and finds only Scemo, who calms him. When he is gone, Scemo brings Francesca from her hiding place and begs her with music and passion to go home. No, she will fly with him instead, over the hills and far away. Shepherds discover them and sing loud insults till the husband, who has not gone far away, hears—and that is the first act.

Francesca's father, fearful of spells and devils, tries vainly to sleep amid wind and storm roaring and crashing to music. He dies, and the whole family, with Francesca's injured husband, set out for the hut of Scemo, whose eyes must have wrought the evil. Vainly he protests he has not left his hut; but the evil eye has that action at a distance, which was denied by Sir Isaac Newton. The Corsican crowd gathers as for a Mississippi lynching; and they tie Scemo to a tree to burn him alive. Francesca shall light the avenging fire. They drag her, with torch in hand, before the helpless Scemo. With a mighty effort, he frees an arm and with his own hands tears out the eyes which have done such evil—and this is the second act.

It is Easter Eve, but the husband's house has no answer for the joyful bells. They wake Francesca from her long swoon, and she rises unremembering. All in white, she comes forth to the crowd, where it is singing and dancing. Suddenly, she cries out "Scemo!" The husband cries back in fury that the Fool is dead, burned alive. "Swear," says the wife, "and I kill myself!" The husband, with his Corsican knife in hand, leaps up the hill to the cave in the rocks where Scemo lives in blindness, and he hears the Fool praying for Francesca's healing in body and in heart. How can he kill him? He puts the knife into the hand of Scemo instead, to slay himself, the husband, whose wrongs were else without end. The Fool has the inspiration of a single mind—his living eyes have done the evil, his dead eyes shall undo it. He is led towards unbalanced Francesca, who rushes to meet him—till he turns to her his empty eye-sockets and chants musically that his heart, too, is empty from overmuch love and pain. The spell is loosed, and her love fever dies, leaving naught but great and musical pity. And this is the end of the third act and the piece.

To each circumstance and emotion Bachelet has written harmonies and orchestration, now violent, now full of subtle coloring. There is no secret of modern musical expression which he has not mastered; and for two years he has gone up and down Corsica, listening for local tone, striving to enter into the local soul. If critics did not block the way, it might be curious to know what an untutored Corsican would feel from this lyric drama—

> But the Devil whoops, as he whooped of old:
> "It's clever, but is it Art?"

Along with these representations of a new composer's work, the Paris Opéra, in virtue of the Russian Alliance, is giving another and broader synthesis of other arts with music. It is introduced by a name before which even critics stand in awe. It is the "Legend of Joseph," here first represented and personally conducted by the composer, Richard Strauss. It is really an opera without words; and it is produced in the "Russian Ballet" season, only because it is acted by those dancers. The composer is a German whom the Paris press persists in mixing up with Vienna and the Danube; the stage scenery is by one of the greatest decorative painters in cathedrals and palaces, Sert, the Catalan Spaniard; and the costumes, which are essentials of such music, are by the not less celebrated Russian decorator, Leo Bakst.

In this high tide of his success, the composer is said to have written "the work waited for and asked for ever since Wagner"; and in it he is supposed "to have found the modern formula of all the arts combined"—excepting the vocal art. The result is "an arabesque of sixty legs and as many arms—gestures adapting themselves to the subtlest of rhythms and harmonies."

The story, of course, is of the unfortunate Potiphar's wife; but the decorative art for the eye—pantomime and dance, scene painting and costumes—is Venetian of the Renaissance. A little, lithe young Russian, who acted in plays in his own country—Leonid Miassine—is the wordless but very active Joseph, and a very pretty one. His first dance—for it is not all acted pantomime, though it is certainly not ballet, Russian or other—is "turn by turn mystic and pastoral." Kousnetzoff, who is a great prima donna in Paris opera, passes through this act without words, gowned and moving to music. Michel Fokine leads all the choregraphy and had his reward when Richard Strauss rushed down on him at the rehearsal, crying "Kolossal!" S. D.

The list of operas from which the twenty offerings of the Century Opera Company for next season are to be selected include: "Madama Butterfly," "La Bohême," "The Jewels of the Madonna," "I Pagliacci," "Cavalleria Rusticana," "Louise," "Thaïs," "Faust," "The Tales of Hoffmann," "Samson and Delilah," "Romeo and Juliet," "Aïda," "Carmen," "Martha," "Hänsel and Gretel," "William Tell," "La Gioconda," "Lucia di Lammermoor," "The Barber of Seville," "Rigoletto," "Lohengrin," "Tannhäuser," "Il Trovatore," and "La Traviata," while the International Ballet will also be reproduced.

The dates for the Bach festival performance at Bethlehem, Pa., are May 29 and 30. Dr. Wolle, who will direct the performances, is a Bach specialist, and his choir is admirably trained. At this festival the second number of the "Mass," the duet "Christ Eleison," for two sopranos, will be sung by all of the first and second sopranos of the choir, eighty in number. The alto solos, "Qui Sedes" and "Agnus Dei," will be sung by all the altos, firsts, and seconds. The "Benedictus," a tenor solo, will be sung by all the tenors. All of the basses will join in giving the two solos, "Quoniam Tu Solus Sanctus" and "Et in Spiritum."

Concerning the performances of "Parsifal" at this summer's Wagner Festival in Munich, we are informed officially that they will be conducted by Bruno Walter. The Grail Cup has been made of alabaster, with precious gems set in by one of the most famous German goldsmiths (Theodor Heiden), and every other scenic detail is being attended to in the same artistic manner. Among the singers engaged are Heinrich Knote, Fritz Vogelstrom, the young Dresden tenor; Karl Erb, and Otto Wolf. For the rôle of Kundry, Frau Mottl-Fassbender, Berta Morena, and Edith Walker; for that of Gurnemanz, Paul Bender; for the rôle of Amfortas, Fritz Feinhals and Paul Bender; for the Klingsor, Desider Zádor and Fritz Broderson. The leading part of the chorus of the flower girls will be entrusted to the celebrated singer, Hermine Bosetti, the favorite of the Berlin and Munich Court Opera. The stage management will be in the able hands of Prof. Anton Fuchs.

A musical novel of which 200,000 copies have been sold—Ernst von Wolzogen's "Kraftmeyer"—has been issued by B. W. Huebsch in a good English translation, under the name of "Florian Mayr." In this book Liszt is vividly portrayed, together with a number of his pupils and others, who subsequently became famous. A more extended notice of it will appear in our literary pages in due time.

Art

THE SPANISH SCHOOL.

Geschichte der Spanischen Malerei. By August L. Mayer. In two volumes, with 286 Illustrations. Leipzig: Klinkhardt & Biermann.

Until the appearance of Emile Bertaux's work on Spanish art in André Michel's "Histoire de l'Art," no comprehensive and authoritative work on the subject was available. Stirling-Maxwell's "Annals of the Artists of Spain" is a labor of love, but an uncritical compilation which, if not entirely, is at least very largely, based upon Cean Bermudez and Palomino; and Passavant's "Christian Art in Spain" is little else than an appreciation. The work of Paul Lefort, a man of penetrating insight and the first serious critic of the subject, was of much importance when it appeared, but it has become antiquated and incomplete, particularly in regard to the early schools. Within its limitations as a hand-book, Dieulafoy's recent "L'Art en Espagne et en Portugal" contains much important information regarding architecture, but it treats of painting in an entirely superficial manner.

The work of Bertaux constitutes a very able presentation of the subject. In regard to sculpture it is the great, one might say the sole, authority. Concerning painting it is sound throughout, and of the greatest interest for the study of certain schools which are the predilection of the author, the Catalan and Valencian primitive schools, and also the painters of Valencia of the beginning of the sixteenth century, among them the Manchegans Ferrando de Llanos and Ferrando de L'Amedina. The work of Dr. August L. Mayer upon the Spanish school of painting, which has just been published in Leipzig, is the logical outcome of his previous books on Ribeira, Greco, Murillo, the Sevillan school, and of his articles in German and Spanish reviews. It is the work of a specialist who is a broad-minded man, interested in the whole field of art and having the knowledge of it which is necessary to give perspective, detachment, and a sense of the large relations to the appreciation of any particular school. But the work involved much research and could only have been written by one who is thoroughly familiar with that rich mine of documents, throwing much light upon the different manifestations of the art of painting throughout the Peninsula, which are to be found scattered in books, and particularly in the innumerable small local reviews and periodicals of Spain.

The plan of the work has been to show the development of Spanish art from the tenth century to Goya, and to give a connected exposition of the art and not a series of artists' monographs. It is logically conceived on big lines. For example, unlike Bertaux, who studies the art of Spain from the standpoint of its foreign influences, Dr. Mayer starts by studying the works of art in themselves before pointing out their relations to foreign schools; a method which has the evident advantage of not dividing the schools, while that of Bertaux complicates matters somewhat by dividing them into spheres of influence.

As an introduction the author gives a general explanation of the importance of the Spanish school and of its relations to other European schools, and he shows that its character is based upon the mixture of Northern with Oriental elements, and upon the peculiar, entirely racial, and most powerful, religious feeling. The chapter on the Catalan school of the eleventh and twelfth centuries treats of many works, hitherto little known, which are of the greatest importance because they are the very last evidences of the Byzantine influence in Western Europe. The chapter on that even less known Castilian school of the fifteenth century, of which virtually nothing can be seen in Madrid, brings out several artistic personalities and many typical works scattered in little places difficult of access. The tenebroso style of the Spanish school is defined and explained; and its differences from the Italian style, as well as the varied character of its manifestations in the provinces of the Castiles, of Valencia, and of Andalusia are clearly shown. Besides doing important pioneer work on special subjects, throughout the book the author coördinates the scattered existing information.

An excellent feature is the giving of comparatively little place to the few well-known artists upon whom there is an abundance of special literature, and the treating extensively of little-known men whose influence was great, such as the fifteenth-century Catalan Ferrer Bassa, and Jacomart, the master who superadded the Sienese and Giottesque elements of the early Italian Renaissance to the influence of the Flemish primitives, and was the dominant personality of the Valencian school of the fifteenth century. The author brings out clearly the intimate relation of Greco with Parmeggianino and the Bassanos, and explains how such an artist as Velasquez became a Castilian in his work; why Madrid became more and more the centre of Spanish art, and how it fell under the influence, inspiring at first but soon baneful, of the Venetians, of Rubens, and of Van Dyck.

While scientific and discriminating, the book is not pedantic. Moreover, it has a refreshing human quality. In the chapter on Goya, for example, Dr. Mayer attempts, by a most interesting comparison with Titian and Beethoven, to explain the extraordinary change in an artist who had already passed middle life, from his first, what may be termed his rococo, style to his second, the real Goya style, so original, deeply human, and superbly painter-like. It is to be hoped that a translation will make this useful and much-needed work available to the English-speaking public.

Spanish sculpture of the seventeenth century, despite the labors of Dieulafoy, Calvert, and Lafond, probably finds few admirers in America. It requires a resolute effort of detachment to put oneself into the mood of Jesuitical Romanism and the Inquisition. Yet this art is worthy of study, if only for its completely indigenous character. A young Spanish critic, Ricardo de Orueta y Duate, in his "La Vida y la Obra de Pedro de Mena y Medrano," offers much to attract both the specialist and the open-minded art lover. Pedro de Mena was born at Granada in 1628, and trained by Alonso Cano. Soon he relinquished the internationalism of Cano in favor of a drastic personal style wholly Andalusian. His most remarkable work is perhaps the forty wooden statues of saints for the choir of the Cathedral of Malaga. Many of the images are portraits of extraordinary intensity, shrewdness, or benignity. In the Virgen de Bélen, in Santo Domingo, Malaga, he achieves almost a Venetian sweetness and dignity. The coloring of his statues is often very pleasing. He continued worthily the haggard St. Francis type. The most remarkable example is in the Cathedral at Toledo. Peculiarly his own is the series of Repentant Magdalens regarding the Crucifix. The ecstatic concentration of the Magdalen in the Convent of the Visitation at Madrid is justly celebrated. Poems were written in her honor. The forms are of great strength, delicacy, and beauty.

These are perhaps the types that will most impress an art lover. For the rest there is much that is shocking to modern taste. Doll-like virgins to be dressed in real frocks, Dolorous Mother with real tears eternally caught on wan cheeks, sentimental martyrs. These are the unquestionable defects of an art that had great qualities of sincerity. It is all of a piece with the simplicity of Pedro's life. He owned no books, his four children became conventuals. He believed firmly, observed the humanity about him, and worked with a masterful hand. The refreshing thing about an art that has its elements of pietistic overstrain is its native idiom. Pedro with many of his fellow sculptors was free from the rather superficial cosmopolitanism of the ba-

roque style. The fervor and veracity of his matter give it perfect authenticity if not high importance. Dr. Orueta has conducted his work with scholarly thoroughness. There are a general essay, a catalogue raisonné with excellent critical comments, and appendices of all accessible documents. The book is in quarto form with many illustrations, many from the author's negatives. It is published at Madrid by the Junta para Ampliación de estudias é investigationes científicas. This careful work affords a favorable approach to an art just beginning to be duly appreciated, and gives an excellent impression of the thoroughness with which the art of Spain is being studied by her younger scholars.

Finance

MR. MORGAN, MR. MELLEN, AND THE NEW HAVEN.

The salient disclosures made by Mr. Mellen, in his testimony on the New Haven's past financing, were these: 8,000 shares of New Haven stock, worth $1,200,000, were exchanged for 24,000 shares of the Westchester Electric Road, worth in his judgment "about ten cents a pound." Under the auspices of the late Mr. J. P. Morgan, $11,000,000 was paid for the whole Westchester property, on which Mellen figured only $5,000,000 had been spent by its promoters; no accounting being made, and information as to why that price was paid being refused, according to Mellen, by Mr. Morgan when such information was requested. Up to date, $35,000,000 of New Haven's money had been put into the property, which has since been operated at an annual deficit of a million and a quarter. Through the medium of Senator Aldrich, the New Haven paid $20,000,000 for the Rhode Island trolley system, which Mellen estimated to be worth $8,000,000.

It is only natural that, in Wall Street and in the country at large, the statements regarding Mr. Morgan should have made a profound impression This was not by any means because of their implication as to the rashness of policy and high-handed use of company capital and credit by the leaders in high finance of a decade or more ago. That story has been told too often, in and out of the courts, to cause any new surprise or consternation. But there were two peculiar aspects of Mr. Mellen's testimony.

One of these was, that he represented Mr. Morgan's dictatorship in such a manner, and with such particulars, as to instil inevitably, in the minds of many people, the belief that Mr. Morgan actually diverted the New Haven's money to his personal uses. The other was that Mellen adroitly used this version of the case to represent himself as an innocent and injured person, whereas every one in touch with the past ten years of the New Haven's history had been convinced, long ago, that Mellen avowedly promoted the policy of reckless expansion which crippled the enterprise, and that his personal dealings with the people, the courts, and the Legislatures of New England were of a nature to mark him out as the mischief-maker.

It is quite true that, even if all this were to be proved, it would not clear up the record of Mr. Morgan's financial relations with the New Haven. But the fact that Mellen's story was so carefully framed to exonerate the man who told it, ought to leave the entire community anxious to have the version of the same events told by some one else who knew what actually happened. The general result of his testimony was to present a picture which might easily appear to show concerted and deliberate plundering of the property by other people, while Mellen, as its president, looked on with mild disapproval, shook his head when he heard of the misuse of the corporation's money, and sometimes went so far as to ask the reason for it.

Perhaps there is nothing to be added to this picture; but it must be described as somehow giving a sense of incompleteness. It is quite impossible to gather what Mr. Mellen really thought of the whole performance. So far as his testimony threw any light on how the New Haven's money had been wasted and its credit shaken, he was careful to place the full burden of blame on Mr. Morgan. Yet even here, his conclusions do not hang together. Having explained with great circumstantiality and detail how some fifty millions was, in his judgment as president of the road, entirely thrown away under Mr. Morgan's auspices, Mr. Mellen rounded up his testimony by declaring that he entertained the highest respect for Mr. Morgan's judgment, that the troubles of the company were due to Mr. Morgan's death, and that had he lived and continued to control its policy, the New Haven would still be paying dividends.

But this is manifestly nonsense. Either Mr. Mellen's testimony as to facts, or his inference from the facts, is unworthy of respect; for the two are wholly incompatible. If it meant that, had Mr. Morgan lived, the New Haven presidency would have remained in Mellen's hands, and that Mellen, in the presidency, would have gone on paying dividends, that at least would have been intelligible. During the last six years in which the company paid dividends, the annual reports confessed some $10,000,000 deficit, and the expert accountant who examined its books for the Interstate Commission held that, in all, $60,000,000 unearned dividends had been paid. Undoubtedly Mellen, with a longer term, might have continued to increase that deficit.

This, however, would scarcely have solved the New Haven's problem. Nor would the funding into long-term bonds of what Mr. Mellen calls the New Haven's $375,000,000 floating debt have helped, if the policy of reckless extravagance in capital expenditure, which was undeniably the characteristic of his whole régime, had been continued. His blunders in managing the company were certainly not all instigated by Wall Street banking influences, and they were not atoned for by his acceptance of a criminal indictment, with magnanimous motives which he himself is careful to point out. What is most evident, at this juncture in the inquiry, is that the whole story of the wrecking of the New Haven property has not yet been told. That it was a shameful story, Mellen's testimony would have proved, if it had not been known before. But the story will not be complete until the clear light has been turned on all the guilty parties—including executive officers who misused their trust.

Thilly's History of Philosophy

By **Frank Thilly,** Professor of Cornell University. xv+612 pp. 8vo, $2.50.

In this work the author tries to trace the development of philosophical conceptions from the days of the ancient Greeks thru the days of the middle ages down to modern times. He shows how the essential teachings of the great systems are related to their respective ages, how they were influenced by the civilizations in which they arose, and what influences they exercised upon contemporary and future thought.

The Foundations of Normal and Abnormal Psychology

By BORIS SIDIS

This book examines and states the fundamental principles of normal and abnormal psychology. The postulates, the essential theories of psychology are laid bare, closely analyzed, and clearly outlined. An important psycho-biological theory of mental life is developed for the first time. The student of psychology and psychopathology who wishes to have a solid foundation of the knowledge of mental life will find the volume indispensable and invaluable. It is the only work containing in one volume both the normal and abnormal phases of psychology.

Important Scribner Books

Notes of a Son and Brother

By HENRY JAMES. Illustrated, $2.50 *net;* postage extra.

The early life of William and Henry James, and their association with their father, illustrated with drawings made by William James during his career as an art student.

"As may be imagined, there is much more than William James in this volume. The atmosphere of it is like a crowded tapestry, made of people, drawn all of them, great or small, with a delightful indifference to their greatness or smallness, and an unfailing sense of spiritual interest and what we may call their decorative effect. . . . It is a privilege to have read this book; for it brings with each grave, sincere chapter the sense of being admitted on terms of close friendship to one whose nobility of outlook, whose disdain of low ideals, is so great that the reader must needs grow the worthier for the confidence."—*London Academy.*

The American Japanese Problem

By SIDNEY L. GULICK, D.D., M.A., Professor in Doshisha University, late lecturer in the Imperial University, Kyoto, Japan. $1.75 *net;* postage extra.

The much-discussed Californian Japanese question, as well as the general Oriental policy of the country taken up with careful foresight, and in a way that robs the "Yellow Peril" of much of its terror.

"An excellent book, well written and full of substantial information, as well as some individual but well-argued theories."—*Baltimore Sun.*

New Guides to Old Masters

By JOHN C. VAN DYKE, Professor of the History of Art at Rutgers College and author of "The Meaning of Pictures," "What Is Art?" etc. 12 Volumes each with frontispiece.

READY

The United States and Peace

By WILLIAM H. TAFT. $1.00 *net;* postage extra.

The sudden flood of limelight on the Monroe Doctrine and kindred subjects, and on the question of peace which has lately grown to such tremendous proportions makes this book by the former President of the United States of very unusual, timely value. "The Monroe Doctrine, Its Limitations and Implications," "Shall the Federal Government Protect Aliens in Their Treaty Rights?" "Shall the Federal Government Enter into General Arbitration Treaties?" and "The Federal Trend in International Affairs" are topics treated by this distinguished expert.

Life Histories of African Game Animals

By THEODORE ROOSEVELT and EDMUND HELLER. With illustrations from photographs and drawings by PHILIP R. GOODWIN, and with forty faunal maps. 2 volumes. $10.00 *net;* postage extra.

One of the splendid results of Theodore Roosevelt's famous African trip, produced jointly with Edmund Heller, of the Scientific Department of the United States National History Museum, who accompanied him on the expedition.

"The vast amount of information which he has gathered first hand will prove not only of interest to the general reader, but of inestimable service to our all too small fund of knowledge of animal psychology."—*New York Times.*

"Two superb volumes which set forth in full about all that is known of the game-animals of Northern and Central Africa."—*Boston Transcript.*

"The volumes will hold an important and permanent place in the literature of African sport, and in that of natural history."—*New York Tribune.*

North Africa and the Desert

By GEORGE E. WOODBERRY. $2.00 *net;* postage extra.

Full of color, atmosphere, and poetic interpretation of the infinite waste places of the Sahara.

"Its soothing spell, like air wafted by the desert breeze, brings a healthful spirit of peace to one whose soul, shut within the walls of a busy city, thirsts for the atmosphere of 'The borderland out yonder, where the hand of God is seen'."—*Chicago Evening Post.*

By HUDSON STUCK, D.D., Archdeacon of the Yukon

Ten Thousand Miles with a Dog Sled

With a photogravure frontispiece and 48 illustrations, 4 in color. $3.50 *net;* postage extra.

Months of hardship, danger, and suffering in a bleak country; slow accomplishment, but glorious triumphs, continually confronted by nature in her most dramatic moments.

The Ascent of Denali (Mt. McKinley)

With illustrations and maps. $1.75 *net;* postage extra.

The romantic story of a great triumph of hazardous mountain climbing in the face of countless difficulties and misfortunes. It is an inspiration to the adventurous.

American Policy

The Western Hemisphere in Its Relation to the Eastern

By JOHN BIGELOW, Major U. S. Army, Retired. Author of "Mars-La-Tour and Gravelotte," "The Principles of Strategy," "Reminiscences of the Santiago Campaign," with map. $1.00 *net;* postage extra.

A treatment of the subject from the South American as well as the North American viewpoint, and with careful attention to the Monroe Doctrine and its effects on Pan-Americanism.

PROSE NARRATIVES
Edited by Chauncey W. Wells
Associate Professor of English in the University of California.
A volume supplying more than 20 models for the writing of simple narration. It is a departure from the ordinary manual in that it excludes stories. It covers, however, a wide range of history, legend, and autobiography, from the Bible and the Sagas, Herodotus and Pliny, Benvenuto Cellini, Defoe, and Franklin, Macaulay, Carlyle, Froude, and Stevenson. An appendix gives supplementary readings with the names of the more available editions.
12mo, 301 pages, $1.25.

"Hello, Agin"

Tommy Asks for A Square Deal

HE lives in New York's stuffy tenement district, the most congested spot in America.

No trees, no grass, not even a whiff of fresh air,—in the only world Tommy knows. Ash cans are his background, and the rattle and roar of traffic his environment.

Tommy's widowed mother is broken with worry; his sisters and brothers are as pallid and frail as he. The winter struggle has sapped their vitality.

They need to breathe something pure and fresh,—a taste of sunshine and outdoor freedom,—an outing in the country or at the seashore.

But between Tommy and his needs stands poverty, the result of misfortune. He must suffer just as if it were all his fault.

And this is why Tommy appeals for a square deal. Nor does he wish you to forget his mother, or his "pals" and their mothers,—all in the same plight.

SUGGESTIONS

A lawn sociable by your class, Sunday School or Club.

A card party at your summer hotel or camp.

A subscription among your friends.

This Association every summer sends thousands of "Tenement Tommies", mothers and babies to the country and to Sea Breeze, its fresh air home at Coney Island. A dollar bill, a five dollar check, or any amount you care to contribute, will help us to answer Tommy's appeal.

Send contributions to Robert Shaw Minturn, Treasurer, Room 200, 105 East 22nd Street, New York City.

Tenement Tommy

Anybody but Anne
By CAROLYN WELLS. Illustrated in color. $1.25 *net; postage extra.*

"A bewildering mystery which will test the intuitions of the most seasoned readers of detective stories."—*Buffalo Commercial.*

MISCELLANEOUS

WherePharaoh Dreams
Being the Impressions of a Woman-of-Moods in Egypt.

By IRENE OSGOOD. With an introduction by Stephen Phillips. Illustrations and initial letters by W. Gordon Mein. 334 pages. 8vo. Cloth. $1.75 *net; postage extra.*

This brilliant book about Egypt is not a travel book, but a delightful volume of Egyptian fantasies. Among the various themes touched upon are Illusion, Unrest, Hope, Temptation, Peace, etc., etc.

In Cheyne Walk and Thereabout
Containing Short Accounts of Some Ingenious People and Famous Places that Were by the Riverside at Chelsea.

By REGINALD BLUNT. With many illustrations from scarce old photographs and engravings. 322 pages. 8vo. Cloth. $3.00 *net; postage extra.*

If you are fond of writers and painters and odd nooks and corners of old London and the gossip of that friendly town, you will want to read this delightful volume.

A Remarkable Novel
that will arouse much discussion

FRANK DANBY'S
MASTERLY WORK
FULL SWING

Is a distinct advance over her other successes,
THE HEART OF A CHILD and PIGS IN CLOVER.

12mo. Cloth, $1.35 net. Postage extra.

NEW YORK TRIBUNE: "A true and understanding study of character."

NEW YORK TIMES BOOK REVIEW: "The study of Agatha Wanstead is unceasingly fine. The secondary love story, too, is full of sweetness and charm."

NEW YORK WORLD: "Among the most notable presentations of the publishers' year. 'Full Swing' ends happily. . . . One closes the book with the satisfied feeling of having followed through a particularly complete and polished work of fiction."

A TIMELY LOWER PRICED EDITION

The Heart of the Antarctic
Being the Story of the British Antarctic Expedition, 1907-09

By SIR ERNEST H. SHACKLETON. New and Revised Popular Priced Edition. With a map and many illustrations. $1.50 *net.*

The people of this country have shown the keenest interest in the various British Polar Expeditions, and it is for the many who could not purchase the original $10.00 edition that this moderate-priced volume has been prepared. The complete narrative of the expedition is given, with the scientific discoveries considerably condensed and described in a popular manner.

THE HISTORY OF THE DWELLING-HOUSE AND ITS FUTURE
By ROBERT ELLIS THOMPSON, LL.D., Principal Philadelphia High School. 12mo. Cloth. $1.00 *net; postage extra.*

So used are we to the conveniences of the modern residence that few of us have any conception of how astonishingly recent most of them are—how late, for instance, came even such a development as the division of upper stories into rooms, except in Southern Europe, and the more imposing edifices of northern nations. These developments are most interestingly depicted, and the author's ideas as to future modes of living are piquant and sometimes a bit startling. The awful waste of present-day housekeeping and its remedy is a subject that will interest everyone.

BUSINESS AND FINANCE

OPERATION OF THE NEW BANK ACT
By THOMAS CONWAY, Jr., Ph.D., and ERNEST MINOR PATTERSON, Ph.D., of the Wharton School of Finance and Commerce, University of Pennsylvania. 430 pages. 12mo. Cloth bound. $2.00 *net; postage extra.*

NEW YORK JOURNAL OF COMMERCE: "A timely book which is certain to prove of very extensive usefulness. It will be of exceptional value to all business interests as well as bankers."

THE CAREFUL INVESTOR
By EDWARD SHERWOOD MEAD, Ph.D., Professor of Finance, University of Pennsylvania. 12mo. Cloth. $1.50 *net; postage extra.*

PHILADELPHIA RECORD: "A work of the greatest importance and its study will save the public many a dollar."

THE CAUSE OF BUSINESS DEPRESSIONS
As Disclosed by an Analysis of the Basic Principles of Economics

By HUGO BILGRAM, in collaboration with Louis Edward Levy. With 9 diagrams. 531 pages. Octavo. Cloth. $2.00 *net; postage extra.*

NORTH AMERICAN, Philadelphia, Pa.: "Modern questions of wealth distribution and land tenure, rarely considered by earlier economists, are here dealt with in open-eyed, new-century processes of fearless thinking. The average citizen will be a wiser and more thoughtful fellow after perusing and studying the arguments adduced in this volume."

TIMELY BOOKS

The Practical Book of Garden Architecture
Fountains, Gateways, Pergolas, Tennis Courts, Lakes and Baths, Arches, Cascades, Windmills, Temples, Spring Houses, Bridges, Terraces, Water Towers, etc., etc.

By PHEBE WESTCOTT HUMPHREYS. Frontispiece in color. 125 illustrations from actual examples of Garden Architecture and House surroundings. Square octavo. Ornamental cloth, in a box, $5.00 *net; postage extra.*

"To the lover of beauty, lay or professional, the Practical Book of Garden Architecture provides a springing fount of pure delight. The material is rich, and it is treated with sympathetic and comprehensive intelligence . . . and as for the pictures—they'd lure mother birds from their nests!"—*Chicago Record-Herald.*

The Flower-Finder

By GEORGE LINCOLN WALTON, M.D. Frontispiece in color. With 573 line drawings in the text. 16 full-page illustrations. Decorative lining paper. 12mo. Bound in limp leather, in a case. $2.00 *net; postage extra.*

"What's that flower over there in the field? You'll find out in 'The Flower-Finder.' Gives many color charts and sketches; grouped so that you can easily find what you are looking for; is bound in leather that permits it to be slipped in the pocket."—*Cleveland Plain Dealer.*

The Training of a Forester

By GIFFORD PINCHOT. 8 illustrations. 12mo. Cloth. $1.00 *net; postage extra.*

Mr. Pinchot has written an inspiring volume on the profession which he has brought so forcibly to public attention. It contains in brief compass the most valuable and interesting facts touching this most important work.

The Meaning of Art
Its Nature, Role and Value

By PAUL GAULTIER. With 36 illustrations. $1.50 *net.*

This work was crowned by the French Academy of Moral and Political Science. Mr. Gaultier's work will delight all lovers of the fine arts, and to many it will be the portal to a finer enjoyment of art and a deeper knowledge of its Nature, Rôle, and Value!

PUBLISHERS **J. B. LIPPINCOTT COMPANY** PHILADELPHIA

The Nation.

NEW YORK, THURSDAY, JUNE 4, 1914.

Summary of the News

Rumor at Niagara Falls has been almost as many-tongued as when, in a first fresh outburst of martial enthusiasm, war correspondents fell to alluding to the water works at Vera Cruz as "the front." In last Thursday's papers there was an apparently well authenticated report, which subsequently proved groundless, that the terms of a settlement had actually been drawn up by the mediators, and had been submitted to President Wilson, while reports of insuperable obstacles in the way of a settlement have been of daily occurrence. The outstanding fact of the situation is that mediators and delegates continue to bend all their efforts towards finding a solution of the question, and the cautiously worded statements given out by Justice Lamar indicate that the margin dividing the various parties to the conference is being gradually narrowed.

The attitude of Carranza and Villa continues the most serious difficulty. A message was delivered to the mediators by an agent of Carranza on Friday of last week expressing the willingness of the Constitutionalists to be represented in the peace proceedings, and it is understood that negotiations to that end are still proceeding. The mediators, however, are believed to have insisted on the declaration of an armistice as a first condition to representation, a condition which the Constitutionalists are hardly likely to accept. The situation was somewhat complicated when, on Sunday, Gen. Carranza declared himself provisional President of Mexico, naming Saltillo as the temporary seat of government, and proceeded to the selection of a Cabinet.

The attitude of Villa towards his chief, despite rumors to the contrary, remains eminently "correct," and a statement was issued by him on Monday in which he again denied with an oath that he harbored any political ambitions, but rather serious dissension seems to have developed among the Constitutionalists in the state of Sonora, where there have been severe clashes betwen the civil Governor, José Maria Maytorena, supported by volunteers, and the military commander, Gen. Alfaro Obregon, and his troops. Meanwhile the southern campaign has been halted temporarily pending repairs to the railway between Gutierrez and Zacatecas. When these have been effected, Villa's forces will undertake the investment of the latter city. At Guaymas, the only place where the Federals have so far held their own, following some desperate fighting on May 28, an armistice was arranged, according to an official announcement made in Mexico City, pending the outcome of the mediation proceedings.

Arms for the Huerta Government, consigned to Vera Cruz, were landed last week at Puerto Mexico by the German liners Ypiranga and Bavaria. On the return of the ships to Vera Cruz fines amounting in the aggregate to some $500,000 were imposed on them by the American collector of the port, acting in accordance with Mexican law, on account of their having discharged their cargo at a port other than that which was designated in their papers. The ships were released on the putting up of a bond by the Hamburg-American Line. It is anticipated that the matter may be the subject of diplomatic discussion between Germany and the United States.

A statement on Progressive policies, somewhat nebulous in character, was issued by Col. Roosevelt before his departure for Spain on Saturday, and was published in Sunday's papers. Comment on the statement will be found elsewhere.

The treaty between the United States and Colombia has passed all three readings in the Colombian Senate, and is this week before the House, where it is expected it will be passed without delay. The treaty will probably not come before the United States Congress until after the vote has been taken on the tolls repeal.

The taking of testimony at the court-martial of the officers and men of the Colorado State militia on charges of murder, arson, and larceny was brought to a conclusion on May 29, when the commission adjourned until June 12. The most notable evidence given last week was that of Major Edward J. Boughton, who had conducted an investigation of the Ludlow affair, and warmly praised the conduct of the troops.

By a unanimous vote the House of Representatives on Monday adopted the amendment to section 7 of the Clayton Anti-Trust bill exempting labor, agricultural, and other mutual help organizations from the operation of the anti-Trust laws. We comment elsewhere upon the significance of this amendment, the wording of which is: "Nor shall such organizations, orders, or associations, or the members thereof, be held or construed to be illegal combinations in restraint of trade under the anti-Trust laws."

A disaster second only to that of the Titanic occurred early on the morning of May 29, when the Canadian Pacific steamship Empress of Ireland was rammed amidships during a fog in the St. Lawrence River off Father Point by the collier Storstad, of the Dominion Coal Company. The passenger ship sank within fifteen minutes of the collision. It was possible to launch only a few of the boats, and many of the passengers were unable to gain the deck before the vessel sank. Four hundred and fifty-two survivors were rescued by the Storstad and by the Canadian revenue cutters Eureka and Lady Evelyn. The number of those lost is estimated at 1,024. An investigation to fix responsibility for the disaster will be held by the Canadian Government at Montreal, beginning on June 9.

Time had one of its revenges last week, when Glenn H. Curtiss made a successful flight with the aeroplane built by Dr. Samuel P. Langley in 1903, which at its original trial fell into the Potomac River, and which has since been reposing in the Smithsonian Institution, pointed at as "Langley's folly."

Reports that the battleships Idaho and Mississippi had been purchased by Greece have been denied from Athens, although it is admitted that negotiations for their purchase had been carried on. The idea of Greece in opening the negotiations was doubtless to offset the recent purchase by Turkey of two Brazilian warships building in the Armstrong yards in England.

News was received on May 29 of the safety of Capt. Robert Bartlett, commander of the Canadian exploring ship Karluk with the Stefansson expedition, and of his company, concerning whose fate the gravest anxiety had been felt. Capt. Bartlett telegraphed from St. Michael, Alaska. The Karluk was crushed in the ice, near Herald Island, on January 16, 1913, but the company was able to disembark on the ice, and there was ample time to remove from the ship stores, sledges, dogs, and the greater part of the scientific equipment. Wrangell Island was reached, and a permanent camp made. Leaving his company in camp, where they are well provisioned, Capt. Bartlett undertook his solitary journey of 500 miles over the ice to obtain help for them. It is expected that a relief ship will be able to reach Wrangell Island by the early part of August.

Premier Gaston Doumergue announced the resignation of the French Cabinet on Monday, and on Tuesday the resignations were handed collectively to the President. The principal reason for the action of M. Doumergue, who formed his Cabinet last December, is said to be uncertainty as to his ability to control a majority in the new Chamber, which assembled on Tuesday, and in the composition of which the recent elections have produced some changes. Differences are also said to exist in the Cabinet concerning the financial measures to be introduced in the new Parliament, and concerning the question of the three years' military service.

The deaths of the week include: Sir Joseph Wilson Swan, the Right Rev. Charles Scadding, Dr. Joseph Edward Stubbs, May 27; E. Yamaza, May 28; Peter Paul von Mauser, Brig.-Gen. James E. Sawyer, Col. Leonard A. Lovering, Prince Peter Sviatopolk Mirsky, Euphemia van Rensselaer (Sister Dolores), Laurence Irving, Sir Henry Seton-Karr, R. B. McClure, May 29; the Rev. Samuel Henry Bishop, Dr. Emil Gruening, May 30; Henry François Joseph Roujon, June 1.

The Week

The substitution of civil government for military administration in the territory under Constitutionalist control, and the transformation of Gen. Carranza from "first chief of the revolution" to provisional President of Mexico, are now under way. The process has been accelerated by events in two places—Mexico and Niagara Falls. Both as against Huerta and as against those who are working for a peaceful settlement, Carranza takes a strategic position. It is to him that events point as Huerta's successor, whatever may be the machinery set up for effecting the transference of power; and in setting up his framework of cabinet and provincial government, Carranza is bidding the peace negotiators take notice of this important fact. There is at first sight a certain sense of unreality about the absence from these negotiations of the party and the man that are virtually bound to emerge from the situation. But precisely because of his strong position in the field, Carranza is represented at Niagara Falls. He is taken into reckoning by the negotiators, and his cause is defended by the logic of events—not to mention our own delegates.

Whether the hopes now entertained as to a settlement of the Mexican problem are to be fully realized or not, great things have already been attained. The war-spirit in this country has been shown to be virtually non-existent. This mighty industrial democracy has made clear its unwillingness to be turned aside from its paths of peace by any provocation yet given it by Mexico. If the whole peace negotiation were now to fail, the country would be filled with chagrin, and it would be difficult to cause to flare up again even so much of Jingoism and zest for fighting as manifested themselves a month ago. To have thus tested the nation and found its response one of peace is by itself a wholesome reassuring. Add to this the recovery of good opinion of us abroad. Europe has dropped the first sneering tone which spoke of Yankee land-greed joined to hypocrisy. It begins to seem possible in France and Germany and England that the United States may not, after all, intend to overrun and annex Mexico. And the revulsion of feeling which has come, to our marked benefit, in South America, is something that years of diplomatic and trade intercourse could not have effected. Idealism in an American President is not such a bad thing, after all, when it gains the country instant recognition, and puts in the way of becoming a practical force the friendly coöperation of all the republics on this continent. It seems to have taken a "dreamer" to make this old dream come true.

However complete our arrangements for preventing disasters at sea, disasters will still be possible through the imperfections of human beings. The great lesson of the Titanic was the vital importance of being so prepared as to reduce the loss of life to a minimum when the disaster comes. In her case, it was the shortage in the number of lifeboats that caused the loss of hundreds of lives which might have been saved; and the result has been that ships are now required to carry lifeboats enough to accommodate all on board. In the Empress of Ireland calamity, it was the shortness of time that made the loss of life so enormous. When a ship goes down in fourteen minutes after she is struck, every minute gained by any person on board may make the difference between life and death. And it would be extremely easy to gain many of these precious minutes. An electric bell might be placed in every stateroom, and close to every berth throughout the vessel, all of them controlled by a single switch on the bridge, the turning of which would cause them to ring, and to keep ringing indefinitely. The minutes saved by this mode of spreading an alarm might easily have meant the escape of scores, perhaps hundreds, of those who perished last week in the St. Lawrence.

The St. Lawrence disaster ought to have at least one result: concentration of public interest upon the La Follette bill pending in Congress, and the International Convention on Safety at Sea, also awaiting approval. Unfortunately, neither of these measures is unanimously supported by those who have studied the subject. Thus, it is declared that if the treaty had been ratified, the rescuing vessels might not have appeared in aid of the Empress of Ireland, since it would relax the provision for continuous wireless service. As to the La Follette bill, it is not satisfactory to shipowners, and is obviously drawn chiefly in the interest of the labor unions. As it now stands, it would put out of business many steamers in inland waters, because of the provision that there must be two able seamen for each lifeboat. Here is a great chance for statesmanship. Somebody, perhaps the Secretary of Commerce, might get all the interested together and see if at least a satisfactory bill cannot be agreed upon. The President and the Senate must decide if the treaty constitutes a retrogression as a whole, or whether its good points do not outweigh the bad. Some action on it ought to be taken soon.

It is a pity that President Wilson should have allowed himself to be manœuvred into a false position in regard to his Memorial Day address, and then at the eleventh hour have reversed his decision not to speak. It will be remembered that he similarly vacillated in regard to his Gettysburg address. It would really seem as if the President were often in need of better advice than he is getting—advice that comes in such a way as to carry conviction with it. As a result of this blunder, he faced an almost hostile audience, and lays himself open to the charge of having reversed himself at the last moment for political reasons. Unfortunate as this is, his words of Saturday were golden. Not a Jingo sentiment came from his lips; he refused point blank to glorify war. He dwelt upon the nobler sacrifices of peace, and yet he gave just and unstinted praise to the men of the Civil War, who are, as he said, above all others secure in their imperishable fame and the imperishable gratitude of the republic.

Secretary Lane presents with great force, and with abundant detail, the case for the establishment of a centralized administration of everything relating to the natural resources of Alaska. His communication is addressed to the chairmen of the Committees on Territories of the Senate and the House of Representatives, and is in support of the bills —substantially identical—pending in the two houses of Congress for the creation of a board or commission to have full charge of Alaskan development. The Sec-

retary points out that "practically all the lands and natural resources of Alaska are still the property of the United States," and that the time is now ripe for the institution of a policy which shall go beyond the mere protection of that property from seizure by monopolists, and shall provide for its use by legitimate enterprise, in such manner as to combine the promotion of the welfare and development of Alaska with the retention by the whole people of the United States of their proper share of the benefits of this great possession. The Government railway has been decided on, and is to be built; in order that this should yield its natural fruit, it is essential that the tangle of archaic laws and of haphazard and unharmonized jurisdictions be replaced by a system of management directed clearly and intelligently to the special needs of the Alaskan situation. Secretary Lane quotes President Wilson's reference to the subject in his message of last December; it is not amiss to add that both the railway and the commission were strongly urged upon Congress by President Taft in February, 1912, in conformity with the recommendations made by Secretary Fisher after a visit of investigation to Alaska.

The proposal which Prof. W. W. Willoughby, of Johns Hopkins University, made to the Mohonk Peace Conference is characteristic of a teacher of political science; but it is not therefore less significant of the public change since the Conference first met twenty years ago. What he desires is a "case method" of teaching peace. "He would have less reiteration of the principles and platitudes of arbitration, and a more detailed, technical discussion of it, its limitations and advantages." Something like this we have heard from President Eliot, who believes that education in pacificism is so far advanced that it is the constructive labors of peace, sometimes very indirectly related to it, which may now be stressed. The view is obviously open to objection that, even if correct, the work of propaganda must still not be abandoned; a passionate and literary presentation being always required to maintain the heroisms of peace and fraternity against those of war. It need not interfere, in bodies like the Mohonk Conference, with discussion of concrete, present cases of international friction. But Professor Willoughby's plan is built, in the first place, on a diagnosis of popular feeling that would have been utterly impossible twenty or fifteen years ago, as the Venezuela incident and Spanish War testify; and it indicates the emergence of an increasing number of men versed in international law, diplomats, and students interested in the problems and technique of arbitration.

In Col. Roosevelt's actual address before the National Geographic Society last week, the data regarding the newly discovered river are less precise than those embodied in the telegram given out after the lecture, a telegram addressed to the Brazilian Foreign Minister, Lauro Muller, by Mr. Roosevelt, and sent from Manaos. In this dispatch we have a definite record of degrees of latitude and longitude, with an enumeration of the affluents of the Roosevelt river, all of which should enable the recreant mapmakers to redeem themselves. Confirmation of the Colonel's telegram is contained in a dispatch addressed by Col. Rondon to the Brazilian Foreign Minister, and evidently based on the same set of observations. It is printed in the Rio de Janeiro *Jornal do Commercio* for May 2. In parts the language in the two telegrams is almost identical. Col. Rondon states that in view of Mr. Roosevelt's health the party had no time to make an exact determination of where the new river enters the Madeira, but on the fact of the river being an affluent of the Madeira the Brazilian explorer is positive. Mr. Roosevelt has therefore done much more than put a new river on the map. He has shown the old maps to be utterly wrong, not only as to the obscure hinterland, but as to the main stream of the Madeira, on which there has been traffic for centuries. Thus on our best maps, the river Aripuana is shown as entering the Madeira from the right near the fifth parallel of latitude. Cols. Roosevelt and Rondon make the Aripuana enter the new river from the left nearly two hundred miles further south. The affair still has puzzling details for the experts to clear up.

How much California has needed her Workmen's Compensation act, described as a vast improvement over the existing statute, is evident from figures given by her Industrial Accident Commission. To that body in 1913 were reported 24,177 accidents, 583 of which resulted in death, 864 in permanent disability, and 10,659 in temporary disability; showing that out of every thousand workmen injured 881 were temporarily and 71 permanently crippled, and 40 killed. The total wage loss was placed at $18,255,616. Set against these statistics there was a record, under the old law, of indemnity paid for 10,721 accidents, amounting to $613,862. The new measure is compulsory upon all except employers of casual labor and those engaged in agriculture; it provides, moreover, for a State compensation insurance fund, which since the new year has become responsible for policies on pay-rolls of over $30,000,000. It will protect two men where one was protected before. It is already attaining one of its aims—to increase the precautions which employers will voluntarily take to promote safety; for the report of last year's accidents is accompanied by testimony that the new act has resulted in greatly increased demands for the advisory services of safety engineers, for stereopticon lectures on safety provided by the Commission, and for the establishment of safety museums.

The American Medico-Psychological Association, in annual convention at Baltimore, rejected the resolutions proposed by the council of the Association recommending the enactment of laws requiring a clean bill of health and evidence of a normal mind before the issuance of a marriage license. According to a report of the meeting, when the resolutions were presented, a vigorous onslaught was made upon them, and when the vote was put they found but few supporters. It is particularly gratifying to see such evidence of soberness of thought on the part of a body of men whose absorption in their specialty would tend to make them magnify the evil to be remedied, and forget deeper and broader considerations. In this sphere, as in others, one great reason why ill-considered notions so often make such rapid headway is that the people who are skeptical about them or opposed to them do not make a "vigorous onslaught" upon them, but content

themselves with silence, leaving all the vigorous assertion to the other side. That resolutions recommending the segregation of the feeble-minded, imbeciles, and other mental delinquents, and the establishment of separate institutions for their care, were adopted unanimously, only emphasizes the stand taken by the Association in the other matter. Between a do-nothing policy and a meddle-with-everything policy there is ample room for discriminating judgment.

Ecclesiastical bodies are often betrayed into adopting ill-considered resolutions, simply because they are presented by a committee. Last week at Chicago the Presbyterian General Assembly accepted a report and recommendation on moral and social questions of the day, against one part of which many prominent Presbyterians are already up in arms. This was in the section dealing with temperance, and all Presbyterian ministers and church members were called upon to resign from clubs where liquor is or may be supplied. Doubtless the author of this recommendation supposed that he was merely proceeding in the spirit of "Come out from among them and be ye separate and touch not the unclean thing." He could scarcely have been aware of the rumpus which his counsel of perfection would kick up. Many Presbyterians are members of golf clubs, university clubs, social clubs, and are not at all disposed to give up their membership, merely because those who so wish can have drinks served to them. The Assembly's utterance goes beyond the matter of personal habits into that of personal associations. It will, no doubt, be generally disregarded.

It is a year since the unveiling, under the auspices of the Smithsonian Institution, of a tablet commemorating the services of Dr. S. P. Langley to aviation; a token of a recent general recognition, in at least the upper circles of science here and abroad, of the value of his labors. He has for some time been accorded the credit of being one of the first to study flying on scientific principles, and to make practical application of his theories along the lines on which the art has since developed. Aviation has grown by the process of trial and error, and if his experiments seemingly ended in failure, he gave, nevertheless, a notable impulse. But in the demonstration last week that he builded better than he knew, his practical claims are also completely vindicated. Not merely his fundamental idea, but his construction, is shown to be so sound that all that was lacking was skill in operation; when a Curtiss took his machine, it rose successfully. To those who believe that the solution of the problems of mechanical and scientific progress will chiefly belong to men of exact scientific training and methods, like Dr. Langley, the flight at Lake Keuka will be highly encouraging. It need not detract from the achievement of other inventors, as the Wright brothers; but it vindicates courage and sincere effort founded on exact knowledge. The rusty aerodrome, which would look strange enough beside a finished aeroplane, is evidence that those who have virtually taken the citadel of flying have found, in Clough's phrase, the body of a first crusader before its walls.

Miss Alice Brown's winning of the ten thousand dollar prize offered by Mr. Winthrop Ames for a play of popular appeal is an extraordinary achievement; extraordinary because of the fact that Miss Brown is a veteran writer of proved talent and with a field and manner of her own. Prize contests nowadays are for the young and unknown, and not rarely for the unschooled. The adolescent victor in such contests wins by virtue of striking a fresh note, the freshness on closer examination consisting in a brave echo of several dead authors and a dozen living successful ones. Since in the terms of the Ames contest it was specified that the play was to be one of popular appeal, there was room for fearing the worst—say, a knockabout farce with pistol-play attachment. The character of the judges in the contest pointed, to be sure, in the other direction. But experience has shown incredible selections made by men of apparently good judgment. Until the prize play is given to the public, the general belief will be that Messrs. Ames, Thomas, and Klauber have reason to congratulate themselves that the anonymous contestant to whom they awarded the prize should turn out to be a writer of proved merit.

A form of international courtesy in which Americans—from their sense of the value of foreign relics and documents, and their wide acquisitions—ought to shine, has just been exemplified by a trustee of Wellesley College, in the return to King Alfonso of a MS. stolen from Seville, and offered for sale in Amsterdam. The notable precedent for the action, the late Mr. Morgan's restoration to Ascoli of the cope belonging to the cathedral, evoked a display of gratitude which should encourage every similar act. On his recent visit to America Signor Ferrero remarked upon it in connection with a general commendation of the much-slandered American taste for foreign treasures. But between citizens and governments of Europe similar examples of courtesy have recently been displayed. King Alfonso himself, lately noting in the Louvre two suits of Moorish armor without duplicate at Salamanca, was promptly presented with them by the Republic. To apply fully the principle that all objects of art taken by force or stealth from their native surroundings should be returned, would cause one of the strangest migrations in history. But while retroactive measures are impracticable, it is pleasant to see that lovers of art and history are setting their faces against a continuance of anything like sharp practice.

In spite of Rudyard Kipling's bad language, the war in Ulster refuses to come off. Indeed, Mr. Kipling's bad language is to be explained by the fact that the war has refused to come off. This may, of course, be the lull before the storm, but no sultry atmosphere hangs over Great Britain. If one may judge from the general tenor of news and impressions, a great indifference has settled down upon the British islands, partly to be described as reaction from much talk and hope of a fight long deferred, partly as the reassertion of common sense in face of the outstanding fact that no immediate doom is confronting unhappy Ulster, with six years and two general elections before she must submit to the yoke. There will be a resumption of verbal warfare after ten days or so, when the last formalities attending the enactment of Home Rule take place, and the Government's amendments are made public. But prospect of a midsummer civil war there is little.

THE COLONEL'S UNCERTAIN TRUMPET.

Lord Rosebery has said that the relations of a party leader to his followers have never been studied as they should be. One thing, affirmed Rosebery, is clear: the followers impose their will upon their chief as often as he imposes his upon them. Certainly it so seems in the matter of the political declaration which Col. Roosevelt left behind him as he sailed for Spain. It has internal marks which bear out the reports that his Progressive counsellors fairly demanded of him that he publish a statement. They were only too conscious that they needed encouraging. A bugle blast from him would hearten their despondent party. The Colonel himself said that it was doubtful if he could find time to put the trumpet to his lips. But finally he yielded to the importunities of his friends, though it must be said that the result was that he gave a most uncertain sound. If it was meant as a signal to the Progressive army to prepare for battle, it can only provoke comparisons with the French Colonel of the *Anti-Jacobin*, of whom it was written:

> He fled full soon, on the first of June,
> But bade the rest keep fighting.

We have had, of course, only a preliminary winding of Mr. Roosevelt's horn. He will be home again in a month, and will undoubtedly plunge into the political fray. To keep out of it would be impossible for him; and he would not be very fastidious about the point where he plunged in. He would sympathize with Gen. Kearney's direction to go in anywhere, as there was "beautiful fighting" all along the line. But we think he ought to be warned against following up the plan of attack on the Wilson Administration which he indicated on Saturday. For by assaulting in that way he would obviously be in danger of riding down more of his own soldiers than of the enemy, and even of unhorsing himself.

He proposes to hold the President and the Democratic party responsible for bad times. "There is widespread apprehension." "The pinch of poverty is felt." Well, if that is true in 1914, it was much more true in 1907. There has not yet been a Wilson panic, as there was alleged to be a Roosevelt panic seven years ago. The *Nation* can speak with the more frankness on this point because we steadily contended in 1907 that it was unjust to charge up to the Roosevelt Administration the financial crash of that year. But if Roosevelt himself is now going over to the doctrine that the President is to blame for bad times, how can he possibly escape the deadly consequences of his own logic? If he now steps forward as a guarantor of "prosperity passed around," it will be incumbent on him to explain why he passed around distress and misery in 1907. It is plainly inadvisable for him to grasp a two-edged sword that is certain to wound himself.

Equally ill-judged is Mr. Roosevelt's assertion that the reduction of the tariff has not helped, and that nothing has been done to "solve the Trust question." A man who is on record as having been frightened out of his determination, as President, to urge Congress to reduce the tariff might with more grace leave that topic alone. Moreover, it can fairly be argued that the moderate lowering of the tariff by the Democrats is in line with the asserted purpose of the Progressives, as laid down in their 1912 platform. In fact, as Representative Palmer points out, nearly all the Progressives in Congress voted for the Underwood bill. Were they right or wrong in doing so? And as for the Democrats being clear off the track as regards dealing with the Trusts, the Colonel might rather have accused them of stealing his own idea. For are they not acting as if bent on legislating in order to carry out one of the planks of the Progressive platform? We mean the one promising "a strong Federal Administrative Commission," which was to "maintain permanent active supervision over industrial corporations engaged in interstate commerce, . . . doing for them what the Government now does for the national banks, and what is now done for the railroads by the Interstate Commerce Commission." Why, the pending Trade Commission bill is so palpably in line with this that the Colonel might have called upon good Progressives to rally to its support! But that, we suppose, would not have been hitting the line hard.

The net effect of Mr. Roosevelt's hurried and rather halting pronouncement will not be great. If it was intended to yield good cheer to the Progressives, a portion of that good cheer has plainly been "passed around" to the Democrats. They feel that their way will be made easy for them by a continuation of the split among their opponents. On the other hand, the Republicans are led to believe that the lack of vitriol thrown their way, in the Colonel's statement, prefigures his return to the party of his first devotion. He is, in any case, plainly waiting to see how the course of politics—the true River of Doubt to him just now—will change, before taking a more vigorous and positive line of conduct. Meantime, those of his countrymen who think will be inclined closely to scrutinize his implied programme of prosperity for the rich and a chicken in every workingman's pot. This would mean a combination of high protection with the doctrine of a division of goods—a sort of alliance between standpatism and sans-culottism.

BLOWING HOT AND COLD WITH LABOR.

If there were no other objection to the so-called compromise agreed on by the President and the Democratic leaders on the one hand, and the labor-union men on the other, and passed unanimously by the House, its dishonesty would be sufficient to condemn the proposal. This dishonesty consists in something far beyond any ordinary question of legislative obscurity or vagueness. The words which have been added to the clause in the Clayton Anti-Trust bill may be interpreted so as to add nothing at all to the meaning of that clause, and they may be interpreted so as to bring about that complete exemption from the operation of the anti-Trust laws which the labor-union men desire. And the proposal is being accepted by both sides not *in spite* of this extreme and fundamental ambiguity, but *because* of it. We confess our own total inability to determine which of the two interpretations would be most likely to be given to the words by the courts; and it is upon the general existence of such inability that the whole scheme is based. The labor men are to accept it because it may give the unions all they want; the opponents of class legislation are to accept it because it may give the unions nothing at all. To write such a provision into the statute-books of the country, to do it deliberately and for the very purpose of conciliating each side by holding forth the prospect that the other side will get the gold-brick—this can be

characterized by no term less harsh than that of a degradation of the law-making function.

The objection of ambiguity applied, indeed, to the labor-and-agricultural organization clause as it stood in the first place. It was as follows:

> That nothing contained in the anti-Trust laws shall be construed to forbid the existence and operation of fraternal, labor, consumers', agricultural, or horticultural organizations, orders, or associations, instituted for the purpose of mutual help and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations, orders, or associations from carrying out the legitimate objects thereof.

If by "legitimate objects" was to be understood objects not in conflict with the general provisions of the law, this gave to the organizations in question no special privileges; if, on the other hand, the phrase were to cover all the purposes and practices which such organizations were in the habit of pursuing, it might go far towards exempting them wholly from the prohibition of the law. But assuming the first interpretation to be correct, the provision would still have the effect of completely meeting the contention of Mr. Gompers that, under the Sherman act, it might be possible for the courts to declare these organizations illegal in their very nature. The words which have now been adopted by the House—

> nor shall such organizations, orders, or associations, or the members thereof, be held or construed to be illegal combinations in restraint of trade under the anti-Trust laws—

either merely say the same thing over again, or go the whole length of taking these organizations—and apparently even individual members—out of the jurisdiction of the general law altogether. It is therefore literally true that if this should be put into the law, nobody knows whether it would have no effect whatever, or whether it would give the labor unions the whole of their most extreme demand.

What that demand is, everybody knows. There is no secret about it. Labor unions desire a declaration that nothing in the anti-Trust laws shall apply to them. That the President is opposed to such class legislation, that he regards it as intolerable, he has indicated in various ways, and on various occasions. It has been given out that he would veto any bill that embodied such a provision, or a provision coming near to this. When he gave his approval to the amendment, it must have been with the expectation that it would not produce the effect which alone makes it acceptable to the labor-union men. We confess that we see no point of view from which this position is defensible. If the words mean nothing, the labor men ought not to be deceived into thinking they mean something. Moreover, the matter cannot end there. What they think they are getting, or may be getting, this time, they will demand next time as a matter of good faith. *Obsta principiis* is the only rule in a question of this kind. The time to assert the integrity of the law is when that integrity is first attacked, not after a breach has been made in its defences. The case is that of the Sundry Civil rider over again, only worse. Mr. Wilson let that go through, on the express plea that it would make no difference—that in any labor-union case he would use funds other than those forbidden. That the principle of the rider was wrong, he plainly stated; he let it go because it would have no effect. In this present matter, it is not in his power to determine whether the effect will follow or not; yet he seems ready to waive the principle on the mere hope that the effect will not follow. Will not the natural next step be to abandon the principle outright?

THE TRUST BILLS AND BUSINESS.

In replying to the representatives of Western manufacturing interests who called upon him on Thursday of last week, President Wilson gave three reasons for thinking them mistaken in asking for a postponement of most of the Administration's anti-Trust programme. They had urged that in the present unsatisfactory condition of the country's business it would be unwise to enact, on top of the tariff and currency acts so recently passed, a mass of new legislation affecting the conduct of business generally; that action of this sort should not be taken until a thorough inquiry had been made by a commission which should consider the actual facts of the situation and report what measures would meet it in a satisfactory manner. To this the President replied, in effect, first, that it was better to do the thing now than to do it later, because uncertainty is the worst thing that can happen to business; secondly, that it was better to pass the moderate bills proposed than to invite the danger of extreme measures through the accumulation of more radical forces; and thirdly, that the present business depression is "merely psychological," there being "no material condition or substantial reason why the business of the country should not be in the most prosperous and expanding condition."

There would be force in the first point if the business world were laboring under a kind of uncertainty similar to that which precedes the enactment of a tariff bill—uncertainty which affects the particular operations of specific business enterprises, and which the enactment of the law would remove. This resemblance, however, does not exist in either respect. If the tone of business is depressed by uncertainty as to legislation, it is not because a man does not know what goods he will be well-advised to buy, or sell, or make, because of possible changes in the law which will affect their prices; it is because of a vague, but none the less important, feeling that business in general may be disarranged, in ways that nobody can define, by the action of Congress. And, so far from this kind of uncertainty being eliminated by the carrying through of the Administration's legislative programme, it is quite within the possibilities—even the probabilities—that it will be increased. The Supreme Court decisions in the Standard Oil and Tobacco cases brought about a definiteness, as well as an effectiveness, in the Sherman Anti-Trust law which had never before existed; the new legislation bids fair to introduce new uncertainties, the extent of which no man can foretell. "If it were done when 'tis done, then 'twere well it were done quickly"—but that "if" is of the essence of the matter.

The second plea is one that can always be urged for any measure to which conservatives object. In the present instance, it is entitled to even less weight than usual, since, so far as regards a large part of the proposed programme, there is hardly any perceptible pressure from radical sources in its favor; nor does it involve any clear principle which is being opposed by the business world in a standpat spirit. In such a

matter as workmen's compensation, or the income tax, there is much validity in the argument that if the capitalist class opposes such a concession to the demands of the time, the resentment provoked by their attitude will result in the pressing of more radical measures; but it is difficult to see anything of this nature in the present situation relating to the Trust bills. What the business world says is that it does not want legislation for legislation's sake; that laws should not be passed on the subject without substantial assurance that they will accomplish great good; that there is no possibility, in the present session of Congress, of subjecting these bills to the kind of examination and amendment which would be necessary for such assurance—the kind that converted the banking and currency bill from a dangerous and unworkable into a safe and workable law. To these arguments the reply that if we don't take what is offered we shall have to put up with worse is certainly not one that commends itself to any man who has the courage of his convictions.

Finally, we are told that the trouble with business is psychological, that the material conditions are all favorable. Well, is not that precisely the point that Mr. Wilson's visitors were making? What they are asking is that one of the causes of that psychological condition be removed. If the trouble were in things over which we have no control—if it were in bad crops, or the exhaustion of capital through overconfident enterprise—the President might well say that his visitors were looking in the wrong direction for relief; but just in so far as the trouble is psychological, they are justified in insisting on the importance of the effect of anything the Government may do, or leave undone, on the temper of the business world. If there were a clear case for these bills, a case grounded on their inherent merits and necessity, it would be right to pass them, whatever their immediate effect upon business. But since their case is highly doubtful in itself, since there is no time for their proper consideration or amendment, and no sign of genuine public demand for their enactment, the all but universal desire on the part of the business world for their postponement is, in the present condition of trade and industry, entitled to serious consideration.

AUSTRIA-HUNGARY AND THE SLAVS

The death of Francis Kossuth, which we recorded last week, has come at a time when the fortunes of the Independent party, of which he was the leader, are on the decline. This has been brought about by internal political developments within the Dual Monarchy, but to a greater extent by the remarkable changes in the international situation in the Near East. The Independent party, under the son of the great Kossuth, came prominently to the fore about a dozen years ago. Its aim was the reduction of the relations between Hungary and Austria to a personal union; and there were those who anticipated that even this slender tie would disappear with the death of the venerable Francis Joseph. This was the time when the break-up of the Hapsburg monarchy was so confidently predicted.

The great issue on which the Hungarian patriot party carried on its campaign was the complete Magyarization of the Hungarian army. For years the battle raged over the so-called "words of command," the demand that the Magyar troops should be not only officered by men of their own race, but drilled and directed in their own tongue. Many concessions were made by the Emperor, but on this last point he has remained obdurate. The Independent party never came into power, but has been strong enough at times to prevent the long continuance of orderly constitutional government. Hungary during the last decade has been ruled largely by bureaucrat Cabinets which have managed to do business by alternately bargaining with the Opposition and threatening it. At one time the Independent party controlled a majority of the Diet. To-day it hardly numbers a hundred followers, divided into two factions, led by Kossuth and by Justh. The death of Francis Kossuth seems to promise its further disintegration.

A masterly counter-stroke to Magyar aspirations came in the year 1905 when the Fejerváry Cabinet brought forward the proposal of universal suffrage for Hungary. This was carrying the war into the enemy's territory. It was the weak point in the case of the Magyar nationalists that, while striving to vindicate their privileges against Austria, they were themselves in a minority in Hungary and jealous of any concessions that might threaten the Magyar ascendency over the Slavs, Rumanians, and Ruthenes under the Hungarian crown. Universal suffrage would have badly shaken, if not totally undermined, this ascendency; and to the present day the project of universal suffrage has remained in suspended animation. To the same degree it has remained an effective weapon in the hands of Ministries nominated from Vienna. In Austria universal suffrage became a fact in 1907, but in Hungary at the present day the electorate is only one-fourth of the male population over twenty years of age. To ward off the ever-present danger, the process of Magyarization has been carried on ruthlessly among the subject races; and with perceptible effect. In 1890 the Magyar element numbered 48 per cent. of the total population of Hungary. In 1910 it had risen to 55 per cent. Yet this is obviously no such overwhelming predominance but that universal suffrage would bring about a radical redistribution of power among the races. The menace is present, and the comparative slackening of Magyar self-assertion as against Austria is partly the result.

Developments in the Balkans have been working for harmony between the two parts of the Hapsburg monarchy. The high tension in international relations which set in with the annexation of Bosnia-Herzegovina some five years ago made it more unlikely than ever that the Emperor would consent to any concessions that might weaken the efficiency of the Dual army. The recurrent crises that marked the progress of the Balkan wars accentuated this tendency. In earlier discussions regarding the possible break-up of the Dual Monarchy, the habit was to assume that Austria needed Hungary more than Hungary needed its partner. But the Balkan wars, and in particular the second war resulting in the aggrandizement of Servia, aroused disquiet at Budapest. Servian ambitions, fired by unanticipated success, are now directed towards the realization of the ideal of that Greater Servia which cannot be complete without the three million Serbs and Croats now under Hungarian rule. There is danger also on the Rumanian frontier. Rumania, too, has profited by the Balkan wars, and nation-

alist aspirations are consequently turning towards the three million Rumanians in Hungary. The danger may not be immediate, but what is, indeed, immediate is the unrest created among the Slavs and other subject races in Hungary by the triumphs of their kinsmen to the south.

Events have thus tended to remind the dominant Magyar element that their case is not so different from that of Austria, of which they have been in the habit of thinking as a conglomeration of peoples ready to fall apart. Pressure from the southern Slavs is bound to increase. There are Hungarians who take a pessimistic view of the final outcome. But even optimists are recognizing that the two partners in the Dual Monarchy have greater need of each other than ever. Under such circumstances, it is not likely that they will waste their energies in quarrelling with each other. Of this, the decline of the Independent party in Hungary is a sign.

A NOTABLE PUBLIC SERVANT.

In an hour when we hear more complaints than ever about our State Legislatures, and more than one Governor is proved unequal to his task, a recent happening in Massachusetts reminds us that there are some American public servants of most satisfactory type and service of whom the general public hears but little. We refer to the retirement from the office of chairman of the State Board of Health of Dr. Henry Pickering Walcott, after thirty-three years of devoted and enlightened service with that body. No less than 2,200 physicians and surgeons united in an address to him in which they recited his many and varied responsibilities of the past, recalled the fact that he was invariably reappointed by Republican and Democratic Governors, and declared that he had met all the duties assumed "with such wisdom, discretion, and rare modesty as to make the task of your successor who would uphold the standards bequeathed to him a difficult one indeed."

Such "rare modesty"; so great was it that, although this useful public servant had toiled thirty-three years for his State, it might almost be said, as in the Scripture, "Now there was found in it a poor wise man, and he by his wisdom delivered the city; yet no man remembered that same poor man." Dr. Walcott, were he less modest, might have claimed for himself a large part of the credit for the remarkable water supply of Boston and its neighboring towns, in obtaining which he was a prime agent; just as he led in the work of establishing the North and South Metropolitan Sewerage systems, in improving the Charles River estuary, and the Concord, Neponset, and Sudbury Rivers. Under his guidance the sanitary conditions of numerous towns and cities in the State have been vastly improved. Yet if he were asked as to his own share in it he would probably say that it was all done by sub-committees of the State Board. He would doubtless even deny that his own connection with the Board was a chief reason for its being wholly out of politics, and for its having such a high standing with the Legislature that, since 1886, when he became chairman, the State's lawmakers have invariably referred to it all important sanitary matters, instead of creating special commissions. Because of this the State has saved hundreds of thousands of dollars and takes front rank among American commonwealths for its handling of these questions. As the letter to Dr. Walcott states: "The investigations and recommendations of the Board have commended themselves to the Legislature and in general have been carried out ultimately as presented. . . . You have borne the responsibilities both of recommendation and of execution."

Meanwhile, Dr. Walcott has found time to be chairman of two State Commissions to consider various important tuberculosis problems. During almost this entire period he has given, as an Overseer, and as a Fellow, since 1890, the same kind of administrative service to Harvard University, from which he graduated in 1858. At times he was acting president in Dr. Eliot's absence, and there are many who believe that his years alone prevented his being Dr. Eliot's successor. Always he has been a wise and judicial executive, weighing the evidence and deciding with care, and invariably abreast of the times in his knowledge of progress in medicine, science, and the arts—rare traits these when reputations for acquiring all-embracing knowledge overnight are so readily made! Such talents as his might early have won him distinction in many money-making fields. As a physician he no doubt could have earned startling fees, and as a consulting sanitarian he might have made his fortune. He has deliberately chosen to be, if not a "poor wise man," a wise man who lives as modestly as befits a great one, and has rejoiced in a wealth of the "durable satisfactions of life," of the dividends that accrue to him who gives his life in keenest intellectual pursuits for the benefit of others and the general welfare of the community.

What a rare taste Dr. Walcott's is; how out of tune with the time! He has flung away his talents, according to many. He should have written as an expert for our muckraking magazines, yet the columns of *Collier's*, *Everybody's*, and the *Saturday Evening Post* knew him not. He has had no press agent. He did not blurt out his views when the Lawrence strike was on and rush to the White House to tell the President what was his duty, nor seek the factory-owners to tell them theirs. He never rose in public hearings uninvited to say "Civis sum" and orate to the reporters. In fact, he bore no resemblance whatever to the type of the Lindseys, who can never be accused of hiding their lights under a bushel, and who can scent capitalistic conspiracies from afar. Dr. Walcott fought Beasts, too—beasts of ignorance, of disease, of neglect. By his quiet, constructive work he insured life to millions. Yet he never wrote a book about it, never called himself a Progressive, or pronounced himself a saviour of society, or boasted of a single achievement. He has merely gone on being a quiet, honest, high-minded gentleman, happy in his service to the State, content—though "no man remembered that same poor man"—in a patriotism that cannot be surpassed, certainly not on the field of battle. So long as Massachusetts or any other State can have such service as Dr. Walcott gave, no American need feel that the science of government fails to advance within our nation. But it remains the duty of all teachers of our youth to bring out the lasting value of such great constructive service as Dr. Walcott's and its vast importance, despite the absence of all flourish of trumpets and of all methods of self-advertisement.

Foreign Correspondence

"KILLING WITH THE MOUTH"—RUDYARD KIPLING'S ATTACK ON THE GOVERNMENT—PETITIONING THE KING.

LONDON, May 22.

"Scathe: to injure, especially by blasting or withering up." So runs the dictionary definition.. When, therefore, one reads on the contents bills of a daily paper the line, "Rudyard Kipling's Scathing Attack on the Government," it would seem a safe inference that "the Laureate of the Empire," as his admirers call him, has achieved something that the Opposition forces in Parliament have for eight years been attempting in vain. It is to the man of letters, we have been assured again and again, that we must look for a really statesmanlike solution of the problems of the modern world. While the party politicians—ignorant and stupid creatures like Herbert Asquith and Viscount Morley and Arthur Balfour—are still occupied with their sordid wrangles, the poet or the novelist, from his vantage-ground of unprejudiced detachment, can alone deliver the nation from its perplexities by bringing his clear intellect and calm judgment to the redress of the people's needs.

The utterance by which Mr. Kipling has thus revolutionized the political situation took the form of a speech at a recent Unionist meeting on Tunbridge Wells Common. He compared the present Cabinet to the embezzlers, murderers, and other criminals with whom his duties as a reporter used to bring him in contact in India. When a man got crooked, one thing led to another, until, at last, he had to put some one out of the way to get straight. That was just the history of the Cabinet. Their crooked work led to the passage of the Parliament act by which they assured themselves of a straight run of at least five years' salary. Then they had to give private members of Parliament a direct financial interest in voting for Cabinet measures, so the House embezzled public funds by voting itself £400 a year per head as salary.

But, even then, their majority was not big enough, so they bought the Irish Nationalist vote by means of the Home Rule bill, which broke the faith of generations, and subsidized the secret forces of boycott, outrage, intimidation, and murder. It was to men with such a record of crime and hatred that the Cabinet prepared to hand over a portion of the United Kingdom, for no other reason than that they might continue in enjoyment of their office. Mr. Kipling continued, in the same vein, to describe how one thing led to another, until, in order to get straight again, the Cabinet decided to put Ulster out of the way by organizing a killing on a large scale, but was foiled by the patriotism of the army, which, to its eternal honor and glory, saved the Empire.

Once upon a time, a popular writer of verses poured scorn upon the people who thought they were making a real contribution to national defence by killing Kruger with their mouth. Killing Asquith with one's mouth is just as easy and just as contemptible. Yet, after all, Rudyard Kipling's tirade of vulgar abuse is a valuable service to political history. In days to come the student of this period will dig it out from the newspaper reports with the same delight with which the archæologist discovers in the sands of Egypt some authentic record of ancient life. For this speech crystallizes, in half a column of print, the unthinkling rage with which the present Government is regarded by an influential class of its opponents. For a generation Mr. Kipling has been "the high priest of Imperialism." This latest outburst is a sort of *reductio ad absurdum* of the Imperialistic temper. It shows what a man of exceptional talent may come to when this madness begins to work in his brain.

Not a few suffragists who do not ordinarily endorse the "militant" programme have supported the plan for presenting a suffrage petition directly to the King. The idea is, of course, utterly preposterous, and could not be approved by any one who had the least glimmer of an understanding of the function of the Crown in the British Constitution. It is quite true that, technically, the King receives petitions from his subjects, just as, technically, he personally appoints every captain in the army. But in constitutional practice petitions, and the deputations that present them, are received only through Ministers. The situation has been plainly put by Sir H. H. Johnston in a letter to the committee of a suffrage society, of which he is a vice-president. "For good or ill," he reminds them, "we have deprived the Sovereign of all initiative action in legislation, and it is as absurd to invoke the precedents of the seventeenth century in this respect as to petition the extinct Star Chamber. If suffragists are to invite the Sovereign to be unconstitutional over the woman's vote, they cannot complain if he is similarly unconstitutional in opposing or initiating other legislation they might vehemently desire or dislike. If the King is advised not to receive this deputation by his Ministers, how can he reject their advice? He might, on the same grounds, next year or in the next few years, refuse to sign his name under 'Le Roy le veult' at the foot of a great measure of female enfranchisement."

The ceremony at what was to have been the opening of the Anglo-American Exhibition on May 14 was marred by an absurd fiasco. The invited guests had the pleasure of listening to the speeches that had been prepared by the Duke of Teck, the Earl of Kintore, and other distinguished persons, but all they were permitted to see of the show itself was gained by peering through the dusty panes of locked doors. Disappointing as was this failure, the explanation of it is, in one respect, highly creditable. The doors of the halls were closed because the exhibition authorities had not satisfied the London County Council inspectors. The management complains that the inspection was made so late that there was not time to comply with the official requirements before the day fixed for the opening ceremony. Be that as it may, it is satisfactory to know that no influence can deter the Council from insisting upon the precautions that it considers necessary to provide for the safety of the public.

The purveyors of popular entertainment ought already, one would imagine, to have learned this lesson of the inflexibility of the L. C. C. from what happened in connection with the opening of Oscar Hammerstein's opera house in Kingsway a few years ago. The first performance was advertised to be given on a certain Monday night. Up to the previous Saturday afternoon Mr. Hammerstein was confident that he should be able to induce the Council to abate some of its conditions respecting exits, etc. Only then did he realize that he was up against an authority whose instructions were not meant to be a basis for discussion, but were as absolute as the fiat of a Czar. When at last the truth dawned upon the astonished proprietor of the new building, he had to get together, post haste, a staff of workmen and keep squads of them at it, night and day, until the structural alterations were luckily completed just before the first ticket-holders appeared at the doors. It was a narrow shave for Mr. Hammerstein, but the reminiscence of it is apt to be somewhat exhilarating to those who take a pride in the efficiency of the Council.

H. W. H.

JAPAN'S DEFENCES BY SEA—THE FIVE NAVAL PROGRAMMES SINCE THE WAR WITH CHINA.

TOKIO, May 12.

So much has been said of late about the development of militarism in Japan, and her alleged naval programme of elaborate and even sinister proportions, that an examination of the facts is but fair to Japan and may prove of considerable interest as a relief to apprehension, so far as it exists abroad.

What actually is Japan's naval programme is an extremely difficult question to answer offhand; for not only is it wrapped up in the secrecy that naturally pertains to such questions, but it is rendered still more complicated for the outsider to unravel by the fact that it consists of a series of programmes doubling upon one another.

There are at present in force five naval programmes, which have been inaugurated by the Imperial Navy and approved by the Imperial Diet. The first one was inspired by experiences in the war with China, when Japan for the first time began to realize the importance and necessity of an adequate naval force. At the time that war broke out, Japan had a fleet of thirty-three ships, aggregating a tonnage of only 61,000, and no battleships at all comparable to those possessed by China. Only after Japan had succeeded in torpedoing and sinking at Wei-hai-wei China's two big ships was the intense anxiety of the nation relieved. No sooner had peace been resumed than Japan set about elaborating a naval expansion programme of 211,000,000 yen, and this, her first, naval programme was carried to completion in 1911. What it did for the Imperial navy may be inferred from the fact that in 1903 Japan

found herself in command of a fighting force of seventy-six ships, with a total tonnage of 258,000.

In this year came another naval expansion programme authorizing an expenditure of 99,000,000 yen, spread over a space of twelve years, ending in 1915. This programme involves the construction of a certain number of battleships, naval weapons, buildings, a replenishment of war craft, and repairs to naval ships. In 1904, another naval expansion programme was launched, involving an outlay of 123,000,000 yen, spread over seven years. Again, during the war with Russia, a further plan for laying out 76,000,000 yen on the navy was promulgated, the time required being seven years. In 1910 appeared a fourth programme for spending on the navy the sum of 80,000,000 yen in six years; and, lastly, in 1911, the Saionji Cabinet promoted a scheme calling for an expenditure of 90,000,000 yen, to be spread over a period of ten years.

Since the war with Russia there have been added four battleships, eight first-class armored cruisers, six other cruisers, besides numerous smaller war craft —all these in addition to the twelve battleships captured from Russia, having a displacement of some 103,500 tons.

A comparison of the fleet that faced Russia with the present naval strength of Japan will further indicate to what extent the naval programmes have been executed, as well as the nation's position as a naval power on the Pacific. Japan met Russia with six battleships, eight armored cruisers, forty-four minor cruisers, as well as other warcraft, including eighty torpedo-boats and nineteen destroyers, representing 157 ships, with a total tonnage of 283,743. To-day the Japanese Empire commands a fleet of fifteen battleships, three of which are of dreadnought strength; thirteen first-class armored cruisers; seven second-class cruisers; thirteen third-class cruisers, representing an aggregate tonnage of no less than 453,115, to say nothing of her sixty destroyers, fifty-nine torpedo-boats, and thirteen submarines, as well as her efficient aerial corps.

Under the fifth expansion programme of 1911-12, her naval strength is greatly enhanced, but this programme is as yet only on paper. It involves, however, an outlay of some 90,000,000 yen, much of which is to be devoted to heavy fighting units. The most deadly weapons of the Japanese fleet are not her dreadnoughts, so-called, but her magnificent array of fast armored cruisers, with a speed of over twenty-six knots, and heavy fighting equipment.

The concluding naval programme of the Japanese authorities was seriously interfered with by the action of the House of Peers at the last session of the Diet in refusing to concur in the naval budget, deleting a sum of 70,000,000 yen from the estimates. This attitude ended in the downfall of the Cabinet.

Japan asks and will insist upon the same treatment as one civilized nation is entitled to ask from another; and her navy stands as a wholesale warning to all who hesitate to accord her this common justice. J. I. B.

Some Modern Painters

PERSONAL NOTES IN TWO CHAPTERS.

By SIR HENRY LUCY.

CHAPTER TWO — ALMA TADEMA — EDWIN ABBEY—LUKE FILDES—MR. GOW—SYDNEY COOPER.

I happen to possess three masterpieces by Alma Tadema that never hung on the line at the Royal Academy. At present they hang on the line in a corner of my dining-room, where, indeed, the work was executed. Dining with us one night, Tadema, pencil in hand, took up one of the menu cards and wrote on the back a group of cabalistic figures displayed thus:

21	21	
15	15	138
31	31	

Deftly turning the card to the left, he with a few swift strokes of the pencil clad the group of three figures with cap and kerchief, producing the comely faces of two country dames. With similar lightning-like treatment he transformed the figures 138 into the face and hatted head of a broth of an Irish boy.

Among the guests was Archdeacon Wiberforce, Chaplain of the House of Commons. Closely watching the magical process which seemed as simple as writing down the figures, he asked if he might reproduce it.

"By all means," said the genial R.A.

The Archdeacon got the figures all right, turned the card into the proper position, and painstakingly copied the drawings. The result was an unrecognizable blotch. The gentle reader will probably do better if he gives his mind to the experiment.

Edwin Abbey got a big price for his picture of the Coronation of King Edward. The payment did not realize money value for time and labor expended. He was content to take the balance out in renown. As was shown in Sir George Hayter's picture of the Coronation of Queen Victoria the subject is not one to be mastered by ordinary art. Only supreme genius could lift it above the colored woodiness reached by the court painter of sixty-six years. Abbey made a picture as well as a portrait gallery. The likenesses are in the main excellent. What strikes one first is the glory of the mass of color, the life and movement that pervades the scene.

On Coronation day the artist was obligingly provided with convenient recess in a tomb in Westminster Abbey immediately facing King Edward's chair, in which the new sovereign was seated. There, while he looked on, came to him the happy thought of seizing for his picture the moment when the Primate raised aloft the crown with intent to place it on the King's head. Simultaneously the cloaked peers, hitherto carrying their coronets in their hand, with one accord uplifted them, placing them upon their heads as the King was crowned.

"At sight whereof," as the ancient office hath it, "the people, with loud and repeated shouts, cry 'God save the King!' The trumpets sound, and by a signal given, great guns at the Tower are shot off."

Abbey told me that while various sitters of high estate gave him much trouble in the matter of sittings, Queen Alexandra excelled all. The best sitter, always urbane, thoughtful of the troubled artist's time and convenience, was King Edward. Punctually at appointed hours he drove in a private brougham to the artist's studio, solely accompanied by an equerry in mufti. He listened smilingly to the artist's instructions as to pose, and implicitly obeyed directions. With the Queen all was different. Abbey attended upon her at command, often waiting over an hour, when he was informed that he could not see her Majesty on that particular day. There were all kinds of trouble with the royal robes, culminating at a time when the artist believed his task was over in demand for alterations which upset all arrangements for the public exhibition of the picture, deferring its opening till the London season was over and the town empty.

At the date of the Coronation Mr. Balfour was the First Minister of the Crown, entrusted with direction of the destinies of the Empire. It would seem reasonable that in an historic picture of this kind he should figure prominently. Prolonged search discovers the Premier at the extreme edge of the crowd, absolutely the last man but one admitted within the charmed circle. Only a minor canon between him and the unnamed multitude outside. The incident throws a flood of light on one of those ordinances upon which, all unknown to the otherwise astute man in the street, the British Constitution rests. In the ceremony of the Coronation the order of precedence, sacred and immutable as the laws of the Medes and Persians, is paramount. The Prime Minister, an official designation of comparatively modern birth, had at the date of King Edward's Coronation no place in the table. Consequently he could claim no precedence either at the Coronation or in ordinary gatherings of official or social life. Accordingly in the Coronation picture, which now decorates one of the walls of Buckingham Palace, he, more or less humbly, stands on the outskirts, a special Providence having set immediately before him the Lord Chan-

cellor (Lord Haisbury), over whose wigged head he can quite conveniently survey the scene.

Next to the King and Queen, standing immediately behind her Majesty, the most striking figure in this pageant is that of the Bishop of Norwich. This is by reason of his robes, whereby hangs a tale. The Primate and other occupants of the Episcopal Bench were arrayed for the Coronation in their ordinary official robes. The Bishop of Norwich was gorgeous in cloth of gold and priceless tapestry. The raiment originally belonged to quite another personage, the Emir of Bokhara to wit. A Norfolk man being on the spot when some upheaval in that far-off country led to the Emir's apparel coming on the market, he bought his robes of state, and on returning to his native country presented them to the Dean and Chapter of Norwich. As the delectable thing would not go round the full capitular company it was resolved to endow the Lord Bishop with its sole possession. It was accordingly, with the least possible alteration, transformed into an episcopal robe, which the Bishop wore at the Coronation, and subsequently lent to Abbey for the uses of the picture.

What his right reverend brethren thought of the little vanity was not spoken, at least not publicly. But the Bishop of Norwich decidedly had the best of it in the show.

When Cecil Rhodes paid his last visit to London, he, at the request of a personal friend, sat for his portrait to Luke Fildes. The great man, whose temper in mildest seasons was not lacking in peremptoriness, wholly failed to realize the dignity of an R.A. He refused to take up the position and pose suggested by the artist. He would be painted as he chose to sit, and in no other way. If Fildes didn't like it, he must leave it.

Fildes certainly did not like it. But in the end it was Rhodes who had to leave it, the studio doors being closed upon him, with order to the servants that they were not to be reopened. This was a sacrifice of some labor, and a fee of 500 guineas. But the situation had become unbearable. Fildes retained the portrait in its unfinished state, and the friend who commissioned it is inconsolable.

Mr. Gow, R.A., who is well known at the Arts and Garrick Clubs, never got rid of the status bestowed upon him by a former Lord Mayor of London. Unveiling the Academician's Jubilee picture at the Guildhall, his Lordship, observing on the frame the magic letters "R.A." after the painter's name, eulogized him as "Mr. Gow, Royal Artillery."

Like the owner of the Shamrock, the Lord Mayor (Sir John Voce Moore) was a tea merchant, though, unlike Sir Thomas Lipton, he did not add bacon or other comestibles to his stores. He laid the foundation of his fortune at Cambridge, where, years ago, he kept a grocer's shop. Overhead lodged an undergraduate, who since has made far-reaching fame in the world of letters. One night he gave a supper to celebrate some happy event. The guests stayed late, and began to grow uproarious. The worthy grocer remonstrated with only partial effect. As at the conclusion of his remarks he turned to descend the staircase, the sight of his bald head proved irresistible. The host, taking up the unfinished bowl of more than half hot punch, dropped it over the staircase on to the head of the future Lord Mayor of London.

When the Cambridge grocer assumed the majesty of the Mansion House, the ex-undergraduate wrote him a letter of congratulation, reminding him of the pleasing incident. Strange to say, he received a chillingly cool acknowledgment. The Lord Mayor fully recalled the incident, but expressed no desire to renew the acquaintance. What was fun to the undergraduates was a bath of hot grog to him.

Sydney Cooper, born in Canterbury four years before Waterloo, died there in the spring of 1901. He was at work almost up to the end, preparing to avail himself of his privilege as R.A. to have his latest masterpiece hung on the line at Burlington House. Talking to Sir William Agnew a short time before his death, he said he remembered that sixty years earlier Sir William's father had suggested to him the subject for a picture. It was a herd of cattle standing knee-deep in a grassy pool at the foot of a verdurous hill.

"And now," said the cheerful old gentleman, "I'm going to carry out the idea."

To those familiar with the general character of Sydney Cooper's works, few of them excluding from their composition three acres more or less and a cow, there is something delightful in the idea, which evidently possessed the veteran artist, that in his ninetieth year he was starting out upon quite a new style. To all appearances he was happily unconscious of any declension of the popularity of his prime. In his eightieth year he endowed Canterbury with a gallery of art, in which many of his pictures are now on view. He hinted that there was a more precious legacy in store for the institution. He made no secret that in his will he had made provision that the work upon which he chanced to be engaged at the time of his death should be added to the gallery, and that the brush falling from his hand and the palette he should never more use should be exhibited to coming generations.

News for Bibliophiles

"JOHN DUNTON'S LETTERS FROM NEW ENGLAND."

Prof. Chester N. Greenough's critical study of "John Dunton's Letters from New England," which appears in the most recently printed volume (XIV, pp. 213-257) of the Publications of the Colonial Society of Massachusetts, is of more than ordinary interest and value. For Mr. Greenough has settled for all time the question of the authenticity of a book that has hitherto held a place of some importance with the early works descriptive of seventeenth-century life in New England by producing evidence which compels us to catalogue the volume anew and transfer it from the history shelf to that devoted to early English fiction. Mr. Greenough proves beyond cavil that this erratic and irresponsible London bookseller is guilty of plagiarism of the most flagrant sort.

Dunton wrote many books, of which the best known is "The Life and Errors of John Dunton, Late Citizen of London," published in that city by S. Malthus (1705), in which he has given an account of his visit to New England in 1686. This part of the book was inadequately reprinted by the Massachusetts Historical Society in 1814. But it is as the author of a series of eight lively letters, purporting to have been written at various times during 1686, giving another and perhaps later version of his stay in New England, that Dunton chiefly commands our interest. These apparently authentic letters, from the pen of a not unfriendly observer, remained unpublished for more than a century and three-quarters, and first saw the light in 1867, when printed for the members of the Prince Society (Boston) from the original manuscript in the Bodleian Library at Oxford, and edited by William H. Whitmore. The edition was limited to two hundred and ten copies (including twenty on large paper), and the book, much sought by collectors, has long been one of the scarcest of the Society's publications.

John Dunton, the son of a clergyman and himself intended for the ministry, was born May 4-14, 1659. Beginning life in "fairly affluent circumstances," he did not escape the misery of poverty, largely the result of his own mad ventures. He has been not inaptly characterized by the elder Disraeli as "a crack-brained scribbling bookseller, who boasted he had a thousand projects, fancied he had methodized six hundred, and was ruined by the fifty he executed."

Dunton came to Boston in the Susannah and Thomas, Capt. Thomas Jenner, bringing with him a considerable stock of books. Upon his arrival, after a perilous journey of nearly three months' duration, he consoled his wife, "dear Iris," by sending her many "letters of tenderness." To his friend, George Larkin, he thus confides: "When Fairweather left Boston (which was a week ago) he had no less than sixty Letters of mine in his Bag (a whole Cargo of Love!) and all directed to Iris."

The bookselling venture did not prosper. Dunton remarks, with some bitter-

ness, that the inhabitants of Boston are ready enough with promises, but slow in making their payments, and, in speaking of his "Brethren the Booksellers," he says: "I am satisfy'd that I'm as welcome to 'em as Sowr Ale in Summer."

For his account of the customs of the Indians, Dunton drew on Roger Williams's "Key into the Language of America" (1643), although he professes to have obtained his information "from a friend." Also, his essay on John Eliot, whom he greatly admired, is largely taken from Cotton Mather. These borrowings, together with minor ones from Josselyn's "Two Voyages" (1674) and J. W.'s "Letter from New England" (1682), are noted by Mr. Whitmore in his Introduction to the Prince Society volume. Yet, "with these imperfections," writes the Editor, "the Letters must remain as unique sketches of New England life, honestly drawn, and defective rather than erroneous."

And, with the exceptions here given, the "Letters," as original productions, appear to have remained unchallenged until Mr. Greenough made his searching study of them. The extent of Dunton's plagiarism is extraordinary. The evidence adduced by Mr. Greenough is conclusive, and has the effect almost of taking one's breath away. In pointing out our author's propensity for borrowing without credit, he says: "That Josselyn actually was Dunton's Baedeker appears when we examine the short descriptions of the various towns which Dunton visited in his rambles. There are twelve of them in all, and the description of each is taken almost verbatim from Josselyn." Moreover, Dunton was not content with taking his descriptions of places ready-made from earlier writers. The most interesting part of his "Letters"—that concerning the people he met in and about Boston—is copied from several books of "characters," and is, therefore, worthless as characterizations of Dunton's acquaintances. No less than thirty-one passages have been traced to these sources—"fourteen from Overbury, seven from Fuller, four from Earle, three from Flecknoe, and three from the author of 'The Ladies Calling.'"

Not only does Mr. Greenough quote many passages, in parallel columns, from Dunton and the authors from whom he plagiarized, but he has also compiled a very useful table of such borrowings as have been traced to their source by Mr. Whitmore and himself. It appears from this list that Dunton, in at least eighty-four cases, incorporated borrowed material in his "Letters." To Mr. Greenough's industrious researches we are indebted for fifty-one of these.

We may here indulge in but a single example of John Dunton's method by placing side by side a sentence or two from his character of Mr. Heath, merchant, of Boston, and Thomas Fuller's character of The Good Merchant in "The Holy and the Profane State" (1642):

FULLER.	DUNTON.
2. He never warrants any ware for good but what is so indeed. . . . 5. He makes no advantage of his chapman's ignorance, chiefly if referring himself to his honesty, where the seller's conscience is all the buyer's skill, who makes him both seller and judge, so that he doth not so much ask as order what he must pay.	There are two things remarkable in him, (and I will instance no more.) One is, That he never warrants any Ware for good, but what is so indeed. And the other, That he makes no Advantage of his Chapman's Ignorance, especially if he refers himself to his Honesty. Where the Conscience of the Seller is all the Skill of the Buyer, the Seller is made the Judge, so that he doth not so much ask as Order what he must pay.

It is not a pleasant thing to have one's faith in an old worthy shaken, even if that worthy is of the Dunton type. But Mr. Greenough has rendered a genuine service to the student of to-day and of to-morrow by pointing out that "John Dunton's Letters from New-England" must be accepted, if at all, only with the utmost caution. The book can never again be used as history.

JOHN THOMAS LEE.

Correspondence

"THE CONSTITUTIONAL POWER OF THE COURTS."

TO THE EDITOR OF THE NATION:

SIR: In the correspondence printed in your issue of May 14, two communications appear in answer to my letter on the constitutional power of the courts. The first communication is from Mr. Rayner W. Kelsey, who objects to my statement that he offered two passages from the Constitution as "proof" of the contention that the Federal Constitution confers upon the Federal Judiciary the power to declare unconstitutional any enactments of the Federal Legislature which they may deem to be so. Mr. Kelsey says that he cited the passages not as "proof" of the contention, "but merely as the basis of the argument." If the passages do not furnish any such basis, the error is all the more serious. These two quotations from the Federal Constitution are the only quotations from that document to be found in Mr. Kelsey's first letter. Bearing this in mind, let us read once more this sentence from that first letter: "Most of us still venture to believe that the above-quoted lines of the Constitution confer upon the Supreme Court the power to declare acts of Congress unconstitutional." If this be not the citation of those passages as "proof" of Mr. Kelsey's contention, I confess to an inability to make anything out of the letter.

But let us come to the chief point in Mr. Kelsey's rebuttal. In my letter of April 23 I said: "Nowhere is such a power expressly given to the judiciary in the first Constitutions of the original States; nowhere is such a power expressly given to the Federal Judiciary in the Federal Constitution." Mr. Kelsey takes issue with these statements, and he is kind enough to say that if I had only taken the precaution to read a standard general history of the United States I should not have made the mistake. Then he quotes from Prof. A. C. McLaughlin's volume in the American Nation series. In that quotation I find three instances of the assumption, or, if you prefer, exercise, by State courts of the power to declare laws passed by their respective State Legislatures unconstitutional. I find nothing else.

Now, if possible, I should like to make my point clear. It is this: In no State Constitution in force before the adoption of our Federal Constitution is there an express grant to the judiciary of the power to declare acts of the Legislature unconstitutional. If Mr. Kelsey can find such an express grant of power I shall be pleased to have him quote the passage in which it is embodied. Simply to quote instances of the exercise of that power by State courts is to beg the question. For the question is: Were those courts constitutionally endowed with such power, or did they merely assume it?

The same question applies to our Federal Supreme Court. I must pass over much in Mr. Pearson's interesting and courteous letter that seems to me to be irrelevant, and much that seems to me to be a misunderstanding of my position. But in his letter of May 14 Mr. Pearson says, or implies, that the fact that the Federal Constitution limits the field in which the Federal Legislature may legislate is proof of the contention that the framers of the Constitution intended the Federal Judiciary to be the judge of whether, in any contested case, the Federal Legislature has overstepped the limits of its field. Surely the power to declare acts of the Legislature unconstitutional is a grave and far-reaching one. Was not the confiding of so great a power to the Federal Judiciary worthy of a distinct, definite, and unmistakable passage in the Constitution? And if it was the deliberate intention of a majority of the framers of the Constitution to endow the Federal Judiciary with such a power why did they not insert such a passage in the Constitution?

Moscow, Idaho, May 20.

THE IRISH IN AMERICA.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for April 16 an authority on immigration, Prof. Henry P. Fairchild, of Yale University, offers some melancholy reflections on the Irish element in America. In the interests of national reason, I hope I may be allowed to express a somewhat different view in a weekly famous for its Irish editor.

It is as an hereditary American that Mr. Fairchild puts the case against the Irish element. With a delightful tact in classification, he says that when the Irish began to arrive in this country they suffered the antipathy that existed among the native stock for "paupers, criminals, diseased persons, and Roman Catholics." The question now is, was this antipathy ill-founded? Mr. Fairchild declares that the more friendly assumption "is open to serious question." He declares specifically that "among criminals, the Irish stand at the head of the foreign-born as regards the total number of offences," and that "the number of Irish paupers in this country is out of all proportion to their percentage of the total population." In addition, he contends that the original agitation rested on a

solid foundation, insisting that many so-called American evils are traceable to these early immigrants. He intimates that the Irish have had an evil influence on public affairs, and especially on questions involving England. He expects the Irish to love England. His general conclusions are vague, but he testifies that we owe a debt to the agitators of an earlier period, and he is certain that under new standards the America of 1914 would, if it had the chance, reject three-quarters of the great Irish migration of 1845-1855—a migration which landed "swarms of miserable wretches on our docks," an "indiscriminate dumping of foreign paupers and criminals on our shores."

It is certainly true that the great Irish migration was largely composed of "miserable wretches." Between 1845 and 1855, 2,000,000 Irish suffered famine, and famine does induce miserable wretchedness. Of these, one million died in Ireland. In the words of Mr. Fairchild himself, "the famine had passed the death-sentence upon a large proportion of the people; emigration—to carry out the figure—merely commuted that sentence to exile. It furnished an outlet to thousands who were otherwise doomed to die." Had antipathy had its crabbed way, the rest of the miserable wretches would, by his own showing, have been pent up for death in a land of death. Happily enough for these beneficiaries of English rule, immigration had not yet come under the ægis of the Sacred Codfish. I do not wish to falsify. Perhaps the fact that the canals and railroads never could have been built without the sturdy Irishmen of 1830 and later, made the new arrivals not unwelcome, but I feel, also, that some misguided natives received them in the spirit of another hereditary American, who saw his land as the "Pole-star of light in Europe's night," a country where

> Each shall care for other
> And each to each shall bend,
> To the poor a noble brother,
> To the good an equal friend.

Statistics, however, have no bowels of mercy, and Emerson is no answer to them. As the spokesman of native conscientious selfishness, Mr. Fairchild is entitled to make his case, and if the Irish have proved inordinately pauper, criminal, and diseased—in addition to being inflicted with a discreditable religion—they have certainly been a poor bargain for those to whom God gave a vested interest in this country.

What are the actual facts? I shall quote against Mr. Fairchild nothing but his own work on "Immigration." From that book I should conclude that no scrupulous person would venture to arraign any class of early immigrants on the data at hand. In regard to crime, for example, he asserts on page 331, "the utter inadequacy of the data for making any deductions as to the influence of immigration upon crime in the United States." In regard to pauperism, it is equally impossible to conclude. While basing his present contentions on the list of paupers in the almshouses, he admits in his book that "these tables, taken by themselves, are wholly unreliable a indicating relative tendencies among races," and neither he nor any one else has as yet any exhaustive data to supplement these tables. In point of fact, the data as to outdoor relief indicate the preponderance of German pauperism

To return to the allegation that the Irish take the lead among foreign-born criminals. In his valuable book Mr. Fairchild gives this allegation an entirely different complexion. There he says: "It appears that the Irish stand at the head as regards the total number of offences and the German next. In respect to major offences, however, the Germans stand first."

On what principle should criminality be judged? Mr. Fairchild asserts very wisely that "tests of criminality, to be accurate, should include quality as well as quantity." On his own principle, then, he stands convicted of inaccuracy—the sort of inaccuracy which an Irishman would feel discreditable, since it would prove that he had not felt the full obligations of truth. What swells the Irish criminal total is the fact that "the Irish and Scotch are addicted to drunkenness." Crimes against property are, apparently, a German proclivity. And, so far as can be ascertained, "the Italians are pre-eminent in crimes of violence or crimes against the person."

In view of the fact that the early Irish immigrants "were a destitute and helpless lot, and fell an easy prey to the machinations of [a] host of exploiters," I think it is reasonable to expect much pauperism, but I am inclined to believe that this is imported pauperism, and Mr. Fairchild has certainly not proved that it is notoriously inherent pauperism. As to criminality, his own words betray him as, in this instance, unsound and, in the strict sense, untruthful.

There remains the question of the corrupt Irish vote. As to this, I shall venture upon three admissions and three accusations: (1) The uneducated Irish came here without ever having had opportunity in self-government, through no fault of their own, (2) they took advantage of the native spoils system, (3) they contributed to bad municipal politics. But (1) on its own side, the United States exploited the cheap Irish labor and failed to educate it politically, (2) the man "higher up," the big grafter, was not usually an Irishman but a corrupt American, sometimes even a New Englander, and (3) the shame of the American city was attributable to causes far deeper than the existence of a convenient Irish medium. I do not defend the culpability, but seek to ascribe it to the proper cause.

In public life, there is this to say: the Irish immigrants certainly have failed to accumulate property proportionately. But the accumulation of property is n the final test of human value. They have done the United States considerable service in such comparatively non-lucrative vocations as the army, the police, the great fire departments; as journalists, a educators, as lawyers, as contractors, as leaders in trade unionism, as clerics, eve as athletes, and also possibly as a Celtic qualification of Puritanism.

The Irish immigration brought to this country the antecedents of many admirable people. I can think of the unadvertised Irish blood in Prof. William James, Augustus Saint-Gaudens, Edwin L. Godkin, as well as the Irish blood in "Hinky Dink" and "Bathhouse John." I can credit Ireland with Mitchel, McAneny, and Prendergast, as well as discredit it with Croker and Murphy. And when I think of the greatest political event of recent years—the smash-up of the Republican party—I see nothing Irish in the visages of Penrose, Barnes, Guggenheim, Lorimer, "Big Steve," of Colorado. It is pathetic to have a political commentator laying at the door of the immigrant evils which were inherent in the commercial intention of the last forty years and in a government imperfectly socialized.

Restriction of immigrants may now be economically expedient; this is one of the genuine problems before us. But I urge that a narrow Americanism is bound to pervert us, as it has perverted Mr. Fairchild—and it can never be a possible basis for this democracy. To adopt the polite words of Gildas, we are all "whelps from the kennel of barbarism." To mount from barbarism, each to each must bend.

FRANCIS HACKETT.

New York, May 21.

"THE HONOR SYSTEM."

TO THE EDITOR OF THE NATION:

SIR: The author of the interesting article on the honor system in the *Nation* of May 7 seems to be entirely ignorant of some of the most important provisions of this system. In the first place equal trust is not placed in every student. The system is simply a form of government by the students. In the University of Virginia and many other institutions which hold the same "patent of nobility" the management of this government is in the hands of a special student committee. Each student pledges his honor, first to abide by the rules of the examination and secondly to report to the committee any dishonesty which may come under his notice. Naturally "the skulking fellow, . . . with the abridged forehead and the saurian eye" (and he is to be found in every institution) would readily give and as readily violate the first pledge, but the presence of the second is a strong deterrent. How strong it is depends upon the honor of the students about him. If he knows that the honor system is thoroughly enforced, he is afraid to cheat.

The virtuous student receives no *quid pro quo*. His honesty is not conditioned upon his teacher's absence or presence. There is no "obsequious withdrawal" of the teacher and the honor system has no proviso, stated or implied, as to which he shall do. Often the teacher remains to answer questions and to attend to details of the examination.

Too much stress has perhaps been laid upon the "honor" of the system. It would perhaps better be called the common decency system. Exactly the same credit redounds to the individual member of the group as to a member of any other self-governed community—and no more. He has only done his duty when he obeys and upholds its laws.

As to whether the honor system or some other should be used in a given institution depends upon circumstances.

Certainly, if the honor system works, the sense of responsibility for one's self and for the group, which it develops, is worth much, and is a distinct advance over any system of inspection, but each system must of course be judged by its results, and if the students do not enforce the honor system it becomes a wretched farce and should be abandoned.

Experience with college students in institutions from Nebraska to Massachusetts leads me to believe that many are strongly influenced by their surroundings in matters of collegiate honesty. Many would not cheat under any circumstances, some would cheat whenever they thought detection or punishment unlikely, many, especially at the beginning, would cheat if others did or if the group winked at such deceit and punishment was not likely to follow, but would not cheat if that were dangerous or unpopular. Under a well-enforced honor system this last set not only refrains from cheating, but grows to regard the practice with disgust. The student regards his teacher's code of morals as a maximum of excellence which it is not necessarily a deep disgrace to fail to reach, but that of his fellows as a minimum to fall below which means ostracism.

In a large institution where the individuals of the group are known to relatively few and where no common interests draw the group together in ways in which it may act upon the individuals powerfully, the honor system may be impracticable, but in smaller, more closely knit institutions, the failure of the honor system when fairly tried would be a sad commentary on the sense of honesty and responsibility among the students.

Spartanburg, S. C., May 19.

NON-UNION MINERS.

To the Editor of The Nation:

Sir: In your editorial entitled "The Colorado Puzzle," in the *Nation* of May 7, you say: "No one seems to be speaking for the non-union miners."

Notwithstanding the strike, there are 10,000 men at work in the coal mines of Colorado. The strikers total not more than 2,000. Many of the leaders never worked underground a day in their lives. Some of them are bartenders and saloon-keepers.

The mine owners have sustained enormous losses and are risking the total destruction of their property to insure the non-union men the right to work without paying tribute to any set of self-constituted bosses.

Is it quite true that "no one speaks for the non-union miners"?

Charles W. Comstock.

Denver, Col., May 16.

[Yes. No one of their number speaks officially for them.—Ed. The Nation.]

"HOWLERS."

To the Editor of The Nation:

Sir: The following "howler" seems worthy to be added to the delightful collection printed in your issue of May 14:

An English schoolboy, confronted with the phrase, "Voici l'Anglais avec son sang froid," translated it, "Here comes the Englishman with his bloody coldness."

S. R. T.

Sharon, Conn., May 25.

"LIBERTAS SUB REGE PIO."

To the Editor of The Nation:

Sir: By a curious coincidence, I happened to be reading the biography of Sydney Smith only a short time ago and I find in my notebook one of the "howlers" to which the writer on the rationale of schoolboy blunders refers in his article, page 564, May 14. It was the translation of Viscount Sidmouth's motto, and the translation of it was by Sydney Smith's brother, nicknamed Bobus, who rendered it (significantly in the reign of George III), "Our pious King has got liberty under."

Literature

CAVOURIANA.

La Giovenezza di Cavour. Da Francesco Ruffini. 2 vols. Milan: Fratelli Bocca. Lire 10.

Cavour Agricoltore. Lettere inedite di Camillo Cavour a Giacinto Corio; precedute da un Saggio di Ezio Visconti. Florence: Barbèra. Lire 4.

Cavour e la Formazione del Regno d'Italia. Da Pietro Orsi. Turin: S. T. E. N. Lire 3.50.

L'Italia Moderna. 1750-1913. Quarta Edizione continuata fino alla Conquista della Libia. Da Pietro Orsi. Milan: Hoepli. Lire 7.50.

Cavour and the Making of Modern Italy. 1810-1861. By Pietro Orsi. Heroes of the Nations Series. New York: G. P. Putnam's Sons. $1.50 net.

Since the centenary of Cavour's birth in 1910, two works of real importance concerning his life have appeared in Italy. In addition there have been various magazine articles and pamphlets, and some personal recollections scattered here and there in newspapers.

The most notable contribution is by Prof. Francesco Ruffini, recently rector of the University of Turin, who has made a very careful study of Cavour's youth. Having worked with the consent of the statesman's heirs, he has enjoyed free access to Cavour's papers. The result is that he is able to supplement the information which Berti first gave in 'Cavour Before 1848," published in 1886, and in Cavour's "Diary," published in 1888. Many things which Berti found it discreet to omit thirty years ago, Professor Ruffini quite properly makes public now; and, besides new material, he supplies names which Berti hid behind initials or asterisks, and he gives us in their entirety letters which Chiala, who also was hampered, printed in fragments only. Among new sources which Professor Ruffini has tapped, the letters of Cavour to his cousin, Adèle de Sellon, and her husband, Baron Maurice, are particularly rich.

In general, this valuable study does not cause us to revise our opinion of Cavour's youth and early manhood; on the contrary, it confirms the impressions derived from preceding biographers, and it makes us wonder all the more at the accuracy of outline and the justness of insight displayed by William de La Rive in his beautiful memoir published in 1862.

On many details, Professor Ruffini sheds new light, by which we realize how difficult Cavour's position was in a household sincerely devoted to Reaction and wholly persuaded that the young Liberal was either wilfully perverse, or crazy, or both. The depth of family affection among young and old alone prevented an irremediable explosion. Their toleration of the black sheep is perhaps more remarkable than is his own abiding affection for them.

Of Cavour's rustication to Grinzane and management of the estate there, and of the steps which led to his undertaking to direct the still larger venture at Leri, Professor Ruffini has much to tell. We do not find, however, any further explanation of Cavour's banishment to the Fortress of Bard, or of his love affair with the Marchesa Giustiniani. As to the latter, the author states frankly that, until material which is known to exist is released, not much can be added to Berti's chapter on the *Incognita.* On the other hand, the letters of Cavour and his father in reference to the son's "plunging" on the Paris Bourse and losing 45,000 francs are documents of capital interest. They show alike the fundamentally magnanimous nature of Camillo and the fair-minded, long-suffering (from his point of view) quality of his father. Our only regret is that the first letter has been lost.

Professor Ruffini has taken great pains to investigate Cavour's relations with his Swiss kinsmen; and again he fills in many details. The importance of Cavour's connections with Switzerland, which includes the fact that his mother was Swiss and born a Protestant, and that from his earliest childhood his visits to Geneva brought him into contact with Liberal and progressive minds, cannot be overestimated; and the editor is right in devoting much space to this factor in Cavour's development. His study extends even to an account of the Geneva revolution of 1841.

So satisfactory is Professor Ruffini's work that it is to be desired that he may be allowed to bring out, as soon as possible, an unexpurgated edition of Cavour's Diary and Juvenilia. That

he is a member of the Commission, appointed by the Italian Government, to issue a national, complete edition of Cavour's letters, documents, and speeches, ought to be a guarantee of thoroughness and fidelity.

The volume, edited by Ezio Visconti, of 264 letters from Cavour to Giacinto Corio, who had the business management of the Leri estates, will be studied by every one who wishes to see how solid and minute a training in agriculture the future statesman gave himself. He knew the character of each acre of land, the value of each crop, the capacity of the laborers, the time to buy and the time to sell. Being ambitious that Leri should be a model for Piedmont, he tried experiments, borrowed suggestions from England and France, consulted agricultural chemists, and studied how to improve the system of transportation. One item illustrates many: he seems to have been the first large importer of guano into Piedmont.

Besides the technical side, these letters reveal also Cavour's human side in dealing with his farm-hands—the acuteness with which he estimated their industry, his sense of justice, his considerateness towards the unfortunate and old. Occasionally, there is a passing reference to political matters: as when he confides to Corio the "joyful news" of his resignation as Prime Minister. These letters, with the sixty already published by Chiala, and the volume edited by Berti containing Cavour's correspondence on financial concerns with De La Rue, the Genoese banker, leave no doubt as to Cavour's ability as a master of business on a large scale.

Some fifteen years ago Count Pietro Orsi, who has subsequently been a professor at the University of Padua, and is now a Deputy in the Italian Parliament, compiled a useful short history of Italy from 1748 to 1898. This he has recently extended to cover recent events down to the Italian conquest of Libia. He has also written in Italian a popular life of Cavour, which appears in an English translation in the Heroes of the Nations series. The English version follows closely enough the Italian original, and has, besides, a large number of illustrations.

Count Orsi's "L'Italia Moderna" is particularly serviceable on account of its supplementary chapters covering the reign of the present King, and giving a survey of the political, social, and industrial condition of Italy in 1913, and of its leaders in literature and the arts. In addition, a bibliography of sixty pages should be mentioned. Count Orsi is a "safe" historian: he refrains from criticism which might rasp partisans of any stripe, and possesses the elements which make him a popular and respected writer.

CURRENT FICTION.

Drum's House. By Ida Wild. New York: E. P. Dutton & Co.

Clever and mannered, by a writer who knows her Meredith and her Hewett, the story concerns a group of county people in "Bandyshire." Its preliminary confession of faith is a trifle menacing:

> The great physician does not scruple to look at your tongue and to ask (with reason) many a bold and pointed query. No more should the novelist limit himself to certain phases; he must go far, ask much, know much. . . . But this is a poor parallel. For though I may have my finger on the pulse of the world, that will not content me; I must be chucking and chucked under the chin. To be frank, I am the world's lover and mistress in one.

After that, the reader is bound to look for something extremely "modern" and disconcerting. If his nerves have not been too well dulled by contact with the current British novel, he will find it. These people are certainly not respectable in the nineteenth-century sense, and that, we suppose, is an object. A middle-aged couple who chiefly love gambling and those Continental resorts in which that form of activity is encouraged, return to England and Drum's House because they have two daughters to be married off. Both marry Bandyshire men. One achieves grass-widowhood in the course of a honeymoon. The other, after a secret marriage with a social inferior, becomes the mistress of a contemptible parson, and the pair are slain in each other's arms—presumably by the injured husband; but that is artfully left to guesswork. The parents, if not respectable, are thoroughly lovable, and the devoted and neglected wife of the miserable parson is a warmly human figure. A good deal of ingenuity is employed in developing the narrative.

Children of the Dead End. By Patrick MacGill. New York: E. P. Dutton & Co.

A pessimistic and melancholy Jack London might have told this story. The writer says that it is largely autobiographical. It is the tale of a fighting Irishman who became an English tramp and navvy and Socialist and, incidentally, a writer. Dermod Flynn finds life unjust from the outset. Before he has entered his 'teens he is sent out of his peasant home by the parents who have thrust him into the world. He is expected not only to make his own living, but to help meet the exactions of the landlord and priest at home. He learns his hard lesson of what is to be expected between master and servant. "The covert sneers, the insulting jibes, the kicks and curses were good, because they moulded my character in the way that is best. To-day I assert that no man is good enough to be another man's master. I hate all forms of tyranny, and the kicks of Joe Bennet and the weary hours spent in earning the first rent which I ever paid for my people's croft, were responsible for instilling that hatred into my being." He goes to Scotland among a squad of potato-diggers, learns to gamble and drink and thieve for a meal, learns, above all, to use his fists. He is a better man than he looks, and at eighteen has made himself feared along the roads and among the railway and mining camps. He is a fighter and gambler by nature, and has no shame in drink as a resource. "I know not whether drink and gambling are evils. I only know that they cheered many hours of my life, and caused me to forget the miseries of being. . . . To gamble and drink was part of my nature, and for nature I offer no excuses. She knows what is best." He despises the church and her time-serving officers, society and her false way with the poor. It is a gloomy book, rebellious rather than powerful, though not without touches of power.

A Stepdaughter of the Prairie. By Margaret Lynn. New York: The Macmillan Co.

"I think my eyes were born tired of he prairie," writes Margaret Lynn in the first of these essay-narratives; but he affectionate appreciation diffused through the book leaves a far different mpression upon the reader. The author has observed well, she has caught from her childhood memories a sentiment that warms and deepens her pictures, and she has a whimsical and sensitive style. Those who think of rural life as barren, or the Western plains as monotonous, can find no more truthful orrection. The affairs of the farm family have humor, the school is described with animation, the woods and fields are invested with an adventurous glamour. For dramatic insight into a trivial matter take the recurrent question of who should carry the dinner bucket to the ittle white cross-roads structure:

> Dramatic and emotional possibilities hovered about this problem, which was no simple one. It involved intricate issues of precedence and succession and privilege and physical superiority and age and sex and who did it last and vigor of conscience and proportion of appetite and some occasional problems which no system could foresee or provide for. Mary shamelessly pleaded privilege of sex and age. But I, being a suffragist by birth, accepted my turn as a matter of principle and only contended that I should not have more than my turn. Having brothers is a great quickener of moral courage. One day Henry, who was at times sophistical beyond belief, proved by some masculine system of logic that if women ought to vote, I ought to carry the bucket as often as both he

and John; and they set the lunch at my wrath-paralyzed feet.

The author's experiences are, unfortunately, thoroughly feminine in point of view; the prairies, as a vast realm of outdoors, really belong to the boy. The bookishness of the childhood which passes before us in these pages is also unusual; although it is by no means rare, for, as Miss Lynn remarks, it is on the prairie that children have time to read, and an environment which whets, not dulls, their intellectual curiosity. The book is a far cry from the urban travesties of country life which stud the fiction shelves nowadays, and has many hints for any one who would treat a social phase in essay form.

Keeping Up Appearances. By Maximilian Foster. New York: D. Appleton & Co.

Jim Agnew, narrator of this story, galled by the fact that he is a mere clerk, though his ancestors lived on their income, decides to emigrate to New York. In the business community where he lived, "money," according to Mr. Foster, "not only talked, but shouted; money was the only impulse in men's lives; all were rated by the standard of dollars and cents." New York then appears as his only haven, the only place where he, too, can become rich and make a showing. Yet once in New York, Jim and his wife are engulfed in the costly whirl of an empty, pleasure-seeking, make-believe society which lives only in to-day, since to-morrow is uncertain. They fall victims to the life of restaurants and first-nights. Their resources are soon drained, and then they find that they cannot retreat, cannot cease making a show, that they must continue keeping up appearances or else be swamped by creditors. Squabs grace the board they offer their guests, bread-and-butter their own. The break does come, and they return to their home town and to a clerk's salary.

The theme is, of course, not new, save that Mr. Foster introduces a worldly, ambitious husband to replace the usual dissatisfied wife. Both husband and wife are normal people. Mr. Foster also introduces a chorus of minor personages excellent in characterization. They are the common city types. There is Mrs. Hodge, whose one and only pursuit was enjoyment, which she got by whatever means was handiest; Mrs. Figler, who began each day with a feverish, consuming study of the social columns and spent her husband's income on clothes and in Fifth Avenue public places; and Figler, the hanger-on, who "at forty had retained the buoyancy of a college freshman, a steady flow of high spirits to which was coupled the fawning manners of a lap-dog." The book presents a concise, straightforward narrative, with a minimum of sensationalism.

NATURAL CRIME.

Criminology. By Raffaele Garofalo. Translated by Robert Wyness Millar. With an Introduction by E. Ray Stevens. Boston: Little, Brown & Co. 1914. $4.50 net.

The *Nation's* review of the first numbers of the Criminal Science series (August 3, 1911) brought forth from the chairman of the committee on translations a protest against the use of quotation marks in connection with criminal "science." The translation of Garofalo's "Criminology" enables us to illustrate the necessity of these quotation marks by pointing to a typical case. There are two kinds of "scientists": the soft-headed variety, who will accept anything that appears to have an empirical origin, and the hard-headed, who attribute an empirical reality to anything that is perfectly tangible. Baron Garofalo belongs to the hard-headed kind. He is looking for a hard and fast criminal type; and when he finds what he wants he puts it down for a fact, whether it be taken from his own experience as a judge, from the prison records, from Dostoievsky's "House of the Dead," or from a tale by Poe (p. 103). On the other hand, this quality of hard-headedness makes him stimulating reading and introduces an element of stern common-sense, which helps to atone for a not too subtle psychology and gives to his treatment of crime a tone somewhat less sensational than that of his compatriot, Lombroso. In this connection we may mention his rather striking plan for enforced reparation and payment of damages on the part of those who are neither violent criminals nor confirmed thieves. Again, he insists that severity of punishment does deter, though his reference to English experience (p. 202) raises the question whether it is the severity of punishment that deters or its certainty.

Garofalo's chief contribution to criminology is the conception of "natural crime." According to him, the criminal is not a man; hence, not a savage, for the savage is not deficient in love for his kind; nor a child, for many criminals are persons of mature intelligence—although most of those introduced by him seem rather strikingly naïve. The criminal is a degenerate product of the human species, but in himself he constitutes a perfectly distinct non-human type, with a psychology which is unintelligible from a human point of view and a physical organism that bears certain irrevocable "stigmata" of crime, such as the protruding jaw and the retreating forehead. In reply to the objection that some who are not criminals bear these Lombrosan stigmata, Garofalo reminds us that not all the criminals are in jail; and if many of those in jail are without them—well, not all who are imprisoned are criminals. The mental "stigmata," if we may call them such, are compactly summarized as deficiencies in "altruism," which is divided into the two departments of "pity" and "probity." Evidently, in Garofalo's view, these are qualities—or, rather, quantities—which may be accurately weighed and measured; a man either has them or has them not. Hence, as he repeatedly maintains, there can be no casual criminals. No man not born a criminal can become a criminal. Criminality cannot be diminished by social reform, by religion, or by education; nor, according to this view, can it be materially affected by alcoholism. Least of all can it be cured through reformation. Both the reformatory and the retributory theories of punishment presuppose moral responsibility, which Garofalo dismisses as so much folly and nonsense. His own remedies are repression, by enforced reparation—how this differs in theory from reformation is not quite clear—and the more consistent remedy of "elimination," by banishment, when convenient, or by death, but not by life-imprisonment. Here one asks why his selectionist philosophy should not require a similar "elimination" of the insane. Garofalo replies by saying that this would do violence to the sentiment of pity, which, he boldly affirms, is not disturbed by the execution of the criminal "monster." Evidently, with moral responsibility abandoned, this crucial distinction is too much for him.

In Garofalo, who is nothing if not definite and systematic, criminal "science" takes the form of a striking but deceptive simplicity. Taking from Spencer an iron-bound theory of natural selection, which Spencer himself thought to be better adapted for the lower forms of life than for the higher, Garofalo carries the conception beyond the biological field into a region supposed to be touched, at least, by intelligence and moral responsibility; and then, to avoid complications, moral responsibility is quietly dismissed. The result is the "natural criminal," a creature neither animal nor human and so grotesque as to be inconceivable. Garofalo claims, indeed, to be analyzing the "motives" of crime, but in his psychology a motive is indistinguishable from the thrust of a piston or a charge of electricity. He will not for a moment assume that criminal conduct may be made humanly intelligible. And it is noteworthy that, in spite of his own extensive experience, of which he makes liberal use, all of his more intimate descriptions of criminals are borrowed from Dostoievsky. For himself they are only uncanny specimens. There appears to be but one "extenuating circumstance." His book seems to show that in his own country, in the custom

of the vendetta and in such organizations as the Sicilian Mafia and the Neapolitan Camorra, he faces a régime of crime, and especially of violent and vindictive crime, to which perhaps there is no complete parallel. Probably he is more than commonly familiar with types of peculiar moral insensibility, if not also with physical stigmata.

THE COMING SOCIALISM.

Progressivism—and After. By William English Walling. New York: The Macmillan Co. $1.50.

In his latest book Mr. Walling describes the steps by which the "Progressive movement" will lead to "Socialism," and gives it as his opinion that the journey will be completed in some twenty-five years. It is important to understand precisely what he means by "Socialism." "Socialism," he says, "does not mean that there will be no social groups—or classes, if we call all such groups by that name; it does mean the abolition of all group or class rule. Class rule implies that more or less fixed classes exist *one above the other*, and classes of this fixed character can, must, and will be abolished. The social groups that remain will not be superimposed one above the other. There will be no class rule" (p. 321). In brief, what he means by Socialism is complete political *because* complete economic equality.

At present the author distinguishes four main groups or classes in society, viz., large capitalists, small capitalists, "privileged" non-capitalists, and non-privileged non-capitalists. The rule of the large capitalists has passed away, and under "Progressivism" the small capitalist is coming into power. When he does, a state of society will result which Mr. Walling calls "State Capitalism." In due course power will fall into the hands of the "privileged" non-capitalists, and then we shall have "State Socialism." The last stage of all will come with the overthrow of this rule by the non-privileged non-capitalist class, and then class-rule will cease and Socialism be an accomplished fact. Only two of these three stages, Mr. Walling thinks, are at present fully recognized. The Progressive recognizes the contest between the small capitalist and the large capitalist, and the Socialist recognizes the struggle against the dominance of the small capitalist; but no one seems to recognize the necessity of the last struggle of all—viz., that of the non-privileged wage-earners against the privileged wage-earners, which ends in Socialism, as Mr. Walling understands—and desires—it.

Chapter xvi, describing the transition to "Socialism," is one of the most interesting in the book. It is not difficult to see even at the present day the trend towards "State Socialism," but it is the final stage that presents the main difficulty, and in this chapter the author describes this stage. Under State Socialism the non-privileged workers will be in a permanent minority in a numerical sense. Their efficiency in class-warfare, however, and their power to injure the other class in society, will be much increased, and by a method of scientific "sabotage" and the "intermittent strike" they will be able to compel the final change, especially as the then ruling class will have but little to lose by the change. And so we come to "Socialism."

Pragmatist as Mr. Walling has declared himself to be, he is at the root as much a determinist as was Marx. His formula is in its way as fixed as that which required the Marxian "catastrophe"—which never came. And because of its materialistic rigidity in conception this book is not very convincing. Your true pragmatist can never be "cocksure" in his predictions—but Mr. Walling is amazingly so. Yet he has done a genuine service in his writings in one respect, and that is in making clear the nature of the Socialist movement as it is to-day after abandonment of the Marxian hypothesis. If we understand him rightly, Socialism is nothing but complete democracy—complete because it is economic and *therefore* political as well. All that he holds of the Marxian theory are the doctrines of "economic determinism" and the "class-struggle."

A CAMPAIGN DOCUMENT.

The Mexican People: Their Struggle for Freedom. By L. Gutierrez de Lara and Edgcumb Pinchon. New York: Doubleday, Page & Co. $1.50 net.

As a campaign document this volume is particularly interesting; a calm, judicial history, containing trustworthy data regarding the progress of Mexico during the past one hundred years, this it is not. Commencing with the vigorous, if somewhat exaggerated, statement that "the Mexican people have democratic traditions as grand, pure, and sane as those of any race in the world," it is not surprising to find many other exaggerated half-truths running riot throughout the book. In their desire to deify the downtrodden Mexican peon, the authors have even gone to the ridiculous extremity of stating that "modern archæological and philological research bear emphatic witness to the fact that they [the Mexican peons] are ethnologically as remote from the wild nomads of North America as are the so-called white races themselves." Coming on the first page of the book, this is certainly fair warning of the kind of stuff that is to follow, and prepares the reader to accept, without blinking, the next statement—that the Mexican peons at the time of the Spanish Conquest "were in full enjoyment of a civilization greatly superior in many respects to that of Teutonic Europe, and certainly superior in every respect to that of the Spanish nation which subjugated and enslaved them." To the ardent enthusiast, bent only on achieving the end in view, modern archæological, philological, and historical researches are of little value if they do not furnish abundant proof of desired premises. The horrible features of the bloodthirsty religion of many of the native races of Mexico are brushed aside with a word as being simply the practices of a small and degenerate section of the master class, the priesthood, and as representing that "common barbarity of priestcraft in all ages and climes."

The authors assume that "all that we know of the evil that is Mexican is the product of a small, parasitic, and originally alien section of the nation," and then in the blandest manner they go on to say: "Bearing these simple basic facts in mind, the maze of Mexican history may be threaded with ease." Naturally, having established themselves on a broad basis of misstatement and misconception of historical truths, it is perfectly easy for the authors to "thread with ease" the maze of Mexican history in such a manner as to arrive at the desired results. The actual facts of history have no terrors for these writers.

Nothing can surprise the reader after such a beginning, not even the statement in regard to our first Mexican War that it "was a preconcerted and predetermined affair on the part of the ruling classes of both the nations involved." It may even be a comfort, to some, to be told by these Mexican apologists that our first war with Mexico was due to a Mexican clerical conspiracy, for "only amid the carnage and confusion of a foreign invasion could the church feel at all safe in the prosecution of plans so bitterly distasteful to the great mass of the people." With constant bitterness rankling in their hearts against the ruling classes of both Mexico and the United States, the authors have succeeded in producing a book which can only be read without irritation by those already blinded by strong sympathy for their cause.

On the other hand, great emphasis is laid on the statement that the people of Mexico have little faith in their leaders. They had shouted at one time "Viva Madero!" but these cries became stilled when, "surrounded by the old element of corrupt politicians, conscienceless peculators, brutal military and scheming prelates, Francisco Madero lost every trace of his vaunted democratic ideals and became consciously or unconsciously the mere creature of that same intolerable oppression and exploitation which had provoked the Revolution of

1910." Now, we are told, they no longer fight for a man, but their cry is "Viva la Tierra! Viva la Constitucion!" and "in this clarified attitude of the Mexican people lies the great hope of the present revolution. No man henceforth can ride on their backs into power. They will go forward unwaveringly, irresistibly, until they have established the new social order. They have learned democracy's great lesson: *that the individual cannot assume the functions of the collectivity.*" The keynote of the conclusion is, "International capitalism can no longer throttle the freedom of the Mexican people with impunity." The book is simply a rabid campaign document, absolutely untrustworthy and without historical value.

Notes

IT is appropriate that in the year of the opening of the Panama Canal some slight tribute should be rendered to the memory of the discoverer of the Pacific. Keats, in a celebrated sonnet, credited "stout Cortez" with the achievement; but the world knows better. Quintana's "Vida de Vasco Nuñez de Balboa," edited by Prof. G. G. Brownell (Ginn; 65 cents), has the merit of timeliness. Quintana has narrated the feats of his hero directly and concisely. The selection is admirably adapted for the purposes of a textbook. The romantic achievements of Spain's early navigators and conquistadores will never lose their charm.

DURING the Hilary term of last year, Mr. Edwyn Bevan delivered four lectures in Oxford on "Stoics and Sceptics," and these have now been issued in a slender volume by the Oxford University Press; ($1.50 net), a good and not too technical study of a subject which has been undergoing a good deal of investigation of late. Mr. Bevan does not conceal the fact that, in exposing the illogical dogmatism of the followers of Zeno and the unsatisfying suspense of the Pyrrhonic school, he has in mind to show the world's need of that unreasoning loyalty to the "Friend behind the Universe" which the Greek philosophers failed to meet, and which was to become the faith of the Christian church. But he does not bear hard on this aspect of the question, and his attitude towards the teachers who were transforming the Socratic doctrine into something more malleable for the moulders of Christianity is thoroughly sympathetic. Perhaps the most valuable of the lectures is the third, which deals with Posidonius. Of recent years German scholars, out of the patches of that philosopher's works and the occasional references to him, have been building up a great figure which is to dominate the intellectual world of Cicero's time. Mr. Bevan examines the evidence for such a theory carefully, with the conclusion that Posidonius was no creative genius, but merely an influential representative of the general tendency towards eclecticism then everywhere prevailing. "People," he observes, "got the idea of a sort of common philosophic stuff at the back of the differences, very much, I think, as a large number of people of to-day cling to the idea of something which they call 'undenominational,' 'undogmatic' religion—the idea of some common religious stuff which you may take for granted at the back of all articulate religious beliefs. That observation not only fits well with what we know of the work of Posidonius, but explains also why the philosophers of his kind are now receiving so much serious consideration.

THE "English Literary Miscellany" of Theodore W. Hunt (Oberlin, O.: Bibliotheca Sacra Co.; $1.50 net) presents the gleanings in familiar fields of an orderly but quite unoriginal mind. There is not a fresh judgment to be found in the book, not a gleam of humor or sally of fancy. On the other hand, there is no pretension to anything of the sort; and at a time when we are so hard beset by cleverness and the attempt at cleverness, there is a kind of relief in coming now and then upon a book which is willing to be commonplace. Professor Hunt writes like a professor of another day, before it became the fashion to coruscate *ex cathedra*, to strain at brilliancy for fear of being found academic. His style is, to tell the truth, pretty dull. It never escapes the rigidity and dryness of the opening sentences of the Preface: "The papers herein presented are discussions within the definite province of English letters. They are developed along historical and critical lines, and they seek to relate the study of our vernacular literature with the manifest progress of English thought and life." The old-fashioned method of exegesis is employed—numbered headings, capitalized catch-phrases, and so on. The substance of the book is sound and well-considered. It might be a serviceable introduction to English prose and verse for a student of exceptional seriousness and patience. As for the progress of English thought and life, they are but dimly shadowed forth in these pages, which are bookish or nothing. The development of literary forms and movements is the real theme. The author's detailed comments are often of ingenuous simplicity—as that Keats's sonnet, "On First Looking into Chapman's Homer," is "justly celebrated"; or that "to have written 'In Memoriam' and 'Idyls of the King' is enough to make an author permanently famous." Upon Tennyson is lavished a commentary as ardent and reverent as was the fashion thirty years ago; and it is recognized in the vaguest manner possible that there has been some sort of literature since the Victorian: "Of the Contemporary British Drama, represented in Swinburne, Austin, Jones, Phillips, and others, suffice it to say, that it has merit, but not masterly merit." These papers differ a good deal in length and theme, but they are all the product of the same earnest humdrum mind. They have all been printed in the *Bibliotheca Sacra.*

PRESIDENT THWING has written a well-informed, well-balanced book on "The American College: What It Is, and What It May Become" (Platt & Peck; $2 net). He is so old-fashioned, or so bold, as to think that the primary purpose of the ideal college is still to give a liberal education, a secondary purpose being to make men of efficiency. A glimpse of his temper is afforded by his consideration of the question of compensation for college professors, in which he applies Adam Smith's five principles of compensation, and reaches the conclusion that, on that basis, it is hard to make an argument for larger pay, although it would be an advantage to the college to have the position represent a higher salary. He is equally calm in discussing athletics; concerning football, he offers some constructive criticism. Co-education draws from him the remark: "We do not know enough about the intellect of women or about the intellect of men to say whether on the ground of sex the training should be the same or different." He will commit himself to no more specific proposition than that "thought and appreciation and righteousness, as aims in education, are equally important for men and women." This is clearly no book for the educational fanatic, although he sadly needs it, but others, whether parents, students, professors, trustees, or philanthropists, will enjoy the ripe wisdom in its pages.

THERE is a pathetic entry in the last, the tenth, volume of the Emerson Journals (Houghton Mifflin; $1.75 net), which suggests why it is necessarily inferior to the notable series which it closes. Emerson, in his sixty-fourth year, writes: "I find it a great and fatal difference whether I court the muse, or the muse courts me: That is the ugly disparity between youth and age." The last volume contains entries from 1864-1876—for days and weeks the journals were neglected. The last five years of silence and forgetfulness are hinted at in an editorial note. The decline, as one may infer it from these last journals, had little that was painful in it, was faced with a brave and conscious resignation, and enlivened by intervals of the old lucidity. On the whole, the writing in this last volume is that of a tired old man, but of one infinitely curious and wise. The note on Hawthorne's funeral reveals a keen regret at not having come nearer that solitary spirit. An appreciation of Charles Sumner has much of the old fire. "Sumner's moral instinct and character are so exceptionally pure that he must have perpetual magnetism for honest men." A passing remark on the commonplaceness of greatest genius is true Emerson. "Great men are the universal men, men of the common sense, not provincial; Raffaelle, not a mannerist. Everybody would paint like Raffaelle, if everybody could paint at all." The racier side of the essayist appears in such aphorisms as that reform is chiefly impossible because of the "invincible depravity of the virtuous"; or in the definition of home: "My idea of a home is a house in which each member of the family can, on the instant, kindle a fire in his or her private room." The flair for valuable oddments is perfect still, even though the creative moment seems nearly past. The most curious information may be gleaned by an attentive reader. We may com-

mend to psychical researchers the strange incident of a friend of Lowell's dreaming the substance of a famous line of the Commemoration Ode the night before Lowell first read it. Artists will welcome the anecdote of Turner seriously studying the nutrition of the whale before he painted that most impressionistic canvas, The Whale Ship, now in the Metropolitan Museum. Educators will note an early and apparently successful experiment in student self-government at Antioch College. This volume closes the series worthily. From the ordeal of the revelation of this mass of private jottings Emerson reappears not only undiminished, but substantially enhanced. Gratitude is due the editors for the thoroughness and tact with which their task has been accomplished.

A REPRINT of the volume of Henry Vaughan's "Sacred Poems" which was originally published as one of the Aldine Poets, in 1882, has been issued by G. Bell & Sons (New York: Macmillan; 35 cents net). In accordance with the prevailing mode the book is made of rather thin paper and is light to handle. The memoir by the Rev. H. F. Lyte is retained, which was itself not new when prefixed to the Aldine edition. He had prepared himself for the sketch by a careful examination into the traditions of Vaughan's life (though with scant success in the discovery of fresh facts), and little or nothing has since come to light—unless Miss Louise Imogen Guiney has in her possession material of the sort not yet made public. But of Vaughan's erratic and interesting twin brother, the mystical "Eugenius Philalethes," Mr. Lyte knew, or told, less than might have been expected. This, no doubt, makes a slight defect in his memoir of the poet, but his writing, from the critical point of view, is decidedly thin, and might well have given place to a more adequate study of Vaughan's position as a follower of Herbert. Vaughan is certainly best known for his religious poems, and all of these the new edition contains; but some of his secular pieces, especially his satires, are of excellent quality, and, as their bulk is small, it is not easy to understand why they should have been kept out of this reprint. As it is, for those desiring a cheap volume, Methuen's edition in the Little Library still offers a fuller collection in more attractive form.

"RELIGION and Free Will" (Oxford: Clarendon Press; 7s. 6d.), by W. Benett, consists of nine essays, closely but not clearly connected, the aim of which, it seems, is to establish the principle of *credo quia absurdum*, or, in the author's corrected version, *non credo quia non absurdum; i. e.*, in matters of religion scientific intelligibility is a ground for suspicion rather than belief. According to Mr. Benett, evolution is a process in which every forward step, every higher satisfaction, only initiates a conflict with still higher needs. All that evolution accomplishes is the strengthening and elevation of character. Its value and meaning are transcendental and must be sought beyond science in religion. "Thus it comes that the foremost and most vital interest of religion is to keep itself aloof from science . . . seeing that even the faintest infusion of scientific probability will impair its emotional effectiveness, and a complete rationalization destroy it altogether." Religion is bound to be incomprehensible if it is to elevate character. Precisely in this incomprehensibility, which secures it from controversy, lies the power of religious dogma. This argument is carried so far that the reader is at times obliged to pause and wonder whether he is not being made the victim of a deep and subtle irony. But Mr. Benett is as sincere as he is also intellectually competent and original. His language and logic have a flavor of thirty years back, but he is fairly abreast of the times in his philosophy, and has evidently made a deep study of religion both in Europe and in the East.

"PATIENCE: An Alliterative Version of 'Jonah' by the Poet of 'Pearl'" (Oxford University Press; $1 net), edited by Israel Gollancz, is the first of a series of Select Early English Poems which the editor has planned. He promises us in the near future similar editions of "The Parliament of the Three Ages," "Winner and Wasted," "St. Erkenwald," etc. The present poem is preserved in the British Museum MS. Nero A. x., which contains likewise "Pearl," "Cleanness," and "Sir Gawayn and the Green Knight"—all most probably by the same author. This MS., it seems, came to Sir Robert Cotton from the library of Henry Savile (1568-1617), of Banke, in Yorkshire. It had belonged, no doubt, to one of the northern monasteries at an earlier period, but passed into private hands after the dissolution of those bodies in the reign of Henry VIII. "Patience" was included in the *editio princeps* of the poems of this MS., which was prepared in 1864 by the late Richard Morris for the Early English Text Society, and it was also brought out separately by Hartley Bateson in 1912. Dr. Gollancz, however, had already edited "Pearl" and other poems of the same period and district, and had, besides, of recent years devoted several papers to the vocabulary of the group, so that he possessed qualifications for dealing with this very difficult set of texts which render his edition of the present form the best that has appeared. The glossary, especially, represents a decided advance on that of his predecessors. The notes, too, throw light on some of the worst of the linguistic puzzles. A special feature of the text is that the lines are arranged in quatrains, which seems to have been the intention of the author. In the Preface the editor merely summarizes what is known concerning the various problems that are suggested by the text. He does not discuss these problems at length, as we should expect in a definitive edition. The work includes a reproduction from the MS. of the first page of the poem; also reproductions of the accompanying illustrations, which are in the rudest style of mediæval art. It closes with what appear to be the Latin sources of the poem, viz.: the Vulgate version of "Jonah," the beatitudes from St. Matthew's Gospel, and a part of the "Carmen de Jona et Ninive," which was formerly attributed to Tertullian.

DR. JOSEPH EDWARD STUBBS, president of the University of Nevada, who died on May 27, was born in Ashland, O., on March 19, 1850. He graduated from the Ohio Wesleyan University in 1873, and received an M.A. degree in 1876. In 1875 he graduated from Drew Seminary, and was ordained to the Methodist ministry in 1874. He studied at Berlin University from 1890 to 1891. Dr. Stubbs was president of Baldwin University, Berea, O., from 1886 until 1894, and had since been president of the University of Nevada. He was a delegate to the Ecumenical Conference in London in 1901, and was president of the Ohio Collegiate Association, 1891-2, and of the Association of American Agricultural Colleges and Experiment Stations, 1899-1900.

NOTES FROM ABROAD.

SOME of Mr. Herbert Jenkins's experiences during his first year as a London publisher have been given by him to an interviewer. Within that period he has had 834 manuscripts submitted to him. He admits that some of the books he has declined have reached a second edition after acceptance by other publishers. On the other hand, he has sold 17,000 copies of two novels that had been rejected elsewhere. In his opinion novices may often benefit by advice from their publishers as to the best use of their material. "Young authors are frequently very bad architects, and as often as not tell two or three stories in one book." When he started his business Mr. Jenkins wanted to adopt "Barabbas" as his registered telegraphic address, but the Post Office authorities ruled it out as unsuitable.

ON May 18, a new hall was inaugurated in the Napoleonic museum which has been created in Empress Josephine's château of Malmaison, just outside Paris. It contains collections of interest in history and art and in the local color of a most interesting time. They are due to M. Charles Follot, president of the Chambre Syndicale of wall-paper manufacturers. There are various series of colored wall-papers in the original designs, or as executed under the Directory, Consulate, and Empire. One series of thirty pieces is thought to be the only remaining example of the "Campaigns of the Army of Italy." There are also decorative draperies, printed on velvet backgrounds, between 1800 and 1810; and there is a panel of Psyche, after a composition of the great house decorator of the day, Laffitte. All these are good, and, for the most part, unique original examples of the brilliant years of Josephine's career. It should also be noted that the decorations which have been applied to the various rooms of the château in transforming it into a museum, such as damask wall-hangings, have been carefully copied by modern manufacturers from fragments or designs of the originals used by Josephine.

AMONG other recent notable gifts dating from the time, there is the harp of Queen Hortense, who was not only Josephine's daughter and mother of Em-

peror Napoleon III, but also composed sentimental songs, of which one, at least, has a fame as wide as the world—"Partant pour la Syrie." As usual, where political feeling enters into historical criticism, her authorship, both of words and music, has been successively denied. They both came into the world under her name, and the alternative musical composer is Alvimare, Josephine's harp teacher—so the harp is in its place. It comes from Empress Eugénie, who had it in her husband's inheritance from his mother. In memory of her bereavement, the aged Empress has also bought land to keep an open vista from Malmaison toward Rueil, where the remains of Josephine and Hortense lie in the parish church, beneath sumptuous marble tombs, monuments of the filial piety of Hortense and Eugène, her brother, and of Emperor Napoleon III. To this land, Empress Eugénie wishes to transfer the mausoleum erected by public subscription for her son, the ill-fated Prince Imperial. It is at present placed in a private garden of Paris; and it is probably her pious intention to have his remains transferred hither—and, who knows?—Napoleon the Third's as well—at some time propitious to their memory.

IN the April number of *De Gids*, one of the leading monthlies of Holland, Mr. Th. M. Roest van Limburg publishes some startling facts with regard to the housing problem in Rotterdam. The author's statements carry weight, as they are based on an experience of years acquired as chief of the Rotterdam police. In this most prosperous of Dutch cities, 75 per cent. of the population lives on a yearly income of $400 or less, and of its half a million inhabitants, 30,000 live in single-room dwellings under the most unhygienic conditions. Queen Wilhelmina has lately shown her interest in the housing of the poor by personally visiting some of the most miserable haunts in Amsterdam. Her Majesty's example is bound to give a stimulus to every one concerned in solving this difficult problem.

TRAVELLERS who have left a part of their souls in Granada will be glad to hear that the restoration of the Alhambra, which is going on, is being done with due reserve and discretion. This is altogether to the credit of the Spanish architect, Cendoya. He has begun by unwearied researches in hitherto unexplored archives, so that he might tread only in the footsteps of the original builders. He has discovered that there were three palaces successively occupying the precincts, with mosques of the court and harem. He has also been able to ascertain the plan of the fortifications which shut in the precincts, and the history of their forty towers. In a square hall at the top of the tower of Las Damas he discovered the first portrait paintings by Arabs (Moors) which have yet been found. These have been studied by Dr. Edmond-Vidal, who is sure that they were painted by artists from Africa, and are not Byzantine works. They represent knights armed *cap-à-pie* riding to war or the chase.

The attitude of the persons is that peculiar to Arabs and is easily recognized by any one familiar with the North of Africa. Even the details show the Arabic origin of these paintings: the features, cut of beard, movements, and garments—all belong to the Moors. The domestic animals—hunting hounds, mules, camels—are African. The Arab horse is drawn with an exactness which shows perfect acquaintance. The wild beasts are full of life; and it would be impossible for a painter to represent so faithfully the attitudes of such animals unless he had taken part in a lion or panther hunt.

Dr. Edmond-Vidal hopes to come on other finds of this little-known and long-doubted Arab art in Morocco. There the painters of the Alhambra took refuge when the Moors were expelled from Spain, and it is known that many palaces were decorated by them.

Science

EDUARD SUESS.

A TRIBUTE TO ONE OF THE MOST VERSATILE AND STRIKING OF SCIENTIFIC MEN.

The death of Prof. Eduard Suess, of Vienna, on the 24th of April, removed one of the most versatile and striking of scientific men. For over sixty years his writings have made him known beyond his immediate Viennese circle; his long and busy life brought to him recognition from all quarters of the globe. Few scientific bodies of prominence failed to place his name on the list of honorary or corresponding members.

Professor Suess was born in London in March, 1831, and was the oldest son of a German merchant, an importer of wool from Bohemia. A few years later the growing consignments of this staple from Australia destroyed the Bohemian business and forced the elder Suess to remove to Prague. The parents planned that their son Eduard should enter his father's business, but as the lad approached manhood his fondness for natural science became too strong to be checked, and his career was shaped in accordance with his bent. His first published work was a description of the Carlsbad Springs, prepared when he was nineteen for the use of foreign visitors. By an extraordinary coincidence we find him returning to this theme fifty-two years later, and delivering in his seventy-first year an address, by invitation, to the Gesellschaft deutscher Naturforscher und Aerzte. The society was in convention at Carlsbad at the time and the theme of hot springs ("Ueber heisse Quellen") was selected by Professor Suess. The paper is practically a further study of Carlsbad, with some conclusions regarding the derivation of the waters from deep-seated igneous rocks. It exercised no small influence upon the discussions then very animated in this country about the source of those ground-waters which rise from the depths of the earth. We may rank the contribution as one of the most influential among the many which came from the pen of the gifted author.

In 1851, when twenty years of age, and after student years passed in the Universities of Prague and Vienna, Eduard Suess became assistant in the Imperial Museum at the latter city. Six years later he became Ausserordentlicher Professor in the University. In 1862 he retired altogether from the Museum, and five years later received the full professor's chair. The ten years from 1851 to 1861 were chiefly passed in studies in one form of fossil life and another. Professor Suess's interest in the affairs of his home city was, however, deep and irrepressible. The water supply of the city was bad, and fevers were causes of grave anxiety. The great need of the community led him to prepare and to publish in 1862 a notable volume of 362 pages on the geological foundations of Vienna, their origin, structure, and relations to the life of the citizen ("Boden der Stadt Wien, nach seiner Bildungsweise, Beschaffenheit und Beziehungen zum bürgerlichen Leben"). The monograph led to the conclusion that a supply of pure drinking water from the Alps was necessary. Professor Suess at once sprang into prominence as an available adviser in these matters, and was elected to the Town Council and to the board having in charge the new aqueduct. When in 1873 the water was finally brought from a source over eighty miles away, the services of Professor Suess were recognized by an election as honorary burgess of the city.

In 1866 he entered the Austrian Parliament and for thirty years was one of the strong men of the Liberal party. His skill in expressing his thoughts in epigrammatic phrase gave several brief and terse sentences which became part of the common speech of the day. Parliamentary experience led to interest in the great economic questions then debated. The matter of the gold standard was becoming yearly more important. In consequence Professor Suess prepared in 1877 an essay on "The Future of Gold" which was widely read. In 1892, in the height of the silver agitation, he wrote a second brochure on "The Future of Silver." The conclusions were so much in harmony with the views of a strong faction in the American Congress that, by direction of the Committee on Finance of the United States Senate, the work was translated, printed in the Government Printing Office, and widely circulated. Professor Suess's conclusion, after a review of the mining industry for the precious metals, was summed up in these words (p. 100): "From this it follows, furthermore, that, *assuming that the system of metallic coinage continues to exist* (and I see as yet no prac-

ticable substitute), *silver will become the standard metal of the earth.*" In this anticipation the course of events in the twenty-odd years since the publication of the essay must have left Professor Suess somewhat the possessor of hopes and expectations deferred. One cannot avoid recalling the words of J. D. Whitney, our distinguished countryman and one of the foremost mining geologists of his time, who, in the "Metallic Wealth of the United States" in 1854, wrote as follows (p. 185):

> Silver is in a geological point of view the metal best adapted to a standard of value, since—possessing all the valuable qualities of gold suitable for that purpose—it is not liable to those fluctuations in its production to which gold is exposed. There is no discovery of a new continent to be looked forward to, whose mines will deluge the world with silver, and any increase in the amount of metal produced must come chiefly from the working of mining regions already known, by the application of increased skill, and capital. As it is obtained mostly from mines wrought in the solid rock, any additional development they may acquire must be gradual, while gold from the very nature of its occurrence can never be produced with that steadiness which characterizes the metals wrought chiefly in deep and permanent mines.

Professor Whitney, no less than Professor Suess, could not foresee the gold production of the Transvaal, nor the vast output of silver from our Western lead and copper mines.

The greatest scientific services of Professor Suess were rendered in connection with physiography. With his remarkable work in this department of geology his name will always be most closely associated. As early as 1862 we find evidence in his papers of a growing interest in this special branch. He began by interpreting the strata of the past as a source of light on the geography of later time. In 1863 he advocated the former land connection of Africa with Southern Europe. Subsequent years of study and reading led to the preparation of his truly extraordinary book on "The Face of the Earth" ("Das Antlitz der Erde"). The first volume appeared in 1885, and passed through a second but unaltered edition in 1892. The second volume was issued in 1888. The first part of the third volume reached its readers in 1901 and the second part in 1909. During the last decade of the nineteenth century and the opening decade of the twentieth, geological exploration was very active in Asia and Africa, and brought ever new stores of information to Professor Suess. Happily they all came in time to be included in the closing volume of his *magnum opus*. As one reads the pages of this thorough review of the earth's physical features, one is amazed at the extent of the author's learning and researches. Every language containing geological records seems to have been at his command, and no part of the globe escaped his watchful eye. Every mountain range of to-day is studied from the point of view of its geological history and structure and as the end-product in a long series of events which are recorded in its strata.

Professor Suess became greatly impressed with the arc-like or crescentic outline of the ranges and emphasized this feature as had no previous observer. He also borrowed from the vocabulary of the miner the old-time word "Horst" for a block left in relief by down-dropping faults on each side. Both the terms, arcuate mountain ranges and Horsts, have in consequence become part of the common geological speech to-day. "Das Antlitz der Erde" has taken its place as a comprehensive compendium of the physical features of the earth and as the encyclopædic book of reference to which the physiographer and geologist naturally turn. It has been translated both into French and into English.

Professor Suess married in 1855 the daughter of a prominent physician of Prague—Dr. Strauss. He is survived by five sons and one daughter. An excellent portrait accompanies a sketch by Sir Archibald Geikie, in *Nature*, May 1, 1905.

J. F. Kemp.

Columbia University.

A unique method in bird photography is described by Mr. Guy A. Bailey in *Bird-Lore* for March-April. By means of an electric current he releases the shutter of his camera at such a distance that he is able to obtain pictures of birds absolutely undisturbed by his presence. In a description of the whippoorwill, Mr. T. G. Pearson calls attention to the fact that this is one of the most valuable of birds to the farmer, since it destroys many harmful insects. Pictures are given of the granite monument, unveiled last October, which was set up in Salt Lake City as a thank-offering to the gulls that saved the first settlers from famine. It is the work of a grandson of Brigham Young, and is surrounded by a fountain where birds may quench their thirst. The incident commemorated happened in the summer of 1848, when flocks of gulls made successful war on the grasshoppers that were destroying the crops.

Peter Paul von Mauser, the inventor of the rifle bearing his name, died at Stuttgart, Germany, on May 29, at the age of seventy-six. Von Mauser was born on June 27, 1838, in Obendorf. While serving his time in the army he made a study of the technique of weapons, and in 1867 he went with his brother to Luttich, where, financed by an American named Norris, they perfected the Mauser rifle.

Sir Joseph William Swan, who died in England on May 27, was the inventor of the first incandescent electric lamp, which was produced in 1879, and of various other electrical devices, including a miners' safety lamp and an electric meter. He also invented the carbon process for making permanent photographs, known as Autotype, and discovered the means of making rapid dry plates, which revolutionized the art of photography. Sir Joseph was born on October 1, 1828, and was privately educated. His honorary degree of D.Sc. was from Durham University. He received the Hughes medal for his invention of the incandescent electric lamp in 1904, and was knighted in the same year. In 1905 the Albert Medal of the Society of Arts was awarded him. He was past president of the Society of Chemical Industry, of the Institution of Electrical Engineers, and of the Faraday Society, and was a Chevalier of the Legion of Honor.

Sir Henry Seton-Karr, who perished in the wreck of the Empress of Ireland on May 29, was born in India on February 5, 1853, the son of G. B. Seton-Karr, of the Indian Civil Service and Resident Commissioner at Baroda during the Indian Mutiny. He was educated at Harrow and at Corpus Christi College, Oxford, where, in 1876, he took second-class honors in law. He was called to the bar in 1879. Sir Henry had travelled and shot big game in Western America, British Columbia, and Norway, and was interested in state colonization. He was a member of the Royal Commission on Food Supplies in Time of War. He was formerly a Member of Parliament, representing St. Helen's, Lancashire, from 1885-1906, in the Conservative interest. He was the author of "Call to Arms," 1900-1; "My Sporting Holidays," 1904, and various sporting articles and reviews. He was knighted in 1902.

Dr. Emil Gruening, formerly president of the American Ophthalmological Society and also of the American Otological Society, died in New York on May 30. He was born on October 2, 1842, in Hohensalva, Prussia, came to this country in 1862, and entered the College of Physicians and Surgeons at Columbia University. His course was interrupted by service in the Civil War, but he graduated in 1867. He studied abroad for three years under Virchow and Von Graefe in Berlin, Paris, and Vienna, and began practice in New York city in 1870. Dr. Gruening filled various positions in the hospitals of New York, and at the time of his death was consulting surgeon to the New York Eye and Ear Infirmary, where he had served actively for thirty-five years, to the Mt. Sinai Hospital, the German Hospital, and to the New York Hospital for Women and Children. Dr. Gruening attained distinction in the two highly specialized branches of medicine, ophthalmology and otology. His most lasting achievement was the development of the mastoid operation as it is performed in America to-day. He was also the first to call attention to the danger of blindness from wood-alcohol poisoning. He contributed voluminously to medical journals on the subject of the eye and ear, and in the Encyclopædia of Diseases of the Eye, edited by Norris and Oliver, he wrote the chapter on Injuries to the Eyes.

Drama

CRITICISM BY INSTINCT.

Studies in Stagecraft. By Clayton Hamilton. New York: Henry Holt & Co. $1.50 net.

Mr. Clayton Hamilton is a dramatic critic justly esteemed for information, alertness, coolness, sanity, and the command of a forcible and pointed English. In his latest work, comprising twenty-four essays on topics that combine generality with timeliness, he is ordinarily on the right side—the side of truth and seriousness against artifice and frivolity, of elasticity against rigor in the application of formulæ, of catholicity against exclusiveness, of imaginative suggestion against aggregations of detail. He is liberal enough to tolerate conventions, to admit farce and melodrama to the rights of legitimate drama, and to detect artistic possibilities in the moving-picture show; he even finds room in his text for a humane word on the much-decried commercial manager. He exalts duly, perhaps unduly, the functions of mechanism and management, but even here he endorses simplicity and combines an admiration for Belasco with a preference for Reinhardt. His most obvious bias is a fondness for novelty, an excessive emphasis on those heterodoxies of yesterday which have become the orthodoxies of to-day. Synge and Brieux, in particular, are glorified with a fervor hardly consistent with the ascendency which drama proper, as distinct from poetry or didacticism, should hold in the mind of a dramatic critic. We may add that the author's cool intellectualism gives an effect of partial unreality to the frequent superlatives and avowals of enthusiasm by which the march of the logic is rather checkered than checked.

Mr. Hamilton, like other observers, has been struck and a little perplexed by the extent to which contemporary dramatic successes are associated with the rejection or reversal of established principles. In "The Undramatic Drama," after an admirable exposition of the bankruptcy of all the formulæ from Aristotle to Brunetière, he is disposed to fall back upon Mr. Archer's dictum that "the only really valid definition of the dramatic is: Any representation of imaginary personages which is capable of interesting an average audience assembled in a theatre"—a definition in which the critics intrench themselves behind impregnable defences, but announce at the same time the abandonment of the campaign. In an interesting paper, "The Plays of Yesteryear," the author puts forth a spirited and indignant reply to Mr. William Winter's* disparagement of the current theatre in the interest of the theatre of fifty years ago, and the younger critic has made out his case, if we concede his tacit assumptions that not répertoires, but products, and the best of the products, shall be accepted as the ground of comparison for the two periods. Under the heading, "Organizing an Audience," cordial and apparently merited endorsement is given to the work of the Drama League, though one suspects Mr. Hamilton of a vague idea that there exists somewhere a latent or potential audience, not included in the ninety-odd millions of the latest American census, which can be summoned from the vasty deep by the conjurations of an enterprising society.

Mr. Hamilton sets much store by analysis, but analysis is hardly his strong point. He is both fortunate and unfortunate in the mastery of a logical mechanism and cast of sentence which is equally well fitted to embody the clearness of his thinking or to disguise its obscurity. When he has fixed a thought in one of these logical moulds, his self-criticism ceases; his eye for relations of all kinds is quick, but he lacks the circumspection which converts acuteness into sagacity. For instance, on page 18, he talks about "expressing poetry" and defines poetry as "that solemn, tremulous happiness," etc., thus, in a single paragraph, confounding poetry, first, with the feeling out of which it springs, and, secondly, with the feeling which it awakens. On page 125 the "staggeringly admirable" craftsmanship of Pinero's "Thunderbolt" leads him to infer the necessity of a return to nature, obviously on the theory that naturalness declines as art rises. But this generalization, true of certain phases of art, is not true of art as a whole, and that "The Thunderbolt" is not comprised in those phases is proved by the fact that its superiority in naturalness to a play like "The Profligate" or "The Mind-the-Paint Girl" is as noteworthy as its superiority in art. The illustrations are sometimes partial. To compare the effectiveness of appeals to the ear and eye, he cites (pages 34-35) as representative of the two senses a single line from Alfred Noyes and the Venus of Milo. At this rate, conclusiveness is easy. Mr. Hamilton should retrench or renovate his philosophy; to philosophize for the uncritical is futile; and if, as we gladly concede, he has written a good book in spite of all deductions, it is because his opinions are the outcome of his sound instincts rather than of his fallible analysis.

*A reference to Mr. Winter's text shows that that gentleman is assailing representations while Mr. Hamilton is defending literature.

An English version, by Federico Sardo and Carlos D. S. Wuppermann (Albert & Charles Boni), of Don José Echegaray's "Mariana" (75 cents net), does scant justice to a work of notable imagination and power. It is written grammatically and probably with literal correctness, but the style is cramped and awkward, without fluency or much sense of characterization. It may, however, serve to give English readers some notion of the dramatic abilities of the Spanish dramatist. In its use of highly improbable coincidence and artificial mechanism, the piece doubtless belongs to the category of romantic melodrama rather than true tragedy, but in the ingenuity of its plot, in deftness of construction, in the presentation of varied and well-balanced personalities, and in the intensely emotional climax, it is masterly. The workmanship is comparable with that of some of the cleverest inventions of Sardou. The heroine is a beautiful young woman, rich, brilliant, and passionate, whose natural disposition has been warped by her experience in childhood of the tragic fate of her mother, the victim of a heartless and infamous seducer. Mistrustful of all men, she plays the part of an unscupulous coquette, alternately alluring and repulsing her adorers, until, in spite of herself, she falls in love with Daniel, whom she has tortured most of all. At the moment of surrender to him she discovers that he is the son of her mother's betrayer. In her despair she bestows her hand upon a rival and thus brings about the final tragedy. The two central characters of Mariana and her lover are veracious studies showing a rare gift of psychological analysis. They have a dramatic value altogether independent of the circumstances in which they are placed, and to which they contribute the necessary theatrical thrill. They are developed with consistency, are artistically supplementary to each other, and come logically to the catastrophe in which they are overwhelmed. And in these days of sexual realism it is worth noting how a genulne dramatist, telling a story of passion, can make it theatrically poignant without any approach to cheap vulgarity. Other personages In the cast, the chivalrous but stupid soldier; the purblind and semi-grotesque old archæologist; his fair and frail wife and her *cavaliere servente;* the benevolent Joaquin, and the rest, are conventional types, on the English as on the Spanish stage, but are delineated with a sure and skilful touch, while each is worked adroitly into the general scheme. Their outlines are badly blurred in the present interpretation.

Thanks to the investigations conducted by Dr. Mummenhoff, archivist of Nuremberg, it has now been definitely ascertained that Hans Sachs, the poet and dramatist of the sixteenth century, was born at 23, Brunnengasse. This street used to be known as the Kotgasse. Unfortunately, the original No. 23 was partly demolished in 1874, and made one building with the next house. Hans became proprietor of No. 23 when he married Kunigunda Kreuzerin in 1519, and was still the owner in 1542, when he

bought the well-known house in the present Hans Sachsgasse.

Laurence Sydney Brodribb Irving, the actor and manager, who went down with his wife in the disaster to the Empress of Ireland on May 29, was the second son of the late Sir Henry Irving and Florence Fanny O'Callaghan. He was educated at Marlborough College, and at the Collège Rollin, in Paris. Originally intending to enter the diplomatic service, he was drawn towards the stage, and in 1893 made his first appearance at Dundee in F. R. Benson's Shakespearean company. After some experience in the provinces he joined his father, for whom he wrote "Peter the Great," a play of considerable merit, although unsuccessful. He was the translator of "Robespierre" which was written for Sir Henry by Sardou, and himself played Taillen. He continued to play various rôles in his father's company until he entered into management for himself, acting in England in "Bonnie Dundee" and "Richard Lovelace," and later in "Raffles." He had made great advancement as an actor, proving himself an eccentric comedian of fine finish, when he and his wife (Mabel Hackney) appeared in New York in 1909-10 in "The Incubus" ("Les Hannetons") and "The Three Daughters of M. Dupont." Recently he was the Iago in Sir Herbert Tree's revival of "Othello."

Music

A book by Caruso entitled "Wie man singen soll" ("How to Sing") is to appear soon in Germany.

Some years ago, when Mark Twain gave a dinner to caricaturists, Caruso was greatly disappointed at not being invited. "Perhaps," he said, "he knows me only as a singer!" To his artistic colleagues he is almost as well known as a caricaturist as he is as the leading tenor of the time. A day hardly passes when he does not sketch somebody. The Italian periodical *La Follia* prints many of these caricatures, and a revised collection is now offered in book form by the publishers of that journal. What strikes one as peculiar is that he hardly ever succeeds with women. The pictures of Geraldine Farrar, Lucrezia Bori, and some others are simply hideous, without even a faint resemblance as a redeeming feature. Far better are his caricatures of men; some of them, indeed, are worthy of the greatest artists. Humperdinck, Leoncavallo, Massenet, Mahler, Gatti-Casazza, Alfonso XIII, are among these. His pictures of himself are among the funniest. Excellent also are the drawings of Toscanini. Polacco, and Hertz, whose gradual evolution from a heart is particularly ludicrous.

"Who's Who in Music and Drama" (New York: H. P. Hanaford) is a volume of 555 pages, edited by Dixie Hines and Harry Prescott Hanaford, which gives not only elaborate data regarding the careers of prominent artists of the dramatic and the musical stage, but contains also the casts of first performances in several cities and other useful features.

Scherer and Dirks's "Deutsche Lieder" is a collection of German songs made by the supervisor of German in the public schools of Indianapolis (New York: American Book Company; 25 cents). The best German poets are represented. Some of the songs are for one volce, with piano accompaniment; others are provided with three or four-part music.

"Petit Recueil de Chants Français" is a collection of forty-eight French songs for use in schools and homes, made by H. Carter and G. Dyson (Oxford University Press). Attention is called in the preface to the fact that, while France has produced fewer songs for high-school pupils, it has been fertile in songs for the younger children. Many of them are printed in Wekerlin's three volumes, entitled "Echos du Temps passé"; the editors have borrowed some of these, substituting other poems for those that were of an amorous nature. All these songs are very simple, both in melody and in harmony, and in character and style they are delightfully Gallic.

The latest addition to the Musiclans' Library of the Oliver Ditson Company is an "Anthology of German Piano Music" ($1.50), selected and edited by Moritz Moszkowsky. It begins with Froberger (who died in 1667), and ends with Beethoven. Other composers included are: Pachelbel, Kuhnau, Mattheson, Moffat, Handel, Graun, three Bachs, Krebs, Kirnberger, Haydn, Hässler, and Mozart. Most of these composers are now forgotten, but Moszkowsky has succeeeded in rescuing pieces of theirs which are decidedly worth hearing. The editor's pithy comments on these composers are printed in the original, as well as in a translation, by F. C. Burkart.

The Dresden baritone, Scheidermantel, has received the prize of 10,000 marks offered by the German Stage Association for the best new translation, into German, of Mozart's "Don Giovanni." There were sixty-seven competitors. The great esteem in which this masterwork (neglected in New York) is held in Germany is shown by the great importance attached to this competition. Among the judges were such eminent men as Leopold Schmidt, Otto Neitzel, Schillings, Krebs, and Fuchs.

Mr. Thomas Beecham has prepared a revised version of "The Magic Flute" for the opening of the opera season at Drury Lane this summer. He has not touched the music, but he has compressed and somewhat altered the various scenes, so as to speed the action up somewhat. Further, he is abolishing the usual spoken dialogue, and is substituting some specially written recitatives, in the Mozartian style, to be accompanied by a small band of nine stringed instruments and a harpsichord. In Mr. Beecham's opinion, the conventional condemnation of this opera, on the ground that its libretto is absurd, is in itself absurd. He cannot understand why some people persist in regarding opera as a species of real life upon the stage. The realists who introduce into an opera such phrases as "Have a whiskey and soda" are doing something that is more ridiculous than the "Magic Flute" libretto.

Art

THE ROYAL ACADEMY.

LONDON, May 4, 1914.

The Academy is always the Academy. Yet perhaps, if anything, there is less to arrest the attention this year than usual; but, on the other hand, as usual, little arrests it so successfully as the work of Sargent.

A portrait of Henry James would be an event in any case. Sargent gives it the vitality and vigor so in contrast to the inanimate, wooden Academic portraits surrounding it that you would stop to look at it, even if you did not know who was the sitter. It is small, a half-length, with no special distinction of pose or design, but an admirable likeness, full of character in the shape of the head, the subtlety of the mouth, in the familiar attitude, one hand stuck in the armhole of the waistcoat, in the waistcoat itself; and then it gives the sense of life and power in the painter to which Sargent owes his too easy triumph in a lifeless exhibition. He scores with so slight a struggle that I never go to the Academy without wishing he could be tesfed by comparison with the masters, as he would be were his Henry James of this year placed by the side, for instance, of that beautiful head of the old Philip at the National Gallery. At the Academy he has no masters, and but one or two rivals. Few other portraits have any serious claim to consideration. He himself sends a second, for the moment breaking through his resolve to have done with portraiture. But in his Lady Rocksavage, also a small half-length, he suggests more interest in reviving the old Lely formula than in studying the character of his sitter, with the result that he gives a charm, a grace, not heretofore associated with his work, and little besides.

After him the honors fall, curiously enough, to G. A. Storey, an Associate of many years' standing, who has seen a long succession of his contemporaries recognized by election to full membership, while he was passed by. He has been content during all these years to exhibit rather colorless paintings nobody remembers, and then suddenly, last spring and this, he resurrected masterly little portraits, presumably done in his youth, that either were not shown or not understood at the time. One, this spring, is A Young Painter said to be himself; the other is Edward Cressy, Architect and Savant, of whom the present generation, I fancy, now first hears, and in both, though the manner is a tribute to the Old Masters. the beauty is in the expression of a distinct and arresting personality, in the careful and sensitive modelling, in

the appreciation for the right placing of head or figure on the canvas.

The expression of personality, but in the painter rather than in her sitters, makes Mrs. Swynnerton's David and Jonathan, Sons of H. Fenwick, Esq., stand out with undeniable force. The two small boys, in their childish white, have wandered along a straight path to the immediate foreground of a brilliant sun-drenched garden. Flowers and foliage have something of that metallic quality which Mrs. Swynnerton finds everywhere in Nature, in the faces and little bare legs of the children as well as in the flowers; the children themselves are merely subordinate details in the whole design; but she sees so frankly for herself and has evolved a way so frankly her own of putting down what she sees that she forces respect even when the violence of her vision may be deplored. It is extraordinary how the honesty with which she works out her scheme and the unity she achieves in working it out, strike one in a room where far more conspicuous places have been assigned to Mrs. Laura Knight's March Many-Weathers and John Lavery's The Studio of the Painter. The group of Mrs. Knight's canvas, a man on a horse with a child seated in front of him and the storm-agitated sky, fairly jump at you from the frame as if their ultimate object were to compete with the familiar big machines of a Paris Salon, and whatever merits of workmanship there may be are overwhelmed by the brutality of the technique. Lavery pits himself against Velasquez on too huge a scale to remain unnoticed. It is a dangerous game to play, and he cannot be said to come off with flags flying. As in Las Meninas, there is the group of figures in the Studio, there are the reflections in the mirror, there is the painter at work, there is the wide space above in the lofty room. But Velasquez filled this space in his room with atmosphere and made it an essential part of his composition; in his Studio Lavery leaves it a vast expanse of canvas and is unable to conceal the difficulty he found in daubing it over with paint. Each figure in Velasquez's group is as perfect as the group itself. But perhaps the comparison is unfair, too cruel, and no doubt Lavery is reserving his best things for his own show next month.

In point of size Herkomer's Managers and Directors of the Firm of Krupp in Essen goes still further than Lavery's Studio. But the wilderness of canvas is no better than a coarse bit of scene-painting, the figures posing as if for the camera, in spite of a desperate determination to represent each one as doing something. Herkomer might have found out from Rembrandt and Hals that men and women may live on the painter's canvas when they sit or stand there doing nothing. However, if Herkomer never fulfilled the promise held out by some of his early work, like The Chelsea Pensioners, if his portraits again this year are without refinement, or grasp of character, or sensitiveness to the beauty of paint and the dignity of design, still with him the Academy loses one of its few members who had the courage of experiment and fearlessness in tackling a large canvas.

There is the inevitable annual crop of wooden royalties, judges and statesmen in their robes, well-known men and women of the day, but nothing else of note. Sir James Guthrie paints with official restraint an official portrait of the Principal and Vice-Chancellor of the University of Edinburgh, but he himself has surpassed it often when less weighed upon by the splendors and insignia of office. Mr. J. J. Shannon's recent sitters have not succeeded in interesting him or providing for him the chance he made such fine use of in his Phil May. C. H. Shannon, when Miss Miriam Levy posed for him, was much more engrossed in her Embroidered Shawl, which he has the honesty to give as title to the portrait. To look at Orpen's portraits is to suspect him of a cheerful willingness to rest on his laurels now that he has discovered, as most Associates and Academicians discover sooner or later in their career, that, an Academicial reputation once secured, the artist has but to keep to the broad and easy road to success for the remainder of his life. With a trifle more subtlety Clausen might have captured the character which he seems to have divined in Thomas Oakey, Esq., and then promptly lost in over-insisting upon it, and this is as true of Gerald Kelly in his study of Lady Gregory, for he emphasizes her strongly marked features almost to the verge of caricature. George Henry prefers to sacrifice character to prettiness and veers more and more to the Christmas supplement and the fashion-plate, a tendency to be regretted in so able a painter. And for the rest, Academicians like Dicksee and Fildes, Ouless and Solomon repeat the performances, each in his Academic way, which have rewarded them with a lifetime of popularity and prosperity. Where the public has grown accustomed to looking for them, there will their portraits be found.

There also, where the public has long been trained to look, the Academic subject picture dear to the Academic heart will not be searched for in vain. Some of the most popular painters of the Academical anecdote have gone forever with Leighton and Tadema, some show signs of weariness with Marcus Stone, who sends merely a study for another version of his young-ladyish sentimental problem in costume. But the president, Sir E. J. Poynter, is faithful, bringing his old treatment of laborious minuteness to his new subject, The Sea-Bath; and Academicians and Associates of the younger generation have quickly learned which way success lies. Indeed, the administrators of the Chantrey Fund could leave them no possibility of doubt in the matter. These administrators have been criticised during a long succession of springs, Royal Commissions have sat upon them, inquiries have been instituted. But they pay no heed, cheerfully going on their way undismayed, knowing what they want and getting it, whether or no it is what lovers of art want and what Chantrey left his money for. As they have bought Leightons and Herkomers, Dicksees and Vicat Coles for large sums in the past, so this spring they have lavished fifteen hundred pounds on a manufactured anecdote by Cadogan Cowper, who, young Associate as he still is, already is represented in the collection at the Tate Gallery.

Lucretia Borgia Reigns in the Vatican in the Absence of the Pope Alexander VI is the theme he has chosen as a peg on which to hang an infinity of detail and an orgy of crude scarlet paint. The Pinturicchio ceiling in the Vatican chamber is copied with a patience that has nothing to do with art; the cardinals and priests are rendered with an elaboration that is apt to be called Pre-Raphaelitic, though it has nothing to do with Pre-Raphaelitism, having none of the genuineness, the seriousness, the fervor that makes itself felt in the most immature achievements of the Brotherhood; symbols are scattered about, or I suppose they are symbols; mechanical gestures are relied upon for the dramatic effect; from beginning to end there is no study of Nature, no real observation—but, for that matter, after seeing the artist's portrait of a sportsman in the same show, I should question whether he has ever yet managed to open his eyes in the face of Nature or men and women as they exist in life and not in the painted anecdote. The Lucretia is the sort of picture that always seems built up for exhibition centres and Chantrey collections, and that, even if it has driven hundreds to the excesses of Cubism and Futurism and other foolish isms, continues to set the standard for the Royal Academy.

A much smaller sum of Chantrey money has been invested in Maurice Greiffenhagen's Women by a Lake; the three figures, with their draperies falling in simple massive folds, set against the blue sky of night that falls like a screen behind them. The design is a little artificial in its romanticism, a little empty; the color scheme is rather arbitrary. But the lines and spacing have a rhythmical feeling; Greiffenhagen is an artist who has done good work—better work which the Chantrey

trustees naturally disdained—and his Jewel certainly is the best thing of the kind in the Academy. To be sure, it is almost the only thing of the kind. I can name nothing else with it except perhaps Anning Bell's large Marriage at Cana, but this is so based on the old Italian painters that one sees in it chiefly an intelligent and sympathetic echo. Near it hangs a dark and purposeless Winter by C. H. Shannon, in which the design is as hard to find as the meaning. Edward Stott's subjects have gradually been leading him from the laborers he once painted in the English country he knew to the land of Biblical legend, where he must rely upon his own invention or the invention of others. The charm of his paintings was in their truth to Nature, the figures introduced in his landscape to give value to the gathering darkness at the close of day, to the mystery of the moon and starlit night. But when he began to borrow them from the Bible, he began also to subordinate his landscape to them, to insist upon the legend, until this year his Motherhood is not only such a group of a woman and her children as Raphael painted, but has all the sentiment and sugary sweetness of Raphael's made-to-order Madonnas. Charles Sims is losing himself almost as hopelessly in the maze of allegory, for which his art has scarcely the elegance, the distinction, which alone could justify it. William Strang, in his group of Card-Players, continues to dally with Post-Impressionism, which, but for him and one other exhibitor, would show no trace of its influence at the Academy. This other exception is, unexpectedly, Clausen, but as yet, to judge from the nude he calls Primavera, it has led him merely to simplification, not stridency, of tone and color. Many subjects besides these will claim admirers, but they are not worth even the easy task of exposing their triviality.

The landscapes arouse no greater enthusiasm. Here again Sargent towers by the sheer force of his impression and the vivacity with which he records it. He does not risk losing it by closer and more intimate study, nor improve upon it by deliberate arrangement. He gives what might be called the painter's snap-shot. It is amazingly clever, amazingly true. You feel the sun burning the hillside below his Cypresses and Pines, you blink in the strong light, and you feel also—in this and his two smaller sketches—the enjoyment of the painter in his power to express himself and his subject with each touch of his brush. Adrian Stokes is another landscape painter who, it is clear, enjoys himself while he is painting, but in a very different way. His is the close and intimate study of Nature. You see how faithfully he has followed the subtler effects of light on the sand-hills, the value of reeds and herons in the Marshes near the Sea, how tenderly he has noted the delicate gradations of color in the sky and on the dunes. His paintings are quiet, unobtrusive, but few others in the Academy convey such a sense of the painter's pleasure in his work and in his emotions before Nature. Clausen's large In the Fields in June explains the problem he set himself—the impressive beauty of a great level stretch of land under a great sweep of cloud-laden sky, and the dignity of the tiller of the soil. But he gets no further than the explanation. Level and sky are empty, and the figures have no relation to them. Mr. Mark Fisher's landscapes always have quality and dignity; they are always well composed; they never betray one's confidence in him as an accomplished painter. It must be confessed, however, that they tend to monotony, so that to describe them would be to repeat the description of former years. But what a relief it is to turn to them from the landscapes of the average painter, whose canvases reveal nothing save his own discretion in cultivating the monotony of mediocrity upon which the Academy has once passed approval.

Of the water-colors and the black-and-whites there is not much to say, except that the Academy, with an unwonted disregard of tradition, has removed them from their old sad quarters to two more spacious galleries, Nos. X and XI. Exhibitors will probably be alone in seeing an improvement in a departure which means a gain in quantity, not quality. The sculpture barely rises above the same depressing level. The absence of Alfred Gilbert is the more regretted as the years go on. Nor does the presence of Havard Thomas offer sufficient amends. The rejection of his Narcissus by the Academy was the year's scandal a few springs since; its acceptance now of his Thyrsis, a bronze, will create less talk. One can see in it but a careful study of a naked model. A bust of A. G. Ross, Esq., by John Tweed, has a rugged character; a bust of Lamia by Alfred J. Oakley and a tall, simple figure of Silence by W. Reid Dick are promising as the work of younger men. Americans will be interested to see Derwent Wood's Sketch Model for the William Pitt statue for the Capitol, Washington, simply because it is to go to Washington, while the same reason will make them wish it had more inherent dignity than the wig and costume of the period can give. In the architectural room one hesitates, as always, to pronounce an opinion, so overcrowded are the walls, so technically dry are most of the drawings, so dull the general effect. If John Russell Pope's Design for a Memorial to Lincoln in Washington, "Authorized by U. S. Congress," was exhibited at all, surely it deserved a more honored place than a corner on the walls of the vestibule, where nobody ever looks for anything except the time on the clock over the central door.

As I finish writing I hear the news of the attack upon Sargent's portrait of Henry James by a woman whose excuse is her desire for the vote. It makes one think of Whistler's saying that even the fool may do harm. Her action has deprived the Academy of its chief interest and the National Portrait Gallery of a portrait which the friends and admirers of Henry James had taken pride and pleasure in presenting to it.

Finance

"PSYCHOLOGY" AND PROSPERITY.

President Wilson laid stress, in his answer last week to the Western manufacturers' delegation, on the theory that the present halt or depression in trade is psychological in its origin. He was not alone in that diagnosis of it; some of the most experienced financiers and manufacturers, especially in their private conversation, have described it in exactly the same way. But the explanation is rather unsatisfactory, for the several reasons that it is vague, that it leads nowhere very definitely, and that it may be made a pretext (as was the case in the famous "Sunshine movement" of 1908) for declaring obstinately that conditions do not exist which every one knows are in visible operation.

"Psychology" has beyond any doubt a powerful influence in emphasizing tendencies, already operative for other reasons. Force of example is unquestionably contagious. In panic times, a great many people economize who do not need in the least to do so—precisely as, in "boom times," a good part of the community lives beyond its means, because of the general atmosphere of prosperity. The man who is perpetually feeling his own pulse and taking his own temperature may be really in good health, but he will sometimes develop the symptoms of disease by merely looking for them. It is not wholly different with "business."

But in any case, some actual economic influence, in the community at large, is always back of these imaginary movements. The psychological influence may merely have put a more striking color on the situation; or it may have prolonged that situation, after the legitimate cause for it is past; but either supposition assumes that a real cause is or has been in operation. The question at present is, In which of these two ways is the mental influence operating? If it is merely emphasizing real conditions,

then the problem remains, as to what is causing those conditions. If it is artificially prolonging a situation whose actual cause has ceased to operate, then forces are accumulating which must greatly accelerate the movement of recovery, when the truth of the matter is visible to every one.

On Tuesday of last week, in the New York Stock Exchange, only 76,232 shares of stock changed hands. That suggested interesting comparisons. It was barely one-fourth of the average full day's trading, even in recent years. It was low record for 1914 to date, and the smallest since the 57,600-share day on the 24th of last November, when the showing attracted wide attention. But what is still more in point, it was, with four exceptions, the smallest business of any five-hour day in eighteen years.

Nor was it an isolated case. The total Stock Exchange transactions of last month were the smallest of any May since 1897. The same was true of last February; and, in fact, to find a smaller twelve months' total than that of 1913 as a whole, one would have to go back upon the record to the same year 1897—a year when the great financial and industrial "boom" of the decade past had not yet begun. This is a rather extraordinary series of comparisons. It naturally suggests the inquiry, whether, now that the epoch-making financial and industrial boom that followed that interesting year is over, we have permanently relapsed, on the Stock Exchange and elsewhere, into the era of small things which existed seventeen years ago.

That question may be promptly answered in the negative. To take only three typical bases on which to measure the difference between the periods, we shall find that, although the sales of shares on the Stock Exchange last year were the smallest since 1897, the country's clearing house exchanges in 1913 were $169,500,000,000, as against $57,400,000,000 in 1897; its iron production 30,966,000 tons, as against 9,652,000, and its population 98,700,000, as against 72,600,000. Comparison of bank deposits, production of manufactures, and total estimated wealth would show an equal or greater expansion during the intervening period, and those are the economic factors which, under normal circumstances, regulate the legitimate volume of both investment and speculation in Stock Exchange securities.

How are we, then, to explain this remarkable shrinkage in business on the Stock Exchange? One explanation is, that a great part of the huge transactions on the Stock Exchange, in the decade after 1897, was in reality fictitious business. It largely represented sales and purchases made simultaneously by the same customers; and, aside from that, an excessively rapid succession of purchases and sales, made in great blocks by speculators who were following a violently manipulated market. That class of business has certainly disappeared from the market of the past two years; a very substantial part of it will never return, for the reason that it has fallen distinctly and rightly under the ban, both of the Stock Exchange authorities and of the statute law.

This would account for a substantial shrinkage from the activities of 1901 or 1906, for instance, but not for a fall to the small totals of 1897. It is supplemented, therefore, by two other familiar explanations. One is, that the decade of enormously heavy dealing in stocks was a period of rapid and perpetual change of intrinsic values, due to a dozen different causes, and that both speculative and investment buying naturally followed it; whereas intrinsic values now are not changing with any such rapidity. The other is, that both investors and speculators are perplexed and uncertain about numerous phenomena of the day. They believe general economic conditions in this country to be too sound to justify selling of such securities as they hold, but cannot see far enough and clearly enough ahead to persuade themselves to buy more.

There remains another influence to consider—international in its scope—which the progress of time will eventually remove. We had our great economic boom; it culminated in the economic crisis; then came the long and trying era of liquidation and rehabilitation. In this country, that period has already been prolonged beyond the usual scope of the aftermath of great financial panics. The one reason clearly in evidence for that prolongation has been the economic distress and the absolute tie-up of capital, on all the world's markets outside of the United States, due to their own extravagant experiments with capital, which came later than our own. Perhaps that liquidation also must be ended, before we can be sure that our own Stock Exchange activities, and with them the play of business confidence and credit, are again under wholly normal influences.

Judicial Interpretation of Political Theory

A Study in the Relation of the Courts to the American Party System

By William Bennett Bizzell, A.M., D.C.L.

12mo. $1.50

In this work the relationship of the courts to the American party system is fully traced. A survey is given of the issues that have divided parties, of the shaping of theory into legislation, and of the judgments of the courts as to the constitutionality of the measures adopted.

The book is of particular interest in reaffirming, at a time when the title of the courts to render final decision is being called into question, the position which the courts have held in the Nation's history.

THE ONLY AUTHORITATIVE WORK ON ICELAND IN PRINT

ICELAND

By W. S. C. RUSSELL

This volume embodies the results of four summers of labor and observation in Iceland In 1911 the author was the geologist of the Matador party of scientists to Jan Mayen, in 1913 he led an expedition to the summit of Mt. Askja, the largest volcano in Iceland, then crossed north of Hoffs Jökull, where man had never been, and reached the south coast, going down between the glaciers. With note-book and camera in hand, the author has made an exhaustive study of the country and its people, their customs and traditions as well as their rich literature.

He has lived with the people under all conditions. The story is a simple, straightforward narrative of four years of unaccustomed travel coupled with delightful descriptions of the country in word-pictures that are realistic and force the reader to long for a visit to this same Arctic land. With the author you will cross the smoking mountains, ascend the greatest of living volcanoes, ford the glacial torrents, skirt the age-old glaciers, descend into the bowels of the lava fields, thread the rock-strewn desert, wind-swept, dreary, lifeless, and pass your evenings in the homes of the kindly farmers whose customs are a thousand years unchanged.

Fully illustrated by photographs and a map. $2.00 net. $2.15 postpaid.

RICHARD G. BADGER, Publisher, BOSTON

ECONOMIC PRIZES

ELEVENTH YEAR

In order to arouse an interest in the study of topics relating to commerce and industry, and to stimulate those who have a college training to consider the problems of a business career, a committee composed of

Professor J. Laurence Laughlin, University of Chicago, Chairman
Professor J. B. Clark, Columbia University
Professor Henry C. Adams, University of Michigan
Horace White, Esq., New York City, and
Professor Edwin F. Gay, Harvard University

has been enabled, through the generosity of Messrs. Hart, Schaffner & Marx, of Chicago, to offer in 1915 four prizes for the best studies in the economic field.

In addition to the subjects printed below, a list of available subjects proposed in past years may be had on request. Attention is expressly called to the rule that a competitor is not confined to topics proposed in the announcements of this committee, but any other subject chosen must first be approved by it.

1. A Local Study of the Immigration Problem.
2. A Study of the Protocol in the Needle-Trade Industry.
3. The Economic Validity of the Single Tax.
4. Price Maintenance.
5. Reciprocity and Retaliation in Foreign Trade.
6. Ship Subsidies by Indirection.
7. The Development of Trade with Latin America.

Class B includes only those who, at the time the papers are sent in, are undergraduates of any American college. Class A includes any other Americans without restriction; the possession of a degree is not required of any contestant in this class, nor is any age limit set.

A First Prize of One Thousand Dollars, and A Second Prize of Five Hundred Dollars

are offered to contestants in Class A.

A First Prize of Three Hundred Dollars, and A Second Prize of Two Hundred Dollars

are offered to contestants in Class B. The committee reserves to itself the right to award the two prizes of $1,000 and $500 of Class A to undergraduates in Class B, if the merits of the papers demand it. The committee also reserves the privilege of dividing the prizes offered, if justice can be best obtained thereby. The winner of a prize shall not receive the amount designated until he has prepared his manuscript for the printer to the satisfaction of the committee.

The ownership of the copyright of successful studies will vest in the donors, and it is expected that, without precluding the use of these papers as theses for higher degrees, they will cause them to be issued in some permanent form.

Competitors are advised that the studies should be thorough, expressed in good English, and although not limited as to length, they should not be needlessly expanded. They should be inscribed with an assumed name, the class in which they are presented, and accompanied by a sealed envelope giving the real name and address of the competitor. No paper is eligible which shall have been printed or published in a form to disclose the identity of the author before the award shall have been made. If the competitor is in CLASS B, the sealed envelope should contain the name of the institution in which he is studying. The papers should be sent on or before June 1, 1915, to

Secretary of Yale University

Two volumes. Royal Quarto. Library Edition, cloth binding, gilt top. Index. Boxed. Per set, **$10.00** *net.* Carriage extra.

Limited edition, on English handmade paper, with reproductions of rare early prints of Yale College. Facsimiles of signatures. Per set, **$25.00** *net.* Carriage extra.

These two large volumes recount the biographies of those seventy-nine Yale men who have rendered, in the judgment of the author, the most important contribution to American life. The selection embraces the biographies of such men as Jonathan Edwards, Nathan Hale, John C. Calhoun, Eli Whitney, James Kent, Samuel F. B. Morse, Noah Webster, James Dwight Dana, William M. Evarts, Fenimore Cooper, Theodore Dwight Woolsey, and William G. Sumner.

The author emphasizes the story of the lives of these men with special reference to the factors of influence upon them as undergraduates.

The records of the Yale Corporation, of the Faculty, of the Linonia and Brothers Debating Societies, and of many old-time student organizations, as well as diaries, letters, biographies, and histories, have been searched for the material employed. The books form a unique contribution to a little-worked field—the influence of our historic universities on the men who have moulded the thought and life of the nation.

Autograph letters of all the graduates memorialized have been printed from the originals in the author's collection, and the volumes are enriched by handsome photogravures.

Life and Letters of Nathan Smith, M.S., M.D.

By Emily A. Smith, with an Introduction by Dr. William A. Welch.

Few men have done more for education and for medicine than did Nathan Smith, Professor and Surgeon, 1762-1829. An eminent doctor perhaps best known as the founder of the medical schools at Dartmouth, Yale, and Bowdoin.

This account of his life was written at the suggestion of Sir William Osler.

Crown 8vo. Quarter Leather. Gilt top. 179 pages. 25 illustrations. Price, $2.25 net, delivered.

The Mental Health of the School Child

By J. E. Wallace Wallin, Ph.D. Director of Psycho - Educational Clinic, School of Education, University of Pittsburgh.

Employing original statistical and experimental data—much of which is nowhere else available—the author presents scientific facts in regard to the mental health of school children in a form which is entirely comprehensible and practical.

8vo. Cloth binding. 450 pages. Diagrams, Charts, Index. Price, $2.00 net, delivered.

Our Many-Sided Navy

By Robert W. Neeser, Author of "A Landsman's Log."

Developing even a far less interesting theme, Mr. Neeser's vivacious style and genuine enthusiasm would make a readable book. But with all the unsung powers of our Navy as a theme, he need fear no inattention from either naval or civil readers.

8vo. Cloth binding. 215 pages. End papers in color. 40 illustrations. 42 pages of appendix. Price, $2.50 net, delivered.

The Department of State of the United States

Its History aud Functions

By Gaillard Hunt, Ph.D., LL.D.

An illuminating book, done in the style of a man who is bent upon stating historic truth without himself making much comment. The work is unique, the first and only history of a department to be written by an expert.

8vo. Cloth binding. 448 pages. Price, $2.25 net, delivered.

PUBLISHED JUNE 12.
VITRUVIUS: THE TEN BOOKS ON ARCHITECTURE

Translated by the late MORRIS H. MORGAN, Ph.D., LL.D., Professor of Classical Philology in Harvard University. Prepared for publication by A. A. HOWARD, Pope Professor of Latin, and H. L. WARREN, Robinson Professor of Architecture in Harvard University. 8vo. *Cloth.* 319 *pages.* $3.50. *With numerous plans and illustrations.*

The treatise which has probably exercised more influence on the history of architecture than any other. Vitruvius not only furnishes us the most important literary medium through which the principles of Greek and Roman architecture have come down to us, but was the textbook of the Italian Renaissance.

GERMAN ROMANTICISM
(1766-1866)
By **Alice Wilson Porterfield,** Barnard College, Columbia University.

A comprehensive handbook, containing in readily accessible form much pertinent information in regard to the German Romantic movement. In addition to a general discussion of the growth and development of the movement and a treatise on the economic background, there are twenty sections on the various phases of Romanticism, including its relation to contemporaneous music, painting, and philosophy.

Each section contains an explanatory introduction and biographical sketches of the various writers, followed by carefully selected bibliographies and reading lists of their chief works in chronological order. Where there is anything peculiarly significant about a work, creative or critical, this is always pointed out.

The book will prove invaluable to advanced students in German and to teachers.

***and* COTTAGES**
Write Aubrey Brown, for illustrated booklet.

¶ If somebody offered you four big books for five cents, and they were full of interesting stories, humorous and philosophical sayings, useful facts, and plenty of pictures, you would think you had a bargain.

The New York Evening Post offers you precisely that every Saturday. Its four sections contain not only the day's news, but a valuable summing up of the week's events.

¶ **The Photographers** who make the pictures for the **New York Evening Post Saturday Magazine** go everywhere and see things that no one individual possibly could. There are from 50 to 60 fine half-tones and other engravings in every issue, covering public life, society, sports, the theatre, the fashions and every other field.

The Magazine is prepared solely for the New York Evening Post readers and is not the ordinary syndicated affair.

Of the many regular features in the other sections, here are a sample half dozen:

MUSIC: Henry T. Finck writes a column that keeps the Saturday reader in touch with the concerts, and contains timely anecdotes, news bits, and editorial utterances about musicians. His reports of concerts and operas are interesting even to the persons who don't know a semiquaver from a harpsichord.

THE STAGE: J. Ranken Towse, veteran among the dramatic critics of New York, tells about the new things in the theatrical world and gives his estimate of plays and events in the dramatic world.

WOMEN AND FEMINISM Some one has said, apropos of *The Evening Post's* head "What Women Are Doing," that, if it knows that, it knows more than Socrates, Napoleon, and Abraham Lincoln. Possibly those three didn't know—feminism is pretty new—but anyone would certainly admit getting a fairly good inkling who reads the very full accounts of suffrage doings, fashions, shopping, sociological movements, and no-mere-man-knows-what-not, written by Clara Savage, Louise Townsend Nicholl, Jeanne Stevens, and other specialists.

FINANCE An entire Supplement is devoted to this subject and Alexander D. Noyes is its editor. It contains business diagnoses and letters from all the financial centres, as well as full quotation tables. It is known as one of the most authoritative financial publications of the daily newspaper world.

CHURCHES AND ORGANISTS Two full pages are given to these subjects. Hundreds of people take the paper for this one feature; and letters come from all parts of the United States from church musicians who keep in touch with New York in this way. E. N. Williamson edits this department.

SOLDIERS and SAILORS The page about Army, Navy and Militia is known wherever a drum beats or a quartermaster's whistle blows. It is a complete encyclopædia of the week's doings and of prospective happenings. The service everywhere reads this page.

Of course, it is not necessary to say that the editorial page and the literary department are read by thinking people the world over and have been for upward of a century.

What some people need to be told is that the price of this Saturday paper is ridiculously low:

FIVE CENTS on the Newsstands.
$2.50 a Year, by Mail, Out of Town.

The New York Evening Post

Please send me for one year the Saturday Edition of The New York Evening Post, for which I enclose $2.50.

Important Appleton Books

Every question you can ask about Government, Federal, State, Local, and Municipal, is answered in this monumental work

Cyclopedia of American Government

Edited by **Albert Bushnell Hart**, Professor of the Science of Government, Harvard University, and **Andrew C. McLaughlin**, Professor of History, University of Chicago. *3 volumes. Cloth, $22.50 per set.*

Every question you can ask about government in the United States, or about even the vaguest influences that affect government, is answered in this great work. The history, principles and practice of the American legal and political systems are covered in minutest detail. The work is arranged alphabetically in cyclopedic fashion, and every article carries numerous cross references to others allied with it. From the earliest times to 1914 everything is here, and so easy to get at that you will find it is a real joy to look up and familiarize yourself with all those problems of government which have perplexed you so long. It is as important as a dictionary and should be in every private or public library.

Love and the Soul-Maker

By **Mary Austin**, Author of "The Arrow Maker." *Cloth, $1.50 net. Postage extra.*

In this new book the author makes one of the strongest pleas for the home that has ever been voiced. Mrs. Austin discusses frankly the problems of sex differences that are being encountered everywhere to-day in our social life, and proves that the balance of the social relations can be accomplished only by the same frank handling of the so-called problem of the double standard of morality. Every serious minded man and woman should read it.

Within Prison Walls

By Thomas Mott Osborne

$1.50 net. Postage extra.

The prison experiences of voluntary convict No. 33,333 X. A startlingly frank picture of the prison conditions such as exist in hundreds of penal institutions in the United States to-day, throwing a strong light on the great need for investigation that will have in mind the possibility of a cure of the criminal tendencies, rather than a punishment to fit the crime.

The Wars of the Roses, 1377-1471

By R. B. Mowat

8vo. $2.00 net. Postage extra.

Excepting the history of our own United States, there is no history so full of interest to students of the world's social and economic advance as that of England during the fourteenth and fifteenth centuries, and this book has at last appeared to fill a long felt need for a complete and authentic account of this interesting period.

Hail and Farewell—"Ave," "Salve" and "Vale"

By George Moore

Cloth, gilt top. $1.75 each vol. Postage extra.

In these three volumes the author brings us into very close touch with many men and women who have helped to make the history of art and literature during the last decade. "It is a wonderful tour de force in literary art, with scarcely a parallel since Rousseau's Confessions."—*North American*, Philadelphia.

Occupational Diseases

By W. Gilman Thompson, M.D.

Illustrated. $6.00 net.

Employers of large numbers of people are now beginning to realize that the conservation of the health of the employee is an asset not to be overlooked, and that a business man who would be successful considers hygiene and sanitation as important as a regular income. Here is the first book published which covers completely the field of industrial and occupational hygiene in America, and no manufacturer or other employer in any field should be without it.

Circulars or full description sent upon request.

D. APPLETON & COMPANY, PUBLISHERS, NEW YORK

The Nation.

NEW YORK, THURSDAY, JUNE 11, 1914.

Summary of the News

Alarmist rumors have been freely circulated during the past week concerning the Mexican crisis, and have gained the more credence from the fact that the sittings of the mediation conference were interrupted from Monday till Saturday of last week while awaiting a reply from Carranza to the last note sent him by the mediators. The "Tampico incident," which appeared at one time to hold the possibility of serious consequences, was happily settled on Monday, and its settlement leaves the conference at Niagara Falls in a stronger position than before. The incident arose from orders given by Gen. Huerta for the blockade of Tampico to prevent the entrance to the port of the steamship Antilla, which left New York on June 2 with a cargo of arms for the Constitutionalists. Rear-Admiral Badger was instructed to keep close watch on the Mexican gunboats, and the Administration announced that Tampico would be maintained as an open port. The situation appeared critical until it was announced on Monday that Gen. Huerta had countermanded the order for the blockade.

Correspondence with the Constitutionalists on the question of their participation in the conference is still being carried on, but the declaration of an armistice, the point on which the mediators continue to insist, remains the obstacle in the way of an agreement. Meanwhile, the United States has presented a further plan to the mediators, which, it is understood, embodies essentially the same provisions as those on which the mediators and the Mexican delegates recently agreed, and in which Gen. Huerta concurred; that is, it provides for a method of transferring the executive power in Mexico to a provisional government, which in a few months shall conduct elections for President, Vice-President, and Congress. It has also been intimated to the Mexican delegates that the United States will not demand any reparation in the nature of a war indemnity.

In Mexico Gen. Carranza was declared Provisional President at Saltillo on Monday to the accompaniment of a certain amount of pomp. The usual reports of differences between Villa and his chief have been circulated and denied, and it is stated that, whatever differences there may have been, an understanding has been reached between the two, and Villa is advancing on Zacatecas, the railway to which place has been repaired. There has been fighting in Sonora between the civil and the military authorities. Gov. Maytorena was besieged last week in the palace by the troops of the Obregon-Calles faction, but was rescued on Monday by the intervention of a band of Yaqui Indians, and regained control of the situation.

The Administration's entire programme of anti-Trust bills, consisting of the Clayton Anti-Trust bill, the Railway Capitalization bill, and the Interstate Trade Commission bill, was passed by the House on Friday of last week, and came before the Senate Committee on the Judiciary on Monday. The opinion is expressed by leaders in the Senate that difficulty will be experienced in passing the Clayton bill, and the prediction is made that, if the President insists on the passage of all three bills before adjournment, the session will be prolonged until far into the autumn.

Juggling in the tolls debate in the Senate resulted on Saturday in the introduction of an amendment intended as a compromise between the Simmons amendment, already accepted by the Administration, and one proposed by Senator Norris, asserting more specifically the right of the United States to regulate the traffic passing through the Panama Canal. The effect of the amendment, if incorporated in the bill, will be to leave the treaty rights of the United States unprejudiced by the tolls repeal legislation and their determination to be decided in the future, presumably by arbitration.

The United States Supreme Court on Monday handed down its decision in the Shreveport case asserting the authority of the Federal Government to regulate interstate commerce through the Interstate Commerce Commission. We deal elsewhere with the effects of the decision, which is of the utmost importance in the regulation of railways and which is welcomed by the railway companies as relieving them from the conflicting control of various State authorities.

The investigation by the Interstate Commerce Commission of the affairs of the New Haven Railway were continued last week, and on Saturday the examination of the books of the Morgan company was concluded and the Commission adjourned. It is generally believed that the public hearing of evidence is now finished, but at the end of Saturday's session Commissioner McChord, who presided, stated that if it were deemed necessary to hold further public hearings, the persons whose evidence was desired would be notified.

Despite his thrice repeated denial of Gubernatorial ambitions, Col. Roosevelt's friends continue in his absence to urge his candidacy for the Governorship of New York State. An elaborate canvass of the sentiment up-State is said to have been undertaken, and if the result of this prove favorable, it is pointed out that there is precedent for the Progressive leader, though all unwilling, accepting a nomination.

The sixth international congress of Chambers of Commerce and Commercial and Industrial Associations opened in Paris on June 8. Three hundred and sixty-nine associations, representative of thirty-seven nations, took part in the opening session. The most important question that will be discussed by the Congress is that of international commercial arbitration.

Another of Italy's periodical general strikes was declared on Monday as a protest against the killing of two supposed anarchists by the police during a parade under the anarchist leader Malatesta at Ancona. Rioting has occurred in various places, but elaborate precautions have been taken by the Government to protect public buildings and works, and it is stated that the authorities have the situation well in hand.

Something in the nature of a Ministerial strike appears to have been in progress in France. Following the resignation of the Cabinet of M. Doumergue on June 1, the President invited M. Viviani, Minister of Instruction, to form a Cabinet. The latter accepted tentatively, but on Saturday informed M. Poincaré that he had failed in his efforts, the difficulty being, apparently, to select a Ministry which should be in harmony on the question of the three years' military service. M. Paul Deschanel, the President of the Chamber, also refused the Premiership, as did M. Théophile Delcassé, former Minister of Marine, and until recently Ambassador to Russia; M. Dupuy, and M. Peytral. On Monday, M. Ribot, a veteran politician and an ex-Premier, undertook the task, and was able to announce the personnel of his Cabinet on Tuesday. M. Ribot himself takes the portfolio of Minister of Justice, M. Bourgeois becomes Minister of Foreign Affairs, M. Delcassé is appointed to the Ministry of War, and M. Clementel assumes the delicate position of Minister of Finance.

A state almost of anarchy seems to exist in Albania. It is extremely difficult to gain any exact information of what is happening, but one gathers from various contradictory reports as to a prospective change of sovereignty, what has been fairly patent throughout, that Prince William of Wied as Mpret of Albania fails to satisfy any considerable section of his subjects. The interesting question is whether any other ruler appointed from the outside by the great Powers would prove more successful in reconciling factions. It has been reported persistently that Prince William's abdication is imminent, and the insurgents have been threatening the capital; but, according to a dispatch published on Tuesday, they have been checked by a defeat at the hands of the Government forces at Tirana.

The deaths of the week include: Sir Douglas Straight, June 3; Harris Charles Fahnestock, Sir William R. Anson, Robert J. Redding, June 4; Dr. Amos Lawrence Mason, Earl of Lucan, June 5; Gabriel Ferrier, June 6; Walter Theodore Watts-Duncan, June 7; Chief Engineer George Edward Tower, U. S. N., June 8; ex-Judge Edgar J. Sherman, June 9.

The Week

The decision by the Supreme Court, on Monday, in the matter of conflicting exercise of power over railway rates by the Federal Interstate Commission and by a State Board of Commissioners, may fairly be called an epoch-making event. The substance of Justice Hughes's opinion, affirmed by the Court with two dissenting votes, is that a State has no right to impose such rates, even for services performed wholly within its borders, as shall interfere with the fair and equal operation of rates fixed by the Interstate Commission for similar services in traffic which crosses the State border. The decision therefore limits the power of a State in matters wherein such power has been constantly exercised; consequently it strongly vindicates the national authority. But it does much more than this. It declares inferentially that in the mass of rate regulations, Federal and State, which have frequently imposed two flatly conflicting orders on the railways, the instructions of the National Board are hereafter to be obeyed in case of conflict, and those of the State Commissions are to be ignored. The issue was raised by the State of Louisiana, which protested against conditions brought about by the State Railway Commission of Texas. It was indirect imposition of a protective tariff against a neighbor State.

The reasoning of the Court is briefly this: Unjust discrimination in rates, unduly favoring one community over another under similar conditions of traffic, is an evil which Congress has power to prevent. It is immaterial that this discrimination was caused by a rate imposed on traffic wholly within one State. The Federal authority is not bound, for the purpose of removing inequality, to reduce the interstate rate to the level of the rate within the State; if it did, it would merely protect interstate commerce by imposing a rate lower than it deemed fair and right. But since Congress has the power to intervene when the State Commission's rate involves discrimination; since it also may provide for exercise of such power through a subordinate agency, and since the Interstate Commerce Commission is the agency thus designated by the law—therefore the Interstate Commission's finding, as against the Texas State Commission's rates, is sustained by the highest court. The principles laid down in this extremely important decision are clear; their practical consequences are perhaps less obvious. The noteworthy forward step which the Court has taken is in assuming that the right, under the given conditions, to overrule a State Commission's rate policy is already inherent in the Federal Commission as an arm of Congress, and does not (as might have been inferred from the Minnesota rate opinion) have to await a new affirmatory vote by Congress.

The Supreme Court's decision that the Missouri Anti-Trust law is not invalidated by the fact that labor unions are exempted from its operation is of peculiar interest at this moment. It may not be conclusive evidence of what the Court would hold in regard to an act of Congress making a similar exemption, but it points strongly in the direction of the sustaining of the constitutionality of such an act. The Supreme Court holds that it was for the Legislature to decide whether the particular form of restraint of competition, or restraint of trade, involved should or should not be exempted from the scope of the statute; and, though there may be points of difference in this regard between a Federal case and a State case, it is certainly, to say the least, not improbable that the same view would be taken of an exemption of labor unions from the scope of the anti-Trust laws of the nation. If the Clayton bill, as passed by the House, were to become a law, the question before the courts would, indeed, be different from this altogether; the question would be, primarily, at least, whether the intentionally obscure language of the bill was to be understood as granting the exemption which the labor unions desire. But in voting for the bill like sheep following a bell-wether, many members made the excuse that there was no danger anyhow, since the courts would declare the provision unconstitutional if they found that it meant exemption. This refuge for cowardice no longer exists. The Missouri decision has come just in time to make unavailable in the Senate the excuse which was found so convenient in the House. Senators who are opposed to class legislation will be squarely called upon to make their votes agree with their opinions.

In his address at the unveiling of the Confederate monument in the Arlington National Cemetery—a fit pendant to his simple remarks before the veterans of the Civil War on Memorial Day—President Wilson happily pointed out those elements of the occasion significant of "a reunited people." The monument was dedicated by officers of the United Confederate Veterans and the Grand Army of the Republic. It had been proposed by President McKinley, himself a commander on the Union side; its cornerstone had been laid by another President, "elevated to his position by the votes of the party which had chiefly prided itself upon sustaining the war for the Union." With fine delicacy, he refrained from any allusion to the facts which made his own acceptance significant. As he remarked, the absence of sectionalism has been so complete that any reading of the salient lesson of the dedication seemed not merely simple, but commonplace; malice towards none, charity for all, had been a watchword even before the close of the struggle, and it remained only to impress it as a personal maxim, making every citizen, in attitude towards public affairs, a replica of a harmonious and forward-looking nation.

Mr. Ledyard's testimony at the New Haven Railroad inquiry does not leave Mr. Mellen in an enviable position. The point on which Mellen, in concluding his testimony of three weeks ago, laid the greatest stress was that he had voluntarily accepted indictment for the Grand Trunk negotiations, solely in order to shield Mr. Morgan, and that his reward had been dismissal from the New Haven presidency. Now comes Mr. Ledyard, who was present at the conferences with Mellen about this same indictment, and who testifies that Mellen had discussed his personal apprehension of being indicted; had declared his purpose "to waive immunity and tell the story," trusting thereby to escape indictment, and had dictated a letter to the District Attorney to that purport. There is surely no evidence of vicarious sacrifice in this. As for the fur-

ther testimony of Mellen, to the general effect that he was dragged reluctantly into the various questionable operations by Mr. Morgan, Mr. Ledyard testifies:

> In all my connection with the board, I never knew of any person but Mr. Mellen taking the initiative in bringing business before the board or any of its committees. . . . He had at his finger ends all the inter-corporate relations, and as a presiding officer he had the ability to put before the board what he wished in the most convincing way. The board had the utmost confidence in Mr. Mellen, and he was in that sense a power in the board. He was in that sense the one who dominated its policy.

It is only fair to say that Mr. Ledyard's statement is of general character, whereas Mellen's testimony, as to his own personal disapproval of the financial terms on which the Westchester and Rhode Island "deals" were conducted, was particular. It therefore remains to produce some further testimony which will bear on those special allegations. But as to the picture drawn by Mr. Ledyard of the general attitude of the New Haven's former president in its board, we are bound to say that it gives exactly the impression which railway men have always entertained. By them, at least, the notion of Mellen as being driven, a timid and unwilling participant, into the management's ambitious schemes, has from the first been greeted with incredulity.

The question of international commercial arbitration, the most important before the International Congress of Chambers of Commerce now meeting in Paris, is of sufficient moment to have received notice in several national legislative bodies. M. Max Leclerc, of the Paris Chamber of Commerce, recently submitted a comprehensive report upon the subject. So necessary is some rapid, inexpensive, and technically competent method of settling disputes in world business that textile firms, grain merchants, and publishers have voluntarily created boards of settlement. The Bourse of Paris has a model contract, for use in all centres of grain trade, and the executive committee of the International Congress of Publishers recently adopted a rule organizing arbitration. What is lacking is legal sanction to the results of these professional agreements. The cabled reports of the plans submitted Monday by Mr. Bernheimer, of New York, and Dr. Pozzi, of Milan, state that they look to legislative provisions "to clothe foreign arbitrators with powers to fulfil their functions, to provide for them legal protection, and to give executive force to the judgments pronounced by them." M. Leclerc proposed that the French Government call two conventions to consider the matter; the first of diplomats and business men, the second of diplomats alone, who might be relied on to reach a satisfactory solution. Clearly desirable as such a consummation is, beyond doubt it must come slowly. A law making international commercial decisions valid in France passed the Chamber in 1908, but has not yet been approved by the Senate. In face of the large difficulties before international action, business organizations must continue doing what they can in an unofficial way.

Rear-Admiral Fletcher's excellent reputation as an officer of judgment and humanity, free from jingoism or blatancy, is enhanced by his two reports on the operations at Vera Cruz. The first, admirably written, records his efforts to limit the loss of life and destruction of property, and strongly confirms the general impression that this unhappy enterprise was carried on with all possible skill, dispatch, and efficiency. The second lists an extraordinary number of officers and men who distinguished themselves by their coolness and bravery. Here again the Admiral's reputation for calm judgment—so highly praised by President Wilson at Annapolis last week—guarantees that all these men really merit the honors he asks for them. As to some other officers, the appearance of a list so unusually long would merely awaken doubts; with Rear-Admiral Fletcher's word for it, the country can be sure that it has in its naval service a high percentage of fearless and devoted men.

Though founded, it is said, on the same principle as that which initiated national aid to agricultural schools a half-century ago, the Hoke Smith vocational-aid bill, embodying the recommendations of the Vocational Education Commission appointed in January, may expect opposition from many sources jealous of the rapid extension of Federal functions. The Commission's plea that it will "help solve a problem too large to be worked out permanently save by the whole nation" seems rather speciously supported by the arguments that the migratory nature of labor makes the subject of interstate concern, and that the resources of the States vary widely in proportion to their burden. There is more force in the statement that the interest and prestige of Federal backing will give a needed impetus to a subject treated too indifferently. It is beyond doubt that State and municipal attention, though widely aroused, requires some further spur. The measure reported last week carries an ultimate expenditure of $7,334,000 a year, to be distributed among all States which will spend dollar for dollar, and submit their plans to Federal approval. Its supervising board would lay extra burdens upon the Postmaster-General and Secretaries of Commerce, Labor, Agriculture, and the Interior, who —with the Commissioner of Education as chairman—would constitute it. The many who feel that local and State divisions can most effectively solve the difficulties of this form of education will hope that debate may show clearly whether the Government would be wise to undertake it.

In his commencement address at Columbia, President Butler struck somewhat the same note as that sounded in his address a year ago. What he then spoke of was the tendency towards making life a Flatland, a thing without depth and without permanent roots, which was an accompaniment of our extraordinary absorption in the immediate problems of the time. This year it was the remarkable growth of the idea of regulation, at the expense of the idea of liberty, to which he directed the attention of his hearers. This is most emphatically a word in season. The prevailing tendency to accept regulation in place of personal liberty, in one field after another, is all the more dangerous because it is in large part due to changes in social conditions which justify regulation of many things formerly left to take care of themselves. Social relations are more complex, the things that have to be done by men in masses and not as individuals are more numerous, than they were half a century ago. But that is no reason why the "self-regarding" acts—to use Mill's term—of men should be subject-

ed to more restraint, but quite the contrary. The habit of regulation, growing inevitably and rightly through the pressure of certain plain social needs, threatens to invade every department of life. It is for university men, above all, to raise the voice of protest against this menace.

When Swinburne, in 1909, was carried from the Pines to his grave, it seemed as if one of the doors of Romance had been closed in England. And n w Theodore Watts-Dunton, who had occupied the same house with him on Putney Hill since 1879, has followed him on the way to the majority. The two were singularly well suited intellectually, and it would not be amiss to say that the later to die held a place as critic in the resuscitated romantic movement somewhat akin to that held by Swinburne as a poet. It is not our purpose to discuss now his powers and adventures as an accredited guide on the slopes of Parnassus. Those who care to read of these things may find them written out at length and in a manner somewhat fulsome in the biography published by his ardent disciple, Mr. James Douglas, while the master was still living. He was at his best, we are inclined to think, in those briefer articles, half personal reminiscence, half literary criticism, such as he wrote for the *Athenæum* on George Borrow, his friend and fellow in gypsy lore; or such as his note on "Rossetti and Charles Wells," printed as preface to a recent edition of "Joseph and His Brethren," with its charming glimpses of Rossetti's circle and especially of Wells himself, that adventurous failure in the romantic hazard.

In his more learned disquisitions Watts-Dunton easily lost himself in magnificent and vain generalizations, and the phrase, "the renascence of wonder," which has given him a kind of celebrity, has been the cause of no little loose thinking and large talking. That watchword of the so-called romantic revival is known to most readers from its place in the article on Rossetti in the Encyclopædia Britannica, but as a matter of fact it was first used by its author in connection with his own wonder-mongering story of "Aylwin." Its meaning, so far as it conveys any very definite idea, has been explained by its creator: it "merely indicates that there are two great impulses governing man, and probably not man only, but the entire world of conscious life: the impulse of acceptance—the impulse to take unchallenged and for granted all the phenomena of the outer world as they are—and the impulse to confront these phenomena with eyes of inquiry and wonder." His own novel, already named, and the rather complicated series of gypsy poems are exemplifications not so much of inquiry and wonder as of wonder and sentimentality, with an occasional flash of imaginative insight.

Alexander Ribot, who has been successful in the difficult task of constructing a Ministry in the face of Radical and Socialist hostility, has presided in his time over Cabinets made up of diverse elements. But that was twenty years ago and more. Since then French Radicalism has taken on a much sharper edge, and M. Ribot, on the other hand, has drifted more and more towards the conservative side. Consequently, there is something anomalous in his being called to the head of the Government after an election in which the Socialist and Radical forces in Parliament have been greatly strengthened. If the leaders of the majority groups find it hard to frame an acceptable policy with regard to the three years' military service law and financial reform, an outsider like Ribot would seem to be confronting an absolutely hopeless task. But it may be that the leaders of the majority groups are not averse to an interim Ministry under a man of national prestige like Ribot—one of France's Elder Statesmen—while they are composing their own differences. Ribot himself is undoubtedly in favor of retaining the service of three years. It was while he was Foreign Minister under Freycinet that the foundations were laid for the alliance with Russia. Any measure tending to weaken the country's military position is obviously out of line with the policy of the Dual Alliance.

One explanation of the prolonged Ministerial crisis is that the leaders of the Radical and Socialist majority are on strike against M. Poincaré. There have been stories that his enemies are determined to drive him from public life, and to that end are resorting to the dissemination of private scandal. It may be that personal and factional spite dominates the situation. But it is also possible that something of a constitutional issue is at stake. It will be recalled that when M. Poincaré was elected President he was hailed as the Strong Man who would check the absolutism of Parliament by the reassertion of the dormant prerogatives of the Chief Executive. His election was hailed as a setback for Radicalism. Now that the Radicals are firmer than ever in the saddle, they may have chosen the moment to assert in unmistakable form the supremacy of the Chamber of Deputies. By bringing M. Poincairé to his knees they would settle the question of the "prerogatives" of the President.

The terrible disasters which overtook the German navy's Zeppelin dirigibles have not in the least discouraged it from going on with other airships of this type. A new and more powerful one than either of the others, the "L—3," has just completed a trial voyage during which it stayed thirty-six consecutive hours in the air and sailed over a large part of Germany. Leaving Lake Constance early in the morning, it went by way of Bâle to Frankfort-on-the-Main, and at nine o'clock in the evening was at Metz. Five hours later it was in Bremen, after which it went out to sea to Helgoland. Just twenty-four hours after leaving Lake Constance, it had come back from Helgoland to Berlin, greeting the workers of the city as they hurried to their tasks. It then returned to the North Sea before finally descending in Berlin at seven o'clock in the evening. On board was the new Inspection Commission of the Navy Department, whose predecessors perished so tragically on the trial trip of the "L—2." While the weather conditions were on the whole favorable, there were some severe winds encountered, but the ship had no difficulty in holding her course. The same craft recently established a new altitude record for Zeppelin dirigibles by rising to a height of ten thousand feet. It is in every way the most powerful ship yet turned out by Zeppelin. Facts as to the engine power are not available, but as to size it is stated that in every dimension she far outstrips her predecessors.

THE FLUX OF PARTIES.

An examination paper on political parties, set in a course on "civics," would nowadays ask questions which it would bother a book-trained student to answer. Do we have government by party in the United States? Are the differences among Democrats, Republicans, and Progressives clear-cut? Does the party out of power steadily oppose the measures of the party having control of the Government, and vote solidly against its measures? We know what theory says on all these points. But what are the facts? Let the ingenuous youth who knows the paper account of party government go to Washington, and what would he see? If he had been in the House of Representatives on last Friday evening, when the anti-Trust bills were passed, he would have thought that our political parties were in a state of complete flux and hopeless confusion. Here were Democratic bills—and bills which had been attacked and denounced by the Republican and Progressive leaders—yet Republicans and Progressives voted for them in battalions. For one bill all of the Progressives voted, while only eight Republicans were against it. For another forty-one Republicans and fifteen Progressives voted. A handful of Democrats were against both. Thus party lines were not merely crossed, but broken.

Superficially, all this looks very like a great success for President Wilson's strategy. If the leader of the Democratic party is able to devise legislation that keeps his own party intact while seriously dividing his opponents, who can stand against him? It is certainly the fact that Mr. Wilson has had, thus far, a series of triumphs of this kind. In this particular, he shines by contrast with the bad luck of President Taft. The latter split his own party and solidified the Democrats. President Wilson has exactly reversed the process. He has held his own followers together while splitting the Opposition. He did it to a certain degree last year with his tariff bill and with his banking and currency legislation. He is doing it with his Panama tolls-exemption repeal, for which many Republicans voted in the House, and for which eight or ten Republican Senators are going to vote. And with his Trust bills he scored apparently the most decisive victory of all.

Things, however, are not always what they seem in politics. A little attention paid to the forces lying behind this seeming demonstration of the President's complete domination over Congress will disclose uncertainties and perils on every hand. In the first place, the Democrats who stood by the President did so without any great enthusiasm. They are in a state of political apprehension. At the very moment when the power of their party appears to be highest, they fear that defeat is impending. The Republicans, moreover, who fell in behind the Wilson bills in the House, have not the slightest thought of relaxing their attacks upon him. Congress is one thing; a national campaign and the poll of the people are another. The fight for the control of the next Congress will be waged just as bitterly as if the Republicans had kept their ranks unbroken in the voting on the Trust bills. Into those measures were written provisions—especially the concessions to organized labor—which many of them dared not go on record as opposing. But the President who urged the bills they will go on opposing to the best of their ability. It was no "era of good feeling" which was indicated by the remarkable switching over of the Republican vote to the Wilson bills.

What perplexes the ordinary citizen, in the presence of all this mixing-up of parties and their policies, goes deeper than anything having to do with elections. In the prevailing deliquescence he seems to find nothing to tie to. The party of his own preference he repeatedly discovers failing him, or leading him he knows not whither. Turning to the other side, he sees no better proofs of conviction and stability. If he looks to the third party, he perceives that the personally conducted Progressives are no more assured of themselves, or more clear in what they think and intend to do, than the others. A vast opportunism seems to have descended like a cloud upon American political parties. It is impossible to trace the old distinctions. For a man to call himself a Democrat or a Republican does not in the least signify any longer what his political convictions are. As for the traditional desire to have two parties in the commonwealth, one conservative and the other radical, few are left to cherish it as possible of realization. Radical views—some say that there are no conservatives left—permeate all parties. The result is obviously to weaken for the time being the standard conception of government by party. Doubtless the present flux will not indefinitely continue. But at the moment, it must be confessed, the break-up and fusing in our political life leave many disconsolate Americans in search of a party.

REGULATING THE REGULATORS.

Is the next step in the social service programme to be the private regulation of Government regulation of private business? Last Thursday the Federal Commission on Industrial Relations was taking testimony on the subject of child labor in the tenements. The representative of an association of garment manufacturers was asked what precautions were observed by employers in distributing work to be done outside of the shop. He replied that such outside work was sent only to duly licensed places under inspection by the State. Thereupon counsel to the Industrial Commission put the following question:

> Isn't it a fact that you have not taken the trouble to inquire into conditions, and haven't you heard previously, as has been testified before this Commission, that the State's inspections are so imperfect as to be unworthy of the name?

We have not at hand the reply of the dazed business man to this amazing interrogation. That he was dazed we are morally certain. For the assumption here was that the business man who is subject to Government regulation is bound to see that the regulators do their duty. Possibly even he ought to lay a complaint against the inspectors for not being sufficiently severe with him.

There was method, of course, in counsel's madness. As counsel for a Federal Commission he was presumably interested in proving the futility of State inspection, as opposed to Federal inspection. In order to score a tactical point he did not hesitate to imperil the entire case for Government regulation. It may be that the Federal Government is more efficient than this or that State government; after all, that is a question of degree. It is by no means our intention here to deny the truth of the statement made by counsel for the Industrial Commission. The case may be as he has described it. And whatever

may have been his immediate object, he has called attention to the fact that the difficulties inherent in the problems of public regulation are accentuated for us by the evil traditions of public inefficiency and the spoils system.

This need of a higher conscience and efficiency in the public service, whether the service of the State or of the Federal Government, is bound to loom up among the pressing problems of our democracy. For democracy will be directly on trial in the working of our public service commissions, our workmen's compensation commissions, our factory and health and tenement and fire-prevention inspectorships; more directly on trial, one imagines, than through the working of our direct primaries, direct elections, and reformed ballots. The difference is measured by the difference between the effort necessary to put a law on the statute books and putting it into practice. We are well into the process of legislation. We are just entering on the process of application. We are now concerned with the human factor upon which the success or failure of remedial legislation depends. It will not do to demand the abolition or reconstruction of a Public Service Commission when we have lost faith in it. All the tinkering and rebuilding in the world will be of no avail if the new machine is to be captured after a few years by the predatory political elements. The problem is to defend these new organs of the public welfare against seizure in the high places, and in all eventualities to prevent politics from laying a dead hand on the rank and file of the public service departments.

These are the perils of the moment. Ultimately it is our belief that the principles of an honest and efficient civil service will establish themselves in the departments we are so rapidly creating. And this will come about precisely because these new departments touch so intimately on the daily welfare of the population. The imagination of the average citizen is apt to remain cold to the more abstract ideals of civic activity. It requires some effort to translate municipal economy or an honest Police Department into terms affecting the daily life of the ordinary non-tax-paying citizen. But no such effort of the imagination is necessary to recognize the difference between an efficient and an inefficient factory inspector or the difference between an honest tenement-house inspector and a tenement-house inspector who grafts. Where the difference between conscientiousness and neglect on the part of a public servant can be measured up directly in the impaired health of the workers or in catastrophes like the Triangle fire, the demand for honesty and efficiency will sweep the politician out of power.

DOUBTS ABOUT DREADNOUGHTS.

From England comes the gratifying news that a foremost British naval authority, Admiral Sir Percy Scott, has come out against the building of battleships, not, it is true, on pacific grounds, but because in his judgment their day is over. It is the victory of the submarine which he reluctantly proclaims, for this is the officer who has done more probably than any other in the British service to develop the science of gunnery. His gun-carriages, his appliances for big-gun firing and for night signalling at sea, and, above all, the impetus he has given to target practice, have all greatly increased the efficiency of the British navy, and given the heavy gun an advantage in the duel between armor and ordnance. But now he declares that armor and gun alike have to yield before the submarine, and that every other type of craft must eventually give way before it. Airships, aeroplanes, and submarines will constitute the fleets of the future, in his opinion; he even goes so far as to say that the Admiralty will be wasting the country's money if it devotes another penny to battleship construction.

It is devoutly to be hoped that naval experts in other countries will now come over to Sir Percy's views. With this precedent before them, tongues may be unlocked which are now tied by fear of the charge of disloyalty to an accepted naval theory, or to the profession. In naval matters experts are much like sheep. When England brought out its Dreadnought, all the world was ready to impoverish itself to follow suit. When she produced a turbine battleship, turbines became the rage; her battleship-cruisers were at once imitated by all of Europe, if not by the United States. Were she to produce a Diesel-engine battleship to-morrow every designer in every Navy Department would hail the day of the coalless battleship. Now, we admit that while England sets naval fashions, no single expert, however eminent, can bring about so radical a change as Sir Percy foretells. Abandon the walls of steel which are the sole hope of Britannia? This Admiral may think himself lucky if he is allowed to remain in his service clubs. Yet his letter to the *Times*, if it is correctly reported here, is bound to set people, in and out of naval uniform, to thinking.

For some time past the current has been running against the big battleship. The British Admiralty itself has been building smaller ships, though our own Navy Department plans larger and larger ones. There has been a reaction, too, against the monster gun, as well as against the horrible expense of the latest war-monsters. The two just being provided by Congress are to cost no less than fourteen millions apiece; at the same time the Secretary is to be authorized to sell the Mississippi, and Idaho, vessels but six years old, which cost only about six millions apiece, yet are now so antiquated as to be unfit, according to the Navy Department, for service in the first line of battle. If the price of such ships of war has risen from less than six millions six years ago to fourteen millions to-day, what will it be six years hence? And conservative naval officers have been asking themselves whether, after all, these monsters are worth building in numbers if thereby all other classes of ships are of necessity neglected. Vera Cruz has shown that in an emergency of this kind a battleship is of less value than an armored transport or light-draught vessel, save that it houses more men and can send larger landing-parties ashore. Fourteen-inch guns on ships lying far out from shore are of no particular value against snipers; though they might have had some value if it had been necessary to help fight off an attack on American intrenchments far inland.

Writing in the *Army and Navy Journal*, a few weeks ago, a person who signed himself "Missouri," but is known to be one of the ablest of our recently retired admirals, asked no less than thirty-one searching questions in regard to the colossal battleship, the animus of which inquiry was plainly hostile. He wanted to know, for instance: "What

actual experience in battle can be quoted to justify this change of calibre from twelve to fourteen inches?" "Is," he inquired, "the increase in size of our newer battleships attended by any gain or loss in manœuvring power? If so, how great is the gain or loss?" It is needless to point out that if there were a gain, and not a loss, this question would not have been put. Some other interrogatories by him were these:

> Do the newer ships carry as many rounds per gun as the older ones? Does the larger ship *per se* offer any military advantages over the smaller, save that she may prove a more stable gun platform? Granted that, in a single ship action, the more heavy guns a ship can carry the better, does this hold true as to fleets? Do big men make better soldiers than small ones? With the same total number of guns, is it not conceivable that an admiral might prefer to have them distributed on more rather than on fewer ships? In a line of battle would not the loss of one such smaller ship be less grave in its consequences than the loss of a leviathan? Is the development of the monster battleship of to-day predicated on any study, however superficial, of what has actually occurred in naval warfare? Is it not rather due to a rivalry which prompts us to "see" our possible enemy and "go him one better"? If those leviathans are really what some people suppose them to be, why stop at a paltry displacement of 31,000 tons? Why not go at once to 100,000 tons and forty twenty-inch guns?

Now, to those who believe that the squandering of the people's money on these monsters is the most wanton waste of public funds in this day and generation, all these doubts are most encouraging. The battleship is certain to go in the long run, because its cost is ruinous, and because it mocks our Christianity; but it will go much faster —very soon, indeed—if other naval officers admit the folly of it from the purely naval point of view.

FATHERS AND SONS IN IRELAND.

A good deal has been heard, in one way and another, of the younger generation in Ireland, and of its impatience with the political ideas and some of the political procedures of its elders. Youth has the traditional privilege of rebelling against age; and it would be strange if Irish youth were an exception. Despite the pressure for solidarity which the Home Rule struggle has long exerted, there are many young Irishmen who do not assent to the political views of their fathers. A striking evidence of this is furnished by a play, "An Irishman's Home," recently published in London. It was written in collaboration by two young Irishmen, one of them the elder son of Sir Edward Carson, the other the nephew and adopted son of Mr. John Redmond. A Montague and a Capulet in agreement!

Reviewers say that the play itself is no great thing, which may well be believed. But the two authors have prefixed to it a "Preface for Politicians," in which they unfold their ideas about Ireland and Irish government in a way which would be noteworthy coming from any young writers, and which, coming from Messrs. Carson and Redmond, is really piquant. For these sons are in pretty thorough disagreement with their fathers. They are so in respect to personal attitude and action. Sir Edward Carson's son is actually a member of the United Irish League! He does not believe in all of its objects, but he wishes to emphasize by his membership in it his protest against the separatism of Ulster. On the other hand, young Redmond has joined the Ulster Volunteers! Not that he is not an ardent Home Ruler, but that he is strongly against the coercion of Ulster. He would not have Irishmen of any shade of political opinion compelled by force to give it up, or to submit to those of a contrary view. One rubs one's eyes as one reads of all this, and involuntarily asks, Is this Ireland? Is it merely a joke which freakish boys are playing?

No; the youthful Carson and the youthful Redmond are as serious in their way as their sires. They merely assert the right to think for themselves. And some of their thinking, as they have written it down in their "Preface," is of a sort to make the Ulster leader and the chief of the Nationalists gasp as they read it, and wonder what has happened to their own flesh and blood. Sir Edward Carson is told by his son that, if his convictions require it, he may keep up "an army of men in open rebellion" in Ulster, but "you must not call it 'Loyalty.'" Mr. John Redmond lights on a passage where his adopted son speaks of "Redmond, the political Syndicalist, bent on keeping the balance of power." But this is partly offset by a description of Sir Edward Carson as "the military dynamitard, whose example would turn every disputed election into a civil war." Almost might "King" Carson make his own echo the words of King Henry IV:

> I know not whether God will have it so,
> For some displeasing service I have done,
> That, in his secret doom, out of my blood
> He'll breed revengement and a scourge for me.

These irreverent children of revered fathers are able to give a reason for the political faith that is in them. Critical of the standpoint, and contemptuous of the rhetoric, of the generation that preceded them, they yet seek to build upon the labors of the past. They are obedient to the injunction to "think Imperially." So thinking, they would have Ireland knit to the British Empire as the great self-governing colonies have been —that is, by granting full local control of local affairs. From this point of view, John Redmond is pronounced the finest example of an Imperial Unionist; whereas "Carsonism, as representing Castle government, will in a couple of generations be looked back upon as the last relic of a mediævalism which, in our colonies, would have been sufficient to drive them into open rebellion in six months." Speaking of the immediate future, these sons of their fathers declare, with a moderation and sagacity that would not be amiss in the older generation:

> The measure of the concessions made by Nationalists to Orangemen will be the measure of the confidence and coöperation with which the men of the North will fall in with the men of the South to make the new Constitution a success. For the present situation has once and for all declared what every Irishman in his heart has already known—namely, that the Englishman does not and cannot understand the Irish problem. Nay, had we not lost our native sense of humor, we should recognize in one thunderous laugh that Sir Edward Carson's military demonstrations of Volunteers are the greatest declaration for Home Rule that has ever occurred in the great controversy, while the dragooning of Ulster would be the greatest piece of coercion since the rebellion of '98.

Warning not to exaggerate the importance of this deliverance of the younger Carson and Redmond is not necessary. The sons may lift their voices, but it is still the fathers who will have to dispatch the business. The truly significant thing in the Ibsenish knocking at the door by the younger generation in Ireland is that, by young as by old, the national sentiment is recognized as a living thing that must be dealt with. By the voice of youth as well as of old

men, Ireland still asks for an end of "the blundering past control," and demands that England, as George Meredith put it, "simply give her elbow-room."

AS THE WORKER SEES HIMSELF.

It may be chance, or it may be another sign of the quickened self-consciousness which has come to English workingmen in recent years, that two of the widely discussed books of the literary season in England should be by workingmen and concerned with the life of the workers. Patrick MacGill is by this time a name not unfamiliar to the discriminating reader on this side of the Atlantic. The name Robert Tressall is quite new. Patrick MacGill, "the navvy poet," though only twenty-four, began his literary career five years ago with "Gleanings from a Navvy's Scrapbook," which led to his appointment on the editorial staff of a London newspaper. Within the present year he has published an autobiographic novel, "Children of the Dead End," and a volume of poems, "Songs of the Dead End." Robert Tressall—if that is a real name—is an English house-painter of strong Socialist leanings, who died and left behind him a manuscript of 300,000 words which came into the hands of Miss Jessie Pope, of the staff of *Punch*. Miss Pope prepared the manuscript for publication by liberal trimming, and has given it to the world as a remarkable human document, under the cumbersome but arresting title, "The Ragged-Trousered Philanthropists" (Frederick A. Stokes Co.).

Fuller information than the editor of the book is willing or able to give regarding the personality of Robert Tressall would have been of value. For in reading this minute record of the work and talk and sufferings and reactions of the English artisan, one is immediately impelled to ask how typical of working-class existence was the writer's own experience. The book is a portrayal of the daily life of the British worker in a provincial town, done with a fine veracity so far as individual characterization goes. But the picture of the life it presents is of such unrelieved gloom that at once the question rises whether this is indeed one of the masses describing the life of the masses, or whether it is the impression created on a clever observer from the outside to whom the life is terrible because it is, after all, strange. This is aside from the author's obvious antagonism to the present organization of society, which is always outspoken and frequently makes the book, in spite of its lifelike figures, a violent Socialist tract. The phrase which the editor has taken for a title is applied by the writer to the workers whose good-natured indifference makes the present system possible.

An excess of pessimism in the depiction of the life of the masses always suggests a standpoint outside of the life of the workers. There may be intimate knowledge; there may be years of actual experience, as in the case of Patrick MacGill, the child of poverty-stricken Irish crofters, sent away to shift for himself when a mere lad and finding, before he was twenty, his full share of work, hard fighting, and drink. Yet MacGill did emerge early in life, and his recollections of the past are necessarily darkened by the inevitable comparison with his newer condition. One suspects the same forces at work in the case of the author of "The Ragged-Trousered Philanthropists." It is not only that his story is a disheartening record of toil, starvation, failure, disease, and suicide, such as the mind recognizes for a distorted picture of the normal life of the skilled worker. Worse than this insistence on the tragedy of the worker's existence, is the denial of value to such brighter phases as even the most disenchanted of chroniclers is bound to notice. The British artisan's pleasures are described as animal pleasures, carried on in an atmosphere of beer and profanity. His ignorance of the political and social forces that shape his own destiny is pitiful. His powers of reasoning when applied to questions of the day are childish. This, our writer is constantly saying by implication or in so many words, is the brute condition to which our iniquitous social system has reduced the worker.

It is a method of observation which, applied to any class and any condition, is bound to show life empty and meaningless. Robert Tressall's house-painters and ditchers, engaged in discourse over their tea and bloaters, are not strikingly more illogical, more ill-informed, more the creatures of prejudice and superstition than many an audience of their betters. The same method has been applied with predilection by the French realists to the "bourgeois," and with similar results. Mr. Wells has applied it to the English shop-clerk to the same effect. We dare say one might play eavesdropper on a company of college professors at their ease and carry away a disheartening impression of a painfully limited outlook, of halting logic, of undeveloped sympathies. The attitude of Mr. Tressall's house-painters towards politics may easily find a parallel in the pages of the *Congressional Record*. And so with their pleasures. To the observer from the outside the atmosphere of the tavern to which the artisan repairs after his work may be painfully sordid, but, after all, there is no essential difference in moral or æsthetic value between the tavern and the bar of a Piccadilly hotel. If Piccadilly is ill at ease in the tavern, the tavern would be just as depressed in the Carlton.

In this tendency to regard as degraded in the worker's life what is only unfamiliar, to accentuate his intellectual limitations which are less the limitations of a class than of the human mind, such books as Robert Tressall's are untrue. Valuable when they deal with specific wrongs, when they protest against the exploitation of the worker, when they deal with the ever-present menace of unemployment and want, they depart from the truth when they seek to deny the worker a humanity which is his.

THE UNIVERSITY AND THE YARD-STICK.

There lies before us an extensive questionnaire, addressed "To the Faculty Members of the University of Wisconsin," by "The University Survey," acting on behalf of the State Board of Public Affairs. With the memory of the Harvard episode of a year and a half ago still fresh, one instinctively asks, first of all: Is this another outbreak of the time-card notion of university management? There was no possibility of mistaking the matter in the Harvard case. No one who had any conception of the true nature and meaning of universities could tolerate for a moment that remarkable manifestation of philistine stupidity and arrogance. The Harvard faculty—or a sufficient number of its members—showed so plainly

what it thought of the scheme that it was incontinently dropped, with the explanation that it had been put forward, without adequate authorization, by an administrative employee of the University, the Assistant Controller. What that gentleman had in view was indicated in his statement that the information was desired "as a basis for pro-rating salaries to the various classified functions"; and it was plain that the answering of the great network of questions concerning the exact disposition of each professor's time was intended to be a regularly recurring performance, exacted of the faculty at such intervals as the managing powers might deem desirable for their purposes.

The Wisconsin inquiry, we hasten to say, is, on its face at least, of a very different character. There is no indication that it is designed to serve as a basis of action in regard to individual professors; neither does it carry any intimation of being intended as a regular feature of university government. Its aim appears to be to gather together, and analyze, and tabulate data of a great many kinds bearing on the working of the university, for the purpose of introducing such changes of a general nature as a study of these data may show to be desirable. Many of the questions are not of the "time-card" variety at all. Thus one set of questions asks the professor what suggestions he has "for improving the preliminary preparation" of students planning to enter his classes, and makes other inquiries of a similar character. On another page we find the professor requested to "state specifically what needed equipment or supplies are so deficient as to handicap you in your teaching." To questions like these there can surely be no objection; and the same thing may be said of a number of the other questions.

Nevertheless, there is enough in the questionnaire to warrant the gravest suspicion that we are to have in this Wisconsin move one more of those wrong-headed and deplorable applications of the "efficiency" idea which have in recent years been threatening our universities from one quarter or another. There is much reason to fear that the time-card part of the inquiry will be held, by the State authorities to whom the report will be made, to be quite as important as any other part. The idea of management looms large in the whole thing. "Supervision of Your Class Room or Seminary Work" is one of the main heads; under it the professor is asked to state "about how often" his work has been observed:

(1.) By the chairman of your department.
(2.) By other members of your department.
(3.) By representatives of the State Department of Public Instruction.
(4.) By representatives of the Board of Visitors.
(5.) By others (please indicate who).
(6.) By regents.

Similar questions are asked concerning the number of personal interviews regarding his courses the faculty member has had with the president, with the chairman of his department, etc. And then of course there are the questions about the number of hours per week spent in the various lines of university work.

In all this there lies a danger more serious than the obvious one of encouraging the notion that the value of a university professor's work may be measured by mechanical tests. The men who make the greatness of a university will be unspeakably repelled by this whole apparatus of observation, and inspection, and tabulation. What is it that draws to a university career men of high spirit and of rare intellectual gifts? The material rewards in it are small. The one thing in which that career offers attractions not to be found in most other callings is the opportunity for the free play of one's individuality. The mere thought of being obliged to keep tab on his intercourse with his students and his colleagues, the mere idea that his work is to be not what his personality makes it but what some chairman or supervisor may find to his liking, would be enough to take the zest out of the life. What has made the universities of Europe illustrious is the independence of the professors. It is not more management, but less management, that is wanted in our universities; where we fall short is in the dignity of the professorate, and the intellectual power and personal inspiration which are attracted into it by that dignity. To press for more mechanical efficiency means to squeeze out that in which we are already deficient, and increase the mere quantity of that in which we are, by comparison, amply supplied.

THE EFFECT OF MILITANCY ON SUFFRAGE—THE GROWING HOSTILITY OF PUBLIC OPINION.

LONDON, May 29.

It is admitted that the suffrage question in England is more prominent to-day than it was five or ten years ago. Therefore, say some of its more ardent supporters, the cause must be nearer victory. Suffragists who do not share this invincible optimism yet derive much encouragement from other evidence of progress. They take, for instance, the attitude of the political parties. The House of Lords is generally regarded as typical of Conservative opinion, but a few weeks ago in that chamber Lord Selborne's Women's Enfranchisement bill was thrown out on second reading by a majority of only 44.

Turning to the Liberal party, we find that the movement is supported by several of the most influential organs of Liberalism in the daily and weekly press, Further, the refusal of the Women's Liberal Federation to make suffragism a test of Liberalism has been followed by the formation of a new society, the Liberal Women's Suffrage Union, whose members pledge themselves to assist no Liberal candidate who is not a suffragist.

Again, the party that during the last few years has manifestly been making the greatest advances at the polls is the Labor party, and that party has definitely adopted woman suffrage as one of the planks in its platform. The policy is also being pursued, with no little success, of winning over women's societies that were originally organized for purposes outside of politics. The capture of the Women Workers' Union by the suffragists is a case in point. In the Lords' debate the other day the Earl of Lytton went so far as to say that wherever women were organized for trade, profession, or occupation, their organizations had expressed an opinion in favor of woman suffrage.

A careful political meteorologist, however, will hesitate to accept these observations as above criticism. To take the last point first, the capture of the women's organizations has not been effected without vehement opposition, followed in some cases by considerable and influential secessions. Then, the endorsement of the movement by trade and professional bodies of women says nothing as to the views of women who are not in receipt of salaries or wages. Besides, the real problem of the suffragists is not to persuade women, but to persuade men, for if a woman-suffrage enactment is ever carried it will have to be that much-despised product, which according to Mrs. Pankhurst has no binding force—a man-made law.

So the only weather reports that amount to much are those registered in Parliament, where the suffrage cause has to face the really decisive tests. The recent House of Lords vote was a very poor basis for optimism. The bill was lost by a vote of nearly two to one—104 against 60—in a thin house. Nearly 400 peers make their appearance when

there is a Home Rule bill to be voted on, and if Lord Selborne's bill had been taken seriously it would have been easy to double or treble the majority against it. As to the situation in the Commons, the estimate made last October by Mr. Lloyd George—one of the strongest and most earnest of suffragists—is even more conspicuously correct to-day. "In a Parliamentary sense," he said, "the movement has gone back. In 1906 there was a huge majority in Parliament for it. In the last two sessions we have been beaten." And Parliament, he told his hearers, who were members of a suffragist deputation, had thrown the Suffrage bill out more on its merits than they would imagine.

The Chancellor of the Exchequer is not given to emphasizing the dark side of the causes he supports. But, in the speech to which reference was made above, he warned his fellow-suffragists that Parliament represented the mood of the nation. In every part of the country what was formerly indifference had been turned into hostility. The explanation of this change was "militancy." The Chancellor reminded his audience that no big proposal can be got through Parliament merely through the energy of enthusiasts. "You carry these things through, not merely with the assistance of the people who are thoroughly convinced, but with the aid of the people who merely assent." The harm that "militancy" had done was by turning this mass of possible assent into actual hostility.

At the time, at any rate, Mr. Lloyd George regarded the discouraging features of the movement as mere passing clouds, and many other prominent suffragists share his conviction that their cause is suffering from no more than a momentary setback. They regard the change in popular feeling as simply a fit of natural irritation, which hinders the exercise of a calm judgment, and which will pass away as soon as people begin to understand that the terrorist outrages are really irrelevant.

But are they irrelevant? That assumption begs the whole question at issue. They would be irrelevant, certainly, if these violent actions were the work of only an insignificant minority, and if they had no connection with the merits or demerits of the suffrage proposal.

But those whose indifference to woman suffrage—or, in some instances, support of it—has been turned by the events of the last few years into definite hostility, hold that in the present case these two conditions do not apply. As regards the first of them, they point out—and they can quote Lord Lytton's recent speech in evidence—that the terrorists' society is one of the strongest, wealthiest, and most active of suffragist organizations; and that those suffragists who confine their own propaganda to constitutional methods at the same time palliate, if they do not applaud, the violent courses of the extreme section. That is to say, the suffragist movement in England to-day is, as a whole, as truly a terrorist movement as Russian nihilism, one part by active coöperation and the other part by the reinforcement of its sympathy.

These reluctant converts to the "anti" position say, further, that the character of the suffrage propaganda has a close and vital bearing upon the suffrage question in itself. They call attention to the fact that the worst of these outrages, striking at the very basis of civilized society, have been committed and approved by women of education and culture. These incidents, as well as the persistent attacks of many suffragists upon the best friends of their cause, have led them to the conviction that women, as a sex, are unfitted for political responsibilities, and that their admission to the franchise would mean the complication of national problems by the addition of a factor whose operation would be illogical, incalculable, and highly mischievous.

H. W. H.

THE NEW FRENCH CHAMBER—SOCIALIST GAINS—THE POSSIBILITY OF REACTION.

PARIS, May 30.

In the new French Chamber, 409 Deputies have been reëlected from the old—and no political change is to be foreseen so far as they are concerned. It is the 193 new members of Parliament whose actions and combinations have to be watched. It has already been trumpeted to the world—and it ought to have been expected—that Unified Socialists, that is, those who are under party discipline and follow their leader as one man, hold 102 seats in the new Parliament, as against 61 in the old. But this by no means indicates the total strength of bona-fide Socialism in the new Parliament. The four Deputies who have been elected, like Briand, as Independent Socialists, may not count for much practical Socialism, on account of their political interests. But there are twenty-two Deputies who have frankly thrown overboard old party names and have been elected as "Republican Socialists." It is better to translate their name in this way rather than more faithfully to grammar—Socialist Republicans.

For the same reason, from M. Clemenceau's first invention of the party name twenty-five years ago, I have translated "Radical Socialists" rather than Socialist Radicals, like the London *Times*. He explained that he was not a Collectivist Socialist; but the political lot of those who have adopted his name has been more and more cast in with that of Socialists pure and simple. Now, in this new Parliament, these Radical Socialists, with the lately invented Unified Radicals who have promised to obey the same party discipline, number 192 Deputies. Even with wavering and defections among such Radicals when obliged to accept or refuse frankly Socialist legislation, there will be at all times more than 300 Deputies who have set out on the march towards the Socialist land of Canaan.

The reason why Socialism has so profited by the elections is not far to seek. It has always been so at every turning of the republic. Since Jules Guesde first organized French Socialists into a political party and brought sixteen Socialist Deputies into Parliament in 1893, their numbers have gone up by just such leaps and bounds in periods of uncertainty and agitation. Thus, the Dreyfus affair brought them to fifty, and now they pass the hundred. Each time, they take their chief increase from the Radicals, who have again lost more heavily to Socialists than the other parties have done.

A more curious phenomenon is that, each time, extreme Conservative voters help to elect Socialists in preference to Radicals. Such a coalition has just defeated Claude Casimir-Perier, the son of the ex-President, and has elected an extreme Unified Socialist. Cardinal de Cabrières, one of the pronounced Royalist bishops, denied that he had anything to do with the electioneering; but the fact remains. A reason commonly assigned is that Catholics imagine that the sooner society goes to the bow-wows, the sooner a reaction will come like that which brought the first and the third Napoleon into power—and so they go in for the "worst" Republicans. This is certainly not the sole reason. Socialists, although they make a religion of their theories, are often very conciliatory in practice, whereas French Radicalism has been from the beginning a counter-religion. As M. Viviani expresses it, the work of the republic has been "to put out the lights of heaven."

A natural question to ask is: How far do the elections express the will of the majority of French voters; that is, of adult male citizens? Jaurès, who is fair-minded as well as ardent in his Socialist leading, acknowledges that full 25 per cent. of the registered voters abstained from voting at the late elections. Such citizens have evidently no will, and their opinions ought not to count. Indifferent or discouraged, they certainly do not belong to such revolutionary layers of society as the Socialists. For that matter, only sixty-one Deputies were elected by an absolute majority, that is, by half plus one or more of the registered voters of their district. Of these, only four were Radical Socialists, and there was no Socialist among them. In other words, in such constituencies, Conservatives must have managed to unite and put forward their whole strength.

The relative defeat of Radicals and Socialists in Paris may mean that reaction is coming in the country at large—since Paris usually leads by some years—or simply that Paris is bored by Radical talk and wants a change. The Nationalist spirit has long been powerful in Paris and counterbalances Socialism in off years.

At any rate, nine-tenths of the Deputies in the coming Parliament have been elected by a minority of the voters of their districts. In the second turn, when no absolute majority of actual votes was cast at the first, a mere plurality is sufficient. Now very many of the Deputies successful at this second turn were elected by only one-third, or even one-fourth, of the registered voters.

Perhaps those accustomed only to the strict party divisions of American elections will best understand the popular movement in France by the votes cast according to the main question which is uppermost. Deputies who had expressly promised to uphold the three years'

military service as it now is, and as it is thought to be necessary against the German danger, received 4,644,286 votes; and others who promised to modify it only in non-essential points had 612,767 more. On the contrary, Deputies who professed the strict Socialist and Radical Socialist policy of reducing military service to two years received only 2,936,044 votes—and only 133,712 votes went to those who refused to commit themselves. Altogether, 417 Deputies—a majority which should be safe—are pledged to the three years' service—and on this rock Socialists and Radicals may split, unless Jaurès lets well enough alone, as he is quite capable of doing. S. D.

Polo.

THE GAME OF KINGS.

The Ball no question makes of Ayes and Noes,
But Right or Left as strikes the Player goes;
And He that tossed you down into the Field,
He knows about it all—He knows—He knows!
—Rubaiyat.

I.

A hundred years ago, Sir William Ouseley, our first chronicler of polo, saw it on his Persian travels. Quoting Pietro della Valle, who covered the same ground, he says: "It was a favorite recreation of kings and chiefs, and originally, I believe, considered as almost peculiar to illustrious personages." The Italian in 1618 had found polo under the patronage of Shah Abbas. Another traveller, Sir Anthony Shirley, found a well-kept *meidan* (field) outside Ispahan; still another calls it "the game of canes." Chardin's Persian notes describe polo as a popular amusement, with thirty or forty participants; but the usual number, four or five players to a side, was then in vogue.

Chugan (mallet), as the Persians called polo, flourished under their Sassanid kings, under the Byzantine emperors at Constantinople, and under the invading dynasties that ruled India and introduced the game. At the court of Akbar it helped in the training of cavalry officers. From India it has spread throughout the world; in ancient times through Tibet into China and Japan; in modern times, adopted by the English, through the Western world. In Tibet polo lingered in a somewhat primitive form, and it was from the adjacent region, Manipur and Gilgit, that English tea- and indigo-planters first had knowledge of the game. The Tibetan *pulu* (ball) was the derivative Anglo-Indians used for the modern name. Since then Australia, South America, Egypt, South Africa, and the Philippines are among the countries familiar with what, in the twelfth century, the Greek Emperor Manuel Comnemus and his Byzantine princes played as Τζυκανιστήριον, which retains the original Persian name, suggesting definite rules and a regular field for play.

But it is to the Persian Homer, Firdousi (940-1020), and his immortal epic, the "Shahnama" ("Book of Kings") that we turn for glowing description, as well as for the first record of an international match. In 600 B. C. the exiled Prince Seavish, with seven Iranians, amazed Afrasiab, King of Turan, with whom he took refuge, by the ease with which they defeated his Turkish team. Firdousi lingers over the feats of the Persian players with the pen of a true lover of the game. In his epic we also learn that *chugan* was fit training for princes. Shapur was provided with tutors by his mother:

But by his rapid progress he outstripped
them;
At seven years old he went upon the
ground
To learn the art of war, and play at polo.

Likewise of Bahram, "that great Hunter" of the "Rubaiyat," we learn from Firdousi:

When he was eighteen
The valiant warrior was like the sun,
He needed not archmages to instruct him
In erudition, how to play at polo—

The "Shahnama" also states that Gushtasp (Hydaspes) was expert at polo; his clouts caused the ball "to vanish among the clouds." Besides these references, the "Shahnama" contains a delightful episode of recognition. Shapur was born during his mother's term of disfavor, and hearing that he has an heir, King Ardashir (226-241) commands a polo match, and from a number of well-favored youths recognizes his son by the daring and brilliancy of his play. Ouseley thinks he saw this incident of Shapur's recognition in a ruined sculpture near Persepolis. Nizami, another Persian poet, records a game played by the Amazons of his time. The beautiful Shirin, dear to Persian romance, played with her handmaidens against a team composed of the king and his courtiers.

After the tradition of great Iranian poetry passed, the succeeding fiction and verse found polo a romantic theme. In our most popular example, the "Rubaiyat," Omar Khayyam has definite reference to the game of kings in the quatrain quoted above. The poloist cannot miss the happiness of Fitz-Gerald's references to the "throw-in" by the referee, whose duties to-day are unchanged; to the field, which in India to-day retains the Persian name *meidan*, and is innocent of "boards" (and the "board-play" useful in crises to Mr. Whitney's team a year ago, and first introduced at Hurlingham in 1879); or to the fine sense of power and direction that makes perfect near- and off-side hitting. Skill in address to the ball was the Persian ideal, and Omar liked the symbol of a well-controlled ball. Anciently all things were equal in horseflesh: but since the pony has attained his modern price and importance, any player, backed up by Kipling's "Maltese Cat," will tell you that the pony *is* the game—though golf, cricket, and hockey are its offspring, and the Irish sport of hurling, an equestrian descendant. Polo demands of its patrons a high standard of horsemanship only rivalled by pigsticking. The ancient poets, however, ignored the pony's merits for the stick-work of the rider.

How the game was popularized in ancient times is uncertain, beyond the fact that *chugan* has been played in various forms in various countries. Probably hard-riding ambassadors were its chief missionaries; and Castiglione, had he known, would have prescribed polo for his courtier. Ouseley quotes Robert's "Cambrian Popular Antiquities" as the source for an Elizabethan MS. describing *knappen*, a game played in Pembrokeshire with several hundred on a side, mounted and foot, armed with cudgels 3½ feet long. Sir Thomas Roe must have seen polo at Agra, in 1618, during his embassy to the Court of the Great Mogul, Jahangir. Although rules always obtained, it is certain that exigencies of temperament and place wrought many variations. It was Shah Bahram who found a player wearing a coat of mail under his polo shirt, and promptly slew him.

Accounts handed down vary as to the number of players and their positions. There was a "back" or "goal-keep," whose duties, owing to the fast, open game, were flexible, if not so aggressive as those developed by Mr. Devereux Milburn. The ball was of sorts and to taste: of light wood or stuffed leather, varying from one in the Persian game to many in the Byzantine and Japanese. Many varieties of mallets were popular. Ouseley saw in a Persian illuminated MS., about 300 years old, three different shapes. Usually semi-circular and straight, transverse heads prevailed. Of rules "off-side" doubtless existed, and it is more than likely that the modern Anglo-Indian and American rules obtained. As the "Rubaiyat" suggests, the referee began play by "throwing-in"; also, as in the early Anglo-Indian game, the ball may have been placed mid-field, and both sides charged for possession, or the captains crossed sticks, as in hockey. Nearly all Persian illuminations show solid goal-posts, though an elaborate dribbling game, to test the rider's possession of the ball, was an early favorite. At least it was good practice, and applied in a goal-game, must have made passing and close-combination almost a science, which, in the commodious field 170 by 300 yards, ideal for a fast, galloping contest, must have provided an inspiring sight. W. G. Tinckom-Fernandez.

Awakening of India

THE DEVELOPMENT OF INDIAN THOUGHT UNDER THE INFLUENCE OF WESTERN IDEAS.

Matthew Arnold's well-known lines about the East watching the legions thunder past and then plunging into thought again rather understate the truth. Yet even India experiences some changes in philosophical interest; and our time is witnessing, in the East as well as in the West, a quickening and re-directing of thought which may make future generations regard it as epochal. This re-direction of thought in the East is of course chiefly due to the influence of Western science and philosophy and Western literary criticism, for though the West and the East have been in contact these many centuries, the philosophers of the Orient are only now beginning to realize that the West has anything to teach them beyond the merely practical and political. In fact, the great majority of the pundits even to-day continue to teach the Vedas and the Shastras in the way they learned them from their gurus, as the last word on all subjects really worth knowing. But the stimulus of Western thought has been felt by all the less orthodox thinkers not only of Hinduism but of the other religions of India as well.

I.

Thus the Parsees—those most "up-to-date" of Indians—feel bound as a matter of course to show that their religion is in thorough accord with "the best of modern thought." And the new formulation of Zoroastrianism resulting (at least so some of us will think) is not altogether an improvement on the antiquated ideas of the Founder. The fact seems to be that the Parsees who have read Western philosophical works are becoming very sensitive over the accusation of being dualists (what indeed could be worse?), and consequently are making over Ahura Mazda into a very proper and modern All-One, such as Zarathustra would certainly quite fail to recognize. But what of that?—for the Parsees tell us that "men of science like Huxley, philosophers like Herbert Spencer, and poets like Tennyson, might all subscribe" to this religion of theirs, "to which the best modern thought is fast approximating."* In these days Herbert Spencer is a better name to conjure with than Zarathustra, and a religion which would be "up to date" must surely be "monistic." Fortunately, however, this modernization of Zoroastrian theology has not gone much farther than the theologians, and the influence of the West upon this ancient religion, in all respects but this, has certainly been for good. It is especially to be noted in the present movement among the Parsees for the systematic education of their children in the religion of their fathers—a movement which is resulting not only in benefit to the children, but in benefit to the religion as well. For the deliberate attempt which the Parsees are making to teach their religion is naturally leading them to rationalize and purify it.

Islam, of course, secure in the purity of the Koran and its teachings, will submit to no such influence from the modern West. The movements within it are mostly self-originated, and some of them, in fact, seem curiously remote from Europe and the twentieth century. Yet Western ideas and especially missionary attack have not been without their influence on the popular theology of the Moslems. Particularly noticeable is this in connection with the views commonly maintained concerning God and man's relation to Him. I have questioned many Mohammedans on these points and find a very general insistence that God is pure spirit and has no body, and that man is free and in sinning acts against the will of God. In vain have I cited the creed of Al Ashari to the contrary: most of them have never heard of him, and they all insist that on these points my quotations from the great authority do not represent the creed of Indian Islam. And in this I find them borne out by that aggressive Mohammedan review, *Muslim India*.

For it should be understood that Islam is becoming aggressive. Not only is it arming with what intellectual weapons it can find against the attacks of Christian missionaries; it is seeking to carry the war into Africa—that is, into London, where its one professional and salaried missionary resides; and it has recently scored its first marked success, in the public conversion of Lord Headley to the "true faith"—a success which is acclaimed with great enthusiasm all over Moslem India.

II.

The renewed interest in religious thought and the general awakening of Indian self-consciousness have also had their effect upon that small but ancient religious body known as the Jains. For centuries most of the Jain scriptures have been hidden away in monasteries, guarded by conservative monks who, themselves too ignorant to read them, would allow no one else to try. As a result the laity, constantly losing in numbers to other religions have been sadly ignorant of the faith which they professed. Within the last eight years, however, a new movement has been set on foot, and many rich and generous Jains are now persuaded to turn some of the money they have been accustomed to spend upon jewels for the images in their temples to more practical purposes; and as a result a number of schools have been founded and a systematic effort is making for the discovery, publication, and translation of their sacred and ancient texts. Several Jain periodicals have also been started, a Young Men's Jain Association founded, and considerable progress has been made towards uniting the two divisions into which Jainism has for so many centuries been divided, the Digambaras and Sventaamaras. At the end of December last year an enthusiastic convention was held in Benares in which both schools joined, and in which a great deal of enthusiasm for the spread of Jain doctrine was exhibited. Reports were read and learned lectures given; but most of the speeches were of a hortatory nature, and the convention had somewhat the air of a protracted revival meeting. One of the most enthusiastic speakers, a recent convert from Hinduism, declared, amid deafening applause, that, just as there should be but one language in the world, and that the Sanskrit, so there should be but one religion, and that the Jain, for Jainism included all that was best in all other religions. At the end of the convention several large gifts for educational purposes were announced, and plans were begun for building a Jain temple and rest house in the United States.

III.

But the great thinkers of India are to be found to-day (as has almost always been the case) within the fold of Hinduism. And they, too, are feeling a new stimulus to thought as a result of Western influence. In Macaulay's time it looked as if European influence might eventually have the effect of lessening the value of the Veda in the eyes of the Indians; but the advent of Max Müller and the Sanskritists marked a new era in the appreciation of the Sacred Books of the East, and not only opened the eyes of us Westerners to their value, but kindled a new and almost fierce Veda-worship in the hearts of many an Indian. The result of this is a series of new battles by the modern pundits—Indian, English, German—on the old battlefields; and questions which to most Americans would seem absurdly remote, or at least very dead, are matters of hot daily discussion in many a study, lecture room, and monastery throughout India. What is the real teaching of the Upanishads: are they monistic or pluralistic, pantheistic or theistic—in fact, have they any one teaching at all? And the Bhagavad Gita, does it teach pantheism or theism, or both: and if both, which was the original doctrine and which interpolated? Most important of all, which is the true Vedanta? Can the monism

*Quoted with approval by Mr. Jivanji Jamshedji Modi from Samuel Long.

and illusionism of Shankara be justified either by reference to the Upanishads and Brahma Sutras or by philosophical argument? The battle is still raging and is likely to continue to rage for many a year.

One may perhaps discover a slight but growing tendency away from the extreme monism of Shankara, which up till now in northern India (and in one sense in Europe and America as well) has had no rival. Many European scholars and some of the less hide-bound of the pundits are beginning to insist that the Upanishads are far less in unison—far less monistic and idealistic—than was supposed only a few years ago. While this is true, however, it must be said that the followers of Shankara and his monism and illusionism still easily hold the field in northern India. I have talked with Sannyasis in their monasteries here in Benares, and they all insist upon the illusion doctrine—some merely because "it is written" in Shankara's Commentary, some for various philosophical reasons. There are, we are told, three kinds of reality: (1) Genuine reality which is Brahman alone, the undivided Self, the Subject without Object; (2) "practical reality," such as the material world; (3) "imagined reality"—pure illusion—such as the rope which one takes for a snake. Now "practical reality," we are assured, is really quite as imaginary and illusory as the third kind; and just as we get rid of the latter by greater insight, so we may correct and get rid of "practical reality"—the material world, the multiplicity of finite selves, the variety of human experience and of the changing and temporal, till only the knowing self remains which is identical with Brahman. But why, you ask, does this "practical," material, finite world seem to be here at all?—Ah, the Sannyasi will answer, that is mere illusion.—But whence the illusion?—Our ignorance.—And our ignorance?—Once more, illusion.

A more serious attempt at a genuine answer to the puzzle is made by the philosopher Bhagwan Das, who in his "Science of Peace" has endeavored to express the Vedanta of Shankara in terms of European thought, and to bring it into line with Hegel and especially with Fichte. The idealistic point of view being taken for granted, the objective world is made to depend upon the One Knower. The consciousness of this One Spirit consists in recognizing the illusion of the phenomenal world which it posits. With it, positing and negating form one simultaneous and timeless act. This is expressed by the logion, "I am not the not-I" or "I-this-not,"—the not-I, in other words, is posited only to be at the same time opposed and negated. Thus the One and the Many, the Changeless and the Changing are united and reconciled. But why does the One thus posit and deny at all? To this there is no answer.

IV.

Besides rekindling the interest of the Indians in their own literature, the West has had a more direct influence on the thought of the East through the introduction of the concepts of modern science. These the more advanced of the Indian thinkers have seized upon and have tried to unite with the teachings of the Veda. The result has been at times a bit fantastic, for the Indian as a rule cannot admit that the concepts of the Veda should be in any way modified; hence his method of mixture is to read modern science and Western ideas of morality and social order into the Veda. The times of the Rishis, we are assured, formed the Golden Age, and all the admitted evils of modern Indian society are due to degeneration and relapse from those perfect days. With few exceptions, the Indian scholars of to-day are as lacking in historical sense and critical skill as their predecessors were before them, and their idealization of the Indian Past is as untrustworthy as it is beautiful. The extreme limit of this sort of thing is reached by the Arya Somaj, whose attitude forms a most interesting psychological study. The members of the Somaj—if I may judge by those whom I have met—are men of learning, ability, and liberal ideas; and yet they insist that the four Vedas are literally and infallibly inspired, and that there is not a line in one of them—not even in the Atharva—that is mistaken or superstitious or primitive. There are no magic formulas in the Atharva nor any hint of polytheism in the Rik. And in fact all the discoveries and inventions of modern science were well known in Vedic times and are plainly referred to in the Hymns!

But the most systematic effort to unite ancient thought with "modern science" is due to Theosophy. Says Mrs. Besant in her "Defense of Hinduism": "In the great conflict between Science and Religion which has been waged in Europe since the sixteenth century, Religion had been steadily losing ground until the great spiritual impulse called Theosophy filled the hands of Religion with forgotten truths, and opened the eyes of Science to new realms awaiting conquest."

Yet the "modern science" which Theosophy has brought into India and injected into Hinduism, is of a sort that every reputable scientist would repudiate. And it would be difficult to assess the harm that Theosophy has done to Hinduism and the set-back it has given to the cause of real enlightenment, by teaching the Hindus to identify science with occultism. An ineradicable hankering after the occult has been the bane of Theosophy ever since its birth. One would have supposed that Richard Hodgeson's exposure of Mme. Blavatsky's tricks would have been enough to sicken the theosophists of that sort of thing, but it really had but little influence upon them. Mrs. Besant is no trickster, but she has the same longing for the superphysical that distinguished her predecessor. She is ambitious of developing telepathic powers, and in fact has become an adept (so one of her former admirers informs me) in reading the thoughts of the people in Mars. Very wisely she confines her efforts to Mars, and specializes only in long-distance telepathy. In her address at the recent Jain convention in Benares I heard Mrs. Besant state quite soberly that Manu was the father of the race: and of course she bolted all twenty-four of the Jain Tirthakaras as historical personages. The next day, at the annual meeting of the Theosophical Society she declared (with great solemnity and amid loud applause) that the Veda was eternal; that the Upanishads were brought into India by the "Toltecs" from the sunken continent of Atlantis at the time when India was raised from the bed of the ocean; and that she knew this because "occult research" had "recovered" a large part of "the ancient Toltec literature."

The influence of Theosophy upon Hinduism had a steady growth up to about a year or two ago, since when it has been suffering a rather rapid and very noticeable decline. This is due to more causes than one, but chiefly to the attempt of Mrs. Besant to force upon Hinduism a Messiah in the form of the rather common-place native boy whose father had entrusted him to her charge, and whom she had sent to England for education. Her surprising revelation that this young gentleman was the latest incarnation of the Deity carried occultism too far for even the much-believing Hindu.

V.

With this source of false science removed there is more hope for the normal development of Indian thought under the influence of Western ideas. What the outcome will be, however, it would be hazardous to predict. Indian philosophy and European science both contain much of eternal value; but just how the two can be united is a question that only the future can answer. Whatever that answer may turn out to be, however, the critical state of Indian thought to-day presents a spectacle of absorbing interest. And the answer, when it comes, will not only have its influence upon India, but will have a bearing of considerable importance upon the Philosophy and the Religion of Europe and America as well.

James Bissett Pratt.

Books and Men

THE MISAPPROPRIATION OF AUTHORS—A BEQUEST TO QUEEN VICTORIA.

Almost coincident with the publication of dispatches in the London *Times* on "The Americanization of Canada," appears "The Year-Book of Canadian Art" (London: Dent), compiled by the Arts and Letters Club of Toronto.

The reason for speaking of the two facts together will appear in a moment. For the present, let it be said that "The Year-Book of Canadian Art" is a pleasing and highly creditable volume, put forward, as one of those who are interested in it writes, to indicate that the Dominion's productions are not confined to wheat and cattle. The literature, music, painting, sculpture, and architecture of Canada are described by a score of writers. Andrew MacPhail writes of Stephen Leacock, Léon Lorrain of French-Canadian literature, George H. Locke contributes a chapter on Goldwin Smith and Sir George W. Ross, while Canadian poetry and fiction are dealt with by Newton MacTavish and Marjory MacMurchy, respectively.

The plaint about Americanization in the *Times* finds a counterpart in this book. For instance, in a chapter devoted to musical composition appears this: "The people of the United States are apt at recognizing meritorious work done by those who happen to sojourn in that country. . . . They no sooner recognize the superior craft or art of a foreign sojourner than they appropriate it, label it 'American,' and exploit it as a strictly 'American' product."

This is a perfectly natural feeling of resentment, and Americans who have seen so many of their artists and authors appropriated in just this fashion by England ought to sympathize with it. The "appropriation" is sometimes innocent enough. Perhaps many an English admirer of Whistler, and of Mr. Henry James, and Mr. John S. Sargent sincerely believes them to be Englishmen. Surely, a great many of Mr. Bliss Carman's readers are quite unaware that he is not a native of the United States—they are not really trying to steal him.

It is, however, ironical that "The Year-Book of Canadian Art" should begin with an essay on Stephen Leacock. For if there is a humorist the spirit of whose writings is entirely American, Professor Leacock is the man. No Americans will need to "appropriate" him—he has Americanized himself completely in his books. His English birth and Canadian residence must be discovered from external evidence.

Compare, for instance, his volume of parodies, "Nonsense Novels," with Max Beerbohm's "A Christmas Garland." The first is immensely funny, hilarious, in fact, and might have been written in Chicago. "A Christmas Garland" is also funny, but super-subtle. It is a higher form of parody, without doubt, but a far less amusing book than Professor Leacock's.

An extreme Anglomaniac of my acquaintance absolutely refused to see anything good in "Nonsense Novels." He listened to the sketches with a face like Buddha. Then somebody informed him of the author's English antecedents—whereupon he has continued ever since in a state of mirth at everything Mr. Leacock writes.

For his book "In Cheyne Walk and Thereabout" (Lippincott) Reginald Blunt had a mass of curious and interesting material. A district which has been the home of Sir Thomas More, of Henry VIII, of "the wicked Dukes of Buckingham," of Steele and Swift and Sir Hans Sloane, and then of Turner, Rossetti, Holman Hunt, and Whistler—to say nothing of Thomas Carlyle—is rich in opportunities for a writer like Mr. Blunt. He is quick to see the odd and bizarre no less than the charming aspects of the place, and his book is the better for dwelling on Don Saltero's Coffee House, on Dr. Dominiceti's Baths, and on the "Physick Garden," as much if not more than on the familiar spots, legends, and associations of this part of Chelsea.

The chapter on the Neilds is a case in point. How many know of Miser Neild, the son of James Neild, the prison reformer? Mr. Blunt pictures him, in his blue swallow-tail coat and gilt buttons, walking about the country to visit his estates, carrying a green cotton umbrella, and with all his baggage in a brown paper bundle. He lived an odd life, but most strange of all was what happened after his death. For when they opened his will—which disposed of about half a million pounds altogether—and had read his wish to be buried in the vault under Battersea Church, "as near unto the coffin of my dear father as the crowded state of the vault will readily admit," and the bequests to his executors, and the provision for the payment of his trifling debts, they came upon a clause which insured him celebrity for many years thereafter. This was it: "I give, devise, and bequeath all real and all personal estate which I may be entitled to either at law or in equity at the time of my death unto Her Most Excellent Majesty Queen Victoria, her heirs, executors, and assigns for her sole use and benefit, and I pray her Majesty to be most Graciously pleased to accept the same."

The Queen was pleased, and did accept it, and paid for a stained glass window to Mr. Neild's memory into the bargain.

EDMUND LESTER PEARSON.

News for Bibliophiles

WILLIAM PITTIS: THE DIFFICULTIES OF A PAMPHLETEER AND BIOGRAPHER.

I.

In the course of my work upon Defoe I have frequently crossed the trail of a certain William Pittis—the name is also found as "Pettis" and "Pettus"—who has aroused my interest, and about whom I have gathered information which seems in the main not to have been published hitherto. This I wish to give here in some detail, and I shall be indebted to any student of bibliography who will correct or supplement it.

Pittis is the subject of a short article by Miss C. Fell Smith in the Dictionary of National Biography—under his father, Thomas Pittis (1636-87), a clergyman of the Church of England—and he figures in Foster's "Alumni Oxonienses" and in the catalogues of the British Museum and other libraries. From these sources we learn that he was born at Southampton in 1674; that he entered Winchester School in 1687—Miss Fell Smith quotes Kirby's "Winchester Scholars," p. 208—that he matriculated at New College, Oxford, on August 14, 1690, at the age of sixteen; that he was fellow of his college from 1692 to 1695, graduating B.A., 1694; and that he was afterwards a member of the Inner Temple. In 1699 he addressed to Dryden an epistolary poem on the death of James, Earl of Abingdon, and the manuscript of an elegy upon Sir Cloudesley Shovel (1708) is preserved in the British Museum (Addit. MSS. 23904, f. 516). On April 25, 1706—so Hearne, not April 27, as Miss Fell Smith has it—he was sentenced by the Court of Queen's Bench to stand in the pillory and to pay a fine of 100 marks for writing "The Case of the Church of England's Memorial Fairly Stated"—not the "Memorial" itself, as Miss Fell Smith erroneously says, or any "Vindication" of that famous pamphlet, as might be inferred from Hearne's language with regard to the affair (cf. Hearne, Collections, ed. Doble I, 235-6). Nearly eight years later—December 3, 1714—he was committed to bail as the author of a tract entitled "Reasons against a War with France."

Meanwhile he had compiled, besides a tract to be mentioned later, three volumes of Parliamentary history, to wit: "The History of the Present Parliament and Convocation" (July 11, 1711—cf. the *Daily Courant*); "The History of the Proceedings of the Second Session of Parliament" (1712?), and "The History of the Third Session of the Last Parliament" (1713?). In 1715 he wrote "Memoirs of the Life of John Radcliffe, M.D.," which reached a third edition the next year, and a fourth in 1736. The authenticity of the letters printed in this book was questioned by William Singleton, Radcliffe's servant, but Pittis defended their genuineness (cf. G. A. Aitken, art. Radcliffe in the Dictionary of National Biography). From the publication of these "Memoirs" to the death of the author in November, 1724, at his chambers in the Inner Temple over the Crown Office, nothing of importance with regard

to Pittis's career seems to have been learned by the few students who have investigated the subject. My notes enable me to add the following particulars:

The catalogue of the Earl of Crawford's library shows that in 1696, the year after he seems to have given up or lost his fellowship, Pittis published "An Epistolary Poem to N. Tate—Occasioned by the taking of Namur" (London, R. Baldwin, fol. 7 pp. + 1 p.). Three years later he addressed to Dryden the "Epistolary Poem" already mentioned (London, H. Walwyn, fol. 3 ll. + 9 pp.). Under date of October 20, 1705, Hearne wrote that "Sr William Pittett" was in custody "for Writing ye Pamphlett call'd *The Bonefire* Wch reflects on ye Burning of *The Memorial*" (Collections, ed. Doble, I, 57). In the index to Hearne this "Sr William Pittett" is entered as "Pittis, T.," who figures also on pp. 235-237, and is no other than our William Pittis, punished "for Writing the Vindication of ye Memorial of ye Church of England." Near this entry Hearne wrote: "Mr. Pittis, who is prosecuted for writing in Vindication of ye Memorial was, I think, Fellow of New College, and has some Poëms in print." Hearne's gossip was sometimes unfounded, but in this instance, although it is certain that Pittis's main trouble was caused by his "Case of the Church of England's Memorial Fairly Stated," we have the additional testimony of Luttrell to confirm the statement of Hearne that Pittis was first arrested for a pamphlet protesting against the burning of "The Memorial." Luttrell's entry (Brief Hist. Rel. v. 600), under Thurs. 11 Octob. 1705, runs, "Mr. Pettis is committed for writing a half sheet call'd Fire and Faggot, being a reflection upon burning the Memorial." I have not yet found this tract under either title, but I shall later give a quotation from Pittis himself, which tends to support the conclusion that his original arrest was caused by his writing some comparatively unimportant pamphlet.

A few months after the publication of "The Case of the Church of England's Memorial," in the summer of 1705 (cf. the *Works of the Learned* for August, vii, 502—really 512), Pittis issued, "while in Durance," on November 22, 1705 (cf. the *Daily Courant*), "A Hymn to Confinement." This was stated to be by the author of "The Case of the Church of England's Memorial," but probably such interest as it aroused was due less to the prisoner's statements about himself, or to the poetical quality of his semi-pindaric effusion, than to the fact that along with his own poem the pamphleteer published, apparently for the first time, the lines written under similar circumstances by Sir Roger L'Estrange, sometimes entitled "The Liberty of the Imprisoned Loyalist" (cf. Hannah's "Courtly Poets," 1891, p. 199, where no reference is made to this appearance of the poem). Pittis stated that L'Estrange's stanzas had been given him in manuscript by a "Person of Honour," and that it was his belief that they had never before been printed. With regard to himself, he admitted that he had made bad use of his advantages, but he claimed to be thoroughly loyal. He had defended Queen Anne while she was Princess, and he was one of the first to reply to the satire upon her Majesty and her Ministers, entitled "The Golden Age." Neither of these productions seems yet to have been identified.

The only letter of Pittis's that I have found is one written to Robert Harley, Secretary of State, either late in 1705 or before the pamphleteer's trial in April, 1706: "You told me when I was under examination before you, that, rather than my necessities should make me comply with booksellers' requests in writing what they should put me upon, you would be assistant to me yourself. I have forborne as long as possible giving your honour the trouble; but, being without friends, without money, and under a very chargeable prosecution, I must beg leave to remind you that I have kept up to the tenour of your commands in writing but one little pamphlet since, which I made bold to present you bound up in blue Turkey leather, by the penny post, and is entitled *'Two Campaigns in One Panegyrical Essay'* in honour of his Grace of Marlborough.

"I pray this implicit obedience may prevail for some consideration per bearer." (Cf. Hist. MSS. Conn. Rep. on MSS. of the Duke of Portland, viii, 200—201.)

The British Museum possesses a copy of this tract (8vo, dated 1706; E. 1980.4), the long title of which shows us that Pittis included with his own panegyric an imitation of Horace, Carm., IV, 5—the "Divis orte bonis." What "consideration" the blue Turkey binding induced Harley, who loved books, to send by the messenger we do not know, but surely it is a pathetic little glimpse we get of the fallen scholar, who yet knew how he wished the offspring of his brain to appear when it should greet the bibliophile.

Luttrell tells us laconically under April 25, 1706, that the "consideration" Pittis received from the court was a fine of 100 marks and an order that he should stand three times in the pillory. But the offending pamphlet is given—erroneously it would seem—as "the Memorial Answered Paragraph by Paragraph." Boyer is more exact (cf. "Annals of Queen Anne's Reign," V, 486). He refers to "The Case of the Church of England's Memorial Fairly Stated" and shows that only two pilloryings were ordered, one on April 26, at Charing Cross, and one on the 29th, near the Royal Exchange. Before the prisoner was discharged he must furnish security for his good behavior for two years.

After undergoing the indignities of the pillory Pittis may have turned to subjects less likely to incur the displeasure of the authorities. On December 31, 1707, the *Daily Courant* advertised as just published the "Funeral Poem" on Sir Cloudesley Shovel, "Dedicated to his Disconsolate Lady, by Will Pettis late Fellow of New College in Oxford," a copy of which, as we have seen, is among the manuscripts in the British Museum. In 1709 he dedicated to the widow of another naval hero, "Nereo. A Funeral Poem sacred to the Immortal Memory of Sir George Rooke, Kt." (London, B. Bragge, fol. 16 pp.) "It must be read, because it sings of him," declared the poet, who was no prophet. Perhaps, the statement that he was personally acquainted with Rooke was inserted by the hack-writer to show that he had known better days.

In 1710 he began the parliamentary series already mentioned with a tract, included by Miss Fell Smith, entitled "The Proceedings of Both Houses of Parliament, in the Years 1702, 1703, 1704, Upon the Bill to prevent Occasional Conformity." (London, J. Baker, 8vo, 2 ll.+ 72 pp.) The dedication is signed "W. P.," and the style and high Tory tone leave little doubt that the compilation is the work of the man who published with Baker during the next three years the volumes already named. The authorship of none of these is doubtful—indeed Pittis signed his name to the second and the third—and the characters of the persons to whom he addressed his dedications may indicate that he had not entirely lost caste. Doubtless he published between 1710 and 1714, besides these four compilations, not a few tracts, but the only ones I have been able definitely to fasten upon him are "Jus Sacrum, or, a Discourse Wherein is fully Proved and Demonstrated, that no Prince ought to be Deprived of his Natural Right on Account of Religion, etc." (London, Baker, 1712, 8vo, 44 pp.), and "Dutch Generosity, and English Gratitude, Exemplified in their Treatment of each other in Peace and War: with a Particular Account of the Entertainment the Dutch gave the Royal Family in their Exile; and how far they Contributed to the Restoration: with several secret Transactions." (London, 8vo, 48 pp.) The reasons for adding these two pamphlets to his bibliography—the first of them an extraordinarily bold plea for the Pretender—will be given later.

The next publication that we can charge to Pittis is a tract in answer to Defoe's well-known defence of his patron, Lord Oxford, "The Secret History of the White Staff." Pittis's pamphlet was entitled "The History of the Mitre and Purse, in Which the First and Second Parts of the Secret History of the White Staff are fully considered, and the Hypocrisy and Villanies of the Staff himself are laid open and Detected" (London: J. Morphew, 8vo, 72 pp.). This attack on Oxford in defence of Harcourt and Atterbury was issued on November 9, 1714 (cf. the *Post Boy*), and two other editions—perhaps only reissues with new title-pages—were advertised within a week. On November 29 (cf. the *Daily Courant*) appeared "The History of the Mitre and Purse Continued—Part II," a second edition of which (8vo, 40 pp.) was advertised on December 11 (cf. the *Post Boy*). That these two pamphlets were by Pittis was asserted by the author of a rare tract entitled "The Secret History of the Secret History of the White Staff, Purse and Mitre. Written by a Person of Honour" (London: S. Keimer, 1715, 8vo, 40 pp.). But this "Person of Honour," according to Pittis himself in "Queen Anne Vindicated," a pamphlet soon to be mentioned, was no less a worthy than Daniel Defoe, who felt that he had forfeited Oxford's favor by indiscreet revelations in the original "Secret History of the White Staff," and was trying to persuade the public that all the tracts in the controversy, his own as well as those by

Pittis, were merely written by irresponsible hacks set on by mercenary publishers. Defoe's description of the methods employed by these scribblers and their hirers ought some day to be republished in full. Here we have barely room for a few quotations. He declared that Pittis, after acknowledging himself the author, had shown him—that is, Defoe, or, more strictly, the writer of "The Secret History of the Secret History"—part of the copy of the "Book, call'd the *Mitre* and *Purse*," in manuscript, "before the same was printed." He, Defoe, could also "prove, who employ'd the said Mr. *Pittis*, and what Hire, or Price he receiv'd for the Work." He mentioned this "with the more Plainness, because of a like Case, which has just now happen'd, and is made Publick by *Pittis* himself, and is as followeth; Mr. *Pittis* has been taken up for writing a Pamphlet, call'd *Reasons for a War with France*, which Book he has own'd, he was hir'd to write by that Conscientious Bookseller, so celebrated for his Honesty, Mr. *Edmund Curl* in *Fleet Street*, who was one of his Bail; upon which he gives out an Advertisement in several of the Newspapers, that a Book was preparing for the Press, entitled *Reasons against a War with France;* by the Author of the *Mitre* and *Purse*, which, as is said above, appears to be the same author, *viz.*, Mr. *Pittis*. This so evidently proves the Practice above of Mr. Curl, and his Associates, Writing for and against, that no Men can be so wilfully Obstinate, as not to be convinc'd" (pp. 22-24).

That it takes one turncoat hack to detect another was probably never better shown than in the relations between Defoe and Pittis at this time. "The Secret History of the Secret History" is written in Defoe's most idiosyncratic and unmistakable style; hence Pittis, who had been a fellow mercenary in Baker's employ, can have had no difficulty in recognizing his assailant. On the other hand, Defoe had no difficulty in determining who it was that in "The History of the Mitre and Purse" was hounding him and his patron, Lord Oxford. Furthermore, in the "Mitre and Purse" Pittis had completely unmasked himself, and had revealed the cause of his hostility to Oxford. We read in the first part of "The History of the Mitre and Purse" (p. 29) that the just fallen Prime Minister, after causing Dr. Drake to be apprehended for writing "The Memorial of the Church of England"—Harley was then one of the Secretaries of State—wheedled "another Person who was in Custody for a Triffling Matter, into a Confession of Writing the Case of the said *Memorial fairly Stated*, etc., and contrary to the most solemn Assurances, that such a Confession should be of no Prejudice to him, with bringing him to a Tryal at the Queen's Bench Bar, the consequences of which to his and the poor undone Gentleman's Disgrace, will appear upon Record." It may be added that it is not improbable that the "Trifling Matter" for which "the poor undone gentleman" was originally taken into custody was the pamphlet entitled "The Bonefire," of which Hearne made mention, or else the "Fire and Faggot" of Luttrell.

W. P. Trent.

Correspondence

MR. MELLEN'S TESTIMONY.

To the Editor of The Nation:

Sir: Sincere thanks for your striking and instructive article on Mr. Mellen's testimony as to the financial history of the "New Haven" Railroad Company.

The late Mr. Morgan was not, apparently, a student of the science of finance, although so great a banker and of such masterly capacity in executive ways. His "iron-clad reticence" suggests, perhaps, a resort to methods of procedure of which he was not proud, certainly, but which were in vogue. But "reticence" is the natural and usual characteristic of such vast autocratic power as nature endowed him with. And as between his profound belief in unification, as distinct from segregation (with its inevitable return to the competitive principle), the writer's sympathy is assuredly with him. If the Trusts have shown themselves a menace to the community—as they surely have—yet most amply are they now supervised from Washington. And this new (and most rightful) assumption of national power should, by good right, speedily and radically modify this aggressive campaign of "segregation." The necessity for it is being obviated—the path for a really beneficent habit of vast coöperation is being made plain. Mr. Morgan, so far from seeking personal gain, would seem to the writer a master idealist in his plan for unification in New England. As contrasted with the criminal schemers of Wall Street, engaged in wrecking properties "for what there is in it," he stands on a pedestal of austere virtue.

Mannering.

Hartford, Conn., May 31.

A REJOINDER REJOINED.

To the Editor of The Nation:

Sir: Since the subject is one of vital concern at the present time, I venture a word of reply to the rejoinder of E. M. H. on "The Constitutional Power of the Courts," printed in the *Nation* of June 4.

As to the first paragraph in the article, I am quite willing to submit to the readers of the *Nation* whether it covers at all the point made in my article of May 14. The passages from the Constitution *are* "the basis of the argument." The argument itself is based upon a train of historical events that helps us to interpret the meaning of those passages. A few such events were mentioned in my first article and have been entirely overlooked by E. M. H. in both of his replies.

And now to come again to what E. M. H. rightly insists is "the chief point." Unfortunately he does not mention at all the statement to which I objected and which I quoted, but rather quotes another sentence that was used much earlier in his former communication and was much more guarded. To recall the real issue I quote again his statement that "nowhere at the time the Constitution was framed was there a judiciary endowed with such a power."

I now submit again that the plain meaning of this statement, especially if it is to have any bearing on the historical problem involved, is that the custom of reversing unconstitutional laws was unknown at the time the Constitution was drawn up. On the contrary, that power had been exercised in several States, as E. M. H. admits in his last letter.

Because the exercise of such a power was well known at the time the Constitution was drawn up and in the light of many other historical facts, some of them mentioned in my first letter and many more stated by the authorities cited in my second letter, most people will continue to look askance at those who would contend that our whole judicial system has been building for over a century upon the basis of a flagrant usurpation.

Rayner W. Kelsey.

Haverford College, Pa., June 4.

"THE CONSTITUTIONAL POWER OF THE COURTS."

To the Editor of The Nation:

Sir: It is well to remember that a Supreme Court with power to declare laws unconstitutional is not without precedent, as is pointed out by a writer in the *Nation* of May 14. It is even better to remember and to insist upon the fact that the framers and ratifiers of the Constitution intended that the Supreme Court should exercise this power.

Madison, in his notes on the Federal Convention, reports several discussions of the subject. Mercer ("Madison's Journal," Hunt ed., Vol. II, p. 73) "disapproved of the Doctrine that the Judges, as expositors of the Constitution, should have authority to declare a law void." On the same page is noted Dickinson's opposition to the idea. Elbridge Gerry (*ibid.*, Vol. I, p. 69) declared that judges would decide on the constitutionality of laws as they did in the States. James Wilson (*ibid.*, Vol. II, p. 18) stated that the courts, as expositors of the Constitution, could set aside laws. It is evident that the point was understood by the framers, and that they intended to confer the power which the Federal courts exercise.

When the instrument was referred to the States, Hamilton wrote on the subject in the *Federalist*, LXXVIII:

> The interpretation of the laws is the proper and peculiar function of the courts. A Constitution is, in fact, and must be regarded by the judges, as a fundamental law. It therefore belongs to them to ascertain its meaning as well as the meaning of any particular act proceeding from the legislative body. If there should happen to be an irreconcilable variance between the two, that which has the superior obligation and validity ought, of course, to be preferred; or, in other words, the Constitution ought to be preferred to the statute; the intention of the people to the intention of their agents.

In the Virginia convention John Marshall asserted ("Eliot's Debates," Vol. III, p. 533) that if Congress made a law "not warranted by any of the powers enumerated, it would be considered by the judges as an infringement of the Constitution which they are to guard. They would not consider such a law as coming under their jurisdiction. They would declare it void."

James Wilson had sat in the Federal Convention, and, as we have seen, had there expressed his views on the point at issue. Now he was in the Pennsylvania Convention, leading the fight for ratification. His statement on the question is explicit (McMaster and Stone, "Pennsylvania and the Federal Constitution," p. 354):

> If a law should be made inconsistent with those powers vested by this Instrument in Congress, the judges, as a consequence of their independence, and the particular powers of government being defined, will declare such law to be null and void. For the power of the Constitution predominates. Anything, therefore, that shall be enacted by Congress contrary thereto will not have the force of law.

The expressions noted were easily found in a search of less than an hour. I have no doubt that others equally convincing would reward continued investigation. These are enough to prove the point I am making. The fact itself cannot be urged too frequently or too strongly. The Federal courts did not arrogate power to themselves. "The Fathers," profiting by the experience of the colonies and of the States, purposely provided the courts with the function of annulling unconstitutional laws. The point was clearly understood—opposed and defended with vigor. So far from the power not being conferred, it was actually urged as an objectionable feature. In the State conventions, delegates with a fresh mandate from the people to ratify the instrument heard the question argued, and ratified with a full realization of what it meant. The annulling power of the courts rests upon the deliberate intention of the makers of our fundamental law.

ROBERT CARTER RANKIN.

Cambridge, Mass., May 16.

ULPHILAS.

TO THE EDITOR OF THE NATION:

SIR: Prof. Leo Wiener severely assails, in the *Nation* of May 7, what he asserts to be some present-day "philological fallacies." I am not able to judge the first one, which refers to Romance philology, but I cannot suppress my decided skepticism in regard to his second theory. Professor Wiener disagrees with the general belief that Ulphilas was the author of the Gothic Bible translation, and assigns that work to some West-Gothic translator in Southern France at the end of the eighth century. He promises all the critical apparatus in a series of volumes which he is preparing for the press, and alludes to a mass of Provençal words, and even a Spanish and an Arabic word, that he found in Gothic.

Germanic philologists will expect his publications with great interest, but, meanwhile, it must be stated that the second and third reasons that the author offers as a taste of what he has in store for us are utterly unsatisfactory. Even assuming the connection of Gothic *dulths* with Latin *indulgere, (in)dultum* to be correct, notwithstanding the difficulties that arise from the correspondence of Gothic *th* with Latin *t*, his contention would be doubtful, to say the least, according to his own statement, that the connecting idea of these words was formed after 367, and, therefore, the time allotted to Ulphilas to become acquainted with them (about fourteen years) was too short.

The next etymology, however, is utterly beyond the limits of reasonable possibility. The author explains Gothic *skulan* as a loan word from late Latin *culca*, "scout." The idea of such an explanation for a preterite-present, *i. e.*, for a verb of one of the oldest types of conjugation and one which is essentially the same in all Germanic languages, is grotesque. As to the third and last of Professor Wiener's reasons, *viz.*, that the corruption of Greek *σπουδαῖος* into Gothic *siponeis* required several centuries, and, therefore, the end of the eighth century was to be assumed as the date of the Gothic Bible, the reader must find it truly remarkable that this is asserted in the same article in which the wonderful preservation of the language of the Goths, after at least six centuries of migration and three centuries of life among Romanized people (if we were to accept Professor Wiener's statements), has been so entirely lost sight of.

E. PROKOSCH.

The University of Texas, May 18.

TO THE EDITOR OF THE NATION:

SIR: No better illustration is needed than Mr. Prokosch's letter to prove that my contention as to a philological fallacy in Gothic is correct. A theory which is based on belief only is fallacious. Mr. Prokosch adduces no proof that Auxentius was at fault in failing to say something about Ulphilas's translation of the Bible; he simply knows it to be a fact that Ulphilas wrote it, because it is a "general belief."

I adduced three groups of words in order to prove historiologically, not philologically, that Ulphilas could not have used them in his day. To the first, Mr. Prokosch objects, because *dultum* cannot give *dulths*, since Gothic *th* being equated to Latin *t* raises difficulties. This is interesting indeed. Mr. Prokosch denies the accepted correspondence of the two sounds (Gothic *wairthan*, Latin *verto*), and yet invokes his orthodox philology to prove my case "utterly unsatisfactory." But as *th* and *t* constantly interchange in Gothic, *dulths* may as well stand for *dults*, so after all, Mr. Prokosch might have had no trouble about the matter, if he had known his Gothic phonology more thoroughly. He objects to *dulths* on the ground that, according to my statement, fourteen years would have been ample time for the word to have got into the translation of Ulphilas. But I maintained nothing of the kind. I said that *indulgere*, in the particular sense, began to form in the time of Ulphilas, that *dulgere* was not recorded until 571; consequently, it is not fourteen, but minus one hundred and ninety, years, that Mr. Prokosch is operating with.

In the same breath, he objects to Gothic *skulan* from Latin *culca*, because only four hundred years had passed since the first recorded appearance of *culca* and *skulan*, if the Bible was written at the end of the eighth century. The trouble is that Mr. Prokosch knows, that is, he shares the "general belief," that the Germanic preterite-present was created in time immemorial. If the strong verb *schreiben* in German is represented as the same strong verb in the Northern languages, does this prove that Latin *scribere* entered into Germanic before the two separated? Why could not the Gothic *skulan* have been borrowed by the other Germanic languages, preterite-present and all? This is exactly what has happened, as I shall show when I get to it.

I cannot comprehend Mr. Prokosch's objection to *siponeis*, because the sentence as it stands makes no sense. Possibly he means that *siponeis* cannot be derived from *spodeus*. If so, I should like to direct his attention to the fact that in the *Skeireins* the reading is not *siponeis*, but *sponeis*, which Massmann emendated to *siponeis*. Nothing has contributed so much to the philological fallacy as these emendations and normalizations, for they disguise the possible truth. Now, *sponeis* and *spodeus* are no further apart than *plapja* and *platea*, yet sufficiently apart to have two centuries between them.

To whet Mr. Prokosch's appetite until my book appears, I will give here a partial list of Burgundian French words in the so-called Gothic Bible which Ulphilas could only have known if he rose from the dead four centuries after his physical demise. Such words are: *agis, aglaitci, agls, ah, ahma, aibr, asans, blotan, bloth, daupjan, dulgis, dulths, faihu, filhan, gafrithon, gretan, idreigan, lisan, marzjan, mathl, missa-, ogan, sneithan, skatts, spilda, spill, sunja.* I will, however, caution Mr. Prokosch that it will not do for him to hunt these words up in Old French dictionaries. I quote for the purpose from 250,000 documents, of the existence of which Germanic scholars know precious little.

LEO WIENER.

North Sandwich, N. H., June 1.

THE WORLD'S FAIR ART BUILDING.

TO THE EDITOR OF THE NATION:

SIR: In the park which was once the World's Fair ground, in Chicago, is still standing the Art Museum, now used as the Field Columbian Museum for scientific exhibits. The building, while solid inside, has a covering of staff instead of marble, and as that is going to pieces, the building is to be torn down—a new scientific museum is now in process of building in the city. But this Art Museum is one of the most beautiful pieces of architecture that have ever been constructed. Is there not some means by which it can be preserved, or reproduced? Could it not, for instance, be rebuilt in San Francisco, for the coming Exposition, and of permanent material? The main façade is all that is essential—it is not necessary to reproduce the immense building as a whole—but the structures that bear the façade are, of course, enormous by themselves. To rebuild its exterior on its present site would be the least expensive plan, but on its present site it serves no very useful purpose—it is too far from the centre of the city. It is not likely that Chicago will do any-

thing about it; but if Chicago does not, a national organization might well be formed to reproduce this magnificent specimen of American genius. If it should be actually torn down, the architect's plans would no doubt be preserved somewhere, but no one would ever realize, from plans, how beautiful the structure is, even in its present state of decay. Saint-Gaudens declared it to be the most beautiful piece of architecture since the Parthenon. It is not too soon (nor is it too late) to begin a movement for its perpetuation. It would be a lasting misfortune if it should not be preserved.

CHRISTINE LADD FRANKLIN.

Chicago, May 18.

THE CHURCH PEACE UNION.

TO THE EDITOR OF THE NATION:

SIR: May I ask the hospitality of your columns to make known to the clergy of the United States that the Church Peace Union has authorized me to offer to the churches five thousand dollars ($5,000) in prizes for the best essays on international peace. The sum is apportioned as follows:

(1.) A prize of one thousand dollars ($1,000) for the best monograph of between 15,000 and 25,000 words on any phase of international peace by any pastor of any church in the United States.

(2.) Three prizes, one of five hundred dollars ($500), one of three hundred dollars ($300), and one of two hundred dollars ($200), for the three best essays on international peace by students of the theological seminaries in the United States.

(3.) One thousand dollars ($1,000) in ten prizes of one hundred dollars ($100) each to any church member between twenty (20) and thirty (30) years of age.

(4.) Twenty (20) prizes of fifty dollars ($50) each to Sunday school pupils between fifteen (15) and twenty (20) years of age.

(5.) Fifty (50) prizes of twenty dollars ($20) each to Sunday school pupils between ten (10) and fifteen (15) years of age.

In the accomplishing of the desired results among the church members and the Sunday school pupils, and in the awarding of the prizes, the Church Peace Union will have to depend largely upon the assistance which the pastors can render. It is earnestly hoped that the pastors will make the announcement of these prizes in all of the churches and Sunday schools of the United States. In the competition for the prizes, only one essay should be sent from each church and from each Sunday school, the essays of the local church and Sunday school being read by a local committee, and the one winning essay forwarded. All essays must be in by January 1, 1915.

Further particulars about these prizes, as well as literature to be used in the preparation of the essays, and lists of books can be obtained by addressing the secretary of the Church Peace Union, Rev. Frederick Lynch, D.D., 70 Fifth Avenue, New York City.

FREDERICK LYNCH.

New York, June 5.

Literature

REALPOLITIK.

Imperial Germany. By Prince Bernhard von Bülow. New York: Dodd, Mead & Co. $3 net.

It is not every German ex-Chancellor that gives to the world pungent memoirs. Perhaps some day we shall have from or about Prince Bülow, too, illuminating "Gedanken und Erinnerungen," with the true truth about the causes of his retirement; meanwhile, being still below the patriarchal age, and perhaps looking forward to a future, as well as back upon a past, he writes, dispassionately and in the main cautiously, a treatise on "Imperial Germany" that is neither history, nor prophecy, nor *apologia pro vita sua*, but yet is a little of all this. In form, it is a series of detached chapters or paragraphs on a large variety of political subjects, not unlike, both as to matter and manner, a Chancellor's manifesto before the Reichstag. The whole, in spite of the labored comprehensiveness imposed upon the author by the circumstances under which he wrote, possesses considerable interest and a certain historiographic value. What is offered now in an English translation was in the original but part of a large work, by various hands, on "Deutschland unter Kaiser Wilhelm II," where it appeared under the heading of "Deutsche Politik."

Prince Bülow writes as an admiring disciple of his great predecessor. Like Bismarck, he now and then takes his audience into his confidence. He speaks with perfect frankness of certain unpleasant facts. Thus we read about German "colonization" among the Poles of East Prussia: "Our policy and the work of colonization must be considered to have failed"; and he admits that "the introduction of our last Army Bill, which had its origin in the change of situation effected by the Balkan War, shows that Turkey's collapse was a blow to us." Personally, he adds, "I never had any illusions about the limits of Turkish ability to act with effect." We seem to hear Bismarck's voice in this reference to Japan: "It is not to our interest to have that eminently capable and brave nation for an enemy. On the other hand, we have no intention, of course, of allowing Japan to use us as a catspaw"; and there is perhaps more than a touch of Bismarckian frankness in such a statement as this (in the chapter on Party Platforms): "I never took the reproach of lack of political principle tragically; I have even, at times, felt it to savor of praise, for I saw in it appreciation of the fact that I was guided by reasons of state." Herr von Bülow does not conceal the fact that he is, first and foremost, a *Realpolitiker.*

Anglo-German relations, as is usual in works on modern Germany, occupy a prominent place in the volume before us. The subject is closely interwoven with the naval requirements of the Empire, and Prince Bülow is a most outspoken advocate of that policy to which William II "devoted all the power of the throne and all the strength of his own personality." The motives which actuate Germany in her relations with England have rarely been laid bare with such nonchalant unreserve:

> The fleet was to be built while we maintained our position on the Continent, without our coming into conflict with England, whom we could as yet not oppose at sea, but also while we preserved intact our national honor and dignity. Parliamentary opposition, which at that time was considerable, could only be overcome if steady pressure were brought to bear on Parliament by public opinion. In view of the anxious and discouraged state of feeling that obtained in Germany during the ten years following Prince Bismarck's retirement, it was only possible to rouse public opinion by harping on the string of nationalism and waking the people to consciousness. A great oppression which weighed on the spirit of the nation had been occasioned by the rupture between the wearer of the Imperial crown and the mighty man who had brought it up from the depths of Kyffhäuser. This oppression could be lifted if the German Emperor could set before his people, who at that time were not united either by common hopes or demands, a new goal towards which to strive, and could indicate to them "a place under the sun" to which they had a right, and which they must try to attain. On the other hand, patriotic feeling must not be roused to such an extent as to damage irreparably our relations with England, against whom our sea power would for years still be insufficient, and at whose mercy we lay in 1897, as a competent judge remarked at the time, like so much butter before the knife. To make it possible to build a sufficient fleet was the foremost and greatest task of German policy after Bismarck's retirement, a task with which I also was immediately confronted, when on June 28, 1897, at Kiel, on board the Hohenzollern, I was entrusted by his Majesty the Emperor with the conduct of foreign affairs, on the same day and the same spot on which twelve years later I handed in my resignation.

The reference to Parliamentary opposition is significant. A twelve years' struggle against party tactics has stiffened Bülow's natural conservatism into rigidity. Inheriting Bismarck's latter-day bitterness towards Radical Socialism and his lifelong distrust of Parliamentary freedom, he goes beyond him in his belief that both can be bent in obedience to the Imperial will, which, according to the gospel of the faithful, is tantamount to the national good. "From first to last during my term of

office," he writes, "I recognized that the Social Democratic movement constituted a great and serious danger. It is the duty of every German Ministry to combat this movement until it is defeated or materially changed." He admits that suppression by force "is no longer feasible," and is sufficiently enlightened to recognize in the freedom of the press, and the right to form associations and hold meetings, "safety-valves which are useful and have become indispensable"; but he nevertheless regards the Social Democratic party, as reinforced by the ranks of Liberalism, not as a political opponent to be vanquished by argument and votes, but as a public enemy to be crushed by all the means at the disposal of the Crown.

Prince Bülow cherishes no illusion as to the relations between Germany and France. "The irreconcilability of France is a factor that we must reckon with in our political calculation." He concedes, however, that "it is a proof of a lively sense of honor if a nation suffers so keenly from a single injury to its pride that the desire for retribution becomes the ruling passion of the people." An interesting paragraph emphasizes the distinction between France and England in their attitude towards Germany:

England is certainly seriously disquieted by our rising power at sea, and our competition which incommodes her at many points. Without doubt there are still Englishmen who think that, on the principle expressed by Montaigne, "que le dommage de l'un est le profit de l'autre," if the troublesome German would disappear from the face of the earth, England would only gain by it. But between such sentiments in England and the fundamental feeling in France there is a marked difference, which finds corresponding expression in politics. France would attack us if she thought she were strong enough; England would only do so if she thought she could not defend her vital economic and political interests against Germany except by force. The mainspring of English policy towards us is national egoism; that of French policy is national idealism. He who follows his interest will, however, mostly remain calmer than he who pursues an idea.

The rhetoric of Prince Bülow in all this bears a curious resemblance to that of Bismarck, who used to indulge in "large views" and dismal interpretations of world politics whenever the National Liberals in the Reichstag became particularly troublesome and the free-traders exposed his economic vagaries. The resemblance is heightened by Bülow's own economic crudities, to which the chapters on Industry and Agriculture, The Protection of Agriculture, and Agriculture in Time of War bear ample witness. There is the familiar harping on the agrarian tariff string, the old sneer at professorial wisdom, in the assertion that "more can be learned from personal intercourse and from life than from books, however profound," the same plea for strong armaments as the ultimate cause of agricultural and industrial prosperity.

Bülow's *Realpolitik* is broad enough to include Germans everywhere, and frank enough to brush aside whatever claims other nationalities might urge in countries where the Germans are only one of the elements in the nation. How is it, he asks, "that in the struggle between different nationalities the German has so often succumbed to the Czech and the Slovene, the Magyar and the Pole, the French and the Italian, and that he is still at a disadvantage to-day?" The answer is:

We are not a political people. Not that we ever lacked penetration and understanding for the sequence of political things, or for the essence and association of the religious, moral, social, legal, and industrial forces which condition politics. We have always possessed this political knowledge to the same extent as our contemporaries, and even to a greater. We did not either fail to realize our own peculiar political shortcomings. But what we did lack, and what we still often lack, is the art of proceeding from insight to practical application, and the greater art of doing the right thing, politically, by a sure creative instinct, instead of only after much thought and considerable cogitation.

If this is rather vague as to details, the meaning is obvious enough. The German everywhere must learn to assert himself, though not, as Bülow readily admits, at the expense of loyalty to the adopted country. In the United States, in particular, attachment to the fatherland is perfectly consistent with American patriotism, and Bülow believes that, since the formation of the "Deutsch-Amerikanischer Nationalbund" —whose importance he greatly exaggerates—the Germans in the United States "are animated more and more by the desire to maintain and encourage a close connection" between the old home and the new. It is fair to add that Bülow's references to this country are thoroughly sympathetic and appreciative. Indeed, with all the frequent rattling of the sabre, the ex-Chancellor is far from identifying himself with German chauvinists à la Bernhardi, and he more than once holds England up to the admiration of his countrymen.

Nevertheless, the keynote of the entire volume is the expressed conviction of Germany's supremacy in most of the important manifestations of the human intellect. "We have achieved great things in all the sciences and arts; the greatest philosophers, the greatest poets and musicians are Germans." Perhaps it is timely not to allow the oft-repeated phrase that Germany has produced the greatest poetry of all time to go unchallenged. Hermann Grimm has lent this assertion the authority of his name, in his characterization of Goethe's "Faust" as "the greatest work of the greatest poet of all times and all nations"; yet we have the greater authority of Goethe himself to the contrary. "Tieck," he said to Eckermann, "is a man of great talent, and no one can be more sensible of his great merits than myself, but it is a mistake to raise him beyond his own height and place him on the same level with me. I can say so plainly, for it matters nothing to me, inasmuch as I have not made myself. I should act similarly if I compared myself with Shakespeare, who also did not make himself, but who is nevertheless a being of a higher order, to whom I look up with reverence."

Germany and her literature are great enough to dispense with vainglory, and her patriots may profitably ponder the saying of a Frenchman, the wise Sainte-Beuve: "I should wish the lecturer dwelling on the beauties and the grandeur of our literature and national history to guard against repeating what is so constantly said, in colleges and even in academies on solemn occasions: that the French are the greatest and most sensible of all nations, and our literature the greatest of all literatures. I should wish him to content himself with saying that it is one of the finest, and that the world did not begin and does not end with us."

CURRENT FICTION.

The Titan. By Theodore Dreiser. New York: John Lane Co.

Mr. Dreiser continues his notable study of the predatory genius of the market introduced in "The Financier." The present scene of operations is Chicago of the eighties and nineties, where gas and street railways spelled golden opportunities. Cowperwood, who in true outlaw fashion establishes and maintains himself in the field by sheer craft and audacity, remains from first to last an interloper, waging his campaign singlehanded against the coalition of local capitalists. The spectacle has so fascinated Mr. Dreiser that he has turned Roman historian, sketching in every figure of any importance in this fight for plunder, following all the moves and countermoves with smiling pagan veracity. Witness the protestations of the two ward leaders who had sold out to the enemy everything but their own seats in the City Council:

"Look at meself! I only won by 300 votes," archly declared Mr. Kerrigan. "By God, I almost lost me own ward!"

Mr. Tiernan was equally emphatic. "The police was no good to me," he declared firmly. "They let the other fellows beat up me men. I only polled 6,000 . . ."

and the ferocious ultimatum of Cowper-

wood in parley with his enemies who have thought to take him unprepared on the eve of a financial crisis:

"If you open the day by calling my loans, I'll gut every bank from here to the river."

A whole epoch of American history could be reconstructed from these two incidents alone; its end, too, foretold from the night when a formidable army with banners camped round about the City Hall while boodling aldermen inside, heckled by a galleryful of resolute constituents, reluctantly voted down the fifty-year renewal of Cowperwood's franchises. For it is not the superior strength of his antagonists or any weakening of his own powers that finally determines this battle of giants, but a change of popular temper so profound as to mark the dawning of a new social era. So much for the application of evolutionary principles by our social historian.

In this volume, however, the emphasis is no longer meant to be upon Cowperwood's business operations, but upon his self-realization—rapacity is a plainer word—in quite another line. "'I satisfy myself,' was his private law," and the consistent individualist must be expected to satisfy himself with many women. These appear in due succession, this one requiring several chapters, that one accounted for in as many paragraphs, a half dozen others listed and disposed of in a line apiece—maids and matrons of outward respectability, all too willing to be properly classed as victims. Mr. Dreiser, who seldom understands when the way to completeness is through elimination, has felt obliged to include them all in order to illustrate authentically the promiscuity of the man who "had little faith in women aside from their value as objects of art," and at the same time can afford to cultivate a very fine taste. It is a pity, since many readers are sure to judge the book entirely by their own disposition towards episodes of this character, whereas what Mr. Dreiser offers to our contemplation is in no sense a rake's progress, but the detailed process of the ripening of appetite into taste.

After all, the whole story lies between two women—the wife who had been the exuberant mistress of his youth and the fastidious girl whose exquisiteness enchants the experienced connoisseur. Aileen, who in her day has satisfied completely his capacity for sensual passion, is outgrown as she ages. To her the desertion is fatal. Her splendid animal vigor, her emotional vehemence and lavishness—all that had made her acceptable and loyal—now conspire to her undoing and contribute to her degradation.

Berenice understands him: "His wife had not kept pace with him, or, rather, had not eluded him in his onward flight—had not run swiftly before, like a winged victory. Berenice reflected that if she were dealing with such a man, lines of care and disappointment should never mar her face." Hers is a nature fit to cope with his, a faculty of calculation to match his own. Caught in the net of her own sordid necessities, she can maintain her prestige, and make her compromise with fate a little disdainfully, with her eyes wide open. She comes to him in the hour of his defeat, instinctively choosing the occasion that will enhance her value, when her yielding will be condescension, not capture. So in this direction, too, we finally come to the limits of individualism, and here we leave him, taken at last in the toils of "a personality which he cannot gainsay."

Mr. Dreiser is no longer, as in "The Financier," an altogether scientific analyst rejoicing in the striking exemplification of a natural law in an unusually fine specimen. He has become more the interpretive philosopher. And his conception of a nature emancipated from fear of consequences by its own exceptional capacities, and maintaining itself at the expense of others, in defiance of the social order, a triumphant though lonely outlaw, would have excited a lesser moralist to indignation and an anxious haste to see justice done.

What a Man Wants. By Charles Marriott. Indianapolis: Bobbs-Merrill Co.

Will some one please tell us why it is necessary to change the titles of English novels for American consumption? Mr. Marriott seems to have called this story "Subsoil." "What a Man Wants" is undoubtedly more catchy, but it happens to mean very little in connection with the narrative, which has to do rather with what a man ought to want—namely, to get beneath the surface of life and art, to the bottom of things. The last sentence in the story is only one of a hundred insisting upon this duty: "There's always new subsoil being turned up, and we can at least help to keep it sweet and wholesome."

Mr. Marriott again has something to say. When we find ourself confronted by a painter-hero, we sigh perhaps. The famous temperament again? The handsome and frowsy and irresponsible waster of paint and women? The fear is groundless; that person does appear in the story, but is merely, in a mild way, the villain, with barely a speaking part. Our painter is of sturdier sort, with a natural liking for decency, and a consequent contempt for long hair, velveteen, and the code apart. His love of order and gentle living have ranged him at the outset with "the best people," and we find him in the parlous state of fashionable portrait-painter, engaged to marry a girl of society. Follow his awakening to the hollowness and conventionality of his work, his new birth of will and purpose, his loss of prosperity, and finally, of his betrothed. Meanwhile, another woman has crept into his life, a woman in full sympathy with his new work, and, as it seems, born to be his mate. The irony of the thing is—and it comes as a shock to the reader—that the frowsy nincompoop with the temperament has lounged his way into the hearts of both the women Hugh Sutherland might have married. It is only an irony, not a tragedy; for Sutherland, as hapless Loveday sees, needs all himself for his work: "There are some men that no woman ought to have," and this man's escape from her half reconciles her to her own profitless folly. A real woman—more real, perhaps, than Sutherland is as a man.

"Unto Cæsar." By Baroness Orczy. New York: George H. Doran Co.

This is an unsuccessful example of the historico-romantic novel. The scene is Rome in the reign of Caligula. The author is lavish with local color, yet so ill-informed that she supposes "a few legions" would amount to less than a thousand men, and that a Roman warship could be carried across Gaul by "sixteen stalwart barbarians." The hero and heroine are, of course, impossible beings. Taurus Antenor, prefect of Rome, is in love with the Emperor's beautiful cousin, Dea Flavia. He is led by Christianity to such a pitch of Quixotism that on various occasions he exposes himself to almost certain death to save his worst enemies, and finally refuses the empire and the love of his mistress out of respect for the command, "Render unto Cæsar the things that are Cæsar's." The style is floridly rhetorical, rejoicing in such words as "bousculading" and "plit."

Life Is a Dream. By Richard Curle. New York: Doubleday, Page & Co.

To read four or five of the nine short stories in this volume is to be impressed with the writer's obvious disqualifications for the form as Americans know it; and, at the same time, with the truth and naturalness of his little slices of life. Constructively, his tales want imagination, plot, surprise; there is scarce a situation in the lot of real dramatic quality. All, however, have merit of style and unity of theme, and shadow forth a character of convincing vividness. One is the story of Old Hoskyns, who cherishes for years a dream of far travels, and when finally he musters his courage to ask for a furlough from the office, is pathetically convinced that he is a doddering old fool with an empty whim in his head; another of little George, who, condemned to appear at a garden party in a blue velvet suit, tears it up and runs away, to be carried sleep-

ily home at dead of night by scared and penitent parents; another of Reeves, who resided for fifteen years on a tropical island, took the steamer for England in high jubilation at the thought of a Christmas at home, and was so overcome by loneliness and sense of exile on seeing the familiar lights of Southampton that he resolved to take the next packet back; another of a book-collector who falls in love with a young woman interested in the sale of books at auction, invites her to appraise his library in order to continue his courtship, and presses it successfully over his first editions. In all these there might be much emotional stress, if there were profound analysis; but the narrative is sober and of objective, unvarnished quality. .

THE BISHOP OF HIPPO.

Saint Augustin. By Louis Bertrand. Translated by Vincent O'Sullivan. New York: D. Appleton & Co. $3 net.

M. Bertrand's life of St. Augustine attracted so much attention when it appeared in the *Revue des Deux Mondes*, in the course of the year 1913, that a translation of it into English was as much expected as it was desired. Mr. O'Sullivan's version is close and accurate, fitting the original like a glove. It is readable, too, and for the most part fairly idiomatic; but somehow the flavor of the French seems rather to have evaporated in the transition, as is so often the case. Occasionally he errs from over-familiarity, as when he reproduces M. Bertrand's description of the epoch, "féconde en aventuriers de grande envergure," as "prolific of daring and high-flying adventurers"; less seldom he is caught by the snare of etymological sound, as when he turns "âmes délicates" into "delicate souls."

But the absorbing interest and some of the charm of the original narrative remain intact. The life of the great champion of Christianity against a reluctantly dying civilization, the creator of autobiography and of the poignant romantic style which literature has never since forgotten, the ardent soul who made his emotions the deepest spiritual nurture of many generations of men—such a life could not be dull under any hand, and, in fact, we already possessed a good popular biography from Mr. Joseph McCabe, written without the anti-Catholic bias which might have been expected from that bitter pen. But Mr. McCabe's work has nothing like the art and the human insight which distinguish M. Bertrand's almost passionate pages. From the first paragraph, bringing before us Thagaste, the birthplace of Augustine, with its "little streets, quite white, which climb up to clay-formed hills deeply furrowed by the heavy winter rains," we are in the guidance of an author who knows every foot of the African and Italian soil once trodden by the Saint, and who has made the people of antiquity live again in his imagination. And to the very last paragraph we feel that our modern interpreter writes in the spirit of Augustine's first biographer, with whose words the book closes: "Pray for me and with me, that I may try here below to follow in the steps of this peerless man, whom, by God's goodness, I have had the happiness of living with for such a long time." It would not be honest to say that M. Bertrand never stretches his documentary rights. Conjecture sometimes takes the place of knowledge, without giving the reader fair intimation of the line where one ends and the other begins; as, for instance, in the attempt to revivify Augustine's father, Patricius, who might well enough have been left in the obscurity really surrounding him. These are the faults of enthusiasm, and will trouble only the very critical reader. The one serious objection to them is that they throw a little too much of the modern atmosphere of sentimentality about the manners of the age.

Perhaps the most interesting chapter is that which gives an account of Augustine's life at Cassicium, not far from Milan, whither he went after his conversion to rest in the country house of a friend. Some of the talks of the master with his mother and pupils were taken down at the time in shorthand, and these, with the "Soliloquies," enable the biographer to reproduce the friendly ways of the little group with charming precision. There are not many things in history more beautiful than this interlude in Augustine's days between the anxious inner conflict of his conversion and the hard fighting that came upon him as bulwark of the church. "Let us remark in passing," says M. Bertrand, with some justifiable exaggeration, it may be, "that this is the last time, before those centuries which are coming of universal intellectual silence or arid scholasticism—the last time that high questions will be discussed in this graceful light way, and with the same freedom of mind. The tradition begun by Socrates under the plane-trees on the banks of the Ilissus is ending with Augustine under the chestnuts of Cassicium."

M. Bertrand has succeeded notably in what was evidently his main design, the endeavor to reconstruct a sympathetic image of a man, of like mind with ourselves, living in an age which, in its conflict of religious ideals, shows certain striking resemblances to our own. Of Augustine's philosophical opinions and dogmatic contentions he has little to say, and that little not always well-grounded. The reader who is looking primarily for such discussions may be warned away; and, indeed, M. Bertrand, without lessening the human character of his work, might well have been somewhat more precise and incisive in regard to the Bishop's battles against Pelagianism and Donatism and the other fierce heresies of the day, which, after all, under their cortex of hard words, touch very deep issues of mortal conduct. Even more misleading, perhaps, is the over-emphasis placed on the Platonic side of Augustine and the slurring over the Manichæan influence which was perpetuated through his theology. "He was this [a Platonist] by nature," observes M. Bertrand. "His Christianity will be a religion all of light and beauty." Such a statement, in the opinion of this reviewer, by its one-sidedness profoundly misrepresents the real office of Augustine in the evolution of human thought and emotion. There was shadow that went along with the light. The great opportunity of M. Bertrand was to show how the dualism of Plato, in passing through the hands of the Bishop of Hippo, took on a deep tinge of the dualism of Mani. Here subtle distinctions are needed, and these the author of this otherwise excellent book has failed to make.

GEORGE HAVEN PUTNAM.

Memories of My Youth, 1844-1865. By George Haven Putnam. New York: G. P. Putnam's Sons. $2 net.

Mr. Putnam's skilful pen has returned to the days of his youth, a part of which it had already covered. In this attractive volume he tells of his boyhood, of the migration to this country of the Putnam family, which has meant so much to the American publishing world, and of his early schooling. Residents of old New York will find a great deal here to refresh their memories of the city of the middle of the nineteenth century, with which so few New Yorkers of to-day have any connection or acquaintance. Mr. Putnam's education was affected by his lack of normal eyesight, which led to the abandonment of his plan to enter Columbia and to his studying abroad when American students in Europe were by no means so numerous or so welcome as to-day. His experiences in France and in Germany, at the outbreak of the Civil War, are set forth at length and with much charm, interspersed with a running history of the progress of the war and of our relations with the great nations of Europe during this period. By 1862 Mr. Putnam could stand it abroad no longer, and he returned to enlist in the 176th New York Volunteers.

A part of his military service Mr. Putnam has written down in his earlier book, "A Prisoner of War in Virginia," but the present volume gives in greater detail the story of a regiment which

met disaster early in the history of its service in the Southwest, then fought as a battalion in Louisiana and Arkansas, and later lost many of its men, captured at the Battle of Cedar Creek, among whom was its boy adjutant, Major Putnam. All of his experiences he now relates in an absorbing narrative of lasting value. It ought to be the duty of all survivors of this great struggle who can write well to recount, ere it is too late, their experience in this epoch-making struggle. The great history of our Civil War is still to be written. So, too, is a real interpretation on a large canvas of the true spirit which actuated the volunteers of 1861 on both sides. When a masterly, moving picture of the underlying currents of that time comes to be written, such narratives as Major Putnam's will constitute most trustworthy groundwork. Of particular interest is his tribute to the work of the adjutants of regiments, brigade divisions, and corps who so often did the work of others having the rank and authority. A later volume dealing with his experiences as a publisher is promised by the author.

SPECIAL PLEADING.

The Americans in the Philippines: A History of the Conquest and First Years of the Occupation, with an Introductory Account of the Spanish Rule. By James A. LeRoy. With an Introduction by William Howard Taft. Boston: Houghton Mifflin Co. $10 net.

Mr. LeRoy when a young man went to the Philippines as secretary to one of the members of the Taft Philippine Commission during its first visit in the Islands. He remained there two years and, having fallen a victim to tuberculosis, received a place in the consular service, but died in 1909. During the six years or so of his incumbency of the office of Consul, he wrote many controversial articles in defence of the policy of Mr. Taft and of the existing scheme of American government in the Philippines. Like former Commissioner Dean C. Worcester, he early determined to publish a "monumental" work on the subject. At his death he left, in addition to his published articles, a mass of incomplete manuscripts. This material, or a considerable portion of it, is now published with an introductory tribute by Mr. Taft and a biography by Harry Coleman, an early friend and associate. Mr. Taft, who ought to know, says that Mr. LeRoy was "not free from some prejudices," and Mr. Coleman says that in his writings on Philippine questions he allowed "no argument in favor of Philippine independence to go unchallenged." These statements are obviously very moderate, and place Mr. LeRoy's two heavy volumes in their correct position. They are to be put in the same category as the volumes of former Commissioner Dean C. Worcester. Both are animated by a single spirit—the disposition to discredit the native inhabitants and to demonstrate the inability of the Filipinos to govern themselves.

Although the first three chapters—147 pages—are devoted to the Spanish occupation, only one of these (about 40 pages) gives an account of events prior to 1890, the remaining two being occupied with developments shortly preceding the coming of the Americans. They are patently intended to make out the worst possible case against the Spanish method of ruling the archipelago. Having drawn a conventionally dark picture of a state of misrule so extreme as to arouse the natives to almost united opposition, the author turns to the conditions under which Dewey appeared in Manila Bay. Here there is a rather careful examination of documentary evidence with respect to the actual position of the American leaders and their relationship to Aguinaldo and his followers.

It is interesting to compare the conclusions arrived at with those reached by Mr. Worcester. Doubtless the opinion will be formed that Mr. LeRoy either had not access to some of the "material" quoted by Worcester, or else that he regarded it as of no importance or as being untrustworthy. Mr. LeRoy at all events admits the coöperation of the natives with the United States forces for the purpose of obtaining independence, and concedes that this purpose was thoroughly well understood by all, although he is careful to state that the "alliance" said to have existed between the two is a "fiction" (Vol. I, page 191). A recital of the familiar incidents in the taking of Manila is then followed by a description of the government organized at Malolos under Aguinaldo. This description is filled with bitter criticism of the methods and machinery employed by the natives and with contemptuous characterization of their chief representatives. An excursion taken by the author into non-Philippine fields is found in a chapter on the Treaty of Paris, which is somewhat disappointing, as it adds nothing to material already available in fairly good form, and merely restates the conventional view of those who regard the treaty as the outcome of necessity, divine compulsion, manifest destiny, or some unknown influence of the sort.

Mr. LeRoy turns to a recital of the minor engagements, skirmishes, guerrilla warfare, and general destruction of property which constituted the staple of events during the two years after 1898. The chief interest of this somewhat tedious recapitulation is the author's attitude towards certain controversial points in our military method in the Philippines. Because Mr. Taft has said that "nowhere can a clearer and more judicial statement be found than in these chapters," the position of the writer has something of an official character. Mr. LeRoy admits the use of torture and of cruel and barbarous methods, although he defends such practices on the ground that they were "inevitable by way of retaliation for Filipino barbarities." He concedes the use of deceit both at Washington and in Manila in regard to the events of the war, as well as the resort to double-dealing in connection with a news censorship established by the military commanders; and the burning of villages and devastation of fields. Later on, Mr. LeRoy adopts a more critical attitude towards the military. When the Taft Philippine Commission arrives, he, like Mr. Worcester, is quite ready to attack the existing régime and to charge the generals in command, by direct implication at least, with arrogance, autocratic tendencies, and indisposition to restore civil rule. The author has little to say of the actual effects of the war, except as they are inferable from his account of the methods of warfare employed. If his story of these methods is correct, the Philippines must have been a devastated and disorganized territory when "pacification" had been accomplished. It is only fair to the author to say that he seems to struggle desperately in his own mind between regret that such practices could have been tolerated by Americans and satisfaction that Aguinaldo and his followers and rivals were so thoroughly broken. How any human being can grant what Mr. LeRoy has to, and does, grant, yet adhere to the view that American occupation of the Philippines has been a wonderful benefit to that distressed land, must remain a mystery in human psychology.

The effort to give a "scientific" cast to these volumes is fruitless because of the manifest bias of the treatment, even where the language is moderate, and because of the evident intent to supply "material" for use against those who have urged a more humane and liberal policy. When the reader lays down either this work or that of Mr. Worcester he can hardly help being overcome by the feeling that the real state of the case has exceeded his worst fears, and that if these be the true accounts of those who were responsible for or connected with the management of Philippine affairs during the crucial period, the situation must have been bad indeed. Mr. Taft's introductory words are simple, frank, and to the point, but he has certainly taken a bold step in setting the seal of his approval upon this story of the "Americans in the Philippines."

Notes

"A History of Connecticut: Its People and Institutions," by George L. Clark, is announced for publication by G. P. Putnam's Sons.

Longmans, Green & Co. announce the forthcoming publication of: "The Economic Organization of England," by W. J. Ashley; "Lourdes," by Johannes Jörgensen, translated by Ingeborg Lund; "German Municipal Life and Government," by William Harbutt Dawson.

The Century Company will publish shortly "Forces Mining and Undermining China," by Capt. Rowland R. Gibson.

"The Great Secret," by Graham Wallas, will be published on June 17 by the Macmillan Company.

Frederick A. Stokes Company announces that the publication of "My Autoblography," by S. S. McClure, has been postponed till early in the autumn.

Among the books announced for immediate publication by the Harvard University Press are the succeeding volumes of Wambaugh's "Constitutional Law"; "The Secondary Teacher in Germany," by William Setchel Learned; "Preservatives for Food: Their Use and Abuse," by Otto Folin; "Scientific Management," by Clarence Bertrand Thompson.

A PROPOSAL has been made to put up a memorial brass to Sir Henry Vane the Younger in the church of Belleau, Lincolnshire, England. In the circular that we have received concerning the proposal it is noted as "somewhat remarkable that while a noble statue has been erected to Vane in Boston, there is no memorial to him in England except a tablet on the wall of his house in Hampstead." The wording of the proposed inscription will be: "To the memory of Sir Henry Vane the Younger, Lord of the Manor of Belleau, Defender of Civil and Religious Liberty, 'Than whom a better Senator ne'er held The helm of Rome', Governor of Massachusetts, 'A man of noble and generous mind': Born 1613—Beheaded 1662." Contributions towards the expense of the memorial, which it is expected will not exceed $96, may be sent to the Rev. James Foster, Tathwell Vicarage, near Louth, Lincolnshire, England, or to the Rev. John Willcock, Lerwick, Shetland, Scotland.

A REPRINT of "French Novelists of To-day," by Winifred Stevens (Lane; $1.50 net), first published six years ago, contains no fresh material except a new preface and the necessary additions to the bibliographies which precede each of the studies. Of the eight novelists treated, two, Edouard Rod and "Pierre" de Coulevain, have died since the appearance of the first edition. Since then, also, many of the novels of Madame de Coulevain, Anatole France, and Pierre Loti have been given to English readers. "Though the contemporary French novel is experiencing many changes," says the new preface, "its three kings of six years ago—Anatole France, Maurice Barrès, Pierre Loti—remain enthroned to-day." Each of them has added something distinctive to his work. M. France has entered the field of history. His "Vie de Jeanne d'Arc" has been accepted as "a monument of historical knowledge"; and in his novel "Les Dieux ont Soif" he has told a story of the Revolution from an unusual point of view. M. Loti, at the end of his outlandish journeying, has discovered England. M. Barrès has been steadily advancing from the championship of agnosticism towards a championship of Rome. These facts are noted in the preface, but the essays proper, being left as they were, are already a trifle antiquated. In themselves they are painstaking and serious rather than illuminating. Their republication is no doubt connected with the fact that the author has in hand a second series of studies under the same title.

A PENCHANT for the great ones of the earth and a tremendous earnestness in the pursuit of his hobby appear to have combined to induce Mr. Thornton Hall to write "Romances of the Peerage" (Brentano's; $3.75 net). The subject might have been made of considerable interest, for there is no lack of romantic episodes in the history of many whose names are enshrined in the pages of Debrett. Mr. Hall's narrative, however, is a prosaic document. The romances that he selects are for the most part fairly well known and many of them have been much better told before. Some of the episodes, one would have imagined, must have tempted even the most decorous writer to a touch of raciness, but the present author is before all things solemn, and at the end of any particularly inglorious record can safely be relied upon to point the obvious moral, if not to adorn the tale.

THE "Penn's Country" of E. S. Roscoe, as issued by Longmans in a revised and enlarged edition (90 cents net), is still a small book, nor is it yet a very important book; but it contains a pleasant account of the literary associations of South Buckinghamshire, from the northern edge of the Chiltern Hills to the River Colne. There is no particular reason why it should be called the country of Penn any more than of Disraeli or Burke or Milton or Gray or some other of the worthies who were born here or made this part of the country their home; but that, again, is a matter of no importance. The chapters can be recommended to any one who enjoys natural description and literary and political anecdotes tastefully combined.

IT would be hard to understand the purpose of Mr. Carl Crow's "America and the Philippines" (Doubleday; $2 net), with its curious hodge-podge of fulsome praise for American policies in the Islands, its defence of wrongs and cruelties practiced by our representatives, and its apparently unintentional admission of the existence of conditions whose very being suggests the failure of our colonial experiment in any large sense of the term, were it not for the closing chapter of the book, which is entitled Philippine Independence. Here is developed a bitter attack on the proposal to give the native home rule or independence, on the ground that many "tribes" exist, that there is "no Filipino nation," that the native inhabitants have no ability and have never produced statesmen (while excluded from a place in the government), artists or scientific men in large numbers (while excluded from opportunities for training), capitalists (while robbed by taxation and discriminating tariffs), or churchmen (while excluded from the religious orders). For these conclusive and satisfying reasons, "it would be tragic for the Filipino people, and humiliating for America, to stop before success is certain"—notwithstanding that two hundred or more pages of brilliant success have just been detailed by the writer. Mr. Crow seems to have written his work while complacently listening to the placeholders and exploiters in the Philippines during a brief trip to Manila. It is unfortunate that he did not do the job more artistically and with greater attention to detail. There are already too many books of this sort on the market, and too few that give American readers the slightest real notion of existing conditions in the Philippines, or of the actual work accomplished or neglected there. Incidentally, Mr. Crow ought to have learned to spell Philippine names after some one of the several more or less recognized methods now in use.

PAGET TOYNBEE'S "Dictionary of Proper Names and Notable Matters in the Works of Dante" (reviewed in the *Nation* for January 12, 1899), which has been out of print for some years, is now republished under the title "Concise Dante Dictionary" (Oxford University Press; 7s. 6d. net). The reduction in length indicated in the new name has been effected chiefly by the omission of controversial matter. The old articles have been revised and brought up to date, and a number of new ones have been added. The thoroughness and trustworthiness of the earlier form of the work are well known; the new and more convenient form will be very welcome to students of Dante.

THE various diplomatic steps by which Russia, during the last three years, has moved towards the establishment of its paramount influence in Mongolia, as Chinese influence has receded, are recorded with great detail in Perry-Ayscough and Otter-Barry's "With the Russians in Mongolia" (Lane, $4.50). That, however, is material which is probably available in a goodly number of publications. Particular interest attaches to the diaries of a trip across Inner and Outer Mongolia by the two authors, set down with no attempt whatever at literature or sensation. Capt. Otter-Barry made the trip on horseback from Kalgan to Urga. Mr. Perry-Ayscough set out from Urga, and by wagon and boat travelled westward into Turkestan. Between the two, they have gathered a large mass of precise information for the geographer and the international trader.

ONE of the many literary reviews of Young France, and specifically "a review of grace, letters, and art," is *La Flora*. It publishes verses of a new poet, Josel Le Marchant. They are unusually original in their "modernism," which is as ancient in recorded verse as Pindar

and the Greek chorus. They would particularly shock that ex-magistrate, Raoul de La Grasserie, who wrote a treatise to prove that the Verb is "the generator of the parts of speech." The following translations are literal and keep to line divisions and punctuation; and they aim at reproducing the jingle, but without much hope of catching up the lightsome phrase:

I.

—Two blond sisters—one
and the other blond of face.
—Springtime—the moon,
the World's grace.
—From two yellow roses
to two girls blond of face—
The moon—Autumn,
the World's grace.
—The grace a-trembling
of two roses blond of face,
and smiling—together—
—the World's grace.

II.

—The moon up above—
—Girls are coming home,
telling their trouble—
—The moon up above:
—Their trouble or their joy—
—You know not well which—
—Know you ever anything?
'Tis what they believe it.
—The moon up above—
—The brier and the rose—
—'Tis one and the same:
—The moon up above
looks down the road:
—But you do not hear
their voice and their steps,
—and at evening you doubt.
—The moon up above—
—All things are vain—
Girls are coming home—
—The moon up above.

André Beaunier, though an old-fashioned critic and a scholar and philosopher, observes: "You ought not to say—I don't understand! For a moment's pleasure, profit by the pretty, well-ordered words which do not mean one thing more than another, and only invite you to dream at your own will. Perhaps a discreet invitation to dream is not all of poetry—and yet there is poetry here."

THE philosophy of "The Ego and its Place in the World" (Macmillan; $3.75 net), by Prof. Charles G. Shaw, of New York University, is a romantic idealism after the fashion of Rudolf Eucken, but differs from the philosophy of Eucken in being more of a romantic individualism. The adventures of Mr. Shaw's ego recall those of Fichte's. Neither compels us to realize vividly that "the ego" means you and me. Mr. Shaw's philosophical drama begins in the world of appearance, from which the ego's first task is to escape, and in which it is then to find a place for itself. The second act is laid in the world of activity, where the ego asserts itself as immanent causality over against the apparently transient causality of the world. Here we see the meaning of Euckenian and Shavian "activism." But the independence of the ego is not made secure until, in the third act, in the world of reality, it reaches the full dimensions of selfhood, and, in gentlemanly Hegelian fashion, becomes reconciled to the world in discovering that the world is also a self. Mr. Shaw's philosophy is not destitute of ideas, but, as becomes a romantic philosophy, the ideas are vague, and both the style and the reasoning are loose and superficial, while the attempt to be striking and original often leads him astray. It is purely gratuitous, for example, to derive from Spinoza's statement, that the order and connection of things are *the same as* the order and connection of ideas, an admission that the ideas are the patterns for the things. Three times, at least, Mr. Shaw uses *valeur* in the sense of "valuer," misled, evidently, by the analogy of *amateur*, and after this we know that he is innocent in construing *in vino veritas* to mean that "in the wine of genuine enjoyment the essence of truth can be perceived."

"ON the Left of a Throne" (Lane; $3 net) is a study by Mrs. Evan Nepean of the personality—the good looks, religion, and amours—of that unfortunate son of Charles II and Lucy Walters who is known to history as the Duke of Monmouth. He fought at Sedgemoor, and was executed for it. Mrs. Nepean's style is not quite like that of the ordinary historian. "The spirit of fair play has been roused by Monmouth's story! Let him, in colloquial phrase, at least, 'have a run for his money'" (p. 6). Enraptured by her hero's "comely young figure," "just under six feet, the perfect male height," by the "swift flash of his brilliant smile," by his warm coloring, his hazel eyes, and his other charms, and stirred romantically by the tragedy of his birth and death, Mrs. Nepean fills many feminine pages with gushing sentiment and exclamatory sentences. The value of her book lies chiefly in the excellent reproduction of twenty-eight portraits, five of which have never before been published; these she has searched out with pains and interpreted with sympathy. There are also some other illustrations.

WALTER THEODORE WATTS-DUNTON, who died suddenly in London on June 7, was born at St. Ives, Huntingdonshire, on October 12, 1832. His family name was Watts, but in 1897 he added to it his mother's name of Dunton. He was educated at Cambridge as a naturalist, but he soon abandoned natural history for law, and practiced as a solicitor in London for a number of years before devoting himself to literature. In 1874 he became a critic on the *Examiner*, and from 1875 until 1898 he was the leading critic on the *Athenæum*. He contributed to the Encyclopædia Britannica the treatise on poetry and the first principles of poetic art, as well as articles on the sonnet and rondeau and the monograph on Rossetti. He also wrote monographs in the same encyclopædia on Vanbrugh, Wycherley, Matthew Arnold, and George Borrow, and was a contributor of literary essays to various magazines and reviews. "The Coming of Love," a collection of poems, appeared in 1897, and his poetic romance, "Aylwin," was published in the following year. Mr. Watts-Dunton had also edited various works, including Borrow's "Lavengro," "Romany Rye," and "Wild Wales."

THE Right Hon. Sir William Reynell Anson, Unionist member of the House of Commons for Oxford University since 1899, died in London on June 4. He was born in Walberton on November 14, 1843, the son of the second baronet and Elizabeth, daughter of Sir Denis Pack. He was educated at Eton and at Balliol College, Oxford. He succeeded to the title in 1873. Sir William was elected a fellow of All Souls', Oxford, in 1867, and two years later was called to the bar. In 1900 he became a Bencher of the Inner Temple. He was Vinerian reader in English law from 1874-81, and in 1880 he contested West Staffordshire. He was vice-chancellor of the University of Oxford, 1898-99; parliamentary secretary to the Board of Education, 1902-5, and trustee of the British Museum, 1911. He was considered one of the foremost authorities on English law. Among the books which he had written on this subject were: "Principles of the English Law of Contract" and "Law and Custom of the Constitution." He also edited the "Memoirs of the Third Duke of Grafton, K. G." He had been a trustee of the National Portrait Gallery since 1904, was the warden of All Souls' College from 1881 until the time of his death, and from 1899 to 1912 was chancellor of the diocese of Oxford.

NOTES FROM ABROAD.

SOME of the London papers just now appear to think that details of their own circulation are of almost as much interest to their readers as the Ulster crisis. The game was started by the *Times* in a triumphant outburst at the sudden jump in its numbers from 53,000 to 170,000 copies a day when its price was reduced to two cents. The *Daily Telegraph* immediately replied with accountants' certificates showing a still greater circulation. The *Times* rejoined by pointing out that its own figures were those of net sales, and added that "those of our readers upon whom free copies of the *Daily Telegraph* are being generously showered by post daily will more clearly understand the manner in which the *Daily Telegraph* evades the important point as to net sales vs. circulation." The dispute becomes the more piquant when one remembers how, less than six months ago, Lord Northcliffe took the lead in a congratulatory presentation to Lord Burnham.

HAPPY days are still in store for collectors of armor, antiquated, if not antique. On June 12 the French War Ministry sells at auction 4,300 cuirasses. They are of the Bourbon Restoration model, and they have been worn successively by the cuirassiers of the Royal Guard of Charles X and the Imperial Guard of Napoleon III. They saw service last in the war of 1870, at the battles of Reichshoffen and Mars-la-Tour. Their polished waists, encircling chosen cavalrymen, riding in numerous ranks, still make an impression when the President of the republic goes out to welcome solemnly foreign kings and queens; but they no longer offer sufficient resistance to the balls of modern rifles, though they are still valid against a revolver or sabre. Outside of France, European armies have abandoned their use, except for parade. The War Office has also sold two superannuated bronze cannons at Fontainebleau for about five dollars each. They

were at once bought up for more than seventy times that price for the sake of the material; and it seems the mere disintegrating of them and transportation will cost as much more. Cannon of artistic or historic interest have been usually placed of late years on the Esplanade des Invalides, at Paris. Tourists too often pass them by without notice, as they do the rich Museum of Armor and Artillery inside the Invalides.

MOST American students at the Paris National Library make the acquaintance of M. Schalck de la Faverie, one of the officials, who not only speaks English with ease, but has made persons and things American his special study. A few years ago he published a thoughtful historical and literary essay on "The Evolution of Puritanism in the United States," and more recently one on the part played by the Vikings in the pre-Columbian voyages, wherein he declares that "the glory of having discovered America in the tenth century belongs unquestionably to the Normans." M. Schalck is now engaged on another American volume, which will have the rather odd title, "Napoléon et l'Amérique." His intention is to bring out the reciprocal influences exerted by France and the United States from the moment of the outbreak of the French Revolution down to the fall of the First Empire, "influences which were often latent," the author remarks, "but which, I think, are of great importance, and which, whether direct or indirect, have as their starting point the rivalry between France and England." So in order to trace these influences from their source down, M. Schalck goes back to the seventeenth century, when the colonial power of France began to decline in the New World. "The subject is a vast one," continues the author modestly, "and I sometimes ask myself the question whether I am equal to the task of treating it as it deserves to be treated. I cannot say how this is, but I will do my best, and if I fail my excuse will be that I am opening a new route, unless I arrive too late; for there does not exist in France, unless I am greatly mistaken, a book of this kind."

IN SPITE of a burning love of national independence, the race divisions of Continental Europe have not been without their influence in Swiss politics. This lends timeliness to the declaration made by the editor of the new French-Swiss review, *Les Cahiers Vaudois:* "We must resign ourselves to it—we are not a nation as others are. There are things which—nationally—we shall never have. We are 'constituted' into a nation, we are not so 'by nature.' We have an organization, we are not an organism. We are not 'necessarily'; we are by virtue of a contract. Everything with us is in a civic agreement. A nation is not necessarily a state. A nation is a being; a state is a form. To be a Frenchman or Italian or German is to be oneself; to be a Swiss is to be a citizen. And to be a Swiss citizen does not prevent one remaining oneself in race, which is not Swiss—there is no Swiss race. I am a Swiss only by a certain fashion of being French; just as a man of Zürich is Swiss only by a certain fashion of being German and a man of Ticino by a certain fashion of being Italian. French is my language—I have, I can have but one, I love but one, I live by one, the language of my place. It is the language of instinct for me, my substance, that by which I assert that I am from a particular country, which is mine, and that I am a person, myself. We French Swiss shall never have creative Swiss strength if we have not French creative force." This significant manifesto may be compared usefully with the situation of many and diverse nationalities in the United States, all by way of melting into one well-defined nation. Is language, then, the secret of the melting pot? Switzerland, with three languages strongly localized, has succeeded in living as one nation for many centuries by "civic agreement."

Science

AN ANCIENT PHARMACOPŒIA.

Syriac Medicine: Syriac Anatomy, Pathology, and Therapeutics, or "The Book of Medicines." By E. A. Wallis Budge. New York: Oxford University Press. $16.75.

Mr. Budge, the indefatigable scholar and Keeper of the Egyptian and Assyrian Antiquities in the British Museum, has done a valuable service for the history of medicine and the students of Oriental antiquities in publishing an elaborate Syriac manuscript which treats in an exhaustive manner the medical knowledge of the day as developed in ancient and mediæval Syria. The text is edited from a manuscript copied at the direction of Mr. Budge at Alkosh, about thirty miles from Mosul on the Tigris, by a certain Isa bar-Eshâya. The original manuscript consists of 289 leaves and is written in a fine Nestorian hand, with numerous vowel points. While the manuscript does not appear to be very old, it is a copy of a compilation that goes back, according to Mr. Budge's researches, to the second century before this era. The author, who does not give his name, was a native of Alexandria, and there is every reason to believe that, in addition to the individual who wrote the major portion of the work, there are other compilers represented in the vast collection of recipes and in the discussions of human anatomy and of symptoms of diseases.

Medicine in the East in the second or third centuries before Christ was entirely dependent upon the investigations of the great Greek physicians of the fifth and fourth centuries B. C., notably Hippocrates and Galen, with whom, indeed, scientific medicine may be said to have begun. Before the Greeks took hold of the subject, medicine was still entangled with magic and divination practices. The ancient Egyptian medicine appears, indeed, at one time to have cut loose from such leading-strings, but later succumbed to the overpowering influence of divination methods which developed in Babylonia and spread throughout the ancient world. The interesting feature of the text published by Mr. Budge is, on the one hand, its dependence upon Greek medicine, and, on the other, the numerous survivals it contains of the earlier magical aspects of medical treatment, which may be traced directly back to the medicine of the Babylonians and Assyrians.

As already suggested, the text bears distinct indications of being a compilation made from various sources, to which probably one copyist after the other added further material. Despite the complicated nature of the composition, one can detect a certain system in the order of subjects. The beginning is made with diseases whose source is found in the head. This is followed by injuries to the respiratory organs, the eyes, tongue, and ears, after which there follow several chapters of a somewhat miscellaneous character. A definite order appears again in the sequence of diseases of the lungs, heart, stomach, liver, bowels, colon, and kidneys. The dependence upon the theory and practice of the Greek physicians is not only apparent in every page, but it is directly indicated by references to Galen, Hippocrates, Theodoros, Archigenes, and others. Two chapters are missing at the beginning, and there are a number of gaps towards the end of the text, but the survey just given shows the large scope of the work, which is evidently intended to cover all diseases incident to the human frame. The theoretical discussion of each disease occupies only a small place in comparison with the remedies proposed, which are heaped up with the intention of providing for all contingencies. In this respect Greek medicine still shows its dependence upon that of Egypt, Babylonia, and Assyria, for the characteristic feature of the medical texts found on Egyptian papyri and on cuneiform tablets is the large number of prescriptions registered for every disease, and, in fact, for every symptom of a disease. Whatever experience had shown to be of value was noted, and so, in the course of time, there grew up an enormous amount of traditional medical lore to which constant additions were made. To take a single example, for difficulty of breathing (including asthma), over twenty different prescriptions are given, differing so considerably from one another as to leave no doubt of their having been compiled from a variety of sources.

But perhaps the most interesting feature of the text published by Mr. Budge is the proof furnished that by the side of the more scientific Greek medicine, the older method of treating diseases,

on the assumption that the bodily trouble was due to the presence of a demon that had found its way into the body, continued to prevail in Syria, and no doubt throughout the ancient East. After exhausting the knowledge that our compilers derived from Greek sources, there is added a long chapter of what the author calls "The Book of Medicines of the Country." By this he means the old native prescriptions which survived the introduction of more scientific medical treatment. It is amazing to note the close parallel that these prescriptions form to what we find in the medical texts of Babylonia and Assyria. The parallel is so close at times that one is tempted to suspect a direct translation into Syriac from the Babylonian original. At all events, the basic idea is identical with the purpose of the remedies found in Babylonian-Assyrian texts, which was to drive out the demon through ill-smelling concoctions or to coax him out through pleasant odors. The cure of the patient followed as a corollary, but the real aim towards which medical treatment was directed was against the demon supposed to be the cause of the disease. Accordingly, we find in these Syriac texts the same strange mixtures, such as pig's fat, the gall of an ox, urine of goats or of young boys, and even the excrement of man or beast, as well as alkali, myrrh, sesame, oil of roses, onions, etc.

As an indication of the purely magical character of such prescriptions, it will suffice to call attention to the directions for curing clouded vision. A young dove is to be taken, its eyes dug out, and it is to be left in the nest for three days. When the mother comes back and sees that its young is blind she will go and bring a certain root, to be laid upon the eyes. Then the head of the young bird is cut off and burnt, and with the ashes the eyes of the patient are to be smeared. A better specimen of the old Babylonian-Assyrian method of treating disease could hardly be found, and the further proof for the direct link uniting this native medicine of Syria with that which was developed in the Euphrates Valley is to be seen in such details as the frequent injunction to take the concoction in wine, which is almost invariably introduced as an ingredient in the prescriptions of Babylonian-Assyrian physicians.

To cap the argument for the curious mixture of old and new in Mr. Budge's text, the compilers have added forecasts and astrological omens precisely after the manner of Babylonian divination texts, in which all kinds of predictions are made from the direction of the wind, the movement of the clouds, the position of the planets, from shooting stars, eclipses of the sun and moon, and the like. Lists of lucky and unlucky days are added, and while the bearing upon disease is in most cases only incidental, yet the evident purpose of the compiler in adding these forecasts and omens was to furnish the physician with the ability to answer questions regarding the outcome of bodily troubles which were put to him. In many cases direct statements regarding this outcome are added according to the phenomena observed in the heavens at the time of the disease, or according to the day of the month in which the symptoms manifested themselves. All this again takes us back directly to the Babylonian-Assyrian methods, so that apart from its intrinsic value the text published by Mr. Budge has an unusual significance for the history of human culture.

Mr. Budge himself, in an elaborate introduction, calls attention to this aspect of the manuscript, without, however, by any means exhausting the material that it furnishes to students of the history of medicine. A valuable part of this material is to be found in the names of the hundreds of drugs, plants, roots, powders, etc., in the prescriptions. Many of these are of Greek origin, but a large number are native terms, and in not a few cases do we find these terms to be the same that we encounter in cuneiform texts. Indeed, with the help of the Syriac names we can interpret in a more satisfactory manner some of the expressions in many of the compilations of Babylonia. It would have added greatly to the value of the work if Mr. Budge had discussed some of the names for drugs and plants occurring in the texts, the meaning of which is not altogether clear. We have noted a number of cases in which Mr. Budge translates the same term in two different ways. A more careful study of the medical nomenclature is thus called for, and no doubt the appearance of this important text will stimulate students in this subject. There are also a number of passages in the Syriac text which present difficulties that are not solved by the translation which the editor offers, but it would be ungrateful to carp at minor matters in view of the profound debt which scholars owe to Mr. Budge for this unique publication.

Probably no more complete pictorial or written life history of any bird has ever been prepared than "Antarctic Penguins" (McBride, Nast; $1.75 net), by G. Murray Levick. The anthropomorphic appearance and ways of these most curious birds make such an account more than popular—it is sensational, and yet scientific as regards truth. The author feels but little the tremendous dramatic possibilities of his subject, but his narrative is clear and pleasing, and the photographs are superb. Perhaps the most memorable shows a black line of toddling little forms, many miles in length, laboring with short steps over the vast field of ice en route to the distant rookery.

Music and Drama

OPERA IN PARIS.

A COATLESS JOSEPH—LIBERTIES IN LIBRETTO — WAGNER IN PARIS — TRIAL STAGES.

Richard Strauss and his "Legend of Joseph" have taken their departure from the Paris Opéra. The first *succès d'estime* had degenerated into a *succès de curiosité*, of which the least factor was music. More even than the extraordinary mingling of Venetian scene-painting and Renaissance costume of some of the characters, light flashing on the lack of costume of the young Joseph made an impression, not all of art. Almost exactly a century ago, a like impression was described by the Irish melodist, fresh to Paris:

Here Daniel, in pantomime, bids bold defiance
To Nebuchadnezzar and all his stuffed lions,
While pretty young Israelites dance round the Prophet,
In very thin clothing, and but little of it.

This time gender is changed and the young Israelite is the hero, Oriental enough, but more Babylonish than Egyptian and dished up for weak decadent Romans rather than Venetians such as Nietzsche loved—"willing for Might." The prima donna who consented to hush her voice in the pantomime of Potiphar's wife was clad, and she did her best to reduce her Russian beauty to the required type:

Daughter of Egypt, veil thine eyes,
I cannot bear their fire!

Nijinski, who had his departure last year after a gesture conventional to no ballet, Russian or otherwise, looked on from his box at the unclothed, unimpassioned, and slow Joseph, while the orchestra crashed its accompaniment of inextricable counterpoint to the deafening cymbals.

The efforts made in the libretto of recent French opera to give only words expressing adequately the musical emotion have brought to light contrasting examples from a century ago. Until 1830, Mozart's "Don Juan" (known in France only by his Spanish name) sang the most unexpected French words—and often to music Mozart never knew. The action being at Naples, an eruption of Vesuvius destroyed the palace of Don Juan. Three "cavaliers of the Marshalsea (horse police)" sang convincedly the trio of the Masques:

Await in silence
The moment of vengeance,
Or the least imprudence
Upsets our plans!

Don Juan kills comfortably the commander behind the scenes and straightway comes forward, with an emotion

not foreseen by Mozart, and sings to music of Kalkbrenner:

> Let's gather young roses
> Which Zephyr uncloses—
> Love's fresh flower unclosing
> To Pleasure belongs!

This was unscrupulous enough, but not so much so as the arrangement of the "Magic Flute," which needed *morceaux de succès*, according to the Paris director. He inserted what he liked of "Don Juan," including Kalkbrenner—and Haydn—and changed the name to "The Mysteries of Isis." The musicians of the orchestra promptly modified this to "The Miseries of Isis." English libretto at least aimed at translation and rhythm, as in "Le Nozze di Figaro":

Un caso: Madama
La notte ti chiama—din! din!

Suppose it befall you
The Countess should call you—ding! ding!

The anonymous French writer known as "Foemina"—only beginning to be known to English readers—moralizes with her usual penetration and from her own experience on the influence of Wagner in France:

The music of Wagner came to us at a moment when need of liberty and room and horror of constraint, a thirst for novelty and a burning, nervous sense of pity and vast, vague hopes were working in us. The will "to live one's life" and the certainty of the "right to happiness" were contemporary with our first enthusiasms for the magician of Bayreuth, along with respect for no matter what passion; with palpitating tenderness for the guilty ones suffering; ardent faith in the results of Socialism; a keener taste for generosity than for justice—and many a tendency, hesitating or precise, toward Anarchy.

Those who are coming after us resemble us not at all. They must have other emotions. When Mozart is played at concerts, it is curious to see what sincere, passionate pleasure is taken by the hearers. You would say his light orchestration, deep peace, and well-ordered reverie are suited to secret needs. Perhaps after the failing of many hopes and the abortion of more than one dream, even those who were in Anarchy begin to find it irritating and seek for rules. License brings the need of constraint and extreme agitation the need of calm. Wagner, who unbridles passions and deifies them and exalts liberty to frenzy, will no doubt not be the herald of the generation now getting to work.

No doubt, too, the generation now getting to work has not yet begun at the Paris Opéra, where "Parsifal" has the best receipts this year, while last year eight different pieces of Wagner were given at forty-eight representations. The greatest single receipt of 1913, however, was for Gounod's "Faust," on March 24—22,363.29 francs, or about $4,500.

The strenuous theatrical life—more dramatic than musical—of the French people may be gathered from the number of new pieces represented in a single year. It was 980 in 1913—and this was 164 less than the number for 1912. It should be said that 511 of these pieces in Paris were performed in special or popular theatres or café-concerts, and not in the known twenty-three theatres frequented by critics. There are 103 theatres of the *quartiers* of Paris, music-halls, and summer cafés—and a dozen or so small theatres where a good deal of the new drama is elaborated. Thus the coming director of the Paris Opéra has earned his experience at the little Théâtre des Arts in drama. Three hundred and fifty of the new pieces were produced in 119 provincial theatres, which might be classified for large cities in much the same manner, and with these have to be counted the very numerous casino halls in watering places. This gives more than 800 new pieces which are not expected to go further than the place and season of their birth. A very few come up to the higher theatres and opera houses by survival of the fittest, and, doubtless, some will please finally the great public. After all, it is something for a country to have all these trial stages devoted to more or less legitimate theatrical and operatic art.

Of the four state theatres of Paris, the Opéra gave two pieces performed for the first time anywhere, "Le Sortilège," by André Gailhard, who had the right to a representation, having carried off the Grand Prix de Rome; and a belated "Suite de Danses" of Chopin. The Opéra Comique produced five recent pieces, of which only "Julien," by Charpentier, of "Louise," is yet known abroad. The Comédie Française had six, and the Odéon nine new pieces. And Antoine of the Odéon has not been able to continue.

Mr. Krall's scheme for organizing all classes of British professional musicians, composers and executants alike, in a powerful trade union, is meeting a good deal of adverse criticism in the English press. It is pointed out, for instance, that, in the event of an industrial struggle, society can dispense more easily with the services of professional violinists and pianists than with those of miners or railwaymen, or even lawyers and doctors. An important factor, by the way, in increasing the cost of orchestral concerts in England is said to be the demand of the picture palaces for instrumentalists. Players prefer the regular engagements and assured incomes that this new opportunity places within their reach.

Dr. Muck, Michael Balling, and Siegfried Wagner are to be the conductors of this summer's Wagner Festival at Bayreuth, which will last from July 22 to August 20.

The operatic event of the season in Italy was Wagner's "Parsifal." In Milan it had twenty-seven and in Rome twenty-two performances. Verdi was represented by four operas in Milan ("Nabucco," "Aïda," "Otello," and "Falstaff"), and the total number of performances was 115. Twelve of these were of Mascagni's new opera, "Parisina," which was also heard in Rome, but only seven times.

Sarah Bernhardt will begin her "farewell" American tour in October. Among other characterizations she promises to appear as Shylock in the trial scene of "The Merchant of Venice." Her repertory will include: "Jeanne Doré," "Lucretia Borgia," "Resurrection," "Phèdre," "Camille," "Madame X," "Le Mort de Tintagile," "A Night Before Christmas," and "The Death of Cleopatra."

At the termination of his present engagement with the Théâtre Gymnase, in Paris, M. Lucien Guitry will join MM. Coquelin and Hertz, directors of the Porte-Saint-Martin and the Nouvel Ambigu Theatres, whose company already includes M. Le Bargy, formerly of the Comédie Française, and other well-known artists. He is to appear next October in the leading part in a play of his own.

His first experiment in producing plays in weekly instalments, like serial stories, has convinced the proprietor of the London Coliseum that the new method is worth continuing. In one instance a man who, after seeing the first, second, and third acts on successive Mondays, had been unable to obtain a seat for the fourth, came to the pay-box and begged to be told how the play ended. The proprietor suggests that the time may come when three provincial or suburban theatres, conveniently near one another, will combine to split up a drama, an opera, and a comedy, and by giving an act of each at each house will make a triple appeal to the playgoing public. The first week Theatre A would give Act I of a drama, filling up the rest of its bill with varieties. The second week it would give Act II of the same drama and Act I of an opera, while at the same time Act I of the drama would be at Theatre B. By this process all three theatres would be running drama, opera, and comedy within a few weeks. It all sounds rather confusing, but many plays have been produced in recent seasons which might with advantage have been taken in small doses.

"Sanctuary," the bird masque of Percy MacKaye, which was performed before the President of the United States, at Meriden, N. H., last September, has been published in a dainty volume, well printed and prettily illustrated (Stokes; $1). The superior literary, poetic, and imaginative qualities of the little work can be better appreciated, perhaps, in type than in actual representation. Mr. MacKaye has acquitted himself of a difficult task with delicate fancy and much verbal skill. His sylvan parable, with its wise and humane moral, is admirable in design and workmanship, and demonstrates the educational and artistic possibilities of that civic theatre of which he is so enthusiastic an advocate.

Art

THE PARIS SALONS.

PARIS, May 24.

New rooms for paintings have been opened this year in the Salon of the Société Nationale des Beaux-Arts. Rumors are about of new regulations in both Salons which will make it possible for a greater number of exhibitors to be admitted. This is reform in the wrong direction. What is needed is to close rooms, to keep out exhibitors, to cut down, reject ruthlessly, or else the whole business of giving art exhibitions will degenerate into an empty farce. It is almost that already. What with the Salon d'Automne, the Salon des Indépendants, the Salon des Artistes Français, the Salon de la Société Nationale des Beaux-Arts, innumerable small shows here, there, and everywhere, in Paris alone, more is exhibited in a year than it is possible for any human being to see or digest, to criticise or enjoy.

It is part of the irony of the whole situation that the year for opening the new rooms downstairs in the new Salon should happen to be one when an unusually large number of the members and exhibitors who give distinction or interest to the galleries have stayed away. Rodin sends nothing, nor does Cottet, nor Caro-Delvaille; Willette, Louis Legrand, Jean Veber, Renouard, Jean Béraud, are among the absent; Anglada, Walter Gay, Zorn, Morrice, are four of the many foreigners for whom one looks in vain. Two rooms have been devoted to Gaston La Touche, one side of another room to Gaston Hochard, both of whom, distinguished members of the Society, have died within the year. I need not point out how severe is the test of a one-man show. It can hardly be said that La Touche stands it to great advantage, especially as there has been no effort to find the right background for the decorative panels most of his paintings really are, or to frame them appropriately. However, after making every allowance for the loss when panels of this kind are hung as pictures, it is certain that so many shown together do not produce the same impression as the few shown year by year—above all, if these few belonged to one series. In such a large miscellaneous collection there seems something almost meretricious in the splendor of light and fantasy of color so often repeated. The clever painting of the water, the dramatic use of the splotches of golden sunlight, even the subjects, the reappearance of his swans, the irresponsible medley of realism and allegory, take on the tedium of a formula, an immensely accomplished trick. Hochard suffers less from the ordeal. His paintings are pictures to be framed, and not decorations. No allegory breaks in upon his stern naturalism; he deals with facts and reduces them to their bare essentials stated in the simplest terms. It is extraordinary how he can fill a marketplace with a crowd or set up the intricate, ornate façade of a Gothic church, with an economy of means that would lead other painters to emptiness; extraordinary how he can get from his bare facts so bluntly stated a color and quality, now in the copes of priests waiting for the ceremony, now in a provincial procession, that a carefully arranged harmony often fails to yield.

I may criticise Gaston La Touche, but it is fair to admit that in neither Salon are there many decorative arrangements to be compared to his. In the new Salon one passes by Roll's big ceiling for the Petit Palais, almost vulgar in design and color, by Weerts's bigger panel for the Hôtel de Ville at Roubaine, by other expanses of dull canvas, to turn with relief to a series of decorative panels by Maurice Denis, though I must confess it is not easy to discover in them the theme of Nausicaa with which they are credited in the catalogue. The bathers and the ball-players are very modern, perhaps seem all the more modern because the painter's method, his extreme simplification of form and line, color and tone, has been accepted as a model by many a would-be young genius who poses as Post-Impressionist. The deliberate archaism savors at times of affectation, but Maurice Denis is an artist, and there is rhythm in the large flowing lines of sea and shore, balance in the spaces of drapery and sand and hillside and nude figures, while it is evident that he has studied the color of the old fresco-painters, to his own profit.

In the old Salon, the big *machins* are fewer than of old, and there Zo's enormous outdoor group of Bonnat et ses élèves Basques et Béarnais for the Musée Bonnat at Bayonne, and Jamet's amusingly realistic ceiling for the Salle des Mariages in the Mairie at Montrouge, and the others by more or less well-known painters, may cheerfully be passed for Henri Martin's huge Le Travail painted for the Palais de Justice. He has shown us laborers before now, but they have usually been laborers in the field; now they are the laborers more typical of what we mean by work to-day: men busy putting up a mighty building, architects, builders, masons, plasterers, all toiling in the brilliant sunshine expressed in the scientific scheme of dots that he has accustomed us to on his canvases, big and little—a brilliant performance, if without the suavity and rhythm that Denis has at his command.

Perhaps the most notable event in either Salon is the appearance of Zuloaga (in the Beaux Arts Salon, of course), who has refrained from exhibiting only too often of recent years. He brings with him a spirit of life, an enthusiasm, a genuine interest in things for their own sake. He has his unmistakable style, but it has not degenerated into a cut-and-dried recipe; he does not give you the same picture every year, as Pointelin gives you the same landscape and Bonnat the same portrait in the old Salon, or as Lhermitte and Carolus-Duran in the new. You could not mistake Zuloaga for any other painter, but he has always something new to say in his own way, and his own way is invariably stimulating in its directness and its freedom from technical fads and movements. He has painted groups of bull-fighters before, but with what inexhaustible zest he again renders the different types, this time found in the village bull-ring! With what delicacy and splendor he gives the detail of their brilliant costume! Who could get as he does the right value of the gold embroidery on a cloak without a touch of crudity or gaudiness? It is true that in the portrait of Maurice Barrès, the figure of the author, dark and sinister, his own yellow-covered book in his hand, is all but lost in the extreme left of the canvas, which is filled instead with the sombre dignity of Toledo, the town Barrès loved and feared and described; true that in the portrait of The Cardinal, the red of the wide-spreading robes is reflected in the face with unnecessary brutality; but from what other portrait is there to be had such a sensation of life, of the thing seen and rejoiced in, of sheer exultation in the sureness and swagger obtained with every stroke of the brush?

The only other portraits that seemed to me to give this sensation of life, though with all the difference in the world, are those of Boldini. He comes dangerously near the fashion-plate himself. One of his two small canvases, the portrait of a lady in the last eccentricities of an eccentric mode, which reduces her, as she lounges in her chair, to scarcely more than a twist of silk and two slender black legs, is almost not so much a fashion-plate as a caricature of a fashion-plate. But Boldini never fails to redeem the absurdities and exaggerations of his sitters by the painter's joy in them, by the wonderful vivacity and accomplishment of his technique, by the beauty of detail—in this portrait the beauty of the velvet and gilding of a chair, the glint of the silver tea service.

As compositions, also, Zuloaga's three large canvases have few rivals. Opposite are three large paintings by Simon and in the largest, Le Quai, there is an obvious endeavor to work out an arrangement in blue in the bril-

liant blouses of the men loafing there. Simon's talent, too, is supposed to be for straightforwardness of vision and strength of treatment. But Simon's arrangement becomes as impersonal as a camera's by comparison. Feeling for design must be sought rather in work that has as little in common with Zuloaga's as Frieseke's and Barlow's in the new Salon, Richard Miller's in the old. Few keep more scrupulously than Barlow to the same themes. He sees such beauty in his quiet women in their quiet dress, still and tranquil as they go about their domestic tasks, that he never tires of painting them, usually in the same simple interiors, though this spring one of the women has wandered out into a shadowy garden filled with rose-colored flowers growing close to the white walls of a house, and it is evident that the painter placed her just there for pure delight in the value of the blue of the shutters against the white of the simple walls. It is in the subtle, evanescent changes wrought by light and color that he gets variety in his endless repetition of the same theme, just as the old Dutch masters did when they painted again and again the same gray room or the same sunlit court. Frieseke is another American who is absorbed in the study of light, but, in his case, brilliant glowing light. If he paints a Venus, it is for the beauty and tenderness of flesh tints in strong sunlight; if a group sitting together out of doors in the summer time, it is because of the way light summer stuffs reflect and absorb the light; if an interior, it is because of the play of sunlight falling and filtering through the window; and always, with the help of the passing light, he weaves figures and background into a perfect harmony.

Richard Miller, who remains faithful to the Artistes Français, is also an ardent student of light in its infinite variety. You cannot doubt his pleasure in rendering the beautiful woman, who in one of his paintings sits low by the window sewing—there for no other reason than that he might study the new value of flesh and hair and draperies against the open window, protected by a half-drawn green blind from the fierce sunshine outside; it is marvellous with what truth the mingling of the cool and hot lights as they stream into the room has been observed, and with what beauty the artist's impression has been recorded. For some years past it was from Le Sidaner many of the most sympathetic impressions and studies of light came. But there are signs of fatigue, of indifference, in his latest work, in his large empty harbor and his colorless, characterless church in the moonlight.

I should have something to say of Luigini, Ménard, Louis Picard, Charles Guérin, had I not said it often before. And there are many things that in a smaller show could not be overlooked. One fact worth the noting is that more Americans contribute every year to the two Salons, and that they maintain as high a level of accomplishment as any other group, and, in many cases, more distinct character. Alexander Harrison, Ullmann, George Elmer Browne, Edwin Scott, Hawthorne, Rolshoven, Elizabeth Nourse, Hermann Webster are among those at the new Salon; and at the old are Mura, Van der Weyden, Walter Griffin, Warren Eaton, Max Bohm, Tanner, Raymond Neilson, and J. McLure Hamilton, the most distinguished, sending, however, but one pastel, a sensitive and masterly study.

In the department of prints and drawings both Salons have fallen away sadly in interest and achievement. It was here at one time that the most important and representative work was found. To-day, little rewards the most careful search. The old Salon reserves its recognition more rigorously than ever for the reproductive etching and lithograph, Bauer's strong and dignified etchings the most conspicuous exceptions. Men like Louis Legrand and Léandre have ceased to contribute to the new Salon. Illustration is passing through a lean interval after its fat years at the end of the last century. In France the tendency at present is to make it do just what it should not—the tendency, that is, to use color drawings in the text and to make them elaborate beyond the reach of modern methods of reproduction, as well as inappropriate and out of harmony on the printed page.

The sculpture continues to astound one by the high level of workmanship attained. Whenever sculpture is needed as decoration, there is always the French sculptor ready to supply it. But the genius is as rare among the sculptors as among the painters. Rodin's absence is a loss to the new Salon, where Bartholomé is purely academic in a nude life-size figure of a woman, and adds little to his new version of his bust of La Gloire from Rousseau's tomb at the Panthéon. For character nothing surpasses the bronze head of a man by Bourdelle. From the sculpture court of the old Salon one carries away the usual impression of a wilderness of flamboyant tombs and strident monuments and endless rows of busts, where it is useless to do more than look for the things in which one has a special interest, the bronze of Paul Bartlett's Lafayette it may be, or MacMonnies's two groups, La Pensée and La Philosophie, for the New York Library. These are placed on either side of the main entrance. Whatever strikes one as crowded and awkward in the arrangement now will probably explain itself when they eventually fill the spaces for which they are designed. N. N.

C. F. Bell's "Drawings by the Old Masters in the Library of Christ Church, Oxford" (The Clarendon Press), is an excellent little handlist and pictorial guide. The small, square volume is avowedly modelled on the useful Milanese manuals of old drawings. Something like a thousand drawings, the entire mounted series, are registered alphabetically. About seven hundred more repose unmounted in portfolios, in a probably deserved oblivion. Mr. Bell contributes a brief introduction on the history of the collection tracing many sheets to their older owners. Among these are Vasari, Ridolfi, Lely, and the two Richardsons. The original bequest to Christ Church was made in 1765 by Gen. John Guise, and for years the use of the collection was hampered by the testamentary command that the drawings should be examined only in the presence of an M. A. Colvin, Berenson, and others have published and described the most important sheets—Leonardo, Raphael, Michelangelo, etc.—but Mr. Bell's 125 cuts present many surprises and problems to students. Among the novelties may be signalized a magnificent Tintoretto sketch for the Stoning of St. Stephen. Many learned visitors have helped in the matter of attributions. Generally these are cautious and credible. The reviewer's especial skepticism is aroused by the interesting series ascribed to Parmigianino, the best of which have more the look of early Schiavone. The book is in every way a boon to the straitened student.

Finance

THE BRIGHTER SIDE OF THINGS.

What has for some little time been described as a "turn for the better in sentiment"—a change which, until very lately, seemed to be based on nothing tangible—has begun to be supported by actual developments. One of them is the continued and highly remarkable grain crop outlook, reflected last Monday by the Government's own forecast of a total wheat yield, under present indications, of no less than 900,000,000 bushels. Last year's crop, which broke all previous records in our history, was 763,000,000. A second consideration, offsetting the gold-export movement which has continued so persistently, is the strong position of the banks; the surplus over required percentage of reserve to liabilities, at the New York institutions, having last Saturday overtopped the showing at this date of any year since 1898.

At last week's end, news of perceptible quickening of business in the cotton trade, and of the placing with the steel mills of several railway orders larger than any received in many weeks, added to the good impression. The Supreme Court's decision, last Monday, upholding the Interstate Commerce Commission's contention that State

Commissions have no right to discriminate against approved interstate rates by requiring lower charges for the corresponding service within the borders of the State, was a victory for fair and even-handed railway supervision. Yet to all this the Stock Exchange has responded only faintly, if at all. On Wall Street, at any rate, the atmosphere of uncertainty and hesitation has continued.

In so far as the movement on the Stock Exchange reflects the sober judgment of experienced men on the general tendencies of the day—and a stock market, in the long run, may usually be relied upon to do that—the present world-wide halt in activity is not illogical. When people do know what is going to happen next, and have been prepared for startling occurrences, their ordinary instinct is to stand still. If they can see danger immediately ahead, they will retreat; if there is nothing to disturb them, they will move ahead. Neither of the two situations exists at the present moment. The financial markets had recognized the fact, and practically ceased to move.

The truth seems to be, that every great financial centre has had apprehensions of its own as to what may happen. But the apprehensions are vague, and do not lend themselves to definite predictions. The French market, for instance, is utterly perplexed as to what its new national legislature is likely to do with certain large public questions; but it does not know of any legislation with a powerful following which would threaten private or public credit. The London market has before it what might be regarded as an absolutely unprecedented picture of social and political disorder. The attacks of the English female maniacs on property and persons have created on the one hand an impossible social position, and on the other hand, the activities of the Ulster malcontents are those which would naturally precede the rebellion of a province. But England has not been able to persuade itself to take either demonstration as a real and formidable turn in the march of public affairs.

Any one can imagine or predict what may actually result from such extraordinary movements; but the prediction does not inspire belief, and serious men will not base their business plans even on the possibility of civil war in Ulster. It may in fact be suggested that not only the lack of excitement with which these incidents are regarded, but the easy-going manner in which their worst possible outcome is discussed, is proof of the community's disbelief in such an outcome. The time when such a thing as civil war, for instance, is actually about to happen, is apt to be a time when all interested people are insisting that its occurrence is impossible.

The position in the United States is curiously different from that in any of these great foreign centres—so much so, that one is sometimes tempted to wonder why we do not hear of this country's peculiar immunity from their troubles. We have our public demonstrations by bands of individuals who object to the present social order; but when the I. W. W. invades the rights of private individuals we put them in jail, and do not release them because they threaten a "hunger strike." We have defiant sections of the country; but the defiance of California and Texas is not of the Ulster sort.

It is true that we have unpleasant uncertainties of Congressional legislation; at the moment, we are confronted with the passage, by one house, of "supplementary anti-Trust bills" which the business community dislikes. These measures undoubtedly have certain grave defects; they are mischievously insincere in their dealing with "labor," they are clumsily drawn, and they can scarcely be described as fulfilling at all President Wilson's promise of legislation which should "limit the debatable area" around the original Anti-Trust act.

All this is true; yet there remain three important facts, which the history of this Congress up to date has clearly proved, and which should be remembered in connection with this latest group of bills. One is, that the radicals of the wilder sort, whom Wall Street, fifteen months ago, apprehensively expected to control this Congress, have not had control at all. The second is, that legislation has been orderly, and the third, that no proposed measure of really objectionable character has yet passed into the statute books this session, without such thorough and careful overhauling as eliminated most or all of its serious defects.

The question of granting increased railway rates is a different and no doubt a paramount problem in the minds of most American business men, and it is right enough that it should be so. But it is not so often considered that even refusal of an advance would at least do nothing more than retain the *status quo* with present rates maintained, whereas under the older order of things a period of dull trade, as prolonged as that through which the country has been passing, would undoubtedly have meant savage "rate wars," cutting of transportation charges below cost, and widespread railway insolvency. That situation, perfectly familiar in the seventies and eighties, is to-day wholly out of the question, and that is perhaps one reason why investors in our railway securities, even when they hesitate to buy more, appear to be in no hurry to sell what they have.

All That's Good In Printing

A HISTORY OF CONNECTICUT

Its People and Institutions

By GEORGE L. CLARK

Author of "Silas Deane," etc.
100 illustrations. $3.50

The purpose of this work is to give a view of Connecticut in its history of two hundred and eighty years; to review the migration hither; glance at the hardships of settlement and repeated wars; look at the courage, problems and idealism; admire the thrift, shrewdness and common sense; notice what the farmers had for breakfast, and how the people dressed, fought, objected, believed and built.

B.W.Huebsch, Publisher, 225 Fifth avenue, New York

The Detroit "Saturday Night" says of The Post-Impressionist:

"Only now and then do we find a writer who sees the laughable side of life and pictures it to us so that we can see it too. Dooley is one of these elect. Another is Stephen Leacock, the Canadian Mark Twain. . . . But we think quite as much of Simeon Strunsky's humorous essays, which we are now publishing. Strunsky is more subtle. He delights in turning up the foolish edge of the most serious situations. But he, too, makes people laugh, God bless him. Unless we cultivate that saving sense of humor which helps us to see life in its proper proportions we are bound to take some things too seriously and so intensify our own misery and the misery of those who have to live with us."

GERMAN ROMANTICISM
(1766-1866)
By **Allen Wilson Porterfield,** Burnard College, Columbia University.

A comprehensive handhook, containing in readily accessihle form much pertinent information in regnrd to the German Romnntic movement In addition to a general discussion of the growth and development of the movement and n trentise on the economic background, there are twenty sections on the various phases of Romanticism, including its relation to contempornneous music, painting, and philosophy.

Each section contains an explanatory introduction and hiographical sketches of the varions writers, followed hy carefully selected bibliographies and reading lists of their chief works in chronological order. Where there is anything peculiarly significnnt about n work, creative or criticnl, this is always pointed out.

The look will prove invaluable to advanced students in German and to teachers.

HOTEL POWHATAN WASHINGTON D.C.

HOTEL OF AMERICAN IDEALS

The Hotel Powhatan is the best, at the same time the newest, hotel in Washington.

Famous Pennsylvania Avenue, at the junction of 18th and H Streets, affords the site for this most luxurious and modern hotel.

Write for booklet with map.

CLIFFORD M. LEWIS, Manager

EVERYBODY LOVES PUCK!

After 40 years—

—Puck has been reborn, rejuvenated!

—a quip from the newest play, the story that is going the rounds of the clubs, a judgement upon the season's salon, a critical estimate of the book just off the press—

—a staff that includes Hy Mayer, Joseph Keppler, Lawson Wood, Barribal, Strimpl, Glackens, Fornaro and de Zayas among the artists—

—James Huneker, Edgar Saltus, John Kendrick Bangs, de Casseres, Percival Wilde, Dana Burnet and Freeman Tilden among the masters of humor, criticism and satire—

—small wonder, indeed, that Puck to-day is voted America's cleverest weekly by those who *know*.

The Nation.

NEW YORK, THURSDAY, JUNE 18, 1914.

Summary of the News

The most important event in Mexico has been the defeat of the Constitutionalists at Zacatecas. According to dispatches from Mexico City and El Paso, dated June 15, an eight days' battle has been in progress, in which the Constitutionalists, under Gen. Natera, were finally defeated. Later dispatches explain the defeat by the absence of Gen. Villa, who remained at Torreon, having, it is stated, resigned as Carranza's lieutenant.

Prospects for a successful issue of the mediation conference continue to improve. On Friday of last week the first part of the peace plan, providing for the installation of a provisional government in Mexico, which had already been agreed on, was reduced to writing. Since then the conference has devoted its attention to a consideration of names, from among which a successor to Gen. Huerta may be chosen. The delegates of the United States have submitted a list of names which are understood to be acceptable to the Constitutionalists, but among which that of Carranza is not included. The text of a further note sent by Gen. Carranza to the mediators was published on Tuesday, together with the reply of the mediators. Gen. Carranza ignored completely the main issue of an armistice, and the mediators' note merely pointed out this omission.

The wearisome debate on the Tolls Repeal bill was brought to an end on Thursday of last week when the bill was passed by the Senate by a vote of 50 to 35. On Saturday the Simmons-Norris amendment to the bill was accepted by the House by a vote of 216 to 71. The bill was signed by the President on Monday.

A further effort to promote class legislation in behalf of the labor unions was seen last week, when the same prohibition that was written into the Sundry Civil Appropriation bill last year, and accepted by the President, was again introduced. The amendment provides that no part of the $300,000 that is voted to the Department of Justice for the enforcement of the anti-Trust laws shall be used for the prosecution of any labor union or farmers' organization.

The President on Monday sent to the Senate the complete list of nominations for the Federal Reserve Board. The names are: Charles S. Hamlin, of Boston, Mass., for a term of two years; Paul M. Warburg, of New York, for a term of four years; Thomas D. Jones, of Chicago, Ill., for a term of six years; W. F. G. Harding, of Birmingham, Ala., for a term of eight years; A. C. Miller, of San Francisco, Cal., for a term of ten years.

We deal elsewhere with the statement made by Secretary of the Treasury McAdoo on June 13 that the yield of the income tax for the first ten months of its operation will fall short of the Treasury's estimate by $23,000,000.

Announcement was made on Sunday that Rear-Admiral Fletcher will succeed Rear-Admiral Badger as Commander-in-Chief of the Atlantic fleet on the termination of the latter's command.

On Saturday, at the biennial convention of the Federation of Women's Clubs in Chicago, a resolution was adopted affirming the Federation's belief in the principle of political equality for men and women.

Another serious collision in fog, happily unattended by loss of life, occurred early on Saturday morning, 400 miles east of Ambrose Lightship. The Hamburg-American Liner Pretoria, east bound, ran into the American Liner New York, west bound, tearing a large hole in her port side forward, but well above the water line. The bulkheads of the New York had been ordered closed and the engines stopped shortly before the collision, on the fog siren of the Pretoria being heard. The damage to the Pretoria was slight and she proceeded on her course. The New York came into port safely on Sunday.

Mr. Asquith announced in the House of Commons on June 11 that he would introduce the amending bill to the Irish Home Rule bill before further progress was made by the House of Lords with the second reading of the main measure. The Premier's undertaking is regarded as a concession to the Unionists. Meanwhile, Mr. Redmond has issued a statement giving the official support of the Nationalist party to the Nationalist Volunteer movement.

The Cabinet formed last week by M. Ribot was short-lived. On Friday it was defeated on a vote of confidence by 306 to 262, and imediately resigned. On Saturday M. Viviani, who had failed to form a Government after the resignation of that of M. Doumergue, was again invited by M. Poincaré to attempt the task, and was able to announce the personnel of his Ministry within a few hours. M. Viviani himself assumes the portfolio of Minister of Foreign Affairs.

Another step was taken in the controversy in Denmark over the Electoral Reform bill, when King Christian, on June 15, dissolved the upper house, stipulating, however, that the dissolution should not include the twelve members nominated by himself. The bill, which abolishes all property qualifications for electors of members of the upper house and takes away from the Crown its present right to nominate twelve members, passed the lower house on June 9. When it reached the upper house the Conservatives brought about a deadlock by absenting themselves, thus making it impossible to form a quorum. The lower house has been prorogued until after the elections for the upper house.

We deal elsewhere with the general aspects of the strike in Italy, which last week assumed serious proportions involving considerable loss of life and much destruction of property.

A curious report was published in the New York *Times* on Tuesday of a "union of the small nations of Europe," consisting presumably of Holland, Switzerland, Denmark, Sweden, Norway, and Belgium. The object of the union is stated to be "to preserve the effective neutrality of the constituent states and to unite their military and naval forces for common action in the event of any one of them being attacked by a great Power."

Not a little significance must be attached to the meeting at Kustenje on Sunday of the Czar and King Charles of Rumania, emphasizing as it does the gradual drifting away of Rumania from the Dreibund and her adoption of a Russophile and anti-Austrian policy. The meeting is interesting, too, in view of the present situation between Greece and Turkey and of the reports of a triple alliance of Greece, Servia, and Rumania.

The tension that has existed for some time between Greece and Turkey has become acute during the last few days. On June 12 Premier Venizelos made a statement in the Greek Chamber of Deputies which almost amounted to a declaration of war, warning Turkey that the ill treatment of Greek subjects in the Ottoman Empire would not be tolerated. A strongly worded note to the same effect was sent to Constantinople. Prospects for peace have not been improved by the announcement of the formal annexation to Greece of the islands of Chios and Mytilene, historic trouble-makers, which were assigned to her by the treaty of Berlin, but had not hitherto been handed over, Turkey protesting that the islands were essential strategic points for the defence of the coast of Asia Minor.

The situation in Albania continues serious, but news came on Monday of a Government victory over the insurgents. The latter made an unexpected attack on the capital early on Monday morning, but were repulsed with considerable loss by the Government troops under the Mpret. It is stated that the Government forces number some 8,000, and the insurgents 25,000, but Durazzo, as our Vienna correspondent points out elsewhere, is strategically easy to defend. All of the great Powers now have vessels lying off Durazzo, and bluejackets have been landed to protect the respective embassies.

The deaths of the week include: William Hammerstein, June 10; Duke of Mecklenburg-Strelitz, June 11; Thomas Dolan, James Campbell, Barclay Vincent Head, Dr. Otto Gustaf Ramsay, June 12; Adlai E. Stevenson, June 14; William Butler Hornblower, June 16.

The Week

The sense of hurt national honor, at last healed, is the chief thing in the minds of those who have followed the long fight for repeal in a kind of agonized hope that the end of the struggle, now so happily reached, would leave the good name and the good faith of the United States shining clear again before the whole world. This was all along the great issue. Our ears were filled with a din about ships and tolls and commerce and subsidies and railways; but all the time the one question was pressing for an answer: Was this nation to adhere to its solemn compact? De Tocqueville doubted whether the American democracy would display a scrupulous honor in the conduct of its foreign relations. Here was a test case. Was our democracy to show that it was capable of making a great effort in the cause of international justice? The unmistakable answer was given in the Senate last Thursday. It may not be appreciated at its full significance just now and here, but there is no doubt what history will say of it, no doubt at all of the profound effect which it will immediately have on foreign opinion.

The United States has swept away the suspicion that, simply because it had the power, it would play fast and loose with the words of a treaty, and make its pledged word of no more value than a dicer's oath. Indignant protest against such an assumption, which he nevertheless knew that all the world was making, was expressed in President Wilson's appeal to Congress. If our honor was questioned, all that we held dear was questioned; and no exertion must be spared to set ourselves right. This has now been done; and everybody knows to whom the chief credit must be given. But for President Wilson's bold initiative, but for the exercise of all his authority as Chief Executive and leader of his party, but for the skill and tenacity with which he pressed the fight, we should not now be rejoicing in the removal of a national stain.

The Secretary of the Treasury's statement that receipts from the income tax on persons, payable on or before June 30, will fall slightly more than $23,000,000 below the Treasury's own estimate of last December, is in some respects surprising and in some not. It certainly indicates a smaller yield, for the ten months on which the tax was assessed, than many people had anticipated; for the Treasury's $54,000,000 forecast, with its heavy reduction from the estimate of more than $80,000,000 by the Congressman who drew up the income tax bill, seemed in line with conservatism. But on the other hand, the productiveness of an income tax, when the experiment is tried for the first time by a government, is always and necessarily conjectural. The income tax of 1894 was never collected; the law imposing it having been declared unconstitutional by the courts. It was therefore no guide to estimates on the present law's productiveness. But the Treasury estimate on the proceeds for the first twelve months under that tax—which was 2 per cent. on all incomes over $4,000—was only $15,000,000, and the Chief of the Bureau of Statistics, after a carefully prepared special report, cut down the first-year estimate to $12,000,000. No "collection at the source" was imposed in 1894; therefore the chances for evasion were greater. There was also no "super-tax" imposed.

Mr. McAdoo's explanation, that "the Department is convinced that many liable to the income tax have failed to make returns, and that many have made inaccurate returns," is entirely plausible. There was probably never an income tax, imposed by any government in the world, to which that statement would not apply. But whether the familiar evasions or suppressions would account in this case for a yield 44 per cent. less than what was actually warranted and determinable, is another question. Even the Treasury must recognize the alternative possibility that its estimates were overdrawn. It is gratifying at all events to learn that the yield from customs revenue will be $21,000,000 above the estimate, and that the surplus of ordinary receipts over ordinary disbursements will be $30,000,000, or only about $11,000,000 under the fiscal year 1913. From one point of view, moreover, the disappointing productiveness of the income tax removes a danger which, in the minds of many thoughtful students of public affairs, threatened evil consequences if the yield had turned out to be as large as the estimates of the Congressional committee. What kind of policy, in public appropriations and public expenditure, follows an unexpectedly large windfall of public revenue, we know by unpleasant experience.

Now that the membership of the Federal Reserve Board has been completed by the President's selection of Mr. Charles S. Hamlin, and the nominations for the five appointive members have been sent to the Senate, this important experiment in banking should before many weeks be fairly under way. Until that Board was named and organized, it was impossible for the constructive machinery of the new banking system to move. The directorates of the eight regional banks cannot organize until the national Board has named the three directors of each regional board whose selection is entrusted to it. The Federal Reserve Board nominations are, in our opinion, such as to meet in a remarkable degree the essential qualifications. Outside of the Secretary of the Treasury and the Controller of the Currency, who are members *ex-officio*, the Board as named contains two practical bankers of high standing, one of them perhaps the best authority on the economic problems of the system. It contains one other member with large experience in government finances and with a reputation for conservative judgment, and a fourth who has given the close and practical study of an expert to the banking law. It now remains, in order to insure the efficiency of the new system of note issues, rediscounting of commercial paper, and control of home and foreign exchanges, that competent managements be chosen for the regional banks. A weak or inexperienced national Board would have invited irritating conflict between the regional banks and the Federal Reserve Board, and perhaps among the regional banks themselves. But second-rate managements for the Federal Reserve banks would invite and perhaps necessitate such use and extension of the national Board's arbitrary powers as in our judgment would be most harmful. This would not be any less probable with a strong and efficient Board at Washington. The true ideal of this somewhat

novel system of centralized banking, as President Wilson has personally recognized, is that it should parallel the scheme of our State and national governments—each supreme in its own proper sphere, and each supplementing, but never interfering with, the legitimate functions of the other.

By a vote of 27 to 24—with 44 Senators not voting—the Senate on Saturday decided to retain in the Legislative and Judicial bill the words "without examination under the civil-service rules," referring to the appointment of "commercial attachés," a new class of officials to be sent abroad under the Department of Commerce. This continues a record in regard to newly created openings in the civil service of the Government, of which the Democratic party has reason to be ashamed. There is always some kind of excuse for keeping out of the merit system the particular class of posts in question at any given moment; but the excuses are usually very thin. In the present instance, the case for the exemption was chiefly represented by Senator Martin, of Virginia, who kept saying over and over again simply that "we believe" that "better men" can be got "for this particular service" without examination than with it. He deprecated any extended discussion of the question, saying that "the only thing which will serve the country now is a vote"; to which Mr. Brandegee very naturally replied that it was doubtless prudent for a man taking his position not to engage in any discussion of the merits of the matter. Five Democrats stood with the minority against the exemption; and it seems just to mention that among them were two Senators whom we are by no means in the habit of commending, Martine of New Jersey and Vardaman of Mississippi.

The labor-union proviso in the appropriation bill, which President Wilson "side-stepped" last year, is to confront him again in this year's bill—the proviso forbidding the use of any part of the anti-Trust appropriation for the prosecution of combinations of workingmen or farmers. Mr. Taft had refused to approve a bill containing this proviso; Mr. Wilson signed it, with the explanation that he did so "without in fact limiting the operation of justice to prosecute violations of law by whomsoever committed." The process, thus begun, of whipping the devil round the stump has been continued on a spectacular scale in the framing of the Clayton Anti-Trust bill, passed a little while ago by the House. You begin by prohibiting the use of a certain fund, making the excuse that, while it pleases the labor people it really has no effect whatever, because there is plenty of money elsewhere for the enforcement of the law. Well, say the labor people, if that is your game, we don't propose to let you off with the first move. We will put our exemption into the law itself. All right, say the side-steppers, we can accommodate you; we will get up an exemption that will look to you like a real exemption but which we will assure the country is no exemption at all. Very good, say the labor men, if that is all we can get this year, we'll take it and be more or less thankful; but if it turns out that we have been gold-bricked, we shall be up and at you in the very next Congress—and in the meanwhile, observe that we are not forgetting to keep up that appropriation-bill proviso, and we'll work it for all it is worth.

Outsiders with any sense of delicacy at all will shrink from meddling with the Progressive family quarrel. But in this cynical age one ought not lightly to pass by the evidence which Mr. Pinchot adduces that we still have among us a Man of Feeling. He is so rare and precious a being that Mr. Perkins felt justified in circulating by the crate in 1912 a document setting forth the proof of his own extreme tenderness of heart. It is true that Beveridge "labored under emotion" as he read his own eloquence, and that Col. Roosevelt was "visibly moved," but it was George W. Perkins on whose cheeks "the tears were coursing," and who "with a sob he could not stifle hastily left the room and paced the corridors to regain his self-control." Nothing so affecting has been written, to our knowledge, since the veracious account of the deep emotion which the Walrus displayed in the presence of the oysters:

"I weep for you," the Walrus said;
"I deeply sympathize."
With sobs and tears he sorted out
Those of the largest size,
Holding his pocket-handkerchief
Before his streaming eyes.

It will be noted that Mr. Perkins was like the Walrus, not only in weeping, but in a decided preference for what Mr. Perkins calls "the large units."

The collision between the New York and the Pretoria, coming on top of that in the St. Lawrence, shows anew the necessity of prompt action, not only in ratifying the Safety at Sea treaty, but in joint additional regulations as to navigation during a fog. This accident recalls a long list of similar ones, such as the collision between the Britannic and Germanic, and the sinking of the Republic and of the Oregon. The New York is one of the oldest vessels in the transatlantic trade, completing her twenty-sixth year of consecutive service—an almost record-breaking length. Had she been fairly struck, she must have foundered promptly; but her captain's skill and good judgment and his prompt stopping indubitably saved the lives of many passengers. Official investigation will show whether the responsibility rests on the Pretoria, as it appears, or whether it was an unavoidable happening. But our Government could well take the lead in grappling with this the most serious of ocean problems by convening a board of its own officials.

It is easy, as Alice Meynell once wrote, to replace man, and, when Nature has once lapsed, to replace Nature; to replace man's work is the difficult task. Connecticut has just taken over her oldest timbered structure, the "Thomas Lee House" of Bride-Brook. It was erected by a gentleman who left England for Saybrook in 1641. Its builder was in his old age member of the Legislature of 1676, was constable under Sir Edmund Andros, and held a justice's court in one of the rooms of the house. His direct descendants still lived in it when Cornwallis surrendered at Yorktown, and Lee at Appomattox; and it was the marriage of one of them which gave Bride-Brook its name, and a theme to one of the earlier of New England woman poets. Two Colonial organizations and the Society for the Preservation of New England Antiquities lent their aid to the local historical bodies in restoring a landmark which, as one speaker remarked, should give every visitor "a

quickened sense of the high message of those ancestors who felled the forests and planted the vines of Connecticut."

The promise of Mr. Julius Rosenwald to duplicate all gifts for negro rural public schools in the South is no less notable for its wisdom than for its generosity. It is not clear from the dispatches whether this refers only to sums raised by colored people or by others; in either event, it is munificent enough. But Mr. Rosenwald is accustomed to bestowing his benefactions both wisely and generously, as witness what he has done for the Y. M. C. A. movement among the colored people. A number of impressive and useful buildings have arisen because of his aid and inspiration. So disheartening has been the condition of the negro rural schools —in many counties they offer a mere mockery of education—that the Slater and General Education Boards, as well as the Jeanes Fund which applies itself exclusively to the colored rural public schools, have been devoting themselves to the task of obtaining better supervision, better teachers, and better conditions. If Mr. Rosenwald will now duplicate every dollar raised by the colored people to improve their cross-roads schools, a splendid spur for their activities has been provided.

St. Louis proposes to adopt the initiative, referendum, and recall. Indeed, by means of initiative and referendum she would decide on non-partisan elections and prefcrential voting. Her new charter, which has been greeted with an approval foreshadowing its adoption in November, has for its controlling idea the reduction of elective offices. This marks a turning of the worm in a State whose citizens have grievously needed the short ballot. A pamphlet recently issued by the Civic Leaguê showed a condition only less bad than Chicago's, where the elector fills 144 officcs. Hereafter, according to the prôposed St. Louis charter, the voter would have but four city offices to consider—Mayor, Controller, President of the Board of Aldermen, and Alderman. The Mayor's appointive power is not limited. His official family—the Directors of Public Utilities, of Streets and Sewers, of Public Welfare, and of Public Safety —constitute a Board of Public Service to work in the closest coöperation with him. Financial matters, however, are under the control of a Board of Estimate, composed of the three elective officials; and there is an appointive Efficiency Board to draft civil-service regulations.

Mr. Asquith's promise to introduce his amending bill to the Home Rule measure before the original bill comes up for consideration in the House of Lords, is more a concession in form than matter. Should an agreement be reached on the amending bill, the Lords might incorporate its substance into the Home Rule bill in the form of amendments. Concessions from Mr. Asquith will consist in the manner in which the amending bill is introduced, not in its contents. On the latter point there is no reason to suppose that the draft of the amending bill as presented will differ from what Mr. Asquith has repeatedly announced—the exclusion, for a period of six years, of such counties of Ulster as shall by a popular vote desire to be exempted from the operations of the bill. What the Unionists will strive for is, in the first place, to make the exemption include all of Ulster, and, secondly and more important, to make the exemption run for all time. On the first point it is certain that the Government will not yield, and it is not certain that the Unionists will insist.

Mr. Redmond has lent his sanction to the scheme for organizing a Nationalist Volunteer force, 300,000 strong. Ostensibly, this is a move in self-defence against Ulster. Actually, it is intended as a hint to Mr. Asquith that Ireland believes in him, but prefers to keep her powder dry. The men of Ulster have a reason for organizing. They are opposed to a bill that is soon to go on the statute books, and they are prepared to go to the point of taking up arms against that law. Irish Home Rulers, having the Government with them—and the armed forces of the Government —are hardly in need of minute-men, except on the supposition that the Ulster Protestants will immediately set to massacring Ulster Catholics, who must look for succor to their fellow Home Rulers from the south. But that is absurd. There may be doubt whether the army will obey orders to thrust Home Rule down the throat of Ulster. There can be no doubt that the army will do its duty when it comes to preventing civil war between Orangemen and Nationalists. To the extent, therefore, that the Nationalist Volunteers are a reality, they are intended as warning that if the Government is frightened into undue conciliation by the prospect of violence in Ulster, it will have to face violence in the rest of Ireland.

Englishmen may soon be asking for a Carnegie Commission to investigate the outrages—on political decency—and massacres—of the English language—now almost daily occurring in their none too fortunate island. Until recently, Mr. Lloyd George was supposed to hold the record for violent speaking, but the Tories, with the aid of Kipling and Lord Esher, have recently been pressing him hard. Indeed, *Punch* perceived the natural affiliation, and wrote a letter to Mr. Kipling to tell him what a great opening there was for him as assistant-reviler to Lloyd George. The latter appears to have been made a bit jealous by the late outbursts of blackguarding by Conservative speakers and writers; and the other day returned to his favorite pastime of slaying "the dukes" with his mouth. He scored pretty high when he warned "the British aristocracy" that "the very dunghill on which they are perched is being undermined."

In one respect the Ribot Ministry, which fell on Friday, must come pretty near holding the record, even for the short-lived Cabinets of France. It virtually died in the act of being born. Even weak Ministries, formed by a coalition among the various "groups" in the Chamber, usually have time to show what they can do, the programme of the Prime Minister being accepted by the Chamber as a matter of course. That Senator Ribot was voted out at the very start, is clear proof of the extent to which political passions are now aroused in the French republic. Ribot was evidently rejected because he was not radical enough, though it is also plain that the extreme Left and the Socialists are aiming their blow at the President himself. Already the organ of Jaurès, *L'Humanité*, is reviving against M. Poincaré the old Gambetta formula, and calling upon him to submit or demit.

THE WASHINGTON QUANDARY.

All the available evidence goes to show that Congress, if left to itself, would adjourn in a few weeks, without passing any more contentious bills. Representative Underwood speaks for many when he declares for adjournment not later than August 1. But by that time, it is obvious, the entire legislative programme of the Administration could not be completed. It certainly could not be unless the Senate should take the highly improbable course of adopting, in President Wilson's phrase, an "express schedule" instead of a "freight" running time. Even so, the question would remain whether it is desirable to enact laws at forty-five miles an hour. High speed, in such matters, means great hazards. It is hasty legislation which gives point to the saying of Voltaire that Parliaments make laws and are then astonished to find how badly they work. And the alternatives at Washington really reduce themselves to very simple terms. If the anti-Trust legislation is to be pushed, it should be maturely considered by the Senate. If there is to be an early adjournment, a good part of it will have to be dropped for this session. Congress can't have it both ways. Neither can the President.

It is admitted that Mr. Wilson still has sufficient authority to hold Congress to its work all summer, if he so desires. Mr. Underwood proposes a compromise. This is to adjourn Congress on August 1, with the understanding that it is to be summoned in extra session directly after the November elections. The idea is that all the left-over bills could then be acted upon before next January, leaving nothing but routine work for the "short" session. How this will appeal to the President does not yet appear. He is reported as continuing in an unyielding mood; and Congress has by this time found out that, lacking Falstaff's size, he lacks Falstaff's "alacrity in sinking." So that those Senators and Representatives who are sadly making up their minds to spend another summer in Washington, are doing it on the supposition that the President will not let them off. He unquestionably has the power to compel them to keep at work, but is it wise and best for him to exercise it?

In finally answering that question, Mr. Wilson will have many things to take into the account. He must consider the attitude of his party. He must reckon with the state of mind of the country. It is all very well to say that prevailing doubts and fears are only "psychological," but that does not make them any the less serious material to be dealt with. It does not make them any less formidable politically. A party leader may have many forces opposed to him and yet triumph; but if the popular psychology is against him, let him beware. And in duly weighing this as it affects the Trust bills now sent to the Senate, the President should not overlook the fact that those bills do not live up to the description of their nature which he gave in advance last January. They were announced, that is to say, as a plan to remove "uncertainties" from the interpretation and enforcement of the Sherman act; they were to furnish a kind of plain-sailing chart for all the honest business men of the country. But it cannot be said that this promise has been kept by the Clayton bill and the other measures that have passed the House. Instead of removing old uncertainties, they create new ones. It is true that the added attempts at definition of what corporations may do and may not do are guarded by many a "Provided." There is great merit in your *provided*. The word is scattered all through these bills, partly in an effort to draw their teeth, partly in a kind of pious hope that the good may be done and the harm avoided. But the net result is only to produce, not a clearing-up of the Sherman Act, not a careful delimiting of its debatable areas, but a series of new administrative measures, themselves stuffed with ambiguities and containing matter to furnish forth a thousand lawsuits.

The need of a certain change of front on these bills has already been made apparent. Several sections of the Clayton bill have been abandoned, and the Trade Commission bill was reported to the Senate on Saturday, changed both in name and in nature. The Commission is hereafter to be called the Federal Trade Commission, and to it is to be confided power to proceed against corporations guilty of unfair or oppressive competition. This term is not defined, as the attempt was rather futilely made by the Clayton bill to define it. Presumably, the Commission will be guided by the doctrines on this subject laid down by the Supreme Court. We do not deny that such a Commission might prove efficient and useful; but there is certainly no such case made out for its urgency as to warrant great efforts, and justify the cruel and unusual punishment of Congress, in order to create it speedily.

One general consideration, affecting this whole question, remains to be mentioned. It is that laws of this nature never meet expectations. They do not do so actually, and least of all politically. It seems to be the thought at Washington that the enactment of the Trust bills would close the entire chapter of that kind of legislation. But it would be folly to imagine anything of the kind. Behind the panacea-man there always lurks another to affirm that this particular nostrum is valueless, and that the country will never be happy until he gets a chance to put *his* nostrum on the statute-book. The bills referred to are plainly a pretty large borrowing from the Progressive platform. But does Mr. Wilson fancy that the Progressives will stop there? Already some of their leaders are agitating for the Government ownership of railways. That sort of appetite is simply whetted by giving it only a part of its bill-of-fare.

THE TREATY FOR SAFETY AT SEA.

There are grave differences of opinion as to the desirability of confirming the pending treaty accepting the results of the International Convention for the Safety of Life at Sea, as well as in regard to the merits of the La Follette Shipping bill. There are those, like Mrs. Florence Kelley, who declare that the treaty marks a step backward; and her evidence has peculiar value not only because of her record of public service, but because she speaks for the travellers, while so many others who are discussing the measure do so from the point of view of the shipowner or of the labor-unionist, like Andrew Furuseth. He resigned as a delegate to the London Conference because it would not follow his views in everything, attacked it and its proceedings whole, and came back long before it had ended its conferences. Naturally, he finds nothing in the London agreement to interest him. But the question which remains for the unbiassed is

whether the sum total of good in the treaty outweighs the evil, or whether the Senate should be counselled to reject the treaty in the hope that in a couple of years a new and more radical Conference will go further than this one did in the matter of safeguarding ocean travel.

What are the criticisms of the treaty? Mr. Furuseth says that if it had been in effect it would in no wise have prevented the loss of the Empress of Ireland; the only change would have been that a lot of her cooks, waiters, coal-passers, etc., would have been rechristened "certificated lifeboatmen," and might not have been able to understand the language of their officers save through an interpreter. Mrs. Kelley insists that the treaty will supersede and relax existing laws for seven years —until 1921—in the matter of a continuous wireless watch, the substitution of life-rafts for one-fourth of the life-boats, and by compelling one country to accept the safety certificate of another even though the laws of the latter are far below our own in safety requirements. In other words, the stringent American laws will be of no avail if the treaty is passed, and a ship from Norway, let us say, comes in with what is under our own laws inadequate equipment or a defective wireless watch. Other objections are that the treaty does not compel cargo boats to have wireless service; that its requirements as to structural changes affect no craft save those whose keels are laid down on or after July 1, 1915. It is also asked what guarantee has the United States that the inspection service in other countries guaranteed by the treaty will be efficient?

Now, it is obviously true that, as the structural changes, such as double bottoms, required by the treaty, apply only to vessels built after July 1, 1915, the Empress of Ireland would not have been affected by its adoption. To suggest, as Mr. Furuseth does, that *all* ocean steamers now afloat should be compelled to add additional bottoms and bulkheads is, on its face, so absurd as to need no comment. It is as if one should suggest that every factory building in New York that is not built according to the latest devices should be taken down and rebuilt. In such cases, whether on sea or on land, no one thinks of doing other than to safeguard the old as well as possible and to prescribe the strictest rules for new construction. Again, Mr. Furuseth's sneer as to the "certificated lifeboatmen" seems to us unjustified, save from the labor-union point of view of creating the maximum number of jobs, needless or otherwise.

That sailors should know the language of their officers we heartily agree; the Conference should have seen to this. As for the life-rafts to which Mrs. Kelley objects, had there been more on the Empress and the Titanic, many lives would have been saved, for they would have floated off. They do not, moreover, capsize in rough seas. But we are with her in thinking that every passenger is entitled to a seat in a boat; there should be plenty of life-rafts besides, even if a ballroom or a swimming tank has to be sacrificed. We should even go so far as to require non-capsizable life-boats. As for the wireless, there is sharp difference between Mrs. Kelley and the Commissioner of Navigation, Mr. Chamberlain, who was a delegate to the London Conference and insists that the treaty does not relax any of the existing United States statutes. We are inclined to think that Mrs. Kelley is correct as to her wireless contention. But the real question at issue is whether, even if she is correct in all her criticisms, the treaty should therefore be rejected.

To this we answer an emphatic no. As our readers are aware, we were criticising the Government and the steamship companies in this matter years before the Republic and the Titanic sank, and we are not overmuch given to advocating compromises. But here a three-quarter loaf is far better than no bread. Mrs. Kelley, we think, overlooks the fact that our American ocean passenger ships are but few; that even the English are in a minority, and that this treaty affects German, French, Canadian, Scandinavian, and Dutch shipping as well as our own. It is a tremendous gain to have all the seagoing world agree as to structural rules for all ships after July 1, 1915; but it is an even greater gain to have got the nations together to legislate on this subject. That we can only hope that the other nations will live up to their obligations, there being no central power to compel them, is true; but it is also true of all other similar international obligations.

OUR PRECARIOUS PUBLIC CAREERS

The appointment of Representative Covington to a life-tenure judgeship, and his acceptance of it, are made the subject of regretful comment by the Baltimore *Sun*, in an editorial entitled "Keeping Our Covingtons in Public Life." It finds that the Maryland Congressman could hardly do otherwise than accept, owing to the uncertainties of politics, particularly in the case of a man independent of political machines and not possessed of such means as would make the heavy expense of a direct-primary contest a matter of indifference. "Mr. Covington," says the *Sun*, "is possibly the most useful man holding political office in this State; certainly he is numbered among the three or four most useful." But if he had looked forward to a continuance of his career in the House, he would have been confronted with the plain fact that if at any time he failed either of nomination or election, he would have to "return to Easton and take up there the practice of law which was interrupted when he first went to Congress."

The trouble is one that confronts us all along the line. So far as Congress is concerned, much might be accomplished in mitigation of it if we could break down the tradition limiting eligibility for the representation of a district to residents of that district. There is no Constitutional limitation of this kind; the requirement of the Constitution being only that every Representative shall, "when elected, be an inhabitant of the State in which he shall be chosen." But sentiment in favor of strictly local representation has, thus far, been so fixed and so universal that there have been hardly any exceptions anywhere to the rule of district representation by district residents. Even if the authority of this rule were broken down, however, the difficulties in the way of keeping a man in Congress when his home district failed him would be very great; perhaps greater under the direct-primary system than under the old-time methods of nomination. Indeed, in view of the deep-seated prejudice in favor of local representation, the question is hardly more than academic. Of more practical importance is the question of making primary elections inexpensive, in which direction our Baltimore contemporary looks for the pos-

sibility of a real betterment. There is no doubt that this is one of the most serious difficulties connected with the direct-primary system. If we are to get and keep good men in our political life, we must make it possible for them to remain in it without facing an exhausting and expensive struggle every few years.

It would be idle, however, to imagine that the trouble can be met by any specific remedy. It is right to try what can be done by this means or that; but the difficulty is so many-sided, the elements entering into it so pervasive and subtle, that hope for any great betterment must rest rather on a general advance of thought and feeling upon the whole subject of public life than on any particular contrivance. And towards such advance an indispensable requisite is a recognition of the loss we suffer when our political life is deprived of any man whose service is of particular value or importance. One of the most notable instances of such a loss that the country has known in many years was when Gov. Hughes ceased to be a factor in the politics of New York State and of the nation. His high usefulness in the exalted judicial position to which he transferred his labors, no one will question; but it was felt, not only in New York, but throughout the Union, that a vital factor which could ill be spared had gone out of our political life when he withdrew from it. How deep that loss was, the history of the Republican National Convention of 1912 was destined speedily to show, in a most dramatic manner. In less obvious ways, and in less marked degree, but nevertheless with consequences most potent in the aggregate, this draining away of much of what is best and finest in our politics and government is going on all the time.

But the draining off of able and high-minded men who have found their way into political life, important as it is, is but a minor indication of a much broader and more important phenomenon. If those who have actually gone into this career and made a notable impression are so often diverted into other paths, how many must there be who ought to be in political life, whom the State or the country needs, whose own inclinations would direct them towards it under favorable conditions, and yet who never enter it at all? It is a mistake to suppose that there are not in Congress, and even in the State Legislatures, a certain number of men of a high order of ability and character, and zealously devoted to their legislative duties. But where there is one of this kind, there ought to be ten. In the State Legislatures particularly, the dearth of men of this type is deplorable. Nobody expects any large question of public policy to receive at the hands of a Legislature the kind of consideration which is its due; and this is a state of things which carries with it the seeds of its own perpetuation. Nothing tends more to keep high-class men out of a Legislature than a general understanding that high-class men do not go there. There are always, fortunately, some exceptions; but it gives one a pang to think how different the story of our Government would be if we could somehow contrive to make the exceptions the rule.

THE ITALIAN DISORDERS.

Extreme self-restraint on the part of the troops and the police in the face of popular disturbances is apparently a tradition of internal Italian policy. During the present troubles, as on several occasions since the great riots of 1898 in northern Italy ushered in an era of economic unrest, soldiers and police have held back under provocation. It is a policy which may be dangerous in the long run, but which is justified in its immediate effects. The "revolutionary" movement which began with last week's rioting at Ancona is pretty near its end, and the village "republics" which sprang up here and there under Socialist and Anarchist auspices will have ceased doing business before many days. Possibly it is part of Government tactics to let the rural populace satisfy its yearnings for the dramatic by setting up "republics" under amateur Robespierres and forcing the hated "aristocrats" to salute the red flag. The rôle played by the peasantry constitutes a peculiar feature of the Italian disturbances. In all other countries it is among the urban workers that unrest flares up first, with the rural population indifferent, if not hostile. But northern Italy has its peasants' associations, who have conducted obstinate strikes with more or less success, and so have offered a fertile field for Socialist and Anarchist propaganda.

The task of the Italian Government was unquestionably made easier by the refusal of the railway workers to proclaim a general strike. This must have been a sore disappointment to the manipulators of the local uprisings in the northern districts, since only a few weeks ago there seemed danger that the railway workers would proclaim a strike on their own account. But since then the Government has taken action to meet in part the demands of the railway men, while letting it be known that in the case of a strike it would make use of the weapon first brought into play with such effectiveness by Premier Briand during the French railway strike of four years ago. This consists in summoning the strikers to the colors as part of the army reserve and working the railways under military discipline.

But fear of such a move must have been only one consideration. Italian workingmen have experimented liberally with the general strike during the last ten years, and have met with failure. They made the mistake which cautious Socialist leaders in other countries have feared, of dulling the edge of a weapon which should be used only in the most pressing emergencies, and with assurance of support from the great mass of the population. Experience has shown that only when the general strike assumes the proportions of a national upheaval, as it did in Russia in 1905 and more recently in Belgium, is there any chance of success. General strikes conducted by labor alone, as in Sweden, or general strikes that are not general, as in Italy, have ended in defeat.

The failure of the Socialist-Republican movement in the Romagna does not, however, rob that movement of significance. One operating cause must have been the revival of Socialist energies, of which we find another illustration in the present political situation in France following a Parliamentary election in which the Socialists have made notable gains and the Radicals, more or less in alliance with them, have also added to their strength. If we look for the further cause behind this reassertion of Socialist aggressiveness we may find it in the reaction from the militarist ideals which have been dominant in Europe during the last five years, or, roughly, since the Turkish revolution set the European balance of power

a-wavering. Italy's war in Tripoli, and the Balkan conflicts, brought Europe face to face with the possibility of a general war, with a consequent enhancement of the nationalist spirit all over the Continent. In Italy itself the Tripolitan conquest created a wave of patriotic enthusiasm which for a time threatened the integrity of the Socialist party in that country.

With the relaxation of international tension has come a subsidence in nationalist feeling and a corresponding recrudescence of the older Socialist pressure. In France this has been made manifest in the present campaign for the abandonment of the three years' military service law. In Italy the rioting points in the same direction. At no time did the monarchy seem so safe as after the Tripolitan conquest; and while an aggressive Italian policy in Albania was being carried on. The uprisings at Ancona and elsewhere are only another instance of the recurrent popular protest against the costs of militarism.

CANADA AND OUR MAGAZINES.

It is less than three years since the people of Canada, by rejecting reciprocity and Sir Wilfrid Laurier, defeated our insidious attempt to annex them, but already another American scare is taking shape—at least in the columns of the London *Times*. That paper has been much concerned with the forces working for the "Americanization" of the Dominion, if not in a political sense, then in a cultural sense. A process of "pacific penetration" is under way which may not threaten the absorption of Canada by the United States, but does threaten the integrity of the Empire by loosening the bonds of a common outlook and common tastes with the mother country. Is it certain, asks the *Times* correspondent, that the people of Canada will never be attracted "by the vision of an independent Canadian Republic"? American immigration into the Western provinces is bringing American tastes and connections. Canadian labor organizations are branches of international organizations with headquarters in the United States. American manufacturers have branch factories in Canada manned largely by American workmen. The newspaper syndicates recognize no 49th degree of latitude. English news intended primarily for consumption in the United States and reflecting the American attitude to English problems is retailed to Canadian newspapers, on the apparent assumption that Alberta or Saskatchewan feels about the House of Lords or Ulster as Iowa or Massachusetts does.

A striking example of how unconsciously the Canadian journalist drops into un-Imperialist modes of thinking is pointed out in a letter by the head of the Canadian branch of Macmillans:

> Much, if not most, of our syndicated material for newspapers comes from New York and Chicago, and only recently a large Winnipeg paper in its Sunday edition had a page story of "How We Develop Our Navy." The account was all concerned with the American navy, and eulogized "Our great Admiral Farragut," for his victory over "the British Navy" in Lake Erie. [It may be remarked that a victory by Farragut over the British on Lake Erie rather represents a Canadization of American history.] There are daily syndicated articles in most of our papers, in which "we Americans" and "our starry flag" and "our United States" and "our trouble with Mexico" figure just as freely as, if not more freely than, generalities about Great Britain.

Not to mention the waning of cricket and lacrosse before American baseball!

But, in particular, it is the cheaper American magazines that are undermining Imperialist sentiment in Canada. "For every English weekly or monthly publication one sees here ten American." The evil effects are not merely sentimental. More pernicious even than the reading matter in the American magazines are the advertising pages, with their highly artistic and psychological appeal. The influx of American magazines thus means an influx of American trade, which in turn binds the two countries more closely together and so completes the vicious circle. Yet how is the danger to be averted? Favorable postal rates by the British Government are advocated as one way of checking the invasion of American periodicals. But it is not likely that anything short of a prohibitive rate on American periodicals would show results. For it is plain that not only is there in Canada a demand for our magazines, but there is in England no rival supply. It has become a commonplace that in Great Britain, for obvious geographical reasons, the newspapers play the part which our own vast distances—and Canada's—have reserved for the weekly and monthly magazines. England has its high-class political and literary reviews of comparatively limited appeal. But its cheap magazines stand far below our own. They concentrate on fiction and diverting matter of a distinctly elementary nature. They are not in the least concerned with the social and political questions which—no matter how free-and-easy their treatment—have nevertheless given our own magazines their enormous vogue. If American magazines were to be excluded from Canada, that country would have to develop a substitute. England has hardly one to offer.

To the extent that the "Americanization" of Canada is a fact, the sole cause is not to be found in mere geographical contiguity, though that, of course, counts greatly. It is the similarity of conditions on either side of the border that works for a similarity in reading tastes. One might keep American magazines out of Canada; one might even keep American farmers out of Canada, and yet tastes and habits of thought would gravitate to the same level on both sides of the boundary. We have spoken of geographical distances. The enormous prairies of Western Canada, with a well-scattered farming population, reproduce our own West as a market for the periodical as opposed to the metropolitan newspaper. Canada's farming population is bound to develop—and, for that matter, has already developed—much the same interest as our own in the problem of railways and express companies and Trusts, and ultimately in the questions of conservation and the relation between government control and private ownership—in other words, thoso social-political questions to which our own magazines devote so much attention.

And yet it is doubtful if Imperial interests are as seriously endangered in Canada as the *Times* imagines in its pessimistic moods. The points of contact betwcen us and Canada are many. But, after all, there are differences which might be emphasized. It is not nccessary to go into detail. It is enough that Americans, when they enter Canada, especially the older provincos, do feel that there is a differencc—a difference in the pace of life, in the higher cultural interests, in the importance of class and caste. These differences from us and resemblances to England are of sufficient vitality to keep tho Imperial feeling alivo for somo time to come.

Foreign Correspondence

THE PLAN TO REFORM THE THAMES—AN ABORTIVE SCHEME —"LIQUID HISTORY."

London, June 8.

Old Father Thames has suffered many indignities in his time, but there has been nothing quite so shocking as the present proposal to put him into a stralt waistcoat. The plan sent out for the consideration of the local authorities has been prepared by C. J. Griffiths, the engineer to the Thames Conservancy, a board which controls the river above Teddington, the lower part of it being the domain of the Port of London Authority. It is a plan for bringing down to the sea much more rapidly than at present the water which falls in the 3,500 square miles of the Thames Valley. Its principal features include the cutting of seventeen new channels, the destruction of the islands that interrupt the current, and the removal of the masonry bridges at Henley, Maidenhead, Windsor, and elsewhere. The cost of it would be not less than $15,000,000, an outlay equivalent to $500 per acre of land relieved from inundation.

The project has only been made public a day or two, but it is already as dead as a doornail. One objection comes from the farmers, in whose interests it has largely been prepared. To be protected from the floods which cause trouble for a few days in the year would be worth something, but it would not be worth the sacrifice of a great part of the value of the river all the rest of the time. What the farmer is asking for is not a river-bank with a gradient of one in three, which would make it impossible for cattle to drink of the stream and would compel him to fence off his fields as a protection of his stock from danger.

But the protest of the farmers is as nothing to that which has been immediately made on behalf of the vast multitude of persons to whom the Thames is every summer a means of healthful recreation. There is probably no other river in the world that contributes so much to the greatest happiness of the greatest number. The nearness of the pleasure part of the river to London makes it one of the most accessible, as well as delightful, resorts for a half-day holiday. "It is no exaggeration," says one of its admirers, "to state that the Thames is a model river for boating, offering as it does not only the perfections of rowing and the quintessence of sculling, but also exceptional facilities for punting and canoeing, in the shape of long reaches of moderate depth, with good gravelly bottom and endless side streams and backwaters offering all the solitude and natural charm of an Arcadian stream."

To those who can afford to spare more than half a day at a time, the Thames has far more to offer. No foreign visitor to England, however short his stay in the country, should miss the two days' excursion by launch from Oxford to Kingston, or vice versa. Grander scenery, of course, can be found on many other rivers, but for its endless variety of simple, restful loveliness, where can be found the rival of this ever-changing, ever-pleasing panorama? These natural charms are heightened by another feature that appeals forcibly to any stranger who has a sense of things past as well as things present. One day a colonial politician, standing on the terrace of the House of Commons, was bragging loudly about the glories of some big river in his own region. It was a much finer river than the Thames—cleaner, wider, and so on. John Burns happened to be close by, and could not stand it. "Do you know what that brown river is, sir?" he exclaimed indignantly. "It's liquid history!"

At Brentford, opposite Kew Gardens, there stands a stone monument commemorating the fact that near that spot Julius Cæsar took his Roman soldiers across. Since that time what a story is linked with the towns and villages along these banks—with Oxford, and Windsor, and Runnymede, and Wallingford, and Hampton Court, and Richmond! Apart altogether from its historical associations, there is something characteristically English about the whole environment of this stream—about the hamlets, and meadows, and country houses that stud its banks. "There is no single spot on the Thames," it has been said, "that could be situated anywhere but in England." That is perhaps an exaggeration, but it remains true that the two days' leisurely journey down its reaches will tell the stranger more about the soul of the country than any other expenditure of the same time.

And "this glorious river," as Izaac Walton called it, twentieth-century vandalism proposes to turn into a canal! The scheme would so reduce the summer level of the stream that, in many stretches of it, about as much of the surrounding scenery would be visible from a boat as if one were passing through a perpetual lock at low water. The destruction of the small islands, or "eyots," as they are generally called, would remove a feature that contributes not a little to the charm of the landscape. In fact, as the Mayor of Reading, himself a member of the Conservancy, has stated, the plan would ruin the Thames as a pleasure resort. And all to get rid of what the report speaks of as "a certain amount of inconvenience" that occasionally follows an exceptionally heavy rainfall.

In this case the æsthetic and sentimental objections are happily reinforced by the very practical consideration of pounds, shillings, and pence. To destroy the "amenities" of the Thames would be to take away the livelihood of thousands of persons dwelling permanently along its banks.

There is a reasonable suspicion that the real purpose of the scheme is not what appears upon its face. The local authorities along the river have been complaining for years that the Thames Conservancy does not take adequate measures to prevent inundations. "Very well," replies the Conservancy, "we will look into the matter, and see what can be done." It sets its engineer to work upon the problem, and, after an elaborate survey, he produces this solution. "If you really want to escape your occasional floods," says the Board to the local authorities to-day, "you will not get any efficient preventive short of such a scheme as this. It is now for you to decide whether you prefer an inundation now and then or the reconstruction of the river as planned by our engineer." H. W. H.

THE INSURRECTION IN ALBANIA—AUSTRIA AND PRUSSIA — THE WEAKNESS OF THE MPRET.

Vienna, June 6.

The troubles in Albania have suddenly assumed threatening proportions, and the new ruler's capacity has been put to the test in a very severe manner. The Mpret has not stood the test. Sudden danger showed him to be a man of no character, and the Austrians, who have had to bear much from the Prussians in the way of criticism during the last few years of trouble in the Balkans, when the Austro-Hungarian foreign policy has too frequently been wavering in character, are watching events in Albania with great interest. They see a German prince, a model military man, the pattern member of the general staff, suddenly placed in strange circumstances, where events unforeseen in the drill book must be met, at once and with decision, and find him wanting.

The joy felt in Austria-Hungary is shared by the Serbs, who say, "All Europe blamed us for our want of diplomacy in keeping the Albanians in the newly annexed regions in order; now the pattern German, the soldier par excellence, cannot keep a handful of Albanian insurgents at bay." The Serbs point out a fact that has long been forgotten in regard to Albania—they say that even the Romans could not inspire respect in this wild people. They built a road right through the country, to reach the Near East, and shipped their goods over Durazzo, but they never attempted to dominate the Albanians in the mountains. The Turks have never been able to do anything in the wilds of Mallisoria, nor has a Turkish tax collector ever succeeded in getting money from the inhabitants of the mountains. The Albanians have been accustomed to live by plunder and robbery, and now that this source of supply has been cut off, partly by the work of civilization carried on by the Serbs, partly by the advance of the Greeks, they are without means of living. The land which was cultivated before the war has fallen into barrenness during the incursions made by troops and brigands, and the Albanian has absolutely no means of living. "How shall he pay taxes?" a diplomatist who knows the Balkans asked me. The new Prince cannot as yet expect the poverty-stricken Albanian to contribute anything to the funds required to administer the new country, although funds for the reorganization of the state are urgently needed.

Besides the mistake of knowing nothing of the people over whom he rules, the Prince von Wied made a great initial

error. He ought to have insisted on the loan guaranteed by the Great Powers being made over to him before he set sail for Durazzo. Turkey has always managed to keep comparative order in Albania by means of distributing money where it was needed and taking men to defend her palaces and public buildings in return for the immediate relief given in the country. The people there are accustomed to being ruled by men with their hands full of ready money. The Prince arrived in Albania almost alone, without money, without a proper guard which would have inspired his new subjects with proper respect, and the final and most fatal mistake of all was taking the Princess and the children with him. The Prince's unconsidered flight on board the Italian warship was only made at the instance of the Princess, who refused to leave her husband's side. The diplomatists of Europe now recognize that the new ruler was most ill-advised in hampering himself with women and children at such a juncture.

Alone, his first task on arriving at Durazzo would doubtless have been to study the military aspect of the place, and he would have seen that Durazzo, lying as it does on a peninsula, was very easy of defence. It is separated from the mainland by swamps, further on a deep river in a ravine separates it from Schiak, the place where the malcontents were assembled. Twenty soldiers posted with rifles on the banks of the ravine could have made the advance of hundreds of men impossible, as, carefully placed, they would have commanded every approach to Durazzo. The Prince appears not even to have contemplated this means of defending the capital, and his future in his adopted country is regarded with great pessimism in Vienna. Here they consider that a Turkish pasha would be the right ruler for Albania. He would understand the difficult character of the people, would be able to communicate with them in a language that they knew, and would only lend a deaf ear to the opposing counsels of Italy and Austria.

The rivalry between Austria-Hungary and Italy, both at home and abroad, has become very keen. Both nations wish to contravene any action taken by the other in Albania, and every forward effort made by Austria is followed by a check from Italy. It is very doubtful whether even the greatest politician could prevail against the multitude of counsels offered to Wilhelm von Wied. And the Mpret never passed as a politician. The battleships hovering outside Durazzo are no doubt a moral support to the Prince, but it is certain that he could press his policy upon his subjects better without the visible sign of the power of the two nations, whose interests in the country are entirely opposed, just outside.

The Albanians ask the Prince to dispossess the beys, and to take away the land from the twelve great ruling families, who require a third of its produce as rent. The great nationalist party is agitating for Albania for the Albanians, and calls upon the Prince to free himself from the trammels of conflicting interests, and to save the country for its people. There is a great work for the right man in this unfortunate country, which is overrun with agents, all with some ulterior object. The ideal ruler, however, must be a man of somewhat rough methods, not the last word of civilization.

Meanwhile the country remains in a state of uproar; discontent is everywhere rampant, and the seeds of insurrection, which have been so largely sown by foreign agents, are bearing fruit. L. R.

"POLITICAL PSYCHOLOGY" APPLIED TO THE NEW FRENCH CHAMBER —SOCIALIST LEADERSHIP.

PARIS, June 6.

Dr. Gustave Le Bon is applying to "political psychology" that scientific method which won the consideration of Henri Poincaré for the "Evolution of Forces," and the eulogy of Gumplowicz for the "Psychology of Crowds" as *genial und bahnbrechend*. Now he gives us a "psychological dissection" of the new French Parliament. "A member of Parliament is not an invariable being of fixed mind. He constitutes a collective personality with the mobility and inconstancy of all collective beings. His value depends for a little on himself, but much more on the group to which he attaches himself. We may compare him to a figure whose importance depends solely on the numbers which precede or follow it.

"The present Parliament seems disquieting because it numbers a hundred Revolutionary Socialists. In truth, their projects are revolutionary enough. A member of their group has just formulated them as follows: 'To expropriate the individual and take from him the means of production which he now holds, so as to socialize them.' Socialists know very well that to ruin the rich industrial and commercial classes would fatally strike back and ruin the other classes also; but that is precisely the end they pursue in order to come to a revolution which they imagine must turn to profit for themselves. Revolutionary in their talk, these apostles of a new faith are much less so in their thoughts. They do not always know how to govern their tongues, but masters whom they fear oblige them to govern their actions. They have a solid hierarchy, and accept timidly and reverently the programmes imposed by their chiefs, committees, and congresses. . . . In the lump, they constitute a docile mass whose gregarious soul is easily handled by their leaders. Their feeble personality is enveloped with a very strong collective soul.

"Revolutionary Socialists are dangerous most of all on account of the fear they inspire. The timid always stand back before the violent. The history of our great Revolutionary assemblies has constantly verified the law. . . . For such psychological reasons, it is to be feared that the United Radical party will be absorbed by the Socialists. The weakness of the Radical party is great because its convictions are uncertain. It will follow Socialists through fear, just as the Plain followed Robespierre through fear of the guillotine—which, moreover, it did not escape. . . . Surely, Socialists have not more character than their adversaries, but the habit of obeying despotic chiefs gives them the power which disciplined troops always have.

". . . The present difficulty is to find out whether, from this crowd of legislators with opinions all afloat, there will arise a few men of tenacious will, capable of continuous effort and possessing judgment enough to distinguish possibilities from chimeras. . . . These will know —since their judgment is supposed to be sure—that the true statesman ought not to govern for a class of persons, but for all classes of citizens. They will know also that vexations imagined by fanatics to satisfy their jealousy and rancor would lead to the worst of reactions. They must have the will to substitute the widest tolerance for those low religious persecutions on which so many Ministries have lived till now. . . . I am not unmindful that the realization of such a programme is very difficult in a house of Parliament divided among ten groups. . . . A task like this demands the heart of Hercules and the brain of Machiavelli. Yes, it is a difficult hour. Socialism unites the discontented as Boulangism did. It has for itself the numerous army of the beaten in life, the ambitious, and the unfit." S. D.

The Errant Mushroom

EXCURSIONS OF AN EPICURE.

To the true mushroom-lover there are dozens of varieties far superior to the canned "buttons" that are supposed to add flavor to a beefsteak; much better than the dried *funghi*, mostly *Boleti*, of the Italians which are supposed to give a sprightly touch to the limp spaghetti of the fixed-price Bohemian dinner; and more delicious than the domesticated *Campestris* bought out of the grape-baskets at the grocer's. They must be sought for in their oftentimes shy and seemingly capricious habitats, and eaten as soon as gathered; and here begins the lure of the mushroom.

An ardent and persistent hunter will find at least thirty edible kinds of mushrooms during a season beginning in May and ending only when the snow flies. His trained eye detects them during rambles in fields and woods, in village streets, on fallen logs, or, as Meredith says, on "the rubbio of woody wreck." Within a short time I gathered a goodly mess of the little *Micacedus* in Washington Square, Manhattan. The lawn of a Unitarian church near Boston yielded a supply of *Atramentarius* for a whole autumn. I rarely reached home from my train without filling my evening paper with *Micacedus, Appendiculatum, Atramentarius*, or some other delectable mushroom

whose habitat, perhaps for that summer only, I had learned to know.

The season begins in May with the Morels, which may be looked for around the decaying roots of apple trees. It was only after several years' search that I came upon enough to enable me to test their admirable quality. As autumn begins one still looks for the faithful *Campestris*, the *Comatus*, or "shaggy mane," some of the *Hypholoma*, and the "smoky" Hygrophorous. All through the summer, especially after frequent rains, the mushroom lover is rewarded, somewhat capriciously it must be admitted, by finding many species that not only delight his discoverer's instinct, but furnish also a delicious feast. If there is a growth of hemlock he looks for the *Chanterelles*—funnel-shaped, the color of yellow ochre, and of an aromatic flavor. He is fortunate if in late August he finds in a mown field a dozen or more *Procera*, or "parasol" mushrooms; and the little white *Naucina*, which must be carefully distinguished from the *Amanitas*, which it somewhat resembles.

The seemingly haphazard manner of growth of many mushrooms has for me a large part of the attraction that lies in searching for them. They are "as shy as the squirrel, and as wayward as the swallow." Even the staid and industrious *Campestris* cannot be relied upon to appear in successive years in the same pasture, though it is less likely to fail you than many other nomadic varieties, which are here one year and flown the next. The explanation of this is quite simple. The mycelium, a thread-like network slowly formed underground, out of which the mushroom shoots up in a night, has become exhausted. But to most persons an explanation at such times is an unsatisfactory substitute for mushrooms.

I spent a whole afternoon rambling through some New Hampshire pastures and woods where the conditions appeared to be perfect for certain summer mushrooms. But nothing came of it. On my way home I did not like the looks of a mongrel dog that seemed ready to dispute the road leading by a farm-house. To avoid him I took a turn through an apple orchard and leaped over a stone wall into the largest and finest growth of the *Lepiota Procera* I had ever seen. The next summer I returned with fond anticipation, but my friends were gone, like gypsies to set up their tents on some other favored grounds.

One morning in the old village where I chanced to be living I looked out of my window for an observation of the weather. The little lawn in front of my neighbor's house was thickly studded with what might have been fallen blossoms of the dogwood tree. Where, the night before, was a neatly shaven lawn, was now a profuse outbreak of *Appendiculatum*—"a thousand saw I at a glance." Farther down the street two old maiden ladies lived in the peaceful retirement of a shaded cottage, a little in from the street. There one morning was another and most beautiful visitation of the same mushroom, which I confess to have gathered without leave.

In Boston there is a Mycological Society that holds weekly exhibitions during the summer season. There every form of "toadstool," however unusual or unimportant, is brought in for wise inspection. The "rose-flush'd mushrooms, undivulged last evening," appear there next day to be "named and known." Here I would say a word in praise of some of the modest, true, but unrecognized scholars of Nature, whom I have known in and about that city. There was one Davenport, who spent his working days at a frame-gilder's bench, and who yet in forty years had become so great an authority on ferns that to him Professor Gray often sent very rare specimens to be named. Hitchings, a paperhanger, through years of patient devotion became an authority on native flowers. It was he who found a white cardinal flower, and was said to have discovered a wild flower in blossom in every month of the year. At the exhibitions of this society one was sure to come across these unassuming and patient observers, from whom the shyest of fungi could not hide away.

I once had occasion to test the enthusiasm and closeness of observation of some of these "sharps," whose knowledge of the subject is far better than mine. Henry, a colored boy in my employ, once brought to me a large "toadstool" which he had found growing in the backyard of the squalid quarters where he lived, just outside Boston. At a glance I thought I recognized it as the *Arvensis*, or horse mushroom, but on looking further down the stem I noticed differences that made me doubt. I sought the higher authority of Mrs. Blackford, at the Museum of Fine Arts, who promptly said, "*Arvensis*"; but her trained eye at once noted variations that put it into another class. She then referred me to another authority, who likewise said, "*Arvensis*." But wiser counsel prevailed. "Call up the president of the Mycological Society!" I was next advised. As I had expected, he exclaimed, "*Arvensis*."

But Henry's "toadstool" was as puzzling to him as it had proved to the other experts. Finally it went to Professor Farlow, at Harvard, who could only say that to his knowledge no such variety had been found in America, though it was known in England. One loves to wonder by what mysterious agency the spores of this mushroom were borne to that little yard in Jamaica Plain.

Books and Men

REMEDIAL LEGISLATION FOR WORDS.

A tax on words is proposed by a magazine writer. He would have Government tax collectors read the newspapers, periodicals, and books, and haunt lecture-rooms, churches, public meetings, clubs, and afternoon teas—wherever talk is uttered. Short words should be exempt, but polysyllables liable to the tax. To speak of the "poor-house" should cost you nothing, but "eleemosynary institution" might, in the end, send you there.

It is hard to discover the reason for this assault upon long words, or for the belief that a tax of this kind would pay the enormous cost of its collection. Are long words—except in the rural newspapers, and as a kind of heavy jest—in such high favor? Not, surely, in the days of "big" novels, full of "good red blood," that "grip" the reader! It was not long ago that a fad travelled through the schools to the effect that only short words, of Saxon origin, were to be encouraged. We were to ignore the variety and richness of the language and pretend that it had not many, but few, sources. A ban lay upon "commence"; pupils were to say "begin" instead. Not a few boys and girls went forth into the world with a hazy notion that "commence" was in some sort of evil repute, that it was bad form, like "cute," "nice," and "elegant" in their popular significance.

Although there seems no pressing need to discourage long words, there is every reason for the foundation of a society for the prevention of cruelty to words—short or long. Take, for instance, that word "big." Can any one doubt that it longs for shorter hours, easier work, longer vacations? It is abominably abused. Once it led a peaceful existence, employed almost wholly (and in its superlative degree) by circus men. Now, the political reporter, the writer of publishers' advertisements, the literary critic, and even the university professor, keep the poor word busy every minute.

About "proposition" one hesitates to speak. It has settled upon the land like a blight. Perhaps it is too late to say anything on the subject, just as it is too late to regret the extermination of the passenger pigeon. Why "proposition" exercises this siren charm, what secret melody dwells in its syllables, let those who can, declare. There is a type of man upon whose lips it eternally hovers. You watch him with a dreadful fascination—he will utter the word every one hundred and twenty seconds, as punctual as the "Old Faith-

ful" geyser. If some magic power made it impossible for him to say "proposition" you feel that he would first turn purple, and then choke to death. From Maine to California smoking-cars and clubs are vocal with: "Look here, I said to him, what kind of a proposition is this?" Meanwhile, the sentence in the Gettysburg Speech about the nation, conceived in liberty, and "dedicated to the proposition," etc., is suffering from a sort of inverted popularity, the result of bad associations.

As with words, so with phrases. "Bulk large" has bulked large in every newspaper for two or three years, and earned a good rest. "Good red blood" lies buried beneath a mound of jeers. "Glutton for work" is still going strong. "Psychological moment" was shyly retreating to the suburbs, but the recent Presidential patronage of the adjective will, perhaps, cause its head to peep forth again. A curious thing about the many psychological moments of ephemeral literature is the fact that only a few of them were moments, and hardly any of them were psychological. Sometimes they were instants in the careers of inanimate things, like locomotives. A similar case occurred when a "human interest story" was written, with a seal for its sole character.

In the small newspaper, "felines," not cats, are still run over by trolley cars; "juvenile offenders" are "apprehended" by the policemen, and the picnic is spoiled when "Jupiter Pluvius puts Old Sol to rout." By far the finest venture into classic fields ever made by any newspaper, to my knowledge, was when the popularity of a dance-hall at a beach was attested by the fact that it was frequented "until the wee sma' hours by the devotees of old King Terpsiquhar."

The subject leads naturally to the schoolboy "howlers" recently discussed in the *Nation*. One brilliant gem seems to have been missing—that about the boy who rendered "Cæsar in Galliam venit summa diligentia," "Cæsar came into Gaul on top of the diligence." It is a pity that one of the most amusing essays ever written on this subject, Prof. Brander Matthews's "On the French spoken by those who do not speak French," should be little known and hard to find. The author does not, it is true, relate the story of the tourist who saw the broken spring on the cab, and hailed the cocher with: "Oh, I say, vous avez cassé votre printemps!" He does tell of the famous translation of the title of "Love's Last Shift"—"La dernière chemise de l'amour," and of the seasick Channel passenger, desiring to get into his berth, who cried faintly to the steward: "Je sens mal; où est ma naissance?"

News for Bibliophiles

WILLIAM PITTIS: THE DIFFICULTIES OF A PAMPHLETEER AND BIOGRAPHER.

II.

We now come to the tracts for and against a war with France, which furnished Defoe with his best ammunition against Pittis. Between the two parts of "The History of the Mitre and Purse," *i. e.*, on November 23, 1714, (cf. the *Evening Post*) appeared the "Reasons for a War with France," which caused Pittis's arrest by the messenger of the press, a man named Gray (cf. the *Post Boy*, December 2-4, 1714). This pamphlet, apart from Defoe's testimony and the fact that the authorities must have had some reasons for proceeding against Pittis, would seem to be the work of our mercenary scribe, since the *Weekly Packet** for November 20-27, 1714, advertised the second edition of it as by the author of the "History of the Parliament," a work which appears to be the compilation already mentioned, *viz.*, "The History of the Present Parliament" (1711) the dedication to which is signed "W. P." The same newspaper for December 4, 1714, assured its readers that Pittis was not really arrested, but went voluntarily to the office of the Secretary of State, where he was honorably admitted to bail for £400 (cf. also the *Post Boy* December 7). But the Whig *Flying Post* for December 11-14 published a letter making fun of the Tory pamphleteer's honorable bail, recalling the fact that he had been pilloried, and asserting that he had previously been informed upon for a tract entitled "Jus Sacrum." A private gentleman—whom we know from other sources to have been William Benson, M. P.—had offered to prosecute Pittis for "Jus Sacrum," and his brother Foe for pamphlets against the Hanoverian Succession, but the design had miscarried. This letter seems also to show that Pittis, after the death of its founder, was connected with Dyer's notorious *Newsletter*, which is not improbable, since Pittis was quite as capable as Defoe of writing on both sides of any question, and since Dyer's written paper had the unenviable reputation of changing its news to suit the views of whatsoever subscriber it might obtain.

The Whiggish tone of "Reasons for a War with France" would of itself arouse suspicions with regard to its author's capacity for tergiversation. These suspicions are greatly increased when we find the *Evening Post* for November 27 and December 7, 1714, advertising for the next week—the pamphlet seems finally to have appeared on December 25, cf. the *Weekly Packet*—"An Argument against a War with France. Wherein the Pamphlet entitled Reasons for a War are thoroughly examined, and fully refuted By the Author of the Mitre and Purse." But, as we have just seen, Defoe asserted that Pittis was the author of the tract last named, and internal evidence seems to show that Defoe was right. It is at least certain that the two hackney writers knew a great deal about each other, and that at this juncture they were not on good terms, for on February 19, 1715 (cf. the *Evening Post*) Pittis published, through Baker, a tract entitled "Queen Anne Vindicated from the Base Aspersions of some late Pamphlets," in which he attacked Defoe vigorously, and added to the latter's bibliography, not only the "Secret History of the Secret History," but a certain "Memoirs of the Conduct of Her Late Majesty and Her Last Ministry, Relating to the Separate Peace with France" (London, S. Keimer, 1715, 8vo, 80 pp.). This tract purported to be "By the Right Honourable the Countess of ———," but it is surely Defoe's, and, ironically enough, it was given to him by no less a person than James Crossley, with the result that we have the amusing spectacle of the most acute of Defoe's early bibliographers and one of the most stanch believers in his probity supporting a contemporary attribution put forward to discredit him, and certainly warranted to produce that effect in any discriminating reader. That Pittis and no other was the Queen's defender, Defoe's assailant, and the anticipator of Crossley as a bibliographer, is clear, not only from abundant internal evidence of his authorship, but from an ascription to him in a contemporary hand to be found in a copy of "Queen Anne Vindicated," owned by Yale University. This tract also proves that Pittis, like Defoe and other pamphleteers of the time, was an adept at disowning his own productions—"The History of the Mitre and Purse" and "Reasons for a War with France"—and that he was sought out by printers such as Samuel Keimer—who links Defoe with Benjamin Franklin—when they needed pamphlets to keep their presses busy.

We next find Pittis early in May, 1715, brought up in court to answer for writing "Reasons for a War with France" (cf. *Dawkes*, May 7). With him was Defoe, charged with a libel against the Earl of Anglesey. My notes indicate that Defoe was found guilty on July 12, along with other political offenders who had come up in May, but I find no reference to Pittis. This need not force us to acquit the latter of having written "Reasons for a War with France," since he may have escaped trial, much as Defoe later escaped punishment, and perhaps for the same reason, to wit, former and promised future services as a pamphleteer in the Whig interest.

We now enter upon the most important phase of Pittis's career, his work as a biographer. On April 12, 1715 Curll advertised in the *Post Boy* a biography of the celebrated physician, Dr. John Radcliffe. It has long been known that Pittis was the author of this hasty and not very interesting compilation, which speedily passed, according to ad-

*Boyer (*Political State*, Nov., 1714, p. 437) noted that Pittis was taken into custody on Nov. 30, 1714, on a warrant from Lord Townshend. He gave (pp. 433-437) the substance of the pamphlet with the surprising comment that it "begun to create strange Jealousies, in the Minds of the People, and even to affect public Credit." Possibly, though he seems to write as a Whig, Pittis's real purpose was to urge upon the new Whig government a belligerent attitude towards France which it would have been inconvenient for them to take.

vertisements, into a second edition, reached a third in 1716, and a fourth in 1736. What has escaped attention almost completely is the fact that there is fairly convincing evidence that Pittis was also the first biographer of Charles Montagu, Earl of Halifax; of Dr. South, and of Sir Stephen Fox.

In the preface to the "Memoirs of the Life" of the worthy last named (London, John Sackfield and J. Roberts, 1717, 8vo, viii + 104 pp.; fol. 1807; oct. 1811) we find the following paragraph:

"As for the Author, howsoever misrepresented by a certain Person, whom he could name with some Disadvantage to his Profession and Character, for one of Mr. Curll's *Hacks, he is not asham'd of having it known, that he is the very Man that wrote Dr.* Radcliff's, *the Earl of* Halifax, *and Dr.* South's *Life, which have not met with so ill a Reception (notwithstanding Things have been crowded into the last for* Posthumous Works, *which he does not hold himself answerable for) as to fling him into the List of* Triobularian *Scriblers."*

Although I do not know who the "certain Person" was and although I should not like to have to parse the phrase, "for one of Mr. Curll s Hacks," I think that the gist of this paragraph is sufficiently clear, and after an examination of the four biographies in question, I am strongly inclined to give them all to Pittis. This has not been done by the writers of the articles on Fox, Halifax, and South in the Dictionary of National Biography, although the Rev. Alexander Gordon, writing on South, was, as the children say in their game, "burning," when he referred to William Pittis's ballad, "The Battle Royal." These verses, which dealt with the Socinian controversy between Dr. South and Dr. William Sherlock, had also satirized Dr. Thomas Burnet, Master of the Charterhouse, and they have been quoted in part, without attribution to Pittis, in Leslie Stephen's article on Dr. Burnet in the great Dictionary. Stephen quoted from the copy printed in Nichols's edition of "The Original Works of William King, LL.D., Advocate of Doctors Commons" (I, 221-222), but, if one may judge from the note on p. 210, the name of the author of the ballad was unknown to King's editor in 1776. The insertion, however, of the entire poem in those "Memoirs" of South, which Pittis claims to have written (pp. 128-129), and the comments there made upon it, suggest the suspicion that the author of the ballad was also the author of the "Memoirs," especially as the approximate date of the satiric verses, 1695, corresponds with the period when Pittis was still moving in church and university circles. What definite authority Mr. Gordon had for his attribution of the verses to Pittis has thus far escaped me, and I have not been in a position to determine when they first appeared in print, but it is reasonable to hold that the insertion of a poem somehow connected with Pittis in the volume dealing with South helps to strengthen the former writer's claim to the authorship of the "Memoirs" of the latter. If there was one thing Pittis was more likely to do than another thing, it was to quote himself.

The earliest indication I have found of attention being paid to the statement by the writer of the "Memoirs" of Sir Stephen Fox that he was also the biographer of Dr. Radcliffe, the Earl of Halifax, and Dr. South is given in the "Notes on Men and Books" jotted down by Edward Harley, second Earl of Oxford, and published in *Notes and Queries* (2nd Ser., ix, 417 seq.). Under the head of *Montagu,* however, the Earl gave a note contradicting in part the information given under the head of *Fox,* drawn from the paragraph in the preface to the "Memoirs" quoted above. He wrote, *"His Life* [*i. e.,* that of Halifax] wrote by a very indifferent hand, even that scoundrel John Oldmixon. Printed for Curll, 8vo, 1715." It is not my business to defend Oldmixon's character, nor can I pretend to be an expert on his writings, but from my knowledge of him and of Pittis, I am morally certain that it was the latter, not the former, who wrote the memoir and collected the poems of Halifax, despite the fact that a Whig would have been a fitter person to undertake such a task than a man bred a Tory.

My reasons are briefly as follows: We know that Pittis wrote the biography of Radcliffe for Curll and that by 1715 he had become something of a renegade to his High Church and Tory sentiments. We find in all the four biographies a somewhat affected and academic style and a free use of padding, which seem to support the claim made in the "Memoirs" of Fox that they were written by one man, and to point back to the style and methods of compilation used by Pittis before 1715. Moreover, we discover that the "Memoirs" of Halifax appropriates some pages from Pittis's "History of the Third Session of the Last Parliament," although so Tory a performance is a strange source of information for a biographer of a Whig statesman, and that there is reason to think that the author of the life of Halifax utilized, with considerable abridgment, Pittis's "History of the Present Parliament and Convocation." One or two special touches seem to connect the biography of Halifax with that of South, and other touches appear to connect the latter with that of Fox, *e. g.,* the extravagant denunciation of the Cromwellians. Finally, in the "Memoirs" of Fox we find a long quotation from "The Case of the Church of England's Memorial Fairly Stated," a pamphlet by Pittis to which he was wont to recur. My own conviction that he was Fox's biographer is strengthened also by the fact that in the "Memoirs" of that statesman an unconscionably long quotation is made from a pamphlet already mentioned in this discussion of Pittis's works, viz., "Dutch Generosity and English Gratitude" (1712). It is, of course, a hazardous, not to say a reprehensible, procedure to make the attribution of this tract to Pittis depend in part upon its wholesale exploitation in the "Memoirs" of Fox, and then to urge that exploitation as additional confirmation of the view that the "Memoirs" of Fox were compiled by Pittis; but I have been strongly impressed by Pittis's tendency to pad his writings with quotations from his own former productions, and I find much in the tract and in the book to make one assign them to the same hand, and that the hand of a journalist trained in the School of Defoe, but with an academic background denied to that monarch of the Fourth Estate. At the very least, given the facts that Pittis was the biographer of Radcliffe and that the writer of the life of Fox claimed to be the biographer of Radcliffe, Halifax, and South, and taking into consideration the similarities of style, substance, and methods of compilation to be discovered in the four works, the first three of which were enterprises of one publisher, Curll, we seem able to make out a fairly strong case for ranking Pittis as one of the most important of the biographers of his day, and we are warranted in asking whether a closer study of his writings and of other anonymous biographies of the period might not yield valuable results.

My remaining information with regard to Pittis is very meagre. In the weekly published by Read we find on October 25, 1718, some doggerel intended to be spoken at the bonfire of November the Fifth. Two of the lines were:

"Weekly Medley and Heraclitus,
With other Works of Drunken Pettus."

This couplet would have meant little to me if I had not, before encountering it, made some investigation of two small newspapers—*Heraclitus Ridens,* a sheet in the dialogue form of L'Estrange, which began a short career at the end of January, 1718, and the *Weekly Medley,* which started its slightly more important course at the end of July. The Tory politics of the former and some of its stylistic features made me quite confident that the writer in *Read's* was not mistaken in pointing to Pittis as its editor or "author." If he wrote the number for May 1 (No. 14), he was then at the seat of Lord Delaware in Hampshire, and it would seem that the bad habits to which *Read's* bears witness had not caused him to lose all his respectable acquaintances. I am quite sure that he wrote the number for July 24, which attempts—vainly—to defend Defoe from the charge of editing a monthly compilation for the Tories, *Mercurius Politicus,* and at the same time utilizing his material in another monthly designed for the Whigs, *Mercurius Britannicus.* The two journalists, both of whom worked for a publisher named William Boreham, had probably become reconciled, and I strongly suspect that Pittis was responsible for the fact that the *Weekly Medley* for January 10, 1719, contained a long extract from a pamphlet by Defoe against Bishop Hoadly, with fulsome praise of the performance. Still, it is hazardous to draw inferences from facts that so readily lend themselves to other interpretations—Defoe himself might have been in temporary charge of the *Weekly Medley.* He had nothing to do with it in October, 1719, however, for on the third of that month the paper was attacking the then famous author of "Robinson Crusoe" in a way that contrasted strangely with the attitude tak-

en towards him in January. There is reason to suspect that Pittis had been supplanted as editor, in or about June, 1719, by a certain William Bond, known to close students of Addison and Aaron Hill, an intimate of Duncan Campbell's circle, and porhaps a collaborator with Defoe in the biography of the deaf and dumb conjurer that usually passes without question as the work of the better-known writer. But Bond's relations with Defoe form another story, and Pittis's editorial career in 1718-19 must, I fear, remain obscure, unless some one is able to spend a good deal of time investigating the unimportant matter.

I have only one other entry with regard to Pittis. The *St. James Evening Post* for November 21-24, 1724, contained a short notice of his death, referring to him as "a noted writer" who had been punished in Queen Anne's reign. The biographer of Defoe cannot but regret that no more is known of the life of a man whose career touched that of the arch-journalist of the period at so many points; but perhaps a lover of his kind will be unable to find in the sordid facts brought out by research sufficient excuse for this attempt to disturb the kindly dust that has covered for two centuries an almost forgotten name.

W. P. Trent.

Correspondence

DEMOCRACY AND DIRECT LEGISLATION.

To the Editor of The Nation:

Sir: Those who clamor for more democracy as a cure for the ills of democracy as we have it, need to consider whether the means proposed—direct legislation—obtain the end sought. This phase of the question was emphasized in my mind by a recent experience. A high-school boy—a pupil of mine—called at my house lately to solicit my signature to an initiative petition proposing an amendment to the State Constitution. I at once asked him how he came to be circulating this petition, since the initiative provision of the Constitution contemplates that this shall be done only by qualified electors. The boy explained that a person, whom he mentioned by name, had offered him and several other boys three cents per name for all the names to this petition they could obtain. He was doing pretty well, he said. At a neighboring store several men had signed without reading the petition, saying that "it was all right." He was not aware that he might be violating the law. He was interested only in the three cents per name. The law requires him to make affidavit that he is himself a qualified elector and that he knows the signers to be such. How this boy of sixteen could make such affidavit was not clear. He supposed that the man, who lived in another town, would have him do this just as if he were really qualified, or that the man, after getting the names, would himself make affidavit that he himself circulated the petition and obtained the names. He said that the father of another boy had been asked to sign for his son, making his affidavit for him. He said that he had "got wise" that all was not right and that he had dropped the matter. This last came to me in a conversation on the following day.

The point that I wish to emphasize here is not the illegality of the proceeding—that would probably have been looked after sooner or later. I am compelled to ask—sympathetic as I am towards complete democracy—just how the ills of democracy are cured by such "democratic" procedure as the foregoing? Yet the possibility of this sort of thing inheres at all times in direct legislation. It points again to our great fallacy of reform through legislation.

L. A. Chase,
Hancock High School.

Hancock, Mich., May 26.

IMMIGRATION FROM THE ORIENT.

To the Editor of The Nation:

Sir: The problem of Oriental immigration is so complex that it will be a misfortune of the first magnitude if this question is allowed to go by default, or any attempt is made to settle it without thorough, painstaking, and sympathetic investigation.

The writer is a native and long resident of New York, but for some years has been an "adopted" Californian. Realizing how hard it is for people who live at a distance to appreciate fully this great problem, it has seemed to me worth while to present my views, which are those of an Easterner on the ground.

The first point that needs to be made clear is the matter of relative density of population. People know, of course, in a general way, that the Atlantic seaboard is more densely populated than the Pacific; but few actually realize that the combined census returns for the great States of Washington, Oregon, and California show a population only a little larger than one-half that of the *city* of New York. Without further argument, it will be at once evident to any thoughtful reader that the Pacific States are not in a position to desire any considerable alien population. The Eastern States may be able to welcome, by the hundred thousand, foreigners of a type that cannot be assimilated; but at present the Pacific States cannot with safety assume such a burden.

For any real understanding of the situation, it should be noted, in the second place, that the people of the Coast States are in a measure isolated from the thickly populated districts of the United States. To the east lies Nevada, with an area exceeding that of New York State and Pennsylvania combined, yet supporting a population of only about fifty thousand in all; and adjoining it on the south is the vast State of Arizona, with approximately three times as many inhabitants. It thus happens that the three million people who thinly fringe the Pacific slope are separated from the more densely populated centres by hundreds of miles of mountain and desert, spanned at great intervals by long stretches of lonely, single-track railway.

Over against this somewhat isolated outpost of Caucasian civilization lies China with a population of 450,000,000 crowded into an area but little larger than that of the United States, and Japan, supporting its 50,000,000 inhabitants upon a territory about the size of California. That these prolific Eastern nations greatly need an outlet for surplus population is obvious; and it is equally clear that they would ultimately overflow our inviting shores in great waves were there no barriers to prevent.

A careful investigation could not fail to discredit the offhand judgment (now, doubtless, prevalent in some quarters) that the restiveness of the people of the Coast is the result of race prejudice merely. Some race prejudice there no doubt is; but that is not the factor which has brought the immigration question to an issue. The Chinese have long been on the Coast; but their retiring ways and the fact that their business activity is limited for the most part to a few special fields has made their presence little felt. The coming of the Japanese has put an entirely new face upon the matter. At least four factors have contributed to this result: (1) The numbers in which the Japanese have come; (2) the fact that immigration from Japan is not controlled by our Federal Government; (3) the economic disturbance caused by this immigration, and (4) the attitude taken by the Japanese themselves.

The thing of prime importance in this whole question is that a definite understanding regarding Oriental immigration be reached while matters are yet in the incipient stage. Now is the time to settle the matter, while the situation is well within our control. If it is allowed to drift along, there is grave danger that we shall bequeath to the next generation a problem which they will be unable to handle. The Chinese alone could repeople the United States two or three times over without depopulating their own country. And those who have seen at first hand conditions in the Southern States, where two races come into daily contact and yet may not amalgamate, will surely agree that it would be little short of a crime to allow an analogous situation to develop in another large section of our country—a situation which in this case would be further complicated by the attitude of the home governments of the alien peoples.

Dr. S. L. Gulick, who has recently been lecturing in the United States in the interest of the Japanese, has described in an interesting way the elaborate bureau of information maintained by the Japanese, whereby agents in every country gather accurate information bearing on all important questions for the use of the home Government. It is very probable, therefore, that conditions on the Pacific Coast are better known in Tokio than in Washington. If this be a fact, the moral is obvious.

In conclusion I would add a suggestion or two: (1) That it ought not to be regarded as an evidence of ill-will towards any nation that the people of the United States desire that the Pacific Coast shall

remain in the unquestioned possession of Caucasians, and (2) that it is not by any means inevitable that a righteous solution of this question can be reached only through an adjustment which requires a wholesale sacrifice of the well-being of our own citizens. It would not be unnatural, of course, that the nations of the Orient, as they develop and push forward to places in the world family, should at first fail to realize that manhood's estate brings with it responsibilities and restraints as well as honors and privileges. But it may ultimately become clear to all that, in questions such as the one now under discussion, it may be the duty of an Oriental people to submit cheerfully to restrictions that are essential to the social and economic well-being of a friendly neighbor. H. C. NUTTING.

Berkeley, Cal., June 1.

"ONE OF THE GIANTS."

TO THE EDITOR OF THE NATION:

SIR: "One of the Giants" in your Educational Number shocks me somewhat, because it pictures vividly a state of affairs to which I am a stranger. The writer who casts a stone at one of the Giants asks, "What has the English department done to help this union (of English with the classics)? Are they (the instructors) ready to give up a single one of their remaining requirements in philology and mediævalism so as to allow the English student time to do a small amount of work in the classics?" The second question he answers with an emphatic no.

If he would turn to the far Western edge of this big continent, he would find an institution of some 5,000 students with a department which permits and encourages future teachers of English to smile sweetly at Ulphilas and the other Giant grinning at the gate and to pass them by. The department of English of the University of California is glad to accept certain units of university credit in Latin and Greek in place of credit in English philology. It does not demand specifically an acquaintance with either one of the Giants even for the degree of Ph.D.

Some time ago a waggish student of mine defined philology as the love of mere talk, the love of logs or dry sticks. But he added that in truth he had derived a benefit from his courses in Old English, Beowulf, Middle English, and Chaucer which was far greater than the benefit derived from all other courses. Frequently philology offers the student a definite serious mental drill which is too often lacking in the courses in English literature and the classics. Doesn't philology serve well to offset the pleasing entertainments offered as courses of instruction in Tennyson, Dryden, and Johnson? Wouldn't it be well for the gushing student of "Hamlet" or "The Everlasting Mercy" to follow the method pursued in the course of Beowulf or Chaucer? Isn't the history of the English language perhaps more valuable than the mechanical substitution of English for Latin words in what is called a course of instruction in Virgil?

The grave weakness seems to lie not so much in the insistence on philology as in the nature of the non-philological courses into which students are crowded.

GEORGE A. SMITHSON.

Berkeley, Cal., June 9.

THOMAS SPENCER JEROME.

TO THE EDITOR OF THE NATION:

SIR: In your issue of May 14 appeared an extended notice of the untimely death of Thomas Spencer Jerome. Few will ever know how much the world of classical scholarship has lost by the sudden arrest of his pen at the very moment when many years of careful, critical study of the Latin historians were coming to their fruitage. Among those who have followed Mr. Jerome's career with deep interest was Prof. Charles Mills Gayley, now head of the department of English literature in the University of California. It was in the early eighties, while the latter was assistant professor of Latin in the University of Michigan, that Mr. Jerome came under his stimulating influence. The friendship then formed was never interrupted. It was to experience the renewal of personal converse during the coming summer. The following letter, written by Mr. Jerome to his former instructor, explains itself. It is dated a week before his death, and was overtaken by the notice that Villa Castello and its choice historical treasures had lost their master—"Master Tom," as those about him affectionately called him. The letter is so piquant in flavor, and touches so interestingly upon the great work which Jerome had in hand, that I make no apology for having prevailed upon Professor Gayley to furnish it for publication. The "chapters of the Potboiler," to which allusion is made, are reprints from "Roman Memories in the Landscape Seen from Capri." It is, perhaps, too much to hope that the deft and experienced literary hand of Professor Gayley may be freed sufficiently from other tasks to attempt an adequate salvage from the notes and other literary materials left by his one-time pupil. WILLIAM FREDERIC BADE.

Berkeley, Cal., June 1.

Villa Castello,
Capri, Italy.
5 April, 1914.

My dear Gayley:

It's a long time since your letter came and my silence may suggest a phlegmatic attitude towards your really delightful announcement of the projected sojourn of the Gayley family in these parts. But such an inference, however specious, would be a shocking inversion of the truth, and I look forward with the greatest pleasure to seeing you much and often. Furthermore, I hope that Madam Sallie—if my advanced age permits this familiarity—will not hold herself aloof from Capri this time. . . . There are circumstances which mitigate my apparent moroseness, such as Gastralgic Aneuroses and the like, but they have dwelt in me too much for me to wish to dwell on them. They had this effect on the course of historical criticism, however, that they kept me from getting out more than a Pot-Boiler last winter; and the Magnum Opus (handled after the manner of the famous discussion of the Snakes in Iceland, to a considerable extent) withholds itself from a waiting world for the present. It seems to need a substitution of Scandal for Sawdust before it makes its appeal to those who are stimulated by the meretricious character of its title. (Old ————, however, shies the title, attributing to the many a virtue too meticulous to endure or embrace a treatise with the strange device—say—"Institutes of Roman Vice.")

I am sending you under another cover as many chapters (reprints) of the Pot-Boiler as it seems decent to inflict on you. Were it not that some lynx-eyed post-office official might call on you for letter postage, I'd inscribe a dedication in something like these terms:

To C. M. G.:
Recollecting his facility in embodying wit in erudition and informing erudition with wit, whereby the dichotomy is synthesized into the higher unity of true scholarship, and relying on the soundness of the aim to excuse the imperfection of the results, the author bespeaks his benevolent toleration of these derivatives of "Freshman Latin" "Memories."

Well, let me know when to look for you. The summer in this part of the world is generally delightful, and made additionally so by the absence of "trippers" and morbific chills in churches, museums, and everywhere else. But, no doubt, I am supplying my grandmother with certain superfluous dietetic instructions. With pleasant anticipations of the Coming of the Gayleys, and with warmest regards, I remain most sincerely yours, THOMAS SPENCER JEROME.

A FRENCH SCHOLAR.

TO THE EDITOR OF THE NATION:

SIR: Attention should be called in America to a very scholarly contemporary French writer on eighteenth-century histrionics in France and Germany, who, even in his own country, is known only to an *élite*. We refer to M. Jean Jacques Olivier (Francillon), who writes under a pseudonym formed by discarding his family name and preserving his three Christian names. M. Emile Faguet has called him "the Theseus of all the library and archive labyrinths." In 1900, when scarcely more than a boy, his first volume appeared, "Voltaire et les Comédiens interprètes de son Théâtre," based on the newspapers, correspondence, memoirs, engravings, and unpublished documents of the period. This work was followed the next year by the first volume of a *de luxe* series, richly illustrated, numbered, and limited to 250 copies, "Les Comédiens français dans les Cours d'Allemagne au XVIIIe siècle." In order to carry on more easily his researches in this connection in the German libraries and archives, M. Jean Jacques Olivier established himself for several years at Heidelberg, where he even found time to act as reader in French literature at the University, and so acquired a talent as lecturer which has placed him in the front rank of graceful Parisian *conférenciers*. The initial volume in this series is entitled "La Cour électorale palatine" and opens with a very complimentary preface

from the pen of M. Faguet. The next year, 1902, came "La Cour Royale de Prusse"; in 1903, "Les Cours de Rheinsberg, de Bayreuth, et d'Ansbach," and in 1905, "La Cour de Hesse-Cassel." This beautiful series is to be continued by volumes devoted to the French actors and plays at the courts of Würtemberg, Bavaria, Saxony, and Austria. In fact, the materials for the first of these volumes is already in an advanced stage of preparation.

Since 1905 M. Jean Jacques Olivier has momentarily abandoned the history of French actors in Germany and come home to study them in France, and with good results. Thus, in 1907, he published "Henri-Louis Le Kain, de la Comédie-Française, 1729-1778," a richly printed and illustrated quarto of nearly 350 pages, giving the private and artistic life of the man who was, perhaps, the best interpreter of the theatre of Voltaire, "a miracle of nature," as Grimm called him. In 1910 came "Une Etoile de la Danse au XVIIIe siècle," a curious and thoroughly documented biography of La Barberina Campanini, whose wonderful dancing once charmed the opera-goers of Paris, London, and Berlin. This notable series was closed last year by another biographical and critical study of a past celebrity of the French stage, "Pierre-Louis Dubus Préville, de la Comédie-Française, 1721-1799."

At the present moment M. Jean Jacques Olivier is busy on a volume devoted to Mme. Dugazon, a celebrated prima donna of the Opéra Comique during the reign of Louis XVI. Like all of this author's books, it will be fully illustrated, and he says that he hopes "to make it somewhat easier to read than any of its predecessors, if for no other reason than because the subject is an amiable smiling figure, a real heroine of romance." THEODORE STANTON.

Paris, May 30.

HOWLERS.

TO THE EDITOR OF THE NATION:

SIR: *Splendide mendax,* "lying in state," cited by you in your issue of May 14 as a somewhat incredibly good specimen of a *howler,* is much better allocated, to my poor mind, in the following quotation from the Rev. Mr. Tuckwell's "Reminiscences of Oxford," chapter 8: "Clever as Blaydes in epigram and pun, though not in sustained satire, was Arthur Ridding of New College, elder brother of the present Bishop of Southwell. When every one was celebrating in Latin verse the Duke of Wellington's funeral he was asked how to render 'lying in state.' *Splendide mendax* was the answer."

A. D. SMITH.

Sackville, N. B., June 2.

TO THE EDITOR OF THE NATION:

SIR: Since the *Nation* condescends at times to wear the cap and bells, possibly its readers might be amused by the translation by the Oxford student of the French terpsichorean phrase, *pas de deux,* which he rendered "father of twins." EDWARD BRECK.

Annapolis Royal, N. S., June 11.

Literature

UNION AND CONFEDERATE STRATEGY.

Bull Run, Its Strategy and Tactics. By R. M. Johnston. Boston: Houghton Mifflin Co. $2.50 net.

A satisfactory account of any military operation consists essentially in an exposition, with respect to each of the opposing forces, of plans, of resources, and of execution. These three phases cannot be sharply separated one from another. There is necessarily an overlapping of plans and resources, for the statement of a plan includes the specification and some description of an objective; and this involves ordinarily an indication, however incomplete and indefinite, of resources. The details of the latter come as a preliminary to the movements.

In the work before us the author indicates the strategic attitude of the Union and Confederate forces with respect not only to the campaign of Bull Run, but also and very properly to the war in general. Treating of the campaign, he places himself first on the side of the North, mentions with brief, judicious description the prominent officers on that side, discusses the strategic situation, and describes the plan adopted for a Federal advance. He designates Harper's Ferry and Manassas Junction as two points next to Washington and Richmond in strategic importance—Harper's Ferry as an advance depot and the point where the Baltimore & Ohio Railroad crosses the Potomac, passing from Federal into Confederate territory; and Manassas Junction as the point where the one railway coming eastward from the Shenandoah Valley joins the one connecting Washington with Richmond. "An offensive movement," he says, "from Washington towards Richmond was, from the first moment, clearly indicated, flanked by a subsidiary movement to seize Harper's Ferry, and thence possibly to operate south along the Valley of the Shenandoah, or southeast across the Blue Ridge, to the Valley of the Rappahannock, in direct support of the main advance." With respect to the enemy he adds: "The Southern outlook was defensive, for the Southern States claimed merely to remain outside the Union; they had no policy of repression, that is, of invasion or the offensive."

Under President Lincoln, Lieut.-Gen. Scott ranked as general-in-chief, Brig.-Gen. Mansfield commanded the troops in Washington, and Brig.-Gen. McDowell commanded the Department of Northeastern Virginia. Major-Gen. Patterson, of the Pennsylvania militia, commanding the Department of Pennsylvania, was slowly pushing down "towards the Potomac with a considerable mass of infantry and artillery."

On the side of the Confederates, R. E. Lee, with the rank of major-general, commanded all the forces in Virginia, Gen. Joseph E. Johnston commanded at Harper's Ferry, and Gen. Beauregard at Manassas Junction. From Washington troops were pushed across the Potomac to Arlington Heights, opposite the capital, and to Alexandria, the starting point of the railway to Richmond. These movements, together with the dispositions in Washington and the march of Patterson's column, may be considered as the strategic deployment, which was completed by the arrival of Patterson on the Potomac about the first of June. The plan originally formed or adopted by Gen. Scott appears in a dispatch which he addressed to Gen. McDowell on June 3, calling for "an estimate of the number and composition of a column to be pushed towards Manassas Junction, and perhaps the Gap [westward along the railway], say, in four or five days, to favor Patterson's attack on Harper's Ferry." To this communication McDowell replied on the following day, to the effect that "the actual entire force at the head of the column should, for the purpose of carrying the position of Manassas," number about 18,000 men of all arms. From this exchange of correspondence it appears that "to favor Patterson's attack on Harper's Ferry it was intended to make what was viewed as a subordinate attack at Manassas Junction." On June 14 Gen. Johnston withdrew from Harper's Ferry towards Winchester. His force numbered about 5,000 men, including among its officers the modest, indifferent-looking colonel who was to come out of the campaign as Brig.-Gen. "Stonewall" Jackson. Patterson had the news of Johnston's withdrawal on the afternoon of the 15th, but so great was his prudence, so cumbersome his army, that it was not till forty-eight hours later that he crossed the Potomac. He thereupon exhibited such inertness that by the middle of July the idea of his executing any decisive operation had to be abandoned and the plan was changed so as to make the principal movement an advance upon Manassas, to be conducted by Gen. McDowell, Patterson being relegated to the secondary rôle of keeping Johnston from going to the support of Beauregard at Manassas Junction. Before describing the execution of this plan, the author gives a detailed description of the forces on each side. Two chapters are then given to the advance to the field of battle, three chapters to the battle, and the three last chapters to the Federal retreat, statistics, and conclusion.

The work is judiciously proportioned and is based upon the most authentic sources of information, including the

battlefield itself, which the author studied in company with army officers. The reader will be inspired by the author's deep and intelligent interest in his subject. He will understand without difficulty his exposition of the plans of the opposing commanders and his statement of the forces at their command, except as regards the artillery. On the Federal side the largest unit was the division. For each division the strength is given in number of men, including artillery and cavalry. The artillery attached to the several divisions is indicated only by units of organization, not by number of pieces. That number is treated separately, without reference to the tactical units to which the pieces are attached. On the Confederate side the largest unit is the brigade. As in the case of the Federals, the reader is left to determine for himself the number of pieces attached to the battle units; but he finds himself unable to do it. With reference to the I Corps, Beauregard's, the Artillery Reserve is represented as commanded by Major Walton, but neither the organizations nor the number of pieces composing it appear. After the artillery reserve (p. 108) comes what is designated as *artillery*. One supposes that this is an additional force, a sort of general reserve, until one discovers that most of it is included in the artillery already mentioned as assigned to brigades. It then appears to be a summary of the artillery, but an incorrect one, inasmuch as it does not include the artillery reserve and does include four six-pounders under Capt. Rogers which do not appear as assigned to any larger unit. The total number of guns in the I Corps is represented as 29, "of which 18 were smooth-bore six-pounders, 9 were six-pounders rifled, and 4 were twelve-pounder howitzers." These items foot up to 31, instead of 29. The error is apparently in the number of smooth-bore six-pounders.

There are eleven maps, but in the whole text there is but one reference to a map (p. 168). The reader will find himself often at a loss which way to turn for the one, if there be one, that affords the aid that he wants. Only the first two maps bear a number by which they may be designated. The other nine can be referred to only by their title or by the page which they immediately precede. Only five maps are provided with a scale. Only one (p. 33) shows the points of the compass, and on that one they are not needed. On the seven succeeding maps on which they are needed, since they are referred to in the text, the reader must orient himself as best he can. On maps 1 and 2, showing the country between Manassas Station and Centreville, a railway runs from the former point to within a mile of the latter. On the six other maps showing the same country no such railway appears. The railways coming from the south and west and uniting at Manassas Junction are shown on four maps as forming an acute angle, and on two as forming an obtuse angle. Troops, or tactical units, are represented on six maps.

It goes without saying that the designation for the several units that is adopted for the maps should be used in the text, or vice versa. In three of the six maps referred to, this obvious principle is violated. In one of them (facing p. 114) the unconventional signs and peculiar numerical designations call for a legend which is lacking. On several of the maps the names of roads and watercourses referred to are not given. Thus, on page 168, one reads of "two regiments facing east on either side of the Warrenton Turnpike." On the map to which this refers the Warrenton Turnpike, though shown, is not recognizable by name or other designation, nor, as already stated, are the points of the compass. The regiments, not being specified in the text, cannot be identified on the map. The reader is unnecessarily confused by the use of such various names for the same or practically the same point as Manassas, Manassas Station, Manassas Junction, and Manassas Gap Junction. Among the important points referred to which are not shown, or, if shown, are not named on any map, are Manassas Gap, Snicker's Gap, Culpeper, Warrenton, Berryville, Arlington. A general order of Gen. McDowell's on pages 114-116 appears to be illustrated by a map facing page 114. The order refers to Fairfax Court House and to Fairfax Station. Both places are on the map. One is marked with its name, the other is not.

On page 57 we learn that Gen. Patterson crossed from the north to the south side of the Potomac on June 17 and that he subsequently "decided to retire" to the north side. We are not told whether he acted on this decision or not, but on page 67 we are allowed to infer that by June 25 he was back on the north side of the river. Further on (p. 79) we read that "on the second of July, as we have already seen, Patterson for the second time crossed the Potomac [to the south side]." The fact is we have not seen Patterson crossing the Potomac on July 2. The nearest we have come to it was to learn (pp. 71-72) that he "finally ventured across the Potomac" and that "he occupied Martinsburg on the 3d of July." So with respect to the statement on page 181, "information reached him [Gen. Evans], as we have already seen, that the Federals were in large force on his left in the direction of Sudley Spring." We cannot admit having seen this particular occurrence.

There is here and there a lack of date or hour. The time covered by the battle is divided into periods, but not as clearly and explicitly as a proper coördination of the movements calls for. We have said enough to indicate the sort of strain to which the reader's mind will be put in trying to follow the author through his description of the movements, and with that we return to the commendation of the work as a complete, unbiassed account of the campaign and battle, useful to the student and necessary to tne historian. We regret that it is not more readable, not the standard work which the author makes us feel that he might, with more care and labor, have made of it. An appendix furnishes a valuable bibliography of books and maps. The index is restricted to proper names, and not free from error.

CURRENT FICTION.

Great Days. By Frank Harris. New York: Mitchell Kennerley.

It is hard to guess at what sort of audience the author has meant to aim this book. It might have been taken as an adventure book for boys but for the passages of sexual realism which leap here and there from a perfectly inoffensive context. The English Jack who is its hero is son of a smuggling innkeeper. War with France breaks out, and there are more profitable chances than smuggling. Jack becomes master of a privateer, has his successes, becomes a prisoner in France, wins a French mistress whom he later marries, although he really loves another. That other is, not unnaturally, a maiden of high lineage, and they are not destined to be apart forever, since it is the easiest thing in the world for the author to kill off the wife at the convenient moment. There is a good deal of spirited writing in the book, sea-fray and land adventure. Napoleon is much in the scene, and not more travestied than the reader of romance may endure to have him. As for the innkeeper and his son, compound of romantic feeling and fleshly lusts, hard sense and generous impulse, they are really human and engaging, as is the trollop Nancy, who ought to be quite despicable.

It is the fashion just now to admit that we are clever, and nothing else; that the "average workmanship" of our fiction is extraordinarily high, and that we have little or nothing more to boast of. The present reviewer is struck with the number of novels which have come under his eye during the past year or two of which he has felt that the fault lay with the amateurish or uncertain handling of really strong materials. This book is one of them, though of Mr. Harris uncertain is the safer word to use. A former editor of the *Fortnightly* and *Saturday Reviews*, and an au-

thor of numerous books of fiction, cannot be called a tyro. But he has experimented in several fields, realism among them, and the trail of the serpent crosses this byway of historical romance.

The Incandescent Lily. By Gouverneur Morris. New York: Charles Scribner's Sons.

The story which gives this volume its title is the only one of the eight which does not fall under a single classification. That classification is the short story of New York society, its theme either love or the ordinary social, sportsmanlike, or avocational ambitions of the upper and fashionable stratum. Now it is the tale of hope deferred in the heart of a would-be tennis champion; now of a rich man who found in a youthful tango teacher a worthy object of his benevolence; now of a gentleman of too exquisite refinement whose courage before a gang of escaped convicts gives his sweetheart the desiderate faith in his manliness; now of a second Mrs. Tanqueray, of Manhattan Island, whose tragic life is fittingly labelled: "You Can't Get Away With It." An apparent exception is the account of the casting away of Red Monday and the Ryan Girl on an Island in the Sound, and of Red's attempt to swim off to save her reputation; but its inspiration is obviously caught from the central incident of Octave Feuillet's best-known tale of French society. The stories are without exception interesting, finished in execution, unmarred by smartness, and undistinguished in final effect.

New Men for Old. By Howard Vincent O'Brien. New York: Mitchell Kennerley.

From its appearance throughout as a page heading, "The Joy of Working" would seem to have been the original title. It is certainly better than that which figures on title-page and cover. The whole purpose of the story is to show that the only real satisfaction in life lies in work. We begin with a conventional situation rather crudely presented, the pampered son of wealth summoned from his idle years abroad to find himself penniless. The Chandos of this tale is not a wastrel, but a dilettante. He has dabbled in philosophy, and learned to paint "in an excellently amateurish way." His father's death brings him from Paris to Chicago, and we are asked to believe that the news that his father has had nothing to leave comes to him a complete surprise. We are also asked to believe that he lives in Chicago for some years thereafter before he learns that his father was a rascal. Young Chandos revolts at the notion of earning his living but, when he has buckled down to it, discovers that the best thing possible has happened to him. His labors have extraordinary results—no wonder they make him cheerful. Few exiles from the studios of Paris would be able, in a matter of months, to make themselves the heads of an established Chicago manufacturing enterprise. It is true that another familiar element comes in, in the person of the employer's daughter, of whom also, in due season, Chandos becomes the head. "It is life itself that has really made you, my artist-business man!" she tells him on the last page. "Artist!" he cries; "that's it! I cannot paint, but, oh, my darling, with time for my canvas, and flesh and blood for my pigments, and life itself for subject, I will make a picture, a real picture." With all its rawness of detail, the story is told with vigor and sincerity.

Cordelia Blossom. By George Randolph Chester. New York: Hearst's International Library Co.

Mr. Chester's mechanical rapid-fire cleverness is in good working order in this story. He offers an unintermittent series of small explosions, hardly noticeable separately, but collectively amounting to rather a nuisance. The theme is the social career of a clever woman. Cordelia Blossom uses with equal skill and success her doting old Kentucky colonel of a husband, and his political opponent, Jim Fleecer, the State boss. She manages the latter through his wife, whom she makes her chief lieutenant and rewards with the jackal's share of her social triumphs. She proceeds on the sound old political maxim that one hand washes the other. By skilful wire-pulling and good luck she at length makes the worthy colonel a Senator, and herself president of the National Federation of Isis Clubs. Her methods are so cynically unscrupulous that they make the veteran Fleecer feel like a novice; yet it is clear that Mr. Chester's readers are expected to sympathize with her and admire her. The book expresses a cheap and vulgar attitude towards life in an appropriate style. Two or three of the characters, however, and notably the old colonel, are vigorously sketched.

Snake and Sword. By P. C. Wren. New York: Longmans, Green & Co.

This study in mental pathology is unique in that its ghastly passages lead not down, but up, and to a happy conclusion; and in the vivid reality of its Indian background. Its fundamental conception is of an orphaned hero, Damocles de Warenne, who by reason of pre-natal influence has a morbid horror of snakes. His strange malady preys upon his mind as a boy in India; it labels him as a coward at his English school; a spasmodic attack at sight of a snake on a golf-course ruins his engagement to Lucile Gavestone, and results in the cutting off of his support from his relatives, forcing him into the army as private; while, to crown all, service in Hindustan, where every day supplies some fresh motive for his unnatural horror, seems to be driving him slowly into the madhouse. It is to Lucile's restored faith, and to a weird situation in which, willy-nilly, he must fight for his life against a cobra, that he owes his ultimate salvation from the obsession. The psychology of the book, though carefully studied, is not as successful as its crowded incident. The microcosmic social conventions and persecutions of Sandhurst and of Wellingborough School, the vulgarity and the rough give-and-take of military life, are reflected with apparent fidelity and with certain spirit. To the Indian scenes Mr. Wren brings a pen of long experience. The dignity of his style is sometimes painfully inadequate to the task he has here essayed.

"SHIRT-SLEEVE MEMOIRS."

With Walt Whitman in Camden. (March 28—July 14, 1888; November 1, 1888—January 20, 1889.) By Horace Traubel. New York: Mitchell Kennerley. $3.50.

The first volume of Mr. Traubel's "shirt-sleeve memoirs" was published in 1906 by Small, Maynard & Co., the second in 1908 by D. Appleton & Co., and now the third comes six years later from another house. There is a certain significance in this hard-luck tale, as they would say in Mickle Street, Camden. Mr. Traubel has adhered to his original plan to leave his story as he wrote it, taking nothing off, and with no attempt to improve it. The result is not altogether happy. Its defects, apparent enough before, are now made glaring by the inevitable comparison with the "Journals" of Emerson, which have run their course between the second and third volumes of the present work. One can, indeed, see the genius of Walt Whitman in the Camden memoirs as one sees the genius of Emerson in the "Journals"; but here the similarity ends. In the "Journals," one is always in the company of a man who, even in his hours of relaxation, showed that his thoughts were habitually with noble things and that he was used to refined language. But about the occasional flashes in the talk of Whitman and the occasional good letter Mr. Traubel's record flows like a vast ocean of frothy commonplace, with reaches of positive vulgarity. It is a pity. The author of "Leaves of Grass" needed no one to increase the mass of flat triviality about him, but there was that in the man which to a recorder of insight might have furnished material for a notable

biography. The least pleasant aspect of Whitman's life is the society of the "Petes" and Buckes who surrounded him, and the tone of Mr. Traubel's book is theirs.

So much for protest. But naturally it would be possible out of the six hundred pages (nearly) of the present volume to fill a long review with bits of conversation and fragments of correspondence which picture the man to the life, or are otherwise interesting. Not the least valuable of these is the exact report of Lincoln's words about Whitman, as given in a letter from A. Van Rensselaer, dated July 30, 1865. The Sage of Camden was "rather cranky" one evening, and some harsh words had passed between him and his young friend. The conversation continues thus:

I [Traubel] was a bit mad myself. We don't have many tiffs. Finally he said: "Don't let's go on in that vein: I've got something pleasanter here; what do you think of it?" He reached smilingly to the table, picked up a letter, and handed it to me. [This sudden and seemingly accidental appearance of all sorts of documents gives Whitman's room the happy character of a magician's box, and is really the most extraordinary feature of the narrative.] I read the letter. . . . "What can I say? Only that I never expected to see the letter: you know you said a bit ago that you didn't think it would ever turn up again." He: "Well, it did turn up. Read it to me." I said: "I bet you know it by heart." "So I do: but I can listen to it again coming to me in your voice." I read.

Then follows the letter, of which this is the heart:

Mr. Lincoln was . . . looking out of the window, when you went by, quite slow, with your hands in the breast pockets of your overcoat, and a sizeable felt hat on your head pretty well up, just as I have often seen you on Broadway. Mr. Lincoln asked who you were, or something like that. I spoke up and said, mentioning your name, that you had written "Leaves of Grass," etc. Mr. Lincoln didn't say anything, but took a good long look till you were quite gone by. Then he says (I can't give you his way of saying it, but it was quite emphatic, and odd), "Well," he says, "*he* looks like a *man*." He said it pretty loud, but in a sort of absent way and with the emphasis on the words I have underscored.

The language is almost precisely that of Napoleon to Goethe, and the scene itself is impressive. What follows is impressive, too, in its own way:

"This is the real thing," I said: "This puts the Lincoln story on ice." W. was heartily amused. "You are a damned impertinent snip after all: you 'wouldn't believe until you were convinced,' as you say: you held off; you half thought I was lying: William too—all the fellows." . . . We laughed together. I kissed him good night.

There is pith and meaning in Lincoln's words; but what shall we think of a literary critic such as the late Professor Dowden, who couples Walt Whitman with Shakespeare? It is like coupling Traubel with Boswell. Such are the strange contrasts of sense and folly that seem to be evoked inevitably by association with Mickle Street. We read through long, dreary sections which merely repeat *ad nauseam* how the sage wanted to "frivol" his evenings away, and then suddenly we come upon a passage such as that on page 485, which gives as marvellously vivid a story of Carlyle as one is likely to have read anywhere—and, incidentally, of Whitman himself. Here, and occasionally elsewhere in Mr. Traubel's narrative, one recognizes the power and the indescribable note of genius which brought some of the most highly educated Englishmen of the day to make the long pilgrimage to Camden, and which sent them away feeling that they had been in the presence of something great and sacred.

AN AMATEUR OF CRIME.

The Romance of Fraud. By Tighe Hopkins. New York: E. P. Dutton & Co. $2.50 net.

The title is merely suggestive, but it serves as well as another for this miscellany about criminals, their characteristics, methods, haunts, and punishments. The author is an English novelist who appears to have become a penologist as it were by second intent. "Wards of the State," published in England two years ago, gave "an unofficial view of prison and prisoner"—unofficial but relatively formal. This volume represents, one may say, the diversions of a reformer. Its chapters treat of all sorts of themes, from the popular-sensational to the curious-recondite. They give an extraordinary amount of information, which the reader feels to be merely dipped from a great store of erudition in this particular field. In the fifteen pages on "the trail," more light is thrown on the actual methods of trackers and sleuths than in a dozen detective stories. Chapters on The Master Thief, The Criminal Tattooed, Crime and Superstition, assemble a large number of odd and little-known facts about the real ways of the underworld. Other papers, like the ones on Newgate, on pirates, on The Man in the Iron Mask, are of more general historical interest. The famous escape of Rose and Hamilton from Libby Prison is rehearsed with uncommon vividness; and A Citation Before the Inquisition makes quite sufficiently concrete the horrors of the Holy Office.

The author is qualified by nature as well as learning for this kind of writing. It is true, he has a good deal to say, first and last, in denial of the sentimental attitude towards crime and the criminal. Criminals, he says, are a businesslike but not heroic class. The picaresque glamour of the eighteenth-century highwayman was a creation of popular fancy. In fact, "there is little to be said for him, except that he usually died game. Alike at his trial and on his last journey, the highwayman was usually in his glory." The romance of piracy also is chiefly figment, based upon a few astounding feats by three or four outlaws of the sea. The race of pirates was a squalid mass of human vermin.

To understand the pirate's calling as it actually was is to understand how foolishly impossible is the halo of romance with which some very delightful writers (the author of "The Pilot" is one of them) have striven to surround it. The task is not to be accomplished. The halo of romance is to the head of the pirate what Cinderella's slipper was to the feet of her sisters, or Mambrino's helmet to the skull of Sancho.

This is all very well; but it is quite clear that our writer is fully under the strange and common spell which crime and the criminal throws upon all orders of men. His theme fascinates him, delights him, as it did Dumas and De Quincey and Dickens. The adroitness of thievery is incense to his nostrils. He beholds a murderer with the rapture of a girl poring upon a rose. He discourses of his loves with the enthusiasm of a lover; and, luckily, remembers to be a criminologist only now and then.

THE PRICE OF EMPIRE.

The Press-Gang Afloat and Ashore. By J. R. Hutchinson. New York: E. P. Dutton & Co. $3.00.

Mr. Hutchinson has told us in great detail, with knowledge based upon the best sources of information, and in a lively and interesting manner which makes the tale seem just a strain less repulsive than it really is, all that any one needs to know about the Press-Gang; how it came in, what it did, and how it went out. The practice of pressing for the navy existed from early times; it first became prominent in the reign of John; was always revived whenever there was special call for the service of the navy, and became the permanent and regular method of recruiting during the period from the Revolution of 1688 to the second quarter of the nincteenth century. This last was precisely the period when the state was given over to the keeping of a land and moneyed aristocracy, whose interests, bound up with the commercial and maritime expansion of the empire, required the sacrifice of much of the general welfare and many of the traditional rights of the nation as a whole. In

1815 English prestige was great, and it was supposed by many, Englishmen and foreigners alike, that the success of England was accompanied by, if it was not the result of, "the most splendid freedom a nation ever enjoyed." But in fact the price of empire was a marked loss, for the immense majority, of well-being and of liberty alike. The price was certainly a heavy one; and it was paid by the small farmer, the shopkeeper, the artisan, and the industrial laborer, and above all perhaps by the nameless thousands who were compelled, against their will, to live the life of galley slaves on board the vessels of the navy.

In England itself the fruits of empire came to full bloom in the first quarter of the nineteenth century. They are familiar to all who have studied that period, a period strongly characterized by the insular egoism of the classes and by the incredible increase of poverty, vice, and crime among the masses. The share of the Press-Gang in producing this result has not been emphasized by Mr. Hutchinson as fully as it might have been; but we may quote one paragraph in which he makes it clear enough:

> The simplest calculation, had she [M'Gugan's wife] cared to make it, would have shown her the utter futility of hoping to live on the munificent wage which a grateful country allowed to M'Gugan, less certain deductions for M'Gugan's slops and contingent sick-benefit, in return for his aid in protecting it from its enemies; and almost any parish official could have told her that she was no longer merely M'Gugan's wife, dependent upon his exertions for the bread she ate, but a Daughter of the State and own sister to thousands of women to whom the gang in its passage brought toil and poverty, tears and shame. . . . You could not take forcibly 100 husbands and fathers out of a community of 500 souls, and pay that hundred the barest pittance instead of a living wage, without condemning 100 wives and mothers to hard labor on behalf of the 300 children who hungered. Out of this hundred wives and mothers a certain percentage lacked the ability to work, while a certain percentage lacked the will. These recruited the ranks of the outcast, or with their families burdened the parish. The direct social and economic outcome of this mode of manning the Navy, coupled with the payment of a starvation wage, was thus threefold. It reversed the natural sex-incidence of labor; it fostered vice; it bred paupers. The first was a calamity personal to those who suffered it. The other two were national in their calamitous effects.

The Press-Gang "went out" because of its "demoralizing effects . . . upon the fleet, its injurious effects upon trade, its antagonizing effects upon the nation, and its enormous cost as compared with recruiting by the good-will of the people." And yet Mr. Hutchison thinks that, without the Press-Gang, the fleet, for a hundred and fifty years, "could in all human probability never have been manned at all." To say that a method, which was so bad that it destroyed itself in the end by its very viciousness, was necessary for a century, is to fall back upon the comfortable historical doctrine that since things were as they were they could not have been otherwise. The question is, of course, a "purely academic" one; but common-sense is apt to suppose that the naval authorities, if they had wished to do so, might readily have accorded decent treatment and decent pay to the men who manned the fleet; and it is apt to suppose that if this had been done the worst evils of the Press-Gang would have been avoided.

Notes

Houghton Mifflin Company will publish on Saturday: "No. 13 Washington Square," by Leroy Scott; "William Gray, of Salem, Merchant," by Edward Gray; "The House of Cecil," by G. Ravenscroft Dennis; "The Seymour Family," by A. Audrey Locke; "The La Tremouille Family," by Winifred Stephens.

Among books announced for publication shortly by the Harvard University Press are: A reprint of President Lowell's "Government of France, Italy, and Germany"; "Municipal Charters," by Nathan Matthews; "Metempsychosis," the Ingersoll lecture for this year, by George Foot Moore, and new editions of Yerkes's "Study of the Self" and of E. A. Sophocles's Hellenistic Greek Lexicon. A new series is also in preparation, entitled Harvard Studies in Romance Languages, edited by Professors Sheldon, Grandgent, Ford, and Potter, the first volume of which will be a critical edition of the poetry of Giacomo da Lentino, by Ernest Felix Langley.

The Oxford University Press has announced the forthcoming publication of the following books: "Court Hand," by Hilary Jenkinson and Charles Johnson; "The Legislative Union of England and Scotland," by P. Hume Brown; "Homogeneous Linear Substitutions," by Harold Hilton; "The Works of Henry Vaughan," edited by L. C. Martin; "The Poetical Works of Robert Herrick," edited by F. W. Moorman; "The Auxilia of the Roman Imperial Army," by G. L. Cheesman; "The Letters of Sidonius," translated by O. M. Dalton; "The Gods of Northern Buddhism," by A. Getty; "English University Drama, 1540-1603," by F. S. Boas; "Map's De Nugis Curialium," edited by M. R. James; "Apulei Apologia," with introduction and commentary by H. E. Butler and S. G. Owen; "The Beneventan Script," by E. A. Loew; "Studies in the Odyssey," by J. A. K. Thomson; "The Oxford Survey of the British Empire," edited by A. J. Herbertson and O. J. R. Howarth. Volume IV is announced of the Oxford Studies in Social and Legal History, containing "The Early History of Contract," by W. Barbour, and "The Abbey of Saint-Bertin," by G. W. Coopland. To the series of Oxford Historical and Literary Studies are added: "Unpublished Selections from Henry Tubbe," edited by G. C. Moore Smith; "Bibliography of Dr. Johnson," by P. W. Courtney; "Selkirk's Colony in Canada," by Chester Martin.

THE second volume of Dio's "Roman History" has now appeared in the Loeb Classical Library (Macmillan; $1.50 net). As we have already noted, the translation of this edition is a thorough revision by Dr. Earnest Cary of the version by Herbert Baldwin Foster.

IN "The Secret Book" (Macmillan; $1.25 net), the author of "The Old Librarian's Almanack" and "The Librarian at Play" has made another book full of fancy and humor out of the materials of his dusty trade. To the lay mind a librarian is a person who, like an undertaker, may be piously cheerful on occasion, may compass "decent mirth," but is incapable of real jollity. Mr. E. L. Pearson, seriously interested in books and men, is depressed by neither; mirthfulness, not painfully decent, is the atmosphere of these pages. The chapters are supposed to be articles read by the members of a little informal club. According to excellent precedents—the Autocrat and others—a slight thread of story is thus supplied for the stringing together of what is virtually a series of familiar essays. A librarian or two, a bibliographer, a short-story writer, a genealogist, a couple of journalists, a schoolmaster—these are the club. It meets at irregular intervals for Welsh rabbits, talk, and "papers" about books new and old, popular and recondite. Nor are appropriate ditties mute; there are some excellent bits of familiar verse scattered through these pages. What the "secret book" is and how Lauriston finds it at last are trifling matters. Mr. Pearson's new book is to be read and enjoyed as an amusing and engaging commentary on all sorts of things bookish and human by a writer high-spirited enough to rejoice in his work and its rewards, major and minor.

IN "The Queens of Aragon: Their Lives and Times" (Brentano's; $3.75 net), E. L. Miron writes entertainingly, and with much information, of bygone days in Spain's eastern kingdom. Aragon existed as a separate political entity from 1035 to 1468 A. D. During this period twenty-six queens shared the throne. History has sketched the portraits of most of these helpmeets of Aragon's warlike kings in the most shadowy outline; but the author has turned to contemporary literature to supply those intimate details lacking in the arid chronicles of the time. A formidable bibliography published as an appendix testifies to his acquaintance with the period. From the most diverse sources he has brought together a multitude of facts presenting an interesting picture of Aragonese culture during the centuries in question. Much information is given concerning the troubadours in Spain; but curiously enough the author has failed to utilize the authoritative work on the subject: Milá y Fontanals's "Troubadours in Spain," not to mention

later studies by Menéndez y Pelayo and Menéndez Pidal. This failure to consult obvious sources is unaccountable in one who gives evidence of much wide and curious reading in works difficult of access. A knowledge of these books would have prevented a blunder like that on page 74, where he says: "Between the troubadour and the trouvère, there was a considerable difference." The distinction, of course, is merely one of dialect and geography, but the context plainly shows that he thinks the troubadour, like the jongleur, to have been merely a minstrel who recited poems written by the trouvère. Such errors are infrequent. The book is an interesting contribution to the culture history of mediæval Spain.

THE author of "How to See the Vatican" (Pott; $2 net), Mr. Douglas Sladen, is known as an indefatigable compiler of travel literature. Some years ago he published "The Secrets of the Vatican," a book which is now out of print, and the present volume, we are informed in a publisher's note, is mainly a revised edition of parts of that work. The aim of the book is to give the ordinary reader some acquaintance with the history of the Vatican and to describe for him those parts of the palace which are least familiar to the average tourist. The author, as will readily be seen by a glance at the authorities to whom he acknowledges indebtedness, makes no pretence to any profound scholarship, nor is his writing adorned with many elegancies of style, but as a plain workaday guide to the Vatican, covering some ground which is not covered elsewhere, this book should have its value.

FOR fulness of treatment the "International Year Book" (Dodd, Mead), under the editorship of Frank Moore Colby and Allen Leon Churchill, remains the most useful of annual handbooks. The volume for 1913, like its predecessors, will be found indispensable by students of contemporary events in search of information too recent to be incorporated in the encyclopædias and in much greater detail than the newspaper almanacs offer. It would be difficult to specify the features of a book which sets out to be a complete encyclopædia for the year; but, as with earlier volumes, we are glad to point out the valuable record of legislation under the History of the different States, material which is nowhere accessible in condensed form. The outstanding events of the year—Mexico, the Balkans, China, the beginnings of the Wilson Administration, Irish Home Rule—receive adequate attention. The record of books and plays of the year in this country and England is perforce largely in the nature of a catalogue, but here, again, the lists come in very handily for speedy reference. We notice in the history of the Balkan troubles one curious misstatement. With regard to the outbreak of hostilities between Bulgaria and her allies we are told: "It was a remarkable fact that Gen. Savoff, the hero of the past campaign against the Turks, opposed the truculent attitude of Dr. Daneff's Government and took no part in the second war." The facts are just the other way. It was the militarist party that forced the hands of the Ministry, and it was Gen. Savoff's unauthorized orders for an advance that precipitated the general fighting which ended so disastrously for Bulgaria.

IN "Napoleon at Bay, 1814" (Lane; $2.50 net), F. Loraine Petre continues the detailed military study which he has been making of Napoleon's later campaigns. The present volume discusses the battles of La Rothière, Craonne, Arcis-sur-Aube, and the other engagements in the course of the quick and hazardous marches by which he tried to move to the rear of the allied armies, cut their lines of communication, and frighten them off from closing in on Paris. Like Carlyle, when writing his "Frederick the Great," the author has personally been over the battle-fields; he also recently had the advantage of seeing 10,000 French troops of the present day manœuvring in part of this theatre of war, according to ideas very similar to those of Napoleon just a hundred years ago. He gives a detailed military narrative, but not too technical for the layman, and adds general remarks and conclusions interesting to the military historian and the professional soldier. Both Blücher and Napoleon receive rather more credit than from most historians who are not distinctly partisan. Blücher was right in urging an immediate pursuit of Napoleon after the French disaster at Leipzig; had his advice been followed, "the Empire of Napoleon would probably have fallen before the end of December, 1813." Blücher was not "a heaven-born genius, but he was full of common-sense, and did not hesitate to rely for brain-work on his more talented subordinate Gneisenau. If Gneisenau supplied the brains, it was Blücher who supplied the relentless energy, the fierce patriotism, and the strong will which pushed his army forward and kept peace between Russians and Prussians." On the other hand, Napoleon's attempt at Schwarzenberg's rear was not "a mere gambler's desperate throw," but might properly be regarded by Napoleon as having some probability of success, in view of his knowledge of "Schwarzenberg's almost insane nervousness regarding his communications." The author has not drawn upon any hitherto unknown material, but makes good use of Napoleon's correspondence, of the old accounts of Clausewitz and Müffling, and of the excellent recent studies of Houssaye, Weil, Hulot, Danilewski, Janson, and others—though not of Fave and Foch.

TO write a satisfactory history of Mormons in Utah, or a satisfactory life of its great leader, one must deny one's self the pleasure of disliking Mormonism. One must be willing to ask if plural marriages lessen unchastity and if co-operative control under church direction is worse than coöperation under the direction of able and fortunate individuals. "Brigham Young and his Mormon Empire," by Frank J. Cannon and George S. Knapp (Revell: $1.50 net), is certainly not an impartially scientific history. The authors seem desirous of describing the economic aspects of the Latter Day Saints, but they are not sufficiently detached to attempt it. Their task is to tell what they think about Brigham Young. It is evident that they think he was a bad man, and a convenient butt for ridicule. They are willing to grant his great achievements, but they do not tell how they came about, and there is no disposition to concede to him worthy motives. The book is written in an easy and vivacious manner; but it bristles with the antipathy which fills the religious and political controversy into which most non-Mormons in Utah have been drawn. It is not a book for one who wishes to gain trustworthy information, and it has the further defect of falling into slovenly and offensive language. We are told, for example, that Brigham had the habit of "jawing Zion into order," and that a certain one of Joseph Smith's widows "was the last of that sorrowing sisterhood to be comforted on the broad bosom of the prophet's successor." The illustrations are good, but they would be better if they included maps of Utah.

NEWSPAPER experiences make up almost the whole of Charles Edward Russell's "These Shifting Scenes" (Doran; $1.50 net). As they touch upon some of the most interesting events in the time they cover, and are told with the skill of a trained newspaper man, the book is most readable. Beginning with the old days of the "tramp" printers, the reader is taken through the harrowing episode of finding work on a New York newspaper, and then through incidents large and small, but never dull, ranging from the Haymarket tumult in Chicago, the Johnstown flood, and a group of national political conventions to murder mysteries and lesser journalistic fry. Mr. Russell has had the opportunity of looking on at some history-making, and he takes full advantage of the fact. Now and then he obtrudes his economic notions, as when he remarks that he "began to see that poverty was the condition of the majority of the people," but on the whole the narrative is unencumbered with irrelevant comment. It does not constitute an autobiography, but rather is a presentation of a large section of the writer's life. Its distinction is that it gives that intimate view of a newspaper man's work that people in general are apt to find fascinating.

JOSEPH PULITZER as a cross-examiner is the central figure of Alleyne Ireland's "Joseph Pulitzer: Reminiscences of a Secretary" (Kennerley; $1.25 net). The book is largely taken up with an account of the way in which the masterful editor tested the qualifications of candidates for the difficult post of secretary to him when blindness and nervousness had driven him to seclusion. "Secretary" is a very inadequate word for what "J. P.," as his entourage called him among themselves, required. His restless mind demanded to be fed and entertained continuously, and this, owing to his apparent knowledge of everything under the sun, was a huge task. In his examination of candidates, which might last for two or three months, he roved "from country to country, from century to century, through history, art, literature, biography, economics, music, the drama, and current politics." Not unnaturally, he placed great emphasis upon

memory. Prominent among his traits were his sudden changes of plan, regardless of the trouble involved, for those who shared with him his yacht or villa. The book gives a close view of one of the most interesting personalities of our time.

SOME months ago Lord Curzon created a ripple of comment by praising Lincoln's Gettysburg Address and Second Inaugural as superior to any other oratory in English in the nineteenth century. "I escape the task of deciding which is the masterpiece of modern English eloquence," he said, "by awarding the prize to an American." The lecture in which these words were spoken was prepared for the University of Cambridge, but abbreviated in delivery. It is now printed in full (Macmillan; $1), and bears the title, "Modern English Eloquence." The bulk of the little volume is devoted to personal recollections of Parliamentary speakers, including Gladstone, Disraeli, Salisbury, Rosebery, Balfour, and Asquith, with some analysis of their methods and effectiveness. These are preceded by a thought-provoking consideration of the changes that have come over Parliamentary eloquence since the days of Pitt and Fox. Theirs was "the art of an aristocratic society, practiced under aristocratic conditions, in an aristocratic age." The coming of democracy has transformed the art by making it less elaborate, less learned, less ornate, a transformation hastened and intensified by the appearance of a new type of eloquence—that of the platform. Lord Curzon holds that eloquence still affects votes in Parliament, and that, far from losing its old political importance, "the gift of speech in political leaders has become a greater necessity—it is really a condition of existence."

HISTORIANS, genealogists, ethnologists, and the lawyers of his State will be deeply grateful to Mr. Ralph Emerson Twitchell for the service he has rendered in making accessible the more interesting of New Mexico's historical documents. The first volume of "The Spanish Archives of New Mexico" (Cedar Rapids: Torch Press; $12) contains a complete catalogue of the records of the court of private land claims now in the custody of the Surveyor-General at Santa Fé. These documents, 1,384 in number, are chronologically arranged, the earliest starting with the year 1685, and the latest bearing the date 1846. The less important are merely listed by title, but those of greater interest are fully translated or described. Volume II contains notice of the far more interesting archives now deposited in the Congressional Library. They cover the years 1621-1821. The author has not sought to compete with the Congressional Library's catalogue of the 20,000 New Mexican documents in its possession, but has, rather, preferred to select the more important of these for translation or fuller description. He notices 3,097. It will be observed that none of the records here published goes back to the sixteenth century exploration period. Much supplemental material might be gathered at Seville in the Archives of the Indies. The records of the seventeenth century are interesting for the light they cast on the mode of life prevailing at remote Spanish outposts, and for much information concerning the Pueblo Indians.

IN a somewhat truculent preface, Mr. Twitchell defends himself in advance from the attacks which he feels sure will be made upon him by the "scholastic Pharisee" for venturing to introduce a little interesting reading into an otherwise arid catalogue. Equally superfluous are the author's ungenerous remarks about the labors of his predecessor, the late A. F. Bandelier, whose much despised list he has closely followed. He furthermore roundly attacks the national authorities who in 1903 removed a portion of the New Mexican archives to Washington. The author admits that these documents are now admirably cared for, and are being catalogued in the most scientific manner; and by his own showing it appears that, while stored in Santa Fé, many were stolen, and the whole collection was in imminent danger of destruction. The burning of the historical collection at Albany and recent revelations regarding the sorry condition of the archives in many Southern States give cause for congratulation that at least one valuable collection of documents is safely housed and cared for.

NOTES FROM ABROAD.

THAT blessed word "federalism" is the catchword of the moment in British politics. Enthusiasm for the federal panacea has almost persuaded Mrs. Humphry Ward to be a suffragist. She has, in fact, publicly avowed her belief that the solution of the woman suffrage problem may come through a division of functions between local legislative assemblies and a central imperial Parliament. The latter would remain in the control of men, but women would have equality with them in "the whole social and domestic sphere of delegated power covered by these local assemblies of the future." It is evident that Mrs. Ward pictures these assemblies as no more than magnified county councils, and has no idea of the gravity of the issues that would be subject to their decision in any scheme of federalism that deserved the name.

THE cold truth about the so-called federal solution of the Home Rule controversy has been set forth in the *Manchester Guardian* by Prof. J. H. Morgan, of University College, London, who is rapidly becoming one of the leading authorities on British constitutional problems. He warns the admirers of this short cut to peace that to federalize the United Kingdom would involve the creation of a written Constitution, and would tax all the energies of all the jurists in England for months, if not for years, before anything could be put in a draughtsman's hands. It would involve the repeal of hundreds of statutes, innumerable administrative readjustments, and the complete reform of the House of Lords. It would mean, to begin with, the total abandonment of the Home Rule bill, which is not suited, and never was intended, to be the cornerstone of a federal system.

A SCHEME is in progress for recognizing Dr. J. G. Frazer's services to research. The proposal is to establish a Frazer Fund for Social Anthropology, from which grants will be made to travelling students of either sex, with a view to their investigating problems in the culture and social organization of primitive peoples. In order to secure continuity of administration, the fund is to be held in trust by the University of Cambridge. The signatures to the memorial issued in connection with the scheme are mainly those of English scholars, but a few American names appear, including that of Prof. B. L. Gildersleeve, and the Continent of Europe is also represented on the list. Mr. F. M. Cornford, of Trinity College, Cambridge, is secretary of the committee of subscribers.

THE "National Office of French Universities and Schools"—a wheel of Government—publishes a little book whose object is "to make known abroad the higher French education as it is today, with the resources it offers." It is quite apart from the well-known "Livret des Etudiants," which catalogues French universities and higher schools, with their courses year by year. This explains to foreign students that, in point of fact, French universities and schools are open to them and welcome them—"on the sole condition that they prove they are in a state to receive the teaching." It is intended to do away with the idea that many administrative difficulties stand in the way of foreign students wishing to enter French universities. The conditions of attendance and of previous requirements for studying with a view to diplomas and degrees are brought out in particular. The publication is a part of the effort made for several years to turn towards French institutions the stream of higher foreign students. Statistics show that this has already met with success. In 1900 there were all told 1,770 foreign students in French universities, and in 1913 there were 5,560, or nearly one-seventh of the total number matriculated.

THE history of the 602 Deputies who have recently been elected to hold rule over France during their four years in Parliament is of some interest. One of the chief reproaches made against republics, particularly Latin republics, is the predominance of the lawyer and professional politician. Now, in this new French Parliament there are 142 barristers and twelve solicitors, between whom the habit of public speaking must make the difference; and there are ten former judges, three notaries, and twenty-seven who have been office-holders in the civil administration. To these may be properly added forty-six journalists and forty-three university professors, fifty-three doctors, and three veterinaries (Gambetta once said in his haste that the system of election sent up a Parliament of "sub-veterinaries"), eleven apothecaries, and twenty-five employees of business. All these would naturally be Radical and Socialist elements, or "wage-earners," as against wage-payers, although this division is far from being verified in the

political reality. On the other, and naturally Conservative or Moderate, side we have forty-six "rentiers," or Deputies living from their own personal incomes as property-holders, thirty-two manufacturers, and twenty-seven merchants, three shipbuilders and six professional financiers, sixteen farmers, and twenty-one ex-officers of army or navy. There are one publisher, six keepers of hotels and cafés, and twenty-two workmen, who are not all Socialists. Jaurès, the leader of the Socialist party, is an ex-university professor of philosophy.

THE French Academy has delegated its "perpetual secretary," M. Etienne Lamy, who took part in our own Champlain celebration, to represent it at the seventh centenary of the battle of Bouvines. The ode crowned for the occasion has been written by Henri de Lècre, a laureate of the Floral Games of Languedoc. This reminds one irresistibly of Lady Ambrose's arraignment of the new republic's "part of culture that comes from a knowledge of history or parts of history." She was supposed at the time to have related a true story of the English historian Freeman: "I sat at dinner by some one who had not only read heaven knows how much history, but had written, I believe, even more than he had read. At last he said to me, in a very solemn voice, 'What a terrible defeat that was which we had at Bouvines!' I answered timidly—not thinking we were at war with any one—that I had seen nothing about it in the papers. 'H'm!' he said, giving a sort of a grunt that made me feel dreadfully ignorant, 'Why, I had an excursus on it myself in the *Archæological Gazette* only last week.' And, do you know, it turned out that the battle of Bouvines was fought in the thirteenth century, and had, as far as I could make out, something to do with Magna Charta."

HERE in France it is generally chronicled as a victory over the German Emperor Otho IV. It was certainly won by Philip Augustus, King of France, over the combined forces of the Emperor of Germany, the King of England, and the Count of Flanders. Koehler, its German historian, says: "The victory of Bouvines had for France this important result—it awakened a national sentiment, and it strengthened the feeling of common solidarity to such a degree that we may say modern France issued from that event." A monument was erected in 1863 on the battle-field, which is within easy reach of tourists, about seven miles from Lille. The village of Bouvines has 600 inhabitants, lost amid the monotonous industries now dominating the region.

A FORMER student of the French School of Athens, Eugène Cavaignac, has presented to the Académie des Sciences Morales an exhaustive documentary report on the duration and obligations of military service in the Roman Republic when it was pouring out its soldiers with the Scipios for the conquest first of Carthage and then of the world. He starts from the indications of Polybius, who was a member of the Achæan League and saw the Roman soldiers at work in the conquest of Macedonia, and was afterwards sixteen years at Rome in the family of the later Scipios. At that time, the Roman idea of the sovereignty of the State—*Majestas*—had grown to that conception which still directs the relations of governments towards the community in Continental Europe. There, too, it has resulted in obligatory military service. Without going into this question, which belongs to philosophical history, M. Cavaignac establishes these facts: Roman citizens owed military service from seventeen to forty-six years of age, with a maximum of twenty campaigns. The minimum has been disputed, but M. Cavaignac decides for six campaigns, which could hardly be crowded into the three years of the present disputed law of the French Republic.

PLANS for the Italian pavilion at the San Francisco Exposition, which have just been published in the papers, have aroused much interest in artistic circles. They are the work of Sig. Piacentini, one of the most popular and successful Italian architects, who is a specialist in buildings of this kind. He has designed for the great world fair a scheme which shall reproduce on the shores of the Pacific a typical Italian mediæval town, with its works of art, its fountains, its gardens, and its quaint houses. There will be two piazzas, a larger one dominated by the Palazzo Pubblico, or town hall, recalling the glories of Italian municipal life, and surrounded by other public and private buildings, forming the centre of the life of the community; and a smaller one with the Loggia dei Mercanti, or merchants' exchange, and surrounded by shops and warehouses, reminiscent of the commercial activities of the Italian city republics. The two will be united by narrow streets and porticos like those of Siena, Verona, or Perugia. The general effect, if the plans are well executed, should be interesting and attractive, but intelligent public opinion rightly insists that the contents of the various buildings should be properly representative of Italian work, and not consist of the usual Neapolitan coral and sham tortoise-shell objects, Sorrento woodwork, the hideous Volterra alabaster ware and Venetian atrocities in spun glass, which have figured in other Italian exhibitions abroad, and which give an entirely false idea of what the country produces. Italy has now so much to show in the way of high-class industrial and artistic production that there is no need to expose such trumpery and wholly out-of-date trash.

THE latest Italian labor strikes are associated to an unusual degree with classical memories and poetry. The dispute is whether Sicilian sulphur shall be exported by way of Catania or Porto Empedocle, which is the seaport of Girgenti—the ancient Agrigentum on the other side of the island. Now Empedocles himself, philosopher, and poet, and physiologist of the heart, from whom the port has its name, went forth from Catania to climb up and throw himself into the crater of Ætna, and so died in sulphurous glory.

> In the slow revolutions of the world
> I shall come many times to Catana—

Matthew Arnold makes him promise.

Science

COL. ROOSEVELT'S SCIENTIFIC OBSERVATIONS.

Life-Histories of African Game Animals. By Theodore Roosevelt and Edmund Heller. New York: Charles Scribner's Sons. $10 net.

Instead of publishing the scientific observations of his trip as appendices to the narrative volumes, "African Game Trails," or scattered through various zoölogical publications, Col. Roosevelt has collected them in these two volumes. The method of presentation is in the form of chapter monographs dealing in some cases with a single species, as The Lion, or with groups, as The Gazelles and their Allies. Again we have proof that science in the future is to derive its chief support from the field work of trained observers. The day of mere museum collecting is past, and there is no excuse for any systematic gathering of specimens unless notes are taken on their life-history.

To take the lion monograph as a type, we find a short introduction on the Felidæ in general, followed by an equally brief summary of the characters of the lion and its sub-species. Then follow almost sixty pages of notes from the life, treating successively of distribution, family and cub life, voice, coloration, method of killing and character of kills, man-eaters, enemies, and method of hunting. The style is straightforward, lucid, and succinct, with unusually short sentences and no attempt at fine phrasing or involved description. In the section on sport, the account of the killing of George Grey is one of the most detailed and vivid narratives which has been written in the annals of hunting. A detailed description of the races of *Felis leo* closes the chapter.

The paragraph on the habits of the wart-hog will give an idea of the general style of treatment:

> They were never found in thick forest. When persecuted by man they became nocturnal; but we often saw them abroad at midday, although their favorite times for roaming and feeding were in the morning and afternoon. They frequently rooted up the ground, going down on their knees; but even more frequently they cropped grass like a zebra or hartebeest. Their food is purely vegetable. They live in burrows, which they invariably enter backward, so as to present to any enemy a front of teeth which would daunt the most ferocious. No matter how headlong the speed of a hunted pig it will always turn and slip backward into its hole, with jack-in-the-box agility. Once we saw a young boar thus disappear, and immediately afterward reappear as if shot out of a catapult; evidently the burrow was already inhabited by another pig, which had savagely assailed the hind

quarters of the intruder. When close pressed they will charge valiantly; but they are certainly nothing like as savage as peccaries. We found a sow with very young pigs in November on the Uasin Gishu; but apparently they breed at all seasons. In galloping after a boar we noticed that in trying to look back at his pursuer he lifted his snout, not turning his head to one side. When in motion wart-hogs always carry the tail straight up, the tassel perhaps falling forward. They are easily tamed, and make amusing pets, owing to their continuous grotesque starts and grunts. They often become exceedingly attached to their owners. At the McMillans' place the cheetahs and wart-hogs were as safe companions as the gazelles; whereas nobody could touch the leopards; and elsewhere we found that the zebras and hartebeests were apt to be dangerous when they became tame.

A preface explains the use of species and genera as adopted throughout the book, showing that a middle position has been taken, trinomials being admitted, but not all the hair-splitting indulged in by closet naturalists. The first five chapters make interesting reading, and collectively form an admirable introduction to the general subject. They deal respectively with The Country and Its History, Derivation of the Fauna, The Flora, Concealing and Revealing Coloration, and Game Preserves. The most important and valuable of these is that dealing with the origin of the fauna, colored maps of the faunal areas and life zones providing vivid illustrations of the facts recorded in the text. The most thorough treatment is that accorded to coloration, though but little of this is new, Col. Roosevelt's theories having been published elsewhere. The careful student will see that he is apt to swing a little too much to the opposite side of the Thayer protective question, as in the lion chapter, where he says: ". . . . the undoubtedly concealing quality of the lion's coloration is of interest chiefly as a coloristic fact, and plays little real part, and probably no part at all, in the animal's success as a hunter, and has not been developed by natural selection or otherwise for this particular utilitarian purpose." But in general he assumes a moderate point of view, thereby revealing the ideas of extremists and of men who have had little experience in actual field work in their true light of exaggeration and false premise.

The final chapter is concerned with Equipment, Arms, and the Preservation of Specimens, and a very full bibliography and index round out the work. The illustrations are excellent.

Mr. J. Evershed, director of the Madras & Kodaikanal Observatories, who recently visited New Zealand, has advised placing at Nelson, as a highly suitable place climatologically as well as geographically, the new institution for research in solar physics to be known as the Cawthron Observatory, from its founder, Mr. Thomas Cawthron, of Nelson, who has given a fund of $250,000 for its equipment and maintenance.

Dr. Otto Gustaf Ramsay, professor of obstetrics and gynecology at Yale Medical School, who died on June 12, was born in New York city in 1870. He graduated from the University of Virginia in 1890, and received the degree of M.A. from Yale in 1901. Later he studied in Germany, and served as interne and associate in gynecology at Johns Hopkins. For several years he had been a member of the Yale faculty.

Drama and Music

THE FATHER OF DANISH COMEDY.

The Comedies of Holberg. By Oscar James Campbell, Jr. Harvard Studies in Comparative Literature, Vol. III. Cambridge: Harvard University Press. $2.50 net.

It is appropriate at a time when, thanks to the assiduity of Mr. Björkman and others, the American reading public is becoming more and more acquainted with Scandinavian writers, that a work of genuine scientific and cultural value should be produced by an American scholar upon a classic Scandinavian author. Though Professor Campbell is primarily an English rather than a Scandinavian specialist, he has nevertheless in this book made America's most significant contribution to the study of the Scandinavian literatures. His book is the third in the series of Harvard Studies in Comparative Literature.

The author's method of treating his subject is purely comparative. A succinct sketch of Holberg's life and a convenient classification of his plays under four heads precede the main portion of the book, which consists of more than two hundred pages upon the relation of Holberg to earlier writers of comedy. Holberg is a peculiarly fit subject for comparative treatment. A Norwegian by birth, a Dane by adoption, an incessant traveller by predilection, he did his utmost to become an intellectual citizen of Europe as a whole. Finding in the Denmark of his day no traditions of culture, he made himself wisely cosmopolitan and diligently sought out the best which other countries could supply. He thus became the father of Danish comedy; indeed, one may say, of Danish literature in general. Mr. Campbell traces clearly his indebtedness to Molière in the grouping and exposition of character, to the *commedia dell' arte* for much of the comedy of his plots, together with the figures that served as vehicles for it, and to the spirit of English satire, which was in many ways so congenial to his own temper. All this was already somewhat familiar matter to students of comparative literature. The author has, however, made a fresh presentation of the whole subject, and has set many facts in a new light. The chapters on the relations of Holberg to French literature other than Molière and on his scantier indebtedness to German and Latin literature furnish much new material. The parallels which Mr. Campbell draws are always reasonably convincing. He proves his case, as "proof" goes in such matters of literary influence. And thorough as his investigation is, it carries no weight of superfluous learning. The quotations from Holberg, and even the titles of the plays, are translated into English—and wisely so, since a knowledge of Danish is not a part of the equipment of the ordinary scholar. The critical apparatus is put into the unobtrusive notes at the end of the book. One cannot speak too highly of the way in which the material has been digested and perspicuously arranged.

Mr. Campbell has made no attempt to discuss Holberg's influence on subsequent writers of comedy in different countries. That subject would require a separate book. If there is any lack in the present volume, it is the absence of a brief and clear indication as to the relative merits of the various plays. The wayfaring man has no guide for the reading of Holberg. And in that connection it is well to call attention to the need of a good English translation of the better-known comedies. Until it is provided, Holberg's laughter, which, according to Mr. Campbell, "bids fair to become immortal," can never be properly reëchoed from our shores.

The fifth volume of the Dramatic Index (Boston Book Company), covering the year 1913, is modelled upon the pattern of its predecessors. As a list of the performers who have appeared upon the musical or dramatic stage in that period, the plays in which they appeared, and the notices accorded to them in the books and periodicals (not the daily press) of the English-speaking world, it seems to be a full and accurate record, achieved at a great cost of systematic labor. The records of the five volumes cover the period 1906-1913. Beyond question, the work, with its convenient alphabetical references, will prove interesting and useful to all persons directly or indirectly concerned in theatrical affairs, while its catalogues of new plays and books on dramatic subjects have a special value; but it should be noted that the critical authorities referred to are not always of the most dependable order.

A Paris letter published in a London journal says: "So it is finally decided that Daudet's play 'L'Arlésienne' shall be withdrawn from the repertory of the Odéon, where it has been in Antoine's hands a never-failing trump card, filling the house as often as given, and re-

taining as the years go by all its charm and its grace. Mme. Daudet, in declining to leave the play to M. Antoine's successor, observes that she considers it right that the Daudet masterpiece should not be allowed to 'vegetate' eternally in the same playhouse, to be ever produced before the same public, and she is in treaty with a boulevard theatre that proposes to take over the acting rights."

Jean Richepin's version of "Macbeth" was produced recently at the Comédie Française, Duncan being played by Mounet-Sully, Macbeth by Paul Monnet, Macduff by Fenoux, and Banquo by Alexandre. Lady Macbeth was taken by the "divine" Bartet, the only artist who currently shares the epithet with Bernhardt, Lady Macduff by Rémy, and the three witches by Madeleine Roch, Silvain, and Devoyod. "M. Richepin's translation is wonderfully dexterous and true," an English critic says, "and while very nearly literal he manages to infuse into the French much of the force, fibre, and color of the original. Anybody familiar with the Shakespeare text could follow easily and smoothly the Richepin 'Macbeth,' but much of it, particularly the witches' incantations, must have been taken on credit by the public as something very fine and powerful, but in an unknown tongue. M. Richepin, in his admirable lectures, showed that he blamed Lady Macbeth more than the Thane of Cawdor for the murders, but in the play at the Comédie Bartet is far from incarnating the savage Queen. This magnificent artist has conceived a coquettish, supple temptress rather than an imperious plotter, and makes a very curious Lady Macbeth. It is not until the last scene that she is at all like the conventional impersonation of the part. She is scarcely Richepin's conception—at least, that is the impression she must leave on those who heard the lecture—but she is an arch-fiend in feminine form, and, if I may be allowed to say so, too French for a wild Scottish laird's wife."

A work that was warmly applauded at the Altenburg Festival was Kelley's quartet in C major. Altogether, Mr. Kelley's music has found much favor in Germany. It would not be a bad idea to introduce it to concert audiences in some of the large cities of his native country.

Texas, it may not be generally known, has produced one of the leading American musicians, Frank Van der Stucken, a composer whose works are awaiting the recognition they deserve. As a conductor he has made the public, especially in New York and Cincinnati, acquainted with many good novelties, including not a few by American composers. His latest achievement has been cordially praised in Antwerp, where he conducted two concerts in commemoration of the bicentenary of Gluck. The composers represented on the programmes, besides Gluck, were Mozart, Beethoven, Weber, Berlioz, Wagner, Verdi, Chabrier, Strauss, Benoit, Grieg, Smetana, and Moussorgsky.

Strauss's new "opera without words," "The Legend of Joseph," is not likely to add to his fame. According to Dr. Möller, of the *Allgemeine Musik-Zeitung*, it falls short of expectations, being little more than a pot-boiler, with some tonal dainties that will attract attention for a little while. Dr. Möller also points out that there is nothing new in the genre of the "Legend of Joseph," which Strauss's followers heralded as an innovation. So far as Germany is concerned, it is; but in France the "dance-drama," or "mimodrama," flourished as long ago as the seventeenth century. Distinguished musicians like Lully, Rameau, and Couperin cultivated it. In the nineteenth century another Frenchman, Noverre, endeavored to elevate the degenerated operatic ballet to a sort of "Gesammtkunstwerk," or combination of the arts. Dr. Möller might have referred also to the Bacchanale which Wagner added to the Paris version of "Tannhäuser." In more recent times the "mimodrama" has been cultivated by a number of Frenchmen and Russians, among them Lalo, Dukas, Ravel, Hahn, Debussy, Arensky, Tcherepnin, Rimsky-Korsakoff, and Stravinsky.

In the days of Mapleson it used to be "Grand Italian Opera." Maurice Grau enlarged that to "Grand Opera in Italian, French, and German." The latest combination is now on trial in London—Mr. Beecham's season of "German, Russian, and English Opera and Russian Ballet." His repertory includes: "Rosenkavalier," "Die Zauberflöte," "Boris Godounoff," "Ivan le Terrible," "Prince Igor," "Daphnis and Chloe," "Papillons," "Coq d'Or," "L'Oiseau de Feu," "Le Rossignol," "Midas," "Scheherazade," "La Légende de Joseph," "Cleopatra," "Nuit de Mal," "Petrouchka," "La Spectre de la Rose," "La Khovantchina," "Dylan," "Le Lac Des Cygnes," "Thamar," "Carnaval."

A hundred years ago, in the month of May, and only three days apart, were born two pianist composers, both famous in their time, but now almost entirely neglected by musicians and amateurs—undeservedly so. One was Adolf von Henselt, a Bavarian, who spent most of his life in St. Petersburg; the other, Stephen Heller, a Hungarian, who made his home in Paris, where he came into contact with Chopin, Liszt, Berlioz, and other eminent masters. Though a much-admired pianist, he soon gave up playing and devoted his time to teaching and composing. Many of his short pieces are gems which concert audiences of our day would be sure to admire if they got a chance to hear them. Unique among his works are a set of technical studies based on difficult passages in Chopin's études. His transcriptions of Schubert's songs equal those made by Liszt. Adolf von Henselt likewise ended his brilliant career as pianist prematurely in order to teach and compose, following the examples of Liszt and Chopin, as well as of Heller. For pedagogic purposes his études are still invaluable, and, like those of his three colleagues just named, they also have genuine artistic value. His arrangements for piano of the overtures to "Freischütz," "Euryanthe," "Oberon," "Egmont," and "Coriolan" are considered models.

Art

GUIDE-BOOKS OF PAINTING.

New Guides to Old Masters. By John C. Van Dyke. New York: Charles Scribner's Sons. London, $1; Paris, 75 cents.

These nicely printed and feather-light guide-books of painting escape the commonplace in every detail of literary style and mechanical make-up. Mr. Van Dyke undertakes the difficult task of a close qualitative appraisal of well-known pictures. Often he tells why a famous picture is bad, believing that the analysis of artistic error is only less instructive than that of beauty itself. By a system of stars the pictures are divided into four classes. Mere mention means a picture of merit, three stars indicate a great masterpiece. At London only Titian's Bacchus and Ariadne and Holbein's Duchess of Milan receive this distinction. We should be glad to find added in a new edition Leonardo's cartoon in the Diploma Gallery, which is ignored. At Paris, the three stars are affixed to four pictures, the Mona Lisa, Mantegna's St. Sebastian, Titian's Entombment, and Paolo Veronese's Marriage at Cana. It is always valuable to find the issue of quality raised sharply by a highly trained and independent mind. There are shocks as well as gratifications in the process—perhaps equally salutary. The writer, for example, is recovering but slowly from the shock of learning that Raphael's Castiglione portrait is but so so.

Mr. Van Dyke goes very thoroughly into the matter of condition and of attribution. On the latter score his pronouncements are, indeed, startling. Only six out of the fifteen titular Rembrandts in the National Gallery and twelve out of the nineteen in the Louvre survive his scrutiny unchallenged. In the general introduction he admits only ten Rembrandts at St. Petersburg, to forty in the official catalogue. As Mr. Van Dyke insists, such questions should be met with his guide in hand before the pictures. Evidently a *Nation* review is not the place for such contentions, but we think Mr. Van Dyke's radicalism as excessive as the conservatism of the museum cataloguers.

The term "old masters" is interpreted pretty narrowly. All the eighteenth-century artists are regarded as modern. Generally, the guides seem to address only the well-informed public. There are no dates of any sort and few material explanations of subject-matter, etc. In short, we have the kind of crisp critical comment to the fellow expert which European scholars are wont to bury in the pages of some *Repertorium* or *Zeitschrift*. Mr. Van Dyke's desire

to say this sort of thing to the larger public that buys gallery guides is inexplicable. The little books, which soon will cover the chief European galleries, will do more to perturb than enlighten. Frankly, we fear the effect and the success of confiding to the "tripping" public the sort of expressions that are usually hazarded only *inter amicos*.

"Ruines et Paysages d'Egypte," by G. Maspero (Paris: E. Guilmoto; 7 fr. 50) is a collection of popular articles by a famous archæologist and accomplished man of letters. The dates of the articles run from 1899 to 1909, and the places vary from the Delta to Philæ. M. Maspero is equally sympathetic with the life of the modern peasant and the ritual of old Egypt. Interesting bits of folk-lore are interwoven with the narrative of finds and restorations. A chapter is devoted to superstition still persistent in Karnak. There is an admirable essay on Luxor as typical of Egyptian architecture and cult. The Coptic monasteries are not forgotten. In every way this is a delightful and instructive work. Nothing could do more to quicken the landscape for the tourist, while the layman will find nowhere else so vivid an account of the actual methods and difficulties of archæological research and conservation. It is especially interesting to note how many of the incidents of an excavating expedition exactly reproduce the scenes sculptured on ancient walls—the replacing of a Pharaoh in his sepulchre, the embarkation of mummies, and their porterage across the sands by workmen who have changed little in garb or looks since the early dynasties.

The "City of David," his tomb, and the burying place of his successors have been brought to the light of day, so far as is possible after the night of so many centuries. The excavations were made during the past winter in Jerusalem, at the expense of Baron Edmond de Rothschild, the octogenarian head of the French branch of the banking family. An account of the results obtained to date was given to the Académie des Inscriptions, May 29, by M. Raymond Weil, who has charge of the work. The ground excavated is the abandoned site of the "stronghold of Zion," which David took by storm from the Jebusites. "So David dwelt in the fort, and called it the city of David. And David built round about from Millo and inward." . . . "So David slept with his fathers, and was buried in the city of David" (II Samuel v, 7, 9—I Kings ii, 10). The permanence of the Jewish tradition is shown by the first preaching of Peter: "Let me freely speak unto you of the patriarch David, that he is both dead and buried, and his sepulchre is with us unto this day" (Acts ii, 29). The part which has been cleared contains all that remains of the ancient tombs, which suffered devastation at a very remote period. It has also been possible to trace the walls of the primitive precincts crowning the ravines, and to discover the remarkable organization of the stronghold's defence. The spring which supplied water has been disengaged; and study has been made of the subterranean aqueducts which brought the water to a bastion sheltered from attack. These excavations on so large a scale have furnished documents of the history of the Jewish city much later under the Romans, shortly after Christ. There is notably a Greek inscription of a "strangers' synagogue," with baths and hostel.

For 160 years the Royal Society of Arts has led an honorable and useful existence, and its record as presented by its secretary, Sir Henry Trueman Wood (Dutton; $5 net), has various points of interest. Started in 1753 through the initiative of a rather obscure painter-philanthropist, William Shipley, the society set before itself the simple aim, from which it has never deviated, of promoting invention in the fine and useful arts through awarding medals and other premiums. Sir Joshua Reynolds, the agitator John Wilkes, Benjamin Franklin, were early members. The society encouraged the introduction of useful plants into Jamaica and other colonies, gave many awards for agricultural machinery, among others for the earliest straw cutters, threshers, planters, and reapers; interested itself in the improvement of colors and dyes; valiantly but none too successfully encouraged the silk industry in England and the colonies, and in later times dealt with such problems as street lighting. Its chief concern for more than a generation has been technical education. For the processes of the fine arts it has always had a peculiar care, awarding besides other premiums annually a silver palette for work or invention. So various an achievement does not lend itself to epitome. Possibly the most important single service of the society was the promotion of the Great Exhibition of 1851, the precedent for countless international exhibitions ever since. Among artists honored by the society we may note Bewick, Cosway, Cotman, Flaxman (at the age of eleven), Landseer, Lawrence, Millais, Mulready, Coventry Patmore, Romney, Schiavonetti. Perhaps the most distinguished non-English medallists are Senefelder, for his book on lithography, and Edison. In its long career the society has had only eleven presidents, including Prince Consort Albert, and Edward VII and George V, both while Prince of Wales. Sir Henry Wood's clear and unaffected chronicle of the more important happenings in the life of the society is a kind of running commentary on the course of modern invention, and offers something of interest to every sort of reader.

Malcolm S. Salaman's "The Great Painter-Etchers from Rembrandt to Whistler" (Lane) is the third in the *Studio* volumes on etching, the other two (1902 and 1913) having been devoted to modern work. The text forms a pleasant accompaniment to the 188 illustrations, which, considering that they are half-tones, are very satisfactory reproductions. Realization of the necessity for compression has resulted in the wise omission of the anecdotal embroidery which is often considered an essential feature of the "popular" style. The criticism is sound without being dry, and is marked by sympathetic understanding. Perhaps the reader may be surprised at the omission of all mention of certain etchers, and at the lack of more definite characterization in the case of others; but, granting the author his right of choice, we find it is generally based on good reasons. One gets vistas of interesting by-paths in the field of etching, as, for instance, in the comparison of Waterloo and Roghman, or in the unexpected introduction of the quiet charm of the Rev. E. T. Daniell. It is pleasant, too, to find old Breenberg in this company; a little plate by him, hardly more than three inches by two, purposely placed in juxtaposition with one of Brangwyn's big decorative pieces in the present exhibition in the print gallery of the New York Public Library, shows how he could be delicate and broad at the same time. Near the end of the text, in the sane appreciation of Whistler, the American notes with satisfaction the graceful tribute to Mr. E. G. Kennedy's Whistler catalogue issued a few years ago by the Grolier Club. The tone of the book and the selection of etchers to be included indicate a critical spirit joined to catholicity—a combination ever welcome.

Finance

THE LARGE GOLD EXPORTS.

There are two reasons why last week's exceptionally large gold export movement has taken front rank among the phenomena of the period. One is, that the $20,000,000 gold, sent out last week to Europe, exceeds all previous records of weekly exports; the other, that the rate of foreign exchange which made this possible is the highest touched in the New York market during nineteen years. The second fact is less significant than might be supposed; for these shipments were made in United States gold coin, whereas shipments of other recent years have been in the form of bullion; and since abrasion through use makes the intrinsic value of $1,000,000 coin less than that of a similar sum in gold bars, the normal "gold export point" is necessarily higher. Where the bars would assay in Europe at $4.88½ to the pound sterling, it may possibly require $4.89, face value, in the coin to meet the same foreign valuation.

The magnitude of the export movement is a more notable phenomenon. Until last week's shipment of $20,000,000 gold, the $17,000,000 shipped in the last week of April, 1910, when our market was relieving London's special requirement, was the record, and before that date the high mark was the $13,900,000 outgo of the second week of May, 1904, when the reaction from this country's great "trade boom" of the period was under way. It has been a little singular that discussion of the

movement has been more vigorous and agitated in Congress than in Wall Street; in fact, it has been difficult to get the financial market to pay great attention to it, except in so far as it established one of those "new high records" which always attract the interest of financial markets. It is also worth pointing out that, although last week's gold shipments made the total movement, for the year to date, no less than $60,000,000, that substantial sum was equalled in the corresponding period of 1913, and exceeded by $4,000,000 in 1904. But neither fact proves that the present movement is not an economic phenomenon of importance.

The unusual volume of the present outflow may be ascribed to the coincidence of several separate causes. European markets have been seeking energetically to draw gold; once or twice this season, they have gone some distance along the road which we ourselves entered with such violent activity when we were bidding for Europe's gold in 1907. That is one main cause.

As to why the foreign markets have been able to get gold here, rather than elsewhere, there are special reasons. One is, that a number of our short-term corporation notes placed in the last few years with Europe are maturing, and that we are paying them off; in other words, that our market is voluntarily buying back its own securities. But another important reason is, that no other country than our own has been in a position to give up gold in quantity without disturbance to its money markets.

Our regular annual gold imports, chiefly from the Mexican and Canadian mining camps, are so great as to counterbalance a very large gold export; in the ten months of the fiscal year which are dealt with by the Government's latest figures, we exported $47,000,000 gold, but imported $60,000,000—only a trifling part of which was received from Europe. One must also allow for our own country's annual gold production, which is $88,000,000. Despite the heavy gold exports of the year to date, the New York banks last Saturday held far more gold in their reserves than they held on January 1. These evidences of ability to spare the recent gold remittances must be considered also in the light of a slackened trade activity, which reduces home requirements for gold; of the decrease in our merchandise exports for the season—due to exhaustion of the held-over supplies of grain and cotton, and to reduced demand for goods from foreign communities where times are harder—and of the increase in our merchandise imports, due in part, but not entirely, to the tariff.

Granting these numerous coincidences, the fact remains that the unusual magnitude of this month's gold exports, and the quite abnormal height of the foreign exchange market, which has made them possible, do not indicate a satisfactory state of things at home. The indication was not satisfactory when, in 1908 and 1904, we were shipping gold at much the same rate as now. But the reason why the heavy outward movement of gold was disliked on those occasions was the evidence it presented of home trade depression, and not because we could not spare the gold, or because its outflow threatened the Government's reserve against its legal-tender notes, or because it indicated, for that and other reasons, a drift towards depreciated money. Those were the inferences, correctly drawn at the time, which converged on the gold exports of 1892 and 1894 all the attention and misgiving of the markets—a very different state of mind from the calmness with which even the stock exchanges watched the gold movement of 1904 and 1908, and with which they are watching that of 1914. With the Gold Standard Act of 1900, gold exports ceased, once and for all, to threaten the soundness of our currency.

Markets were perfectly aware, six years and ten years ago, that when the trade depression, of which the large gold shipments were an evidence, should reach its end, the gold movement would end with them. The present problem, therefore, is how soon we shall witness a reawakening of activity in trade. The usual answer which one gets from experienced men in the different industries is that all really fundamental conditions favor such revival—notably, the grain crops; that the recovery ought to come, but that as yet there is no trustworthy sign of it. Usually, that is the kind of situation in which people familiar with American business history look for surprises.

Too Much Fiction

is often found to be a fault in the selection of Summer Books.

A Suggestion—

Court Masques of James I.

By Mary Sullivan, Ph.D.

8vo. Illustrated. $2.50 net

Here is matter, pleasantly edited, full of references to the pomp and circumstance of the presentation of masques. In flashes one discovers, now a hint of the rivalries and piques of statesmen; now, the inordinate vanity of the noble performers; now, the wanton extravagance of the English in jewels, costumes, and scenery. These precise facts about King James, Queen Anne, Prince Charles, and the allusions to the "Masque of Blackness" or to the "Masque of Queens" and others, give the reader a keen sense of being a witness of the performances, and observing in person the men and manners and masquers.—*The Dial.*

VOL. XCVIII—NO. 2556 THURSDAY, JUNE 25, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

SOME NOTEWORTHY BOOKS FROM THE

HARVARD UNIVERSITY PRESS

Vitruvius: The Ten Books on Architecture

JUST PUBLISHED

Translated by the late MORRIS H. MORGAN, Professor of Classical Philology in Harvard University, and published under the editorship of ALBERT ANDREW HOWARD, Pope Professor of Latin, and HERBERT LANGFORD WARREN, Robinson Professor of Architecture in Harvard University.

4to. Bound in library buckram. Sixty-one plans and illustrations. 319 pages. $3.50 net.

No other architectural treatise has ever exercised such an influence as the De Architectura of Vitruvius—our chief source-book for the principles of Roman building, the final authority to Bramante, Michelangelo, Vignola, and Palladio, and the other great artists of the Renaissance, and a commentary not only on the methods of Roman engineering, but on the ideals and inspiration of the whole European Renaissance.

The Spiritual Message of Dante

By the Right Reverend WILLIAM BOYD CARPENTER, Canon of Westminster Abbey and Clerk of the Closet to the King, and late Bishop of Ripon. *8vo. Cloth. 250 pages. $1.50 net.*

Seldom have the William Belden Noble Lectures made so wide and happy an impression as these delivered by Bishop Boyd Carpenter in 1913. With a rare combination of literary charm and insight, and a scholarly love of Dante, which, though well known, has never before borne fruit, he treats of Dante's life and masterpiece as a Drama of the Soul. The book is illustrated with the four ancient portraits of Dante, and drawings from Lord Vernon's *Inferno*.

The Comedies of Holberg

By OSCAR JAMES CAMPBELL, Jr., Assistant Professor of English in the University of Wisconsin. Harvard Studies in Comparative Literature, Volume III. *12mo. Cloth. 363 pages. $2.50 net.*

Holberg, although perhaps the greatest of Danish writers, and ranking in interest with his contemporaries, the great eighteenth-century dramatists of France, has until now been almost unknown to English readers. After a complete biography of Holberg, the author traces the relations to French, Italian, English, German, and classical works, which made him a notable focus of influence.

Corporate Promotions and Reorganizations

SECOND IMPRESSION

By ARTHUR STONE DEWING, Assistant Professor of Political Economy in Yale University. Harvard Economic Studies, Volume X. *8vo. Cloth. 615 pages, with charts. $2.50 net.*

Giving detailed accounts of the promotion, failure, and successful reorganization of fourteen large trusts of recent date, this book furnishes a searching study of modern "big business" in both its economic and its legal aspects. Much of the material is not available elsewhere. Among the prominent companies treated are the Westinghouse Company, United States Shipbuilding, National Cordage, National Salt, United States Realty and Construction, and American Bicycle and American Malting Companies.

The Year Books of Richard II (1388-1389)

Edited under the auspices of the Ames Foundation by GEORGE F. DEISER, of the Philadelphia Bar, Librarian of the Hirst Free Law Library. *4to. Cloth. xxi+440 pages, with four facsimiles. $5.00 net.*

This book is the first step toward filling the only gap in the English Common Law Reports, and in typographical arrangement is similar to the well-known volumes of the Selden Society—viz.: the French text on one side of the page and the corresponding translation opposite, together with such notes from the record as can be supplied.

Lectures on Legal History and Miscellaneous Essays

By the late JAMES BARR AMES, Dean of the Harvard Law School. *4to. Cloth. 552 pages, with portrait. $3.00 net.*

The experience of Dean Ames in developing the case-system of teaching law, and his ability both in philosophic interpretation and in the application of a vast collection of actual precedents, gave unusual value to his elucidation of legal principles. The bulk of his written work is to be found in this volume, with a joint memoir of the author by a number of his friends, and a Table of Cases and Authorities quoted.

Harvard Health Talks

Being the substance of popular lectures delivered at the Harvard Medical School, to provide every one with the most recent and authoritative information on medical subjects of general importance. *Each, 16mo. Cloth. 50 cents net.*

HUGO MÜNSTERBERG'S

NEW BOOK

PSYCHOLOGY AND SOCIAL SANITY

By the Author of "The Americans," "On the Witness Stand," etc.

The application of psychology to some of the problems of our time. Prof. Munsterberg shows how false are our ideas of advertising; the unfitness of women for jury duty; predicts where the modern craze for dancing will eventually lead us, and discusses other important topics of the day.

What "The Bookman" says:

A mere glance at his table of contents is refreshing to such of us as had considered psychology a sort of abstruse mental solitaire. To find psychology dealing with investment, advertising, and the modern dance gives the whole subject a queer new air of reality. It is before all else practical, and about practical things; there is not a word nor a sentence in it but the veriest layman may understand; and many a native writer might envy this German scholar's clear and easy command of English. There is the sense, too, that in such chapters as that on Sex Education and Modern Dancing a wiser and better balanced mind than heretofore, as well as one deeplier informed and as thoroughly abreast of events, has here spoken something like an authoritative last word on the subject.

NEW YORK CINCINNATI CHICAGO

AN IMPORTANT NEW WORK IN CLIMATOLOGY

The Weather and Climate of Chicago. (Bulletin No. 4, Geographic Society of Chicago.) By Henry J. Cox, Professor of Meteorology, United States Weather Bureau, and John H. Armington, Local Forecaster, United States Weather Bureau.

396 pages, 8vo, cloth; $3.00, postage extra (weight 49 oz.)

This book, of general interest because of its character and authority, will naturally be of peculiar interest to residents of Chicago and the Middle West. Its importance is indicated by the fact that it is issued under the auspices of the Geographic Society of Chicago, and has been prepared by two of the best known weather experts in the country. It includes discussions of a great variety of subjects such as temperature, precipitation, atmospheric moisture, cloudiness and sunshine, wind direction and velocity, barometric pressure, and storm tracks; and among the interesting appendixes to the book are one on the weather of holidays and another containing journal entries relative to the great Chicago Fire of 1871.

The volume contains also a remarkable series of tables with reference to temperature, precipitation, atmospheric moisture, and atmospheric pressure—one hundred and forty-seven in all, with more than one hundred figures and plates.

Of especial interest and importance to teachers in connection with **The Weather and Climate of Chicago** is the preceding Bulletin of the Geographic Society edited by Professor Cox, and by Professor J. Paul Goode of the University of Chicago. It was prepared by a committee of the Geographic Society of Chicago and is entitled **Lantern Slide Illustrations for the Teaching of Meteorology.** It will be found an admirable aid in interesting students in the phenomena of weather and climate.

HAZLITT: SELECTIONS

Edited by WILL DAVID HOWE, Indiana University

These essays, each complete in itself, show Hazlitt at his best as a critic of painting, of poetry, of books, and of men. They take us back to the theatre in the days of Kean, Siddons, and the Kembles; they give us the fine flavor of the evenings at the rooms of Charles and Mary Lamb, where one might hear the best talk of the day. No volume of selections contains more instructive criticism, more brilliant writing, a more stimulating philosophy of life than is included in the representative essays here gathered together.

The present volume is provided with a charming biographical sketch, and with critical and explanatory notes which add materially to its value.

With a Preface on

PARENTS AND CHILDREN

Price $1.50 net. Postage extra

¶ The PREFACE to this book of Plays, entitled "Parents and Children," is one of the most important contributions to one of the vital problems of Social Life, namely, the training and education of Children by their Parents.

¶ Every Father and Mother should read it. Every Teacher should study it. It is a book for every household in the country—for it tells the truth, and tells it in a way to make us think, and to make us realize our duties to our Children, and how best to fulfil them.

The Nation.

NEW YORK, THURSDAY, JUNE 25, 1914.

Summary of the News

Prospects for a satisfactory outcome of the mediation proceedings, which at the end of last week appeared somewhat gloomy, have brightened considerably. The papers of June 18 published the statement of the Huerta delegates explaining their opposition to the proposal of the United States for the appointment of a Provisional President of Constitutionalist sympathies. The main contention of the Huerta delegates was that, for the very reason advanced by the United States that the Government in Mexico controlled elections, it would be impossible, with a Constitutionalist as Provisional President, and with a majority of Constitutionalists on the Advisory Commission, to hold impartial elections. The Administration's reply, insisting on the choice of a Constitutionalist, was made known on Friday, and a deadlock appeared to have been reached. A hurried visit to Washington of Dr. Naón, the Argentine representative at the mediation conference, resulted in the formulation of a new plan of procedure, on which we comment elsewhere, the principal feature of which is that representatives of the Constitutionalists will confer informally with the Huerta delegates, with a view to reaching an agreement as to the Provisional Presidency. There will thus be, as it were, a conference within the conference. It is assumed that the formal mediation proceedings, meanwhile, will be confined to the international aspects of the problem.

The break between Villa and Carranza, which has been so often reported and contradicted, appears to have actually occurred last week, when Villa dispossessed the civil authorities in the northern part of the territory under Constitutionalist control and substituted military appointees of his own. The difference, however, seems to have been adjusted, for the time being, at least, and Villa has taken over the supreme command in the attack on Zacatecas, superseding Gen. Natera, whose attack last week was repulsed, with severe loss.

The Nicaraguan and Colombian treaties have been before the Foreign Relations Committee of the Senate during the past week. Giving evidence before the Committee on Monday Mr. Bryan brought forward the Dubois memorandum, made during the last Administration and stating that "the people of the United States honestly regret anything should have occurred to mar, in any way, the long and sincere friendship that existed for nearly a century between Colombia and the United States," as evidence that the clause in the Colombian treaty which has been interpreted as an apology by the United States had, in effect, the sanction of the Taft Administration.

The nomination of William G. Sharp, of Ohio, as Ambassador to France, was confirmed by the Senate on June 19.

The Clayton Anti-Trust bill has been under consideration by the Judiciary Committee of the Senate, and it seems probable that it may be reported by the end of this week. It is stated that considerable modifications have been made in the bill and that, in particular, the clause exempting labor unions from injunctions or restraining orders issued by the courts to prevent picketing at or near the premises of employers has been stricken out.

Following his discovery that the returns of the income tax will fall short of the Treasury estimate by some $23,000,000, Secretary McAdoo on June 18 addressed a communication to Congress recommending an amendment to the law which should give the revenue collectors broader inquisitorial powers. The assumption is apparently made that Treasury estimates are infallible and that, therefore, there has been wholesale dishonesty in making out returns for the income tax. The proposed amendment gives to the agents of the Government the widest discretion in examining the books, papers, and records both of individuals and of corporations.

In the absence of the greater part of the Progressive party on the high seas an interesting little squabble has arisen among the fractions that are left at home. On Friday of last week Mr. Gifford Pinchot, Progressive candidate for United States Senator from Pennsylvania, publicly endorsed the objection raised by his brother, Amos, against Mr. George W. Perkins as Chairman of the National Executive Committee of the Progressive party. Mr. Amos Pinchot's objection to Mr. Perkins was on the ground that his connection with corporations and his alleged reactionary views regarding "big business" had been detrimental to Progressive interests. On the same day a resolution demanding Mr. Perkins's retirement was offered at a meeting of the New Jersey State Committee of the Progressive party, but was tabled until Col. Roosevelt should have returned.

M. Viviani's Cabinet easily survived its first test vote in the French Chamber last week, receiving a majority of 223 on a vote of confidence arising out of the Premier's declaration of policy. M. Viviani's declaration was almost identical with that of M. Ribot, which had failed to gain the support of the Chamber, except that it insisted even more strongly on the maintenance of the Three Years' Military Service law. The result of the vote shows that, as had been surmised, opposition to M. Ribot's Ministry was based on personalities rather than on policies. The rest of M. Viviani's statement dealt principally with financial provisions, and on June 19 the Chamber further endorsed the new Ministry's policy by adopting, by a vote of 459 to 108, a resolution authorizing the Government to issue a loan of 800,000,000 francs for extraordinary military and naval expenses.

On Monday the French Government issued regulations, enforcing the law passed last March, which will seriously affect foreigners, and particularly Americans, residing in France. The law, which has so far been held in abeyance, but which will now become operative on July 1, provides for a tax of 5 per cent. to be levied upon incomes received in France from foreign stocks, bonds, and securities of every kind.

A terrible aerial disaster, in which nine lives were lost, occurred in Vienna on Saturday, when, in the course of some military manœuvres, an aeroplane collided with the dirigible balloon Koerting, tearing its envelope and causing an explosion. Both machines dropped together from a height of 1,300 feet, and all of the two crews were killed.

Fighting has continued in Albania between the insurgents and the Government troops. Another attack on Durazzo last week was repulsed, but, according to dispatches from the correspondent of the London *Daily Telegraph*, an expedition of Malissore tribesmen that was sent against the insurgents failed utterly, the tribesmen having been surrounded and cut to pieces.

The tension between Greece and Turkey, which when we wrote last week appeared extremely acute, has been sensibly relaxed by the conciliatory tone of the Turkish note sent in reply to the protest of Greece against the treatment accorded to her subjects in the Ottoman Empire. The Turkish note declared that Greek subjects who had been compelled to escape from Turkey during the past few weeks would be permitted to return and that compensation would be made for losses that they had sustained. The situation, nevertheless, remains sufficiently serious, and this country has become to some extent involved in it on account of the projected sale to Greece of the old battleships Idaho and Mississippi. The President has made known his approval of the sale, the question of which has been before Congress for the past ten days, explaining that he did so with the understanding that the acquirement of the ships by Greece would promote the cause of peace. The Turkish Ambassador is understood to have protested against the proposed sale.

The deaths of the week include: Prof. John R. S. Sterrett, Bennet Burleigh, June 16; James B. Brooks, Martin M. Reynolds, June 17; ex-Senator Frank Hiscock, June 18; Brandon Thomas, Sir John E. G. Hill, June 19; William Erskine Torrens, June 20; Baroness Bertha von Suttner, James Moore Swank, Joseph T. Kelly, June 21; Morgan B. Williams, Bayard Dominick, June 22; Mrs. George Westinghouse, June 23.

The Week

The new aspect of things at Niagara is cheering in a double sense. Not only are the efforts for peace, which last Saturday seemed to have reached absolute frustration, to be continued, but the issues have been simplified by bringing face to face the two parties directly concerned. It must be admitted that the situation has its anomalies from the standpoint of correct diplomatic technique. Huertistas and Carranzistas are to carry on the work of a conference which was called to avert hostilities between Huerta and the United States. The A B C nations as mediators between Huerta and the United States have surrendered the centre of the stage to the United States acting as mediator between Huerta and the Constitutionalists. But it is only the pedants of diplomacy who will find fault with the situation. The Tampico flag incident, never more than a pretext for bringing the Mexican problem to a head, has long been lost sight of; and we imagine President Wilson will contrive to bear up under the charge of inconsistency on the smaller matter if only the outstanding issue of Mexican pacification through the elimination of Huerta is attained. Of that the chances are brighter than ever; and not the less so because the two parties now confronting each other at Niagara are the same parties that confront each other at Zacatecas.

President Wilson's earnest efforts in behalf of a settlement at Niagara have earned him the gratitude of friends of peace. The habit of sneering at the Administration's policy of watchful waiting has not died out. But if watchful waiting means a passive attitude, a mere vague expectancy of something that will turn up, the phrase absolutely does not apply to the course pursued at Washington since the opening of the conference at Niagara. Far from drifting, Mr. Wilson has known all along what he wants. He may be accused of prejudice in setting his mind implacably against Huerta; he may be accused of undue partisanship in espousing the claims of the Constitutionalists; but it cannot be said that he has wavered in his determination that the Niagara conference shall not adjourn before all human means towards an agreement on peace have been exhausted.

Mr. Bryan makes a legitimate point in his defence of the wording of the proposed treaty with Colombia, when he points out the almost complete identity of its language with that of the Dubois memorandum, drawn up as the basis for a projected treaty in President Taft's time. But while this consideration may properly be urged as a defence against personal criticism, it is far from conclusive as to the merits of the question. Even if the Taft Administration had drawn up a treaty in form, embodying the same words, it would still remain a question whether the language was desirable; and to say a thing in a memorandum designed to pave the way to a treaty is very different from saying it in the treaty itself. To use the language of courtesy and good will, while providing substantial reparation for injury, would seem to be as far as a nation can be expected to go in the formal instrument of the settlement of such an affair as ours with Colombia. "The United States of America and the Republic of Colombia, being equally animated by the desire to remove all obstacles to a good understanding between them"—such is the opening phrase in the draft of the treaty proposed in Secretary Root's time, and it ought to suffice for any present purpose.

In handing down last Monday so large a number of decisions, before adjourning for the summer, the Supreme Court gives further proof of the industry and energy which have marked it for the past few years. It has now very nearly cleared its calendar. The so-called "intermountain case" is highly technical in its details, but simple enough in the fundamental principles involved. The "long and short haul clause" of the original Interstate Commerce act forbade the charging of higher rates for freight carried between two given points than was charged for freight carried, "under substantially similar circumstances and conditions," between two other points, served by the same line or lines, where the distance traversed was longer. In the amended act of 1910, the "substantially similar conditions" clause was dropped There was left in the act, however, the provision that, "upon application to the Interstate Commerce Commission, such common carrier may in special cases, after investigation, be authorized by the Commission to charge less for longer than for shorter distances"; the Commission being empowered from time to time to prescribe the extent of such exemption from the "long and short haul clause." In the case at issue, the railways insisted that their through transcontinental rates were necessarily kept down by ocean competition from one coast to the other; but that rates between intermediate points, or between an intermediate point and either coast, were not fairly subject to such ocean competition. They therefore asked for higher rates in some of the transportation last referred to than for the full transcontinental haul. The Commission in 1911 partly admitted this contention; but, pointing out that its scope applied in different degree, according as the intermediate shipping centre was near to or remote from the coast, it established a compromise arrangement. Under this, a series of geographical "zones" was fixed, separated by north-and-south lines, and for each of those several zones rates were adjusted according to their assumed relation to the influences which fixed the through transcontinental rate.

The railways party to the suit had challenged the Commission's right to fix such "blanket rates," and the Commerce Court, since abolished, had upheld the contention. The Supreme Court now rules against it, and decides that the Commission has full authority to proceed on the lines adopted in its compromise arrangement of 1911. In two respects the Court's decision is of particularly timely interest. It appears to recognize (what had previously been disputed) the Commission's right to alter rates on the basis of a "blanket ruling," not by fixing each separate rate individually; and this may bear on the pending decision as to a general increase in Eastern railway rates. It also sustains a policy of the Interstate Commission which will become much more important, both to the railways and to the shippers, when the ocean route from coast to coast is shortened by the opening of the Panama Canal.

The orthodox Republican view of the way the tariff works can be stated in a

few words. When we put on a high tariff, we don't make prices any higher to the consumer, but nevertheless we enable manufacturers to pay high wages; when we reduce the tariff, the consumer gets no lower prices, but nevertheless the manufacturer is compelled either to shut up shop or to reduce wages. Just why these things should be so must be a good deal of a puzzle to many persons, and it ought to be something of a relief to them to learn of concrete instances in which things act in a less topsy-turvy fashion. Therefore the statement issued by the Federal Sugar Refining Company, which shows the direct connection between tariff reduction and sugar prices, is valuable. The price of raw sugar in bond is nearly the same now as the average price for some years before the tariff was reduced—2.04 cents per pound, as against 2.09 cents—but the price of refined sugar in the American market is now only 3.82 cents, as against 4.40. There is thus a saving of .58 cent per pound, which means an annual reduction of more than $48,000,000. When the duty shall have been entirely removed, there will be, says the company's statement, a further saving of some $100,000,000 a year. The same kind of thing is going on in many directions. But it is hard to get people to take much note of such relief from indirect taxation, just as it is hard to get them to realize the burden which the tariff imposes on them in the shape of high prices. But the burden is none the less real, nor is the relief any the less beneficial.

Not very long after Col. Roosevelt's announcement that he cannot be a candidate for Governor, and the intimation that he may even be prevented from taking an active part in the campaign, the holy war against Perkins proclaimed by Amos Pinchot takes on reality. Gifford Pinchot has now declared that Perkins is decidedly not wanted in Pennsylvania, and the George L. Record wing of the New Jersey Progressives demands similar action. One might imagine that the Progressives, threatened with the defection of their commander-in-chief, would be in no hurry to pitch any more leaders overboard. A Progressive campaign without Roosevelt in the line of battle and Perkins in the commissariat would seem to be doomed in advance. But that is only superficial reasoning. The fact is, of course, that only Roosevelt is strong enough to carry the burden of Perkins. The Progressive party unaided can never stand up under the weight. Perkins as a Progressive is neutralized by Roosevelt. With the Colonel in partial retirement, Perkins would remain the outstanding figure in any nation-wide campaign the Progressives may undertake. The radical voter who has made a wry face at swallowing Harvester Trust, even with Roosevelt sauce, will balk when presented with Perkins *au naturel*.

Simplicity itself is the aim of the bill which Senator Stone and Representative Flood, at the instance of the Third Assistant Secretary of State, Mr. Phillips, have introduced to make the consular and diplomatic services more mobile. It provides that secretaries and all consular employees be appointed to grades, not to specific posts. The inelasticity of the present plan has long been a source of embarrassment. In emergencies in other cities or in other countries, consuls cannot be transferred without a delay that may stretch into many months before the Senate confirms the nomination. Important changes, moreover, are frequently necessary to adapt the consular service to new conditions; and while the Department can suspend consular offices, it cannot establish new ones. Another innovation is the provision of a uniform salary for each grade. Under the present law, with a specific salary attached to each specific assignment, a promotion necessitates a change of post, and thus frequently removes the officer from the place where he is most useful. Director Carr, of the Consular Service, remarks that the flexibility to which the bill looks "would go far towards giving this country an organization worthy of the name." While the measure cannot be pressed this session, it deserves early consideration in the next.

That some of the cobwebs of our American parallel to the Circumlocution Office, the patent registry, could be made to yield to a new broom, was proved on paper long ago; the first annual report of Commissioner Ewing shows the beginnings of it in practice. Since January "the work has not been more than eighteen to twenty months behind, as a rule." The condition of affairs when the present head took office is succinctly stated. "There was complaint, and very properly, of many cases greatly delayed. There were 4,007 cases between five and ten years old, sixty-nine of these having been in the office as long as fifteen years, and 780 being more than eight years old. While these constituted about 4 per cent. of the total business of the office, their importance, and the work they entail because of their complicated nature, are far out of proportion to their number." The numerous instances of injustices and personal hardships caused by these slow-dragging cases are only one reason for expediting them. Another is the cumulative burden they place upon the patent office force. The employees have been driven at full speed, patent attorneys induced to coöperate with the corps, and a rule invoked forbidding endless amendments to applications. What has been needed is thorough depolarization, as Dr. Holmes would call it, of formulas and systems.

The first congress for the country-wide promotion of mental hygiene, called at Baltimore under the auspices of the National Committee for Mental Hygiene, has adjourned after attracting little attention. Yet it would be notable if only as summarizing the extent to which similar committees within the States are devoting themselves to the subject. Their general objects are the study and amelioration of conditions whence insanity springs; the study of debatable or border-line cases of mental disease; the bettering of the laws governing the commitment of the insane; and the investigation of institutions and institutional methods. Since the formation of the first Mental Hygiene Society in 1908, Illinois, New York, New Jersey, Massachusetts, Maryland, Pennsylvania, and North Carolina have witnessed the foundation of similar bodies. Virtually all have sprung to usefulness as supplements to the efforts of the State Boards of Health and State Boards of Education—that of Illinois, for example, having taken over, at the request of the Cook County courts, the study of cases pending commitment in Chicago. Their clearer function, however, is in the setting up of free clinics, the employment of medical directors, and the education of the pub-

lie in mental hygiene. The field is one in which private philanthropy, especially when scientifically directed, should prove highly useful.

No more interesting action has been taken recently in college circles than the decision of the joint committee on academic freedom of the American Economic, American Political, and American Sociological Associations to investigate the forced resignation from Wesleyan University of Prof. Willard C. Fisher. Professor of economics in that institution since 1906, Mr. Fisher has had his own ideas on numerous subjects. He has twice been Mayor of Middletown, and at that time found that his views on the question of Sunday observance offended the orthodox. The chief bone of contention seems to have been a jocose remark by Professor Fisher to the effect that it might be well to close all the churches of the country for some years as an experiment. This was naturally heresy for Wesleyan, and his resignation followed. He is also reported to have admitted that his attitude is not in harmony with the traditions of this college. But the collegiate world has a vital interest in knowing whether this is something more than incompatibility of spirit or not; whether it is a case of repression of free opinion due to presidential intolerance, or whether it is a case where another connection is more fitting for one of Professor Fisher's frank utterance. It is a difficult problem in human relations which the joint committee has now tackled; but in the interest of the public, colleges which do not tolerate reasonable freedom of thought and speech, ought to be labelled as such.

The chances of success for an aeroplane flight across the Atlantic depend on the extent to which the managers of the enterprise can combine in their machine the factors of speed, sustained flying capacity, and structural strength, which separately have been developed by the aeroplane to a degree approximating the requirements of a trans-atlantic venture. In the matter of mere size, lifting capacity, and stability, the record unquestionably belongs to the Russian aviator Sikorsky, who has carried sixteen passengers at once on a machine with a wing spread of more than 100 feet and driven by four 100-horsepower motors. An aeroplane equipped with cabins—and also restaurant facilities?—like Sikorsky's, would seem to put aviation for touring purposes outside of the experimental class. The record for sustained flight over a measured course is held by Fourney, who in 1912 covered 632 miles in 13 hours 22 minutes; but the closer parallel to the contemplated Atlantic flight is Roland Garros's dash from Bizerta across the Mediterranean to San Rafael, a distance of 558 miles, in 7 hours 53 minutes. The distance from our coast to the Azores, given at 1,200 miles, would call for a duplication of Garros's speed of 70 miles an hour for more than 17 hours. Cold figures would argue that the Atlantic will not be conquered for some years.

A recent letter to the press by the Archbishop of York cited a remark lately made to him by "a distinguished American citizen," to the effect that what most impressed him in the present political situation in England was "the contrast between the demand of the country as a whole for some settlement [of the Irish question] by consent, and the incapacity of Parliament to give effect to it." We fancy that this distinguished American citizen had seen kindred phenomena in his own country; and if the Archbishop had cross-examined him, the reason might have appeared to be the same as to-day in Great Britain—namely, "the entanglements of party pride and policy." Of these the Archbishop complains as standing in the way of averting what may be civil war, though to this the whole nation is averse. The chief entanglement has been that of the Unionist party with Ulster. What Ulster wanted was the defeat of the Home Rule bill and the expulsion of the Government from power. The Ulstermen have themselves played straight. It has been said of them by an Irishman who knows them well that they were not bluffing, because they were too stupid to bluff. But this rude simplicity of the plans of Ulster has been confused by the manœuvres of the English Unionists. The latter demanded the exclusion of Ulster. Now, Ulster did not want exclusion; it wanted to smash the bill and turn out the Liberals. But the Unionists thought that the thing could be done by making a great play about Ulster exclusion. Now that this is to be offered them, in some form or other, Ulster is in a rage at the thought of any settlement which means the passage of the bill, and Unionist leaders are beginning to say that they never intended to assent to exclusion.

Australia has been having her trouble over a labor-preference bill, though of an order the reverse of ours. In two successive sessions of the Commonwealth Parliament, the Government have passed through the House a bill forbidding the preferring of trade unionists in employment on public works. But the Senate, where there is still a Labor party majority, has on each occasion rejected it. Under such circumstances, it is expressly provided in the Australian Constitution that the Governor-General may dissolve both Houses of Parliament. This has just been done, at the instance of the Liberal Premier, and a general election is to follow. No doubt, the Prime Minister, Mr. Cook, hopes to secure seats enough to make sure of the enactment of the bill. Next time, if the Representatives again pass the bill, only to have it thrown out by the Senate, the Constitution provides that it shall be laid before a joint sitting of both Houses, of which a bare majority would suffice to pass it. The issue thus forced is unusual, and the final decision will be watched for with interest.

Far from despairing of the future of parliamentary government in China, Professor Goodnow, constitutional adviser to President Yuan Shi-Kai, believes that the Chinese republic is following the traditional course of evolution from despotism to parliamentary institutions. This course leads through a period of concentration of large powers in the hands of the Executive. It is possible to speak of Yuan Shi-Kai as dictator only by comparison with the radically democratic ideals cherished by the revolutionaries of the south of China under Dr. Sun Yat-Sen. The slow pace of progress towards true representative government is exemplified in Japan, where, after nearly forty years, the principle of Executive responsibility to Parliament is just beginning to assume reality.

MORE CONSPIRACIES!

There is room for dispute as to the condition of business in a great many lines, but there is one line of business which is unquestionably booming. The conspiracy business has never before attained anything like the position it now enjoys as a well-defined branch of capitalistic enterprise. So rapid has been its development in this country that, although only a few years ago—say in the time of President Roosevelt—it could not be classed as anything more than an infant industry, barely struggling for existence, it has now attained the dignity of an international institution. When the Chancellor of the Exchequer of Great Britain gives a branch of American enterprise the recognition of conspicuous mention in a political speech, it may certainly be said to have "arrived." The opponents of Lloyd George's policies, it appears, have "called in the aid of American millionaires," and he goes on to tell his hearers why "these golden apostles" are "intervening in British politics." Inspired by what is going on across the ocean, "America is getting sick of the ruthless piracy of these modern buccaneers." And so the Trust magnates, "baffled and beaten in their own land, are coming over here to stop the deluge at its source."

The question remains, however, whether the conspiracy business is the business of forming conspiracies or that of imagining them. So far as our sources of information extend, we have to say that real conspiracies are still very scarce. Take this one that Mr. Lloyd George has just sprung upon us. The only foundation that he appears to have for his statement is the speech of J. J. Hill's, in which he said: "The false humanitarianism of British social legislation is going to destroy British trade, British commerce, and British industry." Now it is true that Mr. Hill is a millionaire; and it is also undeniable that it is only because he has been a wonderfully successful railway and business man that his opinion was cabled to England. But apart from this, it does not appear that Mr. Hill's millions have had anything to do with the case. Even the few shillings or pounds it took to cable his talk were doubtless paid for in the usual way by the news associations. Out of this Mr. Lloyd George, it appears, has found it the easiest thing in the world to conjure up a mighty conspiracy, a desperate attempt of the Trust magnates of America "to stop the deluge" of humanitarian legislation "at the source." And what makes this performance of the Chancellor of the Exchequer the more curious is that the one American fortune which has, in point of fact, been employed to influence the course of British politics—that of Joseph Fels—has been used in promotion of radical land legislation, and has been of material help to Lloyd George's general propaganda. That, to be sure, was done in the open, and therefore was no conspiracy; but at least it was done, and there is not the faintest trace of reason to believe that anything at all is being done, above ground or under ground, by American Trust magnates to oppose British radicalism.

The latest development in our own Administration's warfare upon the conspiracy of Big Business is the giving out of a selection from the letters that it has received in support of its position. We have no doubt that they have poured into the White House in great quantities; but the more numerous they are the less impressive is the lot that has been chosen for publication. Among those contained in the press dispatches, the longest is this:

> From St. Paul, Minn.: "It is quite manifest that the cause of the present hard times is almost wholly due to a united action on the part of large corporations of the country, after deliberate conference, to chastise your Administration. No doubt the corporations have mutually agreed to put on the brakes and slow up business in every way possible. This is the way they have of intimidating the people and the Administration. There should be a law that would imprison such conspirators and confiscate their business."

Does "the White House"—we do not like to say "does President Wilson"—really think such stuff worth putting forward by way of vindication? Does it really believe that "the corporations have mutually agreed" to cripple the country's business? And even if it does, can it possibly imagine that anybody who does not accept that view on the authority of "the White House" will have his disbelief shaken in the slightest by the bald assertion of an unnamed person in St. Paul, unaccompanied by a particle of evidence?

Canards of this kind might be dismissed with a smile if they formed part of the stage thunder to which we are all accustomed in the midst of an electoral campaign. In this country, and doubtless in every country, allowance is made for the extravagances and escapades of campaign oratory and campaign journalism. "British gold," sent here by the Cobden Club to promote free trade, was a regular part of the stage apparatus of the Republican party for a generation, though every man of sense knew that it was a pure figment of the protectionist imagination. It was transferred to the Democratic green-room during the free-silver period, the only difference being that it was the Rothschilds and other money kings who sent the phantom gold over, instead of the Cobden Club. But when the Government itself resorts to the spreading of these wild imaginings, the matter becomes infinitely more serious. Whatever the end which it is designed to serve, the use of such means is vicious. The precedent is easily followed; and the method is just as likely to be resorted to in the promotion of foolish or unjust policies as of wise and just ones. It is intellectually degrading and politically dangerous; and we should be glad to think that we had seen the last of it, at the hands of this Administration at least.

RADICAL IDEAS ABOUT STATE GOVERNMENT.

Lecky, who observed that a growing distrust of representative bodies was one of the main characteristics of the close of the nineteenth century, could have found novel illustrations of it among the American States in the last few years. The older tendency was to deprive Legislatures of some of their powers. The duration and frequency of their meetings was limited; legislative procedure regulated; local and special laws forbidden; the executive and judicial veto broadened; and checks and supplements like the referendum invoked. But the more recent impulse is to alter the whole nature of the Legislature. It is true that the merits of commission and single-chamber plans have not been convincing. They reappear, however, with pertinacity. A bill was introduced last week in Louisiana providing for replacing the lawmakers by

a body of eight commissioners. In Oregon the measure recently initiated for the abolition of the Senate, leaving an Assembly of sixty, has been endorsed by grangers, labor unions, and civic organizations. Gov. Hunt's proposal of a commission Legislature in Arizona is still fresh in mind. In Kansas, Gov. Hodge's scheme of a continuous Legislature of eight or sixteen members is again brought to notice by a publication sent broadcast from the State Printing Office. It contains ninety pages of argument from newspapers, magazines, and political experts in its favor, and forty pages opposing it.

A study of this pamphlet is instructive. Its arguments for the single-chamber form, which differs little from that now awaiting decision in Oregon, show a uniform source of dissatisfaction. It is essentially a discontent of democracy with itself. The legislative system cannot be run without a deal of trouble; and of this the people are getting impatient. The Baltimore *News* remarks that "the members of Legislatures are in large part elected and controlled by bosses. The lack of scientific and responsive attention to their function is too well known to need assertion. With such a situation, . . . there can be no fundamental objection to electing eight men, as proposed." "We know," states the Columbus *Journal*, "no better policy this State could pursue than to abolish the bicameral Legislature, and put a one-branch body in its place." The St. Paul *Dispatch* believes "there would be less law, and therefore better law. Business system would supplant unorganized effort, and there would be an end to much waste." The Milwaukee *Free Press* finds that "the Governor's strongest argument is based on the increased efficiency of a smaller body. The contests would become more important, and the people would be able to choose better men." All these are sincere opinions; and all are linked together by the recurrent synonyms for "efficiency" and "past incompetency." The fundamental inconsistency is clear. In one breath the reason for change is stated as the benefit of a new form as such. In the next it is given us to understand that the trouble with the old era was the want of public spirit, of a sense of duty animating each legislator.

Belief that anything else than wise action by the people will yield good government is to be combated even when joined with agitation for desirable alterations in form. The merits of the pure commission form of government for States, urged largely on the basis of a false analogy between city and commonwealth, scarcely call for consideration at present. For the plan to abolish State Senates more can be said. Serious reasons on the side of a single chamber can be found in the writings of Bentham, Mill, and Bagehot; there are nations which are legislated for by one chamber; certain of our States have at one time or another tried the plan. The evils of the other system are well known. But, on the whole, the utility and excellence of bicameral government have never been seriously questioned in this country. A single legislative body of sixty in Oregon, moreover, would tend to the same evils as a commission Legislature of sixteen in Kansas. If it held office for any length of time, it would become unrepresentative of the whole people. It would incline to a combination of executive and legislative functions, since, feeling itself the special organ of the popular will, it would gradually subject the executive to control. It might embody order and celerity, but it would go upon the assumption that the people can concentrate responsibility and authority, with merely the check of the newer devices of government. This is a mistake, unless the majority is certain not to use its power tyrannically. The decisions of such a body, finally, would probably be incomplete and hasty. The upper houses in our States have always been the more express image of those judgments of the people which lag temperately behind its emotions; popular clamor is too weakened in force to reach them with commanding appeal. In an ideal state of affairs the two-chamber system might seem transitional; discussion in one broadly representative chamber might conceivably surpass that jealously balanced between two. But the Western States are not yet ideal democracies.

The fundamental objection goes back to the belief that by revolutionizing machinery a millennium can be brought about. If some States need changes, the first and sensible experiments are surely not with the whole form of government, but with the organization and procedure of the present form. There is excellent reason to believe that the present faults of Legislatures are partly the result of the earlier distrust, and the curbing of legislative powers. Some of the innovations, such as the power of the Governor to introduce legislation, greater respect for experts, and a reduction of the size of assemblies, may be salutary. But in general, and in the long run, reform will depend on putting a new breath into the body politic, whatever form it have.

UNIVERSITIES IN A DEMOCRACY.

In his address to the Harvard alumni at Cambridge on Thursday, Senator Lodge admirably defined the attitude of a university towards the new ideals, aspirations, and political aims that come forward from time to time. It is essential, he said, that the youth of the land should be put in sympathy with their own time; they must not be recreant to progress, nor oblivious of the evils of their day. The university itself, however, must not think in terms of years or of decades, but of centuries. That is, it must admit to its precincts, for the purposes of study, every movement to better the moral or material status of others, but must then examine it "not merely in the roseate glow of enthusiastic hope, but by the clear, cold light of the past, before she decides that they are fit for the ordeal of the future and will prove a benefit to mankind." It was excellent advice at Harvard, where too often innate conservatism has denied access to reforms until they had demonstrated their value abroad.

But these words are timely elsewhere than in Harvard, because we hear in so many quarters the assertion that the University, if not in politics, should be in the service of the State; that it should be leading all the political movements of the day; it should draft every bill to be submitted to the Legislature, regarding every fad, or fancy, or sound reform of the hour. If mothers' pensions are bruited in one State, it should be the duty of the nearest State university to accept the proposal, with or without adequate consideration, and rush it into law with all possible speed so that the State may duly be labelled progressive. It should not only guide the farmers; it should reach out into every home, answering every question

put to it by any one, whether by letter or by 'phone. It should be an extension university and an intelligence office combined, with dairy inspectors and instructors in the use of incubators ever on the road, so that the State may have evidence of the University's practical value, of its ability to make two dollars grow where one grew before. But above all else, it should be intolerant of anything except the new; conservatism must be the one unforgivable sin.

Obviously, there is much in this to attract, as the University of Wisconsin has repeatedly shown. But if we accept it as the ideal of the university, we must obviously reject in large measure Senator Lodge's defence of the old-fashioned theory that the chief function of the university is to test the new in the light of the old by the "clear, cold light of the past." There is no longer room for the student and teacher working quietly in their laboratories, not blind to the present, but examining every proposal with scientific detachment and the absence of all heat or partisanship. We must then forget the great teachers of the past who attuned the spirits to which they ministered so that when their pupils went forth they vibrated immediately to the appeal of the hour, being keen with sympathy for the new, but with their sympathy reinforced by sound judgment, and trained by mental and moral discipline to accept what is wise and reject the ephemeral craze of the hour. It would surely be a mighty misfortune were the ideal of a business State university supervising all the activities of the State with a semi-socialistic maternalism to prevail above all others. If we are to have close alliances between State activities and State universities, then more than ever do we need the type of private university, of which Harvard, whatever its weaknesses, is still the preëminent example.

For the danger in the case of State alliances is obvious; how shall the State university face in a difference of opinion with the lawmakers? Just now, the University of Wisconsin is being subjected to an "efficiency" survey, which must make any true scholar feel strongly tempted to hand in his resignation. Subpœnas are even threatened, and a New York researcher is reported to be attending classrooms with a stenographer by his side—doubtless to count the words the professor utters, to measure the attention of his listeners, to put a stop-watch on him, as if he were a bricklayer or a pig-iron handler. When an efficiency test was tried at Harvard last year the whole faculty rose in arms, and the president withdrew the proposal; at Wisconsin they must obey what the State decrees, when it decrees, or get out. To any one who thinks at all, this method of "bringing a university up to date" is destructive of the very best for which it should stand. It is the beginning of an intellectual thraldom likely to stifle any great soul, to reduce a college to the basis of a factory, and to ignore entirely its priceless spiritual values. If our State universities must come to this, Heaven forbid that our privately maintained institutions should cultivate closer relations with the Commonwealths.

BERTHA VON SUTTNER.

With the death of the Baroness von Suttner disappears from view one of the most remarkable personalities of our time, whose influence is, fortunately, destined long to survive her. To her, it may be expected, monuments will be built when the militarism she fought so ardently shall have been abolished on earth. But her great book, "Ground Arms," will always be her truest memorial. Whether the story is authentic or not that a reading of this tract induced the Czar of Russia to call the first Hague Conference we do not know. It is, however, certain that no other brief for peace has won so many converts or exercised so great an influence in all quarters of the globe. Her portrayal of war's horrors opened the eyes of millions to its actual nature, and may be counted one of the great forces which are steadily bringing about the emancipation of the world from wholesale murder.

The author of "Ground Arms" has frequently and not inaptly been compared to the author of "Uncle Tom's Cabin." Both volumes exercised an international influence, being translated into many foreign languages and running through countless editions. Mrs. Stowe's famous book is credited by so careful an historian as Mr. Charles Francis Adams with having prevented, together with the Emancipation Proclamation, the recognition of the Confederate States by the British Government—that is, with having saved the Union. Fifty years hence the actual accomplishment of "Ground Arms" may be clearer than to-day. There is, however, one great difference between the two books: Mrs. Stowe wrote her book after having lived amid slave scenes, while the Baroness von Suttner penned her descriptions of the barbarisms of war without having herself come into contact with them—in contrast to Tolstoy's noble "War and Peace," which was founded on numerous personal experiences of bloodshed. During Bertha von Suttner's youth was fought, in her neighborhood, the Austrian war of 1866. It left her cold, as she said in her memoirs: "I'm ashamed to write these words, but this event made no impression on me—none at all." The Franco-Prussian War likewise left her indifferent. It was not until she came under the influence of a single notable personality that her eyes were opened and her soul set on fire by the iniquities of that which is justly termed "the sum of all villanies."

Her chance answering of Alfred Nobel's advertisement for a secretary and housekeeper became the turning point of her life. His greatest wish was to be able to invent an explosive or machine so terrible as to end all war, and it was from him that she learned to hate militarism with all her ardent and powerful nature. Years afterwards the great peace prize which her former employer founded came to her as a fitting reward for her own achievements, for her ability to visualize the carnage and waste of war so movingly that the bulk of her readers, probably, still think that it was of her own sorrow and widowhood that she wrote so vividly. The prize was the more welcome since it found her in great need. Indeed, she was compelled to the last to labor for her means of sustenance. She gave generously to the great cause, and she suffered much for it. The hatred of the militarists for her knew few bounds, particularly in her own country. When she was last in the United States, at the beginning of the Balkan troubles, her mail was full of exulting and abusive letters and postcards from officers and men of the Austrian army, exulting in what they considered the certain approach of war and reviling her as though her aim in life were the lower-

ing instead of the raising of humanity. Fortunately for her and her nation's happiness, Austria escaped the horrors of the conflict only to pay heavily economically for the waste of lives and property and the destruction of trade in the near-by states.

Bertha von Suttner was no genius; there was within her no innate, overwhelming desire to express herself and her views on what became to her the be-all and end-all of her life. It was rather her iron will and determination to stir the world which we must admire. Without means, or reputation as a writer, speaking without authority or personal experience, she yet found her way to people's hearts. It is all a remarkable example of what single-minded, unselfish devotion to a great cause can accomplish. Naturally, the Baroness quickly lost interest in mere nationalism and came to realize internationalism as the true aim of an enlightened age. It was the sense of the relationship of nations which made her say in what was probably her last personal letter to friends in this country:

> What a comfort it is to my soul to see how widely and how bravely Americans are protesting against war, even if it is already begun. I do hope that the mediation of the South American republics will ward off the danger of a regular war between the States and Mexico. For the pacifists of Europe it would be a dreadful blow if the leaders of the New World should fall into the crimes and errors of the Old.

OUT OF THE MAIN CURRENT.

By eight o'clock of a June morning the first scattering detachments of infantry in rompers and pinafores are debouching on the park benches and the lawns, under the convoy of clean-shaven old men with newspapers. Early morning in the open air is the time of the very young and their grandparents; while the middle ages are still imperfectly awake over the breakfast table. Old men and babies rise early and refuse to dawdle in bed; the old presumably because they have so little time ahead of them, and are bound to utilize every minute of existence, the babies because countless tasks clamor for attention—new business, and the business that remained unfinished the night before when they began nodding in their mothers' laps. The trees and lawns, being at the same time very old and very young in June, are early risers themselves. They have their freshest greetings for first comers, like the thrifty tradesman to his early customers before the midday rush has warped his temper and made his smile perfunctory. This year the trees and grass in the park are of a rare green, owing no doubt to the same heavy snows which have made bumper crops in the West. The trees arch over the asphalt walks and sweep the benches, making cool bowers under which the old read their newspapers at peace. The thin traffic of the breakfast hour makes it unnecessary to keep a wary eye on the rompered and pinafored pioneers.

By ten o'clock the veterans on the benches have done with their newspapers and disappeared. In their place are the mothers and the nursemaids. There is much adult conversation. There is a good deal of domestic industry. The old housewifely virtues are far from vanished. Darning and stitching are in full swing, both utilitarian and educational. Little girls work on very small pieces of fabric with huge needles under careful superintendence; before long there will be very little left of the original fabric, but the purposes of vocational training—a system antedating Froebel and Montessori by several thousand years—will have been fulfilled. By ten o'clock, after two hours of close application to tin pails and rubber balls, the nursing bottle comes into play—somewhat unhygienically, one must confess, but with apparent satisfaction in the two parties immediately concerned. Students of the rudiments of walking steer diagonal and wavering courses across the convenient asphalt. They tack and reach and beat to windward, and occasionally collide with their elders. They are a menace to adult navigation, but not so dangerous as the little girls in charge of doll carriages, which every little while refuse to answer to the helm and roll between the legs of pedestrians, presenting difficult problems in balance. It is essential to safe walking in the park that one keep constant watch on one's feet, for there are the doll carriages and there are the toddlers who suddenly embrace the knees of total strangers and claim intimate relationship with them.

Close attention to the park benches fails to reveal that native animosity between parents and children which Bernard Shaw has recently discovered. It does reveal a wide difference of opinion as to use of the park soil and the water spouting from the hydrant. The chemistry of the ancients is sounder than our own science when applied to the young. The human heart will never respond to oxygen and hydrogen and carbons and phosphates as it does to earth and water and air and fire. Earth and water are the basic elements of childhood. Mixed in a tin pail, they lend themselves to an extraordinary variety of uses. They may be consumed surreptitiously and in small quantities as food. Applied to aprons and socks, they lend themselves to original effects in textile ornamentation. Worked into the face and other exposed parts of the body, they reproduce the war-ornamentation of primitive civilization. By three in the afternoon, say, the aspect of primitive warfare is unescapable. At this hour the native hue of childhood is thickly overlaid with a veneer of dust cut into infinite patterns by sprayings from the pump. By applying one's fingers to the nozzle one may obtain an effect like the fountains at Versailles. The smaller children cry under the deluge and immediately come back for more.

At six o'clock in the afternoon the shadows are falling on a host fast getting ready for bed. Weariness of the body has been setting in and tempers are beginning to chafe. Babies are crying under unjust punishment administered by substitute mothers twelve years old and under. There is a noticeable relaxation in the zest of games. Tin pails are kicked over in a fret. Rubber balls that roll under the benches are no longer pursued with animation, but must be retrieved by nurses or kindly disposed strangers. The militant cries from beneath copses and under rocks, where flying detachments of small boys have been scurrying about in pursuit of the familiar and ever fresh mysteries that lie hidden there, grow fainter. Straggling lines of baby-cart cavalry wind up the hill towards home, and weary-footed infantry drags its painful way at the end of a taut, impatient nurse's arm. Old men appear on the benches with afternoon papers. It is an army in retreat.

SUBMARINES VERSUS DREADNOUGHTS — SIR PERCY SCOTT'S LETTER TO THE *TIMES* — SMALL HOPE FOR THE NAVAL ECONOMIST.

LONDON, June 15.

The doctrines of the "Suicide Club," as the Conservative press dubs the opponents of a big navy, have found support from an unexpected quarter. Admiral Sir Percy Scott, having been asked whether England should build small battleships or large, replies that she should not be building either. Sir Percy is one of the greatest living authorities on the use of heavy guns, and this latest broadside of his has caused scarcely less sensation than the artillery he handled so effectively at Ladysmith. He has endorsed with his name the startling thesis that the men-of-war on which we are so lavishly spending millions are in these days of scarcely any value, either for defence or for offence.

His position is, in brief, that in future wars no battleship will dare to come within sight of a coast protected by submarines. These craft will make impossible the bombardment or blockading of harbors and the landing of a party in an enemy's country. For fear of them no fleet will even put to sea. Sir Percy's picture of the next naval war shows us aeroplanes above and submarines below, operating jointly to expose all battleships within reach to certain destruction. These expensive monsters will be able neither to remain safely in harbor nor to come safely out of harbor. So that the two-to-one standard of which we have been hearing so much means simply that the stronger Power will have two dreadnoughts lying at the bottom of the sea for every one of the weaker.

Criticism of Sir Percy Scott's heresy has taken the form of emphasizing the limitations of the three chief factors of the new warfare; namely, torpedoes, submarines, and aeroplanes. Torpedoes, it is argued, are not weapons of sufficiently great range and precision to be depended on. In the Russo-Japanese War, says Lord Sydenham—better known, perhaps, as the Sir George Sydenham Clarke who has had so much to do with the problems of imperial defence—the results fell far short of reasonable expectation. On the other hand, Arnold White maintains that the damage done to the Russian fleet by torpedoes on the first night of war turned the scale.

Still more attention has been paid in the discussion to the deficiencies of the submarine herself. A strong point has been made of the fact that hitherto her value has never been brought to the test of actual warfare. Peace manœuvres do not supply material for a sound judgment. For example, they do not allow a battleship to get rid of a hostile submarine by running her down. The speed of the submarine, again, is described as a comparative crawl when matched against that of the fast steaming warship. Her maximum speed, when submerged, is only about ten knots, which has to be compared with the twenty-two knots of the battleship, the twenty-eight knots of the cruiser, and the thirty knots of the light-armored cruiser.

As against these damaging figures, Arnold White argues that a long swift cruiser with a large turning circle cannot successfully chase a submarine with a small turning circle. The submarine would turn round and torpedo the cruiser, as a hare gains on the turn when chased by a greyhound.

Further, the submarine can operate by daylight only. It must come to the surface often, and when it does come to the surface it is visible for miles. On the surface it is highly vulnerable to the lightest of guns. Both above and below water it can be sunk by the merest touch of the ship that rams it. Its only weapon is useless for defence. Its view is so restricted that it has gained nothing from the increased distance that the improved torpedo can run. On the high seas submarines will require to be convoyed by parent ships, which, on Sir Percy Scott's own hypothesis, will disappear. Sir Percy also contemplates their frequent need of being hauled up on the land. But when beached anywhere except in their own country, they will need an attendant army to protect them. In short, the submarine, as David Hannay puts it, will go to war attended, nursed, preceded, propped, and coddled

Keen controversy has been aroused by a passage in Sir Percy's letter in which he says that, with a flotilla of submarines commanded by dashing young officers, he would undertake to get through any boom into any harbor, and sink or materially damage all the ships in that harbor. An anonymous naval officer asserts, on the other side, that no submarine has yet attacked a boom with success. Destroyers have done so, not by breaking up the boom, but by "jumping" it, and in such cases have themselves been of little service afterwards, owing to the damage sustained. A new explosive boom that has been tried with great success in several Continental countries may be relied upon to defeat the attacks even of destroyers. Another authority adds that a boom is not the only method of defending a harbor from attack, and that in most harbors the draught of water is less than six or seven fathoms, the minimum which will allow a small submarine to manœuvre when submerged.

The aeroplane, according to Sir Percy Scott's theory, is to be the eye of the submarine. It is to watch aloft and signal the position of the battleships that are to be attacked. "Well," comments David Hannay, "within the last few days the most skilful of all airmen has vanished from sight to a death we can only guess at, in the course of a very short flight. Two seaplanes sent to look for him have come to grief in circumstances of no particular difficulty. A fourth has plunged to destruction, carrying two lives with her. These are not the kind of craft able to watch long and take all weathers confidently." And the aeroplane, as some one else has pointed out, must have a surface ship—*ex hypothesi* certain to be destroyed by the enemy's submarines—close at hand if it is to be employed far from land. Even if these flying craft were perfectly efficient and manageable, they might prove to be as much the enemy as the friend of the submarine. While the aeroplane can never be developed to the point of finding data for the actual aiming of the submarine's torpedo, its ability to detect the submarine's presence from the sky is a proved fact.

The longer the newspaper debate continues, the more confident become the disputants and the more varied their conclusions. This is emphatically a case in which the doctors disagree. And the plain landsman, who pays the bill, has reason to doubt whether the prospect of a reduction in the naval estimates is as near fulfilment as seemed likely on a cursory reading of Sir Percy Scott's letter in the *Times*. Sir Percy himself demanded, in place of battleships, "an enormous fleet of submarines, airships, and aeroplanes," and it must be remembered that not very many submarines can be built for the cost of a dreadnought. The opportunity is already being seized by a section of the press to work up a new variety of naval "scare." Sir Percy Scott's theory, it is argued, may possibly be a sound one. Whether it is valid or not we shall never know until it is tested by actual warfare. In case it should prove to be correct, it is highly important that we should be prepared by means of the "enormous fleet" of submarines and airships that he asks for. At the same time, it might be fatal to put all our eggs into one basket. Suppose Sir Percy Scott should turn out to be mistaken. In that case, the abandonment of our dreadnought policy would involve the destruction of our national existence. To be properly safeguarded in either event, the obvious course is to provide ourselves with the craft Sir Percy wants, not instead of, but in addition to, the dreadnoughts that are put down in the orthodox naval programme.

So that the net result of Sir Percy Scott's intervention may be to leave the naval economist in worse case than he was before.

H W H.

THE COOKS OF PARIS—THE SUCCULENT "ANDOUILLETTE"—A BANQUET OF EPICURES.

PARIS, June 6.

—Truly, I always declared 'twould be pity
To burn to the ground such a choice-feeding city;
As to Marshals and Statesmen and all their whole lineage,
For aught that I care, you may knock them to spinage;
But think, Dick, their cooks—what a loss to mankind!
What a void in the world would their art leave behind!

This was a hundred years ago, when the fear of Napoleon was vanishing and the young Briton was free once more to cross the Channel to acquire a French varnish:

An improving young man, fond of learning, ambitious,
And goes now to Paris to study French dishes.

Bismarck had the universal idea, writing to his wife from Paris, where he accompanied his master, the King of Prussia, to the Exposition of 1867; and he seems to have been painfully surprised

Burling[illegible] Public Library

when Paris, three years later, stoically starved herself for four months against his besieging armies. Strangers now complain at times that they have difficulty in finding the genuine French cookery which excited the enthusiasm of their fathers. Still, it exists, just as Americans, if they know how to seek, can find their catbird still singing his tune and their fireflies in the corn still making night amazing.

> The things that truly last when men and times have passed,
> They are all in Pennsylvania this morning!

Good cooking lasts in France, and you may find it, if you know how to seek. A note has been passed me that a dozen Britons are again coming over to taste authentic products of the French cook's art. To make sure of its genuineness, they are directing their troops now to this province and now to that, according to the home of the particular viand on which they have fixed their hearts. And they begin with the "andouillette" of Troyes.

This particular sausage can be found for sale every year in Paris itself, in the week before Easter, at the century-old Ham Fair—near where Americans go for Memorial Day ceremonies at Lafayette's tomb. I have never counted the number of pork products sold there, but I should not wonder if they were as many as M. de la Reynière assured the English there were ways of dishing up eggs in France—"685, not counting those imagined by our savants daily." The difficulty in Paris would be to get your andouillette cooker, for not every one has the exact French cook it needs at his beck and call.

The great Paris hotels have become cosmopolitan and standardized, and little is to be hoped from them; and, except for universally known French dishes, the same is to be said of the great restaurants. In out-of-the-way streets, there are provincial hotels and eating places, sometimes at a common wineshop, furnishing its customers with the "dish of the day," where the proprietor, man or woman, puts his skilled hand to the making of home cookery. Of late, at a clean, popular restaurant of Montmartre, with unpainted floor and low ceiling, automobiles may be seen drawn up before the door at the lunch hour. A swell from Maxim's found out—and passed the word around—that there was good provincial cooking there; and so the idle ones of the great world sit at meat over against the little people of shop clerks and artisans of the neighborhood. An American millionaire has informed me that he is healing his stomach by lunching in a cheap wineshop, where the proprietor's wife cooks for half a dozen persons.

French Parisians who were not born in Paris—they are perhaps more than half the population—also have their home-eating resorts. You can have bona-fide bouillabaisse that would have suited Thackeray in a Marseilles restaurant close to the Opéra Comique. Thackeray himself ate it in Paris at a little café which keeps his portrait to attract art students from England and America. Then the leaders of the more patriotic provincials of Paris have their monthly home lunches with an appropriate association name—the "apple" of Normandy and the "garlic cream" of Provence, and so for the rest. But these are close circles for native comrades only.

So the English dozen do well to go to Troyes itself, one hundred miles from Paris, to eat their andouillette. There, after Agincourt, the beaten French King, Charles VI, signed away his kingdom to English Henry V, who at once married Princess Katharine of France—all in the church of Saint Jean. In my own visits to that capital of ancient Champagne—it is not in the modern wine district—I have paid most attention to such churches and timber houses of a mediæval past, and to the new Socialist agitation, of which Troyes factories are a nourishing centre. And then,

> I cannot eat but little meat—
> My stomach is not good—

that is, not quite equal to the fat, long, slender, round, and browned andouillette as it comes piping hot to table on a bed of mashed potato or cabbage or even rice or fried with eggs, and, I doubt not, dished up in "685 ways, not counting those imagined by our savants daily." And yet this intensive culture of food and stomachs should be heartily reverenced, because of the close union of soul and body. I am sure the workmen's local revolutions would be far worse if it were not for their occasional andouillettes. By the way, these are made of pork tripe, hashed fine with spices and stuffed into a casing of the same.

It must not be thought that so patriotic and wide-awake a people as the French intend to suffer any decay in their national art, simply because their city hotels make their money from foreigners, who do not know the difference between real, sincere, genuine meat and fish and game and eggs and the imitations from cold storage. Forty friends, some with titles and some playwrights, and Santos Dumont and an ex-Prime Minister have recently had a luncheon of six dishes by as many master cooks of the most careful houses of France. I will not tell the ten Bordeaux and Burgundy wines which brought all safely to the end—except to assure uncontrollable Americans that, in France, he who loves alcohol is never thought a true lover of good wines.

The "hors-d'œuvres," to begin, were works of art: iced melon dashed with Armagnac brandy; pink shrimp salad with asparagus points, and feuillantine pastry of carp milt. The fish was cold salmon trout. Next came a "baron" of Pauillac mutton, "à la Parisienne," that is, with tender lettuce, new peas, and potatoes melting in the mouth. There were Charolais beef "cassolettes" by one master cook, and artichoke hearts by another—succulent and leading to the "Norman hole," which is made in the mass so far ingested by the quaffing of a little glass of cider or grape or plum brandy. This left room for crushed duck and the pastry called the "King's pave," and a salad of mixed celery and truffles. Chevalier Fata had still strength to explain to the master cooks their "high lineage," going back to Prometheus, who stole fire from heaven for the cooking of mortals' food

S. D.

Polo

II.

"AND THE RIGOUR OF THE GAME."

Price Collier shrewdly observed that the peoples of India are a riding and a sitting race; certainly, in the north and northwest, the absence of caste makes for homogeneity, and there a democracy of the horse may be said to exist. While the prodigal expenditure of native princes and "crack" British cavalry regiments has largely influenced the quality of the polo mount, yet nowhere is found a more heterogeneous pony. Gifted with pace, since he is often bought as a "chaser," smaller in bone and not so steady in a "hustling" game as his big western rival, in India every sort of country-bred animal, including the imported Walers, Arabs, Barbs, and Syrians, is played from the Himalayas to Cape Comorin and beyond.

That romance may flicker about ponies of uncertain pedigree has always been part of the charm of polo, especially in the early days when pace and weight did not wholly depend on money. The "Maltese Cat" was one of these "discoveries."

"Let's see," said a soft, gold-colored Arab, who had been playing very badly the day before, to the Maltese Cat; "didn't we meet in Abdul Rahman's stable in Bombay, four seasons ago? I won the Paikpattan cup next season, you may remember?"

"Not me," said the Maltese Cat, politely. "I was at Malta then, pulling a vegetable-cart. I don't race. I play the game!"

The prototype of Kipling's "flea-bitten grey, with a neat polo tail," I identify as the famous "Awfully Jolly," whose romantic story is recorded by that first polo reporter, Moray Brown. "Awfully Jolly" was a Barb colt, captured in a raid in the interior and brought to Tunis bazaar along with the captive women. From the spoiled came a desperate message, begging the raiders to keep the women, but return the colt! This estimate of his value does not seem to have clung to the pony, for he was shipped to Gibraltar and, after unknown vicissitudes, was still young when discovered by Lord Harrington in 1877, drawing a cabbage-cart in Malta. "Awfully Jolly" soon became a famous player, and not only sired many well-known ponies, but also a line of hunters famous in the shires.

It is a far cry from that eventful first match in England between two cavalry teams in 1871, where hockey sticks and a billiard ball helped to make history, or from the first American game five years later. But the history of modern polo may be said really to date from the international matches, where the finest players of two nations have

created and developed a game that will influence play throughout the polo world. During the past two years polo has undergone striking changes, and it is significant to note that with the new polo each side has a victory to its credit. Time was when the tactics were of the conventional order modelled by the pioneers of the 'eighties, and relying for success on the integrity of "position-play," which was rigidly defined. Apart from too great a fidelity to the early canons, the "off-side" rule, that harassed both players and umpires, was responsible for a slow, sticky game.

Warfare has been waged over this rule, and it remained for Americans to prove that its rejection is a gain from all points of view. It was inevitable that the new open, fast, and spectacular game should result in the releasing of No. 1 and back. Now that the British, its chief exponents, have won the last International by adopting the aggressive American tactics, we may hope to find "off-side" become obsolescent across the water and in India. In its favor an important point was worthily maintained. Calling, as the new game does, for a larger string of ponies to stand the strain of the increased pace, the abolishment of "off-side" hindered democratic polo. To meet this criticism, however, the ingenious American system of a goal-handicap for veterans still keeps the game within reach of beginners and less-favored enthusiasts.

International matches show "the rigour of the game" at its apogee. Contrasts in play, horsemanship, and tactics, instead of being invidious, are rewarding. If the cavalry-and-hunting seat of the British gives them greater command over the ball in long, sweeping strokes, the cow-puncher seat of the American makes possible the sharp, quick stroke necessary in a scrimmage and in riding-off. The high-power rifle and machine gun have rendered shock-tactics obsolete for cavalry; in polo shock-tactics have made accuracy uncertain. On the whole, the new galloping game calls for a solid defence by the backs, hard-riding by the forwards, and greater skill in hitting all around. In tactics, the game as created by the American "Big Four" tends to borrow from football, in which the old "flying-wedge" formation was resuscitated with great success last year. Also, from modern football and the ancient Persian game of polo, dribbling and passing in close-combination will be adopted despite the tremendous pace. These points, however, only tend to perfect the scientific aspect of polo for players, ponies, and spectators. But the "rigour of the game" will never be lost if the old polo motto, "Each to his man, and the ball in the centre of the field," continues to be observed.

W. G. Tinckom-Fernandez.

Russian Fiction

RECENT TENDENCIES OF THE YOUNGER WRITERS—THE PREDOMINANCE OF REALISM—PEASANT LIFE.

While such well-known "noisy modernists" as Maxim Gorky and Leonid Andreeff have not kept the Russian literary pot boiling very briskly in recent years, their younger contemporaries have by no means ceased making literary history in Russia. Much significant work has been done in Russian fiction since the decline of the erstwhile spell-binders, by such men as Ivan Shmeleff, Boris Ropshin, Sergeeff-Tsensky, A. P. Chapygin, Ivan Bunin, Andray Bialy, Ivan Volnoff, Boris Zaitseff, A. Serafimovitch, and Fiodor Sologub. All of these evince a commendable disregard for sensational methods and are following accepted literary standards. In reviewing their work, most of which is still unknown outside of Russia, it will be well to take account, with one exception, only of the longer fiction published during last year.

Sergeeff-Tsensky, the author of "Beauty," has already acquired a reputation as a great realist, an optimist, and a sincere artist. This novel, which is still to be completed, and a sixth volume of short stories also published during the year, more than sustain their author's high reputation. His latest work shows an almost Chekhovian reserve and aloofness, and is wholly free from his former dogmatic interpretation of life. It is quite natural, therefore, that Russian critics should be following the rapid evolution of this new writer with keen interest. If there really is to be a "new literature" in the land of the Czar, Sergeeff-Tsensky is undoubtedly destined to be one of its chief makers.

Equally important and enjoying a greater popular success was Ropshin's "That Which Was Not," a sort of "News from Nowhere," though not so utopian as William Morris's work. This curious novel has a revolutionary theme, while the style and spirit are very suggestive of Tolstoy. The author, moreover, frankly adopts Tolstoy's historical philosophy. On account of these resemblances he has been persistently charged with plagiarizing "War and Peace." "That Which Was Not," however, has sufficient merits of its own to account for much of its extraordinary popularity. The book has a revolutionary theme, while its entire tone is really an argument against revolutions and revolutionists, for the author shows up—sympathetically, to be sure—the utter uselessness of both. Hence, along with his faithful portraiture of the revolutionists, there is an anti-revolutionary skepticism, borrowed, obviously, from Tolstoy's pessimistic philosophy of man's place in history. He evidently accepts, too, Tolstoy's theory of non-resistance, for his hero (Andray Bolotoff) harps continually on the "Thou shalt not kill" commandment. Speaking as a revolutionist of the ethics of violence, he reasons thus:

> We are shot, hanged, and exterminated; hence we hang, strangle, and burn our persecutors. But why am I a hero when I kill an officer, while he is a villain and scoundrel for hanging me? It's one of two things—either it is always right to kill, or else killing is never justifiable.

After choosing the latter alternative because, if the injunction "Thou shalt not kill" were not a universal ethical precept, everything were allowable, he concludes:

> But when violating this principle we should not argue that it [killing] is right or proper or justifiable. No; we should make bold to say that it is bad, cruel, and horrible, but inevitable.

As these two Tolstoyan views—the deterministic view of man's place in history and the view that taking human life is murder under any circumstances—receive special emphasis in "That Which Was Not" and give it its moral and philosophic atmosphere, there can be little wonder that the charge of plagiarism should have been preferred against its author. But whether this be justified or not, the book was beyond doubt, if the amount of discussion it provoked may be taken as a criterion, the most successful novel of the year. Since its author is one of the younger Russian writers—and especially since this is but his second effort in longer fiction—he, too, may be regarded as a man of promise in contemporary Russian literature.

A far less sensational, and perhaps also a less significant, novel was Chapygin's "The White Hermitage," which deals with peasant life (a subject frequently treated in current Russian fiction) in the "silent north." The writer, being himself a man born and bred in the ranks of labor, brings to his task a special insight and sympathy possible only to one who has lived the life he depicts. The result is a vivid picture of a region but little understood. The remote people of the somewhat primitive north, with their peculiar habits and speech, are so well described that one wonders where life ends and art begins.

The old customs are rapidly going, and no bearers of any new gospel are in sight; nature is being everywhere denuded of its resources, and the curse of drink is over the land; poverty and discontent reign supreme. Such is the sad picture Chapygin draws of the passing of primitive life in the silent north. But there is one man who still fights for the old order. This is a wild

woodsman of herculean strength—Krem by name—who loves the trees and the animals, and tries to hinder the destruction of both. For this he incurs the bitter enmity of the village exploiters, with a certain one-eyed Vorona at their head. As Krem has a younger brother, also a physical giant, effective resistance to these undesirable citizens might be still possible. But Krem's brother, seduced by drink, has been bribed by Vorona to crush Krem himself, the deadly enemy of all who seek to ruin the villagers and devastate the village. The fratricidal strife that ensues—a war between two Titans—constitutes the main theme of this somewhat epical narrative. Its allegory is obvious. Chapygin's characters are so lifelike, so human, that even morbid introspectionists like Andreeff would do well to study them—especially the great woodsman, who says: "I try the despoilers of the woods in my own court; for this hath God given me strength."

A somewhat similar theme has inspired Serafimovitch's "The City of the Steppe." Here we have a broad view of the silent and wild steppe, just being invaded by settlers. A little smoke rising from afar gives the first evidence of the inroads of civilization. Looking more closely, one sees here and there a log cabin. These soon grow in clusters into a primitive village. When the saloon appears—and it precedes the church in this community—it becomes the social centre, with its owner (Zakharka) as the "guiding spirit." This saloonkeeper, who subsequently comes to own or control most of the industries of the new settlement, is perhaps the most original character in the book. To his egotism it seems that people make roads, build houses, work in field and workshop, buy and sell, are born and die, all for his sake. Even thieves exercise their cunning for his benefit, since the proceeds of theft invariably reach his saloon. Other characters, too—pilgrims, laborers, traders, and counterfeiters—are faithfully delineated.

Like Chekoff, whom he successfully emulates, Serafimovitch delights to draw attention to "life's little ironies," those numerous commonplaces of existence which ordinarily pass unnoticed. Like Chekoff, too, he uses a Russian pure and undefiled—something very refreshing after the linguistic distortions and contortions of the Gorky-Andreeff school. Owing largely to his unsensational manner and method of writing, however, the author of "The City of the Steppe" does not yet attract the attention that his work merits.

The first volume of long fiction from Boris Zaitseff, "The Remote Region," also published during the year, further accentuates the prevailing realistic tendency in Russian literature. This work, though perhaps not strictly a novel, has several features of unusual interest. It deals with the revolutionary years of 1904-1906 and brings out the pitiful smallness of the characters that figured in those big days. Zaitseff's latest book is the more significant as coming from a writer known hitherto chiefly by his impressionistic sketches and short stories. A somewhat similar interest attaches to the two-volume novel by Fiodor Sologub, entitled "Sweeter Than Poison," in which the writer, perhaps the greatest living Russian poet, makes his début as a novelist—albeit none too successfully. Bialy's "St. Petersburg," not quite completed during the year, also has a revolutionary theme. Bialy has long figured in contemporary fiction, but this latest effort is generally taken to mark a promising new departure.

Though not a novel, but a play, Artsybasheff's "Jealousy" should also be mentioned, because its author belongs to the group of contemporary Russian writers whose most recent works we have been considering and because, moreover, it has scored an unprecedented popular success. Other plays were published during the year (A. N. Tolstoy's "The Aggressors," Alexander Bloch's "The Rose and the Cross," and Andreeff's "Professor Storitsin," for instance), but none of them have attracted such attention or provoked so much discussion as Artsybasheff's "Jealousy," which has already been staged both in Russia and abroad. In this play the author of the sensational novel, "Sanin," displays most of his former faults—his puerile pessimism, his vulgar unsentimentalism, and his irrational rationalism. Even structurally the play is far from satisfactory, being very suggestive of motion-picture art. Nevertheless, Artsybasheff's first dramatic effort has sufficient vigor and vitality to fall in with the new tendencies typical of contemporary Russian literature.

Naturally, the better-known Russian writers—such as Korolenko, Kuprin, Chirikoff, Gorky, and Andreeff—have not been idle during the year, while the authors already considered have done much other work than that which has been mentioned. But in both cases the output consisted almost exclusively of short stories, which, meritorious as many of them were, cannot be enumerated here without converting this review into a periodical index. Hence I make no mention of the recent work of Shmeleff and Bunin, two of the foremost representatives of contemporary Russian literature, who have not published any long fiction recently; nor of Ivan Volnoff, whose "Peasant's Chronicle" deals with a theme similar to that of Chapygin's "White Hermitage."

In conclusion, it may be interesting to note what the leading writers of the older generation are doing. Gorky, who has already published the first chapters of his autobiography, has lately shown a tendency to embark upon the troubled waters of literary and philosophical criticism—a task for which he seems ill-fitted. His recent short stories, however, show occasional sparks of his old fire, which may yet be fanned to its former glow. Andreeff's case is not so hopeful, however. His latest work is as full of mysticism, symbolism, and pessimism as anything that has come from his morbid pen. On the other hand, Korolenko, the venerable dean of contemporary Russian writers, whose sixtieth anniversary was recently celebrated with genuine enthusiasm all over Russia, continues to uphold the high standards of a passing literary age of which he himself is perhaps the noblest representative.

DAVID A. MODELL.

Books and Men

THE TRIALS OF LIBRARIANS.

Mr. Henry T. Coutts, who is branch librarian at Islington, has published (through Grafton & Co.) a little volume called "Library Jokes and Jottings." The English librarian, it would appear from the book, has no easier task than his American brother. Indeed, when "constabulary duty's to be done" it seems that he has an even harder time of it. Certain passages in Mr. Coutts's book make it appear that disorderly persons in what the author terms the "(S)Newsroom" call upon him sometimes to act as "chucker-out." This part of a librarian's duties is by no means unknown in America, though there are some happy libraries where it is never needed, and where the custodians, in consequence, think the subject too indelicate to mention.

The Islington librarian tells many library stories, old and new, English and American, funny and moderately funny. One of the best of the things in his book is the satirical comments of two tramps upon librarians and their ways. It is too long to quote, but it is summed up in another remark of "the man in the street." Speaking of the "lib'arian," he tolerantly says: "He's a decent sort o' chap, eddicated and all that, but 'e's got a easy crib, mates, reg'lar wages and no worry."

What American librarian does not know the "bibliographical treasure crank" whom Mr. Coutts describes? "He has discovered an old book in the penny box of a second-hand bookseller, and he brings it to the librarian for valuation. He is surrounded by an air of mystery as he approaches the librarian, and carefully draws forth, from a ca-

pacious pocket, a very dilapidated volume. Usually the book, judged from a bibliographical or literary aspect, is worth about what he gave for it—sometimes less. The librarian tries to break the truth gently, but it is a dismal failure. 'Look at the date,' he will say triumphantly, '1785.' The librarian explains that an old book is not valuable necessarily; that it needs some special bibliographical characteristic to give it a market value. 'But look,' he continues, 'the s is printed like f.' At last the librarian gives it up in despair, and, if humorously inclined, refers the treasure-hunter to a fellow-librarian or bibliophile."

It may be added that the situation is always troublesome for the librarian. If he is asked to set a price on the book, and gives a truthful reply, he is instantly suspected of trying to run down its value, buy it in at a song, and afterwards sell it at a fabulous profit. Sometimes the owner of the book does not desire to sell. He or she is a nice old gentleman or lady who exhibits the book as a treat. The librarian can then take his choice between the rôle of a brute or that of a liar. He can tell the bitter truth or he can hypocritically pretend admiration and envy.

The publication of library jests raises a difference of opinion among librarians. Some of the jokes in Mr. Coutts's book, it is true, are on the librarians, but most of them are at the expense of the readers. Of the librarians who are inclined to deprecate such publications there are three classes. The first of these look upon their work very seriously—almost with an attitude of religious respect. They are few in number, and are diminishing amid the laughter of their colleagues. The second class consists of those who fear that the readers whose oddities and blunders are recorded will take offence and boycott the library. As there has not yet been a case reported of any single reader being offended in this fashion, the danger seems theoretical rather than real. In the third class are those who become rather exasperated, after a year of hard work to make the library useful and pleasant, to find that the only thing which impressed itself upon the newspapers is that some reader made a ridiculous blunder in asking for a book.

This frame of mind is easy to understand. It is that of the public speaker who finds that the reporters have neglected all his serious remarks in order to elaborate upon one anecdote. It is that of the university professor who is naturally irritated, after years of honest scholarship, to find himself derided from one end of the land to the other for some chance remark—misquoted, perhaps, and distorted out of all relation with the truth.

For a second edition of "Library Jokes and Jottings," let this be recorded. It may not be historically true throughout, but the main facts are correct.

A Swedish woman presented herself at the desk of a public library, and remarked: "I wants to see Yon."

"Yon?" queried the attendant.

"Yes, I wants to see Yon."

"What do you suppose she means?" whispered the mystified librarian to another assistant.

"She means 'John,'" said the other. "It's the janitor—he's down in the furnace-room. Send one of the pages."

The page was dispatched, and presently up came John, coal-dusty, perspiring, but polite. He was presented to the woman, and offered his hand to shake. She declined it in some indignation, and matters seemed at a standstill. Finally she led one of the assistants to the catalogue. She pointed dramatically to one of the cards. On it was neatly typewritten:

Marlitt, E., *pseud. See* John, Eugenie.

EDMUND LESTER PEARSON.

News for Bibliophiles

THE DATE OF DRYDEN'S APPOINTMENT AS POET-LAUREATE.

A curious inaccuracy has prevailed ever since the time of Malone, in regard to the date of Dryden's appointment as poet-laureate.

Early biographers of Dryden (among them Dr. Johnson) had apparently taken it for granted that the laureateship was conferred upon Dryden immediately upon the death of Davenant, and had, therefore, given 1668 as the date of the appointment. Malone, however, makes the following statement: "All the biographers of Dryden have said that on the death of Davenant in 1668 he was appointed poet-laureate. But it appears from the Letters Patent, a copy of which will be found in the Appendix, that he did not obtain the laurel till August 18, 1670" (Dryden, Works, ed. Malone, London, 1800, Vol. I, p. 87). Accordingly, Malone prints in the Appendix an official document of the above date, appointing "the said John Dryden our Poet Laureat and Historiographer Royal." Malone adds, apropos of the conferring of the degree of M.A. upon the poet: "Sir William Davenant died in April, 1668, about two months before Dryden received this degree. It would seem that he sought the literary decoration, *honoris causa*, to add somewhat to his pretensions, while he was soliciting to be appointed Poet Laureat and Historiographer Royal; though he did not obtain those offices till two years afterwards" (Vol. I, p. 556).

Scott took Malone's word for it, closely paraphrased Malone's statement, and reprinted the official document. Austin and Ralph ("Lives of the Poet-Laureates," London, 1853, p. 158), repeat the blunder: "When James Howell died, the office of Royal Historiographer became vacant, and it had not been filled up. It was now conferred upon Dryden, together with the Laureateship, which had not been bestowed since the death of Davenant. Dryden was appointed on the 18th of August, 1670." W. Hamilton ("The Poet Laureates of England," London, 1879, p. 90) also preserves the tradition.

When Saintsbury edited Scott's Dryden, he just missed getting the facts. He annotates Scott's statement: "This is the correct date of the patent. There is, however, in the Record Office an instruction for the preparation of a bill for the purpose, dated April 13." As the patent is dated 18th of August, 1670, and as Saintsbury gives the day and month but not the year of the "Instruction," the implication is, of course, that the "Instruction" immediately preceded the patent, in the same year.

Mr. Leslie Stephen, in his article on Dryden in the Dictionary of National Biography (Vol. XVI, p. 66), is the next to fall heir to the story: "In 1670 [Dryden] had the more solid appointments of poet-laureate and historiographer. . . . Davenant, who died in 1668, was his predecessor in the first, and James Howell, who died in 1666, in the last appointment. The office was now joined in one patent, with a salary of 200 l. a year and a butt of canary wine. Dryden was also to have the two years' arrears since Davenant's death."

Finally, Professor Noyes condenses the language, but accepts without question the information of his predecessors: "In August, 1670, [Dryden] received the posts of Poet Laureate (vacant since the death of Davenant in 1668) and Historiographer Royal (vacant since the death of Howell in 1666)." ("The Poetical Works of John Dryden," Boston, 1908, p. xxi.)

It might well have aroused the wonder of Malone and his successors that a lapse of two years should occur between the death of Davenant and the appointment of Dryden to the office. Dryden possessed a considerable degree of political influence; he was at the zenith of his poetical power, and the "Annus Mirabilis," a poem which manifested his peculiar fitness for laureate honors, had just come from the press. There was no rival candidate consideration of whose claims might have delayed the decision of the court, and yet, from the time of Malone to the present, the editors and biographers of Dryden have taken the hiatus for granted and have assumed that the patent of 1670 was the first official recognition of Dryden as poet-laureate.

As a matter of fact, the existence of a patent conferring an office in any given year is by no means a proof that the office is then being conferred for the first time. Nahum Tate was thrice appointed to the laurcateship—first when Shadwell died, again upon the accession of Queen Anne, and again in 1714 when the power of appointment was for the first time vested in the Lord Chamberlain.

The truth is that the Government, instead of dallying with the matter for two years after Davenant's death, issued, on

April 13, 1668, precisely six days after the death of the former laureate, a "warrant for a grant to John Dryden of the Office of Poet Laureate, void by the death of Sir William Davenant." (Calendar of State Papers. Domestic. 1667-1668. Vol. VIII, p. 341.) Nor was this warrant an official secret, for on May 19, 1668, Aubrey writes to Anthony Wood: "Sir William was Poet Laureate, and Mr. John Dryden hath his place." (Aubrey's Lives, Oxford, 1898, Vol. I, p. 209.)

The later patent of August 18, 1670, was evidently issued because at that time, and not until then, the office of historiographer royal was combined with the poet-laureateship, and the patent served to confer the one and to reconfer the other. The patent of 1670 fixes the honorarium for the two offices at £200 and a butt of canary; but it was not until the following year that the honorarium was forthcoming. In the Calendar of Treasury Books for 1671 (Vol. III, part ii, p. 772), is the record of a "money warrant for 500l. to John Dryden, M.A., His Majesty's Poet Laureate and Historiographer Royal in full of what is grown due on his pension . . . payable from the Feast of St. John Baptist next after the death of Sir William Davenant."

EDMUND KEMPER BROADUS.

Correspondence

THE TREATY WITH COLOMBIA.

TO THE EDITOR OF THE NATION:

SIR: The absorbing interest of our affairs in Mexico has served to distract public attention from the treaty recently negotiated with the Republic of Colombia by the new American Minister to that country, Mr. Thaddeus A. Thomson.

Article II of the draft treaty provides, first, that Colombia "shall be at liberty at all times to transport through the interoceanic canal its troops, materials of war, and ships of war, *even in case of war between Colombia and another country*, without paying any charges to the United States." The observance of this stipulation on the part of the United States would be a clear violation of the rules of neutrality in time of war. If Colombia were at war, say, with Germany, it is evident that the fact of our allowing Colombian troops or warships in our possessions without enforcing the customary regulations regarding length of sojourn, could quite properly be considered by Germany as an unfriendly act and a violation of neutrality.

The final paragraph of the same Article II provides that "coal, petroleum, and sea salt, being the products of Colombia, passing from the Atlantic coast of Colombia to any Colombian port on the Pacific coast, and vice versa, shall be transported over the aforesaid [Panama] railway free of any charge, except the actual cost of handling and transportation, which shall not in any case exceed one-half of the ordinary freight charges levied upon similar products of the United States passing over the railway and in transit from one port to another of the United States." American citizens, then, are to allow their goods to be charged double in transit over the Isthmus or through the canal what is to be paid by Colombian products.

In many of our treaties with foreign nations there is included what is usually called the "most favored nation" agreement, by which we bind ourselves in granting any concession to any other nation to grant the same favor automatically and by virtue of this standing clause to the nation with which we have such an agreement. Does any one think that other countries having that "favored nation" clause in their treaties with the United States will be likely to sit back calmly and allow Colombia to avail herself of the provisions of this convention without claiming for themselves the same advantages? We should thus have the pleasant spectacle of foreign nations carrying their products through the canal at rates "which shall not in any case exceed one-half of the ordinary freight charges levied upon similar products of the United States."

MONTGOMERY SCHUYLER, JR.

New York, June 20.

HUERTA, THE MAN.

TO THE EDITOR OF THE NATION:

SIR: One of the disadvantages of a free press is that at times it provides too much news. Especially is this true about personalities; and never perhaps has human being suffered more severely from this surplus of news than has Gen. Huerta. The existence of one man only allows room for a certain number of facts; set out too many and he loses all resemblance to a man and becomes a monster. This is true even when the facts are set out in a friendly spirit. When they are not, as in the case of Huerta, the monster loses even the suggestion of humanity. As a matter of fact, President Huerta is very human indeed—too human, if anything—and his most human traits have been distorted to line the monstrous caricature which serves to represent him to the American public.

Believing only what you read, you would picture the General as a kind of drunken savage, living only to gratify his two overmastering passions for loot and bloodshed. I used to believe a good deal of this myself, before I saw something of the man and his surroundings. Afterwards I realized that if he lived in New York he would probably be conspicuous only by his success in some kind of rather unscrupulous business career. Huerta is not an angel, and he is admittedly not a man of high moral tone. There is no doubt, for instance, about his propensity for strong liquor. I saw him quite recently one evening, at the Café Colon, which is one of several of which he is a regular patron. He was perfectly sober, and, after I had watched him drink four small ponies of cognac, he was none the less sober, talking and walking with perfect composure. Yet it is a fact that at eight o'clock that morning he had been seen at the Automobile Clubhouse, near Chapultepec, drinking cognac and that he had been drinking cognac ever since, probably, as a Mexican doctor who has close relations with the Presidential circle told me, thirty or forty ponies of cognac in the twenty-four hours. Certainly such prowess would be frowned upon in any respectable temperance circle; but it does not appear to interfere with the General's health, his brain, or his business.

We are told that Gen. Huerta has, in a very short time, accumulated an even more enormous fortune than did any of his predecessors. Personally I do not believe it and my disbelief is based upon the authority of a Mexican politician and anti-Huertista. He takes the view that the President has only very little actual cash. His property is mostly in the form of real estate, much of it in the City of Mexico. Hence his reluctance to resign until the legislative acts passed during his term of office be legitimated by his successor, in which case only could he hope to enjoy the fruits of office. I have heard, also, on very good authority, that of the politicians it has been found necessary to dispose of in the last year or two a number were possessed of real estate which, after their execution, was confiscated. What became of it afterwards I do not know, and it is never wise to believe all you hear in Mexico.

There is one point in which the General stands out very markedly from the ordinary run of Mexicans. He is generous not only in words but in deeds also. Every Mexican, of course, makes a point of putting all that he has entirely at your disposal. It is only his form of politeness, and if you seriously accepted his gifts he would probably be greatly amazed. Gen. Huerta not only makes such offers, but actually carries them out. A very eminent diplomatist told me one instance in point. He was, before the present troubles, upon a certain intimacy with the General, and his small boy would frequently play with the Huerta children in their garden, where they have, among other things, a whole farmyard of chickens, lambs, calves, and the like. Among the rest was a small pony to which the young foreigner took a decided and loudly expressed fancy. It chanced that the General was standing near and overheard him. "You shall have it," he said, and at once gave orders to one of his entourage that the pony be taken to the diplomatist's house. Naturally the small boy was delighted; his father less so. In such times as the present, to accept presents, however small, from President Huerta might be made the basis for who shall say what charges of graft, bribery, and the like. Fortunately he was leaving the city within a few days, and his hope lay in the proverbial dilatoriness of the Mexican. He knew that the pony would come, because the General had said so; he hoped that it might come too late, because some other Mexican would have to see to the sending of it. As it turned out, he was right; the pony arrived in due course, but not until the diplomatist and his small boy were already far away from the city.

Not only do all the foreigners who have come into personal contact with the General, almost without exception, speak well of him; but his own servants are devoted

to him, whatever their particular positions. This does not, of course, apply to his Ministers and political entourage. Among them, indeed, he lives and reigns only because the others are afraid of him, and that he should yet be able to inspire real affection in those in more intimate relations with him is something of a tribute.

Perhaps the secret of the extraordinary fight he has put up against such heavy odds is that he attends to things personally. You may frequently read that he is swayed by this, that, or the other Minister; that his cleverest moves are dictated by some subtle foreign adviser. As a matter of actual fact, his Ministers are mere appendages, more or less ornamental, to his "court." Things are done, in their names, of which they know nothing whatever until afterwards—and they are far too wise to make any protest. One particular instance came under my personal observation a few weeks ago. In common with some other newspaper men, I happened to be arrested as a spy. I was released first, and naturally set to work to obtain, if might be, the release of my friends. In the end I was enabled to enlist the sympathies of the Minister of the Gobernacion, in whose province fall naturally all matters of imprisonment. He was ready enough to help, but there was a drawback. He knew nothing of the circumstances, had not heard of the arrests, and at first refused to believe that they had occurred at all. The police, of whom he was the nominal head, had not thought it worth while to mention the matter to him. And when my friend was at last released it was to the President and by no means to the Minister that it was due.

Gen. Huerta has the typical Indian face, suggesting a Savonarola devoid of scrupulosity; he has wise eyes that are not unkindly, and somehow always suggested to me the eyes of an amiable rogue elephant. I confess that, despite his lapses from the strict path of rectitude, I like and admire him. He is at least a man—a man of the unpopular Bismarckian type. O. M. Hueffer.

New York, June 19.

A MASTER OF THE ART OF LIVING.

To the Editor of the Nation:

Sir: In 1865 Charles Eliot Norton wrote to Ruskin, "And yet what you write never seems to me to do full justice to yourself." Those who knew Norton as a teacher lay aside his two volumes of letters with a similar feeling. Vital personalities express themselves in their work, and Norton's peculiar work was teaching. His gift and peculiar instrument was personality. His smile, the tones of his voice, the keen light in his eye, carried his more precious messages. The best that he gave was too subtle for the written page. Moreover, no man writes adequately of his own talent. As a consequence, his collected letters, delightful and admirably edited as they are give us intimate pictures of Emerson, Longfellow, Lowell, Clough, Ruskin, Carlyle, Curtis, but only a shadowy sense of the man who to successive generations of eager-souled youths preached with such singular effectiveness the gospel of life made beautiful by conduct and art.

It is probable that no written page can ever explain the extraordinary significance of Norton to his disciples or publish to the world the measure and quality of his influence upon them for culture and happiness and civilization. But if posterity is to think of him as those who knew him would have it, he will be portrayed as a man who, in an age of material things, lived uncompromisingly upon a hill, practicing the art of making life sweet and sound and elegant; a ma whose intellectual loves were the Parthenon of the Athenians and the poetry of Dante.

To this man the white harmony of those Attic marbles was more than stone cunningly piled and sculptured. The entasis of each fluted shaft, the subtle, unsuspected curve of stylobate, was to him an illumination of the deeper ways of beauty; and in those calm proportions and inevitable relationships he read the laws of life and conduct. For him around each repressed Doric capital was written Sophrosyne, and Ethos, that summary of the attributes of heroic character, glowed from the calm sculptures of the pediment. The whole, embodying the full expression of the sane and happy Greek genius, constituted the visible appeal of the Beautiful and the Good. And it was his spiritual endowment to be able to make those whom he taught see and feel what he saw and felt.

But his æsthetic sympathies were not bounded by the works of the Greek. He loved all beautiful things of all times, especially the best Gothic building, the painting of the Venetians, the slim tower of Giotto, the drawing of the ancient masters of Japan. Yet he was no mere hedonist, in the usual meaning of that word, for, much as he loved the beautiful things of art, he loved high conduct more—high conduct, noble manners, and love. So that it was not strange that, of all the great dead, he should have been drawn most intimately to Dante. In the art and manners of his time he felt the need of qualities eminent in Dante, his uncompromising scorn of vulgarity, mawkishness, and cheap emotion; his elegance and distinction of standards in both life and art; his high simplicity and self-repression, and, most of all, his exalted obedience to Right Reason and Love as twin guides of life.

Led by such ideals, this man labored not to express himself in literature, but in the art of making beautiful people. A teacher of less faith would often have despaired. Too often the young men who came to him had been brought up to look upon the culture of beauty as something unmanly, honor as a stumbling-block to success, fine manners as foppery, and all noble ideals as inconvenient or impracticable. He was misunderstood, maligned, ridiculed, but he never faltered or ceased to insist upon the noblest art, the highest standards of conduct, the tenderest and wisest ideals of love.

Whatever his text, day after day he repeated his appeal for the cultivation of the best, and his protest against contentment with anything short of the best. And so, with both gentleness and fire, he preached and lived his gospel of beauty to the end.

There is a picture of him stamped twenty-five years ago upon the writer's mind which is characteristic. It was towards the close of his active days. The lamplight fell upon the bent figure of a scholar in his chair. He held a book. The pleasant room was walled with books. The portrait by Veronese of a Venetian lady with a pearl necklace glowed dimly in the subdued light. The old man's voice rose and fell in even, modulated cadences. He was reading aloud:

Well, here's the platform, here's the proper place:
Hail to your purlieus,
All ye highfliers of the feathered race,
Swallows and curlews!
Here's the top-peak; the multitude below
Live, for they can, there:
This man decided not to Live but Know—
Bury this man there?
Here—here's his place, where meteors shoot, clouds form,
Lightnings are loosened,
Stars come and go! Let joy break with the storm,
Peace let the dew send!
Lofty designs must close in like effects:
Loftily lying,
Leave him—still loftier than the world suspects,
Living and dying.

He finished, his voice clear but resonant with emotion. His great spirit shone in his eyes. He closed the book.

How is criticism to rate such a man? Who can measure the influences that he set in motion, or compute the latent forces of his work? We only know this: no fire-bearer can be snuffed out; "Lofty designs must close in like effects." The lives of peoples have been lifted up by the lives of individuals no more devoted and inspired by no sweeter aim.

THE GOTHIC BIBLE.

To the Editor of the Nation:

Sir: Forgive me for once more—for the last time—referring to Prof. Leo Wiener's recent article on the Gothic Bible. He ridicules my remarks as unintelligible, inconsistent, and ignorant. Let me briefly state a few facts:

(1.) According to Professor Wiener, my statements concerning Goth. *siponcis* "made no sense." Will it be clear enough if I say that I did not question the identity of Goth. *siponcis* with Gr. *σπουδαῖος* (though, by the way, I do not believe in it), but merely called attention to the fact that Professor Wiener, in this instance, strongly emphasizes the element of chronology while he entirely neglects the influence of time on the character of the language of a migrating people when he believes that the Gothic Bible, with its wonderful preservation of Germanic sounds and forms, can come from the eighth century?

(2.) It is perfectly consistent to believe, as I do, that O.H.G. *skribu* < Lat. *scribo* followed the inflection of *blîbu*, but to consider it impossible that borrowed Lat. *culca* should have been the basis of a Pan-Germanic *skal-skulum*. No philologist can seriously entertain the latter theory for one moment; Professor Wiener does.

(3.) In the interest of the reputation of

American scholarship, Professor Wiener's remark concerning the relation of Lat. *t* to Goth. *th* is truly distressing. I really cannot admit the colossal ignorance of the Germanic sound shifting that Professor Wiener declares me guilty of. It need not be known to my opponent that I have written a few articles on this very subject, but I assure him that I happen to remember that Indo-European *t* is represented by Goth. *th* (or, under Verner's law, by *d*); however, the very beginners in Gothic are taught that this Germanic change took place centuries, perhaps a thousand years, *before* the times of Ulphilas. Even the most elementary knowledge of any philology whatsoever must make it clear that the cognates Lat. *verto*—Goth. *wairtha* are to be judged entirely differently from Goth. *dulths* if borrowed from Lat. *dultum*. Is it worth while to mention that the laws of sound shifting, if we were allowed to apply them here, would require Goth. *t*. *d* (hardly *th*) for the *d*. *t* of the participial form *dultum?*

(4.) The thirty "Franco-Burgundian" loan-words that Professor Wiener kindly offers me "to whet my appetite," as he says, are most astonishing. The great majority are easily derived and explained as purely Gothic, without reference to borrowing from any foreign source whatsoever, and quite a few of them are Pan-Germanic.

I regret to have entered into this discussion at all; the questions raised are of such an elementary character that their serious consideration is a nearly unpardonable waste of space and time; but I could scarcely allow Professor Wiener's disparaging remarks to go unchallenged. E. Prokosch.

Mayville, Wis., June 17.

THE HONOR SYSTEM.

To the Editor of The Nation:

Sir: The honor system, attacked by Professor Firkins, of Minnesota, and defended by Professor Sparrow, of Virginia, is a feature in modern education that will scarcely be affected much by criticism. It is, as Dr. Sparrow has well shown, merely an element, the most important element, in the broader system of student self-government. Whether a given body of students is capable of self-government has to be determined and demonstrated by the students themselves. No professor, or body of professors, can do so for them. No faculty is strong enough to incorporate the honor system into a working code. If the initiative does not come from the students themselves the system has no chance for existence. Its essential foundation is justice. It is unjust for a student, by cheating, to obtain for himself the reward which his classmate wins by hard work. The attempt thus to cheat betrays an individual deficiency which the majority refuse to tolerate; and the only possible resource is the elimination of the offender.

Professor Firkins has been kind enough to refer to an article on this subject, published by myself in 1906, as "judicial." That article was the result of continued observation of student self-government, and was written as a sequel to a paper on "Student Honor and College Examinations," published in 1895 when I was a professor in a Northern technical school. For the man whose whole teaching experience has been in a Southern college where the honor system is traditional, it may be hard to look at the subject from another standpoint. After fourteen years of experience in the North, amid students who had no knowledge of a specialized honor system, and after an equal number of years among Southern students, it is possible to recognize the fact that human nature is about the same in both sections; but that social traditions remain strong long after political and commercial conditions have become changed. Professor Firkins's reply to Professor Sparrow shows how hard it is to dislodge the idea that there is some sort of bargain implied; for he repeats his former arraignment in referring to "that renouncement of supervision in return for which the student undertakes to play the part of an honest man." As I observe the system here, nobody thinks of it as embodying a "quid pro quo." The students merely insist that there shall be fair dealing in the examination-room and class-room, whether the professor is present or absent.

To the question whether the honor system ought to be, or can be, introduced everywhere, a reply can hardly be framed. It ought to be introduced wherever possible; but nobody is able to specify in advance just where it can be. Its existence implies a well-organized student body; and its maintenance is not easy without the previous development of well-defined traditions. At the University of Virginia, and at various other Southern institutions that could easily be named, these conditions are fulfilled. But in a great city, where most of the students meet only or chiefly in the performance of scholastic work, and where the importance of a heterogeneous mass of several thousands of young men is dwarfed amid the interests of hundreds of thousands of population, the introduction of the honor system, or of any other code which must originate among the students and be recognized by the entire student body, would be a task of extraordinary magnitude.

The increasing rate of growth of urban conditions in the United States tends to make the extension of the honor system harder. But it is no longer confined to the South. It has taken root in the North in a number of colleges where density of population is not great enough to overshadow the local importance of the college. Every educational institution has to work out its own problems in its own way. We in Virginia are not warranted in prescribing for those in New York or Minnesota whose local environment is different. If the recent arraignment of the honor system has exhibited some fundamental misconceptions, this is not strange. It does not prove that total depravity exists wherever the honor system has not been organized. It is only an example of honest men, North and South, on opposite sides of the same shield.

ASIATIC IMMIGRATION.

The American Japanese Problem: A Study of the Racial Relations of the East and the West. By Sidney L. Gulick. New York: Charles Scribner's Sons. $1.75.

This is an eminently judicious handling of a perplexing question. The threat made ten years ago by disappointed newspaper men, that the snubs they received at the Japanese military headquarters would not be forgotten, has since been made good in persistent newspaper misrepresentation and antagonism. Particular circumstances have aided malcontents in making California the centre of an anti-Japanese crusade. In the first place, the Californian opposition to Japanese immigration, as Dr. Gulick points out at page 21, is not a sudden outbreak; "it is the heir of decades of antipathy to Chinese." And the different national temper of the Japanese, who rely on their home government to present their grievances at the capital in a way that forces respectful attention, has irritated the complacent local politician, accustomed to the more subservient Chinese attitude. However mildly the Japanese may put his grievance, he cannot give it the least ring of truth as a genuine protest, without being accused of "spoiling for a fight." Long ago the time limit set by the belligerent Capt. Hobson for his anticipated Japanese invasion expired; and the forecast remains—what it was from the beginning—a mere hallucination.

Then, again, San Francisco, whence has come the driving force in the recent anti-Japanese legislation, is, beyond almost any other city in the country, under the domination of foreign-born and anti-religious Socialists; men who regard a government merely from the side of its industrial legislation. Their altruism ends with members of their labor unions, and they are absolutely regardless of the comity of nations.

California, moreover, contains a great number of Southerners, who have been burdened in the past with a race question which still awaits solution; and they and their friends are determined that no similar question shall be forced on the country. In southern California, where the Japanese are better treated than in the northern section, the race distinction is more emphasized; and cafeterias and other restaurants close their doors more rigidly to the brown men.

Moreover, the Progressives, who are in possession of the State Legislature, have taken advantage of the awkward situation in which a Democratic President, the first for nearly twenty years,

finds himself, of calling upon a State Legislature to limit the exercise of its legislative activities and consider the embarrassments of the Federal Government. This trifling with the larger interests of the nation to meet party exigencies may do the party no good in the end, but meanwhile it seems to serve immediate ends in hampering a Democratic Administration.

Our author is wisely silent on some of these aspects of the situation, and sets himself to answer the arguments of those who favored the recent anti-Japanese land legislation and are clamoring for still more legislation of the same nature. These arguments may be classed under four or five heads: intense disgust at race mixture and the possible growth of a new color problem; a contempt for the shabby un-American way in which Japanese laborers live; the absence of reciprocal privileges of citizenship in Japan; dread of their lowering the rate of wages, and dread of their lowering the dignity of labor by making farm and orchard work considered "only good enough for Japs." He is careful to point out how the press, in handling the matter, has persistently suppressed the truth and suggested the false. When Mr. Hattori, of the Japanese House of Representatives, who recently died in San Francisco when on a mission of reconciliation, was advising his countrymen in Hawaii how best to meet the situation, he "made four most impressive and striking points: first, every Japanese in Hawaii should be true to his fatherland and unswerving in his devotion to his Emperor; second, every Japanese settled here in permanency should become an American citizen, if possible; third, such a change of allegiance is not evidence of loss of patriotism and will entail no injury to one's national individuality, . . . for the deeper the patriotic devotion the better fitted the man will be for citizenship in another country; fourth, if after change of allegiance from Japan to America war between the two nations should come, the truer the Japanese, the more valorously will he fight for America." But the American press, in their report of the address, gave only the first of the four points, "thus conveying exactly the opposite impression of the import of his remarks." Dr. Gulick quotes from an editorial which appeared in the San Francisco *Examiner* of last October, showing how insolently our press thinks fit to treat a courteous discussion of an international problem by a writer who is unfortunate enough to be an Oriental.

Five years ago the State of California made an appropriation of $10,000 for a thorough investigation into the whole problem of Japanese immigration, and the report of the Labor Commissioner, J. D. Mackenzie, appeared in May, 1910; but no appropriation, unfortunately, was made for its publication. Was it purposely suppressed, asks Dr. Gulick, because it proved so unexpectedly favorable to the Japanese? Quoting from the "Summary for the Press," he finds that, while it deplores "the readiness of the Japanese to work long hours and in unhygienic conditions," yet "Japanese farm-hands were earning, in 1909, better wages than white men engaged in the same work, and, strange to say, Japanese employed by Japanese received higher wages than those employed by white men." In the future change that is before the country, from extensive to intensive farming, the Japanese may be of the greatest service. "They have made possible developments in berry, lettuce, celery, and kindred crops, which white labor alone would never have allowed. In point of fact, as a whole they are developing uncultivated lands and carrying on forms of agriculture which would remain largely undeveloped if left to whites."

The author devotes several chapters to what he terms the "storm-centre" of his problem, Japanese assimilability. This is a question to which he has paid particular attention, having published many years ago the book by which he is best known, his "Japanese Evolution, Psychic and Social." He recognizes three factors in race assimilation: "biological assimilation through intermarriage; biological assimilation without intermarriage; and social assimilation." Far too great importance, he declares, has hitherto been ascribed to the first of these factors. Modern scientific inquiry has completely established the fact that the "obstacles to the social assimilation of races are not inherent in their biological differences." The assimilation that interests sociological inquirers to-day is psychological rather than physiological. Already the Japanese residents in California are taking on American characteristics in bodily appearance as well as in mental habit. The very task of acquiring the English language tends towards assimilation, for the utterance and articulation of sounds in Japanese require a different use of tongue and throat. Dr. Gulick contends that "such psychic differences as distinguish the East from the West are products of social life, belong to the social order, and are therefore subject to rapid change." He is with President Eliot in holding that the immigration question need not be complicated with any race problem in this case, as the Japanese race keeps itself pure.

The very fact of their gregariousness, their clannishness, is made a matter of reproach. Hitherto very little has been done to train the immigrant laborers in American ways of living, and the cottages and huts in which they are huddled are too often kept in a slovenly manner. But, as a matter of fact, declares Dr. Gulick, so far from "living like pigs," as Californians sometimes assert, "Japanese as a whole are the most cleanly foreigners that come to America. If they are able to acquire a little property, especially if they have their own homes and wives and children, this characteristic, along with their innate artistic sense, becomes conspicuous." He quotes from Bishop Brent, who crossed the Atlantic in the steerage of a boat sailing from Naples. "I never quite gauged the menace from Southern Europeans," declares the Bishop, "until I came over with the indigestible mass on the Caronia. One has pity for them, but that ought not to blind us to the danger they bring to this country. In virility and decency the Japanese are infinitely beyond them." If we qualify Dr. Gulick's statements with the Bishop's remarks, they may be more readily received. The call at present is surely for a national handling of the whole immigration question.

The condition of semi-peonage that has marked the Japanese in Hawaii, and lowered the social status of the Japanese laborer on the Pacific, is a temporary phase that is rapidly passing away. Unmarried Japanese laborers have hitherto regarded themselves as mere birds of passage who are here only on sufferance and must not make permanent homes. Many, however, begin to prefer American life and ways and send for "picture-brides"; and the rising generation will find a barrier to their return in the impossibility of acquiring the very difficult language of their own people. They will be severed from the social and historical influence of their country more completely than other American educated aliens. The assimilation into our social life of a certain number of Japanese, so admirably fitted for particular industries and arts, would be a positive gain. Such are Dr. Gulick's contentions.

The practical proposals, nine in number, that he brings forward for the solution of the whole question are of a very moderate nature. Among them the most important are: that American citizenship should be granted to every qualified individual regardless of race; that immigration should be allowed on a percentage rate of those from the same land who are already naturalized, including their American-born children; that the granting of naturalization should be vested in a bureau of naturalization; and that there should be direct Federal responsibility for all legal and legislative matters in which aliens as such are involved.

A like proposal, dealing, however, only with European immigrants, and leaving Asiatic exclusion laws exactly where they stand, was introduced in the summer of 1913 by Senator Dillingham.

On a basis of 10 per cent. of the people of any nationality already in the United States, it would place a check upon Russian and Italian immigration, but leave a wide margin for German, British, and Scandinavian immigrant. Moreover, it provides for a minimum of five thousand from any land, however few may be their representatives here. Dr. Gulick's basis of 5 per cent. would allow only 220 Japanese and 738 Chinese to enter in any one year, exclusive of such as by social position and education are not to be classed as ordinary immigrants. Surely, a limitation of this nature is drastic enough for any one, however obsessed by the fear of an Asiatic invasion.

The anti-Japanese forces on the Pacific Coast are so well organized that there is danger lest, through indifference, those who, both for national and international reasons, regret the intolerant Asiatic exclusion laws, may see themselves out-voted and thwarted. So thorough and sane a treatise as Dr. Gulick's is of special value at the present time in helping to formulate a policy of a worthier kind, which may furnish a basis for organized activity in checkmating intolerance.

CURRENT FICTION.

At the Casa Napoléon. By Thomas A. Janvier. New York: Harper & Bros.

The casual reader of these tales may be struck with a certain quaintness of flavor which nothing in the prefaee by Mr. Ripley Hitchcoek would account for. Mr. Janvier died only a year ago. These stories, as the copyright dates show, must have been published in the early nineties, presumably in *Harper's Magazinc.* How the world moves in a quarter of a century! Not only are the stories of a gas-lighted, motorless, easy-going New York, they were written by gaslight, in the genial, leisurely, slightly facetious style of that day. The "punch" in fiction had not yet been discovered—or, rather, had not been generally reeognized, for Kipling was introducing it at the moment. In short, the eharm of the stories is already a trifle antiquated. Casa Napoléon, says the preface, represents a real hostelry off Fifth Avenue, frequented for some time by Mr. Janvier. Its host is a politieal exile from Mexico, its hostess a Frenchwoman of Toulouse: hence the bilingual name. As a hotel it is patronized by travellers of several Latin raees, and its cookery attraets a group of New York Bohemians. A representative handful of its patrons supply material for these stories, or sketches, as the exaeting magazine editor of to-day might call them. Whatever their eategory, they are delightful. Col. Withersby, promoter, and Monsieur Duvent, gambler, are as memorable types as Bret Harte's Starbottle and Oakhurst. Mrs. Mortimer is a less sentimentalized type of the frail sisterhood of Poker Flat. The defeat of all three of them on their own ground by the astonishing Marques de Valdeflores is an amusing if not quite credible bit of comedy. It is a book to be particularly enjoyed by middle-aged readers who have tender memories of a phase of the American short story which, in default of "punch," relied openly on its reeipe of whimsical humor and graceful sentiment.

You Never Know Your Luck. By Gilbert Parker. New York: George H. Doran.

This is far from being of the best that the author of "Pierre and His People" has given us. The story is based largely upon the workings of chance. Shiel Crozier, the son of an Irish baronet, at an early age became fascinated by the betting-book at Brook's, and decided to devote his life to the worship of the god Luck. His devotion leads to the loss of fortune. Crozier is estranged from his wife, and goes out to start life anew in a prairie town in the Rockies. There chance leads him to the care of a maiden who appears to him as a symphony in gold. Chance also forces him to reveal his past on the witness-stand at a murder trial. He is shot as a result of the evidence given, and then the Golden Maiden, finding that her love for him is unreeiprocated, decides to assist ehanee. She steams open a letter to Shiel from his wife, discovers her address, and contrives to reeoncile an unsuspecting husband to his wife. Crozier deeides that luck lies in the resumption of his past life. The book has movement and a sprightly wit that atones for a good deal.

A Free Hand. By Helen C. Roberts. New York: E. P. Dutton & Co.

This is a solid piece of work that ought to win a wide audience. It is concerned with the inner life-history of a single individual. Ridley Courage, the son of a narrow-minded, garrulous shopkeeper, does not relish the prospect of settling down to the same occupation. He longs for Canada, where advertisements say a man can have a "free hand." But as he is about to announce his departure, he learns that it has been decided for him that he is to enter a profession. So he prepares to be a dentist, and succeeds after much tribulation. But he has no love for his work. He still inactively longs for a free hand. As a man he seems a failure, except that his native indolence and resignation are punctuated by flashes of ready decision. In one such mood he wins his wife, an unsuccessful young actress, whom he has always loved. The "free hand" he gives her, however, induces her to return to the stage some years later, and leave him with an infant daughter. Accordingly, at forty-five Ridley Courage is not a worldly success and has still missed his "free hand." He has, however, become reconciled to the fact, and has realized that the fault is not of destiny or of life, but "of his own imperfect nature, with its hesitancies and limitations, its sudden weaknesses and fears." But resignation has given him something in place of success. It has taught him sympathy for men and women, with the gift of deep and tender affection. It has given him a love for beauty, color, and vitality. So, after casting up accounts, Ridley begins a satisfied life with a little woman who adores him.

A Lady and Her Husband. By Amber Reeves. New York: G. P. Putnam's Sons.

The lady is a middle-aged English woman of the old-fashioned sort, who is awakened in time to save her soul from humdrum happiness by way of becoming, very mildly, a modern female. The husband is the British paterfamilias of fiction, bumptious and patronizing, clinging to the ancient notion of women as born to serve, to be pretty, and to purr. But it is the twentieth century, and they have a daughter who is very up-to-date indeed. At eighteen years, though still nominally under the shelter of the paternal roof, she has learned to take care of herself and to think. However, Rosemary is not offensive, nor does she have to be lifted out of any sort of scrape. In fact, at the moment of our introduetion to her she has just engaged herself to be married too young, in a perfectly human and normal way. Still, she has learned to think. She engages to be a partner, not an inferior, and belongs to the Fabian Society. She is inoculated (or infected?) with the Socialism and feminism of the day. It is partly through her, partly from mere contact with the new atmosphere, that the meek "little mother" of the family is aroused to consciousness of certain responsibilities. That she owns half the business her husband has made so successful gives her purchase for action which she long defers. The issue is the wage and treatment of the firm's shop-girls. In the end we leave little mother on the way to reform or at least mitigation of the evils she sees; paterfamilias, after vain attempts to overbear her in the established way, destined to be defeated in the long run by the mild obstinaey of a woman sure of her duty. At all events, the passive eomfort of her old days is gone. "Now she, too, was to share man's task and his inheritanee. She had left her ordered house for the elamour and promise of life. . . ." The wife's discovery that her husband has once been technically "unfaithful" to her, and the

effect of that discovery on her attitude, rather cheapens a situation which is otherwise handled with discretion and a good deal of force.

Cross Trails. By Herman Whitaker. New York: Harper & Bros.

Once more we find the frozen wilds of Canada set as a background for the primitive passions and loyalties. Mr. Whitaker describes a man's struggle to regain the love of his wife from whom scandal has separated him at the altar. Their trails cross in Canada, where the husband finds his wife lost in a snowdrift. He brings her to the lumber camp. Their relations are unknown to all others. She repels his kindness, but he cannot permit her to leave the camp in mid-winter. Thereupon she decides to escape by eloping with a rather dissolute Englishman. Too soon his womanish helplessness disgusts her, and she longs for her husband's strength. By a ruse, she leaves the Englishman and returns to the camp to meet her pursuing husband. The woods have cleansed and chastened the hearts of both. The story is vigorously told and abounds in effective bits of description.

AN ECONOMIC HERESY.

The Cause of Business Depressions. By Hugo Bilgram, in collaboration with Louis Edward Levy. Philadelphia: J. B. Lippincott Co. $2 net.

In their search for "The Cause of Business Depressions" the authors have made an examination of the whole field of economic theory; they have found the accepted doctrines untenable and have constructed a theory in their place which is reminiscent of mercantilism and land banks. In their opinion, "sociologists in the halls of learning are teaching, and legislators in Congresses and Parliaments are formulating into law, the misconceptions of economic principles and the misinterpretations of economic history which have come down to us from the past" (p. 457). Mr. Bilgram's "strictly deductive line of investigation," as he rightly calls it, of economic theory, leads him to the conclusion that "the underlying cause of the economic disorder is the legalized restriction of the right to use credit as a medium of exchange, a conclusion which, though confirmed by all the symptoms of the social disease, is not in agreement with the accepted tenets of the modern school of economics" (p. 456). Not only does he find that "the recurring economic paroxysms, known as financial crises, which are followed by periods of industrial depression, are the inevitable outcome of the arbitrary limitation of the volume of the currency," but in addition he finds "that this same cause gives rise to the most grievous of the many forms of social and economic injustice that are so loudly crying for redress throughout the modern world" (p. 511). According to Mr. Bilgram, then, currency reform is the panacea that will cure the business world of its periodical paroxysms, do away with the necessity of paying interest, bring about an equitable distribution of wealth, and accomplish economic justice. He is as sanguine concerning the efficacy of his remedy as are the single-taxers or the Socialists of theirs.

The argument runs thus: The quantity theory of money is inconsistent with facts and untenable. "Money does not owe its value to the demand for a medium of exchange, nor to any law authorizing the issue of such medium, but exclusively to the value of that of which money consists, be it the standard commodity, gold, or credit expressed in terms of that commodity" (p. 155). "The time-honored notion that money is paid to the lender of money for the use of 'capital' is groundless" (p. 280). "Investigation discloses the fact that what the borrower is after is *money*, and that the interest which he pays to the lender of money is paid for the use of money and not for the use of capital" (p. 277). "It follows that if the total demand for money is not supplied, competition will tend to put a premium on its use. Interest is accordingly paid on money because of its inadequacy to meet the demand of those who need it for the exchange of their products or services, and, as we shall see later, this competition raises the rate of interest as high as the market will bear; in deed, so high as to exert a destructive effect upon the market" (p. 317). In a business depression "*the general oversupply of things and services offered for exchange can be accounted for only by an equal under-supply of the medium of exchange. . . . The arbitrary control of the volume of currency, accordingly, is not only the cause of the predatory power of wealth, but also the cause of industrial stagnation*" (p. 363).

The remedy, therefore, is for the Government freely to advance notes to banks on the security of their assets, including loans on real estate security and national, State, and municipal bonds; such notes to be redeemable in gold by the Government, but not by the banks; "the gold for this latter fund could be obtained by requiring every bank applying for currency to furnish not only the prescribed amount of securities, but also gold to the amount of such percentage of the currency issued as experience indicated as sufficient" (p. 409). Delay of a month or more in redeeming the notes in specie would not be serious (p. 410). "While the Federal reserve currency is a step in the right direction, . . . the process of issuing the currency [is] so costly that the intention of the law, that of rendering the business world independent of financial disturbances, can at best be but partially realized" (p. 518).

To make a thorough criticism of "The Cause of Business Depressions" would be to cover the entire field of economics, an uncalled-for proceeding. It is uncalled for because Mr. Bilgram does not adequately support his economic heresies with statistical and other data, and because he completely ignores the contributions of modern economists. For example, in discussing his proposition that pure interest "is clearly traceable to a *monopoly upheld by law*" (p. 350), he does not refer in any way to the diverse currency systems of Canada, England, Germany, and France and their influence on the interest rates in those countries; in discussing money theory he does not mention Irving Fisher, Laughlin, or a host of others who have recently treated that subject.

The main contention of Mr. Bilgram, that the phenomenon of interest is brought about by legal limitation of the medium of exchange, is a fallacy. Economists of all schools will agree as to that. Mr. Bilgram has clouded rather than clarified the questions that he discusses. Consequently it were better to leave the book unread.

THE APPEAL OF THE BALLAD.

Folk-Ballads of Southern Europe. Translated into English Verse by Sophie Jewett. New York: G. P. Putnam's Sons. $1.50 net.

For "successive classes of Wellesley College students, studying English and Scottish popular ballads," Miss Jewett translated sundry cognate ballads in French, Italian, Spanish, Portuguese, and Rumanian dialects. Mainly following Professor Child on the comparative trails, she made her own selection, and in all cases undertook the formidable task of translation. It is said that experts in the various dialects, to whom her translations were submitted, found "hardly a word to change." In the summer of 1909, shortly before her death, Miss Jewett revised these translations, and left them, along with notes and memoranda of an introduction, to be prepared for the press by her friend and colleague, Prof. Katharine Lee Bates.

The editor has done her work with due knowledge, discretion, and sympathy. The original texts, which are printed opposite to the translation, have been verified at the source; the introduction keeps within the limits of the translator's memoranda; and the notes, for which little material had been prepared, are adequate. For the main part of the book, fifty-five "ballads of Southern Europe" are printed and translated, and seem fairly representative in quality and range. The popular note varies from absolute in "Scibilia Nobili" to vanish-

ing in "La Belle au Jardin d'Amour." The selection of these ballads depended, of course, upon the analogous British pieces; but choice of the particular version may here and there be questioned, as in the case of the "Marquise," where tradition is supposed to tell the story of a poisoned royal mistress—whether Madame de Vintimille, as Bujeaud says, or, as the Italian "Gabriella" would suggest, the favorite of Henri IV, or else, in Bladé's opinion, Madame de Montespan. Miss Jewett has selected the version of Bladé, which inclines to be stolid and garrulous, instead of that of Bujeaud, which is simple and effective, approaching the *tout faire rêver*, in Sainte-Beuve's famous definition of poetry, rather than the *tout dire*. But should this choice be questioned? Is not all balladry *tout dire* triumphant? A recent writer, who may or may not have taken his cue from Matthew Arnold and the discussion of Homer, lays down the law that true balladry is garrulous, if not stolid, and that any poetic appeal, of suggestion or of reticence, at onee bewrays the artist. Bladé's version does not conclude on the climax:

> La reine lui donne un bouquet
> Fait de fleurs tant jolies;
> Mais en flairant ce beau bouquet
> Elle a perdu la vie . . .

Two stanzas follow, with "particulars of the funeral"; and even that "Je n'ai ni roi ni femme" of the marquis fails to restore the simplicity and suggestion of the right close. Bujeaud's version ends:

> La reine a fait faire un bouquet [bis]
> De belles fleurs de lyse,
> Et la senteur de ce bouquet
> A fait mourir marquise . . .

Peasants, says one recent writer, would naturally give and take those garrulous details, and would be incapable of the reticence and suggestion of "poetic" versions, such as Bujeaud's, which, for this same poetic taint, should be blotted from the list of traditional ballads. Yet many of the best British ballads have this haunting and suggestive note of conclusion, this right dying fall—"Sir Patrick Spens" and "The Wife of Usher's Well," for example; others, because of the dramatic element, are even more effective in their close—"Babylon," "Edward," "Child Maurice"; and one Shetland ballad, "The Great Silkie of Sule Skerry," is as sudden and stunning at the end as the *Ich wollt', er schösse mich todt* of Heine's little masterpiece. Apart from this last, peculiar case, suggestive conclusion and effective reticence are by no means alien to the ballad; and the argument from old wives' tales is not convincing. Tradition as well as criticism can select what is effective. The clear implication of Professor Child's various comments on individual ballads is that the reticent and effective versions come unspoiled from the hands of tradition; and with this theory Miss Jewett would undoubtedly agree. Her general habit of selection—the "Marquise" version of Bladé can be defended for other reasons than its garrulity—and, still more, her translations, prove this assent.

It is conceded that imitation of the popular ballad is a rare and difficult feat; and translation itself is far from easy. The older ballads often make appeal by failing to say what is expected, and by saying over and over what would seem to have been said enough. Now this repetition, the ground-plan of the old ballad, is a very different matter from garrulity—a point missed by Arnold—and must not be cut down in translation. On the other hand, a translator must not beautify or poetize, and, above all, must not pad. It can be said that Miss Jewett seldom errs in these respects. *Fait de fleurs tant jolies* should not be rendered "sweet with the roses' breath"; and not even the exigency of rhyme excuses "Come and wish me happy chance" for *i v'invito a le mie nosse*, or "one little love-kiss like the old" for *bazin d'amour*. "Lovers' fears" will not do for *amitiés*. Padding outright, as "too tired to weep," p. 125, is very rare. More serious is the failure to keep repetition. In the whirlwind of passion which fills the opening dialogue of "Donna Lombarda" the translator must beget no temperance by bating a jot of that duplication of *müri*, as it is called, echoed, and re-echoed, in successive lines.

Herder passes as the master in this art of translating popular verse. He not only gave Europe knowledge of its ballads, but chanted them, like another Autolycus, and chanted them supremely well. He appealed to the critic and the reader. It is to be regretted that another great lover and student of the ballads did not make his translations with this same wide appeal. And yet the model for English translation of popular verse is to be found in Professor Child's introductions. By way of illustration, he translated, in the first and second of his five volumes, about one hundred and fifty scattered stanzas or couplets from foreign ballads. Only twice did he translate a whole ballad. Once (I, 219) he gives "a close translation" of the Danish "Barnemordersken" instead of the usual prose abstract with a striking stanza or so in verse. Again (I, 363), to show what "beauty" the English "Hind Etin" has lost in transmission, he translates a dozen lines from a Norwegian version, keeping the lilt of the rhythm, the assonance ("drank: forgat"), and using dialect to render certain phrases—"the ae first drink." In the later volumes, probably on account of the pressure on the editor's time and strength, the prose abstracts are shorter, and verse is hardly used at all. But there is plenty of material for the translator or critic of ballads to study in these fragmentary verses of the early introductions. So far as transfer of the ballad as ballad from one tongue to another is concerned, no better translation has been done.

It would be easy to isolate some of Miss Jewett's translations and make them seem inadequate or infelicitous. But if they are read along with the originals, read as a whole—and that was her intention—the rendering is seen to be faithful, in the main, not only to the sense but to the poetry of the more or less difficult texts. In most cases she seems to apply the method so successfully used by Professor Child. Miss Jewett understood the popular ballad, and understood it the better because she loved it. Through her work runs that enthusiasm which Goethe once declared to be so much more effective in the teacher than mere knowledge and power to drill.

THE PURITANS OF INDIA.

Psalms of the Early Buddhists. Second Part: *Psalms of the Brethren.* By Mrs. Rhys Davids. Oxford University Press. 10 shillings net.

In this companion volume to her earlier "Psalms of the Sisters," published five years ago, Mrs. Rhys Davids has translated into English verse the 1,279 "stanzas of the Elders" (Theragāthās) ascribed to the venerable Brethren of the Buddhist Church. Both collections belong to the Khuddaka Nikāya, a division of the Sutta Pitaka, which contains also the well-known Dhammapada and Jātakas. They have already been translated into German by Neumann, who regarded them as the work of one poet.

Mrs. Rhys Davids, on the other hand, believes that tradition is right in ascribing these hymns or psalms to many writers, and holds that it is a veritable collection of ancient verses emanating from authors of distinct personality, whose historical character cannot in the main be questioned. As between the psalms of the nuns and those of the monks she notes the prevalence of the personal note in the former, together with more frequent reference to outward happenings, while in the latter descriptions of nature prevail, and there is more frequent reference to the inner life. On these points it is probable that any one who has read carefully both collections will be inclined to agree with her; but not in the belief, also held by Mrs. Rhys Davids, that much credence can be given to the traditional authorship of the different stanzas. With due deference to the learned translator, all we really know is that there were different authors. Who they were, must remain as doubtful as the true names of the writers of the countless ethical

stanzas in the epic poems or of the seers of the Vedic hymns.

But it is a rich treasure of old religious thought and feeling which stands thus revealed in English dress, varieties of religious experience which might add a new chapter to James's work, if only to point out parallels with similar experiences in the Occident. There is a certain sameness about all of these psalms, but it is the sameness of the one religious ideal here made manifest, the destruction of lust and of all forms of desire, serenity, kindness to all, absence of desire to injure, absence of desire to love, rejection of family ties, an assured expectation of the fulfilment of that "extinction" on earth which shall lead to Nirvāna. But within this religious and ethical frame which encircles all Buddhistic utterances, whether found in the Gāthās or the Dhammapada or elsewhere, the psalms here recorded give many glimpses of the individual struggle, of the variety of experience which is reflected from personal environment. One monk sings how he came to be converted through watching the kites ever swooping down after meat. Another tells of his life as a prince, and how he became at last influenced "to lead the forest-life the Buddha praised." One even leaves us nothing save his emotion, essentially pagan, versified in the lines:

Whene'er I see the crane, her clear bright wings
Outstretched in fear to flee the black stormcloud,
A shelter seeking, to safe shelter borne,
Then doth my river Ajakarani
Give joy to me.

Yet there is another aspect of the picture. Too many of these saints revel in describing how they have deserted their wives and children, "bonds to be broken," in order to devote themselves to inward peace. We read as part of a psalm a Brother's disgusting description of his former (now deserted) wife, who, "afflicted, lean, in sad array, and in tears," greeted him and received only contempt, and we begin to understand that there was a very ugly side to the self-complacent saint. And as we read this long collection of psalms and realize that it is but one more vehicle of the same monotonous religious expression found in all Buddhist works, we cannot help wondering that any community could exist for centuries on so slender an intellectual pabulum as seems to have contented the Buddhists. In a land of art and literature to have produced nothing save religious ejaculation and ethical monitions is rather a sorry showing. The Buddhists were, in fact, the Puritans of India. They knew no art save as it subserved religious needs. The drama was openly scorned; all amusement was taboo; shows and fairs were abhorrent. To them, epic and lyric poetry existed only as memoirs of Buddha and expressions of religious rhapsody. Plastic art served only to recall legends of the master and to instil moral teaching.

These psalms do much to interpret the real feeling of Buddhism. They reveal its strength and its weakness. Even with the best will in the world one cannot find in the stanzas of the Theragāthās a recognition of anything more precious than one's own selfish peace of mind. The "love" taught here is a cool friendliness. The Brethren learned, indeed, from the Master that to "exhort, instruct, and lead others in the right way" was their duty, but their true aim was that of the ascetic philosopher, to retire into a solitary place and, disregarding all social obligations, to save themselves from "the bog of life." Significant are the words of Tālaputa: "I have vomited forth all desires, loves, hates, and *things of beauty*. For no one else have I done this; it is only for myself I acted thus." Buddha himself abhorred ascetism, but this is the Buddhist's attitude in this "psalm" of Kassapa: "In the whole field of Buddha's disciples, saving the mighty Master's self, I stand the foremost in ascetic ways. No man practices ascetic ways so far as I."

Notes

The Index of the *Nation*, January 1 to June 30, will be printed with the issue of July 2.

The Bobbs-Merrill Company announces that it has in preparation a series of volumes on Childhood and Youth, under the general editorship of M. V. O'Shea.

Included in Small, Maynard & Co.'s autumn list will be the following volumes: Fiction.—"A Lady of Leisure," by Ethel Sidgwick; "Happy Hawkins in the Panhandle," by Robert Alexander Wason; "Of One Blood," by Charles M. Sheldon; "The Golden Blight," by George Allan England. Miscellaneous.—"My Son," by William Carleton; "My Adventures in the Arctic," by Robert A. Bartlett; "Four Plays for Children," by Ethel Sidgwick; "A Practical Guide for Authors," by William Stone Booth; "The Wallace Collection," uniform with "The National Gallery" and "The Louvre"; "Consumption," by John B. Hawes 2d; "Vigée le Brun," by W. H. Helm; "My Memories," by Jules Massenet, translated by H. Villiers Barnett; "Highlands of the French Riviera," by Constance Smith.

WE are informed that a full account of the recent discovery in Egypt by Professor Petrie of the diadem and jewels of Senusert II will be given in the July issue of *Ancient Egypt*. This quarterly, which was started at the beginning of the year, is published by the Egyptian Research Account under the editorship of Prof. W. M. F. Petrie and others. It is excellently illustrated, partly in colors, and its object is to serve as a record of the excavations conducted by the Research Account and to enable those of the public who are interested in Egyptology to keep abreast of the results of modern excavation. The price of the magazine is $2 a year. The American representative is the Rev. W. C. Winslow, D.D., 525 Beacon Street, Boston, to whom subscriptions may be sent and inquiries addressed. It may be added that all connected with the Research Account, both in England and in the United States, give their services without remuneration. It is hoped that a sufficient number of subscribers to the magazine may be obtained to remove the necessity of drawing for its maintenance on funds needed for the work of excavation.

AN innocent compilation is "Modern Short-Stories" (Macmillan; $1.25 net), edited by Margaret Ashmun, of necessity "with an introduction and with biographies and bibliographies." Fortunately, the introduction gives the accepted doctrine of this thrice-familiar *genre* in tabloid form, and the biographies are strictly of the thumb-nail variety. The twenty-one stories, selected on now this and now that basis, include such "up-to-date" exemplars as O. Henry, William Allen White, Jack London, and Selma Lagerlöf. Why, after ranging among Russians, French, Germans, and Scandinavians, the editor fails to include Alarcòn, Roberto, Verga, or any other Spanish or Italian master of this now universal and never-enough-to-be-written-about type, one should not inquire too closely. The earnest reader will at any rate find clear type, fair paper, and a guide who will not fall with him into the ditch.

THE latest translation of Rudolf Eucken's works, by Lucy Judge Gibson (Macmillan; $1.25), is entitled "Can We Still Be Christians?" Fifty years ago, in Colenso's time, the issue raised in this question was the Biblical account of the creation; later it had narrowed to the divinity of Christ; and more recently to the acceptance of Christian ethics as final and unique. Eucken declines to qualify by any of these tests, and by him the issue has been rarefied into a question of believing in the reality of a spiritual world transcending naturalistic forces. For him, as for Royce, the essence of Christianity is a belief in a power greater than ourselves, in the form of a spiritual community, apart from which we cannot rise above the forces of nature. In this belief, expressed in the doctrines of redemption and grace, Christianity stands alone among the religions of the world; and in this sense Eucken looks for the redemption of the world from its present lost state of vulgar naturalism by a "new Christianity," which is to supplant all existing ecclesiastical organizations. Granting, however, that we still can be Christians, it remains to ask why we should still want to be. Even Eucken's pessimism, profoundly comfortable and graceful, relents so far as to discover in naturalism itself some evidence of a spiritual motive. It then turns out that all of us are to some degree Christians who are aught but rank materialists. In that case, the "new Christianity" has apparently nothing to offer beyond the stimulus of a

"movement," and it is something of a question whether the day has not passed when spiritual influences need to be harnessed to a movement.

THE title of Mr. Addington Bruce's "Adventures in the Psychical" (Little, Brown; $1.35 net) is well chosen, as the book consists mainly in the repetition of such picturesque tales as one finds in plenty in the annals of the Society for Psychical Research, borrowed from any handy source. These tales he employs quite uncritically to substantiate his belief in the existence of telepathic communication from one individual to another. He, however, throws no new light on "the mechanism" by which this hypothetical transmission is accomplished.

A TIMELY bibliography on our first war with Mexico has been compiled by Henry E. Haferkorn, librarian of the United States Engineer School (Washington Barracks, D. C.). This is not only a select bibliography on "The War with Mexico, 1846-1848," but also a carefully chosen list of books and other printed material on the resources, economic conditions, politics, and government of the republic of Mexico and the characteristics of the Mexican people. Mr. Haferkorn had the Library of Congress to draw upon, as well as the extensive collections of his own library, and those of the War Department and the Army War College. He has sifted the material with great care, annotated the entries, and prepared a full index. The publication will be serviceable to librarians and to students in general.

WHAT may happen to a bit of rhetoric in translation, first into a foreign tongue and then back into its own, is shown by the rendering of Bryan's famous metaphor that appears in the new edition of Hugo Münsterberg's "The Americans" (Doubleday, Page; $1 net), where it takes this form: "You must not nail humanity to a cross of gold." It seems strange that a translator should have made a slip like this, when, if his memory did not serve him, that of almost any one else would; it is doubly strange that the slip should be preserved in a new edition of the translation. Professor Münsterberg published "The Americans" in German a decade ago, not long after the publication in English of his "American Traits." The latter, by showing us our faults, was to bring about an improvement in us, and better appreciation of Germany and of the similarity of our civilization to that of the land of William II. "The Americans," on the other hand, was to reveal to the Germans our good points. Thus, the two books were to bring about an informal *entente cordiale* between the two nations. But their author was so indiscreet as to announce this rather naïve plan, and, in the end, he had to satisfy our curiosity as to what he had told his own people about us by permitting a translation of the later book. The present edition, since it is merely a reprint, not only keeps such slips as the one noted, but speaks always from the standpoint of 1904. Thus, "the last Presidential election" means, not the one of 1912, but of 1900. This, of course, does not vitiate the general reasoning of the book, which is occasionally illuminated by such fresh pictures as that of George Washington, "the popular, dashing, and yet cautious aristocrat."

THE task of compiling such a work as "A Dictionary of Mediæval Romance and Romance Writers" (Dutton; $1 net), by Lewis Spence, might well appall even the greatest living masters of mediæval literature. But a mere cursory examination of the book before us is sufficient to reveal the slenderness of Mr. Spence's qualifications for the enterprise. Take, for instance, an article of capital importance, such as that on Beowulf. With the Anglo-Saxon epic accessible in numerous modern English translations, it is a mystery why the author should furnish us with a synopsis of the poem that is marred by the grossest inaccuracies. According to Mr. Spence, Beowulf first learned about Grendel's ravages from a wandering minstrel who came from the court of "Hrodgar of Jutland" and who sang about these calamities before the hero at "a feast of victory." But these statements of the writer's are as pure a piece of romance as anything in the poem he is analyzing. One need not be surprised, then, that in the next sentence the "trial of strength with Breka" should be put between the time that Beowulf first heard about Grendel ("who lived in the morass near Hirschalle") and his setting out for Denmark (or Jutland, as Mr. Spence would have it). The article on "Breka" is itself a curiosity. French romance fares no better than English at the writer's hands. In the article on "Lancelot" it is stated, "The original legend of his life and adventures is probably the mediæval prose work entitled *Lancelot*," and then a few lines further on (correctly) that he first appears as Guinevere's lover in the "Chevalier de la Charrette" of Chrétien de Troyes. But the prose "Lancelot" is as much taken up with Lancelot's love for the Queen as Chrétien's poem—it even contains a prose rendering of most of the latter—and, as every student of the subject knows, it is altogether later than Chrétien. Mr. Spence refers to Lancelot's "amours" in the prose romance, as if he thought that that work were a sort of "Amours de Faublas." As a matter of fact, it is a glorification of the hero's fidelity to Guinevere—a fidelity from which he does not depart save when he is tricked in the affair of King Pelles's daughter, in order that he may beget the future victor of the Grail-Quest (Galahad).

JUST one specimen from the article on Chrétien de Troyes. Concerning the sources of this poet, Mr. Spence says: "It is quite likely that Chrétien utilized the works of writers now lost, but it is equally probable that he based his art on traditions sung by minstrels; and be that as it may, the fact remains that sundry manuscript copies of his tales, only preserved in the Bibliothèque de l'Arsenal, are manifestly the earliest manuscripts enshrining stories of Arthur and his knights." Manuscripts of Chrétien are, of course, not confined to the Bibliothèque de l'Arsenal nor even to Paris. Moreover, Geoffrey of Monmouth and Wace "enshrine" stories of Arthur and his knights. Both were earlier in date than Chrétien, and, as regards the unessential matter of the relative dates of the manuscripts which preserve the works of these writers, there is no reason to believe that even here the later poet enjoys any advantage. But what does the confused statement that begins this passage mean? It would be a waste of labor to point out other inaccuracies in this same article, or, indeed, to add anything further to the criticism of this worthless book.

"BEATING Back" (Appleton; $1.50 net), by Al Jennings and Will Irwin, is a true story of the real West, which is also an unusually interesting "human document." Fifteen years ago Al Jennings was a notorious bandit and train-robber in Oklahoma. Before that he had been a cowboy, a law student, a land-boomer, and a practicing lawyer. His career as a "long rider" came to an end with a term in the penitentiary. Since his release he has been "beating back" to success in the law and in politics. The history of such a man is bound to be worth listening to; and it has been extremely well told. In the introductory chapter Will Irwin says that he got Jennings to tell him the story in the presence of a stenographer, and that he has merely revised and "edited" the stenographic record. The narrative is simple and direct, without apologies or attempts at romantic idealization. Al Jennings was a born leader, and the very traits which landed him in jail would, in a cruder state of society, have assured his success. Not only in his emotional violence and promptness in action, but in his simple-heartedness, he seems to belong to an earlier time. More than once, when he is describing some outburst, one thinks of Benvenuto Cellini. Like Cellini, he was at the mercy of the moment's passion, and entirely indifferent to consequences. He is a good representative of the Southern pioneer type. Drifting into outlawry through a family feud, he preserved much of the code of the gentleman. His plucky and successful struggle for rehabilitation after his release proved the stuff that was in him.

THE author of "The Empress Frederick: A Memoir" (Dodd, Mead; $2.50 net) has chosen to remain anonymous, and we cannot but approve of his or her decision. The book is not one to be proud of, though it is free from scandal-mongering and contains some interesting glimpses of ever-watchful (and often mistaken) Baron Stockmar, hovering over the newly married Crown Princess Victoria, of the Prince Consort, writing ponderous "physiological treatises" to his daughter, and of rancorous Bismarck, pursuing the luckless English Princess, almost from the day of her entry into Berlin. She herself, as pictured in the volume, and as she doubtless was in reality, appears as a refined, kindly, and exemplary lady, whose chief defects were lack of tact and inability to adapt herself to the requirements of her position as future Queen of Prussia. It would be

unfair to hold the heroine of this book responsible for the silly rôle which she is occasionally made to play by a gushing biographer, who faithfully chronicles that "the Princess Royal had a long engagement, probably the longest that any lady of her rank has had, at least in modern times, but the months as they went by were occupied with her father's sedulous preparation of her intellect, as well as with the more frivolous preparations of her trousseau," and who tells us (on the authority of the writer Gustav Putlitz) that "the Crown Princess is wonderfully well read; she has absolutely read everything, and knows it all more or less by heart." It is true, we are informed elsewhere that "tho Empress, especially as a young woman, did not care very much for reading, though she was fond of being read aloud to, as are most Royal personages," but such contradictions must be looked for in the lives of those in high station, as told by modern biographers. Still, the volume before us is, on the whole, readable and, being compiled from good sources, is not without a certain value.

UNDER the title of "The Descendants of Jöran Kyn, of New Sweden" (Philadelphia: The Swedish Colonial Society), Dr. Gregory B. Keen has reprinted, with considerable additions, a series of articles originally contributed by him to the *Pennsylvania Magazine of History and Biography* during the years 1878-1883. The family of Kyn, or Keen, shows wide ramifications, such well-known names as those of Cadwalader, Finney, McCall, Montgomery, Wharton, and Willing, with Lord Ashburton and John Jacob Astor, adorning the branches of the genealogical tree. The work has primary interest, of course, for the genealogist, but the historian will also find it a valuable supplement to Johnson's recent "History of the Swedish Settlements on the Delaware." A useful map of New Sweden serves as a frontispiece.

THREE volumes, "De Jure et Officiis Bellicis et Disciplina Militari," by Balthazar Ayala; a translation of the same, by John Pawley Bates, and "De Jure Belli ac Pacis," by Hugo Grotius (Carnegie Foundation of Washington, D. C.), are the first of a series of classics of International Law which are to be republished by the Carnegie Foundation, under the editorship of Dr. James Brown Scott, Secretary of the Carnegie Endowment for International Peace. Volume One contains a photographic reproduction of the first edition of Ayala's treatise on the Law of War, with an interesting introduction by John Westlake. The second volume consists of an excellent translation of the original, and in the third is presented a photographic reproduction of the edition of 1646 of Hugo Grotius's great work on the Law of War and Peace. This will be followed by a translation of the text by John D. Maguire.

TWO other treatises by Grotius will be republished, "De Jure Praedae Commentarius," prepared 1604-5, and "Mare Liberum," published 1609. At a later date, and in separate form, a general introduction to the three will appear, in which the relation of Grotius to his predecessors will be shown, as well as his influence upon the development of international law. While the masterpiece of Grotius will be the central point in the series, we are assured that "the works of his leading predecessors and successors will likewise be included." Indeed, the term classic is to be applied in a broad sense so as to include every work which has been a real contribution to the development of international law. One of the reasons for republishing these classics is to provide a supply for public and private libraries in this country. Ayala's treatise has been heretofore available to but few students and many of the writings of Grotius are almost unknown, even to persons who are learned in international law. The Carnegie Foundation, therefore, is rendering an important public service in popularizing these great classics. The form in which they appear is worthy of the endowment which sends them forth, and bears additional testimony to the artistic taste of the distinguished bibliophile who is their general editor.

THE Peabody Museum of Harvard University has recently published as No. 3 of Vol. V of the Memoirs, "A Preliminary Study of the Pre-Historic Ruins of Nakum, Guatemala," by Alfred M. Tozzer. Nakum, discovered by Count Perigny and partially cleared by him, was visited by the Museum Expedition of 1909-10. Although containing ruins of considerable extent and situated near Tikal in Peten, the region of the oldest Maya culture, Nakum proved to be remarkably poor in hieroglyphic inscriptions. Fifteen stelæ and eleven altars are reported by Dr. Tozzer, but only three of the stelæ and none of the altars showed any carving. One stela contained an inscription consisting of nine double glyphs arranged in a single vertical line, but no dates could be made out. On another stela, now fallen and badly broken, was a finely carved head-dress. Dr. Tozzer inclines to the belief that the failure to find carved decoration on the Nakum monuments would seem to indicate that some form of painted design had formerly adorned the smooth faces of the stelæ and altars. Following the custom of recent Harvard expeditions to Central America, it was the object of the expedition to Nakum to search for monuments and buildings bearing sculptures and hieroglyphic inscriptions, rather than to make excavations. Consequently, as an addition to American archæology, the report is disappointing except from the point of view of architecture, where it maintains the usual high standard set by the Museum Memoirs. Unfortunately for the pictorial results of the expedition, there is little at Nakum to show the Maya fondness for architectural decoration. "The façades are almost entirely plain, broken by a simple medial moulding. The cornices are usually quite as undecorative as the mouldings, often no more than the simplest of string courses." The few shards which are figured, and which were found near the level of the ground, are so interesting that one wishes more time had been spent in procuring others. The heliotype plates give an excellent idea of the difficulties under which the explorers had to labor, but it is a pity that more pains were not taken to clear the ground of the forest refuse. The drawings in the text are moderately satisfactory, although figure 95, "Portion of Head of Old Woman," looks more like the head of a camel or a very cross burro!

WE comment elsewhere upon the death of Baroness Bertha von Suttner, which occurred on June 21, in Vienna. Baroness von Suttner was born in Prague in 1843, the daughter of the Austrian Field Marshal, Count Franz von Kinsky, and married Baron Gundaar von Suttner in 1876. Her book, "Ground Arms," which was published in 1890, gained for her the Nobel peace prize which she herself had been largely instrumental in establishing when she was secretary to its founder, Dr. Alfred B. Nobel. Baroness von Suttner was honorary president of the International Peace Bureau, in Berne, Switzerland, and was a member of the advisory council to the Carnegie Peace Foundation. In addition to "Ground Arms," she was the author of "The Age of Machinery," "Martha's Children," "Letters to a Dead Man," "The Great Thoughts of Humanity," and "The Romance of an Author."

PROF. JOHN R. S. STERRETT, the eminent archæologist and head of the department of Greek at Cornell University since 1901, died on June 16. He was born in Rockbridge Baths, Va., on March 4, 1851, and was educated at the Universities of Virginia, Berlin, Leipzig, Athens, and Munich. He received the degree of Ph.D. from the University of Munich in 1880, and the honorary degree of LL.D. from Aberdeen in 1902. Professor Sterrett had been leader of various archæological expeditions in Asia Minor, and was professor at the American School of Classical Studies at Athens, 1896-7. He was joint editor of Cornell *Classical Studies*, and associate editor of the *American Journal of Archæology*, and recently had edited and translated the "Strabo" for the Loeb Classical Library. Among his publications are: "Qua in re Hymni Homerici quinque majores inter se differant," 1881; "Inscriptions of Sebaste"; "Inscriptions of Assos," 1885; "Inscriptions of Tralles," 1885; "Epigraphical Journey in Asia Minor," 1888; "Leaflets from the Notebook of a Travelling Archæologist," 1889; "The Torch-Race," 1902; "The Iliad of Homer," 1907; "A Call of Contemporary Society for Research in Asia Minor and Syria," 1911.

BENNET BURLEIGH, the war correspondent, who had been on the staff of the London *Daily Telegraph* since 1882, died on June 16, at the age of seventy. Mr. Burleigh was born in Glasgow, Scotland, and fought in the Civil War in this country on the Confederate side. He was twice captured and sentenced to death by the Northern troops. He was Central News correspondent throughout the first Egyptian war, being present at Tel-el-Kebir, and represented the *Daily Telegraph* in the second phase of the same war. He was in the French campaign in Madagascar and accompanied the desert column from Korti to Metammah in 1884, being present at the battles of Abu Klea and Abu Kru, and receiving mention in

dispatches. Other campaigns in which he took part included: The Ashanti expedition, the Spanish Riff campaign, the Greek war, the Atbara expedition, when he was present at Omdurman; the South African war; the Somaliland war; the Russo-Japanese war, and the Italian campaign in Tripoli. He was the author, among other works, of "Two Campaigns" and "Empire of the East."

NOTES FROM ABROAD.

TWO years ago something of a stir was made in English political circles by the biographical sketch of King Edward VII, published in a supplementary volume of the Dictionary of National Biography. The writer, Sir Sidney Lee, aroused no little comment by his story of the strange hot-house methods adopted by Queen Victoria and the Prince Consort for their son's education, and by his frank recognition of certain disqualifications from which the late King suffered when he came to the throne. That this article should have been written with the approval of the Court was a notable sign of the times, especially when one remembers the indignation shown by Queen Victoria at the freedom of the Greville Memoirs. So far from having any black marks recorded against him for his dictionary article, Sir Sidney has received official sanction for the preparation of a full-length biography of the same subject.

THERE came into force in England on June 9 a new code of rules relating to procedure *in forma pauperis*. One provision raises the income limit under which a litigant may avail himself of this procedure. It is further provided that, if such a litigant is successful and recovers a substantial sum, his solicitor may receive payment for his trouble. As originally drawn up, the new rules provided that the barrister should be paid also, but the Bar Council raised the objection that, by the etiquette of the profession, counsel's fee on a brief must be fixed beforehand. Barristers undertaking these cases must, therefore, do their work for nothing, and a panel of qualified persons willing to render this service has been prepared. An important feature of the new rules is that, unlike the old, they will apply to the Divorce Court, and will thus make that court accessible to poor persons, who hitherto, for reasons of expense, have had to be content with separation orders granted by the magistrates. With the object of still further diminishing the handicap from which poor litigants suffer, a public fund is about to be started, with high legal sanction, for the assistance of those who, even with a free lawyer to help them, are debarred from seeking redress in the courts through the difficulty of finding out-of-pocket expenses, *e. g.*, the railway fares of their witnesses.

THE rank and file of Liberal politicians are becoming more and more uneasy at the prospect of heavy losses through three-cornered contests at the next English general election. The leaders of the party are hoping to effect some arrangement with the Labor leaders by which certain progressive seats shall be apportioned to Liberalism and others to Labor. This policy, however, is likely to be extremely difficult to carry through, owing to the strength of local feeling on both sides. The very attempt at conciliation only increases the friction in many constituencies. It is widely believed that the only satisfactory solution will be some measure of electoral reform—whether by proportional representation, or alternative vote, or second ballot—but, so far, no one of these schemes has been able to command anything like unanimous support.

TEMPERANCE reformers in Great Britain, in their desire to shorten the legal hours of "the trade," have usually attempted to effect the earlier closing of the saloons at night. A new Scottish Temperance act begins at the other end by compelling them to keep shut in the morning until ten, instead of eight, as hitherto. The innovation came into force at the beginning of June, and appears to have aroused little objection, even in the shipyard district of Glasgow. The prediction that men would stay away from work until the public-houses were opened has not been fulfilled. The police are keeping an alert lookout against the possibility of shebeening.

SEVERAL British scientists hope to turn to profitable account the weeks that will be occupied by their journey to the British Association meetings in Australia. The Ascanius, by which a party of seventy will leave Liverpool on June 22, will be fitted up with biological laboratories. Prof. W. A. Herdman will make an intensive study of the plankton, and Professor Duffield will carry out researches to test how gravity varies over the deep and shallow parts of the ocean, with a view to distinguishing between rival theories accounting for the conformation of the earth's surface.

THE University of London is establishing a Chair of Town Planning, whose occupant will work in coöperation with the professors of architecture and municipal engineering. The new professor, besides giving lectures and holding classes, will supervise the town-planning work of regular students in the drawing office and will organize the summer school of this subject, to be held this year from August 1 to 15. No less than two hundred town-planning schemes are at present under the consideration of the Local Government Board.

AT the end of the Avant-propos of the sixteenth volume of "L'Empire Libéral," the author, the late Emile Ollivier, wrote: "I supplicate his Majesty Death to accord me the time to finish this work; then I will follow him docilely, without complaining, and in perfect confidence, for I am sure he will lead me where it is good that I should go." These words were written in 1912, and M. Ollivier continued to labor incessantly on his task until a month before his death, last August. The forthcoming seventeenth volume, which will end this long series, and which closes with September 4, 1870, the day of the declaration of the Third Republic, was one of the four or five volumes written some fifteen or twenty years ago; for when M. Ollivier started on this undertaking, he wrote first the last part of the period to be treated, with which he was more familiar, and with which he had been more intimately connected. But before sending any of the volumes to the printer, he went carefully over the manuscript, practically rewriting them. He was in the midst of this revision of the seventeenth volume, when overtaken by death. "You will find it all ready for the press," he would say to his faithful wife, amanuensis and collaborator, as he felt his strength gradually failing him. He was mistaken in this, however. The very end is lacking. Though a thorough search has been made among all his papers, the closing chapter, devoted to Sédan, when the curtain was finally rung down on the Second Empire, can be found nowhere, and the volume will be published in the autumn in this truncated form. In the meantime, the *Revue des Deux Mondes* will print two or three articles, as was done with the preceding volumes, taken from the pages of the future book.

THE management of the National Gallery, better known as the Corsini Gallery, in Rome has for some years past adopted the custom of periodically organizing special exhibitions of the works of different artists. They have now arranged an interesting show of the paintings of Michelangelo da Caravaggio, the most realistic Italian painter of the end of the seventeenth century. The occasion was the gift of the picture known as Narcissus at the Font, presented to the gallery by a Russian diplomat, M. Khvostchinsky, and they have collected in the three print rooms a number of other works by the same master scattered among the various public and private collections of the city. The Narcissus represents a young man in a page's costume gazing at his own image in a pool, and so disturbed at the sight that he tries to efface it by stirring up the water. Of the other pictures now on view the most important are the Magdalen and the Rest in Egypt, from the Doria collection; the St. Anthony, from the Church of SS. Cosma and Damian the Anchorite, from the Capuchin Church in Via Veneto; the Madonna dei Palafrenièri, from the Borghese Gallery; the portrait of Paul V, lent by Prince Borghese, of which a replica presented by that Pope himself is in the possession of the Mikado, and a number of works already in the Corsini Gallery.

A VOLUME entitled "Camillo Cavour e Mélanie Waldor" has just been brought out by Prof. Francesco Ruffini, who has been entrusted by the relatives of Count Cavour with a large number of the statesman's private papers. In it we are shown Cavour in a new and unexpected light, that of a hero of a love romance. The novel in question is "Alphonse et Juliette," which appeared anonymously in Paris in 1839, and caused a considerable flutter in the fashionable and literary circles of the French capital, being obviously a *roman à clef*. Signor Ruffini has proved that the author was Mélanie Waldor, a lady for whom Cavour had conceived a great passion, and that Cavour himself was the hero.

Science

PRIMITIVE MAN.

Prehistoric Times, as Illustrated by Ancient Remains and the Manners and Customs of Modern Savages. By the late Rt. Hon. Lord Avebury. Seventh and revised edition. New York: Henry Holt & Co. $3.50.

The latest edition of this classical work enjoys the unusual distinction of having been finally revised by the author fifty years after it was originally written. One of the first of Lord Avebury's extended works, it was thus essentially his last, and it is presumably as perfect as he was able to make it. Treating of a fascinating theme, written in a direct and befitting style, admirably printed and illustrated, with typographical errors generally eliminated, this standard treatise on man in his earliest and humblest estate goes far towards bridging the gap between biology and civic history, even if it does not accomplish the impossible feat of converting archæology into history itself.

One can but reflect that this latest issue of "Prehistoric Times" will be greeted by a very different audience from that which was startled or even scandalized by Lyell's "Antiquity of Man," in 1863, but two years before the début of Lord Avebury's work. The tide of protest and dissent was then rising against the new Darwinian concepts, that Lyell had strongly endorsed, and Archbishop Laud's chronology was in force in all the schools. This latter anachronism survived to a much later day, when schoolboys were taught to head their lists of historical dates with the "Noachian Deluge in 2348," and the "creation of man in 4004 B. C.," some jovial spirits, we believe, adding even the day of the week, and the hour.

The present and prevailing attitude of man towards his own history is a register of the remarkable accommodation in thought which has been effected in the past fifty years. That it is a legitimate and fruitful attitude the advances in prehistoric archæology, as recorded in this work, to speak of no other science, bear unimpeachable witness. We are no longer startled to hear that the negro was living in Africa when the Sahara Desert was a great inland sea, that man has dwelt in northern France nearly or quite as long as its rivers have been cutting their channels to the ocean, that man or semi-man was using rude stone tools in the Miocene Period of the Tertiary Age, at a time so remote that every other contemporary mammal has become extinct, that the age of man, as *man*, upon our earth is probably to be measured, not by thousands, but by hundreds of thousands of years, while for life in general upon our planet, one hundred million years is regarded by the author as a conservative estimate. "In fact," says the judicious Avebury, "all the evidence of geology seems to me to indicate an antiquity of which we are but beginning to form a dim idea." "Our belief in the antiquity of man," he continues, "rests not on any isolated calculation, but on the changes which have taken place since his appearance," and more especially changes in the geography, the fauna, and the climate of Europe, where early man has been more successfully studied; yet it is only in those parts of the earth that possessed a tropical climate that we can expect to find, if at all, the earliest traces of man's immediate ancestry.

When it is considered that primitive man has left to posterity not alone his bones, but in many cases his dwellings, his tombs, his temples, and fortifications, besides a vast store of tools and ornaments, the progress of knowledge in this fascinating field of research is not so surprising. Modern man seems to have discarded every one of those primitive implements save the club, and nearly every ornament but the safety-pin, which was an invention of the Bronze Age, and which, therefore, according to Lord Avebury's calculation, might be from five thousand to seven housand years old.

Little is known of man, or his ancestry, in Tertiary times, excepting that the relics of his workmanship at that most remote epoch are generally so rude as to be hardly recognizable as tool or weapon, that he led a social or communal life, and that he matched his brains with the brawn of the big beasts of his day and won. To follow his history through the more certain Palæolithic Period of the Drift, when he slew and ate the cave-bear and the mammoth, the rein-deer and the woolly rhinoceros, and protected his body from the cold of the glacial climate with their skins, through the later Neolithic Age of polished stone, and the subsequent ages of Bronze and Iron, to more modern times, is the task which the author has performed in his admirable style.

In the Palæolithic or early stone age people sought no better habitations than the caves carved by the hand of nature along the courses of rivers or by the sea, and they knew no metal but gold; many thousands of years were required to learn to polish and perforate their rude but effective implements, and many more thousands were needed to discover the value and use of copper, one of the most abundant and most easily worked of all the metals. The Bronze Age, which began in its first period with the use of this metal alone, is thought to date from 5,000 B. C. in the East, but from 2500 B. C. in Western Europe, so slowly did the knowledge of nature and the arts diffuse among primitive men.

Early civilization, when viewed in the light of existing remains, seems to have followed with remarkable precision the rise of the arts of extracting and using the metals. Though gold was early valued as an ornament, it yielded to copper in real importance to primitive human needs. Tin was probably sought on account of its weight, and in times of scarcity it might have been added to the copper to supply the necessary weight, thus, as the author suggests, leading to the discovery of bronze, an alloy that would be seen to possess different and most useful properties. No tin weapons have ever been found, and those of pure copper are very rare.

When Columbus reached the New World, Central America was still in the Age of Bronze, while the less-advanced Indians far to the north were in an age intermediate between that of stone and copper, since some of them used native copper as a stone, working it cold. The potter's wheel, an invention of the Iron Age in Europe, was unknown to them, as it was to the Mound Builders whom they had supplanted, and who resembled the more advanced Indian tribes. Iron was then unknown in America except to a people living near the mouth of the River La Platte.

The archæologist often digs deep into the dust-bin of time to find only a few scattered objects that had been casually lost, or ravishes an ancient tomb that yields him rich and important data, but fortune actually smiles upon him when he discovers a genuine hoard; this may consist of treasures once hidden away and lost, or of the entire stock in trade of some primitive workman, his workshop forsooth, with all its contents. The greatest of all such hoards was discovered in 1877, when in the course of digging for a sewer in the streets of Bologna a great vase of bronze was encountered, containing no less than 14,800 objects in that metal and three small bits of precious iron.

The ores of iron being less striking in appearance than those of copper, and the metal far more stubborn than bronze, the art of working it was long delayed. The Romans found the inhabitants of northern Britain well equipped with iron weapons, set with bronze handles, and Lord Avebury thinks that they had been using this metal there for nearly a thousand years, its earliest known use beginning in the East and in Southern Europe as early at least as 1500 B. C. Very plausible is the suggestion that some primitive man may have used a lump of iron ore as one of the enclosing stones of his hearth, where, meeting with a strong blast and the necessary charcoal, the metal was thus casually produced, and this unlet-

tered savage, being more observant than his fellows, turned his epoch-making discovery to good account.

That palæolithic man of the Quaternary Period had some taste and skill in the graphic arts has long been known, as proved not only by his sculptures and engravings on stone and bone, but by the numerous and excellent colored pictures which were executed on the walls of his cave-dwellings. Some of the most notable of these wall decorations were found in the cave of Altamira, in Spain, nearly forty years ago, and later at Combarelles, in France, where sixty-four figures of entire animals and forty-three heads were to be seen, representing horses, bison, reindeer, the mammoth, the ibex, and the antelope. Still more recently the caves in the classical locality of Les Eyzies, and of Font-de-Gaume, in Dordogne, have yielded an even longer, if not more famous, series.

The earliest actual remains of man yet discovered in northern Europe pertain to three well-marked races or types, the Neanderthal, the Cromagnon, and Chancelade, of which the first was pronounced by Professor Huxley to be the "most pithecoid of human crania yet discovered." Still a fourth race, of the negroid type, and resembling the Bushmen or Hottentots, has been disclosed by the interesting caves of Grimaldi, near Mentone, close to the Mediterranean Sea, where sixteen skeletons were recovered, and two of them were nearly complete. As to the famous Pithecanthropus skull, found in Java, and at a depth of thirty feet in gravel, of either Pleiocene or Pleistocene age, Lord Avebury was in doubt "whether it should be described as that of a large gibbon, or as belonging to a man of a very small and distinct race." But, excepting this fragment, most ape-like of all such remains are those recently unearthed at Piltdown, in Sussex, England. "The lower jaw," in this instance, says Lord Avebury, "if found by itself, would certainly have been referred to an anthropoid ape, though the teeth are decidedly human." The skull is extremely thick, and the brain, as indicated by a cast that it was possible to secure, is so inferior as to imply little or no powers of articulate speech, and though more man than ape, one naturalist has regarded it as representing not only a different species, but a different genus.

The author, as is well known, finds many a text in the life of the modern savage to illustrate the history of primitive man, and the four concluding chapters, which deal with these analogies, abound in interesting and pertinent comment. "The Van Diemaner and the South American," says the author, "are to the antiquary what the opossum and the sloth are to the geologist."

Drama

THE LONDON SEASON.

AMERICAN PLAYS IN ENGLAND—ZANGWILL'S "PLASTER SAINTS"—THE IRISH PLAYERS—"COMMAND" PERFORMANCES.

London, June 9.

The Providence which placed Manhattan Island in the latitude of Gibraltar or thereabouts seems to have had a special eye to the development of an Anglo-American drama. For, just when the heat-waves begin to flow over New York and drive people to the coast, to the mountains, or to the roof-gardens, the British summer, setting in with its usual severity, gathers all the world to London for "the season." The result is that London adds a supplementary ten weeks to the twenty-five or thirty weeks of the New York theatrical year. Mr. Cyril Maude, having run "Grumpy" in New York to the verge of the close time, can bring it over to England and find a fresh set of audiences eager to welcome his senile Sherlock Holmes. "Potash & Perlmutter" can renew on Shaftesbury Avenue their Broadway popularity; and American visitors, having, so to speak, drained the New York season to its dregs, can easily arrive in time to skim the cream of the London season—not this year a very rich cream, it must be confessed.

The success of the two plays above mentioned shows how little "the cold interposition of the sea" really counts in things theatrical. What could be more English than "Grumpy"? Yet it drew all New York. What more American than "Potash & Perlmutter"? Yet all London is talking of it and flocking to it. Every now and then an American manager, disappointed in some speculation, raises a bitter plaint as to a "conspiracy" in England against American productions. Nothing could be more chimerical. The taste of London is not exactly the same as that of New York—no more is the taste of Boston or of Chicago. Productions that have caught the fancy of New York will now and then fall flat on this side—sometimes for obvious reasons, sometimes for no reason that can easily be assigned. But the notion that there is any general prejudice against American plays, either among the critics or the public, is absolutely unfounded. Americanism, so long as it is comprehensible, is an added attraction rather than the reverse. Some sorts of Americanism are incomprehensible—for instance, it is no use sending us a baseball play, for neither the language nor the feeling can awaken any general response. But where we understand we are quick to appreciate; and American plays performed by American actors have a much better chance than if important parts are taken by English actors. Indeed, the difficulty of duplicating the American performance is a serious check to the popularity of American drama in England. I could name several New York productions of recent years which would have had a great success in London could they have been transported, stock, lock, and barrel, across the Atlantic. But, as this could not be arranged, they either were not presented at all, or, being presented, failed.

The three P's—"Pygmalion" and "Potash & Perlmutter"—are, I fancy, the only marked successes of the present season. "My Lady's Dress," by Mr. Edward Knoblauch, at the Royalty, seems, however, to have survived the rather frigid reception accorded to it by the critics. It is a harmless dream-play, illustrating, in half-a-dozen detached episodes, the lives of the people who have contributed to the production of a three-hundred-dollar dinner gown. The heroine (Miss Gladys Cooper) and her husband (Mr. Dennis Eadie) impersonate in turn the leading characters in the different playlets. No attempt is made either to present the shifting, elusive dream-atmosphere, or to give the episodes any clear sociological import. Whatever success the play may achieve will be mainly due, I imagine, to the last act, which illustrates briefly and poignantly the hard fate of a Bond Street "mannequin."

At Wyndham's Theatre Mr. Alfred Sutro (greatly aided by Mr. Gerald Du Maurier and Miss Marie Löhr) has achieved a fifty-night run with "The Clever Ones," a very light comedy which is supposed to satirize the affectations and extravagances of feminine "intellectuals." The types presented are not very recognizable; but there is some humor in the intrigue, which shows how a young man of great wealth and irreproachably commonplace opinions pretends to be a workingman anarchist in order to win the heart of a pedantic Girton girl, who is in revolt against all the social conventions. Mr. Jerome K. Jerome has scored an undisguised failure with "The Great Gamble" at the Haymarket. It interwove a rather futile comic plot with a rather foolish idyllic underplot. There was, however, some humor in its character-drawing, a good deal of charm in its setting, among the firs and silver birches of the Black Forest.

A much more ambitious play than any of these is Mr. Zangwill's "Plaster Saints," which has succeeded "The Melting Pot" at the Comedy Theatre. Its theme is practically that of the late Harold Frederic's powerful novel, "The Damnation of Theron Ware"; but in Mr. Zangwill's version it might rather be called "The Salvation of Rodney Vaughan." The clerical protagonist,

esteemed, eloquent, middle-aged, and married, has seduced his typist, with unfortunate but not unforeseeable results. By a course of brilliant and enthusiastic lying, he almost, but not quite, prevents the discovery of the intrigue. When it comes to his wife's knowledge, she, poor, simple woman, thinks that he ought to resign his pastorate and the leadership of a White Slave Crusade. He is at first quite sincerely shocked by this narrow view, urging that he is now better qualified than ever to denounce sin, since he now knows what he is talking about. Eventually, however, he does step down from his pulpit and devote himself to the service of God in some lay capacity. The play is ably put together, and contains some "strong" scenes, but is, I think, below Mr. Zangwill's best intellectual level. I am confirmed in this opinion by the fact that it has elicited warm commendation from Mr. Hall Caine.

The Irish Players, at the Court Theatre, are having a fairly successful season, yet not so successful as they deserve—they ought to have crowded houses every night. It happens that I have not seen them for several years, and rumors had reached me that they had deteriorated. I can find no justification for this report. Their art seems to me as sincere, as simple, and, within its limits, as appealing as ever it was. Perhaps my love of the brogue, and the exquisite syntax that goes along with it, renders me over-sympathetic; but where, I wonder, has there been such a Peasant Theatre in the world before? The actors, I fancy, are townsfolk rather than peasants, but they have studied the peasant and know how to reproduce him—and her—with delicately faithful art. And their modest, seemly little theatre in Dublin has had the luck to gather round it rare poets, strong, unsophisticated realists, and original, racy humorists—all the factors, indeed, that go to the making of a fine dramatic literature. Or rather (let me be accurate), all the factors but one—for a dialect theatre cannot extend its portrayal and criticism of life into the domain of wealth and culture. The drawing-room, after all, has as good a right to be mirrored on the stage as the cottar's cabin. But a generation which has almost stifled in the close air of the conventional stage drawing-room cannot be too grateful to the artists who lead them "back to the soil" in the Irish Theatre.

The principal novelty of the present season has been a tragic play, "The Supplanter," by Mr. J. Bernard McCarthy, reported to be a rural postman. It shows how a widow woman, owner of a prosperous farm, disregarding the entreaties of her only son, marries a drunken ruffian; how prosperity at once deserts the household, and how the stepson, constantly insulted and robbed by the stepfather, is at last goaded into killing him. Certainly it is not a great play; it deals with very simple characters, and its technique is purely instinctive; but the very absence of complication and artifice renders it, within its limits, a work of true and delicate art. Profounder in its tragedy is "Maurice Harte," by Mr. T. C. Murray, now some two or three years old. It portrays the ruin wrought in a peasant household by the parents' insensate ambition to force their eldest son into the priesthood, in spite of his lack of vocation. The theme is one of profound significance, and it is treated with an admirable mingling of humor and pathos. For the rest, the company has been relying mainly on such ever-welcome material as "The Playboy of the Western World," "Kathleen-ni-Houlihan," and Lady Gregory's delightful drolls. For my part, I have never found more to admire in the work of this brave little band of artists.

Thanks to the suffragettes—or "outragettes," as they are now called—you have perhaps heard in America of a royal "command" performance which took place a couple of weeks ago at His Majesty's Theatre, in aid of a theatrical charity. All the leading actors of the day vied with one another to take part in the brilliant function. And what, think you, was the classic chosen for ennoblement by the flower of England's histrionic genius in the august presence of Majesty? Was it, perhaps, "Julius Cæsar" or "King Henry IV" or "King Henry V" or even, say, "The School for Scandal"? No, it was one of Mr. Henry Arthur Jones's early melodramas, "The Silver King"—a stirring play of its class and time, but without the smallest pretension to intellectual or literary quality. In one respect, however, this choice was a welcome innovation; for Mr. Jones is, after all, a living playwright, whereas the works hitherto chosen for such occasions have always been either "Money" or "London Assurance"—dead plays of the very deadest period of English theatrical history. Could anything be more tragi-comic than the idea of entertaining the German Emperor—the owner of five great theatres where all the German classics (including Shakespeare) are constantly performed—with a scratch representation of such a piece of antiquated fustian as "Money"? It is a serious scandal that the court should never by any chance betray the slightest consciousness that a revival of English drama has been one of the most conspicuous features of the Edwardian and Georgian period. Of the King himself I desire to speak with the sincerest respect. He is a brave man, doing his arduous and difficult duty with admirable devotion. It is no part of his duty to possess dramatic knowledge or insight. The scandal is that the functionaries of the Lord Chamberlain's department, to whom is entrusted the censorship of the stage, and who ought to guide his Majesty in the proper exertion of the influence he possesses, or might easily possess, should show themselves so cynically careless of the interests of the living drama. It is, of course, a gross abuse that entrusts a junta of court officials with autocratic power over the stage; but since the unwisdom of our ancestors has so ordered it, they might at least show some little sense of the responsibilities which go with autocracy.

WILLIAM ARCHER.

Dunmow, in Essex, famous for its matrimonial flitch of bacon, is the home of a growing literary and artistic colony, whose members are starting a "neighborhood theatre." The actors, as well as the stage decorator, are local residents. Just now they are giving a play, "The Furriner," in which almost all the characters are required to speak the Essex dialect. Among the leading assistants in this experiment are S. L. Bensusan, the author of this play, and J. W. Robertson-Scott, who, under the pseudonym of "Home Counties," is well known as a writer on the English village life of to-day.

The great vogue of the picture palace in England has led to the formation of an Educational Kinematograph Association, on whose committee several leading educational and social welfare societies are represented. The difficulty with so many of these shows is that films not bad enough to be prohibited by the censor may still be objectionable in their influence on children. Reports from school inspectors and teachers give convincing testimony of the injurious effect of the new habit, not only on the eyesight of boys and girls, but on their interest in their school work and on their moral sense. Besides doing what it can to eliminate undesirable pictures, the Association will develop plans for the use of the kinema in schools. At Rochdale already the local educational authorities arrange matinées for the children.

Brandon Thomas, the playwright, who died in London on June 19, was born in Liverpool on December 25, 1856. He was trained as a civil engineer, but in 1879 abandoned that profession to go on the stage, where he had a successful career for twenty-eight years. He toured America in 1885, in the company of Rosina Vokes. Brandon Thomas, however, was better known as an author than as an actor. He wrote a dozen or more comedies, the first one being "Comrades," produced in 1882, but his most successful play was "Charley's Aunt," of "still-running" fame, which was originally produced at the Royalty Theatre, London, in 1892, with W. S. Penley in the leading rôle, and which ran continuously for four years. The play has been frequently revived, and has had many thousand performances in all parts of the world and in numerous languages.

Music

PROBLEMS, PUBLIC AND INDIVIDUAL.

Studies in Musical Education: History and Æsthetics. Eighth Series. Hartford, Conn. $1.60.

Cincinnati has for many years held a prominent place among the musical centres of this country. The steps by which it reached its eminence are described by Frank R. Ellis in the opening pages of the "Papers and Proceedings of the Music Teachers' National Association" for 1913. As far back as 1835 Harriet Martineau was impressed by noting how the spirit of Mozart "swayed and inspired a silent crowd" in a place which had not long before been "a canebrake, echoing with the bellow and growl of wild beasts." A Handel and Haydn Society was organized a decade later, and when Theodore Thomas began his May festivals in 1873 there was at his disposal a trained choir of 2,000 voices. Ever since that time Cincinnati has been noted for its festivals, which are self-supporting. Reuben R. Springer gave the city a Music Hall and an organ which at that time was the biggest and finest in the country. Add to these the local Symphony Orchestra and the College of Music, and we have the chief factors which together made musical Cincinnati famous. Mr. Ellis does not attempt to explain why this same city refuses to patronize performances given within its walls by first-class visiting opera companies.

Another retrospective article in this volume is concerned with the early history of public-school music in the United States. Here again Cincinnati plays a leading part. It was in Ohio and New England that the earliest interest in public-school music seems to have developed. In Massachusetts, Lowell Mason looms up large. The history and work of the Schola Cantorum in Rome, which preserved its identity and organization unbroken for almost eight hundred years, is told by Charles Winfred Douglas. The ideals of this school, which were disseminated among bodies of similar name throughout Europe, are worthy of the serious attention of all choral organizations in our country.

"Class and Private Lessons for Singers" and "The Singer's Control of Speech" are the titles of two other papers of interest to singers included in this volume. Five papers are devoted to public-school problems; several others, to the standardization of music teaching and music examinations in France. Johannes Miersch, of the Cincinnati College of Music, relates that at the National Conservatory in Paris there is a preliminary examination at which all the pupils play the same piece, their performance deciding whether they are to be admitted to the final test. This occurs in the month of July; he remembers a *concours* on a day when the thermometer rose to 105 degrees in the shade, "when the long hours of waiting for one's turn, which might be No. 1 or No. 39, became physical and mental torture."

Arthur Farwell, who for several years was Supervisor of Municipal Concerts in New York, contributes a paper in which he discusses the problem of how to reach with the best music the 95 per cent. of the people who are not able to attend expensive concerts. The present system of municipal concerts is one of the results of the Gaynor Administration. Band concerts are given in some thirty parks in different parts of the city, and in Central Park there are orchestral concerts. Mr. Farwell expresses the opinion that if there were several great orchestral centres, with proper acoustic conditions, they would accomplish more for the people that is worth while than is done by a number of concerts by small bands producing "the old war horses and trivial modern novelties." He is anxious to have such things kept from the orchestral programmes. "The mood of almost religious exaltation and serenity which prevails at these concerts would make ragtime seem ridiculous and even sacrilegious." Perhaps Mr. Farwell, like many others, overrates the inborn musical intelligence of the masses.

The trend of modern composition is described in a trenchant article by Edgar Stillman Kelley. When he was a student at Leipzig Carl Reinecke once said to him: "Some composers begin to modulate before they have established a key," which, of course, "destroys the pleasure derived from contrasting key-colors." The latest of the progressives abolish keys altogether, as they do melody and concord. Some of them, so it is said, insist that our large cities and factories create such a variety of interesting noises that mere musical sounds no longer excite the slightest emotion. This may be persiflage—but one cannot tell, in these days of musical anarchy. One thing all the "futurists" lack—the art of creating melodies. They remind Professor Kelley of the princess who had "the ability to say nothing in seven languages."

On the most important of all musical questions—that of expression—new light is thrown by two papers on "Musical Editing," by Waldo S. Pratt and W. J. Baltzell, and one on "Musical Interpretation," by Mary Venable, who explains, among other things, why Hans von Bülow forbade the use of his own editions of the classics to his pupils. Mr. Baltzell calls attention to the need of caution in buying music. Much of it is carelessly marked by the composers and needs editing, while a very large proportion of the remainder is what has been called "music engraver's phrasing"—a symmetrical and uniform series of slurs of a measure or two in length, absolutely at variance with the construction of the composition. For this reason he has no faith in the scheme of bringing out an edition of classical and modern works without any editing whatever. What, in his opinion, would be desirable is the appointment of a committee to consider the question of uniformity in the use of signs of musical expression, to be submitted to American publishers for their acceptance. It is to be hoped that this will be done.

We have touched on a few only of the more important questions discussed in this suggestive volume. Copies of it may be obtained of Waldo S. Pratt, Hartford, Conn. HENRY T. FINCK.

A fund is being raised in London to purchase an annuity for Alfred Forman, who translated "Tristan" and "Parsifal," and whom Wagner addressed as "noble friend," but who now finds himself retired from a long career in the service of the Post Office without a pension or other means of subsistence. The subscription list is headed by the Earl of Dysart, at whose residence (Ham House, Richmond) the Wagnerites used to congregate on Sundays a generation ago.

The surprise of the Drury Lane opera season has not been the success of the Russian operas—which was generally anticipated—but the enthusiastic reception given to "The Magic Flute." The spectators are described by one of the critics as behaving like so many Mozart experts. "One could feel their settling down before some famous aria, then listening with rapt attention, and, at the close of the aria, relapsing with a slight rustle and waiting till the last note in the orchestra died away before breaking out into noisy clapping of hands." The unexpected popularity of this opera is believed to be due to the excellence of all its performers, including the musicians in the orchestra, which is particularly efficient in the strings.

Parisians had an opportunity a few weeks ago to hear Richard Strauss at the piano during a whole recital. It was given by Franz Steiner, who sang eleven of Strauss's songs, two of which, "Wiegenlied" and "Ich Schwebe," he had to repeat. Strauss also played, with Hekking, his sonata for piano and violoncello.

Weingartner has communicated to the Vienna *Neue Freie Presse* his plans as "Generalmusikdirektor" of Darmstadt. He will obtain some prominent singers and increase the orchestra as well as the chorus. Special attention is to be given next season to "Otello" and "Figaro." He will also conduct the Darmstadt symphony concerts as well as those of the Vienna Philharmonic.

Philadelphia now has, under the able direction of Leopold Stokowsky, one of the best orchestras in America. A big list of soloists has been obtained for next season. It includes Alma Gluck, Olga

Samaroff, Louise Homer, Efrem Zimbalist, Ferruccio Busoni, Schumann-Heink, Harold Bauer, Willy Burmester, Elena Gerhardt, Ossip Gabrilowitsch, Fritz Kreisler, Fannie Bloomfield Zeisler, Carl Flesch, Harold Randolph, Jacques Thibaud, and Josef Hofmann.

During the first three months of this year Wagner's "Parsifal" was heard in Europe by about seven hundred thousand persons who would never have been able to enjoy this work if the Bayreuth monopoly had been continued. Twenty-five European opera houses gave 314 performances of it in the original German, while French, Spanish, Italian, and Bohemian versions were also heard.

Art

We have already reviewed favorably Lisle March Philipps's thoughtful study, "Art and Environment," and have now only to note its inclusion in the list of Henry Holt & Co.

Sir Charles Waldstein's two lectures before the Royal Academy students on "Greek Sculpture and Modern Art" (Putnam; $2.50 net) are now handsomely printed by the Cambridge University Press, with some seventy-five illustrations. In these two eminently judicious discourses the lecturer hit the tone of the place and audience with fairly Attic tact. We seem to have heard much the same plea for harmony, much the same reprehension of individual extravagance from a distinguished line of Academy speakers reaching back to Sir Joshua himself. Sir Charles did no discredit to the ritual theme while naturally failing to invest it with much novelty. Despite the title, modern art barely shows its head, and then in the rather atypical impersonation of Rodin.

A mass of eighteenth-century anecdotes with a sprinkling of orthodox moral comment and a modicum of biography may sufficiently describe Mrs. Bearne's "A Court Painter and His Circle, François Boucher" (McBride; $4 net). The whole is carried off with a rather dizzy kind of vivacity suggestive of the parlor lecture. There are some thirty illustrations, of which a few relate to Boucher. The whole mixture will be most attractive to those who care least about the main point, the artist who happens to be involved.

The Country Life Library (London) has published in its series of Architectural Monographs a large and sumptuous quarto volume on "Houses and Gardens by E. L. Lutyens," described and criticised by Lawrence Weaver. Twenty-six chapters and an Appendix are devoted to a review of Mr. Lutyens's work in the field of domestic architecture, of which there are 580 illustrations. A large proportion of these are full-page plates from photographs, and all without exception are of the high quality which one associates with the Country Life publications. The Appendix is devoted to reproductions of detail drawings from Mr. Lutyens's office; these are the least interesting of the illustrations, as they are not for the most part figured, and show little of the actual construction. It may be questioned whether the work treated of is quite worthy of this extended presentation. Mr. Lutyens is an architect of high repute, and by reason of his work in South Africa and his selection as architect of the new capital of India at Delhi, is probably more widely known abroad than some of his British compeers of equal ability. But it can hardly be said that his work betrays the stamp of special distinction or of marked originality. The country houses shown in this book display good taste, sometimes the elusive quality of artistic charm; the town houses and more formal designs are distinctly dull and heavy. Text and illustrations are evidently designed for the general rather than the professional public; but it is hard to discover, even in the explanatory, almost apologetic preface, any quite adequate motive for so elaborate an advertisement to the multitude. Certainly Americans, whether architects or clients, seeking for instruction as to English country-house architecture, will find more and better material in other sources.

In two miniature volumes, "Berlin, Dresden" and "Munich, Frankfort, Cassel," John C. Van Dyke's "New Guides to Old Masters" (Scribner's; $1 each) cover the chief galleries of Germany. The general characteristics of these guides we have already discussed. On points of quality Mr. Van Dyke is a stimulating mentor, on issues of attribution he is bold to rashness. Out of the twenty-two Berlin Rembrandts, most of which were bought by the great expert Dr. Bode, only seven are accepted as genuine, three of these being doubtful. A process that involves giving such a masterpiece as the Vision of Daniel to scholars of the calibre of Eckhout or Bol will find little favor with the judicious. In general we are convinced that such critical matters should be threshed out in the special journals before being laid before the public. We feel, too, that the warning against repainting is overdone. It is most needful to know the few pictures that are intact and those that are hopelessly overpainted. But the caution "somewhat repainted" holds of nearly all old pictures, and may be taken for granted. Mr. Van Dyke grants three stars, the mark for a great masterpiece, to only four pictures in Germany; the Sistine Madonna and the Giorgione Venus at Dresden, the Saskia with a Crimson Cap at Cassel, and the Wings of the Van Eyck Adoration of the Lamb at Berlin. It seems to us that he underrates such pictures as Dürer's Four Apostles and the Dresden Ruysdaels, nor can we at all agree with his low estimate of Holbein's Georg Gisze. It is a masterpiece of the cold type, but still a masterpiece. Mr. Van Dyke's invention of a "Pseudo-Vermeer" to account for the poorer pictures ascribed to the master of Delft seems to us fantastic. Broadly speaking, these little books are better calculated to divert the expert than to edify the public.

We have received Part XII of Paul Herrmann's valuable "Denkmäler der Malerei des Altertums" (Munich: F. Bruckmann Co.). This part is devoted to the frescoes in the so-called House of the Citharist at Pompeii, as the previous one was to those of the "Villa of Cicero." It goes without saying that the plates maintain the high standard of the house of Bruckmann for beautiful and accurate reproductions, and Dr. Herrmann's text displays the scholarship and the infinite pains in his study and description of details to which the previous parts of this work have accustomed us. Indeed, one of the most useful and important features of his text is his correction, bit by bit, of the many careless errors in the descriptions of the colors and other details which were made in earlier catalogues, notably—to our surprise—Helbig's, on which students have hitherto relied with confidence. But the most impressive fact which he brings out, and which is a disheartening one to all lovers of ancient art, is that many of the Pompeian frescoes, especially among those which were removed to the Museum of Naples, have already sadly deteriorated in the comparatively brief period since their discovery. Students who have visited that museum at rare intervals must have been conscious of this fact in a general way—the increasing effect of dinginess, and the gradual deadening of the vivid colors which one notices after an interval of several years—but Dr. Herrmann proves it by evidence which is incontrovertible. Those who consult the present part may follow this evidence most convincingly by comparing the reproductions which he gives of early photographs of several of these frescoes with his own plates showing their condition to-day. Of course the early photographs were generally retouched, and sometimes extensively, to make them good "sellers," but by comparing those of different makers he says he has been able to determine the facts, as no two negatives of the same subject were retouched in precisely the same manner.

We may cite two examples given by Dr. Herrmann as appalling illustrations of what has happened within a single generation. One is the picture of Leda or Nemesis (pl. 111, Helbig No. 152), which his reproduction of an early photograph shows with all the details of the three figures and their architectural setting clearly defined, whereas now the whole surface is badly worn, the figures are barely recognizable, and many of the details have practically disappeared. The other is the charming Judgment of Paris (pl. 113, Helbig No. 1286). Both the early photographs and Helbig's description show that not many years ago this picture was strong in color and well preserved throughout, but now the upper part has paled and some of its more delicate details have vanished, while the lower third has gone entirely, even the surface of the stucco having crumbled away. To appreciate this situation it must be remembered that the excavation of the House of the Citharist was begun in 1853, and completed in 1868, with a long interval of interruption between, so that the deterioration to which we refer has occurred during the first generation after the discovery of these fres-

coes. Such being the case, to what are we to look forward for future generations—will there be anything left for them? It is a comfort to believe that these matters are more carefully and intelligently looked after now than they used to be, and that better treatment has been given to the paintings unearthed in recent years, insuring them a longer and more brilliant life, yet this is but imperfect consolation for what has been allowed to go and now can never be recovered.

Barclay Vincent Head, an authority on numismatics, died in London on June 12. He was born in Ipswich, England, on January 2, 1844. In 1864 he was appointed an assistant in the British Museum; in 1908 he was elected vice-president of the Royal Numismatic Society, and was joint editor of the *Numismatic Chronicle* from 1869 until 1910. From 1893 to 1906 he was keeper of the department of coins and medals of the British Museum. Mr. Head was a correspondent of the Institute of France and of the Royal Prussian Academy of Sciences, and a member of the Imperial German Archæological Institute. He had also received the degrees of D.Litt. from Oxford, D.C.L. from Durham, and Ph.D. from Heidelberg. He was the author of "History of the Coinage of Syracuse," "The Coinage of Lydia and Persia," "History of the Coinage of Ephesus," "Historia Numorum," and the Catalogues of Greek Coins in the British Museum in ten volumes.

Finance

THE SWING AROUND A CIRCLE.

In an interview with the *Evening Post* last week, ex-Senator Edmunds—a survivor, in full intellectual vigor, of the celebrated group of statesmen who guided the country's political destinies from the ending of the Civil War to the beginning of the Spanish-American conflict—had two things to say which bore on the financial situation. One was in comment on President Wilson's theory of a "psychological depression." Mr. Edmunds offset this by President Cleveland's remark of 1884 that "it is a condition, not a theory, which confronts us."

The pressing of the contrast between the two Presidential utterances was interesting, though perhaps not wholly fair. Mr. Wilson did not allege, and could not very well have done so, that business depression was not in itself an actual condition. Mr. Cleveland was not arguing that theory had no part in plans to reduce the tariff, but that revenues ought to be reduced, whichever economic theory about it might be the wiser, because the overflowing public surplus was deranging the money market.

The second point of ex-Senator Edmunds had to do with the situation itself—financial and industrial, as well as political and social. As to this, he declared himself not discouraged at the popular extravagances of the day:

> It will all come out right. The troubles are not political, but social. Human history and experience teach that things go around in circles. We are now in a part of the circle which I shall not endeavor to classify. We are troubled with an epidemic of emotion among people who don't stop to reflect. Radical doctrines are merely a sign of the times. Some day there will be a further swing around the circle and then you will see a change.

This is a highly interesting statement. If the principle applies to the social and political ferment of the day, it can hardly fail to apply to the financial disturbance as well; for the one is vitally influenced by the other. What is the basis of it?

That good and bad times in business swing around in a fairly well-defined circle—usually fixed at something like twenty years—is an old story. That happens under the influence of other causes than the upheaval and subsidence of great popular emotions. Retrenchment and accumulation of capital, through a series of years, alternate with an approximately equal period of expansion and speculation. Each is the natural sequel to the other; we are now in a period of the first-named sort, just as we were in a period of the other sort a decade or so ago, and just as we were in a period such as now exists a decade before that. In the field of political contests, the swing of the circle is somewhat narrower, because any party in power is apt to become unpopular through inability to please all its previous supporters, and because the dissatisfied voting constituency which creates majorities swings, for the time being, to the other side.

But the "epidemic of emotion," of which Mr. Edmunds speaks, is something different from either. Its seizure of the mind of whole communities is much more rare in its recurrence. Such world-wide demonstrations, occurring in periods half a century or more apart, and seemingly based on a fixed resolve to upset existing institutions, have been explained on the theory that the previous state of things had at last become impossible to endure. They have also been explained on the ground that the public's imagination had been so set on fire, by a series of inventions which had changed the methods of the physical world, that the excited public had determined to change things with equal suddenness and completeness in the social, political, and financial world as well. Either theory would apply to the great upheaval of 1789 and to that of 1848, and either applies to that which is now in progress.

What is even more immediately to the point, leaders in both of those older epoch-making demonstrations, after the real abuses and anachronisms of the period had been successfully attacked, proceeded to indulge in every sort of wild and fantastic propaganda of reform. That also is true to-day; some of the evidence for which is the proposed recall of judicial decisions in politics, "syndicalism" in economic theory, feminism and the militant suffragettes in the field of moral and social institutions, and Government commissions with power to regulate any incorporated business (the original proposition of the Trades Commission bill) for finance.

After the French Revolution, and after the uprisings of 1848, the civilized world swung gradually around the circle again. It never got back to exactly the situation which it had left behind it when the people rose against the Crown; otherwise the Bourbon autocracy, with its *lettres de cachet*, would have returned after the one upheaval had subsided, and the Continental tyrannies would have been rebuilt after their general collapse in the middle of the century. On any such supposition, the wild performances of associated capitalists, "thinking in hundred millions," would return when the present commotion should have spent its force—which no one imagines as a probability.

But, on the other hand, 1789 did not introduce a permanent régime of sansculottes, guillotines, Jacobin clubs, and a calendar in which Year One was the date of the French Convention. The settling down of affairs after 1848 did not establish a world-wide institution of State Socialism. Neither will the aftermath of the present furious emotional upheaval leave the courts or the marriage ceremony abolished, or the banks and the stock exchanges managed by legislative committees. Mr. Edmunds was wise, however, in declining to commit himself as to exactly what part of the circle we are in to-day. That is something which every one would like to know, and which it is not at all probable any one will know until we are considerably further along on the periphery.

Introductory Geology

A Textbook for Colleges

By Thomas C. Chamberlin and Rollin D. Salisbury, Heads of the Departments of Geology and Geography in the University of Chicago. (*American Science Series.*)

xi + 708 pp. 12mo. $2.00.

This is an abbreviation and simplification of the authors' *College Geology*, which has been so widely and successfully used in American colleges. Many technical details have been omitted, but the general purpose and scope of the volume is not altered fundamentally. Part I deals with geological processes and materials, and Part II with historical geology.

"It is a most excellent indication of the genuine love of high literature that the editors have been able to bring together so many distinct contributions of a suggestive and critical character. There is a freshness about the work which is inspiriting, and the study is of that which is worth while, not the tiresome praise of the second rate."
—*Atlantic Monthly*
